2 Footmen of the King.
1 Ditto of the Queen.
2 Hobby Grooms.
12 Coach-horse servants.
20 Coach-horses.
Horses for three post-coaches, five post-chaises, and two saddle-horses, on the Monday; on the Tuesday, for two post-coaches and six saddle-horses.
Lady Courtenay.
Lady Caroline Waldgrave.
Lady Frances Howard.
Lord Harrington.
Mr. G. Goldsworthy.
Mr. G. Wynyn.
Mr. Price.
Prince Ernest—one gentleman and three servants.'

'Windsoe, June 16, 1794.
Since I have seen —— this evening, it is settled that Princess Royal will not go to Portsmouth, consequently not Miss Mackenthun, and the two next princesses will take but one servant between them, consequently Mrs. Cleovly, Mrs. Sands, Mrs. Willis, and Miss Albert will go in the post-coach, and one post-chaise will be waiting at every stage on Monday.'
KARL THEODOR KÖRNER.

THE BOOK OF DAYS.

SEPTEMBER 23.

Born—Octavius Caesar Augustus, first Roman emperor, 63 B.C.; Arietta; Dr. Jeremy Collier, Celebrator of *A View of the Stage*, &c., 1650; Slow Que, Cambridgeshire; Karl Theodor Körner, German poet, 1791, Dresden. Died—Bishop Jewel, eminent prelate, 1671; Herman Melville, distinguished physician, 1798, London; John Matthew Bartram, eminent physician, 1822; William Upcott, Collected of historical manuscripts, 1845, London; Edward Wedlake Brayley, topographical and antiquarian writer, 1854.

KARL THEODOR KÖRNER.

The life-blood of Germany was never roused nor quickened with greater impetus, than when the old fatherland sprung to arms; to assert its rights against the tyrannical sway of France, towards the close of the first Napoleon's career. For years she had groaned under the sway; but repeated defeats had taught her to succumb to the oppression which it seemed impossible to resist. Hope at last gleamed upon her from the lights of burning Moscow, and in 1813 she rose, determined to throw off the yoke. In thus vindicating her outraged rights, she was nobly supported by the intellect and genius, as well as by martial prowess of her sons. The stirring lectures of Fichte, and the martial lyrics of Körner, were no less effective towards the liberation of their country than the valor and strategical skill of Lützow and Blücher.

The father of Karl Theodor Körner held a distinguished position as member of the privy-council of Saxony, and numbered Goethe and Schiller among his personal friends. In his infantile days, Karl was a sickly delicate child, but as he advanced in years, he rapidly outgrew all these signs of weakness, and by the time he approached manhood, was noted for his adroitness in all manly exercises, more especially horsemanship and fencing, besides being renowned for his musical skill, and grace and agility as a dancer. To crown all these, nature had bestowed on him a fine military figure and handsome countenance, with large, full, and expressive eyes. The law was the profession to which his father's wishes would have destined him; but young Körner's tastes inclining more to natural science and engineering, he was sent, when a stripling, to Freiberg, to study mining in the school there presided over by the celebrated geologist, Werner. He pursued his studies in this place in theoretical and practical mining with much enthusiasm, but quitted it in 1810, to attend the university of Leipaia, from which, after remaining for a short time, he proceeded to that of Berlin. In the same year, he made his first appearance before the public, by the issue of a small volume of poems, entitled *Die Knöpfe* or *The Buds.* From Berlin he was sent by his father to Vienna, where he seems to have turned his attention chiefly to dramatic composition, and produced several pieces, one of which, more especially, a tragedy on the subject of Zrinyi, the Hungarian hero, was performed with immense success. Among his friends in Vienna were included Wilhelm von Humboldt, then ambassador from the Prussian court, and Frederick Schlegel, the celebrated historical commentator and poet. During his stay in Vienna, also, he formed an ardent attachment for a young lady, which met the entire approbation of his family, and arrangements were entered into for their speedy union.

But another bride now claimed the attentions of Körner. The cry to arms which in the spring of 1813 echoed from one end of Germany to the other, found an enthusiastic response in his bosom, and he felt himself impelled to take his place forthwith in the ranks of those patriots who were striving for the liberation of their country in Prussia and the northern states of the confederation. Writing to his father, he says: 'Germany is roused; the Prussian eagle flaps its wings and awakes in all true hearts the great hope of German freedom. My genius sighs for its fatherland; let me be its worthy son. Now that I know what happiness may be realised in the stars of my destiny look down on me with such genial rays, now does a righteous inspiration tell me that no sacrifice can be too great for that highest of all human blessings, the vindication of a nation's freedom.'

In pursuance of this resolve, Körner, in the month of March, quitted Vienna, and proceeded to Breslau, where he joined Lützow's celebrated company of volunteers, or the Black Huntmen, as they were termed. A few days after his joining the corps, it was solemnly dedicated to the service of its country in the church of Rochau, the services concluding with Luther's noble hymn, *Ein fester Burg ist unser Gott.* The powers of physical endurance which Körner had acquired in the course of his mining studies at Freiberg, proved of eminent service to him in the fatigues of a military life. His enthusiasm and ardor for his new duties soon procured his elevation to the post of lieutenant, whilst the gentleness and kindness of his nature made him the idol of his comrades. Here, too, his martial muse was fairly called into action, and some of the noblest of those lyrics which have rendered him the Tyrtäeus and Pindar of Germany, were composed beside the bivouac and watchfires during the intervals of military duty. In the battle of Gorde, near the Elbe, where the French received a signal check, and in the subsequent victorious march of Lützow's volunteers by Halberstadt and Eisleben to Planen, Körner took a prominent part, acting in the latter movement as adjutant to the commander. Whilst lying at Planen, an intimation was treacherously conveyed to Lützow of an armistice having been concluded, and he accordingly proceeded to Magdeburg, where he was received with enthusiasm in the neighbourhood of Leipzig. Here he found himself surrounded and threatened by a large body of French, and Körner was despatched to demand an explanation from the officer in command, who, instead of replying, cut him down with his sword, and a general engagement ensued. The Black Huntmen were forced to save themselves by flight; and Körner, who had only escaped death by his horse swerving aside, took shelter in a neighbouring wood, where he was nearly being discovered by a detachment of French, but contrived to escape them away by shouting in as stentorian tones as he could utter: 'The fourth squadron will advance!'
of the German poet is animated. Young, brave, and generous, his effusions are literarily the out-breathings of an unselfish and gallant spirit, which disregards every danger, and counts all other considerations as dross in the attainment of some grand and noble end. A collection of his martial poems, under the title of Leyer und Schwert (Lyre and Sword), was published at Berlin the year following his death. Many of these, including 'My Fatherland,' 'The Song of the Black Huntsmen,' 'Lützow's Wild Chase,' 'The Battle-prayer,' and 'The Sword Song,' are well known to the English public through translations.

One of Körner's most popular songs, is 'The Song of the Sword,' which he wrote only two hours before the engagement in which he was shot. He compares his sword to a bride, and represents it as pleading with him to consummate the wedding. This explains the allusion in the following poem for Mrs Hemans, which we quote as a graceful tribute from one of ourselves to the memory of a noble stranger.

FOR THE DEATH-DAY OF THEODOR KÖRNER.

A song for the death-day of the brave,
A song of pride!
The youth went down to a hero's grave,
With the sword, his bride!
He went with his noble heart unworn,
And pure, and high;
An eagle stooping from clouds of morn,
Only to die.
He went with the lyre, whose lofty tone,
Beneath his hand,
Had thrill'd to the name of his God alone,
And his fatherland.
And with all his glorious feelings yet
In their day-spring's glow,
Like a southern stream that no frost hath met
To chain its flow!
A song for the death-day of the brave,
A song of pride!
For him that went to a hero's grave
With the sword, his bride!
He has left a voice in his trumpet lays
To turn the fight;
And a spirit to shine through the after-days
As a watch-fire's light;
And a grief in his father's soul to rest
Midst all high thought;
And a memory unto his mother's breast
With healing fraught.
And a name and fame above the blight
Of earthly breath;
Beautiful—beautiful and bright
In life and death!
A song for the death-day of the brave,
A song of pride!
For him that went to a hero's grave
With the sword, his bride!

UPCOTT, THE MANUSCRIPT-COLLECTOR.

In a work of this nature, it would be improper to omit reference to one so devoted to the collection and preservation of English historical curiosities as William UPCOTT, sometimes styled the King of Autograph-collectors. Ostensibly, he pursued a
modest career in life, as under-librarian of the London Institution: the life below the surface exhibited him as acting under the influence of a singular instinct for the acquisition of documents connected with English history—one of those aids to literature whose names are generally seen only in the titles of books or on labels, while the truth is that, but for them, the efforts and the powers of the most accomplished historians would be vain. Upcott was born in Oxfordshire in 1779, and was set up originally as a collector by his godfather, Osias Humphrey, the eminent portrait-painter, who left him his correspondence. With this as a nucleus, he went on collecting for a long series of years, till, in 1836, his collection consisted of thirty-two thousand letters illustrated by three thousand portraits, the value of the whole being estimated by himself at £10,000. That this was not an extravagant appraisement may now be averred, when we know that, after large portions of the collection had been disposed of, a mere remnant, sold by auction after the collector's death, brought £412, 17s. 6d. It was to Upcott that the public was indebted for the preservation of the manuscript of the Diary of John Evelyn, a tilable store of matter regarding English familiar life in the seventeenth century. The Correspondence of Henry, Earl of Clarendon, and that of Ralph Thoresby, were also published from the originals in Mr Upcott's collection.

This singular enthusiast spent the last years of his useful and unpretending life in an old mansion in the Upper Street at Islington, which he quaintly denominated Autograph Cottages.

NAVAL ENGAGEMENT OFF FLAMBOROUGH HEAD, SEPTEMBER 28, 1779.

On 23rd September 1779, a serious naval engagement took place on the coast of Yorkshire, H.M.S. Serapis and Cunentess of Scarbrough being the ships on the one side, and a squadron under the command of Commodore Whitelock and Rear-Admiral Hood on the other. It was a time of embarrassment in England. Unexpected difficulties and disasters had been experienced in the attempts to enforce the loyalty of the American colonies. Several of England's continental neighbours were about to take advantage of her weakness to declare against her. In that crisis it was that Jones came and insulted the coast of Britain. Driven out of the Firth of Forth by a strong westerly wind, he came southwards till he reached the neighbourhood of Flamborough Head, where he resolved to await the Baltic and merchant fleet, expected shortly to arrive there on its homeward voyage under the convoy of the two men-of-war above mentioned. About two o'clock in the afternoon of the 23rd September, Jones, on board of his vessel the Bon Homme Richard (so called after his friend Benjamin Franklin), descried the fleet in question, with its escort, advancing north-east, and numbering forty-one sail. He at once hoisted the signal for a general chase, on perceiving which the two frigates bore out from the land in battle-array, whilst the merchant vessels crowded all sail towards shore, and succeeded in gaining shelter beneath the guns of Scarborough Castle. There was little wind, and, according to Jones's own account, it was nightfall before the Bon Homme Richard could come up with the Serapis, when an engagement within pistol-shot commenced, and continued at that distance for nearly an hour, the advantage both in point of managability and number of guns being on the side of the British ship; whilst the remaining vessels of Jones's squadron, from some inexplicable cause, kept at a distance, and he was obliged for a long time to maintain the action with the two English frigates. The harvest-moon, in the meantime, rose calm and beautiful, casting its silver light over the waters of the German Ocean, the surface of which, smooth as a mirror, bore the squadrons engaged in deadly conflict. Suddenly, some old eighteen-pounders on board the Bon Homme Richard exploded at their first discharge, killing and wounding many of Jones's sailors; and as he had now only two pieces of cannon on the quarter-deck remaining un silenced, and his vessel had been struck by several shots below the water-level, his position was becoming very critical. Just then, while he ran great danger of going to the bottom, the bowspirt of the Serapis came athwart the poop of the Bon Homme Richard, and Jones, with his own hands, took the lower yard out of the enemy's position. A dreadful scene at close-quarters then ensued in which Captain Pearson, the British commander, inflicted signal damage by his artillery on the under part of his opponent's vessel, whilst his own decks were rendered almost untenable by the hand grenades and volleys of musketry which, on their cannon becoming unserviceable, the combatants on board the Bon Homme Richard discharged with murderous effect. For a long time the latter seemed decidedly to have the worst of the contest, and on one occasion the master-gunner, believing that Jones and the lieutenant were killed, and himself left as the officer in command, rushed up to the poop to haul down the colours in the hopelessness of maintaining any longer the conflict. But the flagstaff had been shot away at the commencement of the engagement, and he could only make his intentions known by casting cannon balls on the other side for quarter. Captain Pearson then hailed to know if the Bon Homme Richard surrendered, an interrogation which Jones immediately answered in the negative, and the fight continued to rage. Meantime the Countess of Scarbrough had been engaged by the Pallace, a vessel belonging to Jones's squadron, and after a short conflict had surrendered. The Bon Homme Richard was thus freed from the attacks of a double foe, but was at the same time nearly brought to destruction by the Alliance, one of its companion-vessels, which, after keeping for a long time at a distance, advanced to the scene of action, and poured in several broadsides, most of which took effect on her own ally instead of the British frigate. At last the gallant fire from the arrounds of Jones's ship told tellingly in the thinning of the crew of the Serapis, and at last killed her fire; and a terrible explosion on board of her, occasioned by a young sailor, a Scotchman, it is alleged, who, taking his stand upon the extreme end of the yard of the Bon Homme Richard, dropped a grenade on a row of cartridges on the main-deck of the Serapis, spread such disaster and confusion that Captain Pearson shortly afterwards struck his colours and surrendered. This was at eleven o'clock at night, after the engagement had lasted for upwards of four hours. The accounts of the
Losses on both sides are very contradictory, but seem to have been nearly equal, and may be estimated in all at about three hundred killed and wounded. The morning following the battle was extremely foggy, and on examining the Bon Homme Richard, she was found to have sustained such damage that it was impossible she could keep longer afloat. With all expedition her crew abandoned her, and went on board the Serapis, of which Paul Jones took the command. The Bon Homme Richard sank almost immediately, with a large sum of money belonging to Jones, and many valuable papers. The prize-ships were now conveyed by him to the Texel, a proceeding which led to a demand being made by the English ambassador at the Hague for the delivery of the captured vessels, and the surrender of Jones himself as a pirate. This application to the Dutch authorities was ineffectual, but it served as one of the predisposing causes of the war which not long afterwards ensued with England. After remaining for a while at the Texel, the Serapis was taken to the port of L'Orient, in France, where she appears subsequently to have been disarmed and broken up, whilst the Countess of Scarborough was conveyed to Dunkirk. Meanwhile, Jones proceeded to France, with the view of arranging as to his future movements; but before quitting Texel, he returned to Captain Pearson his sword, in recognition, as he says, of the bravery which he had displayed on board the Serapis. Pearson's countrymen seem to have entertained the same estimate of his merits, as, on his subsequent return to England, he was received with great distinction, was knighted by George III, and presented with a service of plate and the freedom of their corporations, by those boroughs on the east coast which lay near the scene of the naval engagement. In France, honours no less flattering were bestowed on Paul Jones. At the opera and all public places, he received enthusiastic ovations, and Louis XVI. presented him with a gold-hilted sword, on which was engraved, 'Victorissimi regis Ludovici XVI. remanerat stremuo vindici' (From Louis XVI, in recognition of the services of the brave maintainer of the privileges of the sea).

It may be noted that the true name of Paul Jones was John Paul, and that he made the change probably at the time when he entered the American service. His career was altogether a most singular one, presenting phases to the full as romantic as any of those undergone by a hero of fiction. The son of a small farmer near Dumfries, we find him manifesting from his boyhood a strong predilection for the sea, and at the age of twelve commencing life as a cabin-boy, on board the Friendship of Whitehaven, trading to Virginia. After completing his apprenticeship, he made several voyages in connection with the slave-trade to the West Indies, and rose to the position of master. He speedily, however, it is said, conceived a disgust to the traffic, and abandoned it. We find him, about 1775, accepting a commission in the American navy, then newly formed in opposition to that of Britain. What inspired Paul with such feelings of rancour against his native country, cannot now be ascertained; but to the end of his life he seemed to retain undiminished the most implacable resentment towards the British nation. The cause of the colonies against the mother-country, now generally admitted to have been a just one, was adopted by him with the utmost enthusiasm, and certainly he contrived to inflict a considerable amount of damage on British shipping in the course of his cruises.

To the British nation, and to Scotchmen more especially, the name of Paul Jones has heretofore only been suggestive of a daring pirate or lawless adventurer. He appears, in reality, to have been a sincere and enthusiastic partisan of the cause of the colonists, many of whom were as much natives of Britain as himself, and yet have never been specially blamed for their partisanship. In personal respects, he was a gallant and resolute man, of romantically chivalrous feelings, and superior to everything like a mean or shabby action. It is a singular point in his career to remark his disinterestedness in restoring, in after-years, to the Countess of Selkirk, the family plate which the necessity of satisfying his men had compelled him to deprive her of, on the occasion of his descent on the Scottish coast, and for which he paid them the value out of his own resources. The letters addressed by him on this subject to the Countess and her husband, reveal his generosity and abilities in point of literary composition. By the Americans, Admiral Paul Jones is regarded as one of their most distinguished naval celebrities.

**MONEY THAT CAME IN THE DARE.**

The following simply-told narrative, though not so very wonderful as to shock our credulity, contains a pleasing spine of mystery, from its want of a direct explanation. It was found, under the date of September 23, 1673, in an old memorandum-book, that had belonged to a certain Paul Bowes, Esq., of the Middle Temple. A little more than a hundred years later, in 1783, the book, and one of the mysteriously-found pieces of money, was in the possession of an Essex gentleman, a lineal descendant of the fortunate Mr Bowes.

'About the year 1658, after I had been some years settled in the Middle Temple, in a chamber in Elm Court, up three pair of stairs, one night as I came into the chamber, in the dark, I went into my study, in the dark, to lay down my gloves, upon the table in my study, for I then, being my own man, placed my things in their certain places, that I could go to them in the dark; and as I laid my gloves down, I felt under my hand a piece of...
money, which I then supposed, by feeling, to be a shilling; but when I had light, I found it a twenty-shilling piece of gold. I did a little reflect how it might come there, yet could not satisfy my own thoughts, for I had no client then, being several years before I was called to the bar, and I had few visitors that could drop it there, and no friends in town that might designally lay it there as a bait, to encourage me at my studies; and although I was the master of some gold, yet I had so few pieces, I well knew it was none of my number; but I found first time I found gold, I supposed it left there by some means I could not guess at. About three weeks after, coming again into my chamber in the dark, and laying down my gloves at the same place in my study, I felt under my hand a piece of money, which also proved a twenty-shilling piece of gold; this moved me to further consideration; but, after all my thoughtfulness, I could not imagine any probable way how the gold could come there, but I do not remember that I ever found any, when I went with those expectations and desires. About a month after the second time, coming into my chamber, in the dark, and laying down my gloves upon the same place, on the table in my study, I found two pieces of money under my hand, which, after I had lighted my candle, I found to be two twenty-shilling pieces; and, about the distance of six weeks after, in the same place, and in the dark, I found another piece of gold, and this about the distance of a month, or five or six weeks. I several times after, at the same place, and always in the dark, found twenty-shilling pieces of gold; at length, being with my cousin Langton, grandmother to my cousin Susan Skipwith, lately married to Sir John Williams, I told her this story, and I do not remember that I ever found any gold there after, although I kept that chamber above two years longer, before I sold it to Mr Anthony Weldon, who now hath it (this being 23d September 1673). Thus I have, to the best of my remembrance, truly stated this fact, but could never know, or any probable conjecture, how that gold was laid there.

The relationship that existed between cousin Langton and cousin Skipwith does not seem very clear, according to our modern method of reckoning kindred; but it must be recollected that, in former times, the title of cousin was given to any collateral relative more remote than a brother or sister. Probably, cousin Langton was Mr Bowes's grandmother as well as Miss Skipwith's, and, if she liked, could have solved the mystery. For the writer has known more than one instance of benevolence among old ladies making presents of money to young relatives, in a similarly steady and eccentric manner.

SEPTEMBER 24.

St Rusticus or Rotiri, bishop of Avranches, 6th century. St Chunnel or Conald, priest and missionary. St Germer or Gere mar, abbott, 658. St Gerard, bishop of Conon, martyr, 1046.

Born.—Sharon Turner, historian, 1708, London. Died.—Pepin, king of France, 788; Michael III, Greek emperor, assassinated, 867; Pope Innocent II, 1145; William of Wykeham, founder of Winchester School, 1404, South Walkham; Samuel Butler, author of Hudibras, 1680; London; Henry, Viscount Hardinge, governor-general and commander in India, 1855, South Park, near Tunbridge.

The Feast of Ingathering.

Wherever, throughout the earth, there is such a thing as a formal harvest, there also appears an inclination to mark it with a festive celebration. The wonder, the gratitude, the piety felt towards the great Author of nature is brought before us that, once more, as it has ever been, the ripening of a few varieties of grass has furnished food for earth's teeming millions, insure that there should everywhere be some sort of feast of ingathering. In England, this festival passes generally under the endeared name of Harvest Home. In Scotland, where that term is unknown, the festival is hailed under the name of the Kva. In the north of England, it is observed under the Mel-Supper. And there are perhaps other local names. But everywhere there is a thankful joy, a feeling which pervades all ranks and conditions of the rural people, and for once in the year brings all upon a level. The servant sympathises with the success of his master in the great labours of the year. The employer looks kindly down upon his toiling servants, and feels it but due to them that they should have a banquet furnished out of the abundance which God has given him—one in which he and his family should join them, all conventional distinctions sinking under the overpowering gush of natural, and, it may be added, religious feeling, which so well befits the time. Most of our old harvest-customs were connected with the ingathering of the crops, but some of them began with the commencement of harvest-work. Thus, in the southern counties, it was customary for the labourers to elect, from among themselves, a leader, whom they denominated their 'lord.' To him all the rest were required to give precedence, and to leave all transactions respecting their work. He made the terms with the farmers for mowing, for reaping, and for all the rest of the harvest-work; he took the lead with the scythe, with the sickle, and on the 'carrying days;' he was to be the first to eat, and the first to drink, at all their refreshments; his mandate was to be law to all the rest, who were bound to address him as 'My Lord,' and to shew him all due honour and respect. Disobedience in any of these particulars was punished by imposing fines according to a scale previously agreed on by 'the lord' and all his vassals. In some instances, if any of his men swore or told a lie in his presence, a fine was inflicted. In Buckinghamshire and other counties, 'a lady' was elected as well as 'a lord,' which often added much merriment to the harvest-season. For, while the lady was to receive all honours due to the lord from the rest of the labourers, he (for the lady was one of the workmen) was required to pass it on to the lord. For instance, at dinner-time, the vassals were to give the horn first to the lady, who passed it to the lord, and when he had drunk, she drank next, and then the others indiscriminately. Every departure from this rule incurred a fine. The blunders which led to fines, of course, were frequent, and produced great merriment.
In the old simple days of England, before the natural feelings of the people had been checked and chilled off by Puritanism in the first place, and what may be called gross Commercialism in the second, the harvest-home was such a scene as Horace's friends might have expected to see at his Sabine farm or Tuscian rustic's described in his *Idyls.* Perhaps it really was the very same scene which was presented in ancient times. The grain last cut was brought home in its wagon—called the *Hock Cart*—surmounted by a figure formed of a sheaf with gay dressings—a presumable representation of the goddess Ceres—while a pipe and tabor went merrily sounding in front, and the reapers tripped around in a hand-in-hand ring, singing appropriate songs, or simply by shouts and cries giving vent to the excitement of the day.

Harvest-home, harvest-home,
We have ploughed, we have sowed,
We have reaped, we have mowed,
We have brought home every load,
Hip, hip, hip, harvest-home!

So they sang or shouted. In Lincolnshire and other districts, hand-bells were carried by those riding on the last load, and the following rhymes were sung:

The boughs do shake, and the bells do ring,
So merrily comes our harvest in,
Our harvest in, our harvest in,
So merrily comes our harvest in!

Hurrah!

Troops of village children, who had contributed in various ways to the great labour, joined the throng, solaced with plum-cake in requital of their little services. Sometimes, the image on the cart, instead of being a mere dressed-up bundle of grain, was a pretty girl of the reaping-band, crowned with flowers, and hailed as the *Maids.* Of this we have a description in a ballad of *Bloomfield's*:

Home came the jovial Hockey load,
Last of the whole year's crop,
And Grace among the green boughs rode,
Right plump upon the top.

This way and that the wagon reeled,
And never queen rode higher;
Her cheeks were coloured in the field,
And ours before the fire.

In some provinces—we may instance Buckinghamshire—it was a favourite practical joke to lay an ambuscade at some place where a high bank or a tree gave opportunity, and drench the hock-cart party with water. Great was the merriment, when this was cleverly and effectively done, the riders laughing, while they shook themselves, as merrily as the rest. Under all the rustic jocities of the occasion, there seemed a basis of pagan custom; but it was such as not to exclude a Christian sympathy. Indeed, the harvest-home of Old England was obviously and beyond question a piece of natural religion, an exultation of jocund gratitude to the divine source of all earthly blessings.

Herrick describes the harvest-home of his epoch (the earlier half of the seventeenth century) with his usual felicity of expression.

Come, sons of summer, by whose tolle
We are the Lords of wines and oils;
By whose tough labours, and rough hands,
We rip up first, then reap our lands,

Crown'd with the ears of corn, now come,
And, to the pipe, sing harvest-home.
Come forth, my Lord, and see the cart,
Drest up with all the country art.
See here a maeskin, then a pike;
As apostolic pure as it is sweet:
The horses, mares, and friaking fillies,
Clad, all, in linnen, white as lillies.
The harvest swaines and wenches bound
For joy, to see the hock-cart crow't.
About the cart bares how the rural youth,
Of rural younglings raise the shout;
Pressing before, some coming after,
Those with a shout, and these with laughter.
Some bless the cart; some kiss the sleeves;
Some prank them up with ostens leaves;
Some cross the full-horse; some with great
Devotion stroak the home-borne wheats;
While other rusticke, lease attent
To prayers than to merryment,
Run after with their breeches rent.
Well, on, brave boyes, to your Lord's hearth;
Glitt'reng with fire, where, for your mirth,
You shall see first the large and cheesefull
Foundation of your feast, fat beams;
With upper stories, mutton, veale,
And bacon, which makes half your meal;
With severall dishes standing by;
As here a custard, there a pie,
And here all-stomach frumenties.
And for to make the merrie cheerer
Ham-wing wine be wanting here,
There's that which drowneth arts, stert beers,
Which freely drink to your Lord's health,
Then to the plough, the commonwealth;
Next to your flaes, your lanes, your fatts,
Then to the maids with wheaten hate;
To the rough sickle, and the reapers sythe;
Drink, frolick, boys, till all be blythe,
Feed and grow fat, and as ye eat,
Be mindful that the lab'reng next,
As you, may have their full of meat;
And know, besides, ye must revoke
The patient oxen unto the yoke,
And all goe back unto the plough
And harrow, though they're hang'd up now.
And, you must know, your Lord's word's true,
Feed him ye must, whose food fils you.
And that this pleasure is like raines,
Not sent ye for to drowne your pains,
But for to make it spring againes.'

In the north, there seem to have been some differences in the observance. It was common there for the reapers, on the last day of their business, to have a contention for superiority in quickness of dispatch, groups of three or four taking each a ridge, and striving which should soonest get to its termination. In Scotland, this was called a *kemping,* which simply means a strving. In the north of England, it was a *mell,* which, I suspect, means the same thing (from Fr. *mélée,*). As the reapers went on during the last day, they took care to leave a good handful of the grain uncut, but laid down and covered over; and, when the field was done, the 'bonniest lass' was allowed to cut this final handful, which was presently dressed up with various sewings, tyings, and trimmings, like a doll, and hailed as a *Corn Baby.* It was brought home in triumph, with music of fiddles and bagpipes, was set up conspicuously that night at supper, and was usually preserved in the farmer's parlour for the remainder of the year. The bonny lass who cut this handful
of grain, was deemed the Har’st Queen. In Hertfordshire, and probably other districts of England, there was the same custom of reserving a final handful; but it was tied up and erected, under the name of a Mare, and the reapers then, one after another, threw their sickles at it, to cut it down. The successful individual called out: ‘I have her!’ ‘What have you?’ cried the rest. ‘A mare, a mare, a mare!’ he replied. ‘What will you do with her?’ was then asked. ‘We’ll send her to John Snooks,’ or whatever other name, referring to some neighbouring farmer who had not yet got all his grain cut down.

This piece of rustic pignancy was called Crying the Mare. It is very curious to learn, that there used to be a similar practice in so remote a district

The custom of Crying the Mare is more particularly described by the Rev. C. H. Hartahorne, in his Sociopía Antiqua (p. 498). ‘When a farmer has ended his reaping, and the wooden bottle is passing merrily round, the reapers form themselves into two bands, and commence the following dialogue in loud shouts, or rather in a kind of chant at the uttermost pitch of their voice. First band: I have.

SEPTEMBER 24. THE FEAST OF INGATHERING.

her, I have her, I have her! (Every sentence is repeated three times.) Second: What hast thee? What hast thee? What hast thee? First: A mare, a mare, a mare! Second: Whose is her? Whose is her? Whose is her? First: A B's (naming their master, whose corn is all cut. Second: Where shall we send her? &c. First: To C. D. (naming some neighbour whose corn is still standing). And the whole concludes with a joyous shout of both bands united.

In the south-eastern part of Shropshire, the ceremony is performed with a slight variation. The last few stalks of the wheat are left standing; all the reapers throw their sickles, and he who cuts it off, cries: "I have her, I have her, I have her!" on which the rustic mirth begins; and it is practised in a manner very similar in Devonshire. The latest farmer in the neighbourhood, whose reapers therefore cannot send her to any other person, is said to keep her all the winter. This rural ceremony, which is fast wearing away, evidently refers to the time when, our county lying all open in common fields, and the corn consequently exposed to the depredations of the wild mares, the season at which it was secured from their ravages was a time of rejoicing, and of exulting over a tardier neighbour.

Mr Bray describes the same custom as practised in Devonshire, and the chief peculiarity in that instance is, that the last handful of the standing grain is called the Nack. On this being cut, the reapers assemble round it, calling at the top of their voices, 'Armack, armack, armack! we have'n, we have'n, we have'n,' and the firekin is then handed round; after which the party goes home dancing and shouting. Mr Bray considers it a relic of Druidism, but, as it appears to us, without any good reason. He also indulges in some needlessly profound speculations regarding the meaning of the words used. 'Armack' appears to us as simply 'Our nag,' an idea very nearly corresponding to 'The Mare,' and 'we have'n' seems to be merely 'we have him.'

In the evening of harvest-home, the supper takes place in the barn, or some other suitable place, the master and mistress generally presiding. This feast is always composed of substantial viands, with an abundance of good ale, and human nature insures that it should be a scene of intense enjoyment. Some one, with better voice than his neighbours, leads off a song of thanks to the host and hostess, in something like the following strain:

Here's a health to our master, The lord of the feast; God bless his endeavours, And send him increase!

May prosper his crops, boys, And we reap next year; Here's our master's good health, boys, Come, drink off your beer!

Now harvest is ended, And supper is past; Here's our mistress's health, boys, Come, drink a full glass.

For she's a good woman, Provides us good cheer; Here's your mistress's good health, boys, Come, drink off your beer!

One of the rustic assemblage, being chosen to act as lord, goes out, puts on a sort of disguise, and comes in again, crying a prolonged note, 'La-re-sus! He and some companions then go about with a plate among the company, and collect a little money with a view to further regalements at the village ale-house. With these, protracted usually to a late hour, the harvest-feast ends.

In Scotland, under the name of the Kirn or Kirn Supper (supposed to be from the churn of curds usually presented on the occasion), the feast usually ends in like manner. The description of the feast given by Grahame, in his British Geographies, includes all the characteristic features:

'The fields are swept, a tranquil silence reigns, And pauses of rural labour, far and near. Deep is the morning's hush; from grange to grange Responsive cock-crows, in the distance heard, Distinct as if at hand, soothe the pleased ear; And oft, at intervals, the flail, remote, Sends faintly through the air its deafening sound.

Bright now the shortening day, and blithe its close, When to the Kirn the neighbours, old and young, Come dropping in to share the well-earned feast. The smith saith his ponderous sledge has thrown, Raked up his fire, and cooled the blazing ground. His sluice the miller shuts; and from the barn The threshers he, to do their Sunday coast. Simply adorned, with ribands, blue and pink, Bound round their braided hair, the lasses trip To grace the feast, which now is smoking ranged At tables of all shape, and size, and bent. Joined awkwardly, yet to the crowded guests A seemly joyous show, all loaded well; But chief, at the board-head, the haggie round Attracts all eyes, and even the Goodman's grace Prunes of its wonted length. With eager knife, The quivering globe he then prepares to broach; While for her gown some ancient matron quakes, Her gown of silken woof, all figured thick With roses white, far larger than the life, On azure ground—her grizzled tallow-dung, Old as that year when Sheriff Muir was fought. Old tales are told, and well-known jests abound, Which laughter meets half-way as ancient friends, Nor, like the worldling, spurns because threadbare.

When ended the repast, and board and bench Vanish like thought, by many hands removed, Up strikes the fiddle; quick upon the floor The youths lead out the half-reluctant maids, Bashful at first, and daring through the reeds With timid steps, till, by the music cheered, With free and airy step, they bound along. Then deftly wheel, and to their partner's face, Turning this side, now that, with varying step. Sometimes two ancient couples o'er the floor, Skim through a reel, and think of youthful years.

Meanwhile the frothing bickers,* soon as filled, Are drained, and to the gauntlets † oft return, Where gossips sit, unmindful of the dance. Salubrious beverage! Were they sterling worth But duly priced, no more the alembic vast. Would, like some dire volcano, vomit forth Its floods of liquid fire, and far and wide Lay waste the land; no more the fruitful boon Of twelve ten shriveledoms, into poison turned, Would taint the very life-blood of the poor, Exhilarating their heart-strings like a bursting scroll.'

* Beakers.
† Wooden frames on which beer casks are set.
Such was formerly the method of conducting the harvest-feast; and in some instances it is still conducted much in the same manner, but there is a growing tendency in the present day, to abolish this method and substitute in its place a general harvest-festival for the whole parish, to which all the farmers are expected to contribute, and which their labourers may freely attend. This festival is usually commenced with a special service in the church, followed by a dinner in a tent, or in some building sufficiently large, and continued with rural sports; and sometimes including a tea-drinking for the women. But this parish gathering is destitute of one important element in the harvest-supper. It is of too general a character. It provides no particular means for attaching the labourers to their respective masters. If a labourer have any unpleasant feeling towards his master, or is conscious of neglecting his duty, or that his conduct has been offensive towards his master, he will feel ashamed of going to his house to partake of his hospitality, but he will attend without scruple a general feast provided by many contributors, because he will feel under no special obligation to his own master. But if the feast be solely provided by his master, if he receive an invitation from him, if he finds himself welcomed to his house, sit with him at his table, is encouraged to enjoy himself, is allowed to converse freely with him, and treated by him with kindness and cordiality, his prejudices and scruples will be dispelled, and mutual good-will and attachment established. The hospitality of the old-fashioned harvest-supper, and other similar agricultural feasts, was a bond of union between the farmer and his workpeople of inestimable value. The only objection alleged against such a feast, is that it often leads to intemperance. So would the harvest-festival, were not regulations adopted to prevent it. If similar regulations were applied to the farmer's harvest-feast, the objection would be removed. Let the farmer invite the clergyman of his parish, and other sober-minded friends, and with their assistance to carry out good regulations, temperance will easily be preserved.

The modern harvest-festival, as a parochial thanksgiving for the bounties of Providence, is an extra service in addition to the old harvest-feast, but it should not be considered as a substitute for it.

SEPTEMBER 25.

St Firmin, bishop of Amiens, martyr. St Barr or Finbarr, first bishop of Cork, confessor, 6th century. St Ansuire, bishop of Auxerre, about 605. St Colfrid, abbot, 718.

Born.—Christian Gottlob Heyne, classical editor, 1729; Chemnitz, Saxony; William Bomaes, eminent divine, 1714, Harlepool; Abraham Gottlob Werner, geologist, 1750, Westfalen, Upper Lautania; Felicia Dorothea Hemans, poetess, 1784, Liverpool.

Died.—Philip L. tie Spain, 1506, Burgoa; Lancetot Andrews, eminent priest and writer, 1629; Ambrosio, Marquis of Spinola, great Spanish captain, 1630; Robert Dodley, bookseller, and dramatist, 1764, Durham; Richard Pococke, bishop of Oswego, oriental traveller, 1745; John Henry Lambert, German philosopher, 1777, Berlin; Richard Porson, eminent Greek scholar and professor at Cambridge, 1808, Old Jewry, London.

RICHARD PORSON.

The character of Porson exhibits an extraordinary combination of the highest classical learning and critical acumen, with a strong propensity to coarse drollery and convivial excess. His aberrations were indeed in many respects more ludicrous than repulsive, and notwithstanding the additional disadvantage of a rough and unceremonious temper, we can scarcely find it in our hearts to regard him otherwise than as a very honest fellow, who was nobody's enemy but his own.

A brief sketch will suffice for his history. He was the son of the parish clerk of East Ruston, in Norfolk, and having displayed from childhood the most marked inclination for study, with a wonderfully tenacious memory, he came under the notice of Mr Hewitt, the clergyman of the place, who undertook his instruction along with that of his own sons. The weaver's boy, for such was the occupation of Porson's father on week-days, continued to manifest such indications of classical genius, that a subscription was entered into in the neighbourhood to defray the further expenses of his education. Through these means he was sent first to Eton, and afterwards to Trinity College, Cambridge, where he gained a fellowship, but was afterwards obliged to relinquish it, from a conscientious objection to enter holy orders and subscribe the Thirty-Nine Articles. He then wended his way, a penniless adventurer, to London. Here he is said to have subsisted for nearly six weeks on a guinea, but a number of gentlemen, literary men, and others, clubbed together at last to purchase him an annuity of £100, which placed him beyond the reach of want for the remainder of his days. Shortly afterwards, the Greek chair at Cambridge became vacant, and Porson was at once elected to the professorship, which required no declaration of adherence to any rule of faith, but only £40 per annum. Though no lectures or other services were required of him, it would seem that Porson had fully determined on giving these, but never accomplished his intention, partly owing to his own indolence, partly to the failure of the college authorities in supplying him with proper rooms and accommodation. Most of his subsequent life seems to have been spent in London, where he occupied himself with editing the tragedies of Euripides, and contributing political squibs to the Morning Chronicle, relaxing himself by convivialities with his friends, and evenings at the Cider Cellars. In 1806, he was chosen librarian of the London Institution, with a salary of £200 a year, and residence; but his health had now greatly declined, and in about two years after his appointment, he died from the effects of an apoplectic fit, at the age of forty-eight.

The circumstances connected with Porson's marriage are rather curious. He was very intimate with Mr Perry, the editor of the Morning Chronicle, for whom his sister, Mrs Lunan, a widow, kept house. One night the professor was seated in his favourite haunt, the Cider Cellars in Maiden Lane, smoking a pipe with a friend, when he suddenly turned to the latter and said: 'Friend George, do you not think the widow Lunan an agreeable sort of personage, as times go? The party addressed replied that she might be so.
In that case," replied Porson, 'you must meet me at St Martin's-in-the-Fields at eight o'clock to-morrow morning,' and thereupon withdrew after having called for and paid his reckoning. His friend was somewhat puzzled, but knowing that Porson generally meant what he said, resolved to obey the summons, and accordingly next morning presented himself at the appointed hour at the church, where he found Porson, with Mrs Lunan and a female friend, and a person in full canonnals for the solemnisation of matrimony. The service was quickly got through, and thereupon the party quitted the sacred building, and bride and bridegroom going each different ways with their respective friends. The oddity of the affair did not end here. Porson had proposed to Mrs Lunan some time before, but had insisted on her keeping it a secret from her brother; and now that the ceremony was completed, seemed as determined as ever that nothing should be said of the marriage, having apparently also made no preparations for taking his bride home. His friend, who had acted as groomsmen, then insisted that Mr Perry should be informed of the occurrence; and Porson, after some opposition, consenting, the two walked together to the next morning's. Notwithstanding what may well be called this most unprecedented treatment of a wife on her wedding-day, it is said that during the year and a half that the marriage subsisted, Porson acted the part of a kind and attentive husband, and had with his wife lived, there is great reason to believe that she might have weaned him in time from his objectionable habits.

The secret of these was his propensity to drinking, which seems to have been in a great measure a monomania with him, as he would quaff liquors of all kinds, and apparently with equal gusto. Horace Tooke used to say that Porson would drink ink rather than nothing at all. One day he was sitting with an acquaintance in the chambers of a mutual friend in the Temple, who was confined to bed in another room. It so came about that the latter went into the room to get a bottle of embrocation for himself, which had been left on the chimney-piece. The phial was empty—Porson having drunk up the contents! When dining out, he would not infrequently return not to the dining-room after the company had departed, collect all the dribs of wine which had been left at the bottoms of the glasses, and drink off the aggregate. On one occasion he unexpectedly arrived at the house of his friend, Hoppner, the painter, in the vicinity of London. The latter regretted his inability to offer the professor dinner, as Mrs Hoppner had gone to town, and carried with her the key of the cupboard which contained the wine. Porson, however, declared that he could dine very well on a mutton-chop, and beer from the next public-house, and this repast was accordingly procured. Sometime afterwards, he remarked to his host that Mrs Hoppner must assuredly keep some bottle in her bedroom for her own private drinking, and that a search might be made for it. Hoppner protested as to his wife's strict temperance, and the impossibility of any such private mode of refreshing herself being resorted to. To quiet his guest, however, who was becoming obstreperous, an inquisition was made, and a bottle discovered, which Porson drained with the utmost delight, declaring it was the best gin he had tasted for a long time. Hoppner, rather discomfited, informed his wife, on her return, that their friend had drank every drop of her hidden flask of cordial. 'Drunk every drop of it!' exclaimed the horrified woman. 'My God, it was spirits of wine for the lamp!'

The dirtiness of his personal attire was very conspicuous, more especially in the latter years of his life. So disreputable an appearance did he at times present, that he would be refused admittance by the servants at the houses of his friends. His favourite beverage at breakfast was porter, and the Cambridge professor of Greek was often seen making his morning-meal on a pot of porter and bread and cheese, with black patches on his nose, and as dirty as if he had been rolling in the kennel. He seems to have been held in high esteem by all who had the good fortune of an encounter with a stage-coach with a Cambridge undergraduate, whom he confounded in a pretended quotation, by producing from his pocket one after the other nearly all the Greek classics, and requesting him to point out in any of them the passage to which he referred. Another anecdote, not so well known, is that of his having called on a friend who was reading Thucydides, and consulted him as to the meaning of a word. Porson at once quoted the passage in which it occurred, 'How did you know what passage I referred to?' inquired his friend. 'Oh,' was the reply, 'I know that the word in question occurs only twice in Thucydides—once on the right, and once on the left hand page in the edition which you are now reading. I saw you look at the left page, and therefore knew the passage at once.' He used indeed to say sometimes, that the tenacity of his memory was a great misery to him, as it made him remember, whether he would or not, and forced him to retain in his recollection many things which he would gladly have forgotten.

CIDER-MAKING.

Debarred by the adverse influences of climate from the profitable cultivation of the vine, the northern nations of Europe have endeavoured to supply this deficiency by the manufacture of exhilarating liquors from fruits and grains of various kinds, more congenial to their soil and skies. Of these rivals to the grape, with the exception of John Barleycorn up his son's, there is none which may more fairly claim to contain the
palm of agreeableness and popularity than the apple and her golden-haired daughter, the bright and sparkling cider, whom some ardent admirers have even exalted to a level with the regal vintage of Champagne. Hear how John Philips, in his poem of Oder, eulogises the red-streak apple and its genial produce:

Let every tree in every garden own
The Red-streak as supreme, whose pulps fruit
With gold irradiate, and vermilion shines
Tempting, not fatal, as the birth of that
Prisman that won
Fond Eve in hapless hour to taste, and die.

This, of more bounteous influence, inspires
Poetic raptures, and the lowly Muse
Kindles to loftier strains; even I perceive
Her sacred virtue. See! the numbers flow
Easy, whilst, cheer'd with her nectarous juice,
Hers and my country's praises I exalt.

Hail Herefordian plant, that dost disdain
All other fields! Heaven's sweetest blessing, hail!

Beer that an opious matter of my song,
And thy choice nectar; on which always waits
Laughter, and sport, and care-beguiling wit,
And friendship, chief delight of human life.

What should we wish for more? or why, in quest
Of foreign vintage, insomuch, and mixt,
Today, in this extremest world: why tempt the rage
Of the rough ocean? when our native globe
Imports, from bounteous womb, annual recruits
Of wine delectable, that far surmounts
Gallic, or Latin grapes, or those that see
The setting sun near Calpe's towering height.

Nor let the Rhodian, nor the Lesbian vines
Vaunt their rich Must, nor let Tokay contend
For sovereignty; Phænussa will must bow
To th' Arician wine.

Like hop-picking in the east, the gathering of apples, for cider, forms one of the liveliest and most interesting of rural operations throughout the year in the western counties of England. These comprise mainly Hereford, Monmouth, and Gloucester shires, Somerset and Devon, the first and last counties more especially representing the two great cider districts of England, and also two separate districts, Hereford and Devon, the latter being noted par excellence for sweet, as Devonshire is for rough cider. Both descriptions, however, are made in the two counties. In the sweet cider, the object of the maker is to check the volatine fermentation as far as possible, so as to prevent the decomposition of the saccharine matter, which in the rough cider is more or less destroyed. The cider lauded by Philips in such encomiastic terms, is the sweet Herefordshire cider; but as a native of the west midland counties, a due allowance must be made for local predilection. It, nevertheless, enjoys a deservedly high reputation, and it is stated as a positive fact that an English peer, when ambassador in France, used frequently to palm it on the noblesse as a delicious wine.

In the manufacture of cider, those apples are preserved which are in a small size and have an acid or astrigent taste. Red and yellow are the favourite colours, green being avoided as producing a very poor quality of liquor. Where cider is made in small quantities, or where it is desired to have it of a specially fine description, the apples are gathered by the hand when thoroughly ripe, carefully picked, and any rotten portions that may appear, cut away. For general purposes, the fruit is beaten from the trees by the aid of long poles, and collected in baskets beneath, by women and children. It is then spread out in heaps in the open air, and remains exposed to the weather till it becomes mellow. It is then conveyed to the cider-mill, a primitive apparatus, consisting of a stone wheel revolving in a circular trough of the same material, and driven by a horse. The apples are ground as nearly as possible to a uniform consistence, it being especially desirable that the rinds and kernels should be thoroughly pressed, as on the former the colour, and on the latter the flavour of the liquor essentially depend. The resulting pulp, or, as it is termed, pomace, is taken to the cider-press, a machine constructed on the principle of the packing-press, on the floor of which the crushed fruit is piled up, between layers of straw or hair-cloth, and subjected to a severe and protracted pressure. The heap thus formed is styled the close. Wooden tubs or troughs receive the expressed liquor, which is then placed in casks, and left to ferment. This operation being successfully completed, the cider, bright and clear, is racked off into other casks, which are allowed to stand in the open air till the ensuing spring with their bungs lightly fixed, but which are then tightly closed. The best time for distilling it is said to be when it is from eighteen months to two years old, or rather when it has acquired its highest brightness and flavour in the cask. If the proper time for doing this be seized, the liquor thus bottled may be kept for a very long period, but, as a general rule, cider is extremely difficult to preserve, from the readiness with which it turns sour, owing to the development of lactic acid.

As a summer drink, cider is a most palatable and refreshing one, though its extended use seems to be confined to the western counties of England, where it occupies the place in popular favour held, in other parts of the country, by beer. The percentage of alcohol which it contains, varies from 5 to 8. We retain a most affectionate remembrance of the liquor in conjunction with the fairy nooks of Devon, and the rich pastures of Somerset, through which, some say two years ago, it was our fortune to ramble. Enchanted land of the west! how our fancies are entwined with the sunny valleys, deep shady lanes, and the beauty and vigour of those rustic inhabitants. Long may Pomona shed her choicest blessings on thy head, and her refreshing juices cheer the heart of the thrifty and way-worn traveller!

SEPTEMBER 26.

Saints Cyprian and Justina, martyrs, 304. St Bæbeba, pope and confessor, 310. St Colman, abbot and confessor, 610. St Nins the Younger, abbot, 1005.

ST CYPRIAN THE MAGICIAN.

This saint, so surnamed from his having, previous to his conversion, practised the arts of a magician or diviner, has been coupled in the calendar with Justina, a young Syrian lady, regarding whom a young pagan nobleman applied to Cyprian to assist him with his arts in rendering her more favourable to his suit. Justina was a Christian, and opposed, we are told, through the aid of the Virgin, such an
JAM AND JELLY MAKING.

In Gal's *Annals of the Parish*, in which the Rev. Micah Belwhider quaintly chronicles the occurrences of his district from 1760 downwards, the following entry occurs relative to an important epoch in the parochial history:

'If I should not, in my notations, forget to mark a new luxury that got in among the commonalty at this time. By the opening of new roads, and the traffic thereon with ears and carriers, and by our having been that of conversion going to the Clyde, and sailing to Jamaica's and the West Indies, heaps of sugar and coffee-beans were brought home, while many, among the kail-stocks and cabbages in their yards, had planted groset and berry bushes; which two things happening together, the fashion to make jam and jelly, which hitherto had been only known in the kitchens and confectionaries of the gentry, came to be introduced into the clachan (village). All this, however, was not without a plausible pretext; for it was found that jelly was an excellent medicine for a sore throat, and jam a remedy as good as London candy for a cough or a cold, or a shortness of breath. I could not, however, say that this gave me so much concern as the smuggling trade; only it occasioned a great fasnicer to Mrs Belwhider; for in the berry-time, there was no end to the borrowing of her brass-pan to make jelly and jam, till Mrs Teddy of the Cross Keys bought one, which in its turn came into request, and saved ours.'

This manufacture of jam and jelly may now be said to form an undertaking of some importance in every Scottish household, occupying a position in the social scale above the humblest. In South Britain, the process is also extensively carried on, but not with the universality or earnestness of purpose observable in the north. To purchase their preserves at the confectioner's, or to present to their guests sweetmeats, stored in those mandacious pots, which belies so egregiously the expectations entertained of them at first sight, in regard to cubic contents, would in the eyes of the generality of Scottish ladies (those of the old school at least), be an act of indefensible wantonness, and lack of good housewifery. Even when the household store was exhausted, as very frequently happens about the months of May or June, we have seen the proposal to remedy the deficiency by purchasing a supply from a shop rejected with scorn.

The jelly-making season may be said to extend over three months—from the beginning of July to the end of September, beginning with strawberries and going out with gooseberries and plums. Great care is exercised in the selection of a dry day for the operation, to insure the proper thickening of the boiled juice. As is well known, this last circumstance constitutes the most critical part of the process; and the obstinate syrup, resolutely refusing to coalesce, not unfrequently tries the patience and temper. In such cases, there is no remedy but to boil the mixture over again with an additional supply of sugar, the grudgingness of which, is a fertile cause of the difficulties in getting the juice thoroughly inspissated. We have a vivid recollection of being once in a farmhouse, when the wife of a collier in the neighbourhood, whom the goodwife had endeavoured to initiate in the mysteries of jelly-making, made her appearance with a most woebegone countenance, and dolorous narrative of non-issues. 'I can mak naething o' you thing,' she said with an expression of perfect helplessness, 'it's just stamin' like d'water!' Whether she was enabled to get this unsatisfactory state of matters remedied, we are unable to say.

Like washing-day, the manufacture of jam and jelly, whilst it lasts, entails a total disregard of the lords of the creation and their requirements, unless, indeed, as not frequently happens, the 'men-folk' of the family are pressed into the services as assistants. A huge pan of fruit and sugar is sometimes a difficult matter to convey to, and place properly on, the fire, and we have seen a great stalwart fellow, now an officer in her Majesty's army, summoned from the parlour to the kitchen, to give his aid in accomplishing this domestic operation. Should a student be spending the recess in the country, during the summer, he is very likely to be pounced on by the ladies of the family to assist them in gathering and sorting the fruit, or snipping off the noses and stalks with a pair of scissors. Of course, in general, the young man is only too happy to avail himself of so favourable an opportunity for flirtation, where the companions of his toils are young, good-looking, and blessed with a fair share of juvenile spirits.

The *Book of Days* is not a cookery-book, and, therefore, any directions or recipes in connection with jelly-making, would here be wholly out of place. Yet in connection with so familiar a custom of Scottish domestic life, we may allude to the difference of opinion prevalent among those versed in jam-love, as to the proper time which should be allowed for the syrup remaining on the fire, after having reached the point of ebullition. Some recommend the space of twenty minutes, others half-an-hour, whilst a few, determined that the preserves shall be thoroughly subjected to the action of Vulcan, keep the pan bubbling away for three-quarters, or even an entire hour. An esteemed

333
relative of our own always insisted on this last period being allowed, with the result, it must be stated, sometimes of the jam becoming a veritable decoction, in which the original shape of the fruit could scarcely be recognised, whilst the substance itself became, after having cooled, so indurated as to be almost impracticable for any other use than as a lollipop. As her old servant was wont to declare, 'she bolted the very judgment out o' t!'

In country places, in the north, fruits of the garden, many of the wild products of the woods and fields are made use of in the manufacture of preserves. The bilberry or blueberry, the barberry, and above all the bramble, are largely employed for this purpose; while in the Highlands and moorland districts, the cranberry, the whortleberry, and even the black and unsavoury berries of the roose or mountain-sorrel are made into jam. On the shores of the Argyllshire lochs, where, from their sheltered position, the fuchsia grows with remarkable luxuriance, its berries are sometimes made into a very palatable compote. Bramble-gathering forms a favourite play amid the juvenile members of a Scottish family, and we have a very distinct recollection in connection therewith, of wild brakes where the purple fruit grew luxuriantly, amid ferns, heath, and the raspberry bushes, with the inquiring brightness of a September sun overhead, and the brilliant varieties of a September foliage. Faces stained with livid hue, hands scratched with thorns and briars, and shoes and stockings drenched with ditch-water, are among the reminiscences of the joyous days of bramble-gathering.

The inconsiderable number of applications recorded by Mr Balhiller, as having been made to his wife for the use of her brass jelly-pan, is quite consonant with the actual state of matters in a country town in Scotland in former times. These culinary conveniences being rare, the fortunate possessor of one was beset on all sides by her neighbours with requests for it, and if she were good-natured and unselshab, she ran a considerable risk of being entirely excluded herself from participation of the benefit.

Now, however, that these utensils have become an appendage to every kitchen of the least pretension to gentility, such a state of matters has come to be ranked fairly among the legendary reminiscences of the past.

The institution of jelly and jam, as already observed, has experienced a much more extended development in North than in South Britain. In the former division of the island, the condiments in question are regarded as an indispensable appendage to every social tea-drinking, and are also invariably brought out on the occasion of any friend dropping in during the afternoon and remaining to partake of tea. To refrain from producing them, and allow the guest to make his evening repast on bread and butter, would be regarded as in the highest degree niggardly and ill-breeding. And in large social gatherings, such as entertainments in honour of visitors, or as a valediction to friends leaving the house, two dishes of jelly are often served up at the same table with the fish, meat, and cold vegetables.

SEPTEmBER 27.

Saints Cosmas and Damian, martyrs, about 303. St Bencet, Count of Arian, and his wife, St Delphina, 14th century.

Born.—Louis XIII. of France, 1601; Fontainebleau; Jacques Benigne Bossuet, eminent preacher and controversialist, 1699; Diégo.

Died.—Marco Girolamo Vida, author of Latin poems, &c., 1564; Alba; St Vincent de Paul, eminent philanthropist, 1660; Pope Innocent XII, 1700; Dr Thomas Burnett, author of the Sacred Theory of the Earth, 1715, Charterhouse, London; Admiral Bené Duguay-Trouin, French naval commander, 1734; Paris; James Bradley, celebrated engineer, 1772, Turnhurt, Staffordshire.

ROBERT, DUKE OF NORMANDY.

By the battle of Tournebray, fought this day in 1106, was decided the destiny of the dukedom of Normandy, and of its unfortunate ruler Robert, the eldest son of William the Conqueror.

Carried away by the impetuosity of his character, and deceived by evil counsellors, Robert brought trouble into his dominions, and discords into the house of his father, who forgave him only on his dying bed. Leaving to his brother William the care of his Norman subjects, he yielded to the religious and chivalric spirit of the times, and with the choicest of the nobility set out to show his valour on the plains of Syria, where he was one of the chiefs of the first Crusade.

We can only praise the courage and military exploits of Duke Robert in the east; they were so extraordinary as to obtain him the offer of the crown of Jerusalem, which, on his refusal, was given to Godfrey of Bouillon. A few flags which he had taken from the enemy, were all he brought back from his victories, and these he presented to the Abbey of the Holy Trinity at Caen. During his absence, his brother Henry had seized on the
Robert, Duke of Normandy.

September 28.

Roberts, Duke of Normandy, and, though deep in debt, Robert was led into further expenses in the vain hope of recovering his lost inheritance. After this reconciliation between the brothers became impossible, and want of order and economy were the ruin of Robert. He had recourse to arbitrary taxes, not only imposed upon the provinces, but upon the citizens, merchants, and rich people, thus causing general discontent. Numerous and powerful factions were formed; Henry I. was only too ready to obey their call, and arrived in Normandy at the head of his army. His gold bought many partisans; the towns of Bayeux and Caen alone remained faithful to Duke Robert; and after a long siege the first was carried by assault and burned, whilst a conspiracy broke out in Caen, scarcely leaving the unfortunate duke time to escape. A few gallant chevaliers, faithful to their oaths and the principles of legitimacy, rallied round him; but the battle of Tinchebrai was gained by the king, and the duke was taken prisoner.

Became master of his brother, Henry imprisoned him in the castle of Cardiff. For greater security, the keys of the unhappy duke were put out. His detention lasted from 1108 to 1139, when he died, and it was during this long period that he endeavoured to soothe his weariness by becoming a poet. The songs of the Welsh bards were tried to alleviate his sorrows, and the deep distress he felt at being separated from his only child, whose prospects he had blighted. Forced to learn the language of his jailers, he made use of it to compose several pieces in Welsh, one of which remains, a sort of plaintive elegy. The prince looked on an old oak-tree rising above the forest, which covered the promontory of Penarth, on the Bristol Channel, and from the depths of his prison he thus mournfully addresses it, following the custom of the Welsh bards, who repeat the name of the person or thing they address in each stanza:

Oak, born on these heights, theatre of carnage, where blood has rolled in streams:
Misery to those who quarrel about words over wine.

Oak, nourished in the midst of meadows covered with blood and corpses:
Misery to the man who has become an object of hatred.

Oak, grown up on this green carpet, watered with the blood of those whose heart was pierced by the sword:
Misery to him who delights in discord.

Oak, in the midst of the trees and plants which whilst surrounding these have stopped thy growth and hindered the thickening of thy trunk:
Misery to the man who is in the power of his enemies.

Oak, placed in the midst of woods which cover the promontory from whence thou seest the waves of the Severn struggle against the sea:
Misery to him who sees that which is not death.

Oak, which has lived through storms and tempests in the midst of the tumult of war and the ravages of death:
Misery to the man who is not old enough to die.

He died at Cardiff, in 1139, in his eightieth year.

Expenses of a Decent Lodging in London in 1719.

Swift thus writes from London to his friend Stella, 27th September 1710: "I lodge in Bury Street [St James's], where I removed a week ago. I have the first floor, a dining-room, and bed-chamber, at eight shillings per week; plague deep, but I spend nothing for eating, never go to a tavern, and very seldom in a coach; yet, after all, it will be expensive."—Works, Scott's edition, ii. 29.

What seemed to Swift in Anne's days so 'plague deep,' would not be found considerably deeper; certainly it would not be less than forty-eight shillings a week.

September 28.

Born.—Sir William Jones, oriental scholar, 1746, London.
Died.—Emperor Lothaire I., 855; Henry VI., emperor of Germany, 1197; Jean Baptiste Massillon, celebrated French preacher, 1742; Thomas Day, author of Sandford and Merton, 1789, Warrington-on-Thomas; Granville Penn, miscellaneous writer, 1844, Stokes Park, Bucks; Thomas Amyot, literary antiquary, 1850, London; Dr Karl Ritter, distinguished geographer, 1859, Berlin.

Thomas Day.

Rousseau's ideal of education was a cross between the Red Indian and the Spartan. The influence of his fervid advocacy was greatest in France, but he did not lack thorough-going disciples in England, who reduced some of his most questionable dogmas to practice. Mrs. Gaskell, in her Life of Charlotte Brontë, relates that she had an aunt who, in her childhood, was adopted by a wealthy couple, with the purpose of training her on French and philosophic principles. Her food and clothing were of the simplest and rudest description; but for this she did not mind, being healthy and merry, and indifferent to dress and eating; her hardship lay in the fact, that she and a favourite dog were taken for an airing in the carriage on alternate days; the creature whose turn it was to be left at home being tossed in a blanket—an operation which the girl especially dreaded. Her aversion to the tossing was the reason why it was persevered in. She had grown indifferent to dressed-up ghosts, and so the blanket-exercise was selected as the next mode of hardening her nerves.

One of the most notable of Rousseau's English followers was Thomas Day, the author of Sandford and Merton, a book which several generations of children have heartily enjoyed for its stories, without a thought of its philosophy. Day was born in Wellclose Square, London, in 1748. His father held a place in the custom-house, and left him a fortune of £1300 a year. He was educated at the Charterhouse and Oxford, and spent some summers in France, where, with all the enthusiasm of youth, he received the new philosophy of education.

855
condemning old systems as wholly vicious, and believing that no perfection of character was unattainable under Rousseau’s. Having resolved on marriage, he determined that his wife should be modelled in accordance with the new light. He therefore went to an orphan asylum at Shrewsbury, and picked out a flaxen-haired girl of twelve, whom he named Sabrina Sidney, after the Severn and Alernon Sidney; and then to the Foundling Hospital in London, where he selected a second, whom he called Lucretia. In taking these girls, he gave a written pledge, that within a year he would place one of them with a respectable tradesman, giving £100 to bind her apprentice, and that he should maintain her, if she should turn out well, until she married or commenced business, in either of which cases he would advance £500. With Sabrina and Lucretia he set off for France, in order that, in quiet, he might discover and discipline their characters. He, however, and the girls quarrelled; next they took small-pox, and he had to pay the doctor; and when he was glad to return to London, and get Lucretia off his hands by apprenticing her to a milliner on Ludgate Hill. It is pleasant to know that she behaved well; and that on her marriage to a substantial linen-draper, Day cheerfully produced his promised dowry of £500. Poor Sabrina was reserved for further trial, but by no means could she qualify for Mrs Day; against the sense of pain and danger no discipline could fortify her. When Day dropped melting sealing-wax on her arms, she flinched; and when he fired pistols at her garments, she started and screamed. When he tried her fidelity by telling her pretended secrets, she divulged them in gossip with the servants. Finally, she exhausted his patience by wearing thin sleeves for ornament, instead of warmth, when out on a visit. He packed her off to an ordinary boarding-school, kept her there for three years, allowed her £20 a year, gave her £500 on her marriage to a barrister; and when she became a widow with two boys, he pensioned her with £30 a year. Failing to educate a wife, he was content to marry, in 1788, Miss Milnes of Wakefield, a lady whose opinions nearly coincided with his own, and who was willing to abjure all vanities in dress. Day was killed in 1759 by a loup from a young boar, which he was trying to train on a new method.

GHOST WITNESS-SHIP.

In the year 1749, the remote Highland district of Braemar, in Aberdeenshire, was the scene of a murder, which was subsequently alleged to have been discovered through the instrumentality of the ghost of the murdered person; to which effect evidence was given on the trial of two men before the High Court of Justiciary in Edinburgh. From the details of the trial, which have been printed in a separate volume by the Bannatyne Club, Sir Walter Scott framed a brief narrative, which may serve on the present occasion, with the help of a few additional particulars:

‘Upon the 10th of June 1754, Duncan Terig Clark, and Alexander Bain Macdonald, two Highlanders, were tried before the Court of Justiciary, Edinburgh, for the murder of Arthur Davis, a sergeant in Guise’s Regiment, on the 28th of September 1749. The accident happened not long after the civil war [of 1745], the embers of which were still reeking, so there existed too many reasons on account of which an English soldier, straggling far from assistance, might be privately cut off by the inhabitants of these wilds. [Davis had a fowling-piece, and money and rings upon his person, and some of his valuables were afterwards seen in possession of the accused. Robbery seems to have been the sole object of his murderers.] It appears that Sergeant Davis was amusing many years without any certainty as to his fate. At length an account of the murder appeared from the evidence of another Alexander Macpherson [or Macgillies], a Highlander [a farm-servant at Inver and about twenty-six years of age], speaking no language but Gaelic, and sworn by an interpreter, who gave the following extraordinary account of his cause of knowledge: He was, he said, in bed in his cottage, when an apparition came to his bedside, and commanded him to rise and follow him out of doors. Believing his visitor to be one Farquharson, a by and by he was glad to return to London, and get Lucretia off his hands by apprenticing her to a milliner on Ludgate Hill. It is pleasant to know that she behaved well; and that on her marriage to a substantial linen-draper, Day cheerfully produced his promised dowry of £500. Poor Sabrina was reserved for further trial, but by no means could she qualify for Mrs Day; against the sense of pain and danger no discipline could fortify her. When Day dropped melting sealing-wax on her arms, she flinched; and when he fired pistols at her garments, she started and screamed. When he tried her fidelity by telling her pretended secrets, she divulged them in gossip with the servants. Finally, she exhausted his patience by wearing thin sleeves for ornament, instead of warmth, when out on a visit. He packed her off to an ordinary boarding-school, kept her there for three years, allowed her £20 a year, gave her £500 on her marriage to a barrister; and when she became a widow with two boys, he pensioned her with £30 a year. Failing to educate a wife, he was content to marry, in 1788, Miss Milnes of Wakefield, a lady whose opinions nearly coincided with his own, and who was willing to abjure all vanities in dress. Day was killed in 1759 by a loup from a young boar, which he was trying to train on a new method.

GHOST WITNESS-SHIP.

In the year 1749, the remote Highland district of Braemar, in Aberdeenshire, was the scene of a murder, which was subsequently alleged to have been discovered through the instrumentality of the ghost of the murdered person; to which effect evidence was given on the trial of two men before the High Court of Justiciary in Edinburgh. From the details of the trial, which have been printed in a separate volume by the Bannatyne Club, Sir Walter Scott framed a brief narrative, which may serve on the present occasion, with the help of a few additional particulars:

‘Upon the 10th of June 1754, Duncan Terig Clark, and Alexander Bain Macdonald, two Highlanders, were tried before the Court of Justiciary, Edinburgh, for the murder of Arthur Davis, a sergeant in Guise’s Regiment, on the 28th of September 1749. The accident happened not long

386
inference was rather smart and plausible than sound, for the apparition of the ghost being admitted, we know too little of the other world to judge whether all languages may not be alike familiar to those who belong to it. It imposed, however, on the jury, who found the accused parties guilty, although their counsel and solicitor,* and most of the court, were satisfied of having committed the murder.'

Scott's hypothesis for the explanation of the alleged apparition, is that giving information is unpopular in the Highlands, and Macpherson got up the ghost-story, 'knowing well that his superstitious countrymen would pardon his communicating the commission intrusted to him by a being of the other world.' This hypothesis (whatever other may be adopted) is not only without support in positive fact, but it assumes a degree of anxiety for the execution of justice wholly gratuitous, and certainly far from characteristic of the Braemar Highlander of that day. It also ignores the corroborative evidence of Isabel Maccharlie. What is even more important, it is out of harmony with the chronology of the story related by his ghostly visitation and buried the sergeant's bones three years before any measures for the vindication of justice were taken, and, for anything that appears, no such measures would ever have been taken, but for the active interference of a retired officer of the army, named Small. This gentleman seems to have been inspired with a strong feeling as a friend of the government and of the army, in contradistinction to the Jacobite sentimemts which then largely prevailed. So vigorous were his efforts to make out evidence against the murderers of Davis, that it was taken notice of in the formal defence of the accused, and orally by their counsel, the eminent Mr Lockhart, who was notoriously a Jacobite. Small felt so much exasperated by the insinuations of the counsel, that he met them dressed in the Parliament Cloak, with his sword by his side, and made an assault upon Mr Lockhart, as the latter was walking to the court; for which offence he was put in prison by the Lords, and only liberated on his making an apology.† It seems to have been to this circumstance that Welderburn alluded in his famous retort upon Lockhart, in the Court of Session in Edinburgh, when, stung by the overbearing manner of his senior, he reminded him of his having been disgraced in his person and dishonoured in his bed—a burst of sarcasm followed by his laying down his gown, and deserting the Scotch for the English bar. (See Book of Days, vol. i. p. 39.)

The case of Sergeant Davis, remarkable as it is, does not stand quite singular. A similar one, which occurred in the county of Durham in the year 1631, has been related in many books, and is the subject of a critical historical inquiry in Surtees's History of Durham. The circumstances can be made out with tolerable clearness as follows:

One Walker, a yeoman of good estate, and a widower, living at Chester-le-Street, had in his service a young female relative named Anne Walker. The results of an amour which took place between them, caused Walker to send away the poor girl under the care of one Mark Sharp, a collier, professedly that she might be taken care of as befitted her condition, but in reality that she might no more be troublesome to her lover in this world.

Nothing was heard of her till, one night in the ensuing winter, an honest fuller, named James Graham, who lived about six miles from Walker's house, coming down from the upper to the lower floor of his mill, found a woman standing there, with her hair hanging about her head, in which were five bloody wounds. According to the man's evidence, afterwards given,* he asked her who she was, and what she wanted; when she gave an account of her sad fate, having been killed by Sharp on the moor in their journey, and thrown into a coal-pit hard by, while the instrument of her death, a pick, had been hid under a bank, along with his clothes, which were stained with her blood. She demanded of Graham that he should undertake the business of exposing her murder, and having her murderesses punished; a task he did not enter upon till she had twice reappeared to him, the last time with a threatening aspect.

The body, the pick, and the bloody clothes being found as Graham described, little doubt remained that Walker and Sharp were the guilty men. They were tried at Durham before Judge Davenport in March 1633. The man of discovery could not fail in that age to make a great impression, and produce much excitement at the trial. Hence it is not very surprising to hear that one of the jury, named Fairbair, alleged that he saw a child sitting on Walker's shoulder. The men were found guilty, condemned, and executed.

---

**SEPTMBER 29.**

St Michael and all the Holy Angels. St Theodota, martyr, 642.

**Michaelmas Day.**

Michaelmas Day, the 29th of September, properly named the day of St Michael and All Angels, is a great festival of the Church of Rome, and also observed as a feast by the Church of England. In England, it is one of the four quarterly terms, or quarter-days, on which rents are paid, and in that and other divisions of the United Kingdom, as well as perhaps in other countries, it is the day on which burghal magistrates and councils are re-elected. The only other remarkable thing connected with the day is a widely prevalent custom of marking it with a goose at dinner.

Michael is regarded in the Christian world as the chief of angels, or archangel. His history is obscure. In Scripture, he is mentioned five times, and always in a warlike character; namely, thrice by Daniel as fighting for the Jewish church against Persia; once by St Jude as fighting with the devil in Richardon's Borderer's Table Book (vi. 351), it is stated that Graham's original deposition is in the Bodleian Library, Oxford.
about the body of Moses; and once by St John as fighting at the head of his angelic troops against the dragon and his host. Probably, on the hint thus given by St John, the Bomiah church taught at an early period that Michael was employed in command of the loyal angels of God, to overthrow and consign to the pit of perdition Lucifer and his rebellious associates—a legend which was at length embellished in the sublimest poetry by Milton. Sometimes Michael is represented as the sole archangel, sometimes as only the head of a fraternity of archangels, which includes likewise Gabriel, Raphael, and some others. He is usually represented in coat-armour, with a glory round his head, and a dart in his hand, trampling on the fallen Lucifer. He has been as much furnished, like the human warriors of the middle ages, with a heraldic ensign—namely, a banner hanging from a cross. We obtain a curious idea of the religious notions of those ages, when we learn that the red velvet-covered buckler worn by Michael in his war with Lucifer, and used by St Casimir in the Norman army from 1057 to 1067, when the bishop of Avranches at length forbade its being any longer exhibited.

Angels are held by the Church of Rome as capable of interceding for men; whereas it is that prayers are addressed to them and a festival appointed in their honour. Wheatley, an expositior of the Book of Common Prayer, probably expresses the limited view of the subject which is entertained in the Church of England, when he says, that 'the feast of St Michael and All Angels is observed that the people may know what blessings are derived from the ministry of angels.' Amongst Catholics, Michael, or, as he has been named, St Michael, is invoked as 'a most glorious and warlike prince,' 'chief officer of paradise,' 'captain of God's hosts,' 'receptor of souls,' 'the vanquisher of evil spirits,' and 'the admirable general.' It may also be remarked, that in the Sarum missal, there is a mass to St Raphael, as the protector of pilgrims and travellers, and a skilful worker with medicine; likewise an office for the continual intercession of St Gabriel and all the heavenly militia. Protestant writers trace a connection between the ancient notion of tutelar genii and the Catholic doctrine respecting angels; indeed, the one is only an expansion on the other. As to the soundness of this view we do not give any opinion, but it seems certain that in early ages there was a prevalent notion that the affairs of men were much under the direction of angels, good and bad, and men prayed to angels both to obtain good and to avoid evil. Every human being was supposed to have one of these spiritual existences watching over him, aiming him good, and ready to help him when he was in need. And, however we may judge this to be a delusion, we must certainly own that, as establishing a connection between the children of earth and something above and beyond the earth, as leading men's minds away from the grossness of worldly pursuits and feelings into the regions of the beautiful and the infinite, it is one of by no means the worst tendencies. We must be prepared, however, to find Columbus amidst all the more aspiring ideas of our forefathers.

In time, the sainted spirits of pious persons came to stand in the place of the generally nameless angels, and each place and person had one of these as a special guardian and protector. Not only had each country its particular patron or tutelar saint, but there was one for almost every town and church. Even trades and corporations had their special saints. And there was one more specially to be invoked for each particular ail that could afflict humanity. It will be curious here to descend a little into particulars. First, as to countries, England had St George; Scotland, St Andrew; Ireland, St Patrick; Wales, St David; France, St Dennis and (in a less degree) St Michael; Spain, St James (Jago); Portugal, St Sebastian; Italy, St Anthony; Germany, St George; France, St Gall and the Virgin Mary; Germany, St Martin, St Boniface, and St George Cataphractus; Hungary, St Mary of Aquisgrana and St Lewis; Bohemia, St Wenceslaus; Austria, St Colman and St Leopold; Flanders, St Peter; Holland, St Mary; Denmark, St Anscharius and St Canute; Sweden, St Anscharius, St Eric, and St John; Norway, St Olafus and St Anscharius; Poland, St Casimir; Poland; and St Albert; Russia, St Nicholas, St Mary, and St Andrew. Then as to cities, Edinburgh had St Giles, Aberdeen St Nicholas, and Glasgow St Mungo; Oxford had St Frideswide; Paris, St Geneviève; Rome, St Peter and St Paul; Venice, St Mark; Naples, St Januarius and St Thomas Aquinas; Lisbon, St Vincent; Brussels, St Mary and St Gudula; Vienna, St Stephen; Cologne, the three kings, with St Ursula and the eleven thousand virgins.

St Agatha presides over nurses. St Catherine and St Gregory are the patrons of literati and studious persons; St Catherine also presides over the arts. St Christopher and St Nicholas preside over mariners. St Cecilia is the patroness of musicians. St Cosmas and St Damian are the patrons of physicians and surgeons, also of philosophers. St Dismas and St Nicholas preside over thieves; St Eustace and St Hubert over hunters; St Felicitas over young children. St Julian is the patron of pilgrims. St Leonard and St Barbara protect captives. St Luke is the patron of painters. St Martin and St Urban preside over tipsey people, to save them from falling into the kennel. Fools have a tutelar saint in St Mathurin, archers in St Sebastian, divines in St Thomas, and lovers in St Valentine. St Thomas Becket presided over blind men, eunuchs, and sinners, St Winifred over virgins, and St Yves over lawyers and civilians. St Ethelbert and St Eilian were invoked against thieves.

Generally, the connection of these saints with the classes of persons enumerated took its rise in some incident of their lives, and in the manner of their deaths; for instance, St Nicholas was once in danger at sea, and St Sebastian was killed by arrows. Probably, for like reasons, St Agatha presided over valleys, St Anne over riches, St Barbara over hills, and St Florian over fire; while St Silvester protected wood, St Urban wine and vineyards, and St Oeyth was invoked by women to guard their keys, and St Anne as the restorer of lost things. Generally, the patron-saints of trades were on similar grounds—persons who found themselves exercised them, or were supposed to have done so. Thus, St Joseph naturally presided over carpenters, St Peter over fishmongers, and St Crispin over shoemakers. St Arnold was the
patron of millers, St Clement of tailors, St Eloy of smiths, St Goodman of tailors, St Florian of mercers, St John Port-Latin of booksellers, St Louis of pewter-makers, St Severus of fullers, St Wilfred of bakers, St William of hatters, and St Windelina of shepherds. The name of St Cloud obviously made him the patron-saint of nunnemites; St Sebastian became that of pinmakers, from his having been stuck over with arrows; and St Anthony necessarily was adopted by swine-herds, in consequence of the legend about his pigs. It is not easy, however, to see how St Nicholas came to be the presiding genius of parish-clerks, or how the innocent and useful fraternity of potters obtained so alarming a saint as ‘St Gore with a pot in his hand, and the devil on his shoulder.’

The meditating saints are enumerated in the following passage from a whimsical satire of the sixteenth century:

To every saint they also do his office here assign, And fourteen do they count, of whom thou may’st have aid divine; Among the which Our Lady still doth hold the chiefest place, And of her gentle nature helps in every kind of case. St Barbara looks that none without the body of Christ doth die; St Cuthwine favours learned men and gives them wisdom high, And teacheth to resolve the doubts, and always giveth aid Unto the scolding sophist, to make his reason stay. St Apollis the rotten teeth doth help when sore they ache; Osiris from the bleared eyes the cause and grief doth take; Rocks healeth scabs and mangins, with poxcs, and scurf, and scall, And couleth raging carbuncles, and boils, and botches all. There is a saint, whose name in verse cannot declared be. * He serveth the plague and each infectious malady. St Valentine, beside, to such as do his power despise The falling-sickness sends, and helps the man that doth to him cries. There is a saint of furious folk doth Vitus pacify, And doth restore them to their wit, being called on speedily. Eustaceus doth ease the colic and the griping of the guts, And Laurence from the back and from the shoulder sickness puts. Baisie drives away the quinsey quite with water sanctified, From every Christian creature here, and every beast beside. But Leonard of the prisoners doth the bands asunder fall, And breaks the prison-doors and chains, wherewith his church is full. The quarant ague, and the rest doth Pernet take away, And John preserves the worshippers from prison every day; Which force to Pernet sake they give, that help enough may be, By saints in every place. What doth thou omit to see? From headless unprouided death doth Mark deliver his, Who of more force than death himself, and more of value is.

* Probably St Roque.

St Anne gives wealth and living great to such as love her most, And is a perfect finder out of things that have been lost; Which virtue likewise they ascribe unto another man, St Vincent; what he is I cannot tell, nor whence he came.

Against reproach and infamy on Swam do they call; Romulus driveth spirits away and wicked devils all. The bishop Wolfgang heals the goat, St Wendela keeps the sheep,

With shepherds and the oxen fat, as he was wont to keep.

The bristled hogs doth Anthony preserve and cherish well,

Who in his lifetime always did in woods and forests dwell.

St Gertrude rides the house of mice, and killeth all the rats.

And like doth Bishop Huldric with his two earth-passing cats.

St Gregory looks to little boys, to teach their a, b, c,

And makes them for to love their books, and scholars good to be.

St Nicholas keeps the mariners from dangers and disease,

That beaten are with boisterous waves, and to’rd in dreadful seas.

Great Christopher that painted is with body big and tall,

Doth even the same, who doth preserve and keep his servants all.

From fearful terrors of the night, and makes them well to rest.

By whom they also all their life with diverse joys are blest.

St Agatha defends the house from fire and fearful flame.

But when it burns, in armour all doth Florius quench the same.

It will be learned, with some surprise, that these notions of preserving angels and saints are what have led to the custom of choosing magistrates on the 29th of September. The history of the middle ages is full of curious illogical relations, and this is one of them. Local rulers were esteemed as in some respects analogous to tutelar angels, in as far as they presided over and protected the people. It was therefore thought proper to choose them on the day of St Michael and All Angels. The idea must have been extensively prevalent, for the custom of electing magistrates on this day is very extensive.

‘September, when by custom (right divine) Geese are ordained to bleed at Michaelmas’ shrine’—

sings Churchill. This is also an ancient practice, and still generally kept up, as the appearance of the stage-coaches on their way to large towns at this season of the year amply testifies. In Blount’s Tenures, it is noted, in the tenth year of Edward IV., that John de la Hay was bound to pay to William Barnaby, Lord of Lastre, in the county of Hereford, for a parcel of the demesne lands, one goose fit for the lord’s dinner, on the feast of St Michael the archangel. Queen Elizabeth is said to have been eating her Michaelmas goose when she received the joyful tidings of the defeat of the Spanish Armada. The custom appears to have originated in a practice among the rural tenantry of bringing a good stubble goose at Michaelmas to the landlord, when paying their rent, with a view
of labourers, to the number of threescore or upwards, all in green caps alike, bearing in their hands the symbols of their several employments in so great a business, with drums before them, marching twice or thrice about the cisterm, orderly present themselves before the mount, and after their obeisance, the speech is pronounced. It thus commences:

'Long have we labour'd, long desir'd, and pray'd
For this great work's perfection; and by the aid
Of heaven and good men's wishes, 'tis at length
Happily conquer'd, by cost, art, and strength:
After five years' dear expense in days,
Travail, and pains, beside the infinite ways
Of malice, envy, false suggestions,
Able to daunt the spirit of mighty ones
In wealth and courage, this, a work so rare,
Only by one man's industry, cost, and care,
Is brought to blest effect, so much withstood,
His only aim the city's general good.'

A similar series of mere rhymes details the construction of the works, and enumerates the labourers, concluding thus:

'Now for the fruits then: flow forth, precious spring,
So long and dearly sought for, and now bring
Comfort to all that love thee: loudly sing,
And with thy crystal murmur struck together,
Bid all thy true well-wishers welcome hither!'

'At which words,' we are told, 'the flood-gate opens, the stream let into the cisterm, drums and trumpets giving it triumphant welcomes, a peal of small cannon concluding all.'

This important work, of the utmost sanitary value to London, was commenced and completed by the indomitable energy of one individual, after it had been declined by the corporate body, and opposed by many upholders of 'good old usages,' the bane of all improvements. The bold man, who came promptly forward when all others had timidly retired, was a simple London tradesman, a goldsmith, dwelling in Baseinghall Street, named Hugh Myddleton. He was of Welsh parentage, the sixth son of Richard Myddleton, who had been governor of Denbigh Castle during the reigns of Edward VI, Mary, and Elizabeth. He was born on his father's estate at Galch Hill, close to Denbigh, 'probably about 1556,' says his latest biographer, Mr. Smiles, for 'the precise date of his birth is unknown.' At the proper age, he was sent to London, where his elder brother, Thomas, was established as a grocer and merchant-adventurer, and under that brother's care he commenced his career as a citizen by being entered as an apprentice of the Goldsmiths' Company. In due time he took to business on his own account, and, like his brother, joined the thriving merchant-adventurers. In 1597, he represented his native town of Denbigh in parliament, for which he obtained a charter of incorporation, desiring further to serve it by a scheme of mining for coal, which proved both unsuccessful and a great loss to himself. His losses were, however, well covered by his London business profits, to which he had now added cloth manufacturing. On the accession of James I, he was appointed one of the royal
jewellers, being thus one of the most prosperous and active of citizens.

The due supply of pure spring water to the metropolis, had often been canvassed by the corporation. At times it was inconveniently scanty; at all times it was scarcely adequate to the demand, which increased with London's increase. Many projects had been brought before the citizens to convey a stream toward London, but the expense and difficulty had deterred them from using the powers with which they had been invested by the legislature; when Myddelton declared himself ready to carry out the great work, and in May 1609 'the dauntless Welshman' began his work at Chadwell, near Ware. The engineering difficulties of the work and its great expense were by no means the chief cares of Myddelton; he had scarcely begun his most patriotic and useful labours, ere he was assailed by an outcry on all sides from landowners, who declared that his river would cut up the country, bring water through arable land, that would consequently be overflowed in rainy weather, and converted into quagmires; that nothing short of ruin awaited land, cattle, and men, who might be in its course; and that the king's highway between London and Ware would be made impassable! All this mischief was to befall the country-folks of Hertfordshire and Middlesex for Mr Myddelton's 'own private benefit,' as was boldly asserted, with a due disregard of its great public utility; and ultimately parliamentary opposition was strongly invoked. Worried by this senseless but powerful party, with a vast and expensive labour only half completed, and the probability of want of funds, most men would have broken down in despair and bankruptcy; Myddelton merely sought new strength, and found it effectually in the king. James I joined the spirited contractor, agreed to pay one-half of the expenses in consideration of one-half share in its ultimate profits, and to repay Myddelton one-half of what he had already disbursed. This spirited act of the king silenced all opposition, the work went steadily forward, and in about fifteen months after this new contract, the assembly took place at the New River Head, in the fields between Ialington and London, to witness the completion of the great work, as we have already described it.

The New River Head, 1665—after Hollar.

The pencil of the honest and indefatigable Hollar has preserved to us the features of this interesting locality, and we copy his view above. Mr Smiles observes that 'the site of the New River Head had always been a pond, "an open idell pools," says Hawes, "commonly called the Duckpond; being now by the master of this work reduced into a comely pleasant shape, and many ways adorned with buildings." The house adjoining it, belonging to the company, was erected in 1613.' Hollar's view indicates the formal, solid, aspect of the place, and is further valuable for the curious view of Old London in the background; the eye passing over Spa-fields, and resting on the city beyond; the long roof of St Paul's Cathedral appearing just above the boundary-wall of the New River Head; and the steeple of Bow Church to the extreme left. This view was fortunately sketched the year before the great fire, and is consequently unique in topographical value.

Myddelton's autograph, written during the last year of his great labour, is here engraved (see the next page). To it was prefixed the title 'Sir,' by the king's award, at the completion of the undertaking. James I seems to have been fully aware, 301
SIR HUGH MYDDELTON, AND THE

THE BOOK OF DAYS. WATER SUPPLY OF OLD LONDON.

at all times, of Myddelton's merit, and anxious to
help and honour it. Some years afterwards, when
he had temporarily reclaimed Bradin Harbour,
Isle of Wight, from the sea, the king raised him to
the dignity of baronet without the payment of the
customary fee, amounting to £1060, a very large
sum of money in those days.

A few words must suffice to narrate Myddelton's
later career. He sold twenty-eight of his thirty-
six shares in the New River soon after its com-
pletion. With the large amount of capital this
gave him to command, he carried out the work at
Brading, just alluded to. He then directed his
attention to mining in North Wales, and continued
to work the mines with profit for a period of about
sixteen years. The lead of these mines contained

much silver, and a contemporary declares that he
obtained of 'pure silver 100 pounds weekly,' and
that his total profits amounted to at least £3000
a month. 'The popular and oft-repeated story of
Sir Hugh having died in poverty and obscurity,
is only one of the numerous fables which have
accumulated about his memory,'* observes Mr
Smiles. 'There is no doubt that Myddelton
realised considerable profits by the working of
his Welsh mines, and that toward the close of
his life he was an eminently prosperous man.'
He died at the advanced age of seventy-six, leaving
large sums to his children, an ample provision
for his widow, many bequests to friends and relatives,
annuities to servants, and gifts to the poor. All
of which it has been Mr Smiles's pleasant task to
prove from documentary evidence of the most
unimpeachable kind.

In order to fully comprehend the value of

THE LITTLE CONDUIT IN CHEAPSIDE.

Myddelton's New River to the men of London, we
must take a retrospective glance at the older water

* The favourite fable is, that he was ruined by his
connection with the New River, applied for relief to the
citizens, and got little, lived in great indigence, and died
disregarded. It was even asserted that he hid his decen-
dence beneath the name of Raymond, in a Shropshire
village, where he was occasionally employed as a pavior.

supply. Two or three conduits in the principal
streets, some others in the northern suburbs, and
the springs in the neighbourhood of the Fleet
River, were all they had at their service. The
Cheapside conduits were the most used, as they
were the largest and most decorative of these
structures. The Great Conduit in the centre of this
important thoroughfare, was an erection like a
tower, surrounded by statuary; the Little Conduit
stood in Westcheap, at the back of the church of
St Michael, in the Querne, at the north-east end of
Paternoster Row. Our cut exhibits its chief features,
as delineated in 1585 by the surveyor R. Treswell.
Leaden pipes ran all along Cheapside, to convey
the water to various points; and the City Records
tell of the punishment awarded one dishonest
resident, who tapped the pipe where it passed his
doors, and secretly conveyed the water to his own
well. Except where conveyed to some public
building, water had to be fetched for domestic use
from these ever-flowing reservoirs. Large tankards,

TANKARD-BEARER.

holding from two to three gallons, were constructed
for this use; and may be seen ranged round the
conduit in the cut above given. Many poor men
the curious fact, that the rude old elm-tree water-pipes were taken up and removed from before the houses in Piccadilly, extending from the Duke of

Devonshire's to Clarges Street, several years ago; and that a similar series were recently exhumed from Pall Mall.

**CEREMONIES FORMERLY CONNECTED WITH THE ELECTION OF THE MAYOR OF NOTTINGHAM.**

On the day the new mayor assumed office (September 29), he, the old mayor, the aldermen, and councillors, all marched in procession to St Mary's Church, where divine service was said. After service the whole body went into the vestry, where the old mayor seated himself in an elbow-chair at a table covered with black cloth, in the middle of which lay the mace covered with rosemary and sprigs of bay. This was termed the *burying of the mace*, a doubtless symbolic act, denoting the official decease of its late holder. A form of electing the new mayor was then gone through, after which the one retiring from office took up the mace, kissed it, and delivered it into the hand of his successor with a suitable compliment. The new mayor then proposed two persons for sheriffs, and two for the office of chamberlains; and after these had also gone through the votes, the whole assemblage marched into the chancel, where the senior coroner administered the oath to the new mayor in the presence of the old one, and the town-clerk gave to the sheriffs and chamberlains their oath of office. These ceremonies being over, they marched in order to the New Hall, attended by such gentlemen and tradesmen as had been invited by the mayor and sheriffs, where the feasting took place. On their way, at the Week-day-Cross, over against the ancient Guild Hall, the town-clerk proclaimed the mayor and sheriffs; and at the next ensuing market-day they were again proclaimed in the face of the whole market at the Malt Cross.

The entertainment given as a banquet on these occasions will perhaps astonish some of their successors in office. "The mayor and sheriffs..."
welcomed their guests with bread and cheese, fruit in season, and pipes and tobacco.' Imagine the present corporation and their friends sitting down to such a feast!

SEPTEMBER 30.

Born.—Burrideis, tragio dramatist, 480 a.c.; Salamis; Celsus Pompeius, Magnus (Pompey the Great), 106 a.c.; Jacques Necker, financier to Louis XVI, 1754, Geneva; William Hutton, miscellaneous writer, 1728, Derby.

WILLIAM HUTTON.

Biography records scarcely a finer instance of industry and economy leading their possessor out of all the unprocurous circumstances to affluence and honour, than the story of William Hutton, the Birmingham stationer. His father was a wool-comber, and a dissipated character. William was born in Derby in 1793, and, at the age of seven, was set to earn his living in the Derby silk-mill, and, being too small for his business, he had to move about on a pair of high pattens. In his fifteenth year, he went to Nottingham, and served a second apprenticeship at the stocking-frame by which, on reaching manhood, he could not maintain himself. For amusement, he commenced to practise bookbinding, and, growing expert, resolved to make it his trade. He took a shop at Southwell, fourteen miles from Nottingham, at a rent of 20s. a year, and there resorted every Saturday, the market-day. He used to leave Nottingham at five in the morning, carrying a burden of three pounds' weight to thirty, opened shop at ten, dined on bread and cheese, and half a pint of ale, took from 1s. to 6s. shut up at four, and trudged home in the dark, arriving at Nottingham by nine. Southwell was a poor place, and in 1750 he determined to try Birmingham, and engaged half a shop in Bull Street at 1s. a week. In Birmingham, he found three booksellers, Aries, Warren, and Wollaston; but he 'judged from the numbers of the innumerable of the inhabitants, that there might be room for a fourth, and hoped that, as an ant, he might escape the envy or notice of the three great men.' Five shillings a week covered all his expenses—food, lodging, washing, and dress, and at the end of the first year he had saved £20. He then ventured to move into a house at £6 a year, and business began to grow rapidly upon him. By and by he relinquished book-selling for stationery, and opened a paper-warehouse, the first ever seen in Birmingham. He made a good marriage; he speculated in lands and houses, sometimes gaining and sometimes losing; he built a country-house and set up a carriage, and was duly recognised as a substantial citizen. He was elected an overseer of the poor and to other civic offices, and as a Commissioner of the Court of Requests he was pre-eminently useful. The Court of Requests was a tribunal for small debts, where equity was administered by the common-sense of an unpaid magistrate, and at the trifling cost of a summons. Hutton did his duty as judge with extraordinary assiduity. 'The Court of Requests,' he writes, 'soon became my favourite amusement. I paid a constant attendance, which engrossed nearly two days a week of my time. That my government was not arbitrary will appear from two facts: I never had a quarrel with a suitor, nor the least difference with a brother-commissioner. I attended the Court nineteen years. During that time more than a hundred thousand causes passed through my hands! A number possibly beyond what ever passed the decision of any other man. I have had 250 in one day.' Hutton published a collection of cases, with his decisions, in the Court of Requests, and they afford vivid evidence of high judicial faculty, and of a wide and shrewd knowledge of human nature.

In 1781, Hutton made his appearance as an author, in the publication of a History of Birmingham. 'I took up the pen,' he says, 'and that with fear and trembling, at the advanced age of fifty-six, a period at which most authors lay it down.' He spared no pains to make his book a good one: 'Pleased as a fond parent with this first literary offspring, I may be said, while in manuscript, to have had the whole by heart. Had a line been quoted, I could have followed it up through the chapter. Frequently, while awake in the night, I have repeated it in silence for two or three hours together without adding or missing a word.' His success with Birmingham tempted him on to other works, such as a History of Derby, The Roman Wall, The Battle of Bosworth Field, some poetry. 'Having commenced,' he writes, 'I drove the quill thirty years, in which time I published fourteen books.'

Hutton suffered a severe affliction in 1791. The Church-and-King mob, who sacked and burned Priestley's house and chapel, served Hutton in the same style. His warehouse, his stock-in-trade, and country-house at Bennett's Hill, were all destroyed. Hutton was not, like Priestley, a keen politician; his words were always well considered and pacific; but he was a disserter, he frequented the Unitarian meeting-house, and among the rabble there were probably not a few who bore him no good-will for his judgments in the Court of Requests. The sufferers from the riot had great difficulty in recovering their losses from the Hundred. Hutton said his claim for £6273 and £5390; and others fared even worse. This harsh usage somewhat soured his temper. He confesses, 'The cruel treatment I had met with totally altered my sentiments of man. I had considered him as designed to assist and comfort his species; to reduce the rough propensities of his nature, and to endeavour after perfection, though he could not reach it; but the experience convinced me that the nature of the human species, like that of the brute creation, is to destroy each other. I
therefore determined to withdraw from all public business, to spend the small remainder of existence with my little family, and amuse myself with the book and the pen.'

Hutton's nature was too vigorous to remain long under such morbid impressions, and though he continued to be suspected and distrusted as a Jacobin, neither his activity nor his enjoyment of life was seriously affected, and he renewed his business as stationer to his son, but he could find little satisfaction away from the warehouse, and every morning, for many years, he walked from Bennett's Hill to town, and spent the day with the same assiduity as when making his fortune. He was a great pedestrian, and his feats, when an old man, were the surprise and alarm of his friends. In his seventy-seventh year, on the 4th July 1800, he set out on foot from Birmingham to make a survey of the Roman Wall. His daughter accompanied him as far as Penrith, riding on a pillion behind a servant, meeting her father in the evening at some appointed inn. He marched from the Solway along the line of the wall to Wallsend, and then back again from Newcastle to Carlisle, 'having,' he says, 'crossed the kingdom twice in one week and six hours, mated with a July sun, and without meeting a man.' By the way he arrived at Birmingham, 7th August, after a loss on my part of perhaps one stone weight by perspiration, a lapse of thirty-five days, and a walk of 801 miles.' His daughter describes his manner of walking as 'a steady saunter, by which he got over the ground at the rate of full two miles and a half in an hour. The pace he went did not even fatigue his shoes. He walked the whole 600 miles in one pair, and scarcely made a hole in his stockings.'

William Hutton closed his useful and, on the whole, happy life on the 20th September 1815, at the advanced age of ninety-two. He left an autobiography, giving minute particulars of his habits and career, and in many respects it is not unworthy of a place alongside Franklin's.

REVEREND GEORGE WHITEFIELD.

Whitefield was the most effective pulpit orator of last century, and perhaps of any century. He was thoroughly in earnest, and shrank from none of the toils and privations incident to what he thought his path of duty. His voice excelled both in melody and compass. He had a good figure and a fine countenance, and his gestures were always appropriate and full of grace. Franklin, who heard him frequently, learned to distinguish easily between his sermons newly composed, and those which he had often preached in the course of his travels. 'His delivery of the latter,' he says, 'was so improved by frequent repetition, that every accent, every emphasis, every modulation of the voice was so perfectly well turned and well placed, that, without being interested in the subject, one could not help being well pleased with the discourse; a pleasure of much the same kind which one receives from an excellent piece of music.'

Whitefield was born in 1714, at the Bell Inn, in the city of Gloucester. He gave his boyhood a very bad character after the common practice of eminent prelates. His father was early left a widow, and as soon as George was able, he assisted her in the public-house, and in the end 'put on his blue apron and his nippers (scissors or sleeves), washed mops, cleaned rooms, and became a professed and common drawer.' This drudgery was a condition of necessity, not of choice. He had been at a grammar-school, his fine voice had been so praised that he had been tempted to try the stage, and his religious feelings impelled him to the service of the church. Hearing how cheaply a young man might live if he resigned his university and attended the church at the age of eighteen in that capacity. The students called Methodists, because they lived by rule and method, were then exciting great attention, and Whitefield's heart yearned towards them, and after a while he passed into their fellowship, and rivalled the most ardent in devotion and austerity. 'God only knows,' he writes, 'how many nights I have lain upon my bed groaning under what I felt. Whole days and weeks have I spent in lying prostrate on the ground in silent or vocal prayer.' He chose the worst food, and affected mean apparel; he made himself remarkable by leaving off powder in his hair, when every one else was powdered, because he thought it unbecoming a penitent; and he wore woollen gloves, a patched gown, and dirty shoes, as visible signs of humility. He would kneel under the Church, walk in silent prayer, shivering the winter cold, till the great bell summoned him to his college for the night. He kept Lent so strictly that, except on Saturdays and Sundays, his only food was coarse bread and sage-tea, without sugar. The end was, that before the termination of the forty days, he had scarcely strength enough left to creep up stairs, and was under a physician for many weeks. He was ordained deacon in 1738, and after several engagements as curate, called for Georgia at the invitation of Wesley. At the end of a year he returned to England, to solicit subscriptions for an orphan-house which he had established in Savannah, and which continued to be one of the chief cares of his life. His eloquence was in nothing more apparent than in the case with which he drew money from the unwilling and indifferent. From a London audience he once took a thousand pounds, and considered a prodigious subscription. Prudence in the person of Franklin could not resist his persuasive appeals. Franklin disapproved of the orphan-house at Savannah, thinking Philadelphia the proper place for its erection, and he says: 'I silently resolved he should get nothing from me. I had in my pocket a handful of copper money, three or four silver dollars, and five pistoles in gold. As he proceeded I began to soften, and concluded to give the copper; another stroke of his oratory made me ashamed of that, and determined me to give the silver; and he finished so admirably, that I emptied my pocket wholly into the collector's dish, gold and all.'

Whitefield's life was spent as a travelling-preacher, and generally made an early round through England and Scotland, and was frequently sent to Ireland. He repeatedly visited America, and traversed the whole extent of the British possessions there. Wherever he appeared, crowds flocked to listen to him. In London, he sometimes preached early in the morning, and in the dark and cold of winter the streets near the chapel used to be thronged with eager listeners bearing lanterns in their hands. When he took his departure from a place, he was usually followed by a troop of
REV. GEORGE WHITEFIELD.  
THE BOOK OF DAYS.  
A CONTEST FOR PRECEDENCE.

Sir John Finetti, master of ceremonies to the first two monarchs of the Stuart dynasty that sat on the throne of England, wrote a curious work, entitled Choice Observations touching the Reception and Precedence of Foreign Ambassadors. This book, though to us, at the present day, merely an amusing account of court squabbles and pretensions to precedence, was a very important treatise in the ideas and spirit of its author; who, but for his untimely death, little earlier, might have passed as the prototype of Polonius. One great difficulty, never settled in Finetti's lifetime, was the placing of the French and Spanish ambassadors, each claiming precedence of the other. James I, on some public festivals, solved the problem by inviting neither of them; but this could not always be done, and so, for many years, the principal courts of Europe were disturbed by unseemly broils between the representatives of France and Spain. At last, the long struggle came to a crisis, formal complaints and courtly protocols being supplemented by swords and pistols; and the battle, which settled the much-disputed point, was fought in the streets of London.

In September 1661, an ambassador from Sweden was expected to arrive at the court of Whitehall. The etiquette and custom there was to have been observed on the arrival of an ambassador, was for the king's barge to meet him at Gravesend, and convey him up the river to Tower-wharf. He was then received in the king's carriage, his own carriage following next in order, and after that the carriages of the other ambassadors, according to their national precedence. On this occasion, the Marquis d'Estrame, the French ambassador, determined that his carriage should follow next to the Swede's, and the Baron de Batteville, the Spanish ambassador, having made an exactly similar determination, preparations were made for a contest. And, as the populace of London might readily be expected to take part in the fray, the ambassadors applied to King Charles, who, very complaisantly, issued a proclamation, forbidding any Englishman, under penalty of death, from interfering with the quarters of the ambassadors on their parts, that firearms should not be used.

The 30th of September, the day appointed for the Swedish envoy's reception, having arrived, Tower-hill was crowded with an immense number of the lower classes, anxious to witness the fight; while a strong body of horse and foot guards were posted in the same locality, to prevent any action on the part of the spectators. The hour appointed for the ambassador to land was three o'clock in the afternoon; but the Spanish carriage, guarded by fifty men, armed with swords, was on the wharf five hours earlier, thus obtaining an advantageous position. The French carriage, arriving a little later than its Spanish rival, did not acquire so good a position; it was better guarded, however, being accompanied by one hundred men on foot, and fifty on horseback, most of the latter in defiance of the arrangement made with the king, being armed with pistols and carbines. All was quiet, till the Swedish ambassador, having landed and been received in the king's carriage, was driven off, his own carriage following. A desperate struggle then commenced. The Spaniards forming across the road to bar the passage of the French, the latter fired a volley,
memoration of the important event. One side
bears the monarch's head, on the other, Louis is
represented standing on the dais of his throne,
before him is Fuentes, in the humble attitude
one would expect of a mere Spanish ambassador.
and the other ambassadors standing round. The motto is 'Jus
precedendi assertum, confitentes Hispanorum
oratoris,' which may be translated—The right
of precedence confirmed by the avowal of Spain.

THE REVOLUTION OF 1399.
The 30th of September 1399, marks an epoch in English history—the transference of the crown from the House of Plantagenet to that of Lancaster. On the previous day, a deputation from the Lords and Commons had waited on King Richard II., then a prisoner in the Tower, and had obtained from him a formal renunciation of the throne, in favour of his cousin, Henry of Bolingbroke, who a few weeks before had landed from exile at Ravenspur, in Yorkshire, and in an astonishingly short time made himself master of England. At the time of Henry's landing, Richard was absent on an expedition to Ireland, and for some time remained in ignorance of what was transpiring at home. On receiving intelligence of Henry's alarming progress, he dispatched at once the Earl of Salisbury with an army, but this nobleman after disembarking at Good
tree, soon found himself deserted by all his forces;
and Richard, on landing a few days afterwards at
Milford Haven, was soon placed in a similar predicament.
Deterred on all hands, the unfortunate monarch
was at last compelled to surrender himself to the
Earl of Northumberland, and meet at the castle of Flint his
cousin Henry. He was then conducted as a prisoner to
Chester, from which he was afterwards transferred to the
Tower; and then, on 20th September, he received the
deputation from parliament already mentioned.
The following day, his renunciation of the crown
was formally ratified, and himself formally deposed.
Whilst this procedure was going on, Henry of Bolingbroke,
Duke of Hereford, remained seated in his usual palace near the throne, which was empty, and covered with cloth of gold. As soon as eight commissioners had proclaimed the sentence of deposition, he rose, approached the throne, and having solemnly crossed himself, said: 'In the name of God the Father, Son, and Holy Ghost, I, Henry of Lancaster, challenge the realm of England, because the same is
right line of blood from the good lord King Henry III., and through that right, that God of his grace hath sent me, with help of my kin and of my friends,
to recover it; which realm was in point to be undone for default of government and undoing of the
good laws. He then knelt for a few minutes in
apparent devotion on the steps of the throne on which he subsequently took his seat, being conducted thither
by the archbishops of Canterbury and York.

Though a manifest usurpation, the seizure of the crown by Henry IV. seems to have been
fully in accordance with the will of the English nation, which was disgusted with the corrupt and imbecile admin-
istration of Richard II. The vigorous government of
Henry and his sons, the chivalrous Henry V., may almost be a vindication of their wisdom in this
change of dynasty. But the terrible wars of the Roses, and the miserable end of Bolingbroke's unhappy
grandson, Henry VI., amply avenged the wrongs of the Plantagenet family. However we may reverence
the ability of Henry IV., and excuse his usurpation of the crown, a dark cloud still resided in memory in connection with the unfortunate Richard II., who was mysteriously murdered by Henry's orders in Pontefract Castle, a short time after his deposition.
Then came October full of merry glee;
For yet his soul was totty of the must,
Which he was treading in the wine-fat’s see,
And of the joyous oyle, whose gentle gust
Made him so frolic and so full of lust;
Upon a dreadful Scorpion he did ride,
The same which by Dianas doom unjust
Slew great Orion; and eke by his side
He had his ploughing-share and couler ready tyde.

Spenser.

(DESCRPTIVE)

OCTOBER  IT is now yellow autumn, no longer divided from summer by the plumy sheaf and lingering flowers, but with features of its own, marked with slow decay. There is a rich hectic red on its cheek, too beautiful to last long, and every wind that blows pales the crimson hue, or scatters its beauty on the empty air, for everywhere around us the leaves are falling. But through the openings autumn makes in the foliage, many new beauties are revealed—bits of landscape, which the long close-woven leaves had shut out, of far-away spots, that look like a new country, so strange do they appear when seen for the first time through the faded and torn curtains which have shaded summer. Hill and valley, spire and thatched orange, winding highways and brown bends, over the meadows—with stiles and hedges—shew fresh footpaths, which we have never walked along, and make us long to look at the unvisited places to which they lead. We see low clumps of evergreens, which the tall trees had hidden; nests in hedges, where we were before unable to find one;
and in the orchards a few hardy apples still hang, which only the frost can ripen. The fields seem to look larger, where we saw the grass mown and the corn reaped, for we can now see the bottoms of the hedges, and the other crops as beautiful to the eye as they did when in blossom, such a rich scarlet dyes the leaves, mingled every here and there with golden touches. The elders are still covered with dark purple berries, especially the branches which overhang the water-courses, and are beyond the reach of the villagers. We see flags and rushes and water-plants rocking in the breeze, and reflected in the ripples which were hidden by the entangling grass that now lies matted together, and is beginning to decay. As evening approaches, the landscape seems to assume a sober hue, the colours of the foliage become subdued, and the low sighing of the wind, the call of the partridge, and the few notes uttered by the remaining birds, fall upon the ear with a sad sound at times, and produce a low feeling, which we are seldom sensible of at the change of any other season of the year.

There is still one out-of-door scene beautiful to look at and pleasant to walk through, and that is hop-picking—the last ingathering of autumn that finds employment for the poor; nor are there many prettier English pictures to be seen than a well-managed hop-plantation. The smell of the hop is very delightful, so different from that of new hay and hawthorn-buds, yet quite as refreshing. What a beautiful motion there is in the light and shadow when the breeze stirs the vine-shaped leaves, and the golden coloured hopes swaying the bine to and fro, and sharp quiverings in the open net-work where they cross each other, and all pervaded with a soothing aroma, that makes the blood stir like the smell of the rising sap in a forest at spring-time! Merry people, too, are the hop-pickers, whether at their work, or when going or returning from the hop-plantations. The little huts they run up to sleep in, their places of cooking, washing, and other domestic contrivances, tell that they belong to the race who have herded the way into many a wilderness, lived there, and founded colonies, that are now springing up into great nations. We see them travelling to the hop-grounds with baby on back, leading their children, cars with cradle and bed, saucepan and kettle, and no doubt nearly everything their humble home contained. We look on and wonder how those tiny bare feet will ever tramp so far, yet while turning the head and watching them, we see them go pit-pat over the ground, three or four steps to the one or two longer strides of their parents, caring no more for the gravel than if they were shed with iron, and we are astonished to see what a way they have gone while we have been watching. Sometimes, in the hop-grounds, we have seen a cradle with the baby asleep in it, swinging between the tall hop-bines, and thought what a pretty picture it would make, if well painted! Often, in the neighbourhood of Farnham, the hop attains the height of from fourteen to sixteen feet, and excepting between a clear hedge or others, when the leaves are swallowed by autumn, we know nothing more beautiful to walk among than these tall swaying bines. It flowers in June, and in favourable seasons is ripe in September, though many hops remain to be picked in the early part of the present month. There are several varieties of hops grown, known as the red-bind, green-bind, and white-bind; the first of which, though producing small cones, is a hardy plant, and resists the attacks of insects; while the second is the only one that produces a good hop and gives employment to the poor, though that is the chief season, for in spring the ground has to be well stirred and drawn up about the young shoots; then the poles must be placed in the ground about the end of April, when the shoots are generally five or six inches high. And after all this is done, the shoots must be tied to the poles as they grow higher, and this must be done lightly and carefully, for if fastened too tight, the shoot would decay, come off, and send out fresh ones from below, which would attain no height, be dwindled, and not bear a bunch of cones worth the gathering. The wild-hop, which may be seen romping about our hedges, is indigenous, and pretty it looks amid the other climbing-plants, many of which bear beautiful berries, nor is there any record of its having been cultivated before the reign of Henry VIII. It was, however, imported from the Low Countries, and used for brewing in England, as early as 1428.

To an observant eye, many little changes are presented, which shew how rapidly autumn is advancing. The flocks are now driven to the fold of an evening, for the nights are becoming too cold and damp for them to remain in the fields, and they will soon be enclosed in ground set apart for their winter-feeding. It is a pleasant sight to see them rush out of the fold of a morning after their confinement, then hurry on and break their closed ranks to feed here and there on the unpalatable and scanty pasturage. Turn wherever we may, we see the face of Nature changing; nowhere does it now wear its old summer look, the very sound of the falling leaves is a crumbling of the reign of summer's beautiful halls—we cannot help thinking of those who have perished—who have gone before us, blown forward to the grave by the icy blasts of Death. The scenery of spring awakens no such emotions, there is no sign of decay there, for all seems as if fresh springing into life, after the long sleep of winter. But now, even the sun seems to be growing older, it rises later and sets earlier, as if requiring more rest, instead of increasing in heat and brightness, as he did when the butter-cups looked up at him and 'flashed back gold for gold.' Yet we know this natural decay is necessary to produce the life and beauty of a coming spring.
and it is some solace to know, that for every flower autumn rains and blows upon and buries, a hundred will rise up and occupy their places by the time summer returns again, for it is her work to beautify decay.

Nearly all our singing-birds have departed for sunnier lands far over the sea, and the swallows are now preparing to follow them, while, strange interchange, other birds visit us which have been away all spring and summer. Some days before the swallows leave us, they assemble together, at certain places—generally by some watered meadows. One flock after another rushes up to the water to take their fill of worms and insects, and a flock after another is mused upon until a flock of thousands is mustered; and were not the same gathering going on at other places besides, we might fancy that all the swallows that visit us were assembled in one spot. One place they frequented, which abounded in oyster beds, in our younger days, and when up early angling, we have seen them rise in myriads from the willows about six in the morning, and dividing themselves into five or six companies, disperse in contrary directions, when they remained away all day, beginning to return about five, and continuing to come in until it was nearly dark. No doubt this separation took place on account of the scarcity of food, as sufficient could not be found, without flying many miles from the riverside, where they assembled. Every day the flock appeared to augment, and we have no doubt that every division, on its return to this great mustering-ground, brought in many stragglers. We have also often fancied that it was here the young swallows exercised themselves, strengthening their wings for the long journey that lay before them, by circling flights and graceful evolutions, as if trying at times which could come nearest the water at the greatest speed without touching a drop with either breast or pinions. We also came to the conclusion, that all the young ones did not accompany the divisions that went away every day in search of food, but only a portion—as thousands remained—and that those which went out one day rested the next, and had their turn on the second morning, or each alternate day. They seldom remained later than the middle of October, and when they left for good, went away in such strong companies that it must have been nearly the end of the season. A few generally remained for a day or two, then went off in the same direction. Dead swallows were generally picked up among the willows after the flock had migrated. Earliest amongst the fresh arrivals is the wood-cock, who generally reaches the end of his journey in the night, and very weary and jaded he appears. Seldom is he ever seen to land, though he has been found hiding himself near the coast, in so exhausted a state as to be run down, and taken by hand. But he does not remain by the seaside a day longer than he is compelled, where, having recruited himself a little, he sets off to visit his former haunts. The snipe also arrives about the same time, and is found in the haunts of the wood-cock, on high moors and hills, while the season is mild, and in low, warm sheltered localities when the weather is severe. In October the redwing reaches us, and if the autumn is fine and warm, its song may often be heard. Its favourite haunts are parks, and secure places, abounding in clumps of trees, where it feeds on worms, and such like soft food, so long as it can be found; never feeding on berries unless they are forced by the frost, then they soon perish. The early arrival of the fieldfare is considered by country-people a sure sign of a hard winter, especially if there is a large crop of haws and haws, which they say, revententially, Providence has stored up for them beforehand. We think it is a surer sign, that, in the country they have quitted, severe weather has set in earlier than usual. Some naturalists say, that although this bird obtains its food in the hedges, it roosts on the ground; the reason assigned for arriving at this conclusion is, that we—very properly—must not capture larks in the field, often find fieldfares amongst the birds thus taken. May not this have been in some neighbourhood where hedges were rare, and caused them to roost, like the rooks on Salisbury Plain, where there is plenty of food, but very few trees, compelling them either to fly miles away at night, or take up their lodgings on the cold ground? next is the great authority for this account of the fieldfare.

The woods never look more beautiful than from the close of last month to the middle of October, for by that time it seems as if nature had exhausted all her choicest colours on the foliage. We see the rich, burnished bronze of the oak; red of many hues, up to the gaudiest scarlet; every shade of yellow, from the wax gold of the primroses to the deep orange of the tiger-lily; purple, from the light lilac to the darkest velvets of the pansy streaked with jet; and all so blended and softened together in parts, that like the colours on a dove's neck, we cannot tell where one begins and the other ends. And amid this change, the graceful fix-trees seem now to step boldly out, and we are amazed at the quiet beauty we have so long overlooked as we gazed upon these stately and swarthy daughters of autumn, who have been hidden by their fairer sisters of summer. We often wish that a few more of our great landscape-painters had devoted their canvass to the endless tints of 'the fading and many-coloured woods,' as they are seen at no other time excepting this season of the year. Nothing can be grander than the autumnal foliage of the oak, with its variety of tints, which are more numerous than can be found on any other tree, as far as the eye can reach. The leaves of every hue, and browns running into shades, that are almost numberless. The beech again—excepting only one or two of our shrubs—is covered with the richest of all autumn colours—an orange that seems almost to blaze again as you look at it in the sunset, recalling the burning bush before which Moses bowed. Nearly one of the first trees to shed its foliage is the walnut, next the ash, if covered with those keys that make such a rattle in the November wind—if these are wanting, the tree remains much longer in leaf. The ash is one of the most graceful of our forest-trees, with its leaves set in pairs as if made to match one another, while its smooth, tough branches have a gray hue, that seems to make a light through every portion of the tree. The horse-chestnut now wears its changing livery of auburn gold, but a hardy hardy be classed amongst our English forest-trees, as it was a stranger to our parks, ornamental-grounds, and copses less than two centuries ago. The lime or linden, though it soon loses its leaves, shows well in an autumn landscape; so does the tall poplar, seeming as if trying to touch the sky
with its high up-coned head. How beautiful the elm now looks, especially if its changing foliage is seen from some summit that looks a wood, for it is the tallest of our forest-trees, and its topmost boughs may then be seen high above all others! Even so near London as Dulwich, these stately trees may be seen in all their beauty, and some of them look old enough to have thrown their checkered shadows over Shakespeare, when he walked under them with Alleyn the player, in consultation, as they laid out plans for the old hospital which the latter built, and called by the solemn name of 'God's Gift.' And who can walk through our woods and forests without feeling as if in the presence of Shakespeare, moving side by side with him, and Orlando, and Rosalind, and that contented duke who found the woods

'More free from peril than the envious court;'

while the Forest of Arden seems to rise before us with its herd of capricorn deer, and in the midst of the eye we picture the melancholy Jacques reclining beneath some broad-branched oak, 'whose antique roots peep out upon the brook,' on which the falling leaves go gliding until lost by the overhanging boughs that shut out the receding stream. What a pattering there is now when the wind blows, as the pale golden scorns some rattling out of their beautifully-carved cups—the drinking-vessels of our old fairy-tales, and often forming the tea-service of our country children in the present day, when they play at giving a tea-party on the floor of some thatched cottage! And how grand is the pipping of the great autumn winds, sounding like an organ through the forest, and causing us to feel that we are walking through a temple built by an Almighty hand, for there is no sign of the builder man around us! That trellised roof, where, through the openings made by the fallen leaves, we see only the sky, points to a greater Builder than imitative man.

Beautiful as many of our poetical images are, drawn from the fallen leaves, and sad as the sight is to see them lying around our walks, still the fall of the leaf is not its death, no more than that of one flower fading in a cluster is the death of the flowers. There is no need to make room for another blossom. A swelling bud will always be found in autumn above the leaf that is about to fall; and as this bud increases, it pushes down its predecessor, and causes it to break off, or to hang by so slight a hold that the wind soon carries away the loosened leaf. This bud, which forces off the old leaf, forms the future stem or branches, which, during the following summer, will bear many leaves in place of the one it has displaced; and though it will cease to increase during the dead winter-months, will be among the foremost to show itself in the spring. Evergreens retain their leaves throughout the winter, through the new buds not forcing off the old foliage until spring, instead of putting out above the old foliage in autumn as other trees do. This can be proved by transplanting almost any tree; if it lives, the new buds will come out and push off the old leaves, which soon begin to wither after its removal. But if the tree does not retain life, the leaves will still wither, and instead of falling off, remain on the branches, from whence they are not easily removed through dead. The dead leaf remains on the tree; the live leaf falls down after it is dead, pressed down by the swelling bud above it, but still retaining a great portion of its leafy moisture. As for the colouring of autumn leaves, it is supposed that the trees absorb oxygen during the night, which, owing to the coldness of the weather, they have not strength enough to throw out again in the daytime, and that this gives an acidity to the juices of the tree, which changes the colour of the leaf, or, that otherwise, they would be pushed down by the new buds, in all their green summer array. Some admit that this may be the case with leaves that are red, but not with others that are brown and yellow. So the question remains open to many doubts, and as we look at the changing foliage in reverence, we feel satisfied in our own minds, that those beautiful touches have been put in by the wonder-working hand of the Creator.

(HISTORICAL.)

This month, so called from being the eighth in the year according to the old Alban or Latin calendar, was, by our Saxon ancestors, styled Weimond (modern, Weinmond), or the wine-month. In allusion to this epithet, an old writer remarks, 'and albeit they had not anciently wines made in Germany, yet in this season had they them from divers countries adjoining.' October was also called, by the ancient Germans, Winter-fyllith, from the approach of winter with the full moon of the month.

In some of the ancient Saxon calendars, this month is allegorised by the figure of a husbandman carrying a sack on his shoulders and sowing corn, in allusion to the practice of sowing the winter grain, which takes place in October. In other old almanacs, the sport of hawking has been adopted as emblematical of this, the last month of autumn.

CHARACTERISTICS OF OCTOBER.

On the 33d of the month, the sun enters the sign of Scorpio, an astronomical emblem said to typify, in the form of a destructive insect, the increasing power of cold over nature, in the same manner as the equal influence of cold and heat are represented by Libra, or the balance, the sign of the preceding month of September. The average temperature for the middle of the month, throughout the British Islands, is about 56°. On the 1st, the sun rises in the latitude of London at 6.11, and sets at 5.49.

Though a melancholy feeling is associated with October, from the general decay of nature by which it is characterised, there occurs, nevertheless, not infrequently in it, some of the finest and most exhilarating weather of the year. Frosts in the mornings and evenings are common, whilst the middle of the day is often enlivened by all the sunshine of July without its oppressiveness, and the clearness of a frosty day in December or January without its piercing cold.
First of October.

FESTIVAL OF THE ROSARY.

The rosary, as is well known, is, in the Roman Catholic Church, a series of prayers, consisting of fifteen Pater Noster and a hundred and fifty Ave Mariae, which, for the convenience of worshippers, are counted on a string of beads. Each rosary, or string of beads, consists of fifteen decades, each of which decades contains one Pater Noster, marked by a large bead, and ten Ave Mariae, marked by ten smaller beads. The festival of the rosary was instituted to improv the divine mercy in favour of the church and all the faithful, and return thanks for the benefits conferred on them, more especially for the victory of Lepanto, in 1571, over the Turks. This success, believed to be obtained through the intercession of the Virgin, who is so specially invoked in the devotion of the rosary, was ordered by Pius V. to be annually commemorated under the title of St Mary de Victoria. This epithet was, however, changed by his successor, Gregory XIII., into the title of the Festival of the Rosary. The victory of Prince Eugene over the Turks at Belgrade, in 1716, was ordered by Clement XIII. to be included in the benefits which this office specially commemorates.

Born.—Henry III. of England, 1206, Winchester; Henry St John, Viscount Bolingbroke, politician and philosophical writer, 1678, Battersea; Paul L., emperor of Russia, 1754.

Died.—Michael II., the Stamnener, Greek emperor, 829; Pierre Cornelle, great tragic dramatist, 1684, Paris.

THE MUSICAL SMALL-COALMAN.

On 1st October 1714, was buried in Clerkenwell churchyard, Thomas Britton, a dealer in coal, whose life presents one of the most curious social anomalies that have ever been recorded. Whilst gaining his livelihood by the active exercise of a humble craft, occupying a habitation and wearing a garb corresponding in plainness to his trade, this singular man contrived by his various talents, and more especially his musical tastes, to assemble around him the most aristocratic company in London, and to be admitted into their society on equal terms, at a time when the principle of exclusion was far more rigidly maintained than it is now, between the upper and lower ranks of the community.

The house occupied by our small-coalman was situated in Aylesbury Street, Clerkenwell, and

formed the corner-house of a passage leading by the Old Jerusalem Tavern into St John's Square. On the ground-floor were the coal-stores, and above them a long narrow room, very low in the ceiling, and approached by a break-neck stair from the outside. In this modest saloon, Britton held his musical reunions, which were attended by the great and fashionable, and at which, among other eminent performers, the celebrated Handel did not disdain to exhibit his unequalled skill for the entertainment of the company. The origin of these gatherings is ascribed to Sir Roger P'Estrange, a famous musical dilettante, who, along with other gentlemen, had been taken with the conversation and manners of Britton, and greatly beyond what might have been expected from his station in life. Nor were his guests confined to the male sex. Elegant ladies, from the most fashionable quarters of London, thronged to his humble mansion, and, in the pleasure which they experienced in listening to his concert, forgot the toils which they had undergone in ascending to the hall of performance. It has been said that Britton charged his guests with an annual subscription of ten shillings for the music, and a penny for each cup of coffee drunk. But this was certainly not the case at first, when the entertainment was entirely gratuitous, and no refreshments of any kind were given, though possibly some change may have been introduced at a later period.

In the Augustan age of Queen Anne, the passion for collecting old books and manuscripts began to develop itself among the nobility. Among the most noted bibliophiles of the aristocracy were the Duke of Devonshire, and the Earl of Oxford, Pembroke, Sunderland, and Winchelsea. A favourite Saturday pastime of these noblemen was to make their rounds through the various nooks of the city in which booksellers congregated, and then reassemble at noon at the shop of Christopher Bateman, a bookseller in Paternoster Row. About this time, Thomas Britton would make his appearance, having finished his round, and, depositing his sack of small-coal on the ledge of Mr Bateman's window, would go in and join the distinguished company. Here his skill in old books and manuscripts was no less conspicuous than the correctness of his musical taste, and rendered him a most useful acquisition.

As has happened with many greater men, Britton did not escape the shafts of slander and malice, and it was variously asserted that his musical assemblies were merely pretenses for seditious meetings or magical incantations, and that he himself was an atheist or a Jesuit in disguise. There seems, however, to have been really nothing objectionable either in his principles or mode of life, his character being that of a simple and inoffensive, though learned and intelligent man. His death was brought about in a singular manner.
A blacksmith, named Honeyman, who possessed the faculty of ventriloquism, and had almost forgotten, by the exercise of it, the notorious Dr Sacheverell into fits, was induced, as a practical joke, to play off his art upon Thomas Britton. Being introduced to the blacksmith, by a supernumerary messenger, speaking from a distance, the death of Britton, intimidating, moreover, that his only chance of escape was to fall down immediately upon his knees, and repeat the Lord’s Prayer. The poor man, terrified out of his senses, did as he was told, and verified the prediction but too soon, as he took to his bed, and died in a few days.

Two pictures of Britton were painted by his friend Woolaston. One of these, which was deposited in the British Museum, represents him in his blue frock, with the small coal-measure in his hand, as he appeared when he went through the town crying his wares. He has also been fortunate enough to secure transmission to posterity in the following lines by Prior:

"Though doomed to small-coal, yet to arts allied,
Rich without wealth, and famous without pride,
Music’s best patron, judge of books and men,
Beloved and honoured by Apollo’s train.
In happy sure or ROMAN times did appear
So bright a genius in so dark a sphere!
More of the man had probably been saved
Had Kneller painted, and had Vertue graved."

RUMINATING MEN.

"I remember," says Mrs Fioszi, in her "Tours in Italy," "Dr Johnson once said that nobody had ever seen a very strange thing, and challenged the company to produce a strange thing; but I had not then seen Avvocato B——, a lawyer, at Milan, and a man respected in his profession, who actually chewed the cud like an ox. He is apparently much like another, tall stout man, but has many extraordinary properties, being eminent for strength, and possessing a set of ribs and sternum very surprising, and worthy the attention of anatomists. His body, upon the slightest touch, even through all his clothes, throws out electric sparks; he can reject his meals from his stomach at pleasure; and did absolutely, in the course of two hours, go through, to oblige me, the whole operation of eating, masticating, swallowing, and returning by the month a large piece of bread and a peach. With all this conviction, nothing more was wanting; but I obtained, besides, the confirmation of common friends, who were willing likewise to bear testimony of this strange accidental variety. What I hear of his character is, that he is a low-spirited nervous man; and I suppose his ruminating moments are spent in lamenting the peculiarities of his frame."

This human chewer of the cud was not such a singular being as Mrs Fioszi imagined. Fabricius ab Aquapendente records two similar cases coming under his own observation. One was a monk, who rejoiced in another bovine characteristic, his forehead being adorned with a pair of horns. The other ruminant was not so ornamented himself, but was the son of a one-horned parent; he was a Paduan silversmith, and Fabricius had the satisfaction of dissecting him, and proving the falseness of Bartholin’s theory, that human ruminants possessed double stomachs. Lynæus tells us of Anthony Recchi, who was obliged to retire from the dinnerable to ruminate undisturbed, and who declared that the second process of mastication was sweeter than honey, and accompanied with a delightful feeling. His son inherited the same faculty, but with him it was under better control, he being able to defer its exercise till a convenient opportunity. Semnart knew a man similarly qualified, and accounted for it by attributing it to the fact of his having been fed on milk warm from the cow, in consequence of the death of his mother at his birth. Peyer believed that two of his countrymen acquired the habit from learning to imitate the calves and sheep with which their vocation associated them. Blumenbach says he knew two men who ruminated their vegetable food, and found great enjoyment in the feat, while one of them had the power of doing so not as he felt inclined.

In the "Philosophical Transactions" for 1691, there is an account by "the experienced and learned Frederick Saire, M.D." of a ruminating man living at Bristol, described as a person of considerable parents but of tolerable sense and reason, who had followed the practice from his earliest years, and always found a temporary deprivation of the faculty the sure precursor of illness. He used to commence ruminating about a quarter of an hour after a meal, and the process usually occupied him for an hour and a half, and was attended with greater satisfaction than the first mastication, after which food always lay heavy in the lower part of the throat. Under the date of October 1, 1767, we find the following in the "Annual Register": "We have the following extraordinary account from Winbourne, in Dorsetshire. A few days ago died here Roger Gill, shoemaker, and one of our singing-men, aged about sixty-seven, remarkable for chewing his meat or cud twice over, as an ox, sheep, or cow. He seldom made any breakfast in his later days; he generally dined about twelve or one o’clock, ate pretty heartily and quickly, without much chewing or mastication. He never drank with his dinner, but afterwards about a pint of such malt liquor as he could get; but no sort of spiritsuous liquor in any shape, except a little punch, but never carol for that. He usually began his second chewing about a quarter or half an hour; sometimes later, after dinner; when every morsel came up successively, sweeter and sweeter to the taste. Sometimes a morsel would prove offensive and crude, in which case he spat it out. The chewing continued usually about an hour or more, and sometimes would leave him a little while, in which case he would be sick at stomach, troubled with the heartburn, and foul breath. Smoking tobacco would sometimes stop his chewing, but was never attended with any ill consequences. On the 10th of June last, the faculty entirely left him, and the poor man remained in great tortures till the time of his death."

Similar cases have been recorded by Messrs Tarbes, Percy, Lawrence, Oullier, Riche, and Copland. The latter published a full account of a case of rumination in "The London Medical and Physical Journal" (1819-20), and observes in his "Medical Dictionary," published in 1858, "since the publication of that case, two others, one of them in a medical man, have been treated by me, and
I have reason to believe that instances of partial or occasional rumination are not so rare in the human subject as is generally supposed."

OCTOBER 2.

Died.—Aristotle, great Greek philosopher, 322 B.C., Chalcis; Major John André, hanged by Washington as a spy, 1780; Admiral Augustus Keppel, 1756; Dr W. E. Channing, Unitarian divine, 1842, Bennington, Vermont, United States; Miss Bingham, painter, without hands or arms, 1850, Liverpool; Thomas Thomson, legal and literary antiquary, 1852, Edinburg.

SPAIN BEQUEATHED TO THE BOURBONS.

On 5th October 1700, Charles II. of Spain executed his last will and testament, by which he conveyed his dominions to Philip, Duke of Anjou, second son of the French dauphin, and grandson of Louis XIV. Perhaps no mortuary bequest has excited greater commotions than this celebrated document, occasioning, as it did, the celebrated War of Succession in Spain, and the well-known campaigns of Marlborough and Prince Eugene in Germany and Italy, in connection with the same cause. The circumstances attending its execution possess both a curious and painful interest, and exemplify strikingly the extremes of priestly machination and political unscrupulosity on the one hand, and of regal misery and helplessness on the other.

Feeble in body and mind, wasted by disease, and a prey to the most depressing melancholy and superstition, the unfortunate Charles II. was evidently hastening to the end of his career. Throughout life he had been kept in a state of perpetual tutelage, and had scarcely ever been permitted to have a will of his own. He was the only child of the old age of Philip IV., by that monarch's marriage with his niece, and of two unions which Charles himself had successively contracted, there had never been any issue. The legal right to the Spanish crown now devolved on the descendants of his grandfather Philip III., one of whose daughters was the mother of Louis XIV., and another of the Emperor Leopold. The sympathies of Charles were all in favour of the House of Austria, but he was surrounded by a powerful and unscrupulous faction in the French interest, who left no means untried for the accomplishment of their ends. Working on the superstitious fears of the dying monarch, his ghostly advisers held up before him the terrors of eternal punishment if he failed to make a will in favour of France as the legitimate heir. 'I am partial to my own family,' said poor Charles, when thus badgered, 'but my salvation is dearer to me than the ties of blood.' To relieve in some degree his perplexity, he dispatched one of the noblemen of his house

hold to Pope Innocent XII. to request his advice relative to the disposal of the Spanish dominions. The aged pontiff, himself on the brink of the grave, was surrounded by cardinals devoted to the French interest, and he returned a reply that he had no doubt that the rightful heir to the Spanish monarchy was the dauphin; but that to prevent the union of the two crowns of France and Spain, the succession should be vested in his second son, Philip, Duke of Anjou. Yet Charles still clung to his Austrian relatives, and was supported in his preludices by his queen, a sister-in-law of Leopold, who is said sometime previously to have been ineffectually tempted by France to abandon the interests of her family, by the bait held out to her, of marrying the dauphin on Charles's death, and thus continuing to share the Spanish throne. The palace was converted into a bear-garden by the squabbles and uprors which roused through every quarter, and the noise of which even reached the chamber of the dying king. Intrigues for the post of confessor to the miserable sovereign were eagerly carried on between the partizans of the respective claimants of the succession; and both, as they from time to time gained the ascendancy, attempted to influence, in opposite directions, the weak and vacillating mind of Charles. Can any condition be imagined more wretched than that of the latter, emaciated with disease and suffering, conscious of his approaching and inevitable end being made the subject of the most calculating and acrimonious discussion, and yet denied the boon, which every Spanish peasant enjoyed, of dying in peace, and even threatened with the vengeance of Heaven in another world if he refused to do violence to his own feelings by gratifying the aspirations of an ambitious court? The victory between the contending factions at last remained with the French, and under the superintendence of Cardinal Portocarrero, the whole armoury of priestly influence and supernatural terror was brought to bear successfully upon the mind of the king. He had already been frightened by statements of his being bewitched, and requiring to be exercised to have the cause of his illness removed. Then it was suggested that his health would be benefited, and the prayers of departed spirits stimulated on his behalf, were he to gaze on and touch the remains of his ancestors, mouldering in the funeral vaults of the Escorial. Urged by his spiritual directors, Charles descended with them to these abodes of the dead, and there witnessed the opening of the marble and jasper coffins which enclosed the relics of royalty. The first opened was that of his mother, for whom he had never entertained any great affection, and at the sight of whose remains he displayed no special emotion. It was different, however, when the tomb of his first queen, Louise of Orleans, was unsealed. The body presented scarcely any traces of dissolution, and the countenance seemed nearly as fresh and blooming as when in life. Charles gazed long and earnestly on the lifeless face, and at last exclaiming, 'I shall soon be with her in heaven!' rushed, in an agony of grief and horror, from the place. Another trial to which he was subjected arose from an insurrection of the Madrid mob, who had been persuaded by the French faction that a famine from which they were suffering had been brought
about by the Austrian ministers and their partizans. The rabble destroyed all the bakers' shops, and presenting themselves before the palace, demanded a sight of the king. "His majesty is asleep," said one of the courtiers. "He has slept too long already, and must now awake," was the angry response. It was judged prudent to gratify the populace in their demand, and the poor king, pale and trembling, and unable to stand on his feet from sickness and fear, was brought out to the balcony in the arms of his attendants. As a capstone to all his sufferings, the last will and testament, appointing Philip of Anjou as his successor, was presented to him for his signature by Cardinal Foscari. Overed and imported on every side, Charles, with great reluctance, appended his name to the document, and then, bursting into tears, exclaimed: "I now am nothing! Immediately on signing it he fainted, and remained for a long time in that condition, inducing the belief that he was dead. He recovered, however, from this fit, and survived for a month longer, expiring on 1st November. The contents of the will were carefully concealed from the queen, the Austrian party, and Europe in general. When the testament came to be read after the king's death, it is said that Blécourt, the French ambassador, aware of its being in favour of his court, advanced confidently towards the Duke of Abrantes, whose office it was to declare the successor to the crown. Rather to the astonishment of the former, the duke, after looking composedly at him, turned aside his head. Then all at once, as if he had not observed Count Harrach, the imperial ambassador, he joyously embraced the latter, saying: "It is with great pleasure, my lord" (then pausing to give him a closer hug), "yes, my lord, it is with an extreme joy, and the utmost degree of satisfaction, that I withdraw myself from you, and take leave of the most august House of Austria!"

The success this attending French diplomacy may, after all, be regarded as of a very dubious kind. Though the grandson of Louis XIV. succeeded ultimately in establishing himself on the Spanish throne, which had been obtained for him by so questionable means, it was only after the expenditure of a vast amount of blood and treasure on the part of his native country, such as rendered the latter years of the reign of the Grand Monarque a period of weakness and misery. The whole circumstances connected with the celebrated will of Charles II. exhibit strikingly the notions then prevalent regarding the relations of sovereigns to their kingdoms, which were considered to be those of hereditary proprietors rather than of responsible first magistrates. Two Spanish nobles, during the discussion in council on the subject of the succession, did indeed suggest a reference of the question at issue to the decision of the national cortes, but such a proposition was at once superciliously negatived as dangerous and disloyal.

JOSEPH RITSON.

The peculiar tastes and pursuits of the antiquary frequently give him a strong individuality, which, with a little exaggeration, may produce caricature. He seldom appears in the pages of the novelist or dramatist in other than a ridiculous light, being depicted generally either as a foolish collector of despicable trifles, or a half-witted good-natured twaddler. That all this is unjust, will be readily conceded in the present day, when archaeological studies have become fashionable, and soreses are given in rooms filled with antiquities as an extra attraction. Among the numerous antiquaries, who, by their labours, have rendered important services to the literature of their country, none has surpassed Joseph Ritson, who was himself an excellent sample of the painstaking and enthusiastic scholar, but unfortunately disfigured by eccentricity and irritability, which "point a moral" in his otherwise useful career.

Ritson was born October 2, 1758, at Stockton-upon-Tees, Durham, and was bred to the legal profession; he ultimately came to London, entered Gray's Inn, and was called to the bar by the society there in 1789. He appears to have restricted himself to chamber-practice, and to have neglected in a great degree that calling also, that he might indulge in the more congenial study of our older poets. In his readings at the Bodleian Library and elsewhere, he quietly garnered a multitude of facts—a scrupulous accuracy regarding which was one of his distinguishing characteristics, and an absence of it in any work was deemed by him as little inferior to a moral delinquency. His first appearance in the literary arena, was an attack on Warton's History of English Poetry, in which he proved himself a most formidable antagonist. His "observations" were printed in a quarto pamphlet in 1782, uniform with Warton's volumes, because, as he remarks with a grim jocularity, "they are extremely proper to be bound up with that celebrated work." The boldness of his invective, and the accuracy of his objections, at once stamped him as no contemptible critic. But he was unfortunately wanting in temper and charity—errors were crimes with him, and treated accordingly. No better illustration of his mode of criticism could

JOSEPH RITSON.
be given than the passage on the death of Marlow, who died in a fray, from a wound given by his own dagger turned against him by his adversary. Warton, in describing the wound, says it was in his bosom. Ritson at once fires up because he finds no authority for the exact spot, and thus addresses Warton: 'Your propensity to corruption and falsehood seems so natural, that I have been sometimes tempted to believe you often substitute a lie in the place of a fact without knowing it. But if you came to tell us that Marlow was stabbed in the bosom I cannot conceive.' In other instances, Ritson had more justice on his side, and really combated serious error, for Warton by no means understood old English so well as he did; thus, where the sultan of Damascus is described as riding to attack Richard Coeur de Lion, the romance tells us:

'A fanon brode in hand he bare,'

which means, that he came equipped with a broad falchion or sabre. Warton, unfortunately, interprets the import of the passage to be that the sultan carried a falcon on his fist, to shew his contempt for Richard. Ritson, upon this, bursts forth into unmeasured invective: 'such unparalleled ignorance, such matchless effrontery, is not, Mr Warton, in my humble opinion, worthy of anything but contempt.' To Dr Percy and his Reliques of Ancient English Poetry, he is no whit more civil; and, in subsequent publications, he continued his attacks, until the good bishop heartily regretted ever having concorted a work that has given, and will continue to give, pleasure to thousands, and has aided in spreading a knowledge of the beauties of our old ballad-poetry, before comparatively unknown. Percy, unfortunately, worked from an ill-written and imperfect manuscript, and he did not scruple to draw upon his own invention to supply what was wanting. This was a crime not to be forgiven in the eyes of Ritson, who would have walked from London to Oxford, or sailed across the Channel, or travelled by any means, to procure his manuscript, or correct an error. Percy desired to make his work popular, an object in which he certainly succeeded, but Ritson's attacks on his work, and his triumphs, were carried on by the antiquary so far, as to needlessly annoy the worthy prelate, for he ultimately denied the existence of the manuscript from which Percy professed to obtain his originals. Ritson had no patience for looseness of diction or assertion; and an amusing anecdote of this is given by Sir Walter Scott, who was intimate with him. He had visited Sir Walter at his cottage near Lapwade, and, in the course of conversation, spoke of the remains of the Roman Wall in the border counties as not above a foot or two in height, on the authority of some friend at Hexham. Sir Walter assured him, that near Gilland 'it was high enough for the fall to break a man's neck.' Ritson took a formal note, visited the spot afterwards, and then wrote to say he had tested the assertion, and thought his friend had been in error. 'I beg pardon,' says Sir Walter, 'what a risk I had been in, for you may believe I had no idea of being taken quite so literally.'

Ritson's Select Collection of English Songs appeared in 1783, and in after-years he published a series of volumes on our Robin-Hood ballads, and ancient popular literature. These were far superior in character to anything of the kind that had before appeared in the literary world, being remarkable alike for their erudition and accuracy. His volumes are elegantly printed, and the few illustrations in them are among the most graceful productions of the pencil of Stothard. It is sad to remember that Ritson lost money by these admirable works. He was too painstaking and accurate for general appreciation, and the public could read easier the books of looser compilation. But his last days were troubled by further necessary losses, arising from unfortunate speculations, and being obliged to sell his books, he naturally became more irritable than ever. His opinions underwent important changes, and from being a decided Jacobite, he became a liberal in the widest sense of the French Revolution, whose heroes he worshipped, and whose unfortunate religious ideas he also adopted.

Sir Walter Scott said of Ritson, 'he had an honesty of principle about him, which, if it went to ridiculous extremities, was still respectable from the soundness of the foundation. I don't believe the world could have made Ritson say the thing he did not think.' Surtees adds, 'that excessive aspiration after absolute and exact verity, I verily believe, was one cause of that unfortunate sycophancy with which he treated some of his respectable contemporaries.' In Ritson's case, the very meekness of the evil effects of a narrowed view of truth itself, when combined with an irritable temper. Hated as a critic, while respected as a scholar, he rendered himself unnecessarily an object of dislike and aversion, whilst with a little more swiftness he might have fulfilled his mission equally well. To him we are undoubtedly indebted for a more exact rendering of our ancient authors, which has guarded them from that looseness of editorship which was Ritson's abomination. His name and works, therefore, take an important place in literary history. His personal errors, and their consequences, should also be a warning to such critics as needlessly turn their pens to poniards, and their ink to gall.

THE DUKE OF CUMBERLAND'S MARRIAGE.

On October 2, 1771, Henry Frederic, Duke of Cumberland, younger brother of George III., married the Honourable Mrs Horton, a daughter of Lord Irwin, and widow of Christopher Horton of Catton, a Derbyshire gentleman. She was also the sister of the famous Colonel Luther, whom the court-party put forward as the legal possessor of the seat for Middlesbrough in the House of Commons, in opposition to the claims of Wilkes. The match occasioned the utmost displeasure to George III., who was only informed of it about a month after the event by a letter which he received from his brother, saying that he was married to Mrs Horton, and had gone off with her to Calais. In conjunction with the maladministration avowed shortly after by the Duke of Gloucester, for the sake of his two younger brothers, with the Dowager Countess of Waldegrave, this marriage of the Duke of Cumberland occasioned the passing in parliament, by the king's direction, of the well-known Royal Marriage Act, which subsequently rendered null the unions of George IV., and the Duke of Sussex. The bridegroom had, the previous year, made himself
unpleasantly conspicuous by figuring as corespondent in a cress cov. trial, in which the wife of Earl Grosvenor was the party imployed. It is hinted also, that he had only married Mrs Horton after having failed in endeavouring to win her on easier terms. The lady is described by Horace Walpole as a young widow of twenty-four, extremely pretty and well made, and remarkable for the great length of her eyelashes, which veiled a pair of most ariful and coquettish eyes. In the opinion of that prince of letter-writers, she had no genuine reason to blame herself for a man so intellectually weak as the duke. The latter for many years was rigidly excluded from court, as was also his brother, the Duke of Gloucester. He died in 1790, without leaving issue of the marriage. It ought to be remarked that his wife is not to be confounded with Mrs Anne, or Annabella Horton, better known by the name of Nancy Parsons, who, at one period lived with the Duke of Gordon as his mistress, and ultimately became the wife of Lord Maynard.

STRANGE HISTORY OF THE CHEVALIER D'EON.

Of all the ambassadors or diplomats who ever served a sovereign, the most extraordinary, perhaps, was the Chevalier d'Eon, who occupied a large space in the public mind at certain periods during the last century: extraordinary, not for his political abilities or services, but for his personal history.

D'Eon first became known in England in 1761, the year after George III. ascended the throne. England and France, after many years of war, had made and received overtures of conciliation; and the Duke de Nivernois was sent by Louis XV. as ambassador extraordinary to negotiate the terms of peace. The chevalier, who accompanied him as secretary, won general favour at court; he was of prepossessing appearance, managed the duties of his position with much ability, and displayed a wide range of accomplishments. When the duke had completed the terms of peace, D'Eon had the honour of communicating the fact from the one sovereign to the other. The court-journal of those days announced as follows, early in 1763:

"Mr. de Beaun, the ambassador from France, returned this day to London, and was received by the Duke de Nivernois as Knight of the Royal Military Order of St Louis: his Most Christian Majesty having invested him with that order, when he presented to him the ratification of the definitive treaty of peace with England. Madame de Pompadour, who held an equivocal but influential position at the court of Versailles, wrote about the same time to the Duke de Nivernois, noticing the chevalier in the following terms: 'This M. d'Eon is, I am told, a very good sort of man, who has served the king in more countries than one: and the English have been very polite in giving him the treaty to bring. This, I doubt not, will be of some advantage to him.' When the duke returned to France in 1763, on the completion of his mission, he strongly recommended D'Eon as the temporary representative of France in England, until a permanent ambassador could be appointed. So well had the chevalier conducted himself, that both monarchs assented to this; and soon afterwards we read of the three distinguished French assesses, Lalaonde, Le Condamine, and Camus, being introduced to George III. by the Chevalier d'Eon, as French envoy or representative.

These were the only three brilliant years of D'Eon's life passed in England; they were followed by a period of disgrace. Louis XV. appointed the Count de Guercy his permanent ambassador in England, and directed D'Eon to resume his former position as secretary of embassy, with additional honours as a reward for his services. D'Eon, disappointed in his ambition, or angered in some other way, refused to submit, and published letters exposing a number of diplomatic secrets relating to the court of France, including an accusation very damaging to the Count de Guercy. The French courtiers were very uneasy at this; and the count brought an action against him in the Court of King's Bench for libel. D'Eon made neither an appearance nor a defence, and a verdict was given against him. The French authorities were very anxious to get hold of him, and even sanctioned a forcible entry into the house in queen's yard, and swore he was supposed to be residing; but he remained for a time hidden. Towards the close of 1764, he applied for a bill of indictment against the Count de Guercy, for a conspiracy to murder or injure him; the count, instead of rebutting the charge, claimed his privileges as a foreign ambassador; and the public remained of opinion that the charge was not wholly without foundation.

Now ensued a long period of D'Eon's career. He remained in England several years, little known except by his frequent attendance at fencing-matches, in which art he was an adept. At length, in July 1777, an action was brought in the Court of King's Bench, the decision of which would depend on the sex of D'Eon. One man, on evidence which seemed to him conclusive, betted a wager that the chevalier was a woman, and brought an action to recover the amount of the bet. Without touching upon the evidence adduced, or the judge's comments, it will suffice to say that D'Eon from that time became regarded as Madame D'Eon, and assumed female attire. A memoir of her was published, from which it appeared that she was born at Tonnerre, in Burgundy, of parents who occupied a good station in society. For the purpose, as secretary to the embassy from France, she was, with her own consent, treated as a boy, and received the multiform names of Charles-Genevieve-Louis-Auguste-Andre-Timothé d'Eon de Beaumont. She was sent to Paris, and educated at the College Mazarin, where she went through the same physical and mental exercises as the other pupils. She became a well-educated person. When past the age of schooling, she became successively actor in a pantomime, house in queen's yard, and wrote several books which attracted attention. She was introduced to the Prince de Conti, who introduced her to Louis XV. Louis at that time wished Russia to form a league with France instead of with Prussia; but as this could not be accomplished without a little preliminary intrigue, some secret agent was needed; and D'Eon was selected for the delicate position. The memoir implies, if not directly asserts, that Louis was made acquainted with the real sex of D'Eon. Be this as it may, D'Eon made two distinct visits to Russia, in or about the year 1755; the first time dressed as a woman, the second time as a man, and not known by any one
as the same person in the two capacities. So well did D'Eon succeed, that presents and rewards followed—rich gifts from the Empress Elizabeth; and a pension, together with a lieutenantcy of dragoons, from Louis. D'Eon served in the campaigns of the Seven Years' War; and then occurred the events in England between 1761 and 1777, already noticed.

The end of D'Eon's life was as strange as the beginning. In woman's dress, D'Eon was in France for a time in 1779, but he resided mostly in England. It was one way—the was largely interested in bets, amounting in various quarters to the enormous sum of £20,000, depending on the question of sex; but a positive denial was given to this insinuation. At length, in 1810, the newspapers announced that the celebrated Chevalier d'Eon died, on the 29th of May, in Millman Street, Foundling Hospital; and then, and not until then, was it decisively known that he was really and properly Chevalier d'Eon, who had so often, and for reasons so little to be comprehended, passed himself off as a woman.

THE STORY OF MAJOR ANDRE.

There are few monuments in Westminster Abbey which have attracted more attention than that which commemorates the sad fate of Major Andre. Perhaps no event of the American revolution made more aching hearts on both sides of the Atlantic. Great Britain lost two armies, and thousands of her brave soldiers were slain upon the field of battle, but it may be doubted if so many tears were shed for them all, as for this young soldier, who died upon the gallows.

John Andre was born in London, the son of a Genoese merchant, in 1731. He was sent to Geneva to be educated, but returned to London at the age of eighteen, and, his talents having introduced him to a literary coterie, he became enamoured of Miss Honora Sneyd, a young lady of singular beauty and accomplishments. As both were very young, the marriage was postponed, and Andre was induced to engage in trade; but he was ambitious, and, at the age of twenty, entered the army. At the close rank of the American war he was sent to Canada, and taken prisoner at St John's; but being exchanged, he became the favourite of that gay and gallant officer, General Sir Henry Clinton, who appointed him his aid-de-camp, and soon after adjutant-general.

Young, handsome, clever, full of taste and gaiety, an artist and a poet, he was the life of the army, and the little vice-regal court that was assembled around its chief. The British occupied the American cities, and while the troops of Washington were naked and starving at Valley Forge, Sir Henry was holding a series of magnificent revels in Philadelphia, which were planned and presided over by the gallant Major Andre.

Philadelphia was evacuated; Sir Henry returned to New York; and Major Andre, who had known the wife of the American general, Arnold, in Philadelphia, entered into a correspondence with him, and was the agent through whom the British general bargained, under promise of a large reward, for the surrender of Westpoint, the key of the highlands of the river Hudson. Andre visited Arnold within the American lines, to carry out this treachery; he was captured on his return by three American farmers, who refused his bribes; the papers proclaiming Arnold's treason were found upon him, and, by his own frank confession, he was convicted as a spy, and sentenced to be hanged.

Arnold, by the blunder of an American officer, got warning, and escaped on board the Pulteney. Sir Henry Clinton, by the most urgent representations to General Washington, tried to save his favourite adjutant, but in vain. There was but one way—the surrender of Arnold, to meet the fate decreed to Andre. That was impossible; and the young adjutant, then in his twenty-ninth year, after a vain appeal to Washington, that he might die a soldier's death, was hanged on the west bank of the Hudson, almost in sight of the city held by the British army, October 2, 1780. If his life had been undistinguished, he died with heroic firmness. The whole British army went into mourning, and, after the close of the war, his body was deposited near his monument in Westminster Abbey. Even in America, where the name of Arnold is a synonym of treason, the sad fate of Major Andre excited, and still excites, universal commiseration.

OCTOBER 3.

St Dionysius the Areopagite, bishop of Athens, martyr, 1st century. The Two Knaves, martyrs, about 595. St Gerard, abbot, 959.

Born.—Richard Boyle, the great Earl of Cork, 1566; Canterbury; Giovanni Battista Boccara, natural philosopher, 1716, Monckton.

WATCHING AND LIGHTING OLD LONDON.

Civilisation, in its slowest progress, may be well illustrated by a glance at the past modes of guarding and lighting the tortuous and dangerous streets of old cities. From the year 1553, when Henry III. established night-watchmen, until 1830, when Sir Robert Peel's police act established a new kind of guardian, the watchman was little better than a person who

'Disturbed your rest to tell you what 's o'clock.'

He had been gradually getting less useful from the days of Elizabeth; the Dogberry and his troop were unmistakable pictures of the tribe, as much relished for the satirical truth of their delineation in the reign of Anne, as in that of her virgin predecessor. Little improvement took place until the Westminster act was passed in 1763, a measure forced on the attention of the legislature by the impunity with which robbery and murder were committed after dark. Before that year, a few wretched oil lamps only served to make darkness visible in the streets, and confuse the wayfarer by partial glimmerings across his ill-paved path. Before the great civil wars, the streets may be said to have been only lighted by chance; by the lights from windows, from lanterns grudgingly hung out
by householders, or by the watchmen during their rounds; for by a wonderful stretch of parochial wisdom, and penny-wise economy, the watching and lighting were performed at the same time. The watchman of the olden time carried a fire-pot, called a cresset, on the top of a long pole, and thus marched on, giving light as he bawled the hour, and at the same time, notification of his approach to all thieves, who had thus timeless warning to escape.

The appearance of this functionary in the sixteenth century will be best understood from the engraving here copied from one in Sharp's curious dissertation on the Coventry Mysteries. A similar cresset is still preserved in the armoury of the Tower of London. It is an open-barred pot, hanging by swivels fastened to the forked staff; in the centre of the pot is a spike, around which was coiled a rope soaked in pitch and resin, which sputtered and burned with a lurid light, and stinking smoke, as the watchman went his rounds. The watch was established as a stern necessity; and that necessity had become stern, indeed, before his advent. Roger Hoveden has left a vivid picture of London at night in the year 1176, when it was a common practice for gangs of a ‘hundred or more in a company’ to besiege wealthy houses for plunder, and unscrupulously murder any one who happened to come in their way. Their ‘vocation’ was so flourishing, that when one of their number was convicted, he had the surpassing assurance to offer the king five hundred pounds of silver for his life. The gallows, however, claimed its due, and made short work with the fraternity; who continued, however, to be troublesome from time to time until Henry III., as already stated, established regular watchmen in all cities and borough-towns, and gave the person plundered by a thief the right of recovering an equivalent for his loss from the legal guardians of the district in which it occurred; a wholesome mode of inflicting a fine for the non-performance of a parish duty.

The London watchman of the time of James I., as here depicted, differed in no essential point from his predecessors in that of Elizabeth. He carried a halbert and a horn-lantern, was well secured in a frieze gabardine, leathern-girdled; and wore a serviceable hat, like a pent-house, to guard against weather. The worthy here depicted has a most venerable face and beard, showing how ancient was the habit for parish officers to select the poor and feeble for the office of watchman, in order to keep them out of the poorhouse. Such ‘ancient and most quiet watchmen’ would naturally prefer being out of harm’s way, and warn thieves to depart in peace by ringing the bell, that the wether of their flock carried; ‘then presently call the rest of the watch together, and thank God you are rid of a knave,’ as honest Dogberry advises. Above the head of the man, in the original engraving from which our cut is copied, is inscribed the cry he utters as he walked the round of his parish. It is this: ‘Lanthorne and a whole candell light, hange out your lights heare!’ This was in accordance with the old local rule of London, as established by the mayor in 1416, that all householders of the better class, rated above a low rate in the books of their respective parishes, should hang a lantern, lighted with a fresh and whole candle, nightly outside their houses for the accommodation of foot-passengers, from Allhallows evening to Candlemas day. There is another picture of a Jacobean bellman in the collection of prints in the British Museum, giving a more poetic form to the cry. It runs thus:

‘A light here, maids, hang out your light, And see your horns be clear and bright, That so your candle clear may shine, Continuing from six till nine; That honest men that walk along May see to pass safe without wrong.’

The honest men had, however, need to be abed betimes, for total darkness fell early on the streets when the rush-candle burned in its socket; and
was dispelled only by the occasional appearance of the watchman with his horn lantern; or that more important and noisier official, the bellman. One of these was appointed to each ward, and acted as a sort of inspector to the watchmen and the parish, going round, says Stow, 'all night with a bell, and at every lane's end, and at the ward's end, gave warning of fire and candle, and to help the poor, and pray for the dead.' Our readers have already been presented with a picture of the Holborn bellman, and a specimen of his verse. He was a regular parish official, visible by day also, advertising sales, crying losses, or summoning to weddings or funerals, by ringing his bell. It was the duty of the bellman of St Sepulchre's parish, near Newgate, to rouse the unfortunates condemned to death in that prison, the night before their execution, and solemnly exhort them to repentance with good words in bad rhyme, ending with:

'When Sepulchre's bell to-morrow tolls,
The Lord above have mercy on your souls!'

The watchman was a more prosaic individual, never attempting a rhyme; he restricted himself to news of the weather, such as: 'Past eleven, and a starlight night;' or 'Past one o'clock, and a windy morning.' Horace Walpole amusingly narrates the parody uttered by some jesters who returned late from the tavern on the night when frightened Londoners expected the fulfilment of a prophecy, that their city should be engulfed by an earthquake, and had, in consequence, as many of them as could accomplish it, betaken themselves to country lodgings. These revellers, as they passed through the streets, imitated the voice of the watchmen, calling, 'Past twelve o'clock, and a dreadful earthquake!'

The miserable inefficiency of the watchmen, and the darkness and danger of the streets, continued until the reign of Anne. The apathy engendered by long usage, at last was roused by the boldness of rascals. Robberies occurred on all sides, and night-prowlers scarcely waited for darkness to come, ere they began to plunder. It was not safe to be out after dark, the suburbs were then cut off from the town, and a return from London to Kensington or Highgate was a risk to the pure, and probably to the life of the rash adventurer. There was even a plot concocted to rob Queen Anne as she returned to Kensington in her coach. Still the police continued ineffectual, and as long after as 1744, the mayor and aldermen addressed the king, declaring the streets more unsafe than ever, 'even at such times as were heretofore deemed hours of security,' in consequence of confederacies of great numbers of evil-disposed persons armed with bludgeons, pistols, cutlasses, and other dangerous weapons, who were guilty of the most daring outrages. The prison and the gallows now did their work in clearing the streets, the watch was put on a better footing, and a parish tax for lighting led to the establishment of oil-lamps in the streets. The rude character of these illuminations may be seen in Hogarth's view of St James's Street, where the best would naturally be placed. Fig. A of the following group is copied from this view, forming the background of the fourth plate of the 'Rake's Progress' (1735). A rough wooden post, about eight feet high, is stuck in the ground; from this stretches an iron rod and ring, forming a socket for the angular lamp, dimly lighted by a cotton-wick floating in a small pan of oil. Globular lamps were the invention of one Michael Cole, who obtained a patent for them in 1708, and first exhibited one of them the year following at the door of the St James's Coffee-house. He described it as 'a new kind of light, composed of one entire glass of a globular shape, with a lamp, which will give a clearer and more certain light from all parts thereof, without any dark shadows, or what else may be confounding or troublesome to the sight, than any other lamps that have hitherto been in use.' Cole was an Irish gentleman, and his lamp seems to have won favour; it slowly, but surely, came into general use, and is shown in our Figure B.

It was customary, in the Hogarthian era, and until the close of the last century, to bestow much cost on the iron-work about aristocratic houses. The lamp-irons at the doors were often of highly-enriched design in wrought metal; many old and curious specimens still remain in the older streets and squares at the west-end of our metropolis. Fig. C depicts one of these in Manchester Square, and the reader will observe the trumpet-shaped implement D attached midway. This is an extinguisher, and its use was to put out the flambeau carried lighted by the footman at the back of the carriage, during a night-progress in the streets. Johnson notices the cowardly bullies of London, who

'Their prudent insults to the poor confine;
Afar they mark the flambeau's bright approach,
And shun the shining train, and golden coach.'
We give a second, and more ornate example of
a doorway lamp and extinguisher from Grosvenor
Square, and it may be remarked as a curious
instance of aristocratic self-sufficiency, that this
spot, and a few others inhabited by the nobility,
vassals of the crown, so as to strengthen and render
paramount the royal prerogative. But the means
which he adopted for the accomplishment of this
end were of a much darker and more subtle
description than those employed by the English
monarch. One feudal prince, against whom his
machinations were especially directed, was the
celebrated Charles the Bold, Duke of Burgundy,
than whom, with his ardent impetuous nature,
there can scarcely be imagined a greater contrast
than the still and wily Louis, whose line of con-
duct has earned for him the epithet of Peronne.
The duplicity of the latter found itself at fault,
and nearly entailed upon its possessor the most serious
consequences.

The burghers of Liège had revolted from their
liege lord, the Duke of Burgundy, and been secretly
encouraged in their rebellion by the king of
France. Louis believed it possible to conceal this
circumstance from Charles, but one of his own
ministers, the Cardinal Balue, maintained a cor-
respondence with the duke, and kept him informed
of everything that transpired at the French court.
Through the instigation of this treacherous courtier,
Louis was induced to pay his vassal a visit at the
town of Peronne, in the territories of the latter.
By this mark of confidence, the French king hoped
to hoodwink and seize Charles. The duke receives
his sovereign with all marks of respect, and lodged
him with great splendour in the castle of Peronne.
Conferences on state matters were entered into
between the two potentates, but in the midst of
them Charles received intelligence of Louis's
underhand-dealings with the people of Liège, and
his rage on learning this was unendurable. On the
2d October 1468, he laid the French king
under arrest, subjected him to close confinement,
and was even on the point of proceeding to further
extremities. But he ultimately satisfied himself
by dictating to Louis a very humiliating treaty,
and causing him to accompany him on an
expedition against those very citizens of Liège with
whom he had been intriguing, and assist in the
burning of their town. It is said that so bitter
was the mortification which Louis endured in the
sequence of having thus imprudently placed himself
in the power of Charles, that on his return
home, he ordered to be killed a number of
ravenous jays and magpies, who had been taught
to cry 'Peronne!' The treachery of Cardinal
Balue was also punished by the confinement, for
many years, of that Churchman in an iron cage
of his own invention.

Robert Barclay.

Though not the founder of the Society of Friends,
Robert Barclay was one of its earliest and most
energetic champions, and did more than any other
in vindicating and explaining its principles to the
world. The great apostle of the Quakers was
the eldest son of Colonel David Barclay, of Dry,
in Kincardineshire, a Scottish gentleman of ancient
family, who had served with distinction in the wars
of the great Gustavus Adolphus. Robert received
his first religious training in the strict school of
Scottish Calvinism, but having been sent to Paris
to study in the Scots College there, under the
Robert Barclay was a convert to the Roman Catholic faith. Returning, in his fifteenth year, to his native country, he found that his father had joined himself to the new sect of the Quakers, which had only a few years previously sprung into existence under the leadership of George Fox. Robert's faith in the Roman church does not appear to have been very lasting, as, in the course of a few years, we find him following the example of his parent, and adopting enthusiastically the same tenets. Father and son lived an exemplary in all the relations of life, and was no less distinguished by the gentleness and amiability of his character, than by range and vigour of intellect.

TREATY OF LIMERICK.

On 3d October 1691, was signed the famous treaty of Limerick, by which the resistance of the Irish to the government of William III. was terminated, and the latter established as undisputed sovereign of the three kingdoms. On the part of the besieged the defence had been conducted by General Sarsfield, one of the bravest and ablest of King James's commanders, who had conducted thither the remains of the army which had continued undispersed after the disastrous engagement of Aghrim, in the preceding month of July. Within the walls of Limerick were contained the whole strength and hope of the Jacobite cause. On the 26th of August, the town was invested by William's Dutch commander, Ginckel, but the garrison made a brave resistance, and it was not till after some terrible encounters that the attacking force was enabled to open its trenches on both sides of the Shannon. On this advantage being gained, Sarsfield, despairing of successfully holding the place, proposed a surrender upon conditions, an offer which was favourably entertained, and by the treaty signed two days subsequently, the war in Ireland was concluded, and tranquillity restored to the country, after a long series of devastating hostilities.

The articles of the treaty of Limerick were highly creditable both to the wisdom and moderation of King William, and also to the valour of the Irish garrison, who had succeeded in obtaining such favourable terms. The troops were allowed to march out of the town with all the honours of war, and had permission, at their option, to embark for France, or enter the service of the English king. The majority, numbering about 10,000, preferred the former alternative, and passing over to the continent, enrolled themselves under the standard of Louis XIV., and became that renowned corps so celebrated in the French service, as 'The Irish Brigade.' The most important stipulation of the treaty, however, in a national point of view, was the clause by which the Roman Catholics were secured in the free exercise of their religion. This stipulation was partly intended to meet the superimposition of oppressive penal laws, by which was fostered a spirit of hatred and hostility to the English government, who ought rather to have sought to conciliate the inhabitants, and the evil results of whose policy towards Ireland, throughout the eighteenth century, are observable even to the present day.
OCTOBER 4.

ST. FRANCIS.

The memory of no saint is held in affection so mingled with reverence by the Roman Catholic Church as St. Francis, 'the gentle and the holy.' He was born in 1182, in the romantic town of Assisi, in Umbria. His father was a merchant, and a hard money-making man. Francis he took into partnership, but he wasted his money in gay living, splendid dress, and banqueting, and made the streets of Assisi ring at night with song and frolic. When about twenty-five, he was seized with a violent illness, and when he rose from his bed, nature looked dreary, and his soul was filled with loathing for his past life and habits. He resolved to be religious, and of course religious after the fashion of his generation. He determined never to refuse alms to a poor person. He met a troop of beggars, and exchanged his dress for the rags of the filthiest. He mortified himself with such severity, that Assisi thought he had gone distracted. His father had been distressed by his luxury, but now he thought he should be ruined by his alms-giving. To bring him, as he thought, to his senses, he beat him unmercifully, put him in fetters, and locked him up. Finding him, however, incorrigible, he carried him before the bishop; and there and then he denounced all his rights of ownership and inheritance, and stripped off his clothes in token of his rejection of the world, and his perpetual choice of poverty.

Francis, thus relieved from all entanglements, pursued his way with a simple energy which nothing could withstand. The fervour of his devotion diffused itself like an epidemic, and crowds parted with their possessions, and followed him into poverty and beggary. He went to Rome, and offered himself and his comrades to the service of the pope. Innocent III, in 1210, incorporated the order, which grew into the mighty and widespread fraternity of Franciscans, Grey Friars, or Minor Friars. The first name they had from their founder, the second from their grey clothing, and the third from their humility. Their habit was a loose garment, of a grey colour reaching to the ankles, with a cowl of the same, and a cloak over it when they went abroad. They girded themselves with cords, and went barefooted.

The austerities related of Francis are very much of a piece with those told of other saints. His story is one of the most marvellous in the history of religion. If any part of his rough habit seemed too soft, he darned it with pauchthread, and was wont to say to his brethren, that the devils easily tempted those who wore soft garments. His bed was usually the ground, or he slept sitting, and for his bolster he had a piece of wood or stone. Unless when sick, he rarely ate any food that was cooked with fire, and when he did, he sprinkled it with ashes. Yet it is said, that with indescribable or excessive austerity he was always dispensed. When a brother, by long fasting, was unable to sleep, Francis brought him some bread, and persuaded him to eat by eating with him. In treating with women, he kept so strict a watch over his eyes, that he hardly knew any woman by sight. He used to say: 'To converse with women, and not to be hurt by it, is as difficult as to take fire into one's bosom and not be burned. He that thinks himself secure, is undone; the devil finding somewhat to take hold on, though it be but a hair, raises a dreadful war.'

He was endowed, say his biographers, with an extraordinary gift of tears; his eyes were as fountains which flowed continually, and by much weeping he almost lost his sight. In his ecstatic raptures, he often poured forth his soul in verse, and Francis is among the oldest of the Italian poets. His sympathy with nature was very keen. He spoke of birds and beasts with all the tenderness due to children, and Dean Milman says the only malediction he can find which proceeded from his lips, was against a fierce swine which had killed a lamb. He had an especial fondness for lambs and lambs, as emblems of the Redeemer and the Church. When his surgeon was about to cauterise him for an issue, he said: 'Fire, my brother, be thou discreet and gentle to me.' In one of his hymns, he speaks of his brother the Sun, his sister the Moon, his brother the Wind, his sister the Water. When dying, he said: 'Welcome, Sister Death.' While in prayer it is said that he often floated in the air. Leo, his secretary and confessor, testified that he had seen him, when absorbed in devotion, raised above the ground so high that he could only touch his feet, which he held, and watered with his tears; and that sometimes he saw him raised much higher.

In his ardour for the conversion of souls, he set out to preach to the Mohammedans. A Christian army was encamped before Damietta, in Egypt. He passed beyond its lines, and was seized and carried before the sultan, and at once broke forth in exposition of the mysteries of faith. The sultan is reported to have listened with attention, probably with the Mohammedan reverence for the insane. Francis offered to enter a great fire with the priests of Islam, and to test the truth of their creeds by the result. The offer was declined. 'I will then enter alone,' said Francis. 'If I should be burned, you will impute it to my sins; should I come forth alive, you will embrace the gospel.' This also the sultan refused, but with every mark of honour conveyed the bold apostle to the camp at Damietta.

The crowning glory of the life of Francis is reputed to have occurred in the solitude of Mount Alverno, whither he had retired to hold a solemn fast in honour of the archangel Michael. One morning, when he was praying, he saw in vision a seraph with six wings, and in the midst of the wings that was necessary to the vision of the cherub appeared, and left on his mind an unutterable sense of delight and awe, he found on his hands and feet black excrescences like nails, and in his side a wound, from which blood frequently oozed, and stained his garment. These marks, in his humility, he hid with jealous care, but they became known, and by their means were wrou
many miracles. Pope Alexander IV. publicly declared that, with his own eyes, he had seen the miracles. The audience at the Theatre-Royal, Drury Lane, were agreeably surprised by the gentlemen belonging to that house performing the anthem of God Save our Noble King. The universal applause it met with—being encored with repeated huzzas—sufficiently denoted in how just abhorrence they hold the arbitrary schemes of our insidious enemies, and detest the despotic attempts of papal power. The song and air (the latter with some slight inaccuracies) were printed in the Gentleman's Magazine for October of that year; but Mr William Chappell believes that it had been in the light previously, in a collection, entitled Harmonia Anglicana.

**HEART-REQUESTS.**

**OCTOBER 5.**

St Placidus, abbot, and companions, martyr, 546. St Gallus, widow, about 550.

**HEART-REQUESTS.**

Some curious notions and practices respecting the human heart came into vogue about the time of the first Crusade, and were by many believers to have originated among those who died in that expedition. As the supposed seat of the affections, the heart was magnified into undue importance, and, after the death of a beloved or distinguished person, became the object of more solicitude than all the rest of his body. Thus the heart was considered the most valuable of all legacies, and it became the habit for a person to bequest it to his dearest friend, or to his most favourite church, abbey, or locality, as a token of his supreme regard. And when no such bequest was made, the friends or admirers of deceased persons would cause their hearts to be carefully embalmed, and then, enclosing them in some costly casket, would preserve them as precious treasure, or entomb them with special honour. This remarkable practice, which has been continued more or less down to the present century, was most prevalent during the medieval ages—numerous instances of which are still on record, and many of them are curious and interesting. Our space will only permit us to give a few specimens:

Robert, the famous Earl of Melford and Leicester, died in 1118, in the abbey of Frenaux, where his body was buried, but his heart, by his own order, was conveyed to the hospital at Brackley, to be kept as a relic until the next World Day, when, if the King of God had graciously vouchsafed to grant it, he might be restored to life again.

* See Mr Chappell's learned work, Popular Music in the Olden Time, ii. 691-707.
there preserved in salt." He had been among the early Crusaders in the Holy Land, and was, says Henry of Huntingdon, "the most sagacious in political affairs, and one of the ablest..."

When he perceived death approaching, he assumed the monastic habit, the usual act of atonement in such characters at that period, and died a penitent in the abbey of Přeßburg, but, while he founded the hospital at Brackley, where his heart was preserved, it stoutly refused to restore any of the possessions which he had unjustly acquired.

Isabella, daughter of William, Marshal, Earl of Pembroke, and wife of Richard, brother of Henry III, died at Berkhampstead in 1239, and entered the abbey of St. Mary's. Her husband, after her death, was buried there, and she was buried beside him in the church of Tewkesbury, to be there buried before the high-altar. Her body was buried at Beaulieu, in Hampshire. "The noble Isabella, Countess of Gloucester and Cornwall," says Matthew Paris, "was taken dangerously ill of the yellow jaundice, and brought to the point of death. She became senses, and after having had the amulets of her flaxen hair cut off, and made a full confession of her sins, she departed to the Lord, together with a boy to whom she had given birth. When Earl Richard, who had gone into Cornwall, heard of this event, he broke out into the most sorrowful lamentations, and mourned inconsolably. Her heart, while attending mass in the church of St. Lawrence, at Witerbo, in Tuscanw, was cruelly murdered by Simon and Guy de Montfort, in revenge for the death of their father at the battle of Evesham, in which, however, he appears to have had no part. His heart was sent in a golden vase to Westminster Abbey, where it was deposited in the tomb of Edward the Confessor. On his monument was a gilt statue holding his heart, labelled with these words: "I bequeath to my father my heart pierced with the dagger."

His heart, Richard, king of the Romans, having been thrust between his legs in 1217, before grief at his father's death, his body was buried at the abbey of Hayles, his own foundation, and his heart was deposited in the church of the Minories Brethren, at Oxford, under a costly pyramid erected by his widow.

The heart of John Baliol, Lord of Barnard Castle, who died in 1293, was, by his widow's desire, embalmed and enclosed in an ivory casket richly ornamented, and placed in the abbey of St. Mary's. Devorgilla, used to have this casket placed on the table every day when she ate her meals, and ordered it to be laid on her own heart, when she herself placed in her tomb. She was buried, according to her own direction, near the altar in New Abbey, which she herself had founded in Galloway, and the casket containing her husband's heart placed on her bosom. From this touching incident, the abbey received the name of Dolce Cor, or Sweetheart Abbey, and for its arms bore in chief a heart over two pastoral staffs, and in base three mullets of five points.

Hearts were not only bequeathed by Crusaders, who died in the Holy Land, to their friends at home, in testimony of unaltered affection, but were sometimes sent there in fulfilment of an unaccomplished vow. Thus Edward I, after he ascended the throne, again took the cross, promising to return to Jerusalem, and give his best support to the crusade, which was then in a depressed condition. But, being detained by his wars with Scotland, unexpected death, in 1207, prevented the fulfilment of his engagement. He therefore, on his death-bed, charged his son to send his heart to Palestine, accompanied with a hundred and forty knights and their retinues, in discharge of his vow. Having provided two thousand pounds of silver for the support of this expedition, and his heart being so conveyed to Edward, it is said that God would accept this fulfilment of his vow, and grant his blessing on the undertaking. He also impregnated eternal damnation on any who should expend the money for any other purpose. But the disobedient son little regarded the commandment of his father."

It is remarkable that the two sworn foes, Edward I of England, and Robert Bruce, king of Scotland, should have alike decided to send their hearts to be buried in the Holy Land. Each gave the order on his death-bed; each had the same motive for giving it; and the injunction of each was destined to be unperformed; but had their wishes been realised, the hearts of these two inveterate enemies would have met to rest quietly together for ever, in the same sepulchre.

The account of Bruce's heart is very interesting. As he lay on his death-bed, in 1298, he entrusted Sir James Douglas, his dear and trusty friend, to carry his heart to Jerusalem, because he had not, on account of his war with England, been able to fulfil a vow which he had made to assist in the crusade. Sir James, weeping exceedingly, vowed, on the honour of a knight, faithfully to discharge the trust reposed in him. After the king's death, his heart was taken from his body, embalmed, and enclosed in a silver case which, by a chain, Douglas suspended to his neck; and the heart of Scotland received a suitable retinue to attend him, he departed for the Holy Land. On reaching Spain, he found the king of Castile hotly engaged in war with the Moors, and thinking any contest with Saracens consistent with his vow, he joined the Spaniards in a battle against the Moors, but, ignorant of their mode of fighting, was soon surrounded by horsemen, so that escape was impossible. In desperation, he took the precious heart from his neck, and threw it before him, shouting aloud: "Pass on as thou wert wont; I will follow or die!" He followed, and was immediately struck to the earth. His dead body was found after the battle, lying over the heart of Bruce. His body was carried away by his friends, and honourably buried in his own church of St. Bride, at Douglas. Bruce's heart was intrusted to the charge of Sir Simon Lescot of Lee, who bore it back to Scotland, and deposited it beneath the altar in Melrose Abbey, where, perhaps, it still remains. From this incident, Sir Simon changed...
his name from Locard to Lockheart (as it is used to be spelled), and bore in his arms a heart within a fetterlock, with the motto, 'Corda serrata pando.' From the same incident, the Douglas's bear a human heart, imperially crowned, and have in their possession an ancient sword, emblazoned with two hands holding a heart, and dated 1329, the year in which Bruce died. An old ballad, quoted in the notes to Scott's Marmion, has this stanza—

'I will ye charge, after ye I depart,  
To holy grave, and therein bury my heart;  
Let it remain ever in the tyrne and hor,  
To ye last day I see my Saviour.'

Mrs Hemans has some beautiful lines on Bruce's heart, in Malrose Abbey, of which the following is the first stanza:

'Heart! that didst press forward still,  
Where the trumpet's note rang shrill,  
Where the knobly swords were crossing,  
And the plumes like sea-foam tossing;  
Leader of the charging spear,  
Fiery heart!—and liest thou there?  
May this narrow spot in urn  
Aught that so could beat and burn!'

Sir Robert Peckham, who died abroad, caused his heart to be sent into England, and buried in his family vault at Denham, in Buckinghamshire. He died in 1569, but his heart appears to have remained for many years unburied, as we gather from the following entry in the parish-register of burials: "Edmundus Peckham, Esq.," a son of Sir George Peckham, July 18, 1586. On the same day was the heart of Sir Robert Peckham, knight, buried in the vault under the chappel. The heart is enclosed in a leaden case thus inscribed: "I. H. S. Robertus Peckham Eques Aureus Anglus Cor suum Dulciæ, patre major. Monumentis commendari. Obiit 1 Septembri MD. XIX."

Edward Lord Windsor, of Bradenham, Bucks, who died at Spa, January 24, 1574, bequeathed his body to be buried in the 'cathedral church of the noble city of Liege, with a convenient tomb to his memory, but his heart to be enclosed in lead, and sent into England, there to be buried in the chapel at Bradenham, under his father's tomb, in token of a true Englishman." The case containing this heart, which has on it a long inscription, being thus braced together, induced the searchers to separate them, when a silver case, shaped like a heart, was found in a cavity between the stones. The case, which was engraved with the arms and name of Lord Edward Bruce, had hinges and clasps, and on being opened, was found to contain a heart carefully embalmed in a brownish-coloured liquid. After drawings of it were taken, it was carefully replaced in its former situation. In another cavity in the stones was a small leaden box, which had probably contained the bowels, but if so, they had then become dust."

The circumstances respecting the heart of Lord Edward Bruce, who was killed in a duel in 1613, are interesting. His body was interred at Bergen, in Holland, where he died, and a monument was there erected to his memory. But a tradition remained in his family, that his heart had been conveyed to Scotland, and deposited in the burial-ground adjoining the old Abbey-Church of Culross, in Perthshire. The tradition had become to many a discredited tale, when, to put it to the test, a search was made in 1806 for the precious relic. Two flat stones, strongly clasp'd together with iron, were discovered about two feet below the level of the pavement, and partly under an old projection in the wall. These stones had on them no inscription, but the singularity of their

heart, that formerly the executioner of a traitor was required to remove the body from the gallows before life was extinct, and plucking out the heart, to hold it up in his hands, and exclaim aloud, ‘Here is the heart of a traitor!’ ‘It was currently reported,’ says Anthony Wood, ‘that when the executioner held up the heart of Sir Everard Digby, and said, “Here is the heart of a traitor!” Sir Everard made answer and said, “Thou liest!”’ This story, which rests solely on A. Wood’s authority, is generally discredited, though Lord Bacon affirms there are instances of persons saying two or three words in similar cases.

From attaching such importance to the human heart, doubtless arose the practice, which is exemplified in many of our churches, of representing it so freely in sepulchral commemoration. And this occurs, not only where a heart alone is buried, but often the figure of a heart with an inscription is adopted as the sole memorial over the remains of the whole body. An example may be seen in St John’s Church, Margate, Kent (see engraving on the previous page). A plate of brass, cut into the shape and size of a human heart, is sunk into the slab which covers the remains of a former vicar of the church. The heart is inscribed with the words ‘Credo quod,’ which begin each inscription on three scrolls that issue from the heart, thus:

\[ \text{Redemptor meus vivit} \]
\[ \text{De terra surreccturus sum} \]
\[ \text{In carnis mea videbo demum Salvatorum mem} \]

Beneath the heart is a Latin inscription, which shows that the whole body of the deceased was interred below. In English it is as follows: ‘Here lies Master John Smyth, formerly vicar of this church. He died the thirtieth day of October, A.D. 1433. Amen.’

Sometimes hearts are represented as bleeding, or sprinkled with drops of blood, which was probably

The heart is inscribed with the letters J. H. C., and is held in two hands cut off at the wrists, which are clothed in richly-worked ruffles. This heart commemorates the interment of John Merston, rector, who died in 1446. It is sometimes placed on the breast, or held in the hands of an effigy representing the person commemorated. The latter case is probably in allusion to Lamentations iii. 41. In such instances, sepulchral hearts are to be regarded as merely emblematic, or, being the chief organ of life, as representatives of the whole body. But in many instances they mark the burial of hearts alone. Thus, in Chichester Cathedral is a slab of Purbeck marble, on which is chiselled a trefoil enclosing hands holding a heart, and surrounded by this inscription:

\[ \text{HIC QVIT LE COUER MAUDIE DE} \]

The rest of the inscription has been obliterated. Another interesting memorial of the burial of a heart formerly existed in Oatley Church, Huntingdonshire. This consisted of a small trefoil-headed recess, sculptured in stone, containing a pair of hands holding a heart. Behind this recess was found a round box, about four inches in diameter, which probably had contained a heart that had perished, as it was empty when discovered.

The burial of hearts appears to have been often attended with some funereal ceremony. The most remarkable instance on record occurred so recently as the 19th of August 1775. This was the burial, as it was called, of Whitehead’s heart. Paul Whitehead was the son of a London tradesman, and was himself apprenticed to a woollen-draper, but having received a superior education, and imbued a literary bias, he relinquished business as soon as the terms of his apprenticeship were completed. He entered into various literary projects, and published several pieces, both in prose and verse, chiefly of a satirical character. In his poetical satire, he adopted Pope as his model, but, to use his own expression, ‘he found that their powers were differently appreciated.’ His effusions, however, were not unsuccessful, especially those of a political character, which he supported by the active and zealous part he took at a contested election for Westminster. His talent and services were so far appreciated by his party, that Sir Francis Dashwood, afterwards Lord le Despencer, procured for him an appointment worth about £800 per annum. This, together with his wife’s fortune of £10,000, placed him in affluent circumstances, and he passed the remainder of his life in comparative retirement at Twickenham. His compositions were of temporary interest, and he appears to have highly estimated himself, for he positively refused to collect them for a standard edition. His moral character, in early life, may be conceived from his being not only a member, but the secretary of the notorious Medmenham Club, or the mock Monks of St Francis. In later life, his habits were respectable, and he possessed a benevolent and hospitable disposition. He died on the 30th of December 1774, aged sixty-four, and among many other legacies he bequeathed ‘his Heart to his noble friend and patron, Lord le Despencer, to be deposited in his mausoleum at West Wycombe, a village two miles from the town of High Wycombe and adjoining Wycombe Park, his lordship’s place of residence.”
This mausoleum, which was built with funds bequeathed by George Bubb Dodington, Lord Melcombe Regis, is a large hexagonal roofless building, with recesses in the walls for the reception of busts, urns, or other sepulchral monuments. It stands within the churchyard near the east end of the church, which is also a very singular edifice, built by Lord le Despencer on a remarkably lofty hill, and about half a mile from the village. Whitehead's heart, by order of Lord le Despencer, was wrapped in lead, and enshrined in a marble urn, which cost £50, and on the 16th of August 1775, eight months after Whitehead's death, was conveyed from London to be solemnly deposited within the mausoleum. At twelve o'clock, the precious relic, having arrived within a short distance of Wycombe, was carried forward, accompanied by the following procession:

A grenadier officer in his uniform;
Nine grenadiers, rank and file, two deep, the odd one last;
Two German-flute players;
Two choristers in surplices, with notes pinned to their backs;
Two German-flute players;
Eleven singing-men in surplices, two and two, the odd one last;
Two French-horn players;
Two bassoon players;
Six fifers, two and two;
Four muffled drums, two and two;
The urn containing the Heart, resting on a hier ornamented with black crape, and borne by six soldiers, with three others on each side to relieve them; Lord le Despencer, as chief mourner, in his regiments as colonel of the Bucks Militia, with crape round his arm; Major Skottowe, Captain Lloyd;
Seven other militia officers in uniform;
Two fifers;
Two drummers;
Twenty soldiers, two and two, with firelocks reversed.

Dr Arnold, Mr Atterbury, and another walked on the side of the procession all the way, with scrolls of paper in their hands, beating time. The 'Dead March' in Saul was played the whole way by the flutes, horns, and bassoons, successively with the fifes and drums. The church-bell continued tolling, and great guns were discharged every three minutes and a half. The hill on which the church stands was crowded with spectators, while the procession, moving very slowly up, was an hour in reaching the mausoleum, and another hour was spent in marching round it, and performing funereal glee. The urn was then borne with much ceremony into the mausoleum, and placed on a pedestal in one of the niches, with this inscription underneath:

PAUL WHITEHEAD OS TWICKENHAM, ESQS.
Ob. 1775.
Unhallowed hands, this urn forbear,
No gems, nor orient spoil,
Lie here concealed; but what's more rare,
A heart that knew no guile.

The ceremony was concluded by the soldiers firing three volleys, and then marching off with the drums and fifes playing a merry tune. On the next day, a new oratorio, called Goliah, composed by Mr Atterbury, was performed in the church.

The heart used to be often taken out of the urn, to be shewn to visitors, and in 1626, notwithstanding the warning epitaph, was stolen, and has never been recovered.*

OCTOBER 6.

St Faith or Fides, virgin, and her companions, martyrs, 4th century. St Bruno, confessor, founder of the Carthusian monks, 1101.

BORN—Dr John Kay (Cains), founder of Caius College, Cambridge, 1610, Norwich; Dr Nevil Maskelyne, astronomer, 1732, London; Madame Campan, biographer of Marie Antoinette, 1752, Paris; Louis Philippe, king of France, 1837, Paris; Madame Jenny Lind Goldschmidt, vocalist, 1821, Stockholm.

DIED—Charles the Bald, king of France, 877; Sir John Young, Baron Lygar, in 1658 Governor-general of Canada, 1676.

ANCIENT WATCHES.

Many inventions of the greatest value, and ultimately of the commonest use, are sometimes the most difficult to trace to their origin. It is so with clocks and watches. Neither the precise year of their invention, nor the names of their inventors, can be confidently stated. Till the close of the tenth century, no other mode of measuring time than by the sun-dial, or the hour-glass, appears to have existed; and then we first hear of a graduated mechanism adapted to the purpose, this invention being usually ascribed to the monk Gerbert, who was raised to the tiara in 999, under the name of Sylvester II. These clocks were cumbrous machines; and it is not till the fourteenth century that we hear of portable clocks. In the succeeding century, they were much more common, and were part of the necessary furniture of a better-class house. They were hung to the walls, and their movements regulated by weights and lines, like the cheap kitchen-clocks of the present day. The invention of the spiral spring as the motive power, in place of the weight and line, gave, about the middle of the fifteenth century, the first great impetus to improvement, which now went on rapidly, and resulted in the invention of the watch—a time-measurer that might be carried about the person.

Southern Germany appears to have been the place from whence these welcome novelties chiefly issued; and the earliest watches were known as 'Nuremberg Eggs,' a sobriquet obtained as well from the city from whence they emanated, as from their appearance. The works were enclosed in circular metal cases, and as they hung from the girdle, suggested the idea of an egg. Before the invention, or general adoption of the fusee—that is, from about 1500 to 1540—the movements were entirely of steel; then brass was adopted for the

* In further reference to the subject of this article, we beg to direct the reader to a very elegant and interesting work, recently published, from the pen of Miss Hartshorne, and entitled Exhumined Hearts of Warriors and Illustrious People.
plates and pillars, the wheels and pinions only being fabricated of steel; and ultimately the pinions only were of steel. The fusee being universally adopted about 1540, no great change occurred for fifty years, during which time the silversmith seems to have assisted the watchmaker in the production of quaint cases for his works, so that they might become ornamental adjuncts to a lady's waist. Our first example (formerly in the Bermal Collection, and now in that of Lady O. Fitzgerald) tells, after an odd fashion, the classic tale of Jupiter and Ganymede. The works are contained in the body of the eagle, which opens across the centre, and displays the dial-plate, richly engraved with scrolls and flowers on a ground of niello. It will be perceived that this watch is so constructed, that when not suspended to the girdle by the ring in the centre of the bird's back, it can stand on the claws wherever its owner may choose to place it.

Watches were now made of all imaginable shapes and sizes, and the cases of all forms and materials; crystal was very commonly used, through which the mechanism of the watch might be observed. Sometimes stones of a more precious character were cut and adapted to the purpose. The Earl of Stamford possesses one small egg-shaped watch, the cases cut out of jacinths, the cover set round with diamonds on an enamelled border. Mr O. Morgan has in his curious collection of watches one in form of a golden acorn, which discharged a diminutive wheel-lock pistol at a certain hour; another was enclosed in silver cases, taking the form of cockle-shells. We engrave a specimen of which is likewise of silver, is encircled with a gilt ornamented design of floriated scrolls and angels' heads. The wheels work on small rubies. It is believed to be of the time of Queen Elizabeth.

When the famous Diana of Poitiers became the mistress of Henry II., she was a widow, and the complaisant court not only made her mourning-colours the favourite fashion, but adopted the most lugubrious fancies for personal decoration. Rings in the form of skeletons clasped the finger; other mementos of an equally ghastly description were used as jewels; small coffins of gold contained chased and enamelled figures of death; and watches were made in the form of skulls, of which we engrave an example. All these quaint and bizarre forms passed out of fashion at the early part of the seventeenth century, when watchmakers seem to have devoted their attention chiefly to the compact character of their work. About 1680, they assumed a flattened oval form, such as we have seen used to a comparatively recent period; they were sometimes furnished with astronomical dials, and perpetual moving calendars, and often struck the hour; the inner case acting as a silver bell. In Ben Jonson's 'Staple of News,' the opening scene exhibits a dissolute junior anxiously awaiting his major, who 'draws forth his watch, and sets it on the table; immediately afterwards exclaiming:

'It strikes!—one, two;
Three, four, five, six. Enough, enough, dear watch,
Thy pulse hath beat enough. Now sleep and rest;
Would thou couldst make the time to do so too:
I'll wind thee up no more!'

It appears, then, that until 1670, when the pendulum-spring was invented, the mechanism of the watch had made no advance since the days of Elizabeth. The French makers were among the first to introduce judicious improvements, particularly such as effected weight and size. Lady Fitzgerald possesses a gold enamelled watch manufactured by order of Louis XIII., as a present to our Charles I., which may rival a modern work in its smallness. It is oval; measuring about 3 inches by 1¼ across the face, and is an inch in thickness. The back is chased in high-relief with the figure of St George conquering the dragon; the motto of the Garter surrounds the case, which is enriched with enamel colours. Grotesque forms for watch-cases seem to have quite gone out of fashion in the seventeenth century, with one exception; they were occasionally made in the form of a cross to hang at the girdle; and are consequently, but erroneously, sometimes
ANCIENT WATCHES.  THE BOOK OF DAYS.  THE MAID OF NORWAY.

called "Abbe's watches." The example here engraved is also from the collection just alluded to. It is covered with elaborate engraving of a very delicate character; the centre of the dial-plate represents Christ's agony in the Garden of Olives.

WATCHE NO. 4.

the outer compartments being occupied by the emblems of his passion; a figure of Faith occupying the lowermost. The style of engraving is very like that of the famous Theodore de Bry, who worked largely for the French silversmiths at the commencement of the seventeenth century.

OCTOBER 7.

Died—Charles III., the Simple, king of France, 929; Castle of Peronne; Margaret, Maid of Norway, 1290; Urduay; Sir Thomas Chaloner, statesman and writer, 166; George Gascoigne, poet and dramatist, 1577; Stamford, Lincolnshire; Giovanni Battista Guarini, author of the Pastor Fido, 1612, Venice; Nicholas Heines, scholar and critic, 1681, Holland; Antonio Sacchini, composer, 1784, Paris; Dr John Brown, founder of the Brunonian system of medicine, 1788, London; Dr John George Zimmerman, celebrated author of the treatise on Solitudes, 1795, Hanover; Dr Thomas Reid, eminent Scottish metaphysician, 1796, Glasgow; Edgar Allan Poe, American poet, 1849, Baltimore.

THE MAID OF NORWAY.

The fate of this child-sovereign, who only reached her hereditary dominions to die, and through whose decease so protracted a series of disasters was entailed on Scotland, forms one of the interesting events in the history of a nation so noted for the misfortunes of its queens. What we really know of the "fair maid of Norway" is very little, however liberally we may draw on imagination to supply the deficiencies, and fill in the lights and shadows to a picture of which the chroniclers of the times have furnished us with nothing but the most meagre outlines. It is not to the brief and sententious records of the thirteenth century, that we are to look for narratives of domestic events, or the personal history of a little girl of seven years old, even though that little girl were a queen in her own right.

Margaret, Princess of Norway, was the only child of Eric, king of that country, by his marriage with the daughter of Alexander III., of Scotland. Her mother died in giving her birth, and on the death of her maternal grandfather in 1255, by a fall from an unruly horse over the cliff at Kinghorn, she became sole heir of the Scottish crown, being already, moreover, heiress-presumptive to that of Norway. Alexander III. had indeed been most unfortunate in his domestic relations, having seen one member of his family after another, including two promising sons, descend into the grave before him, whilst his second marriage, a short time before his death, with the beautiful French princess Joleta, had been unproductive of issue. Feeling sensibly his loneliness, and solicitous also for the careful upbringing of his little grand-daughter, in whom all his prospects of a successor rested, he sent over to Norway, shortly after her mother's death, an embassy of Scottish nobles, requesting from his son-in-law the delivery of Margaret to these gallant knights, for the purpose of being brought over to, and educated in, Scotland. Eric refused his consent, and the deputation had to quit the Norwegian court with their master's behest unaccomplished. None of them, however, were destined to set foot again in their native country, the ship in which they were conveyed founndering in sight of the Scottish coast. Margaret may thus be deemed fortunate in having had so narrow an escape of her life, though it was only to lengthen its duration by a very few years.

On the melancholy death of Alexander III., the kingdom was thrown into a most distracted condition; but a great assembly of nobles and baronies was held, in which fealty was sworn to Margaret of Norway, as the sovereign of Scotland, and great anxiety expressed to have the young queen brought over to dwell among her subjects. The present conjuncture of affairs presented a strong temptation to the able and ambitious (King) Edward I. of England, to form an advantageous connection with Scotland. A matrimonial alliance was proposed by him, between the young Scottish queen and his own son Edward, Prince of Wales. The offer was favourably entertained both by the Scottish nobles and Margaret's father, King Eric, and negotiations were forthwith instituted for arranging the terms of the match. These were at length settled to the satisfaction of all parties, the principal conditions being that, notwithstanding this union with England, Scotland should retain all the rights and privileges of an independent kingdom, and that its sovereignty in the event of Edward and Margaret having no children, should revert to the young queen's nearest lawful heir. With the view of hastening an adjustment of matters, it is said that money was freely distributed by Edward, in the shape of bribes and pensions among the leading-men of Eric's court.
OCTOBER 7. EDGAR ALLAN POE.

It may not be a very profitable, but it is certainly a curious speculation, to ponder over the consequences of this marriage to Scotland, had the course of events permitted it to be carried into effect. The union of England and Scotland might thus have been accomplished on most honourable terms to the latter country, which would further have been spared the almost continuous series of wars and revolutions which have affected a country upwards of three hundred years that intervened between Margaret's death and the accession of James VI to the English throne. The peaceful arts of commerce and agriculture might have been allowed full scope to develop themselves, and the national industry might have raised the country at a much earlier date to that state of prosperity and wealth, which she has only attained in later and more tranquil times. But in that case the purifying influences of adversity would have been unfelt, less occasion would have arisen for the display of manly heroism and independence, the national spirit would have languished, and a Scotchman at the present day would have been unable to quote the deeds of Wallace and Bruce.

In addition to the stipulations regarding the succession to the crown, it had been agreed in the matrimonial treaty, that the young queen should be brought forth to Scotland, and be brought up either there or at Edward's court, as might be found most suitable. When the time for her departure arrived, however, her father displayed a great reluctance to part with her; a reluctance which many will regard as a presentiment of the untoward occurrence, by which he was destined so soon to be deprived of her altogether. Both Edward and the Scottish council urged on Eric the fulfilment of his engagement, by sending over his daughter to her future husband and dominions. Two distinguished Scottish knights—Sir David Wemyss, and the famous Sir Michael Scott, of Balfourie, so renowned for his reputed necromantic lore—were despatched to Norway to announce the event, and Eric now gave his consent that she should depart. We can imagine the little girl of seven, wholly unconscious of the important interests which centered in her, sorry to part with a loving and indulgent father, and carried down to the beach, to be intrusted to the care of some weather-beaten Norse admiral, who might possibly, in his youth, have taken part in King Hacon's expedition to Scotland, and the battle of Largs. A tender and delicate child, ill fitted, it would seem, for enduring the fatigues of a sea-voyage, she quitted, in September 1300, her father and her native land, never to see either of them again.

Meantime the Scottish nation was expecting the arrival of its young sovereign with all the loyal enthusiasm by which it has ever been distinguished, and a great council was being convened at Perth for deliberating on the affairs of the realm. Suddenly, this august assembly was electrified by a rumour, which reached it from the north, that the young Queen Margaret was no more. The dismal news was soon confirmed, and the country learned with dismay that her father's forebodings regarding her had proved both true, and that her delicate frame had been unable to support the effects of sickness and exhaustion. Prostrated by illness shortly after commencing her voyage, she gradually sunk, and when at length the vessel reached Orkney, poor Margaret was carried ashore only to breathe her last. At the intelligence of her death, to use the words of an old chronicler, 'the kingdom was troubled, and its inhabitants sunk into despair.' The disastrous interregnum that followed, and the disputes between the descendants of the Earl of Huntingdon, brother of the queen, as claimants to the throne, resulting in the attempt of Edward I. to annex Scotland to his dominions, are well known to all readers of history. It may be remarked that a claim to the Scottish crown was also put in by King Eric, as representing his daughter; but no active steps were taken to assert this alleged right. He died a few years afterwards, while only a young man of thirty, having been married to Margaret's mother at an age little above fourteen.

No particulars are known as to the precise spot where the Maid of Norway died, and even her place of burial has never been satisfactorily ascertained. Doubtless, however, she was interred in the venerable cathedral of St Magnus, at Kirkwall, in Orkney; but nothing definite as to this circumstance can be stated, and no known monument commemorates her sepulchral stone marks the spot of her grave. Amid a number of tombs, however, within that ancient church, bearing no name or inscription, one was discovered, which, on being opened and examined, gave indications of its being the grave of a young person, whilst one or two other circumstances combined to favour the idea of its having been the resting-place of the remains of Margaret of Norway.

EDGAR ALLAN POE.

Edgar Allan Poe, an eccentric American poet, was born at Baltimore, January 1911. It may seem absurd to say that he belonged by birth to the aristocracy, in a country where no aristocracy is recognised. Still, it is a fact that Poe was an aristocrat, and it is also true, that no people are more proud of the advantages of birth and breeding, than citizens of the United States, especially those who belong to the southern division of those states. Poe was a Southerner in manners and feelings, as well as by birth; and there is little doubt, that the greater part of the infamy which was heaped upon him after his death, was owing to the fact that as a man of taste he despised, and as an aristocrat, treated with contempt, a tradesman in literature, who lived by making books of biographies, generally laudatory of living literary persons. This man took his revenge when the opportunity came, as any one may kick a dead lion with impunity. Many have echoed, no doubt honestly, the evil fame which was made for the poor poet by the man whom he had despised and insulted during his life.

Poe's grandfather was a soldier in the war of the American revolution, and a friend of Lafayette. His father was a student at law. He fell in love with an English actress, named Arnold, and married her. They both died young, and at nearly the same time, leaving three orphan children. Edgar was adopted and educated by a wealthy merchant of Virginia. At the early age of five years he was brought to England, and was sent to school near London, till he was ten years old.
Poe's life was a series of eccentric adventures. The reason of this is to be found in his temperament, or physical constitution. He lived, from the cradle to the grave, on the verge of madness, when he was not absolutely mad. A half-glass of wine intoxicated him to insanity. His brain was large, almost to deformity, in the region where phrenologists place the imaginative faculties. Under the influence of slight stimulants, such as would have been inappreciable by a person otherwise constituted, Poe was led on to commit acts, the consequences of which were often distressing, and might at any moment have been fatal, as was finally the case.

At an early age he entered college at Charlottesville, Virginia, but he was expelled for dissipation. He also entered the military school at West Point, New York, but he left in a year. During the excitement in favor of the independence of Greece, he started for that country; but he was next found at St Petersburg, where he fell into distress, as was his fortune almost everywhere, and some friends sent him home.

Soon after his return, he published a volume of poems entitled Arauc, Tamerlane, and Minor Poems. These were written from the age of sixteen to eighteen years.

At one time he enlisted as a soldier, but he soon deserted. He had much partiality for active exercise, and very little for discipline, though he was exceedingly methodical and orderly in all the details of life. He was remarkable for aquatic and gymnastic performances. He was able to leap farther than most men, and he once swam seven miles and a half against the tide.

In 1835, Poe was employed to write for the Southern Literary Messenger, and about this time he married his cousin, Virginia Clemm, who, at the time of their union, was about fourteen years old. After this, we find him engaged on Benton's Gentleman's Magazine, at two pounds a week. This was of brief continuance, and his next was connected with Graham's Magazine, and wrote Some Strange Stories, nearly all of which seemed tinged with a sort of semi-insanity. We next find him engaged with Mr Briggs, in establishing the Broadway Journal. This was soon discontinued.

About 1844, he wrote The Raven, which has enjoyed a more extended reputation than any other production of his pen.

After the appearance of the Raven in transatlantic periodicals, Elizabeth Barrett Browning wrote to Poe, that 'The Raven had excited a fiendish horror in England.' He was delighted with the compliment. Indeed this sort of impression appeared to be an object of ambition with him. Poe always seemed to consider The Raven as his master-piece, and he was fond of reciting it in company, in a sort of song-toned voice, which was very unpleasant to some.

It would be difficult to calculate the amount of fame that Poe might have earned, if he could have lived, and written one year in undisturbed sanity. After the fame of The Raven had brought his name upon every lip, he was invited to lecture before the Boston Athenæum—the highest honour the Athenæum could bestow on the poet. He went before an elegant and most intellectual Boston audience, and instead of giving a lecture, he repeated a juvenile poem that had been published! His friends had no doubt of the cause, or occasion of this strange proceeding, but the audience were indignant. Poe declared that 'it was an intentional insult to the genius of the frogpond, a small pond on Boston Common—a further evidence of the madness that he often induced, by taking stimulants, though he knew his fearful liability. After this, his irregularities became much the rule of his life, that Mrs Clemm, who acted the part of a good genius to the poet and his young wife, her daughter, took a cottage at Fordham, near New York. Here she devoted herself to the care of both with tender and unceasing assiduity. Mrs Poe was dying of consumption. Poe was plunged in a deep melancholy, which did not admit of his writing anything. They were in a state of almost utter destitution, and the malady of the poet was constantly aggravated by witnessing the suffering of his fading, fussy-like wife, to whom he was tenderly attached. Friends came to their help the moment their condition was known, and it was subsequently brought against Poe, that he took a bribe at this time for a favourable review, which he afterwards wrote of a miserable book of poems. In speaking of this speculation of conscience, after he had somewhat recovered the tone of his mind, he said, 'The author gave me a hundred dollars, when my poor Virginia was dying, and we were starving, and required me to write a review of that book. What could I do!'

Let those who have judged him harshly for this, and other sins of his life, place themselves in his condition. When sober and sane, Poe was a gentleman of pure taste and elegant manners, whose conversation was always interesting, and often instructive. He had great personal beauty, and the aristocratic manner and bearing of a southern gentleman, and a descendant of the Cavaliers. In 1846, Poe published Eureka, which he first gave as a lecture. It is impossible to give the characteristic description of the peculiar literary performances by Poe. The same sort of extravagance pervades all, and those who knew him most intimately, and were best qualified to judge, believed that he lived and wrote with a shade of madness in all that he did—and yet few men were more methodical and orderly in their habits than Poe. His handwriting was delicately beautiful, and at the same time clear and plain. His study was the perfection of order and neatness. But his fearful proclivities might change all this in a moment. The world cannot believe that half a glass of wine could make a man lose all self-control, and hurry him on to madness, and its fearful consequences. But there is abundant proof that this was true of Poe.

After the death of his wife, Poe gradually recovered from the deep melancholy which had paralyzed all his mental power during the last portion of her life, and engaged again in literary occupation. Subsequently, he entered into correspondence with a lady of fine genius and high position, with a view to marriage. But here, again, his destiny was against him. The marriage was broken off, and soon after Poe died of delirium tremens, at the age of thirty-eight years. This violation of his will, it seems natural for an irregular life, combined with excessive brain-work, to bring its victims to an end.
OCTOBER 8.

St Thais, the penitent, about 348. St Pelagia, the penitent, 5th century. St Cyra, virgin, 5th or 6th century. St Bridget, widow, 1373.

Born.—Dr John Hoadly, dramatist, 1711, London.
Died.—Nicola di Rienzi, tribune of Rome, assassinated, 1354; Sir Richard Blackmore, poet, 1729; Dr Andrew Kipps, miscellaneous writer, 1795, London; Vittorio Alfieri, great tragic dramatist of Italy, 1803, Florence; Henry Christoph, king of Haiti, 1597; Charles Fourier, Socialist, 1837, Paris; Johann H. Dannecker, German sculptor, 1841, Stuttgart.

Rienzi.

Sir E. B. Lytton's noble romance of Rienzi has painted in the most attractive and glowing manner the life and actions of the renowned tribune of Rome. It must be admitted, also, that unlike many so-called historical novelists, the author has little, if at all, overstepped the limits of fact and reality in the portraiture of his hero, and presents, both in the delineation of Rienzi's character and the general picture of the political and social condition of Rome at the period, an account which, making due allowance for poetical embellishment, may, on the whole, be relied on as strikingly just and accurate.

It is well known that Rome, in the fourteenth century, was in the most anarchical and deplorable condition. A set of factions and tyrannical nobles had established, in their lawlessness, a perfect reign of terror over the unhappy citizens, and had driven the representatives of St Peter from their seat in the Eternal City, to establish a new pontifical residence at Avignon, in the south of France. Here, during seventy years of the fourteenth century, the papal court maintained itself, and, freed from the restraints by which it was hemmed in and overawed at home by its own subjects, asserted the privileges of the sacred college and the authority of ecclesiastical sway. In the meantime, the general body of Roman citizens groaned under the oppressions of the nobles, which were every day becoming more frequent and intolerable. This scene of violence was unexpectedly changed by one of the most remarkable revolutions that have ever taken place in any state, and which, if carried out with the same success that inaugurated its commencement, might have exercised a lasting and beneficial influence not only on Rome, but the whole of Italy.

Niccolo Gabrini, commonly called Niccolo, or Cola di Rienzi, from an abbreviation of his father's name of Lorenzo, was the son of an innkeeper and washerwoman of Rome, who, however, conscious of the natural abilities of his son, bestowed on him a good education, which the young man improved to the best advantage. His enthusiasm was especially excited by the history of the ancient glories of his native city, and he revolved with generous ardor many schemes for raising her from her present degradation to the summit of her primitive greatness. Chosen as one of the thirteen deputies from the Roman commons to the papal government at Avignon, he acquainted himself with great credit in an oration addressed to Pope Clement VI., and received the appointment of apostolic notary, with the daily salary of five gold florins. Stimulated by the success thus achieved, he commenced in earnest, on his return to Rome, his self-imposed task of routing the Roman inroads upon the assertion of their rights and liberties. The death of a much-loved brother, whose assassins, from their aristocratic influence and position, escaped unpunished, added the impulse of revenge to that of patriotism. In animated declamations to the people in the streets and public places of Rome, Rienzi descended on the greatness of their ancestors, the right and enjoyment of liberty, and the derivation of all law and authority from the will of the governed. The nobles were either too ignorant to comprehend, or too confident in their might, to dread the effect of such addresses, and the designs of the orator were still further veiled by his adopting, like Brutus, the guise of a buffoon or jester, and condescending, in this capacity, to raise a laugh in the palace of the Roman princess. But, in the month of May 1347, a nocturnal assembly of a hundred citizens was congregrated by him on Mount Aventine, and a formal compact was entered into for the re-establishment of the good estate, as Rienzi styled his scheme of popular freedom. A proclamation was then made by sound of trumpet, that on the evening of the following day, all persons should assemble unarmed before the church of St Angelo. After a night spent in devotion and prayers, Rienzi, accompanied by his band of a hundred followers, issued from the church, and marched in a solemn procession to the Capitol, from the balcony of which he harangued the people, and received, in their acclamations, a ratification of his assumption of supreme power. Stephen Colonna, the most formidable of the nobles, was at this time absent from Rome, and on his return to crush out at once and for ever, as he imagined, the spark of rebellion, he only narrowly saved himself by flight, from falling a victim to the fury of the populace, who supported with the most determined zeal the cause and authority of their champion. A general order was then issued to the great nobles, that they should peaceably retire from the city to their estates; a command which was obeyed with the most surprising unanimity. The high privilege of ruling triumphant, the inheritance of ancient days, was assumed by Rienzi, who forthwith set himself with active earnestness to the task of administrative reformation. In this, for a time, his endeavours were crowned with the most gratifying and signal success. The defences which the nobles had erected around their palaces, and within which, as in robbers' dens, they ensconced themselves to the defiance of all law and order, were levelled to the ground, and the garrisons of troops by which the citizens were overawed, expelled and suppressed. Law and order were everywhere re-established, an impartial execution of justice insured with respect to all ranks of society, and a vigorous and economical management introduced into the departments of revenue and finance. In these days, according to the glowing account of a historian of the time quoted by Gibbon, the woods began to rejoice that they were no longer infested with robbers; the oxen began to plough; the pilgrims visited the sanctuaries; the roads and inns were replenished with travellers; trade, plenty, and good faith were restored in the markets; and a purse of gold might
be exposed without danger in the midst of the highway.

The city and territory of Rome were not the only places comprehended in the patriotic aspirations of Rienzi, who aimed at uniting the whole of Italy into a grand federal republic. In such a scheme, he was fixed five hundred years in advance of his time, and the same difficulties that marred its accomplishment in modern times, were instrumental in causing its failure in the fourteenth century. The republics and free cities were indeed disposed to look favourably on the projects of the Roman tribune, but the rulers of Lombardy and Naples both despised and hated the plebeian chief. Yet the advice and arbitration of Rienzi were sought by more than one European sovereign, and, as in the case of Cromwell, the ambition with which he conformed himself to the dignity and general requirements of his high station, formed the theme of universal wonder and applause.

But the judgment and solidity which constituted such essential elements in the character of the English Protector, proved deficient with Nicolo di Rienzi. An injudicious and puerile assumption of regal authority, his own absence in the execution of justice, and a tendency to convivial excesses, had all their influence, in conjunction with the proverbial fickleness of popular esteem, in bringing about the overthrow of the tribune. On one occasion, when he caused himself to be created a knight with all the ceremonies of chivalry, he excited prodigious scandal by bathing in the sacred porphyry vase of Constantine, whilst at the same time the breaking down of the state bond, which he reposed within the baptistry, the night previous to the performance of the ceremony of investiture, was interpreted as an omen of his approaching downfall. After one or two unsuccessful attempts of the two great factions of the exiled nobles, the Colonna and the Orsini or Orsini, who laid aside their mutual animosities to unite against a common foe, the dethronement of Rienzi was suddenly accomplished by the Count of Minervino, who introduced himself into Rome at the head of one hundred and fifty soldiers. The tribune, thus surprised, shewed little of the resolution by which his conduct had been hitherto distinguished, and with a lachrymose denunciation of popular ingratitude, he pusillanimously abdicated the government, and was confined for a time in the castle of St. Angelo, from which, in the disguise of a pilgrim, he afterwards contrived to escape.

For seven years, Rienzi remained an exile from his native city, wandering about from the court of one sovereign to another, and was at last made a prisoner by the Emperor Charles IV., who sent him as a captive to the papal court at Avignon. The champion of popular rights was for a time treated as a malefactor, and four cardinals were appointed to the charges laid against him of heresy and rebellion. But the magnanimity displayed by him before the pope, seems to have made an impression on the mind of Clement VI., who relaxed the rigours of his confinement by allowing him the use of books, the study of which, more especially of the Holy Scriptures and Titus Livius, served to console the ex-tribune under his misfortunes.

On the accession of Innocent VI. to the pontificate, a new line of policy was adopted by the court of Avignon, who believed that by sending Rienzi to Rome as its accredited representative, with the title of senator, the anarchy and violence which since his deposition had become more rampant than ever, might be suppressed or diminished. The citizens had, indeed, experienced ample cause for regretting the order and impartiality of Rienzi's sway in the tyranny of his successors. His return was celebrated with every appearance of triumph and rejoicing, and for a short period, the benefits which had attended his former government marked his resumption of power. But his relations with the court of Avignon rendered him an object of suspicion to the people, whilst a spirit of jealousy and apprehension led him to the perpetration of several acts of cruelty. To crown his unpopularity, the exigencies of government compelled him to impose a tax, and a fatal commotion was the result. In the closing scene of his career, he displayed a strange combination of intrepidity and cowardice, appearing on the balcony of the Capitol, when it was surrounded by a furious multitude, and endeavouring by his eloquence to calm the passions of the mob. A storm of abuse and more effectual missiles interrupted his address, and after being wounded in the hand with an arrow, he seemed to lose all manly resolution, and fled lamenting to an inner apartment. The populace continued to surround the Capitol till the evening, then burst in the doors, and dragged Rienzi, as he was attempting to escape in disguise, to the platform in front of the palace. Here for an hour he stood motionless before the immense multitude, who for a time stood as if by some spell before the man who had undoubtedly in many respects been well deserving of their gratitude. This feeling of affection and remorse might have shielded the tribune, when a man from the crowd suddenly plunged a dagger in his breast. He fell senseless to the ground, and a revulsion taking place in the feelings of the mob, they rushed upon and deepshotted him with murderous wounding. His body was ignominiously exposed to the dogs, and the mutilated remains committed to the flames.

Thus perished the celebrated Rienzi, who in after-times has been regarded as the last of the Roman patriots, and celebrated in such glowing language by Lord Byron, with whose lines from Costello Harold's Pilgrimage the present notice may not inappropriately close—

"Then turn we to her latest tribune's name, From her ten thousand tyrants turn to thee, Redeemer of dark centuries of shame— The friend of Petrarch—hope of Italy— Rienzi! last of Romans! While the tree Of freedom's wither'd trunk puts forth a leaf, Even for thy tomb a garland let it be— The Forum's champion, and the people's chief— Her new-born Numa thou—with reign, alas! too brief."
COMBAT BETWEEN A MAN AND A DOG.

M. Aubry de Montdidier, a French gentleman, when travelling through the forest of Bondy, was murdered and buried at the foot of a tree. His dog remained for several days beside his grave, and only left the spot when urged by hunger. The following incident occurred. The latter was not the least of his and presented himself at the house of an intimate friend of his master's, making the most piteous howlings to announce the loss which he had sustained. After being supplied with food, he renewed his lamentations, moved towards the door, looking round to see whether he was followed, and returning to his master's friend, laid hold of him by the coat, as if to signify that he should come along with him. The singularity of all these movements on the part of the dog, coupled with the non-appearance of his master, from whom he was generally inseparable, induced the person in question to follow the animal. Leading the way, the dog arrived in time at the foot of a tree in the forest of Bondy, where he commenced scratching and tearing up the ground, at the same time recommencing the most piteous lamentations. On digging at the spot thus indicated, the body of the murdered Aubry was exposed to view.

No trace of the assassin could for a time be discovered, but after a while, the dog happening to be confronted with an individual, named the Chevalier Macaire, he flew at the man's throat, and could only with the utmost difficulty be forced to let go his hold. A similar fury was manifested by the dog on every subsequent occasion that he met the person. Such an extraordinary hostility on the part of the animal, who was otherwise remarkably gentle and good-tempered, attracted universal attention. It was remembered that he had been always devotedly attached to his master, against whom Macaire had cherished the bitterest enmity. Other circumstances combined to strengthen the suspicions now aroused.

The king of France, informed of all the rumours in circulation on this subject, ordered the dog to be brought before him. The animal remained perfectly quiet till it recognised Macaire amid a crowd of courtiers, and then rushed forward to seize him with a tremendous bay. In these days the practice of the judicial combat was in full vigour, that mode of settling doubtful cases being frequently resorted to, as an appeal to the 'judgment of God,' who it was believed would interpose specially to shield and vindicate innocent innocence. It was decided by his majesty, that this arbitration should determine the point at issue, and he accordingly ordered that a duel should take place between Macaire and the dog of the murdered Aubry.

We have already explained* that the lower animals were frequently, during the middle ages, subjected to trial, and the process conducted against them with all the parade of legal ceremonial employed in the case of their betters. Such an encounter, therefore, between the human and the canine creation, would not, in the fourteenth century, appear either specially extraordinary or unprecedented.

The box for the combat was marked off in the Ile Notre Dame, then an open space. Macaire made his appearance armed with a large stick, whilst the dog had an empty cask, into which he could retreat and make his springs from. On being let loose, he immediately ran up to his adversary, attacked him first on one side and then on the other, avoiding as he did so the blows from Macaire's cudgel, and at last with a bound seized the latter by the throat. The murderer was thrown down, and then and there obliged to make confession of his crime, in the presence of the king and the whole court. This memorable combat was depicted over a chimney in the great hall of the château of Montargis. The story has been made the subject of a popular melodrama.

ELIZABETH CROMWELL:
THE LADY-PROTECTRESS

Elizabeth Cromwell, widow of the Protector, after surviving her illustrious husband fourteen years, died in the house of her son-in-law, Mr Clapole, at Norborough, in Northamptonshire, on 8th of October 1672. She was the daughter of Sir James Bourchier, a wealthy London merchant, who possessed a country-house and considerable landed estates at Felsted, in Essex, by no means, be inclined to flatter Elizabeth, admits that she was a woman of enlarged understanding and elevated spirit. 'She was an excellent housewife,' he continues, 'as capable of descending to the kitchen with propriety, as she was of acting in her exalted station with dignity; certain it is, she acted a much more prudent part as Protectress than Henrietta did as queen. She educated her children with ability, and governed her family with address.' A glimpse of the Protectorate household is afforded by the Dutch ambassadors, who were entertained at Whitehall in 1654. After dinner, Cromwell led his guests to another room, then the Lady-Proteccress, with other ladies, came to them, and they had music, and voices and a psalm.' Heath, in his Flagellum, the little brown, 'springing book' stigmatised by Cowley as a 'brute,' remarks that Cromwell was a great lover of music, and entertained those that were most skilled in it, as well as the proficient in every other science. But this admission is modified by the royalist writer taking care to remind his readers that 'Saull also loved music.'

At a period when the vilest scrupulosity passed for loyalty and wit, we hear no evil report of Elizabeth Cromwell. No doubt her conduct was most carefully watched by her husband's enemies, and the slightest impropriety on her part would have speedily been blazoned abroad; yet no writer of the least authority throws reproach on her fair fame. It may be concluded, then, that though probably plain in person, and penurious in disposition, she was a virtuous, good wife and mother. In Cowley's play, The Cutter of Coleman Street, there is an allusion to her frugal character and want of beauty, where the Cutter, sneeringly describing his friend Worm, says: 'He would have been my Lady-Proteccress' poet; he wrote once a copy in praise of her beauty; but her highness gave nothing for it, but an old half-crown piece in gold, which she had hoarded up before these troubles, and that discouraged him from any further applications to court.'

It is a curious though unexplained fact, that we find none of her relatives taking part in the great civil war, nor even any of them employed under
the Protectorate administration of public affairs. Nor has any indisputably genuine portrait of Elizabeth been handed down to us, so that the only representation of her features that we have, though universally considered to be a likeness, is found as the frontispiece of one of the most rare and curious of cookery-books, published in 1694, and entitled *The Court and the Kitchen of Elizabeth, commonly called Joan Cromwell, the Wife of the late Usurper, truly Described and Represented.* The accompanying illustration is a copy of this singular frontispiece. The reader will notice a monkey depicted at one side of the engraving, and probably may wonder why it was placed there. In explanation, it must be said that the old engravers sometimes indulged in a dry kind of humour, of which this is an example. There is an old vulgar proverb that cannot well be literally repeated at the present day, but its signification is, that on the ground a monkey is passable enough, but the higher it climbs, the more its extreme ugliness becomes apparent. The animal, then, emblematises an ignorant upstart; and as the work is a satire as well as a cookery-book, the monkey is an apposite emblem of one who, according to the author’s opinion, ‘was a hundred times fitter for a barn than a palace.’

From the peculiar style and matter of this book, one is inclined to think that its author had been a master-cook under the royal régime, and lost both his office and perquisites by the altered state of affairs. Or he may have been a discarded servant of Elizabeth herself, for his various observations and anecdotes evince a thorough knowledge of the Protectorate household. Indeed this is the only value the book now possesses, and it must not be forgotten that the only fault or blame implied against Elizabeth by this angry satirist, is her ‘sordid frugality and thrifty baseness.’

When the Protessant took possession of the palace of Whitehall, our culinary author tells us that: ‘She employed a surveyor to make her some little labyrinths and trap-stairs, by which she might, at all times, unseen, pass to and fro, and come unawares upon her servants, and keep them vigilant in their places and honest in the discharge thereof. Several rooms were likewise made in her own apartments, and many small partitions up and down, as well above stairs as in the cellars and kitchens, her highness-ship not being yet accustomed to that roomy and august dwelling, and perhaps afraid of the vastness and silentness thereof. She could never endure any whispering, or be alone by herself in any of the chambers. Much ado she had, at first, to raise her mind and deportment to this sovereign grandeur, and very difficult it was for her to lay aside those impertinent meanesses of her private fortune; like the Bride Cat, metamorphosed into a comely virgin, that could not forbear catching at mice, she could not comport with her present condition, nor forget the common converse and affairs of life. She very providently kept cows in St James’s Park and a dairy in Whitehall, with dairy-maids, and fell to the old trade of churning butter and making butter-milk. Next to this covey of milk-maids, she had another of spinster and sewers, to the number of six, who sat most part of the day in “her privy-chamber sewing and stitching: they were all of them ministers’ daughters.”

The dishes used at Cromwell’s table, of which our author gives the receipts, sufficiently prove that the magnates of the Commonwealth were not insensible to the charms of good living. Scotch collars of veal was a very favourite dish, and narrow puddings were usually in demand at breakfast. The remains, after the household had dined, were alternately given to the poor of St Margaret’s, Westminster, and St Martin’s in the Fields, in a very orderly manner without babbles or noises. On great feast-days, Cromwell would call in the soldiers on guard, to eat the relics of his victuals.

We are also told, but surely it must be a scullery scandal, that the time-honoured perquisite of kitchen-stuff was endangered, under the rule of the Protessant, she wishing to have it exchanged for candies. Nor was she less penurious with her husband’s comforts; we are informed that: ‘Upon Oliver’s rupture with the Spaniards, the commodities of that country grew very scarce, and oranges and lemons were very rare and dear. One day, as the Protector was private at dinner, he called for an orange to a loin of veal, to which he used no other sauce, and urging the same command, was answered by his wife that oranges were oranges now, that crab [Seville] oranges would cost a great, and, for her part, she never intended to give it.’

The reason assigned by the Protessant for her frugal inspection and parsimony, was the small allowance and mean pitance she had to defray the household expenses. Yet, she was continually receiving presents from the sectaries; such as Westphalia hams, nets’ tongues, puncheons of French wines, runlets of sack, and all manner of preserves and confits.

It could now be expected that any cook of eminence would serve “in such an establishment, and so this chronicler of the backstairs lets us know, that Cromwell’s cook was a person of no
note, named Starkey, who deservedly came to grief of all a simple manner. One day, when
the lord mayor was closeted with the Protector on business of importance, this Starkey, forgetting his high office and professional dignity, took the lord mayor's sword-bearer into the cellar, treacherously intending to make that important official drunk and incapable. But Starkey overrated his own prowess, while underestimating that of his guest; for the well-trained bacchanal of the city was little affected by the peculiar atmosphere of the cellar, while Starkey, becoming drunk and disorderly, was overheard by the Protector, and ignominiously discharged upon the spot.

The only state or expense indulged by the Protectress was: 'the keeping of a coach, the driver of which served her for caterer, for butler, for serving-man, and for gentleman-usher, when she went to any public place.' And our author adds, that she had 'horses out of the same stables and their stabling and livery in her husband's allotment out of the Mews, at the charge of the state; so that it was the thriftiest and unexpensive pleasure and diversion, besides the finery and honour of it, that could be imagined. For it saved many a meal at home, when, upon pretence of business, her ladyship went abroad; and carrying some dainty proviant for her own and her daughters' own repast, she spent whole days in short visits, and long walks in the air; so that she seemed to affect the Scythian fashion, who dwell in carts and wagons, and have no other

'The more we read of this scurrilous attack on a prudent mistres, a good wife, and mother, the more we are inclined to admire her true and simple character. It is pleasant to contemplate the Lady-Protectress leaving her palace and banquet of state, to take a long country drive, and a sort of picnic-dinner with her daughters. Nor does our author fail, in some instances, to give her credit for good management; he says that: 'Her order of eating and meal-times was designed well to the decency and convenience of her service. For, at last, the ringing of a bell, the din of the hamlet, or the bustle of the grooms, with the inferior officers. Then the bell rung again, and the steward's table was set for the better sort of those that waited on their highnesses. Ten of whom were appointed to a table or a mess, one of which was chosen by themselves every week for a steward, and he gave the clerk of the kitchen a bill of fare, as was agreed generally every morning. To these ten men, by law, friends should casually come to visit them, the value of ten shillings, in what flesh or fish soever they would have, with a bottle of sack, and two of claret was appointed. But, to prevent after-comers from expecting anything in the kitchen, there was a general rule that if any man thought his business would detain him beyond dinner-time, he was to give notice to the steward of his mess, who would set aside for him as much as his share, and leave it in the butty.'

The utmost malignity of the royalists, then, could say no more against the Lady-Protectress, than that she was a thrifty housewife, giving her the appellation of Joan, the vulgar phrase for a female servant. And there is every reason to conclude that Elizabeth Cromwell was a wife well worthy of her illustrious partner.
MARY and the Duke of Suffolk, who remained in France as English ambassador, very discreet and circumspect in their conduct. But the former displayed little delicacy in avowing herself of the recovery of her liberty, and in less than two months from Louis's death, Mary and the duke were privately wedded at Paris. In thus contracting a union without obtaining the permission of Henry VIII, both parties exposed themselves to the risk of his serious displeasure, which to Suffolk, as his own subject, might have proved fatal. But the dowager French queen and her English husband having crossed the Channel, and taken up their abode in their manor in Suffolk without venturing near the court, a reconciliation was in a short time effected; a consummation the accomplishment of which was greatly owing to the good offices of Cardinal Wolsey, who appears to have been a staunch friend of the young couple.

CERVANTES.

The age which gave Shakespeare to England gave Cervantes to Spain. Cervantes was Shakespeare's senior by seventeen years, but their lives were otherwise contemporaneous; and nominally, though not actually,* on one day, the 23rd of April 1616, both died.

The life of Miguel de Cervantes Saavedra was one of almost continuous hardship and privation. He was born in 1547 at Alcalá de Henares, about twenty miles from Madrid. His parents had noble relations, but were poor, and concerning his youth little is positively known beyond what he incidentally tells us in his writings, as that he took great pleasure in attending the theatrical representations of Lope de Rueda, that he wrote verses when very young, and that he read everything within his reach, even as it would seem the torn scraps of paper he picked up in the streets. At Salamanca, he completed his education, and at the age of twenty-three he accompanied Monsignor Aquaviva to Rome, in the capacity of chamberlain. At Rome, in 1571, he entered the papal army as a common soldier, to serve against the Turks. Perhaps with oblique reference to himself, he observes, 'I have always noticed that none make better soldiers than those who are transplanted from the region of letters to the fields of war, and that never scholar became soldier, that was not a good and a brave one.' He was present at the great sea-fight of Lepanto, on the 7th October 1571, when the combined fleets of Spain, Venice, Genoa, Malta, and the pope, in 206 galleys, met the Turks in 250 galleys, and utterly defeated them, checking desirably Turkish intrusion into the west of Europe. Cervantes was in the thickest of the fight, and besides two wounds, received one which deprived him of the use of his left hand and arm during the rest of his life. In 1576, he received a command in a regiment for the Low Countries, but on his voyage thither, he was captured by an Algerine squadron, and he and his comrades were carried to Algiers, and sold as slaves. He served successively three cruel masters, a Greek and a Venetian, both renegades, and the day himself. Many were his plots to escape, and severely did he suffer when detected. He had a grand project for

* See Book of Days, vol. i. p. 544.
the insurrection of all the Christian slaves in Algiers, who numbered full 25,000; and the day declared that 'if he could but keep that lame Spaniard well guarded, he should consider his capital, his galley, and his slaves safe.' Four times his ship was captured by the Turks, and twice his ankles were tied to the stake, and once the hangman's rope was round his neck. After five years of cruel bondage, he was ransomed for the enormous sum of 500 gold ducats, which had been scraped together by friends and relatives in Spain.

Without means, Cervantes resumed the profession of soldier, and served in three expeditions against the Moors. In 1584, at the age of thirty-seven, he married a lady of good family, but with trifling or no fortune. To earn a livelihood, he commenced writing for the stage, and produced, he informs us, thirty dramas, which were all acted with considerable applause. It would appear, however, that the theatre did not pay, for, in 1588, we find him at Seville, then the great market for the vast wealth coming in from America, and as he calls it, 'the shelter for the poor and a refuge for the unfortunate.' At Seville, he acted as agent and money-collector, but did not thrive. In 1590, he made an ineffectual application to the king for an appointment in America, setting forth his adventures, services, and sufferings while a soldier in the Levant, and all the miseries of his life while a slave in Algiers. From Seville he moved to Valladolid, and tradition runs, that he was imprisoned there as a debtor or defaulter, and that, whilst in prison, he commenced writing Don Quixote. The tradition may be true, but it is based on no certain evidence. At anyrate, in poverty, at Valladolid, the first part of the immortal romance was written, and at Madrid it was printed and published in 1605.

The book at once attracted attention, and before a year was out a second edition was called for in Madrid and two editions elsewhere. Successful in authorship, however, did little to mend Cervantes's fortune. The Duke of Lerma, minister of Philip III., engaged him to write an account of the festivities and bull-fights with which Lord Howard, ambassador of James I., was received at Valladolid in 1605. Meanwhile, Cervantes went on writing, and produced a number of tales, Novelas Esequiales, and A Journey to Parnassus, a satire on the bad taste of his time, which made him enemies, but which, next to Don Quixote, is thought his finest production. The second part of Don Quixote did not make its appearance till 1615.

The author's end was then near. Some years before, he had joined the brotherhood of the Holy Sacrament, one of those religious associations which were then fashionable, and which included among its members Quevedo, Lope de Vega, and other men of letters. Subsequently, he assumed the habit of a Franciscan, and three weeks before his death, he formally entered the sacred order—

'Who, to be sure of Paradise,
Dying put on the weeds of Dominic,
Or in Franciscan think to pass disguised.'

He was buried in the convent of the monks of the Trinity, Madrid, but, a few years afterwards, this convent was removed to another part of the city, and what became of his ashes is quite unknown. No monument was raised to his memory till 1835, when a bronze statue of him, larger than life, was cast at Rome and set up in Madrid. It may seem incredible, but it is nevertheless the fact, that this statue of Cervantes was the first ever erected in Spain to the honour of a man of letters.

Though the true hero of this life we shall err if we think of him as miserable. If any inference may be drawn from the tenor of his writings, his was that happy temper, which out of adversity derives not bitterness, but matter for reflection and humorous enjoyment. What to the majority of men would be simple affliction, would, we conceive, to the author of Don Quixote be softened in a halo of humorous suggestions. Humour is a rare sweetener of life, and, as Carlyle remarks: 'Cervantes is indeed the purest of all humorists; so gentle and genial, so full, yet so ethereal is his humour, and in such accordance with itself and his whole noble nature.' The world dealt hardly by him, but we shall search in vain for a sour or malignant passage from his pen.

OCTOBER 10.

TESTAMENT OF MASTER WILLIAM TRACIE.

'The x days of October, in the xxii year of the rayne of King Henry the VIII.' is the date of an interesting document connected with the Reformations in England, 'The Testament of Master Wylliam Tracie, Esquier.'

In the time that immediately preceded the Reformations, many intelligent persons imbibed the opinions of Wycliffe, without making any prominent exhibition of them. This latent degeneracy usually crept out in their last wills, or on their death-beds. The omission of a wish to have masses said for their souls after their death was considered a strong proof of heresy, and dealt with severely. As an instance of this, it is recorded, that the body of William Tracie was taken up in Henry's VIII.'s reign, and publicly burned, by order of the chancellor of Worcester, because the following passage was found in his will: 'And towshyn the wealth of my soule the fayth that I have taken and reserved, is sufficient (as I suppose) without any other man's works or works. My grounde and my beleife is, that ther is but one god and one mediator betwene god and man, which is Jesus Christye. So that I do not except none in
one of these parties Dr Ingenhousz received the titles and qualifications of Cavendish in a pompous and formal manner, and introduced to him an Austrian gentleman. The Austrian thereon launched out into compliments, saying his chief reason for coming to London was to see and converse with one of the greatest ornaments of the age, and one of the most illustrious philosophers that ever existed. To this high-flew verbiage Cavendish answered not a word, but stood with his eyes cast down, abashed and in misery. At last spying an opening in the crowd, he flew to the door, nor did he stop till he reached his carriage, and drove directly home. Any attempt to draw him into conversation was almost certain to fail, and Dr Wollaston's recipe for treating with him usually answered best: 'The way to talk to Cavendish is never to look at him, but to talk as if it were into vacancy, and then it is not unlikely you may set him going.' Professor Playfair, who visited London in 1782, and was frequently at the meetings of the Royal Society Club, remarks: 'Mr Cavendish is a member of this meeting. He is of an awkward appearance, and has not much of the look of a man of rank. He speaks likewise with great difficulty and hesitation, and very seldom. But the genius or genius appears through this unpromising exterior. He never speaks at all, but it is exceedingly to the purpose, and either brings some excellent information, or draws some important conclusion.'

Cavendish's town-house was near the British Museum, at the corner of Gower Street and Montague Place. Few visitors were admitted, and some who were permitted to cross its threshold reported that books and apparatus were its chief furniture. He collected a large library of scientific literature, and willing to have it made useful, but not to be troubled with readers and borrowers, he hired a house for its reception in Dean Street, Soho, and kept a librarian. When he wanted one of his own books, he went there as to a circulating library, and left a formal receipt for whatever he took away. His favourite residence was a beautiful villa at Clapham, nearly the whole of which was occupied as workshops. The upper rooms were an observatory; the drawing-room was a laboratory; and in an ante-room was a forge. On the lawn was a wooden stage, from which access could be had to a large tree, to the top of which Cavendish, in the course of his astronomical, meteorological, and electrical experiments, occasionally ascended. For beauty he seemed quite indifferent. His apparatus, always exact and accurate so far as essential, was constructed of the cheapest material, and without any regard for symmetry.

His few guests were treated on all occasions to the same fare—a leg of mutton, and nothing else. Four scientific men were to dine with him one day, and when his housekeeper came to ask him what was to be got for dinner, he said a leg of mutton. 'Sir,' said she, 'that will not be enough for five.' 'Well, then, get two,' was his reply. His heir, Lord George Cavendish, visited him once a year, and was allowed an audience of but half-an-hour. His great income was allowed to accumulate without attention. The banks where he kept his account found they had a balance of £80,000 on hand, and sent a messenger to confer with him regarding it. The messenger was announced, and
Cavendish, in great agitation, desired him to be sent up, and as he entered the room, cried: 'What do you come here for? What do you want with me?'

'Sir, I thought it proper to wait upon you, as we have a very large balance in hand of yours, and we wish your orders respecting it.'

'If it is any trouble to you, I will take it out of your hands. Do not come here to plague me!' 'Not the least trouble to us, sir, not the least; but we thought you might like some of it to be invested.'

'Well, well. What do you want to do?' 'Perhaps you would like £40,000 invested.' 'Do so, do so! and don't come here to trouble me, or I'll remove it.'

If men were a trouble to him, women were his abhorrence. With his housekeeper he generally communicated by notes deposited on the hall-table. He would never see a female servant, and if an unlucky maid showed herself, she was instantly dismissed. To prevent inevitable encounters, it is said he had a second staircase erected in his Clapham villa. In all his habits he was punctiliously regular, even to hanging his hat on one peg. From an unpunctual walk he was, however, driven by being gazed at. Two ladies led a gentleman on his track, in order that he might obtain a sight of the philosopher. As he was getting over a stile, he saw to his horror that he was watched, and he never appeared in that path again. That he was not quite merciless to the sex, was proved by his saving a lady from the pursuit of a mad cow. The fashion of his dress he never changed, and his appearance was consequently old and antique, and provoked the attention he so much disliked. The villagers beheld him with awe, and thought him a wizard. His complexion was fair, his temperament nervous, and his voice squeaking. Of course, he would never allow his portrait to be taken, and the only memorial we have of his appearance is a hasty and surreptitious sketch. He died on the 24th of February 1810, aged upwards of seventy-eight. At the time of his death, he was the largest holder of bank-stock in England. He owned £1,157,000 in different public funds, the value of which was estimated at £700,000, and had besides freehold property of £5000 a year, and canal and other personal property. £80,000 lay to his credit at the bankers.

Dr George Wilson, the biographer of Cavendish, sums up his character in saying: 'There was nothing earnest, enthusiastic, heroic, or chivalrous in the nature of Cavendish, and as little was there anything mean, grovelling, or ignoble. He was almost passionless. All that needed for its apprehension more than pure intellect, or required the exercise of fancy, imagination, affection, or faith, was distasteful to Cavendish. An intellectual head thirsting, a pair of wonderful acute eyes observing, and a pair of very skilful hands experimenting or recording, are all that I realise in reading his memorials.'

FATHER MATHEW.

Like Scotland, the island of Ireland has been frequently twitted with the propensity of her children to an over-indulgence in strong liquors, and it cannot be denied that the vice of intoxication has, in past times at least, formed a repulsive characteristic of both countries. With such material to work upon, it will be readily admitted that any one endeavouring to act the part of a reformer of morals, would find an endeavour to convert the masses to sobriety a truly Herculean task. Yet in Ireland such an attempt was made, and the energy and devotedness of one man accomplished what was, temporarily at least, a great moral revolution.

The Rev. Theobald Mathew, who thus proved so successful an apostle of the temperance cause, was related to the family of the Earls of Llandaff, of which his father was an illegitimate son. Having been ordained a priest in 1814, he was appointed to a missionary charge in Cork, where his zeal and earnestness quickly secured him an immense influence both among rich and poor. Through his means, a benevolent association for visiting the sick and destitute was established in that city, on the model of the societies of St Vincent de Paul. While thus engaged in an active career of usefulness, a temperance society was formed in Cork about 1836, and Father Mathew became its president. The heroic missionary threw himself with all the ardour of a recluse into the new movement, and so successful were his efforts, that in a few months he obtained 150,000 converts in Cork alone to temperance principles. Determined to diffuse the benefits of the good cause still further, he commenced a progress through the west of Ireland, in which he was everywhere followed by crowds, who pressed forward to take the vow of total abstinence. The greater part of the island was thus traversed by Father Mathew, and he also visited London and other towns in England. Much of the success that attended his peregrinations, is doubtless to be ascribed to that mysterious sympathetic influence by which whole communities have often been swayed. Such was the preaching of Peter the Hermit in the middle ages, and similar effects have recently been witnessed in the temperance movement in Britain and America. It is, however, greatly to Father Mathew's credit, that the habitually impulsive temperament of the Irish was thus acted upon for the purest and most beneficial of purposes—their reclaimation from a vice which had hitherto constituted with them a national opprobrium. It must also not be forgotten, that the good priest was himself a serious sufferer by the results of his philanthropic exertions. A distillery in the south of Ireland, belonging to his family, and from which he himself derived a large income, was shut up in consequence of the disuse of whiskey among the lower orders, occasioned by his preaching. His services to the cause of religion and morality were at last recognised by the state, and a pension of £300 a year granted him from the civil list. Notwithstanding this, the expenses attending the benevolent institutions kept him always poor, and even burdened him with a debt, to relieve him from which a subscription was raised. For some years previous to his death, which took place on December 8, 1856, he was incapacitated by ill health from continuing his labours. As a true benefactor of humanity, Father Mathew must ever be regarded as one of the most shining ornaments of the Roman Catholic Church.
DEATH OF ZWINGLI.

THE BOOK OF DAYS.

OCTOBER 11.

Saints Tarachus, Probus, and Andronious, martyrs, 304. St Canice or Kenany, abbot in Ireland, 596. St Beakeburga or Eldburga, virgin and abbess, about 664. St Gunmar or Gomer, confessor, 774.

Died.—Louis V. emperor of Germany, 1547; Ulrich Zwingli, S. Gallen, burned as a heretic, 1531; Sir Thomas Wyatt, the elder, poet and statesman, 1562; Thomas Stackhouse, biblical writer, 1752; Benham, Berkshire; Anne, Countess of Macclesfield, mother of the poet Savage, 1755; London: Samuel Wesley, musician, 1837.

DEATH OF ZWINGLI.

Inferior to Luther and Calvin in point of genius and mental vigour, Ulrich Zwingli, or as his name is Latinised, Zuinglius, the great Swiss reformer, is better fitted as a man to command our love and esteem. The purity and amiableness of his character are universally admitted, whilst the honour unquestionably belongs to him of being the earliest of the ecclesiastical reformers of the sixteenth century. In his death, too, he may be regarded as a martyr to his principles, having accompanied, at the desire of the council of Zurich, a body of troops, sent during a civil war between the Catholic and Protestant cantons, to the relief of their countrymen at Appenzell, where an action was joined; and the devoted pastor was struck down in the act of encouraging the soldiers. The victory turned against the Protestants, and Zwingli, left dying on the battle-field, was run through by the sword of a Catholic soldier, who was ignorant of his quality, but discovered him to be a heretic from his declining, by signs, to avail himself of the offer of a confessor, and recommend his soul to the Virgin. On his body being found and recognised next day, group of spectators assembled to gaze on the remains of the renowned pastor of Zurich. One of these who had been his colleague in his days of Catholicism, looked long and earnestly on the lifeless face, and then exclaimed: ‘Whatever may have been thy faith, I am sure thou wast always sincere, and that thou lovedst thy country. May God take thy soul to his mercy!’ The fanatical fury of a bigoted mob was, however, incapable of any such generous appreciation, and a proposal to burn the heretical corpse was received with acclamations, and forthwith carried into execution.

When Zwingli thus met an untimely death, he had only attained the age of forty-seven. As an ecclesiastic of the Roman Catholic Church, he had manifested from the first a decided tendency to the study of the Scriptures, inculcating the doctrines of primitive Christianity rather than medieval dogmas, and by referring to the Scriptures as the only authoritative tribunal in religious matters. While a preacher also in the celebrated abbey of Einsiedlen, he discountenanced greatly the superstition notions which attracted so large a concourse of pilgrims to that celebrated shrine, and procured an erasure of the inscription over the abbey-gate. ‘Here pious remission of all sins is obtained.’ His convictions as to the errors of the established faith gained daily ground, and made rapid progress after his transfer from Einsiedlen to the post of preacher in the cathedral of Zurich. Here he felt himself called upon, like Luther in a similar position, to denounce the shameless traffic in indulgences, which Samson, a Franciscan friar, was endeavouring to carry on in Zurich, under the authority of Pope Leo X. The laical emissary was the leader of the rebellion against the authority of the Holy See having thus been inaugurated, Zwingli was not long in proceeding to shake off its authority altogether. In a work which he published, On the Observation of Lent, he disputed with great freedom the obligation of observing particular days, and found himself arraigned in consequence, at the instance of the Bishop of Constance, before the great council of Zurich, to answer the charges of heresy and innovation. Converted, however, already by the preaching of Zwingli to a participation in his sentiments, the decision of the council was a triumphant vindication of the accused, and what may be regarded as the first sanction by state authority of the principles of the Reformation in Switzerland. Shortly afterwards the images were removed from the churches, the celebration of mass abolished, and the practice of marriage introduced among the clergy, Zwingli himself setting an example by wedding, at the age of forty, the widow of an eminent magistrate, by whom he had one son.

As a reformer, Zwingli is certainly entitled to the credit of originality as well as precedence. His views seem to have been matured without any assistance from and co-operation with others, though on after-comparison his formula of faith agreed in all essentials with that of Luther, and was nearly identical with that of Calvin. With the first of these reformers, he maintained a strenuous contest on the subject of consubstantiation, or the presence of the body and blood of Christ in the sacramental elements; but on the occasion of a discussion between them at Marburg, in 1529, the proceedings terminated by the two champions signing their mutual assent to fourteen articles, and expressing a hope that their difference regarding the real presence would not interrupt their harmony, as coadjutors in the same cause. With regard to Calvin, it ought to be observed that his influence has, in reality, been very slight in Switzerland, where the reformed Helvetic church was founded by Zwingli several years before the doctrines of Calvin had been heard of. There is, nevertheless, as already remarked, a close similarity between their tenets, though the characteristic doctrine of predestination is less decidedly expressed by Zwingli.

The amiability of Zwingli’s character was no less conspicuous than its intrepidity and uprightness. In many points, he seems to have been in advance of his age, as we find him reproaching in the assembly of the canton of Zurich the practice which, down to the present day, has formed so unfavourable a trait of the Swiss people—the readiness to hire themselves as mercenary troops to the service of any foreign despots. In this object he so far succeeded, that a law was passed by the assembly of the canton forbidding all foreign alliances and subsidies for the space of twenty-five
years. The liberality and large-heartedness of his religious views were remarkable for the sixteenth century. He maintained that no person ought to be molested for his opinions, and ventured even to express a belief in relation to the salvation of heathens, that 'all good men who have fulfilled the laws engraven on their consciences, whatever age or country they may have lived in, will partake of eternal felicity.' One special position that the ecclesiastical must in all respects be subordinated to the secular power has been made an object of reproach to him, both by Catholics and Protestants. This sentiment contributed perhaps indirectly to his fate, as it was in obedience to the orders of the Zurich magistrates, that he met death on the field of battle, a circumstance with which several of his enemies have thought fit to stigmatise his memory.

SPECTRE-DOGS.

Neither Brand in his Popular Antiquities, nor Sir Walter Scott in his Witchcraft and Demonology, mentions spectre-dogs as a peculiar class of apparitions, yet they seem to occupy a distinct branch of English mythology. They are supposed to exist in one form or another in almost every county, and few kinds of superstition have more strongly influenced the credulous mind. To have the 'black dog on the back' has become a general phrase, though perhaps few who use it have an idea of its origin. The following anecdotes about spectre-dogs will illustrate this phrase, and shew how generally this branch of superstition is received.

According to popular psychology, the subject may be divided into three parts: 1. Black dogs, which are really fiends that have assumed the form of dogs; 2. The spirits of evil persons, who, as part of their punishment, have been transformed into the appearance of dogs; 3. Evil spirits, that to mimic the sports of men, or to hunt their souls, have assumed the form and habits of hounds. We will begin with the black-dog apparition.

In almost every county there is a popular belief in a spectral dog, which, although slightly varying in appearance in different parts, always bears the same general characteristics. It is described in large, and black with long ears and tail. It does not belong to any species of living dogs, but is usually said to resemble a hound, a setter, a terrier, or a shepherd-dog, though often larger than a Newfoundland. It bears different names, but is always alike supposed to be an evil spirit, haunting places where evil deeds have been done, or where some calamity may be expected. In the Isle of Man, it is called the Mouhe Dog, and, according to tradition, was accustomed to haunt Peel Castle, where it was seen in every room, but especially in the guard-chamber. Here, as soon as candles were lighted, it used to go and lie down before the fire, in presence of the soldiers, who became so accustomed to its appearance, that they lost much of the awe which they first felt at its presence. But knowing its malicious character, they never ventured to molest it, till one of them, in a drunken fit, swore that 'he would try whether it were dog or devil!' He made his trial, and was instantly sobered, but rendered speechless. He lived only three days afterwards, and then 'died in agonies more than is common in a natural death.' 'I heard this attested,' says Mr Waldron,
had seen this diabolical dog. 'I was returning home,' said he, 'late at night in a gig with the person who was driving. When we came near the spot, where a portion of the gibbet had lately stood, we saw on the bank of the road-side, along which a ditch or narrow brook runs, a flame of fire as large as my man's hat. What's that?' I exclaimed. 'Hurrah!' said all the company all in a tremble; and suddenly pulling in his horse, made a dead stop. I then saw an immense black dog lying on the road just in front of our horse, which also appeared trembling with fright. The dog was the strangest looking creature I ever beheld. He was as big as a Newfoundland, but very gaunt, shaggy, with long ears and tail, eyes like balls of fire, and large long teeth, for he opened his mouth and seemed to grin at us. He looked more like a fiend than a dog, and I trembled as much as my companion. In a few minutes the dog disappeared, seeming to vanish like a shadow, or to sink into the earth, and we drove on over the spot where he had lain.' The same canine apparition is occasionally still witnessed at the same place or near it.

In Norfolk, and in some parts of Cambridge-shire, the same kind of apparition is well-known to the inhabitants, by the name of 'Shuck,' the provincial word for shag. Here he is said chiefly to haunt churchyards, but other lonely places are not secure from his visitations. Thus a dreary lane, in the parish of Overstrand, is called, from his frequent visits there, Shuck's Lane. The spot on which he has been seen, if examined soon after his disappearance, is found to be scorched, and strongly impregnated with the smell of brimstone!

In some districts of the county of Lancashire, this spectre-dog bears the names of 'Trash' and 'Skrinker.' Its general appearance is the same as in other parts, but its habits, and the object of its visits, seem somewhat different. It does not haunt particular spots, but appears to certain persons to warn them of the speedy death of some relation or intimate friend. Occasionally, however, it gives its warning, not by its appearance, but by uttering a peculiar screech, from whom it is called, in the local dialect, Skrinker. Its name, Trash, is applied to it, because the noise made by its feet is supposed to resemble that of a person walking with heavy shoes along a mirey, sloppy road. If followed, it retires, but always with its eyes fronting the pursuer, and either sinks into the earth with a frightful shriek, or, if the pursuer avers his eyes from it for a moment, it disappears he knows not how. If struck at with a stick or weapon, it keeps its ground, but, to the horror of the striker, his weapon passes as harmlessly through it as if it were a mere shadow.

Lyme-Regis, in Dorsetshire, has a famous story about one of these canine apparitions. About a mile from the town stands a farmhouse, which once formed part of an old manor that was demolished in the parliamentary wars, except the small portion still existing. The sitting-room now used by the farmer, and also by his predecessors for a century or two, retains the large old-fashioned fireplace, with a fixed seat on each side under the capacious chimney. Many years ago, when the then master of the house, as his custom was after the daily toils were over, used to settle himself on one of these snug seats in the chimney-corner, a large black dog as regularly took possession of the opposite one. This dog in all essentials resembled the spectre-dog already described. For many nights, weeks, and months, this mysterious visitor, sitting vis à vis to the farmer, cast a gloom over his evening enjoyment. As long as he received no harm from the ghost, he suffered it, but when accustomed to his appearance, he began to look on him as one of the family circle. His neighbours, however, often advised him to drive away the fiend-like intruder; but the farmer, not relishing a contest with him, jestingly replied: 'Why should I? He costs me nothing—he eats nothing, he drinks nothing, he interferes with no one. He is the quietest and most gentle creature in the house.'

One night, however, the farmer, having been drinking too freely with a neighbour, and excited by his taunts about the black dog to an unusual degree of irritation, determined his courage should no more be called in question. Returning home in a rage, he no sooner saw the dog on his usual seat, than, seizing the poker, he rushed with it towards his mysterious companion. The dog, perceiving his intention, sprang from its seat, and began to run up stairs, followed by the angry farmer. The dog fled into an attic at the top of the house, and just as the farmer entered the same room, he saw it spring from the floor, and disappear through the ceiling. Enraged at being thus foiled, he struck with the poker the ceiling where the dog had passed through, and down fell a small old-fashioned box, which, on being opened, was found to contain a large sum in gold and silver coins of Charles I.'s reign. The dog was never more seen within doors, but to the present day continues at midnight to haunt a lane which leads to this house, and which has long borne the name of Dog Lane, while a small inn by the roadside still invites the passing stranger by the ominous sign of the 'Black Dog.'

As I was returning to Lyme,' said she, 'one night with my husband down Dog Lane, as we reached about the middle of it, I saw an animal about the size of a dog meeting us. 'What's that?' I said to my husband. "What?" said he, "I see nothing." I was so frightened I could say no more then, for the animal was within two or three yards of us, and had become as large as a young calf, but had the appearance of a sack or bag, his body with fiery eyes, just like the description I had heard of the "black dog." He passed close by me, and made the air cold and dank as he passed along. Though I was afraid to speak, I could not help turning round to look after him, and I saw him growing bigger and bigger as he went along, till he was as high as the trees by the roadside, and then seeming to swell into a large cloud, he passed over in the air. As soon as I could speak, I asked my husband to look at his watch, and it was then five minutes past twelve. My husband said I saw nothing but a vapour or fog coming up from the sea.'

A case of this kind shows how even a sensible person may become the victim of self-delusion; for in all practical matters this woman was remarkably sober-minded, intelligent, and judicious; and well educated for a person of her calling—the wife of a poor nurse, the duties of which she discharged in the
writer's house for several weeks to his fullest satisfaction, shewing no symptoms of nervousness or timidity.

The foregoing examples belong to the class of fine spirits, and confirmed the appearance of dogs. We will now give a few instances of human spirits that, as a punishment, have been transformed into similar apparitions.

Lady Howard, a Devonshire notable of the time of James I., was remarkable for her beauty, her wealth, her talents, and accomplishments. But she had many bad qualities. Amongst others, she was unnaturally cruel to her only daughter, and had a sad knack of getting rid of her husbands, having been married no less than four times. At last she died herself, and, for her misdemeanours while living, her spirit was transformed into a hound, and compelled to run every night, between midnight and cock-crowing, from the gateway of Pitz-ford, her former residence, to Oakhampton Park, and bring back to the place from whence she started, a single blade of grass in her mouth; and this process was done, with continuous till every single blade of grass is removed from the park, which she will not be able to effect till the end of the world. How these particulars were communicated to our living fellow-mortals we are not informed, and we dare not venture a conjecture. Our rustic psychologists have been rather more explicit in the following story.

There once lived in the hamlet of Dean Combe, Devon, a weaver of great fame and skill. After long prosperity he died and was buried. But the next day he appeared sitting at the loom in his chamber, working as diligently as when he was alive. His sons applied to the vicar, who accordingly went up to the foot of the stairs, and heard the noise of the weaver's shuttle in the room above. 'Knowles,' he cried, 'come down; this is no place for thee.' 'I will,' replied the weaver, 'as soon as I have worked out my quill!' (the quill is the shuttle full of wool.) 'Nay,' said the vicar, 'thou hast been long enough at thy work; come down at once.' So when the spirit came down, the vicar took a handful of earth from the churchyard, and threw it in its face. And in a moment it became a black hound. 'Follow me,' said the vicar, and it followed him to the gate of the wood. And when they came there, it seemed as if all the trees in the wood were coming together, so great was the wind. Then the vicar took a nutshell with a hole in it, and led the hound to the pool below the water-fall. 'Take this shell,' said he, 'and when thou shalt have dipped out the pool with it, thou mayest rest—not before.' And at mid-day and at midnight, the hound may still be seen at its work. 1

It is difficult to understand why the industrial weaver was consigned to such a hopeless doom. Many spectral dogs, believed to be the souls of wicked persons, are said to haunt the sides of rivers and pools, and sometimes their Yelping is so dreadful, that all who hear them lose their senses.†

Besides such apparitions of solitary dogs, whole packs of spectral hounds are said to be occasionally heard and seen in full cry in various parts of England and Wales, but chiefly in mountainous districts. They are everywhere described much in the same way, but with different names. In the north, they are called 'Gabriel's Hounds;' in Devon, the 'Wark,' 'Yeah,' or 'Heath Hounds;' in Wales, 'Crom Anwn,' or 'Owen Wybr;' and in Cornwall, the 'Devil and his Dandy-dogs.' But few have ever imagined that they have seen these hounds, though popular superstition has described them as black, with fiery eyes and teeth, and sprinkled all over with blood. Generally, they are only heard, and seem to be passing swiftly along in the air, as if in hot pursuit of their prey; and, though not very high up, yet they cannot be seen, because they evaporate like cloud-vapours. Their Yelping is said to be sometimes as loud as the note of a blood-hound, but sharper and more terrific. Why they have anywhere received the name of Gabriel's hounds, appears unaccountable, for they are always supposed to be evil spirits hunting the souls of the dead, or, by their diabolical Yelping, to betoken the speedy death of some person. Thus, Mr Holland, of Sheffield, describes the following somet the superstition as held in Yorkshire—

'Oft have I heard my honoured mother say
How she hath listened to the Gabriel Hounds;
Those strange unearthly and mysterious sounds
Which on the ear through murkies terrors come.
And how, entranced by superstitions spell,
The trembling villager not seldom heard,
In the quaint notes of the nocturnal hound
Of death premonished, some sick neighbour's knell.
I, too, remember once, at midnight dark,
How these sky-yelpers startled me, and stirred
My fancy so, I could have then averted
A mimic pack of beagles loud and loud!
Nor wondered I that rustic fear should trace
A spectral huntsman doomed to that long moonal chase.'

Wordsworth, alluding to another form of this superstition, similar to the German story of the Wild Huntsman, thus writes:

'He oftentimes will start,
For, overhead, are sweeping Gabriel's Hounds,
Doomed, with their impious lord, the flying hare
To chase for ever through aerial grounds.'

Many wild and amusing stories are told respecting these aerial hounds; especially in the secluded districts of Devon and Cornwall. The following is an specimen. A hardman was journeying home across the moors of Cornwall one windy night, when he heard at a distance the baying of hounds, which he was not long in recognising to be the dismal Yelp of the Devil's Dandy-dogs. He was three or four miles distant from his home; and, much terrified, he hurried onwards as fast as the treacherous nature of the soil and uncertainty of the path would allow; but the melancholy Yelping of the hounds and the fiendish shout of the hunter came nearer and nearer. After a long run, they appeared so close upon him, that he could not help turning round to look at them. He was horror-struck, for he could distinctly see the hunter and his dogs. The huntsman was terrible to behold. He was black, had large fiery eyes, horns, a tail, and carried in his claw-y band a long hunting-pole. The dogs, a numerous pack, blackened the ground as far as it could be seen; each snorting fire, and Yelping in the most frightful tone. What was the poor rustic to do? No
cottage was near; no rock, no tree to shelter him—nothing remained but to abandon himself to the fury of these hell-hounds. Suddenly, a happy thought flashed into his mind. He had been told that no evil spirit can resist the power of prayer. He fell on his knees, and at the first holy words he uttered, the hounds stood still, but yelped more dismally than ever; and the huntsman shouted, 'Bo Shrove!' which 'means,' says the narrator, 'in the old language, The boy prays!' The black huntsman then drew off his dandy-dogs, and the poor herdsman hastened home as fast as his trembling frame permitted.

This, and similar stories, strikingly illustrate the creative power of the imagination when excited by fear. The herdsman's vision existed only in his own mind, induced by the terrifying sound, which, although adapted by his imagination to his previous conceptions of the dandy-dogs, was a reality. For it has been fully and satisfactorily ascertained that the goblin-hounds, which have originated such fanciful legends in almost every country, are merely flocks of wild-fowees, or other large migratory birds.

HARRY ROWE.

In the earlier half of October 1800, there died in the poor-house of York one Harry Rowe, a well-known character in his locality, who made a good deal of noise in the world while he lived, and caused considerable speculation among Shakspearean commentators after his death. For Harry had

many years held the distinguished post of trumpeter-major to the high-sheriffs of Yorkshire, and was also the reputed author of an ably-commentated

dition of Macbeth, and a musical farce, entitled No Cure, no Pay, a trenchant satire on quack-doctors, and the shameful facility with which medical diplomas and degrees were then obtained by illiterate adventurers. Rowe was born at York in 1726. He served as trumpeter in the Duke of Kingston's regiment of light horse, at the battle of Culloden; and, after he retired from the army, attended, in the same capacity, the sheriffs and judges at York assizes for nearly half a century. Rowe was also the master of a puppet-show, and, for many successive years, he opened his little theatre at York during the winter months, making a regular circuit to various parts of the country in the summer season. By these means he long supported his poor and aged parents, never allowing them to receive any other aid than that amply provided for them by his own exertions. In his own case he was less fortunate. When overtaken by age and poverty, Rowe was forced to seek an asylum in the poor-house, where he died.

The puppet-showman had a rough, ready, caustic wit, with which he interlarded the speeches of his wooden comedians, to the great delight of the audience. And so, many actually thought that the edition of Macbeth, bearing Rowe's name on the title-page, was really written by him, to the great mystification of later commentators. In the preface, Harry is made to say: 'I am the master of a puppet-show, and as, from the nature of my employment, I am obliged to have a few stock-plays ready for representation whenever I am accidentally visited by a select party of ladies and gentlemen, I have added the tragedy of Macbeth to my green-room collection. The alterations that I have made in this play are warranted, from a careful perusal of a very old manuscript in the possession of my prompter, one of whose ancestors, by the mother's side, was rush-spreader and candle-snuffer at the Globe playhouse, as appears from the following memorandum on a blank-page of the manuscript: 'This day, March the fourth, received the sum of seven shillings and fourpence, for six bundles of rushes, and two pair of candle-snuffers.'

The work cleverly satirizes Johnson's, Steevens's, and Malone's editions of Shakespeare, and was written, as well as No Cure, no Pay, by Dr. Andrew Hunter of York, a skilful physician and able man of letters. The profits were given to Rowe, to support him in a long and painful illness; and, when unable to manage his wooden company, the old trumpet-major sold the works of the charitable but satirical physician, in all parts of the city of York, as his own composition.

OCTOBER 12.

St. Wilfrid, bishop of York, confessor, 708.

Born.—Edward VI. of England, 1587, Hampton Court; Pedro I., emperor of Brazil, 1798; Hugh Miller, geologist, 1802, Cromarty.

Died.—Pope Honorius I., 638; Pope Boniface VIII., 1303; Maximilian II., emperor of Germany, 1576, Regensberg; Duke of Palma, Portuguese statesman, 1850, Lisbon; Robert Stephenson, engineer, 1859, London.
DISCOVERY OF AMERICA.

On 12th October 1492, Columbus with his followers landed at last on Watling's Island, one of the Bahama Isles, and planted there the cross in token of gratitude to the Divine mercy, which, after guiding him safely through a perilous voyage, had at last, in the discovery of a western world, crowned with success the darling aspiration of his life. Land had already been descried on the previous evening, but it was not till the ensuing morning that the intrepid admiral beheld the flat and densely-wooded shores gleaming beneath the rays of an autumn sun, and by actually setting his foot on them, realised the fulfilment of his hopes.

It is now well known that although Columbus was unquestionably the first to proclaim to the world at large the existence of a new and vast region in the direction of the setting sun, he cannot literally be said to have been the first European discoverer of America. The ancient Scandinavians or Norsemen, so renowned for their maritime enterprise, had, at the commencement of the 11th century, already settled in Greenland; and earlier still, the Phœnicians, in search of new lands and trade, explored the whole east coast of America as far south as lat. 41° 30' N., and there, near New Bedford, in the state of Massachusetts, they planted a colony. An intercourse by way of Greenland and Iceland subsisted between this settlement and Norway down to the fourteenth century. There is also satisfactory evidence for believing, that in the twelfth century the celebrated Welsh prince, Madoc, having sailed from his native country with a small fleet, landed and founded a colony on the coast of Virginia. But to Columbus still belongs the merit of having philosophically reasoned out the existence of a New World, and by practically ascertaining the truth of his propositions, of inaugurating that connection between the Eastern and Western Hemispheres which has affected so remarkable a revolution in the world's history. It is a little curious, indeed, that the belief which Columbus entertained, at first, as to the land discovered by him being part of India or China, was adhered to by him to the last, and he died in the idea that Cuba formed a portion of the mainland of India. This notion so pertinaciously clung to, by both the great Genoese and Europe in general, was dispelled by Balboa's expedition, in 1513, across the Isthmus of Darien, and discovery of the Pacific Ocean; whilst a few years later, the real position of these countries with respect to America was demonstrated by the expedition of Fernando Magalhaens, whose untimely death, in the Philippine Islands, deprived him of the honour of being the first circumnavigator of the globe.

Much obloquy has been thrown on Amerigo Vespucci, the Florentine navigator, for depriving Columbus of the honour of giving his name to the New World. How the denomination of America arose from Vespucci's Christian name, has never been satisfactorily explained, but it appears to be sufficiently ascertained that he himself is in no wise responsible for the circumstance. Vespucci, who was a man of considerable attainments, wrote an account of his American voyages, which was translated into German, and obtained an immense popularity with that nation. It has been conjectured that the name of America was first applied in Germany to the New World, and from thence was adopted by the other countries of Europe.

THE 'CURIOSITIES' OF MANCHESTER COLLEGE.

On 12th October 1639, died at Clayton Hall, near Manchester, Humphrey Chetham, who bequeathed the large fortune which, though a gentleman by birth, he had made in trade, for the purpose of establishing a school for the education of forty poor children of Manchester, and also of founding a public library, which till recently was almost the only institution of the kind in Britain. The college as the scholastic establishment and library are termed, was originally a religious foundation, but the buildings were in the sixteenth century sold to the Derby family, from whom they were purchased shortly after the death of Mr Chetham, by the trustees of the latter. The boys are boarded, clothed, and educated from about the age of six to fourteen, after which they are bound apprentices to some trade. Both in a philanthropic and antiquarian point of view, the college forms one of the most interesting public buildings in Manchester, contrasting so strongly with the traditions of ancient times, with the bustle of factory-life and the din of mills and machinery. No part of the structure strikes the visitor more forcibly in this respect than the library, which is open daily to the public, with an unlimited right to every one, whether a resident in the town or a stranger, of reading, within a room set apart for the purpose, any book in the collection. The only condition demanded is, that the reader shall enter in a book his name and address. The reading-room is an antique apartment, wainscoted with oak, and adorned with portraits of Humphrey Chetham, the founder, Luther, and other celebrities, and presenting altogether such a quaint and secluded appearance, that it is difficult for the visitor to realise the fact of his being near the centre of such a busy nineteenth-century city as Manchester.

It is a well-known fact that in recent years an odd collection of what were termed 'curiosities' used to be exhibited in the library gallery attached to the college. The visitors were, for the most part, people from the country, who flocked thither to see the wonders of the place. A small fee for admission was charged, the duties of exhibitor being assumed by the college-boys in rotation, and certainly to a stranger the show-boy was the greatest curiosity there. With a loud, shrill voice, in the broad Lancashire dialect, and a tone of wearisome monotony, the boy, with or without a long wand, thus directed attention to the objects exhibited: 'That's th' skeleton of a man; that's a globe; that's a talliscope; that's a snake; over th' snake's back's two watch-bills; there's a frog's legs; that wi's a white coat once belonged to General Wolfe; that's the whip that th' snake was kilt wi'; that topmost's a crocodilo; that bottommost's a halligator; that boot won't belonged to Queen Elizabeth; that's a Hindain pouch; that's an ancient stiletto; that's part o' Humphrey Chetham's armour; that wi's the white feaces was a monkey; under th' monkey's a green lizard; side o' th' monkey's a porpus's skull; under the porpus's skull's a halligator; under th' haller's a turtle; them bows an' arrows belonged to th' Injians; that's a porpus's head; them there's various kinds o'
adders, worms, snakes, fishes, and venemous creatures; that albina piece was taken from th' dead body of a Frenchman, that was killed at th' battle o' Waterloo, that was fowt i' th' year eighteen hundred and fifteen; th' same a pair o' eagle's claws; that arrow belonged to one o' th' legions that fowt under General Wolfe at th' battle o' Bosworth Field, i' th' year 1485, when King Richurt th' Third, king of England, was slain; th' arrows wound belonging to Robin Hood; that's a sea-hen; that's a sea-weed; that's a unicorn fish; that's part of a Hindian's skull; that's th' top o' it; that's Oliver Crummell's stone and tankard; that's part on a loadstone; them two pieces o' wood was almanacks aforescript 'prin' was fun' out; that's a hearse; her han' been mot a spaking-trumpet; side o' th' spaking-trumpet's a shark's jaw-bone; that's leaning against th' spaking-trumpet's Oliver Crummell's sawood; that's a leather-bag; side o' th' leather-bag's two cokey-nut shells; side o' th' cokey-nut shell's a porpus's skull; side o' th' porpus's head's a pumpkin; over th' pumpkin's a turtle; side o' th' turtle's a sea-woman's skirt; that top 'un a consumer; then there's the Jeck of th' halligator under th' halligator—a woman's clog that was split by a thresher-bolt, an' hoo wasn't hurt; side o' th' crocodile's tail's a sea-hen; side o' sea-hen's a Laplander's snow-shoe; that in a box is th' skeleton of a nightingale.'

This brought the show-boy and his gaping auditors to the door of the reading-room, the door of which being thrown open, the company entered to the great annoyance of the readers, and the lad would point out in the same loud, piercing voice, the various curiosities which the apartment contained, including the portrait of Chetham the founder, and finally pointing to the brilliantly painted and gilded cock on a bracket, would exclaim, by way of peroration, ‘That’s th’ cock as crows when he smells roast-beef!’ The country-folk at this would stare more and gape wider, as if in momentary expectation of hearing Chastellere, and then turn away, half disappointed, but consoling themselves with the supposition that just then there was no roast-beef within smelling distance. This ludicrous exhibition is, however, no longer one of the sights of Manchester College. The feoffees, feeling that it was scarcely in accordance with the cloistered quiet, solemn aspect, and studious silence of the place, at length closed the show, and the curiosities have been removed to the Salford Royal Museum, Peel Park.

ROBERT STEPHENSON.

The lives of George and Robert Stephenson are interwoven, and it is not unlikely that some do not sufficiently recognise the genius of the son in the original stock of his father. 'It was my father's thorough training,' said Robert, 'his example, and his character, which made me the man I am.' And on another occasion, he observed: 'It is my great pride to remember, that whatever may have been done, and however extensive may have been my own connection with railway development, all I know and all I have done is primarily due to the parent whose memory I cherish and reverence.' It is pleasant to read these modest and grateful words, yet we must remember that character is as much as education, and in Robert Stephenson it was easy to discern a repetition of those qualities of will and intellect which raised his father from a labourer's cottage to wealth and honours which might satiate any ambition. If Robert rejoiced in his father, George might rejoice in his son. The two men were inseparably joined together, and held in the son the crown and perfection of the foundation laid in the father.

Robert Stephenson was born towards the end of 1803, while his father was working as brakeman at Willington Quay, on the north bank of the Tyne, about six miles below Newcastle. George having felt the pinch of ignorance, resolved that his son—his only son—should not suffer in the same way. To cite his own words: 'When Robert was a little boy, I saw how deficient I was in education, and I made up my mind that he should not labour under the same defect, but that I should put him to a good school, and give him a liberal training. I was, however, a poor man; and how do you think I managed? I betook myself to mending my neighbours' clocks and watches at nights, after my daily labour was done, and thus I procured the means of educating my son.' Thence he sent the boy to a school in Newcastle, to which he rode daily on a donkey. There are some still living who remember the little boy, dressed in his suit of homely grey stuff, cut out by his father, cantering along to school upon the 'cuddy,' with his wallet of provisions for the day and his bag of books slung over his shoulder.

At the age of fifteen, he was apprenticed to a coal-viewer, and during three years in which he served in that capacity, he spent his evenings with his father in reading, and study, and eager discussions concerning the locomotive-engine, and its growing powers and possible uses. In order that Robert should be well qualified to deal with the world, George took him from business and sent him for six months to Edinburgh University. To what excellent purpose he turned this brief sejourn is proved by an anecdote related by Mr Smiles. One evening, long years afterwards, Mr Robert Stephenson was conversing with a friend in his house in London, and rising from his seat he took down a volume from the shelves. 'What have we here?' was asked, as a book of neatly written manuscript was spread before him. Mr Stephenson's answer was: 'When I went to college, I knew the difficulty my father had in finding the funds to send me there. Before going I studied shorthand; while at Edinburgh, I took down, verbatim, every lecture; and in the evenings, before I went to bed, I transcribed those lectures word for word. You see the result in that range of books.' One reason for undertaking this great labour was, that his father should share in the instruction he received.

On his return from Edinburgh, Robert assisted his father in the survey of the Stockton and Darlington Railway, entering the figures while his father took the sights. Then he was engaged on the more difficult task of scheming out the line between Liverpool and Manchester over Chat Moss. In 1824, he went to South America, to superintend some mining operations in Columbia; but finding life there dull and unsatisfactory, and his father writing that his help was urgently required at home, he returned to England after an absence of three years, and assumed the management of a locomotive-factory which had been set up in
Newcastle. There he constructed the Rocket, that celebrated engine which won the prize of £500 at the competition at Rainhill in 1829, and established the efficiency of the locomotive for working the Liverpool and Manchester Railway, and indeed all future railways. His next great undertaking was the formation of the railway between London and Birmingham, a work of prodigious difficulty and anxiety. In examining the country to ascertain the best line, he walked the whole distance between London and Birmingham upwards of twenty times. Long tunnels and miles of deep excavation had to be driven through unknown strata. The business of railway-making was new, and those who contracted for its execution seldom came to any good. Speaking of the difficulties encountered during the construction of this line, Robert Stephenson observed: 'After the works were let, wages rose, the prices of materials of all kinds rose, and the contractors, many of whom were men of comparatively small capital, were thrown on their own resources. Their calculations as to expenses and profits were completely upset. Let me just go over the list. There was Jackson, who took the Primrose-Hill contract—he failed. Then there was the next letter—Nowells; then Croadland and Harding; north of the Tyne—Tommie Penny of the Tyne cutting; next Stoke Hammond; then Lyers; then Hughes: I think all of these broke down, or at least were helped through by the directors. Then there was that terrible contract of the Kilby tunnel, which broke the Nowells, and killed one of them. The contractors to the north of Kilby were more fortunate, though some of them pulled through only with the greatest difficulty. Of the eighteen contracts in which the line was originally let, only seven were completed by the original contractors. Eleven firms were ruined by their contracts, which were re-let to others at advanced prices, or were carried on and finished by the company. The skill with which he overcame obstacles between London and Birmingham established Robert Stephenson's reputation beyond cavil, and procured him the fortune which could secure his name, and he had only to propose his own terms to obtain them. In one session of parliament he appeared as engineer for no fewer than thirty-three new schemes. His work was enormous, and his income larger than ever fell to any of his profession. His business did not, however, fall into easy routine, but he was continually called to exercise his genius in surmounting difficulties hitherto unattempted by engineers. He designed the Royal Border Bridge, which crosses the Tweed at Berwick, and the High Level Bridge over the Tyne at Newcastle, both of which are marvellous and beautiful works; but as engineer to the Chester and Holyhead Railway he won his chief triumph in carrying the line through tunnel-like bridges over the Straits of Menai and the estuary of the Conway works on an immense scale and anxiety. When he had got the first tube floated at Conway, and saw all safe, he said: 'Now I shall go to bed!' The Britannia Bridge over the Straits gave him still more trouble. 'It was,' he said, 'a most anxious and harrowing time with me. Often at night I would lie tossing about, seeking sleep in vain. The tubes filled my head. I went to bed with them and got up with them. In the gray of the morning, when I looked across the square, it seemed an immense distance across to the houses on the opposite side. It was nearly the same length as the span of my tubular bridge!' When the first tube had been floated, a friend remarked to him: 'This great work has made you ten years older.' 'I have not slept sound,' he replied, 'for three weeks.'

The tubular bridge he repeated on a grander scale in the Victoria Bridge across the St Lawrence, at Montreal; and in two bridges over the Nile, he varied his plan by running the line upon the tubes instead of within them. It was from his experience in Egypt that he addressed the House of Commons with so much effect on the Suez Canal scheme. 'I have surveyed the line,' said he, 'I have travelled the whole distance on foot, and I declare there is no fall between the two seas. Honourable members talk about a canal. A canal is impossible—the thing would only be a ditch!'

George Stephenson was once invited to offer himself as member of parliament for South Shields, but he declined the honour, having slight interest in politics. 'Politics,' he used to say, 'are all matters of theory—there is no stability in them; they shift about like the sands of the sea; and I should feel quite out of my element amongst them.' When the question of the three bridges was raised, he held a decided opinion. 'England,' said he to Sir Joseph Paxton, 'is, and must be a shopkeeper; and our docks and harbours are only so many wholesale-shops, the doors of which should always be kept open.'

Robert, on the other hand, was, strange to say, a thorough-going Protectionist, and represented Whitby in parliament as a Conservative from 1847. He resisted freemen, and supported the Navigation Laws; and on the 26th of November 1852, he went into the lobby with the famous minority of 53, who voted in disapproval of liberal commercial legislation, and thereby earned the name of 'cannon balls,' their heads being presumed too hard for the entrance of a new idea.

Robert Stephenson died on the 12th of October 1859, in the fifty-sixth year of his age, and was buried by the side of Telford in Westminster Abbey.

OCTOBER 13.

Saints Faith, Januarius, and Marcellus, martyrs, 804.
St Gerald, Count of Aurillac or Orillac, confessor, 908.
St Colman, martyr, 1012. Translation of the relics of St Edward the Confessor.† Seven Friar Minors, martyrs in Marocco, 1220.

Born.—Edward, Prince of Wales, son of Henry VI., 1453; Windsor: Sophia, Electress of Hanover, mother of George I., 1660, Mayence; Maurice, Marshal Saxe, eminent general, 1696, Dresden; Ferdinand VII., king of Spain, 1784.

Died.—Claudius, Roman emperor, poisoned, 54 a. d.; Pope Gregory XIII., 1417; Pope Pius III., 1503; Theodore Bessa, eminent reformer, 1808; Count Thomas Harrison, parliamentary general, executed, 1660; Dr John Gill, eminent Baptist divine, 1771, Southwark; Joachim Murat, Bonapartist king of Naples, shot, 1815; Antonio Canova, celebrated sculptor, 1822, Venice; Mrs Elizabeth Fry, philanthropist, 1846, Ramsgate.

* No. 34 Gloucester Square, Hyde Park, London, where he lived.
† See Book of Days, vol. i. p. 64.
John Aubrey was an English gentleman-scholar who flourished in the latter half of the seventeenth century, and made many curious collections in history and antiquities. From some papers drawn up by him about the year 1678, and which are preserved in the Ashmole Museum, the following notes are condensed by an eminent historical student—H. T. Riley—who has obligingly communicated them to the editor of the Book of Days.

There were very few free schools in England before the Reformation. Youths were generally taught Latin in the monasteries, and young women had their education, not at Hackney, as now (1678 A.D.), but at nunneries, where they learned needlework, confectionary, surgery, physic, writing, drawing, &c. Anciently, before the Reformation, ordinary men's houses had no chimneys, but flues like louvre-holes. In the halls and parlours of great houses were written texts of Scripture, on painted cloths.

Before the late civil wars, at Christmas, the first dish that was brought to table was a boar's head, with a lemon in its mouth. At Queen's College, in Oxford, they still retain this custom; the bearer of it brings it into the hall, singing to an old tune an old Latin rhyme—Caput aperi defero, &c. [The boar's head in bring.] The first dish that was brought to table on Easter-day was a red herring riding away on horseback—a.e., a herring arranged by the cook, something after the manner of a man on horseback, set in a corn-salad. The custom of eating a gammon of bacon at Easter was—namely, to shew their abhorrence of Judaism at that solemn commemoration of our Lord's resurrection.

The use of "Your humble servant," came first into England on the marriage of Queen Mary, daughter of Henry IV. of France [to King Charles I.]. The usual salutation before that time was, "God keep you," "God be with you!" and, among the vulgar, "How do you do?" with a thump on the shoulder. Until this time, the court itself was unpolished and unmannered. King James's court was so far from being civil to women, that the ladies, nay, the queen herself, could hardly pass by the king's apartment without receiving some affront.

In days of yore, lords and gentlemen lived in the country like petty kings: had their castles and their boroughs, and galloways within their liberties, where they could try, condemn, and execute. They never went to London but in parliament time, or once a year, to do their homage to their king. They always ate in Gothic halls, at the high table or oriel (a little room at the upper end of the hall, where stands a table), with the folks at the side-table. The meat was served up by watchwords. Jacks are but of late invention; the poor boys did turn the spits, and licked the dripping for their pains. The beds of the men-servants and retainers were in the hall, as now in the grand or privy chamber. The hearth was commonly in the middle, whence the saying—"Round about our coal-fire."

The halls of the justices of the peace were dreadful to behold; the screen was garnished with corsets and helmets caping with open mouths, with coats of mail, lance-axes, pikes, halberds, brown-bills, and bucklers. Public inns were rare. Taverns were more frequented than inns. The gentry kept three days together, if occasion served. The meetings of the gentry were not at taverns, but in the fields or forests, with hawks and hounds, and their bugle-horns in silken baldric.

In the last age, every gentleman-like man kept a sparrow-hawk, and a priest kept a hobby; as Dame Julian Barners teaches us (who wrote a treatise on field-sports, temp. Henry VI.); it was also a diversion for young gentlewomen to man sparrow-hawks and merlins.

Before the Reformation, there were no poor rates; the charitable doles given at religious houses, and the church-ale in every parish, did the business. In every parish there was a church-house, to which belonged spits, pots, crocks, &c., for dressing provisions. Here the housekeepers were entertained and were merry, and got their money. The young people came there too, and had dancing, bowling, and shooting at butts. Mr Antony Wood assures me, there were few or no almshouses before the time of King Henry VIII.; that at Oxford, opposite Christ Church, is one of the most ancient in England. In every church was a poor-man's box, and the like at great inns.

Before the wake, or feast of the dedication of the church, they sat up all night fasting and praying—that is to say, on the eve of the wake. In the Easter-holidays was the clerk's "ale," for his private benefit and the solace of the neighbourhood.

Glass windows, except in churches and gentlemen's houses, were rare before the time of Henry VIII. In my own remembrance, before the civil wars, copyholders and poor people had none in Herefordshire, Monmouthshire, and Salop: it is still (1678 A.D.).

About ninety years ago, noblemen's and gentlemen's coats were [like those] of the bedels and yeomen of the guards—i.e., gathered at the middle.

Captain Silas Taylor says, that in days of yore, when a church was to be built, they watched and prayed on the vigil of the dedication, and took that point of the horizon where the sun arose, for the east, which makes the variation that so few are true, except those built between the two equinoxes. I have experimented [with] some churches, and have found the line to point to that part of the horizon where the sun rises on the day of that saint to whom the church is dedicated.

In Scotland, especially among the Highlanders, the women make a courtesy to the new moon; and our English women, in this country, have a touch of this; some of them sitting astride on a gate or stile the first evening the new moon appears, and saying, "A fine moon, God bless her!" The like I observed in Herefordshire.

From the time of Erasmus [temp. Henry VIII.] till about twenty years last past, the learning was downright pedantry. The conversation and habits of those times were as starchy as their bands and square beards and gravity was then taken for wisdom. The gentry and citizens had little learning of any kind.

A very small kind of hawk.

"To man a hawk" was a current phrase, meaning, to make a hawk tractable.

* And burden of a well-known song of former times.

440
TRAGEDY OF THE CALAS FAMILY.

OCTOBER 13.

kind, and their way of breeding up their children was suitable to the rest. They were as severe to their children as their schoolmasters, and their schoolmasters as masters of the house of correction. Gentlemen of thirty and forty years old were to stand, like mutes and fools, bareheaded before their parents; and the daughters—grown women—were to stand at the cupboard-side during the whole time of the proud mother's visit, unless leave was desired, forsooth, that a cushion should be given them to kneel upon, brought them by the serving-man after they had done sufficient penance in standing. The boys had their foreheads turned up and stiffened with spittle. The gentlewomen had prodigious fans, as is to be seen in old pictures; and it had a handle at less half-a-yard long: with these the daughters were oftentimes corrected. Sir Edward Coke, Lord-Chief Justice, rode the circuit with such a fan; Sir William Dugdale told me he was an eye-witness of it; the Earl of Manchester also used such a fan.

'At Oxford (and, I believe, at Cambridge) the rod was frequently used by the tutors and deanes; and Dr Potter, of Trinity College, I know right well, whipped his pupil with his sword by his side, when he came to take his leave of him to go to the Inns of Court.'

TRAGEDY OF THE CALAS FAMILY.

Of all the Causes Célebres of France, there is none which possesses a more painful interest, or points a more instructive moral, than the trial and condemnation of Jean Calas, by the parliament of Toulouse, in the last century. Presenting, on the one hand, a striking instance of the extremities to which even judicial assemblies may be carried by the influence of bigotry and fanaticism, it also gave occasion to the exercise of a powerful effort on the part of Voltaire, whose successful exertions to procure the reversal of an iniquitous sentence, form one of the most meritorious actions in the life of the sceptic philosopher.

In the year 1761, there resided at Toulouse, in the south of France, an old man, sixty-four years of age, named Jean Calas, who for forty years had exercised the vocatio of a respectable shopkeeper in that town, and had gained general esteem amid all classes for the amiability and probity of his character. His family, like himself, were all Protestant, with the exception of his third son Louis, who had been converted to the Roman Catholic faith through the instrumentality of an old female servant, who still formed one of the household. The eldest son, Marc-Antoine, was a moody young man of twenty-nine, possessed of great abilities, but depressed and disheartened by finding himself excluded as a Protestant by the tyrannical laws of the time from exercising the profession of an avocat or barrister for which he had qualified himself by study. Thus debarred from following out his inclinations, he had no other resource than to fill the post of assistant to his father, whilst his leisure hours were devoted to cards and billiards. At length, on the 13th of October, in the year above mentioned, a young man, named Le Vayse, who had been absent for some time from his native town, called on the Calas family, and was pressed by Marc-Antoine and his father to remain to supper. The family-party, consisting of M. and Madame Calas, Marc-Antoine, and Pierre Calas, and the young Le Vayse, sat down to table. Marc-Antoine appeared rather dejected, ate little, and abruptly quitted the company, entering the kitchen for a few moments before he passed out. The old servant inquired if he were cold. 'On the contrary,' replied he, 'I am burning.' The supper-party imagined that he had gone out to his usual haunt, the billiard-room, and therefore gave themselves no concern for his absence. La Vayse at last rose to depart, and Pierre Calas followed with a light to shew him the way to the street. On arriving at the door, they found the shop-door open, and entering to ascertain the cause, were horrified at finding Marc-Antoine Calas suspended from one of the folding-doors which communicated between the shop and a warehouse behind. A cry of consternation, uttered by the two young men, summoned down-stairs the elder Calas and his wife; but Le Vayse, placing himself before the door, prevented her from advancing further, whilst her husband and second son hastened to her first-born. La Vayse then ran for a surgeon, who, on arriving, found that life had been extinct for two hours.

The lamentations of the household had meantime reached the surrounding neighbourhood, and a crowd soon gathered, attracted by the intelligence that Marc-Antoine had perished, and in a mysterious manner, for the Calas family, very imprudently for themselves, had agreed to conceal the cause of death, owing to the feeling of infamy which attaches to an act of suicide. Two magistrates speedily arrived to investigate the case, the multitude still increasing around the house, and expressing their opinions on the event, when a voice suddenly called out from the crowd: 'Marc-Antoine has been murdered by his father, because he intended to become a Catholic!'

By one of those electrical impulses, of which numerous instances occur in the history of popular commotions, this monstrous idea at once took possession of the public, including the magistracy, and an order was forthwith given for the arrest of all the members of the Calas family who were in the house on that fatal night, including La Vayse and the old female-servant, the convert of Louis Calas, who seemed to be the only person present with his father. The body of Marc-Antoine received, under this belief, the honours due to a martyr, and was interred with the utmost pomp and circumstance in the cathedral of St Stephen, a crowd of twenty thousand persons accompanying the procession, in which an imposing array of priests and monks strove to celebrate, with all the impressiveness of the Roman Catholic Church, the obsequies of a man who had ever regarded their faith with the utmost aversion.

In the meantime the unhappy Calas family were treated with great cruelty. The aged Jean Calas was repeatedly tortured to extort confession, but in vain, and a similar result attended all attempts to terrify the other accused parties into an admission of guilt. The trial of the old man came on shortly before the parliament of Toulouse. Notwithstanding the absolute impossibility of a person, at his time of life, being able to strangle a vigorous young man, in the immediate neighbourhood of a public thoroughfare, and the total absence of any evidence to support the charge, the blind stolidity
and fanaticism of his judges pronounced sentence of death, though only by a majority of seven to six in a court of thirteen. It is said that, latterly, the constancy and nerve of Jean Calas forsook him, and that in his last appearance before the parliament he betrayed such signs of agitation as told strongly against his innocence. In crossing the court of the building, from his place of confinement to the judgement-hall, his attention had been attracted by a flaming pile, to which the public executioner, surrounded by a large crowd, was committing some Protestant treatise. The poor victim of fanatical prejudice imagined that in this spectacle he beheld the preparations for his own death, and was seized by a paroxysm of terror which influenced him throughout the subsequent judicial procedure. But he persistently as ever maintained his innocence, and by the day of execution, he had regained such firmness as excited the admiration of many, and induced a strong revulsion of feeling in his favour. The cruel sentence was accomplished on 9th March 1765, when the old man endured lingering death of two hours duration by having first his bones broken with an iron bar, and then being stretched on the wheel. He died, maintaining his innocence with his last breath, and rejecting firmly all the adjurations addressed him by the confessor who attended him on the scaffold. The other members of the family were afterwards brought to trial and acquitted, though Pierre Calas was banished on the charge of an offence against religion.

In the latter part of the century, news travelled slowly, and consequently it was not till the end of March that the intelligence of this terrible execution was brought to Voltaire, at Ferney, by a traveller from Toulouse to Geneva. The philosopher was horror-struck, and formed at once the resolve to leave no stone unturned for the purpose of establishing the innocence of the Calas family. Through D'Alembert and other friends in Paris, he procured representations of the case to be made to the king and his ministers, and himself sent for Pierre Calas, and a younger brother, who was apprenticed at Geneva, and examined them with the most searching minuteness. The information which he obtained from this and other quarters was carefully sifted and forwarded by him to Paris. He also supplied the widow of Calas with money to convey her to the capital, as a necessary step for re-establishing her husband's innocence. At last his arduous exertions were successful, the decision of the Toulouse parliament was reversed, and on 9th March 1765, exactly three years from Calas's death, the tribunal which had condemned him pronounced a solemn judgment, annulling their former sentence, and remitting thus a tardy and ineffectual justice to the unfortunate man and his family.

MRS FRY.

The labours of Howard in effecting an amelioration on the condition of prisoners throughout Europe, though signal and important, cannot be said to have accomplished any radical change in the management of these establishments, and derive their highest estimate, in a reformatory point of view, from their directing the attention of the general public to this momentous topic. It was reserved for a woman to carry out what John Howard had so gloriously begun, and, by assuming the mantle which he had dropped, to inaugurate, through her philanthropic exertions, these enlarged views on the subject of prison discipline by which it is now so conspicuously characterized both in legislative enactment and practice. In memory of the name of Elizabeth Fry, we inscribe that of a true heroine, who made the moral and physical wellbeing of her fallen brothers and sisters the aim and study of her life, with the same spirit of devotedness and self-sacrifice which, more recently, has been so nobly exhibited by Miss Florence Nightingale on behalf of our gallant soldiers.

As is well known, Mrs Fry's maiden name was Gurney, and both by the father and mother's side, she inherited eminently the Quaker element; her father, John Gurney of Earlham, in Norfolk, being a distinguished member of the Society of Friends, and her mother, a great-granddaughter of the celebrated Quaker apologist, Robert Barclay. Mr Gurney, however, was not a very strict adherent of his society, and, from the liberal and extended course which he maintained in all denominations, there was little of the sectarian fanatical principle followed in the bringing up of his family. They seem, on the contrary, to have entered freely into all the amusements and pleasures of the world, Elizabeth among the rest. At the age of eighteen, however, she was much impressed by a sermon delivered by William Savery, an American Quaker, and from that period her religious views became gradually more and more decided. They were more steadily established by her marriage, shortly afterwards, to Mr Joseph Fry, a Quaker of the strictest sort, and the junior partner of an extensive mercantile firm in London. It was not, however, till a good many years subsequently that her attention was first directed to the question of prisoners and prison discipline; a subject which appears first to have been suggested to her mind by a visit previous, along with some members of the Society of Friends, to the condemned cell in Newgate in 1813. The impressions produced upon her by the spectacles which she witnessed in that prison of profligacy, poverty, and filth, was such, that she set her energies seriously forthwith to the task of devising some method for the alleviation of these scenes of horror. With the approbation of the magistrates of Middlesex, she began her labours, and, in the female wards, of a school for the purpose of affording to the inmates instruction as well as employment. She also succeeded in organizing an association of ladies for visiting the female prisoners in Newgate, an occupation in which she herself took a most active share, conversing and praying with them, and by her earnest kindness exerting a soothing influence on the hearts of even the most depraved. Through her exertions and representations, a most marked change was effected in the condition of Newgate, more especially the female department, and the improved state of the prison attracted the attention of individuals of the highest authority and position in the land. But Mrs Fry's labours did not cease with Newgate. She gradually extended their sphere, and soon made the general subject of prison discipline the object of consideration and amendment, and before committees both of the Lords and Commons, she was examined as an important and
The battle of Hastings, fought on Saturday, the 14th of October 1066, was one of those decisive engagements which at various periods have marked the commencement of a new epoch or chapter in the world's history. Gained by the Duke of Normandy, mainly through superiority of numbers, and several well-directed feints, the conduct of the Saxons and their monarch Harold was such as to command the highest admiration on the part of their enemies, and the result might have been very different had Harold, instead of marching impetuously from London with an inadequate army to repel the invaders, waited a little while to gather strength from the reinforcements which were every day pouring in to his standard. But the signal success which, only a few days previous, he had gained over the Norwegians in the north of England, made him over-confident in his own powers, and the very promptitude and rapidity which formed one of his leading characteristics proved the principal cause of his overthrow.

On the 28th of September, sixteen days before the battle, the Normans, with their leader William, had disembarked, totally unopposed, from their ships at a place called Bulverthe, between Pevensey and Hastings. The future Conqueror of England was the last to land, and as he placed his foot on shore, he made a false step, and fell on his face. A murmur of consternation ran through the troops at this incident as a bad omen, but with great presence of mind William sprang immediately up, and shewing his troops his hand filled with English sand, exclaimed: 'What now? What astonishes you? I have taken seisin of this land with my hands, and by the splendour of God, as far as it extends it is mine— it is yours!'

The invading army then marched to Hastings, pitching their camp near the town, and sallying out from this intrenchment to burn and plunder the surrounding country. Landed on a hostile shore, with a brave and vigorous foes to contend with, all William's prospects of success lay in striking a decisive blow before Harold could properly muster his forces or organise his means of resistance. The impetuosity of the Saxon king, as already mentioned, soon furnished him with such opportunity. Arriving at Senlac, where the bloody engagement a few days subsequently was destined to rechristen by the appellation of Battle, Harold pitched his camp, and then received a message from William, demanding that he should either resign his crown in favour of the Norman, submit the question at issue to the decision of the pope, or finally maintain his right to the English crown by single combat with his challenger. All these proposals were declined by Harold, as was also a last offer made by William to resign to his opponent all the country to the north of the Humber, on condition of the provinces south of that river being ceded to him in sovereignty.

On Friday the 13th, the Normans quitted Hastings, and took up their position on an eminence opposite to the English, for the purpose of giving battle on the following day. A singular contrast was noticeable in the manner that the respective armies passed the intervening night. Whilst the Saxons, according to their old convivial custom,
spent the time in feasting and rejoicing, singing songs, and quaffing bumpers of ale and wine, the Normans, after finishing their warlike preparations, betook themselves to the offices of devotion, confessed, and received the holy sacrament by thousands at a time.

HASTINGS FROM THE FAIRLIGHT DOWNS.

At early dawn next day, the Normans were marshalled by William and his brother Odo, the warlike bishop of Bayeux, who wore a coat of mail beneath his episcopal robes. They advanced towards the English, who remained firmly entrenched in their position, and for many hours repulsed steadily with their battle-axes the charge of the enemy’s cavalry, and with their closed shields rendered his arrows almost inoperative. Great ability was shown by William and his brother in rallying their soldiers after these reverses, and the attacks on the English line were again and again renewed. Up to three o’clock in the afternoon, the superiority in the conflict remained with the latter. Then, however, William ordered a thousand horse to advance, and then take to flight, as if routed. This stratagem proved fatal to the Saxons, who, leaving their position to pursue the retreating foe, were astounded by the latter suddenly facing about, and falling into disorder, were struck down on every side. The same manœuvre was twice again repeated with the same calamitous results to the English, and on the last occasion Harold, struck by a random arrow which entered his left eye and penetrated to the brain, was instantaneously killed. This still further increased the disorder of his followers, who, however, bravely maintained the fight round their standard for a time. This last was grasped by the Normans, who then raised in its stead the consecrated banner, which the pope had sent William from Rome, as a sanction to his expedition. At sunset the combat terminated, and the Normans remained masters of the field.

Though by this victory William of Normandy won a kingdom for himself, it was not till years afterwards that he was enabled to sheathe his sword as undisputed sovereign of England. For generations, indeed, the pertinacity so characteristic
of the Saxon race displayed itself in a steady though ineffective resistance to their Norman rulers, and for a long time they were animated in their efforts by a legend generally circulated among them, that Harold, their gallant king, instead of being killed, had escaped from the field of battle, and would one day return to lead them to victory. History records many such reports, which, under similar circumstances, have been eagerly adopted by the vanquished party, and are exemplified, among other instances, by the rumour prevalent after the deaths of Don Roderick, the last of the Gothic kings of Spain, and of the Scottish sovereign James IV., who perished at Flodden.

FIELD-MARSHAL KEITH.

Among the eight generals of Frederick the Great, who, on foot, surround Racine’s magnificent epitaph at St. Martin’s in Berlin, one is a Briton. He was descended of a Scotch family, once as great in wealth and station as any of the Hamiltons or the Douglases, but which went out in the last century like a quenched light, in consequence of taking a wrong line in politics. James Edward Keith, and his brother the Earl Mariscal, when very young men, were engaged in the rebellion of 1715-16, and lost all but their lives. Abroad, they rose by their talents into positions historically more distinguished than those which their youthful imprudence had forfeited.

The younger brother, James, first served the czar in his wars against Poland and Turkey; but, becoming discontented with the favouritism that prevailed in the Russian army, and conceiving himself treated with injustice, he gave in his resignation in 1747, and was admitted into the Prussian service as field-marshal. Frederick the Great made him his favourite companion, and, together, they travelled incognito through Germany, Poland, and Hungary. Keith also invented a game, in imitation of chess, which delighted the king so much, that he had some thousands of armed men cast in metal, by which he could arrange battles and sieges. On the 29th of August 1758, he met with the Duke of Brunswick, whom he had the archives opened to carry away the documents that particularly interested the Prussian court: he also managed the admirable retreat of the army from Olmutz in the presence of a superior force, without the loss of a single gun; and took part in all the great battles of the period. He was killed in that of Hochkirchen, 14th of October 1758. His correspondence with Frederick, written in French, possesses much interest. He was of middle height, dark complexion, strongly marked features, and an expression of determination, softened by a degree of sweetness, marked his face. His presence of mind was very remarkable; and his knowledge, deep and varied in character; whilst his military talents and lively sense of honour made him take rank among the first commanders of the day. His brother, the lord-marshall of Scotland, thus wrote of him to Madame de Geoffrin: ‘My brother has left me a noble heritage; after having overrun Bohemia at the head of a large army, I have only found seventy dollars in his purse.’ Frederick honoured his memory by erecting a monument to him in the Wilhelmsplatz, at Berlin, by the side of his other generals.

ORATOR HENLEY.

Possessing considerable power of eloquence, with great perseverance, a fair education, and a good position in life, Henley might have pursued a quiet career of prosperity, had not overweening vanity induced him to seek popularity at any risk, and eventually make himself ’preacher and sany of the age,’ according to the satirical verdict of Pope, which he had well earned by his ill-peaceful buffoonery.

Henley was the son of a clergyman residing at Melton Mowbray, in Leicestershire, where he was born in 1692; he was sent to St John’s College, Cambridge, and while an undergraduate there, sent a communication on punning to the Spectator (printed in No. 396), which is now the most readily accessible of all his voluminous writings, scattered among the rest of his productions. He was appointed reader at St George’s Chapel, in Queen Square, and afterwards at St John’s, Bedford Row: delivered from time to time charity-sermons with great success; and worked at translations for the booksellers. After some years, he was offered a small country living, but would not consent to the obscurity which it entailed. The same exaggeration of style and action in the pulpit, however, which rendered him a favourite with the public, exposed him to animadversion on the part of the clergy and churchpatrons. He now attempted political writing, offering his services to the ministry; and when they were declined, made the same offer to their opponents, with no better success. Determined for the future to trust to his own power of eloquence to draw an income from the public, he announced himself as the restorer of Ancient Eloquence,’ and opened his ‘Oratory’ in a large room in Butcher Row, Newport Market. Here he preached on Sundays upon theology, and on Wednesdays, on any subject that happened to be most popular. Politics and current events were treated with a vulgar levity that suited the locality. The greatest persons in the land were attacked by him. ‘After having undergone some prosecutions, he turned his rhetoric to buffoonery upon all public and private occurrences. All this passed in the same room where at one time he rested, and at another celebrated what he called the ‘primitive eucharist.’* In a money point of view, he was very successful, his Oratory was crowded, and cash flowed in freely. For the use of his regular subscribers, he issued medals (like the free tickets of theatres and public gardens) with the vain device of a star rising to the meridian, the manu ad summa; and, beneath it, Inveniam viam aut faciam. Pope has immortalised ‘Henley’s gilt tub,’ as he terms the gaudy pulpit from which he poured forth his rhapsodies. There is a caricature of him as a

* Note to Pope’s Dunciad.
O great restorer of the good old stage,
Preacher at once and wary of thy age!
O, worthy thou of Egypt's wise abodes.
A decent priest, where monkeys were the gods!
But fate with butchers placed thy priestly stall,
Meek modern faith to murder back, and murderual;
And bade thee live, to crown Britannia's praise,
In Toland's, Tindal's, and in Woolston's "days."

After some years, Henley left Newport Market,
but, faithful to his old friends the butchers,
he opened his new Oratory in Clare Market, in the
year 1746, and indulged in the most scurrilous
censoriousness, and a levity bordering on buffoonery.
His neighbours, the butchers, were useful allies,
and, it is said, he kept many in pay to protect him
from the consequences of his satire. In some
instances, he must have run risks of riot and
mischief to his meeting-room, which could only be
repressed by fear of his brawny protectors. In one
instance he tricked a mob of shoemakers,
by inducing them to come and hear him describe
a new mode by which shoes could be made most
expeditiously; the plan really being, simply to cut
off the tops of ready-made boots! His reflections
on the royal family led to his arrest, but he was
liberated, after a few days, on proper bail being
tendered, and a promise to curb his tongue in
future. His ordinary free-and-easy vulgarity is
well hit off in an article on the 'Robin Hood
Society,' published in No. 18 of the Gray's Inn
Journal, February 17, 1753; he is called Orator
Bronze, and exclaims: 'I am pleased to see this
assembly; you're a twig from me, a chip of the
old block at Clare Market; I am the old block,
invincible; coup de grace, as yet unanswered.
We are brother-rationalists; logicians upon funda-
mentals! I love ye all—I love mankind in
general—give me some of that porter!'

Despite his boldness and impudence, and the
daring character of his disquisitions on politics and
religion, Henley found a difficulty in keeping up
an interest in his Oratory. A contemporary writer
says: 'for some years before its author's death, it
dwindled away so much that the few friends of it
feared its decease was very near. The doctor,
indeed, kept it up to the last, determined it should
live as long as he did, and actually exhibited many
evenings to empty benches. Finding no one at
length would attend, he admitted the acquaintances
of his door-keeper, runners, &c. gratis. On the
13th of October 1763, the door was closed. In
some Oratory ceased, no one having iniquity or im-
pudence sufficient to continue it.'

Irrespective of the improper character of the
subjects he chose to denounce upon, his inordinate
conceit induced him to treat every one as his
inferior in judgment; and he enforced his opinions
with the most violent gesticulation. Henley's
feverish career is a glaring instance of vanity
overcoming and degrading abilities, that, properly
cultivated, might have insured him a respectable

* Three deistical writers, whose works were published
in the early years of the last century.
* A public debating-society, held at the sign of the
Robin Hood, in Butcher Row, near Temple Bar. Each
person paid sixpence for admission, and had a ticket for
four pennyworth of drink, the twopence paying the
expenses of the society.
* This is an error, Henley's death being recorded in the
obituary of the Gentleman's Magazine, on 14th October
1756.
position, instead of an anxious and fretful life, and
an immortality in the pages of a great satirist, of a
most undesirable nature.

OCTOBER 15.

St Helens or Homps, anchorit, about 500. St Tod, virgin and abbot. St Teresa, virgin, foundress of the
Reformation of the Barefooted Carmelites, 1592.

Born.—Virgil, Latin poet, 70 B.C., Andes, near Mancunia; Evangelista Torricelli, inventor of the barometer, 1608; Pianzaidoli, in Romagna; Allan Ramsay, Scottish poet, 1685; Louishila, Lancashire; Alexander Fraser Tytler, Lord Woodhouselee, author of Elements of General History, 1747, Edinburgh; Christian, Count Stolberg, poet and
dramatist, 1748, Hamburg; Frederick William IV., king of Prussia, 1795.

Died.—Lucrétia, Latin philosophical poet, 55 B.C.;
Ambroise Veimont, eminent anatomist, 1694, Zante; Pope
Gregory XIV., 1691; Dr James Anderson, author of
works on political economy, &c., 1808, London; Michael
Kelly, composer, 1826, Ramsgate; Letitia Elizabeth
Maclean (née Landon), poetess, 1825, Cape Coast Castle;
Rev. John Foster, celebrated essayist, 1844, Stapleford,
near Bristol.

MRS MACLEAN ('L. E. L.').

On New-year's Day morning, 1839, the readers
of newspapers were startled by the announcement
of the death, at Cape Coast Castle, of Mrs Maclean,
wife of Mr George Maclean, the governor of that
settlement. But a few months before she had
quitted the shores of England with all the gay
periphrasia of a bride, proceeding after the
nuptial knot had been tied to her future home by
the palm-clad shores, and amid the tropical
vegetation of West Africa. Recollections of the
young and enthusiastic 'L. E. L.,' whose contribu-
tions to the Literary Gazette had in their youthful
days of romance called forth so many juvenile
tributes of admiration both in prose and verse,
filled with tears the eyes of many staied men of
middle age, whilst to those who had enjoyed the
privilege of her society, and the vivacity and charm
of her conversation, the shock produced by this
sad and unexpected intelligence was overwhelming.
Other feelings, however, were speedily to be excited
—those of an intense curiosity and interest, not
unmingled with horror, by the report that Mrs
Maclean had died from the effects of a dose of
prussic acid, insatiably taken, and, as some did
not hesitate to insinuate, with the intention of
self-destruction. The whole affair was involved
in the deepest mystery, the sole explanation afforded
being that between eight and nine o'clock on
the morning of Monday, 10th October, a female servant
had gone to Mrs Maclean's room, for the purpose of
delivering a note which had just been received.
She experienced some difficulty in opening the
door, and found that it was occasioned by Mrs
Maclean having fallen with her back against it.
The unfortunate lady was lying perfectly senseless,
with an empty bottle in her hand, labelled as con-
taining hydrocyanic or prussic acid. Assistance
was immediately procured, but all in vain—the
vital spark had fled. Mr Maclean, her husband,
had been suffering from indisposition for a few
days previous, and had been most assiduously
tended by his wife, who, on the morning of her
death, had risen to administer some refreshment
to him, and had then retired to her room to resume
reposée. The servant also who found her in the
condition we have mentioned, had seen her about
half an hour previously. No one had observed
anything peculiar in her demeanour, or any indi-
ation of depression of spirits, though from her
attendance night and day on her husband, she had
become very much exhausted, and was besides
liable to spasmodic attacks, for the relief of which,
it was stated at the inquest, that she was in the
habit of taking in a glass of water a few drops of
medicine from the bottle which was found in her
hand. The conjecture then came to be, that she had
inadvertently taken an overdose, and feeling
its effects, had endeavoured to open her door and
call for assistance, when she was stricken down
helpless. No satisfactory conclusion was ever
arrived at, and there the matter rests. It should
be stated, however, that all the evidence brought
forward went entirely to negative the idea of suicide
having been committed. Between Mr Maclean and herself a strong and sincere affection
subsisted; there had never been any difference
between them; and from the tone of all her commu-
nications to her friends at home, it was evident
that she looked forward with great complacency
and cheerfulness to her future career at Cape
Coast.

Previous to her marriage, the life of Letitia
Elizabet Landon had not been diversified by
much incident. The greater part of it was spent
in London, in the neighbourhood of Chelsea and
Brompton, in the former of which localities she
was born in 1802. Her father, John Landon, the
son of a Herefordshire rector, had in his early days
gone to sea, but afterwards settled in London as an
army-agent. From her earliest years Letitia dis-
played a most engaging propensity for reading,
and the bent of her genius towards poetry was
early displayed. The first poems that were ever
published were by William Cowley and Cowley.
When the family resided at Brompton, they
happened to have as their near neighbour
William Jordan, the celebrated editor of The
Literary Gazette, and an acquaintance having been
formed, some of Miss Landon's juvenile pieces
were shewn to him, approved of, and inserted in
his journal. Public attention was soon attracted
by the beauty of these pieces; and the mysterious
initials 'L. E. L.,' by which the authoress subscribed
herself, came soon to be recognised as belonging to
the finest lyricists of the day. Thus stimulated, she
proceeded to more ambitious undertakings, and
the poems of The Improvisatrice, The Troubadour,
The Golden Violet, and The Venetian Bracelet, proc-
cured for her all the fame which their glow and
luxuriance of description, with the most melodious
rhymery of verse, so richly combined, whether
however, from its essentially artificial character,
however natural an appearance it may wear, the
poetry of Miss Landon is destined to an abiding
immortality, may not unreasonably be questioned.
Never was there a poet whose works were less
a reflex of his own mind than those of L. E. L. With
all the enchanting descriptions of woodland glades,
sunny gardens, and flowery meadows, beneath
the magic of a Provencal or Italian sky, Miss Landon,
like Charles Lamb, had little affection for the country, and found herself nowhere in a more congenial atmosphere than amid the smoke and bustle of London. Neither did her disposition partake of the pensive, melancholy cast, so conspicuous in her poems, being, on the contrary, remarkable for its vivacity and cheerfulness. Those who expected to find in her an embodiment of the feelings portrayed in her works, found themselves generally egregiously mistaken in their anticipations. It was said of her, "that she should write with a crystal pen dipped in dew upon silver paper, and use for pounce the dust of a butterfly's wing;" the real fact being, that her locality for invoking the Muses was her bedroom—a bare homely-looking room facing the street, where she wrote at an old worn-out desk, placed on a little drooping table. In person, the impression conveyed was a very pleasing one. Her figure was slight and graceful, and without being artistically beautiful in feature, her face, when she spoke, became handsome in its expressiveness. It is recorded of Hogg the Ettrick Shepherd, that, on being first presented to her at the house of Mrs Hall, he took her hand, and looking earnestly in her face, exclaimed: "Oh dear! I have never met with such a sweet thing as that ye, but I'll do sae nae maik; I didna think ye'd been seen bonny!"

THE WYNWARD GHOST-STORY.

No modern ghost-story has been more talked of in England, than one in which the seers were two military officers named Sherbrooke and Wynyard. The men occupied conspicuous places in society, and were universally known as persons of honour, as well as cool good sense; the reality of their vision was attested by a remarkable circumstance which afterwards took place; and every effort of their own or on the part of others to give an 'explanation' has been vain.

John Cope Sherbrooke and George Wynyard appear in the army list of 1785, the one as a captain and the other a lieutenant in the 33d Regiment—a corps which, some years after, had the honour to be commanded by the Hon. Arthur Wellesley, since Duke of Wellington. The regiment was then on service in Canada, and Sherbrooke and Wynyard, being of congenial tastes, had become friends. It was their custom to spend in study much of the time which their brother-officers devoted to idle pleasures. According to a narration resting on the best authority now attainable,† they were one afternoon sitting in Wynyard's apartment. It was perfectly light, the hour was about four o'clock; they had dined, but neither of them had drunk wine, and they had retired from the mess to continue together the occupations of the morning. It ought to have been said, that the apartment in which they were had two doors in it, the one opening into a passage, and the other leading into Wynyard's bedroom. There was no other means of entering the sitting-room but from the passage, and no other egress from both him but through the sitting-room; so that any person passing into the bedroom must have remained there, unless he returned by the way he entered. This point is of consequence to the story.

As these two young officers were pursuing their studies, Sherbrooke, whose eyes happened accidentally to glance from the volume before him towards the door that opened to the passage, observed a tall youth, of about twenty years of age, whose appearance was that of extreme emaciation, standing beside it. Struck with the presence of a perfect stranger, he immediately turned to his friend, who was sitting near him, and directed his attention to the guest who had thus strangely broken in upon their studies. As soon as Wynyard's eyes were turned towards the mysterious visitor, his countenance became suddenly altered, and he said: "Sir John Sherbrooke, "of a man's being as pale as death, but I never saw a living face assume the appearance of a corpsé, except Wynyard's at that moment."

As they looked silently at the form before them,—for Wynyard, who seemed to apprehend the import of the appearance, was deprived of the faculty of speech, and Sherbrooke perceiving the agitation of his friend, felt no inclination to address it—as they looked silently upon the figure, it proceeded slowly into the adjoining apartment, and, in the act of passing them, cast its eyes with an expression of somewhat melancholy affection on young Wynyard. The oppression of this extraordinary presence was no sooner removed, than Wynyard, seizing his friend by the arm, and drawing a deep breath, as if recovering from the surfeition of intense astonishment and emotion, muttered in a low and almost inaudible tone of voice, "Great God! my brother!"—"Your brother!" repeated Sherbrooke, "what can you mean, Wynyard? there must be some deception—follow me;" and immediately taking his friend by the arm, he preceded him into the bedroom, which, as before stated, was connected with the sitting-room, and into which the strange visitor had evidently entered. It has already been said, that from this chamber there was no possibility of withdrawing but by the way of the apartment, through which the figure had certainly passed, and as certainly never had returned. Imagine, then, the astonishment of the young officers, when, on finding themselves in the centre of the chamber, they perceived that the room was perfectly untenanted. Wynyard's mind was so imprinted at the first moment of his observing him, that the figure whom he had seen was the spirit of his brother. Sherbrooke still persevered in strenuously believing that some delusion had been practised.*

* Archdeacon Wrangham alludes to them in a note in his edition of Plutarch. "A very singular story, however, says he, 'could be told on this head by Generals S— and W—, both men of indisputable honour and spirit, and honourably distinguished by their exertions in their country's service.' The death of the first is thus noted in Blackwood's Magazine for June 1830: 'At Calverton, General Sir John Cope Sherbrooke, G.C.B.' The other seer seems to have passed into another branch of the army, and died at the engagement of the 24th Light Dragonos, June 13, 1809.
† The narration here given is from Accredited Ghost Stories, written by Mr Jarvis. Mr Jarvis adds the following note: 'This story has been read by a relation of General Wynyard, who states that, in all important circumstances, it is strictly true.'

The two gentlemen remarked at the time, that the figure appeared as did an ordinary light indoor costume, while they wore furs and wraps owing to the severity of the weather.—M. E. M., in Notes and Queries, April 3, 1853.
They took note of the day and hour in which the event had happened; but they resolved not to mention the occurrence in the regiment, and gradually persuaded each other that they had been imposed upon by some delusion of the moment. The officers, though they could neither account for the reason, nor suspect the author, nor conceive the means of its execution. They were content to imagine anything possible, rather than admit the possibility of a supernatural appearance. But though they had attempted these stratagems of self-delusion, Wynyard could not help expressing his solicitude with respect to the safety of the brother whose apparition he had either seen, or imagined himself to have seen; and the anxiety which he exhibited for letters from England, and his frequent mention of his fears for his brother's health, at length awakened the curiosity of his comrades, and eventually betrayed him into a declaration of the circumstances which he had in vain determined to conceal. The story of the silent and unobtrusive visit was, however, more absurd than the destiny of Wynyard's brother became an object of universal and painful interest to the officers of the regiment; there were few who did not inquire for Wynyard's letters before they made any demand after their own; and the packets that arrived from England were welcomed with more than usual eagerness, for they brought not only remembrances from their friends at home, but promised to afford the clue to the mystery which had happened among themselves.

By the first ship's intelligence relating to the story could have been received, for they had all departed from England previously to the appearance of the spirit. At length the long-wished-for vessel arrived; all the officers had letters except Wynyard. They examined the several newspapers, but they contained no mention of any death, or of any other circumstance connected with his family that could account for the preternatural event. There was a solitary letter for Sherbrooke still unopened. The officers had received their letters in the mess-room at the hour of supper. After Sherbrooke had broken the seal of his last packet, and cast a glance on its contents, he became friend away from the company, and departed from the room. All were silent. The suspense of the interest was now at its climax; the impatience for the return of Sherbrooke was inexpressible. They doubted not but that letter contained the long-expected intelligence. After the interval of an hour, Sherbrooke joined them. No one dared be guilty of so great a rudeness as to inquire the nature of his correspondence; but they waited in mute attention, expecting that he would himself touch upon the subject. His mind was manifestly full of thoughts that pained, bewildered, and oppressed him. He drew near to the fireplace, and leaning his head on the mantel-piece, after a pause of some moments, said in a low voice, to the person who was nearest him: "Wynyard's brother is no more." The first article of their leave was: "Dear John, be kind to your friend Wynyard the death of his favourite brother." He had died on the day, and at the very hour, on which the friends had seen his spirit pass so mysteriously through the apartment.

It might have been imagined, that these events would have been sufficient to have impressed the mind of Sherbrooke with the conviction of their truth; but so strong was his prepossession against the existence, or even the possibility of any preternatural intercourse with the souls of the dead, that he still entertained doubts about the report of his senses, supported as their testimony was by the coincidence of vision and event. Some years after, on his return to England, he was walking with two gentlemen in Piccadilly, when, on the opposite side of the way, he saw a person bearing the most striking resemblance to the figure which had been disclosed to Wynyard and himself. His companions were acquainted with the story, and he instantly directed their attention to the gentleman opposite, as the individual who had contrived to enter and depart from Wynyard's apartment without being conscious of the means. Full of this impression, he immediately went over, and at once addressed the gentleman. He now fully expected to elucidate the mystery. He apologised for the interruption, but excused it by relating the occurrence, which had induced him to the suspicion of this solecism in manners. The gentleman received him as a friend. He had never been out of the country, but he was the twin-brother* of the youth whose spirit had been seen.

From the interesting character of this narration—the facts of the vision occurring in daylight and to two persons, and of the subsequent verification of the likeness by the party not previously acquainted with the subject of the vision—it is much to be regretted that no direct report of particulars has come to us. There is all other desirable authentication for the story, and sufficient evidence to prove that the two gentlemen believed and often told nearly what is here reported. Dr Mayo makes the following statement on the subject: 'I have had opportunities of inquiring of two near relations of this General Wynyard, upon what evidence the above story rests. They told me that they had each heard it from his own mouth. More recently a gentleman, whose accuracy of recollection exceeds that of most people, has told me that he had heard the late Sir John Sherbrooke, the other party in the ghost-story, tell it much in the same way at a dinner-table.'

A writer, signing himself Cynicus, states in Notes and Queries (July 3, 1866), that the brother (not twin-brother) whose spirit appeared to Wynyard and his friend was John Otway Wynyard, a lieutenant in the 3rd regiment of Foot-guards, who died on the 15th of October 1788. As this gentleman writes with a minute knowledge of the family-history, we may consider this date as that of the alleged spiritual incident.

In Notes and Queries, July 2, 1859, appeared a correspondence, giving nearly the strongest testimony then attainable to the truth of the Wynyard ghost-story. A series of queries on the subject, being drawn up at Quebec by Sir John Harvey, adjutant-general of the forces in Canada, was sent to the Colonies. Sherbrooke's report was understood to be a survivor of the officers who were with Sherbrooke and Wynyard at the time of

* The particular as to this person being a twin-brother has been denied. See Notes and Queries, June 19, 1866, p. 36. + Letters on the Truth contained in Popular Superstitions. By Herbert Mayo, M.D. Ed. Frankfort, 1849, p. 62.

449
the occurrence; and Colonel Gore explicitly replied to the following effect. He was present at Sydney, in the island of Cape Breton, in the latter end of 1785 or 1786, when the incident happened. It was in the then new barrack, and the place was blocked up by ice so as to have no communication with any other part of the world. He was one of the first persons who entered the room after the supposed apparition was seen. The ghost passed them as they were sitting at coffee [between eight and nine in the evening], and went into G. Wynyard's bed-closet, the window of which was put [at] 'down.' He next day suggested to Sherbrooke the propriety of making a memorandum of the incident; which was done. 'I remember the date, and on the 6th of June our first letters from England brought the news of John Wynyard's death [which had happened] on the very night they saw his apparition.' Colonel Gore was under the impression that the person afterwards seen in one of the streets of London by Sherbrooke and William Wynyard, was not a brother of the latter family, but a gentleman named (he thought) Hayman, noted for being like the deceased John Wynyard, and who affected to dress like him.

SHOW PRODIGIES.

The English newspapers and broadsides of old days preserve to us some curious notices of what have been, from time to time, brought before the public as personal prodigies. We find the grave King William in a novel kind of association in the following account, for example, of a Strong Man. The article is dated, 'London, printed by J. W., near Fleet Street, 1689.'

'THE ENGLISH SAMSON: HIS STRENGTH PROVED BEFORE THE KING: being an account of the wonderful exploits that Mr William Joyce performed before his majesty at Kinsington, the 16th of this instant November, 1689.'

[After a little prefatory flourish, the advertisement thus continues.] 'Being asked how much he was capable of lifting, he reply'd above a tun weight; whereupon a solid piece of lead was laid on his breast, and being shap'd as convenient as possible for his laying hold of, in order to lift it; and being weigh'd, it contained a tun and fourteen pound and an half, which was more than he at first proposed: notwithstanding which he lifted it up at a considerable height from the ground, to the admiration of his majesty and his nobles, who were eye-witnes thereof; supposing such an exploit far beyond the ability of any mortal man to perform — after which, at his majesty's command, a rope of incredible thickness was brought and fastened about his middle, and the other end to an extraordinary strong horse; at which time he told his majesty that the horse could not move him; upon which, to try the experiment, the said horse was order'd to be whipp'd in order to pull him out of the place; but notwithstanding this strength, Mr. Joyce stood as immovable as an oak-tree; whereupon, seeing his majesty and others of the nobility to be singularly astonish'd at this strange action, he thereupon declared that he could, by mere strength, break the same rope in two; whereupon, tying the same to two posts, he twitch'd it in pieces seemingly as easy as another man does a piece of pack-thread; and not only so, but afterwards putting his armes about one of the said postes (which was of extraordinary magnitude), he at one violent pull broke it down, and in the same manner he served the other also, to the extraordinary wonder of all then present. At which strange performances his majesty was mightily well pleas'd (and, 'tis said), has ordered him a considerable gratuity, besides an honorable entertainment for both him and his acquaintance.' We are credibly inform'd that the said Mr Joyce pull'd up a tree of near a yard and half circumference, by the roots, at Hamstead, on Tuesday last, in the open view of some hundreds of people, it being modestly computed to weigh near 3000 weight; these, and several other strange and amazing exploits, he performs almost every day, even to the wonder of all mankind!' In some degree in contrast with King William's Strong Man, is the account of a wonderfully small Scotsman, who was subjected to public attention in the same reign.

'A SCOTTISH DWARF.'

'These are to give notice to all persons of quality, and others, that there is newly come to this place, a little Scotch man, which hath been admired by all that hath seen him, he being but two foot and six inches high; and is near upon 60 years of age. He was marry'd several years, and had issue two sons (one of which is with him now). He sings and dances with his son; and has had the honour to be shewn before several persons of note at their houses, as far as they have yet travelled. He formerly kept a writing-school; and discourses of the Scriptures, and of many eminent histories, very wisely; and gives great satisfaction to all spectators; and if need requires, there are several persons in this town that will justifie, that they were his scholars, and see him marry'd. He is to be seen at the lower end of Brookesfield Market, near the market-house.' (Further than this, there is no clue to the name of the town.)

Other wonders of the same kind follow:

'A "CHANGELING" † CHILD.

'To be seen next door to the Black Raven, in West-Smithfield, being a living skeleton, taken by a Venetian galley from a Turkish vessel in the Archipelago: This is a fairy child, supposed to be born of Hungarian parents, but chang'd in the nursing, aged nine years and more, not exceeding a foot and a half high. The legs, thighs, and arms are so very small, that they scarce exceed the bigness of a man's thumb, and the face no bigger than the palm of one's hand; and seems so grave and solid, as if it were threescore years old. You may see the whole anatomy of its body by setting it against the sun. It never speaks. And when passion moves it, it cries like a cat. It has no teeth, but is the most voracious and hungry creature in the world, devouring more victuals

* We take this to mean 2000 lbs., or within about 2 cwt. of a ton; although one would have computed the weight of a tree of this stated circumference, allowing proportionally for its height, branches, &c., at much more.

† Changeling, a child left by fairies for the parents' own child. It was either deformed, mischievous, or idiotic, and hence the term came to be generally applied to a child having those qualities.
EACH PRODUCER.

THE PAINTED PRINCE.

There is no date to the following, further than that which may be gathered from the style of its typography, which would seem to be of about the period to which most, if not all, of these curious advertisements belong. The one immediately before us runs thus:

"Prince Giolo, Son to the King of Moangis, or Gilolo; lying under the Equator in the Long. of 102 Deg. 30 Min.; a Fruitful Island abounding with rich spices and other valuable commodities."

"This unfortunate prince sailing towards a neighbouring island, with his mother and young sister, to complement the intended marriage betwixt her and the king of that island, a violent tempest surpriz’d them, and drove them on shoar upon the coast of Mindanao, where they were all made prisoners, except the young lady, with whom the king was so inamoured, that he took her to wife; yet suffered the prince and his mother Nacatara to be purchased for money. The mother died, but the prince, her son, arrived in England."

"This famous Painted Prince is the first wonder of the age, his whole body (except face, hands, and feet) is curiously and most exquisitely painted or stained, full of variety of invention, with prodigious art and skill performed. Inasmuch, that the antient and noble mystery of painting or staining upon humane bodies seems to be comprised in this one stately piece."

"The pictures, and those other engraven figures copied from him, serve only to describe as much as they can of the foreparts of this inimitable piece of workmanship. The more admirable back-parts afford us a lively representation of one quarter-part of the world upon and betwixt his shoulders, where the arctic and tropick circles center in the midst pole on his neck. And all the other lines, circles, and characters are done in such exact symmetry and proportion that it is astonishing, and surmounts all that has hitherto been seen of this kind."

"The paint itself is so durable that nothing can wash it off, or deface the beauty of it. It is prepared from the juice of a certain herb or plant peculiar to that country, which they esteem infallible to preserve humane bodies from the deadly poison or hurt of any venomous creatures whatsoever. This custom they observe—that in some short time after the body is painted, it is carried naked, with much ceremony, to a spacious room appointed, which is filled with all sorts of the most venomous, pernicious creatures that can be found; such as snakes, scorpions, vipers, centaupes (centipedes), &c. The king himself is present. The grandees and multitudes of spectators seeing the naked body surrounded with so many venomous creatures, and unable to wound or do any mischief to it, seem transported and ready to adore him; for none but those of the royal family are permitted to be thus painted."

"This excellent piece has been lately seen by many persons of high quality, and accurately surveyed by several learned viri, and ingenious travellers, who have express'd very great satisfaction in seeing of it."

"This admirable person is about the age of thirty, graceful, and well-proportioned in all his limbs; extremely modest and civil, neat and cleanly, but his language is not understood, neither can he speak English."

"He will be exposed to publick view every day from the 16th of this instant, June, at his lodgings at the Blew Boar's Head, in Fleet Street, near Water Lane; where he will continue for some time, if his health will permit. But if any persons of quality, gentlemen or ladies, do desire to see this noble person, at their own houses or any other convenient place, in or about this city of London, they are to send timely notice, and he will be ready to wait upon them in a coach or chair any time they may please to appoint, if in the day-time."

STORY OF THE DIAMOND NECKLACE.

In connection with the unfortunate Marie Antoinette, whose judicial murder by sentence of the Convention took place on 16th October 1793, we may in this place not inappropriately introduce the famous story of the Diamond Necklace, in which the French queen played a conspicuous role.
though involuntary part. This extraordinary affair originated in the profligate state of French society preceding the Revolution, when the upper classes, as if in mockery of the sufferings of the starving poor, displayed a magnificence as insulting as it was reckless and insane. We are told that the officers of the king’s maison militaire not only wore uniforms, but had the harness and caparisons of their horses covered with gold, and the very manes and tails of these animals plaited with gold braid. Louis XVI. and his queen fell into this strange infatuation; and one of their most serious errors of judgment, was their conduct in the case of the Diamond Necklace, which cast a slur upon the fair fame of the queen, and finally proved one of the most deadly weapons in the hands of her

enemies. The details long occupied the attention of the court of France, the College of Cardinals, and the higher ranks of the clergy. Many versions of the facts were given, but the following narrative, compiled from the documents of the case, from the memoirs, pamphlets, and petitions of the accusers and the accused, may be relied on as essentially correct.

In 1774, Louis XV., wishing to make a present to his mistress, Madame du Barry, commissioned the court-jewellers to collect the finest diamonds to form a necklace that should be unique of its kind. Some time and a considerable outlay were required to make arrangements to procure the largest, purest, and most brilliant diamonds. Unfortunately, before the necklace was completed, Louis XV. was laid in his grave, and the fallen favourite was fain to be content with the riches she possessed, without requiring the execution of the deceased monarch’s intentions. The work, however, was too far advanced to permit of its being abandoned without great loss; and in the hope that Louis XVI. might be induced to purchase it for the queen, the jewellers finished the necklace, which was valued at 1,800,000 francs (£72,000 sterling). The new king’s finances were in too low a state for him to purchase the necklace; and when it was offered to him, he replied that a ship was more needed than a necklace, which, therefore, remained in the hands of the jewellers for some years, until the occurrence of the event which, by breaking it up and dispersing it, gave it historical celebrity.

To understand by what a complication of circumstances, a woman without position, fortune, favour at court, or even very great charms of person, could have conceived the idea of obtaining an ornament that was beyond the means of sovereigns, can only be explained by reference to events much
story of the diamond necklace.  
OCTOBER 18.

The prince was now completely duped. He was convinced that Madame Lamotte was admitted daily into her majesty's private apartments, and he thought it natural that the lively queen should be amused by her quick-witted sallies, and that she should make use of her as a ready tool. Following his guide’s advice, he expressed his joy and gratitude in writing, and the correspondence thus commenced was continued, and so worded on the queen’s part, that the cardinal had reason to believe that he had inspired unlimited confidence. When he was supposed to be sufficiently prepared, a note was risked from the queen, commanding the grand-almoner to borrow for a charitable purpose 60,000 francs, and transmit them to her through the medium of Madame Lamotte. Absurd as was this clandestine negotiation, the cardinal believed it; he borrowed the money himself, and remitted it to Madame Lamotte, who brought, in return, a note of thanks. A second loan of a like amount was obtained. With these funds Madame Lamotte supplied her husband, and her husband furnished her with the enormous sum of 40,000 francs, and started gay equipages, though not until the artful woman had, through her usual medium—a letter from the queen—insinuated to the cardinal that, to prevent suspicion, he should absolve himself for a time, when he instantly set out for Alsace.

Meanwhile, Madame Lamotte accounted for her sudden opulence by saying that the queen’s kindness supplied her with the means. Her majesty would not allow a descendant of royal blood to remain in poverty. This success emboldened Madame Lamotte to aim at much higher game. The court-jewellers were by this time tired of having the costly necklace lying idle; an emissary of Madame Lamotte had insinuated to them, that an influential lady at court might be able to recommend the purchase of the necklace. A handsome present was promised for such a service. But Madame Lamotte was cautious; she did not meddle with such matters; she would consider the subject. In a few days, she called on the jewellers, and announced that a great lord would that morning look at the necklace, which he was commissioned to purchase. The cardinal, in the meantime, received from his quasi-royal correspondent a note to hasten his return for a negotiation. On reaching Paris, he was informed that the lady in question desired to purchase the necklace without the king’s knowledge, for which she would pay with money saved from her income. She had chosen the grand-almoner to negotiate the purchase in her name, as a special token of her favour and confidence. He was to receive an authorisation, written and signed by the queen, though the contract was to be made in the cardinal-prince’s name. He unhesitatingly hastened to fulfil his mission; and on February 1, 1785, the necklace was placed in the cardinal’s hands. Twenty thousand livres of the original price were taken off, quarterly payments agreed to, and the prince’s note accepted for the whole amount. The jewellers, however, were made aware that the necklace was being purchased on her majesty’s account; the prince writing a letter from his authority, and charged them to keep the affair secret from all except the queen.

The necklace was to be delivered on the eve of a great fête, at which Madame Lamotte asserted the queen desired to wear it. The casket containing it was taken to Versailles, to the house of Madame
Lamotte, by whom it was to be handed to the person whom the queen was to send. At dusk, the cardinal arrived, followed by his valet bearing the casket; he took it from the servant at the door, and, sending him away, entered alone. He was placed by Madame Lamotte in a closet opening into a dimly-lighted apartment. In a few minutes a door was opened, a 'messeigneur from the queen' was announced, and a man entered. Madame Lamotte, after a behaviour toward, placed the casket in the hands of the last-comer, who retired instantly. And so adroitly was the deception managed, that the cardinal protested that through the glazed sash of the closet-door, he had perfectly recognised the confidential valet of the queen! To strengthen the cardinal's belief, Madame Lamotte told him that she had taken lodgings at Versailles, as the queen was desirous of having her at hand; and to corroborate this statement, she persuaded the cardinal, disguised, to accompany her, when the queen, as she pretended, desired her attendance at Trianon. On one of these occasions, Madame Lamotte and the cardinal were escorted by the pretended valet, who was the former's accomplice; but it was the concierge of the Château of Trianon, and not the queen, whom Madame Lamotte went to visit.

The acknowledgment of the necklace was next artfully planned. Madame Lamotte had noticed that when the queen passed from her own apartment, crossing the gallery, to go to the chapel, she made a motion with her head, which she repeated when she passed the Ciel de Béour. On the same evening that the necklace was delivered Madame met the cardinal on the terrace of the château, and told him that the queen was delighted. Her majesty could not then acknowledge the receipt of the necklace; but next day, if he would be, as if by chance, in the Ciel de Béour, her majesty would, by the motion of her head, signify her approbation. The cardinal went, saw, and was satisfied. Meanwhile, as Madame Lamotte informed her dupe, the queen thought it advisable not to wear the necklace until she had mentioned its purchase to the king.

The presence of the cardinal now becoming troublesome, a little note sent him again to Alaise. Madame Lamotte then despatched her husband with the necklace to London, where it was broken up; the small diamonds were reset in bracelets and rings, for the three accomplices; the remainder was sold to jewellers, and the money placed in the Bank of England in a fictitious name.

The cardinal, in the meantime, induced the jewellers to write to the queen (if they could not see her), to thank her for the honour she had done them. They did so, and were soon summoned to explain their letter, which was an enigma to the queen; and the whole affair of the purchase, as far as the cardinal was concerned, was then explained to her majesty. This was in the beginning of July. From this time on, Madame Lamotte advanced, and with increasing success, her various schemes, by unjust and undignified manner. Instead of exposing the manoeuvre, and having the authors of the fraud punished, the queen allowed herself to be guided by two of the most inveterate enemies of the cardinal, whom she left to their surveillance; and the jewellers were merely told to bring a copy of the agreement, and leave it with her majesty.

Meanwhile, the first installment in payment of the necklace was nearly due, and the cardinal being wanted to provide funds for it, he was recalled to Paris in the month of June, by a note assuring him that the realisation of the queen's promises was near at hand, that she was making great efforts to meet the first payment, but that unforeseen expenditure rendered the matter difficult. The prince, however, began to think it strange that no change was apparent in the queen's behaviour towards him, and the necklace worn; but to satisfy him, Madame Lamotte arranged a private interview with the queen, between eleven and twelve o'clock, in a grove near Versailles. To personate her majesty at this rendezvous, the conspirators had chosen a certain Mademoiselle Leguet, whose figure, gait, and profile gave her a great resemblance to the queen. This new accomplice was not initiated into the secrets of the plot, but was told that she was to play her little part to mystify a certain nobleman of the court, for the amusement of the queen, who would be an unseen witness of the scene. It was rehearsed in the appointed grove: a tall man, in a blue great-coat and slouched hat, would approach and kiss her hand, with great respect. 'She was to say in a whisper: 'I have but a moment to spare; I am greatly pleased with all you have done, and am about to miss your height of power.' She was to give him a rose, and a small box containing a miniature. Footsteps would then be heard approaching, on which she was to exclaim, in the same low tone: 'Here are Madame, and Madame d'Artou! we must separate.' The scene took place as planned; the queen's relatives being represented by M. Lamotte and a confidante named Villette, who, approaching, cut short the cardinal's interview, of which he complained bitterly to his friends. Nevertheless, understanding that the queen was unable to pay the 300,000 livres, he endeavoured to borrow them; when a note came to say, that if the payment could be delayed one month, the jewellers should receive 700,000 livres at the end of August, in lieu of the 300,000 livres due in July; 30,000 livres being rendered as interest, while for the rest, he strived to pay out of the proceeds of the sale of the diamonds. The jewellers took and gave the cardinal a receipt on account; but they refused any further delay, and daily pressed the prince for payment, and threatened to make use of the power his note gave them. 'Why,' exclaimed he, 'since you have had frequent access to her majesty, have you not mentioned the disagreeable situation in which her delay places you?' 'Alas! Monsieur,' they replied, 'we have had the honour of speaking to her majesty on the subject, and she denies having ever given you such a commission, or received the necklace. To whom, my prince, can you have given it?' The cardinal was thunderstruck: he replied, however, that he had placed the casket in Madame Lamotte's hands, and when her deliver it into those of another. 'At any rate,' he added, 'I have in my hands the queen's authorisation, and that will be my guarantee.' The jewellers replied: 'If that is all you count upon, my lord, we fear you have been cruelly deceived.' Madame Lamotte was absent from Paris, but repaired thither, and arriving at the grand-almoner's in the middle of the night, assured him she had just left the queen, who threatened to
deny having received the necklace, or authorised its purchase, 'and to make good her own position, would have me arrested, and ruin you;' at the same time entreats his eminence to give her shelter until she could concert with her husband her means of escape. This was, in reality, a rue to clear herself and criminate the cardinal, who, she declared on her arrest, had kept her a close prisoner for four-and-twenty hours, to prevent her disclosing that she had been employed to sell the diamonds for him.

This took place early in August. An enemy of the cardinal now drew up a memorial of the whole affair, which, however, was not presented to the king until the 14th of August; and next morning being a great féte, while the grand-almoner, in his pontifical robes, was waiting to accompany her majesty to the chapel, he was summoned to the royal closet before Louis and Marie Antoinette, the memorialist, and two other court-dignitaries. The king, barding him the depositions of the jewellers, and the financier of whom the cardinal had endeavoured to borrow for the queen 300,000 livres, bade him read them. This being done, the king asked what he had to say to these accusations. 'They are correct in the more material points, sire,' replied the cardinal. 'I purchased the necklace for the queen.' "Who commanded you?" exclaimed she. 'Your majesty did so by a writing to that effect, signed, and which I have in my pocket-book in Paris.' 'That writing,' exclaimed the queen, 'is a forgery!' The cardinal threw a significant glance at the queen, when the king ordered him to retire, and in a few minutes he was arrested and sent to the Bastille.

A few days after, Madame Lamotte was arrested in the provinces, where she was entertaining a large party of friends; her husband had escaped, and she had sent her other accomplices out of the kingdom. She was taken to the Bastille on the 20th of August; when examined, she at first denied all knowledge of the necklace, though she admitted that she and her husband had been employed by the cardinal to purchase a very valuable set of loose diamonds. She afterwards said that the necklace had been purchased by the cardinal to sell in fragments, in order to retrieve his affairs; and that he had acted with the connivance of Cagliostro, into whose hands the funds had passed. She denied all mention of the queen's name, and her tone was ironical and daring. Cagliostro and his wife were sent to the Bastille, where they were kept for many months; but nothing proved that they had been concerned in the affair, though the cardinal used to consult Cagliostro, in whose cabalistick art he had great faith.

At this stage light unexpectedly broke in. Father Loth, a neighbour of Madame Lamotte, whom she had intrusted with her secret, revealed to the friends of the cardinal the parts played by Vilette and Madame-miselle Leguet, who were accordingly arrested, one in Geneva, and the other in Belgium. Their evidence was conclusive as to the deception Madame Lamotte had practised upon the cardinal with regard to the queen, and the other facts were easily proved. The testimony of Cagliostro also weighed heavily against her; and when confronted with the witnesses, in a violent rage she exclaimed: 'I see there is a plot on foot to ruin me; but I will perish without disclosing the names of the great personages yet concealed behind the curtain!'

This strange drama was at length brought to a close on the 31st of May 1786; when, in the trial before the Criminal Court, the prince-cardinal was proved innocent of all fraud, but was ridiculed for his extreme credulity; was ordered by the king to resign his posts at court, and was exiled to his abbey of La Chaise-Dieu in the confines of Avignon. The wretched woman, Lamotte, was sentenced to be flogged, branded, and imprisoned for life. When the former part of the sentence was executed, she most fouly abused the queen; and though she was gagged, enough was heard to form the ground of the vilest calumnies. Her husband, who had escaped to England, was condemned by default; when he threatened to publish a pamphlet compromising the queen and minister, Baron de Breteuil, if his wife were not set free. This was treated with contempt; but, ten months after, Madame Lamotte was permitted to escape to England, whither the Duchess of Polignac was sent to purchase the silence of the infamous Lamottes with a large sum of money. The bribe was thrown away, for though one edition of the slanderous pamphlet, a second was published some time after; and the copies which are now extant in the Imperial Library of Paris, were found in the palace of Versailles, when it was taken possession of by the Republican government.

THE WHISTLE DRINKING-CUP.

The drinking-customs of various nations would form a curious chapter in ethnology. The Teutonic races have, however, the most claim to be considered 'potent in potting.' The Saxons were great drinkers; and took with them to their graves their ornamental ale-buckets and drinking-glasses, the latter made without foot or stand, so that they must be filled and emptied by the drinker before they could reach a mouth to which they were to be burned. Mighty topers they were, and history records some of their drinking-bouts. Notwithstanding the assertion of Iago, that 'your Dane, your German, and your swag-bellied Hollander, are nothing to your English' in powers of drinking, it may be doubted if the Germans have ever been outdone. Certainly no persons have bestowed more thought on quaint inventions for holding their liquors, or enforcing large consumption, than they have. The silversmiths of Augsburg and Nuremburg, in the sixteenth and seventeenth centuries, devoted a large amount of invention to the production of drinking-cups, taking the form of men, animals, birds, &c., of most grotesque design. Our engraving (see the following page) represents one surmounted by a wind-mill. It will be perceived that the cover must be held in the hand to be filled, and retained there till it be emptied, as then only it can be set upon the table. The drinker having swallowed the contents, blew up the pipe at the side, which gave a shrill whistle, and set the sails of the wind-mill in motion also. The power of the blow, and the length of the gyration, were indicated in a small dial upon the front of the mill, and also in some degree testified to the state of the consumer. Among the songs of Burns is one upon
THE BOOK OF DAYS.

In equal shares I freely give it.
Not doubting but they will receive it.
To Sally Crouch and Mary Lee.
If they with Lady Poulet be,
Because they would the year did dwell
In Twickenham House, and served full well,
When Lord and Lady both did stray
Over the hills and far away:
The first, ten pounds; the other twenty;
And, girls, I hope that will content ye.
In seventeen hundred, sixty-nine,
This with my hand I write and sign,
The sixteenth day of fair October,
In merry mood, but sound and sober;
Past my three-score-and-fifteenth year,
With spirits gay and conscience clear,
Joyous and frolicsome, though old,
And like this day—serene, but cold;
To foes well-wishing; and to friends most kind,
In perfect charity with all mankind.
For what remains, I must desire,
To use the words of Matthew Prior:—
"Supreme! All-wise! Eternal Potentate!
Sole Author! sole Disposer of my Fates!
Enthron’d in Light and Immortality!
Whom no man fully sees, and none can see!
Original of Beings! Power Divine!
Since that I think, and that I live, is thine!
Benign Creator! let thy plastic hand
Dispose of its own effect! Let thy command
Restore, Great Father, thy instructed son,
And in my act, may Thy great will be done."

To be thus quaint and eccentric in one of the most solemn affairs of life, is of by no means unfrequent occurrence among the denizens of this cloudy island. Some men choose to burden their executors with a great number of injunctions, partly to express certain tastes and prejudices, but mainly, as we may presume, for the vanity of causing some little sensation about themselves when they are no more. The following is a notable example:

'A True Copy of the Last Will and Testament of Mr. Benjamin Dod, Citizen and Linnen Draper, who lately fell from his Horse, and Dy'd soon after.'

'In the Name of God, Amen. I, Benjamin Dod, citizen and mercer of London, being in health of body, and good and perfect memory; do make this my last will and Testament in manner and form following (that is to say): First, my soul I commend to Almighty God that gave it me, and my body to the earth from whence it came. I desire to be inter’d in the parish church of St. John, Hackney, in the county of Middlesex, about eleven o’clock at night, in a decent and frugal manner, as to Mr. Robert Atkins shall seem meet, the management whereof I leave to him. I desire Mr. Brown to preach my funeral sermon; but if he should happen to be absent or dead, then such other persons as Mr. Robert Atkins shall appoint: and to such minister that preaches my funeral sermon I give five guineas.

'Item: I desire four-and-twenty persons to be at my burial, out of which Messrs. J. Low, &c. (namning six persons) to be pall-bearers; but if any of them be absent or dead, I desire Mr. Robert Atkins to appoint others in their room, to every of which four-and-twenty persons so to be invited to my funeral, I give a pair of white gloves, a ring of ten shillings’ value, a bottle of wine at my funeral, and half-a-crown to spend at their return that night, to drink my soul’s health, then on her journey to purification in order to eternal rest. I appoint the room where my corpse shall lie, to be hung with black, and four-and-twenty wax-candles.
to be burning. On my coffin to be affixed a cross, and this inscription—

Jesu Hominum Salvator.

I also appoint my corps to be carried in a hearse, drawn with six white horses, with white featherers, and follow'd by six coachmen, with six horses to each coach, to carry the four-and-twenty persons. I desire Mr. John Spicer may make the escutcheons, and appoint an undertaker, who shall be a noted churchman. What relations have a mind to come to my funeral may do it without invitation.

Item: I give to forty of my particular acquaintance, not at my funeral, to every of them a gold ring of ten shillings’ value; the said forty persons to be name’d by Mr. Rowan Atkins. As for mourning, I leave that to my executors hereafter name’d; and I do not desire them to give any to whom I shall leave a legacy.

After enumerating a number of legacies, &c., the testator concludes thus:

I will have no Presbyterians, moderate Low-churchmen, or occasional Conformists, to be at, or have any thing to do with, my funeral. I die in the faith of the true Catholic Church. I desire to have a Tombstone over me, with a Latin inscription; and a lamp, or six wax candles, to burn seven days and nights together thereon.

The will of Peter Campbell, of Darley, dated October 20, 1616, contained the following passage:

Now for all such household goods at Darley, whereof John Howson hath an inventory, my will is, that my son Roger shall have them all towards housekeeping upon this condition, that, if at any time hereafter, any of his brothers or sisters shall find him taking of tobacco, that then he or she, so found, shall have their own kind by careful provision, for favourite cats, dogs, and parrots. Others, good easy-natured souls, love to charge their wills with a joke, which they know will provoke a smile from their old friends when they are lying cold in the grave. A few examples of these various testamentary eccentricities follow:

1788. — I, David Davis, of Clapham, Surrey, do give and bequeath to Mary Davis, daughter of Peter Delaport, the sum of £6, which is sufficient to enable her to get drunk for the last time at my expense.

1789. — I, William Blackett, governor of Plymouth, desire that my body may be kept as long as it may not be offensive; and that one or more of my toes or fingers may be cut off, to assure a certainty of my being dead. I also make this request to my dear wife, that as she has been troubled with one old foe, she will not think of marrying a second.

1791. — I, John Aylott Stow, do direct my executors to lay out five guineas in the purchase of a picture of the viper biting the benedict hand of the person who saved him from perishing in the snow, if the same can be bought for that money; and that they do, in memory of me, present it to — Esq., a King’s Counsel, whereby he may have frequent oppor-

unities of contemplating on it, and, by a comparison between that and his own virtue, be able to form a certain judgment which is best and most profitable, a grateful remembrance of past friendship and almost parental regard, or ingratitude and insolence. This I direct to be presented to him in lieu of a legacy of £300, which I had, by a former will, now revoked and burnt, left him.

Extract from the Will of St. Church, is 1793. — I give and devise to my son, Daniel Church, only one shilling, and that is for him to hire a porter to carry away the next badge and frame he shall have occasion to employ.

1813. — I, Elizabeth Orby Hunter, of Upper Seymour Street, widow, do give and bequeath to my beloved parrot, the faithful companion of 25 years, an annuity for its life of 200 guineas a year, to be paid half-yearly, as long as this beloved parrot lives, to whoever may have the care of it, and proves its identity; but the above annuity to cease on the death of my parrot; and if the person who shall or may have care of it, should substitute any other parrot in its place, either during its life or after its death, it is my positive will and desire, that whoever does so shall refund to my heirs or executors the sum or sums they may have received from the time they did so; and I empower my heirs and executors to recover it from whoever could be base enough to do so.

And I do give and bequeath to my son, Mary Dyer, widow, now dwelling in Park Street, Westminster, my forezaid parrot, with its annuity of 200 guineas a year, to be paid her half-yearly, as long as it lives; and if Mrs. Mary Dyer should die before my beloved parrot, I will and desire that the aforesaid annuity of 200 guineas a year may be paid to whoever may have the care of my parrot as long as it lives, to be always the first paid annuity; and I give to Mrs. Mary Dyer the power to will and bequeath my parrot and its annuity to whomsoever she pleases, provided that person is neither a servant nor a man—it must be bequeathed to some respectable female.

And I also will and desire that no person shall have the care of it that can derive any benefit from its death; and if Mrs. Dyer should neglect to will my parrot and its annuity to any one, in that case, whoever proves that they may have possession of it, shall be entitled to the annuity on its life, as long as it lives, and that they have possession of it, provided that the person is not a servant or a man; but a respectable female; and I hope my executors will see it is in proper and respectable hands; and I further will and desire that whoever possesses it, and its annuity, to any respectable female on the same conditions. And I also will and desire, that 20 guineas may be paid to Mrs. Dyer directly on my death, to be expended on a very high, long, and large cage for the forezaid parrot. It is also my will and desire, that my parrot shall not be removed out of England. I will and desire that whoever attempts to dispute this my last will and testament, or by any means neglect, or tries to avoid paying my parrot’s annuity, shall forfeit whatever I may have left them; and if any one that I have left legacies to attempt bringing in any bills or charges against me, I will and desire that they forfeit whatever I may have left them, for so doing, as I owe nothing to any one. Many owe to me both gratitude and money, but none have paid me either.

1806. — I, John Moody, of Westminster, boot-maker, give to Sir F. Burdett, Bart., this piece of friendly advice, to take a special care of his conduct and person, and never more to be the dupe of artful and designing men, lest at a certain time the conduct and persons moving in a higher sphere of life; for place-men of all descriptions have conspired against him, and if prudence does not lead him into private life, certain destruction will await him.

1810. — Richard Crawshay, of Cynfaeth, in the

* Gentleman’s Magazine, April 1769.*
county of Glamorgan, Esq. 'To my only son, who never would follow my advice, and has treated me rudely in very many instances; instead of making him my executor and residuary legatee (as till this day I have given him $100,000).

1793.—I, Philip Thackenes, formerly of London, but now of Bologna, in France, leave my right hand, to be cut off after my death, to my son, Lord Audley; and I desire it may be sent to him, in hopes that such a sight may remind him of his duty to God, after having so long abandoned the duty he owed to a father who once affectionately loved him.

1770.—I, Stephen Swain, of the parish of St Olave, Southwark, give to John Abbot, and Mary, his wife, 6d. each, to buy for each of them a halter, for fear the sheriffs should not be provided.'

1794.—I, Wm. Darley, late of Ash, in the county of Herts, give unto my wife, Mary Darley, for picking my pocket of 60 guineas, and taking up money in my name, of John Pugh, Esq., the sum of one shilling.'

1795.—I, Catharine Williams, of Lambeth, give and bequeath to Mrs Elizabeth Paxton £10, and £25 a year, to be paid weekly by my husband, to take care of my cats and dogs, as long as any of them shall live; and my desire is that she will take great care of them, neither let them be killed or lost. 'To my servant, John Smith, £10 and my jackasses, to get his living with, as he is fond of traffic.'

1785.—I, Charles Parker, of New Bond Street, Middlesex, bookseller, give to Elizabeth Parker, the sum of £50, whom, through my foolish fondness, I made my wife, without regard to family, fame, or fortune; and who, in, return, has not spared, most unjustly, to accuse me of every crime regarding human nature, save highway-robbery.'

Amongst jocular bequests, that of David Hume to his friend John Home, author of *Douglas*, may be considered as one of the most curious. John Home liked claret, but detested port wine, thinking it a kind of poison; and the two friends had doubtless had many discussions on this subject. They also used to have disputes as to which of them took the proper way of spelling their common family-name: Hume or Homé; and the following codicil to his will: 'I leave to my friend, Mr John Home, of Kilduff, ten dozen of my old claret at his choice, and one single bottle of that other liquor called port. I also leave him six dozen of port, provided that he attests under his hand, signed John Hume, that he has himself alone finished that bottle at two sittings. By this concession, he will at once terminate the only two differences that ever arose between us concerning temporal matters.'

Somewhat akin to this humour was that shown in a verbal bequest of a Scotch judge named Lord Forfgen, who died in 1727. 'Dr Clerk, who attended Lord Forfgen at the last, told James Boswell’s father, Lord Auchinleck, that, calling on his patient the day his lordship died, he was let in by his clerk, David Reid. “How does my lord do?” inquired Dr Clerk. “I houp he’s well!” answered David, with a solemnity that told what he meant. He then conducted the doctor into a room, and shewed him two dozen of wine under a table. Other doctors presently came in, and David, making them all sit down, proceeded to tell them his deceased master’s last words, at the same time pushing the bottle about briskly. After the company had taken a glass or two, they rose to depart; but David detained them. “No, no, gentlemen; not so. It was the express will of the deceased that I should fill ye a’ fou, and I maun fulfil the will o’ the dead.” All the time the tears were streaming down his cheeks. “And, indeed,” said the doctor afterwards in telling the story, “he did fulfil the will o’ the dead, for before the end o’ that, there was na ane of us able to bite his ain thoomb!”

*JOHN HUNTER’S MUSEUM.*

It is doubtful whether any private individual ever formed a museum more complete and valuable than that of John Hunter, now under the care of the Royal College of Surgeons, in Lincoln’s Inn Fields. Whatever else the great surgeon was doing, he never forgot or neglected his museum. In 1755, when his brother Dr William Hunter was a sculptor and lecturer of eminence, John was his assistant, and helped him in making anatomical preparations. He soon, however, went full-fledged as an assistant, and examined all the living and dead animals he could get hold of, to compare their structure with that of the human body. He made friends with the keepers of all the travelling-menageries, and lost no opportunity of profiting by the facilities thus afforded. A mangy dog, a dead donkey, a sick lion, all alike were made contributory to the advancement of science in the hands of John Hunter. He took a house in Golden Square in 1764, and then built a second residence at Earl’s Court, where he might carry on experiments in science. After having been a member of the College of Surgeons, he removed from Golden Square to Jermy Street, where he packed all the best rooms in the house full of anatomical specimens and preparations. He married in 1771, and his wife thereafter lived at Earl’s Court, for there was no room for her among the physiological and pathological wonders of Jermy Street. Indeed, for more than twenty years, he was accustomed to carry on his favourite researches at Earl’s Court, only being in London a sufficient time each day to attend to his practise as a surgeon. His collection increased so rapidly, that the house in Jermy Street became filled to repletion; in so much that, in 1789, he took a larger house on the east side of Leicester Square. Here he built a new structure expressly as a museum, comprising a fine room fifty-two feet by twenty-eight, lighted at the top, and provided with a gallery all round. Sir Joseph Banks aided John Hunter out of his own ample store of natural-history specimens, and the museum soon became a wealthy one. Mr Home, a brother-in-law, who had been an assistant army-surgeon, came to reside with him as a sort of curator of the museum. Hunter also employed a Mr Bell for fourteen years, in making anatomical drawings and preparations; while he himself was accumulating a vast mass of MS. papers—building up almost a complete system of physiology and surgery, on the evidence furnished by the specimens in his museum. Hunter was always and frequently embarrassed, by the expenses which his scientific enterprise entailed upon him, and this notwithstanding the fact that his professional income reached £2000 a year for some years before his death. In 1794, he began to open his museum *privately printed by R. M. Milner, Esq.*

*This anecdote is taken from Boswelliana, a volume*
occasionally to the public, and justly prided himself on the scientific way in which it was arranged. Being a hasty and irritable man, he soon took offence, and was not readily appeased; and he himself predicted that any sudden or violent anger would probably kill him. The result mournfully verified his prediction; for, on the 16th October 1795, having had a very exciting quarrel with some of the members at the College of Surgeons, he dropped down dead in the attempt to suppress his feelings.

In his will, he directed that his museum, the pride of his life, should be offered to the nation if anything like a fair sum were tendered for it; in order that it might be retained in the country. Failing in this, it was to be offered to certain foreign governments, in succession, and if all these attempts failed, it was to be disposed of by private contract. After much negotiation, the government bought the splendid collection, in 1799, for £15,000. The question, what to do with it? had then to be decided, and the following arrangement was come to. The College of Surgeons received a new charter in 1800, constituting it a 'Royal' College, and giving it increased powers. The Hunterian Collection was granted to the keeping of the college on condition of the public being allowed access to it; and twenty-four 'Hunterian Lectures' on surgery being given annually by the college. The government granted £27,500 to construct a building for the reception of the collection; but it was many years before the museum was really opened.

One painful circumstance connected with this museum was the indignation of the whole medical profession of Europe. John Hunter left a vast mass of manuscripts of priceless value, recording the results of forty years' researches in comparative and pathological anatomy and physiology. This treasure was placed in the museum. Mr (afterwards Sir Everard) Home was one of the executors, and also one of the trustees. He took these manuscripts to his own house, about 1810, under pretence of drawing up a catalogue of them; and no entreaties or remonstrances would ever induce him to return them. He kept them ten or twelve years, and then burned them! The only reason he assigned was, that John Hunter had requested him to do so. The world viewed the matter otherwise. Year after year, while the manuscripts were in his possession, Sir Everard poured forth scientific papers in such profusion as astonished all the physicians and anatomists of Europe, who had hitherto been ignorant of his possessing such attainments. Then, after years of surprise and disappointment at the non-return of the Hunter manuscripts, the act of their destruction was openly admitted by Home, and the source of his scientific inspiration now became tolerably manifest. Unhappily, this disgraceful transaction remains beyond a doubt. The trustees and the board of curators indignantly remonstrated with Home in 1824 and 1825, and compelled him to make an attempt to vindicate himself, but none of his excuses or explanations could do away with the one cruel fact, that the invaluable manuscripts were irrevocably gone.

The Hunterian Museum, comprising 22,000 specimens, occupies a fine suite of rooms and galleries at the Royal College of Surgeons, on the south side of Lincoln's Inn Fields. Most of them are valuable only to medical men; but some, such as the skeletons of the Bojesaman, the Irish giant, and the Sicilian dwarf, and the embalmed body of the wife of Martin Van Butchell, a celebrated quack-doctor in the last century, will be viewed by all with the greatest interest.

OCTOBER 17.

St Etheldreda or Audry. St Anustas or Austu, abbess at Isaac, 683. St Andrew of Crete, 761. St Hedwiges or Areole, Duchess of Poland, widow, 1243.

ST ETHELREDRA OR ADRY.

This saint, commemorated in the Romish calendar on 3rd June, but in the English calendar on 17th October, in celebration of the translation of her relics from the common cemetery of the nuns to a splendid marble coffin within the church of Ely, was the daughter of a king of East Anglia, and earned an exalted reputation both by her piety and good works, and the maintenance of an early vow of virginity which she observed through life, though married successively to two Saxon princes. She founded the convent and cathedral of Ely on the spot where the cathedral was erected at a subsequent period, and died in 679 as its abbes. Various churches throughout England are named after her, among others Ely Cathedral, the patronage of which, however, she shares with St Peter.

From St Etheldreda's more homely appellation of St Audry, is derived an adjective of the English language in familiar use. At the fair of St Audry, at Ely, in former times, toys of all sorts were sold, and a description of cheap necklaces, which, under the denomination of tawdry laces, long enjoyed great celebrity. Various allusions to tawdry laces occur in Shakespeare, Spenser, and other writers of their age.

'One time I gave thee a paper of pins,
Another time a tawdry lace,
And if thou wilt not grant me love,
In truth I'll die before thy face.'

Old Ballad.

'It was a happy age when a man might have wooed his wench with a pair of kid-leather gloves, a silver thimble, or with a tawdry lace; but now a velvet gown, a chain of pearl, or a coach with four horses, will scarcely serve the turn.'—Rich's 'My Lady's Looking-glass,' 1616.

In process of time, the epithet tawdry came to be applied to any piece of glittering tinsel or tarnished finery.

Born,—Augustus III., king of Poland, 1696; John Wilkes, noted demagogue, 1727, Clerkenwell, London; William Scott, Baron Stowell, great constitutional lawyer, 1745, Ewbank, near Newcastle-on-Tyne.

Died.—Txye John VII., 753; Philip de Comines, historian, 1559, Argentavis, in Ecou; Andrew Osianer, eminent Lutheran divine, 1659, Konigstrop; Sir Philip Sidney, poet and hero, 1586, Arnheim, Holland; Sir Edmundbury Godfrey, mysteriously murdered, 1678; Ninon de Lenox, celebrated beauty and wit, 1705; Dr John Ward, rhetorician, 1758; Frederic Chopin, musical composer, 1849, Paris.
SIR PHILIP SIDNEY.

THE BOOK OF DAYS.

SIR PHILIP SIDNEY.

Sir Philip Sidney, the idol of his own, and the
beast of succeeding ages, was not quite thirty-two
when he died. He lived long enough to afford, to
all who knew him, unmistakable promise of great-
ness, but not so long as to leave to posterity any
singular proof of it. And yet we can read his
character, as it is here left, and feel assured
that the universal love of him was founded on
a solid basis. Though at times we catch glimpses
of a certain haughtiness, a haughtiness, an ill-tempered
boldness of valour, such as in an older man we
should not have looked for, we find, on the other
hand, unmistakable marks of a true-hearted
patriot, a wise statesman, a skilful general, an
elegant scholar, a graceful writer, a kind patron,
and a Christian gentleman. Ophelia's description
of Hamlet has often been applied to him, and it
seems to fail in no particular—

'The courtier's, scholar's, soldier's, eye, tongue,
sword.
The expectancy and rose of the fair state,
The glass of fashion and the mould of form,
The observed of all observers.'

He was beautiful within and without; elegant as
well in fashion of person as in grace of mind.
'Imitate his virtues, studies, and actions,' said his
father to Sidney's younger brother, speaking of
Sidney; 'he is a rare ornament of this age, the
very formular that all well-disposed young gentle-
men of our court do form their manners and life
by. . . . In truth, I speak it without flattery of
him or of myself; he hath the most rare virtues
that ever I found in any man.'

Sir Philip Sidney was named Philip after Philip
of Spain, as well from gratitude to that king, to
whom the family was beholden, as in honour of
Mary. His mother was a Dudley. Her father,
his grandfather, her brother, and her sister-in-law,
Lady Jane Grey, had all died on the scaffold; and
this was the Dudley blood of which Sidney was
prond.

The events of Sidney's short career are not very
prominent in history. After leaving the university,
he travelled for some years. Being a Protestant,
he encountered some personal danger at Paris,
where he happened to be during the treacherous
massacre of St. Bartholomew. Afterwards he was
present at Venice, at a time when that already
waning power was making peace with the Turk.
Besides these particulars, there is nothing worthy
of remark in Sidney's travels. After his return,
his progress at court was slow. Elizabeth employed
him on several important embassies, in which he
gave entire satisfaction; but the queen had a way
of holding back ambitious youths of merit, and
though she was very fond of Sidney, and even took
a finger to stand godmother to his daughter
Elizabeth, she reserved her honest, unsuaded
counsels, with considerable coldness, while she
appears, at the same time, prudently to have acted
on them. At last, she stopped him in the very act
of secretly embarking with Sir Francis Drake on
a voyage of discovery; and, as she was always
whimsical, instead of punishing him, she made
him governor of Flushing, a post which some time
previously he had applied for in vain. Sidney
threw himself heart and soul into the cause of the
Low Countries; took an important town by a
skilful night-attack; shewed himself apt for war;
and received his death-wound in the battle of
Zutphen, so named, was not a battle. A few hundred men were sent to
intercept supplies, which the Prince of Parma was
conveying into the town, and fell into an ambush
of several thousands. Sidney, from a restless
first for adventure, had joined the troop,
unbidden, with other English leaders; and these
valiant men, to whom retreat was open, foolishly
performed prodigies of valour. Sidney, in a fit of
generous boldness, had thrown away his thigh-
armour, because a friend had unintentionally come
without his own, and a ball shattered his thigh.
He had the best of attendance, his wife's nursing,
and many tears of true friends; but nothing
remained for him but to die a noble and Christian
death, and to be borne in a black ship over the
still sea and up the Thames, to lie in state many
months, to have a national funeral, and be lain in
peace in old St Paul's.

A curious contemporary ballad accurately de-
scribes the melancholy close:

'The king of Scots bewrayed his grief in learned
verse,
And many more their passions penned, with praise to
dock his heart.
The Flushingers made suit his breathless corpse to
have,
And offered a sumptuous tomb the same for to
engrave;
But O, his loving friends, at their request did grieve,
It was too much he lost his life, his corpse they
should not have.
And so from Flushing port, in ship attired with
black,
They did embark this perfect knight, that only
breath did lack;
The wind and seas did mourn to see this heavy sight,
And into Thames did carry this much lamented
knight;
Unto the Minoris his body was conveyed,
And there, under a marial hearse, three months or
more was laid;
But when the day was come he to his grave must go,
An host of heavy men repaired to see the solemn
show.'

Thus the pride of the English people passed out of
the view of men, and for many months it was
counted indecent for any gentleman of quality to
appear, at court or in the city, in light or gaudy
apparel.

King James of Scotland, as we have seen, wrote
certain sonnets; the two universities between
them produced three volumes of mournful elegies;
and Spenser honoured his lost friend and patron
with the poem of Astrophel, which was published
in company with several others; the most beautiful
of them, to our taste, is The Doleful Lay of
Clorinda, because of its true feeling; such true
feeling as becomes well Mary, Countess of Pom-
brooke, Sidney's sister, who is said to have been the
writer of it.

'O Death! that hast us of such riches left,
Tell us at least, what hast thou with it done?
What is become of him whose flower here left
Is but the shadow of his likeness gone?
Scares like the shadow of that which he was,
Nought like, but that he like a shade did pass.
Lastly, Sidney was a true friend and excellent patron. Spenser owed to him the notice which Elizabeth took of him: and Fulke Greville, Lord Brooke, who wrote his life, felt himself honoured to be able to have such a motto as the following engraved on his tomb:

'Servant to Q. Elizabeth,
Counsellor to K. James,
And Friend to Sir Philip Sidney,
Trophæum Poesiæ.'

'SIDNEY'S SISTER.'

Mary, Countess of Pembroke, the sister of Sir Philip Sidney, made a name for herself by her poetical writings, which, added to her beauty and amiability, have placed her in the Pantheon of notable Englishwomen. All the poets united in singing her praises, Spenser described her as—

'The gentlest shepherdess that lived that day,
And most resembling, both in shape and spirit,
Her brother dear.'

And that brother dedicated to her the celebrated romance, which he wrote at her request, and therefore entitled The Countess of Pembroke's Arcadia.

Mary Sidney married Henry, Earl of Pembroke, in 1576; her wedded life was short but happy. After her husband's early death, she retired from the gaieties of the court, devoting herself to the education of her children, the enjoyments of literary leisure, and the exercises of religion. Her longest poem, on the sublime subject of our Saviour's Passion, was written at this time; and though perhaps tinged with poetical exaggeration, thus reflects the pious regrets of her widowed life:

'My infant years misspent in childish toys,
My riper age in rules of little reason,
My better years in all mistaken joys
My present time (O most unhappy season!)
In fruitless labour and in endless love,
O what a horror hath my heart to prove!

I sigh to see my infancy mispent,
I mourn to find my youthful life mislaid,
I weep to feel my further discontent,
I die to try how love is living dead;
I sigh, I mourn, I weep, I living die,
And yet must live to know more misery.'

Sir Philip Sidney concludes his Apology for Poetry, with a malediction on all those whose creeping souls cannot look up to the sky of poetry: praying that they may be unsuccessful in love, for lack of skill to compose a sonnet, and that their memories may fade from the earth, for want of an epitaph. His sister neither merited nor obtained such a fate; her memory having been honoured in lines more lasting than brass or marble. Her epitaph, written by Ben Jonson, has never been exceeded in the records of posthumous praise:

'Underneath this sable hearse,
Lies the subject of all verse.
Sidney's sister, Pembroke's mother,
Death ere thou hast killed another,
Fair and learned, and good as she,
Time shall throw a dart at thee.'

To these simple and elegant lines, six more, of a rather inferior character, were subsequently added,
by an unknown author, supposed to be her son William, Earl of Pembroke:

'Marble piles let no man raise
To her name, for after-days,
Some kind woman, good as she,
Reading this, like Nobe,
Shall turn marbles and become
Both her mourner and her tomb.'

NINON DE LENCLOS.

This celebrated beauty, who almost enjoyed, like Helen of Troy, the gift of perennial youth, exhibits in her life a striking illustration of French society and morals during the seventeenth century, over nearly the whole of which period her history extends, having been born in 1616 and died in 1706, at the age of ninety. Time seemed hardly to make any impression upon her; and so enduring were her charms of person, that even when she had passed her seventhieth year, they still retained the power of attracting admirers and enkindling love. Nor were her attractions restricted solely to those of face and figure. For conversational wit or égipée—that special quality of mind and spirit—she occupied a distinguished place, even in the brilliant circles of Parisian society, in the reign of Louis XIV. Of the general laxity which then prevailed in social ethics, we need no more convincing proof than the fact of a person, who led so disreputable a life as Ninon de Lenclos, being openly received into the company of, and courted by individuals, male and female, of the highest respectability and position. Even M. de Beuvié, whose son was one of Ninon's many lovers, could jestingly address her in her letters as her belle-fille; and the prudish and bigoted Madame de Maintenon, after her own elevation to the matrimonial couch of Louis XIV., did not hesitate to invite this Aspasia of France to take up her abode in the palace of Versailles. The latter, however, preferred a life of licence and excess to the ingenuities of wit and austerity which had just then been inaugurated at court. The great Condé sought repose after his military toils in the society of Ninon, and the subtle La Rochefoucauld could here only satisfy his longing for personal beauty in conjunction with the charms of vivacity and wit. Molière and La Bruyère were constantly to be met in her salons, and what she spoke they wrote; in the words of Jules Janin, hers was spoken, and hers was written eloquence. She was well informed on general subjects, spoke several languages, was a thorough and enthusiastic student of Montaigne, and performed with much skill on various musical instruments. Christina, ex-queen of Sweden, paid her a visit, and declared, on leaving Paris, that she had seen nothing more attractive there than the illustrious Ninon. Yet with all her natural advantages, and amid all the splendours by which she was surrounded, Mademoiselle de Lenclos was not happy, and used to declare, in her old age, that were she compelled to live over again her past years, she should certainly commence by hanging herself. So impossible is it to enjoy that serenity of mind, so essential to true happiness, that 'peace of God which passeth all understanding,' where the life is a habitual violation of the precepts of religion and morality, let us bask ourselves as we may in the sunshine of worldly pleasures, honours, and wealth.

The name of Ninon was a pet-epithet bestowed on Mademoiselle de Lenclos by her father, her baptismal appellation being Anne. To the pernicious lessons inculcated by this relative, who professed unblushingly the grovelling and materialistic doctrines popularly ascribed to Epicurus, most of the subsequent errors of his daughter seem to be traced. He was a gentleman of good family in Touraine, and served with distinction in the wars of Louis XIII. against the Huguenots. His wife was also of aristocratic birth from the Orléanais, and, with totally contrary tendencies to her husband, was of a pious and even ascetic turn of mind. Anne's natural disposition to gaiety revolted against such underlying regularity in religious observances, whilst in her father she found a friend but too ready to encourage her in her determination to free herself from the salutary restraint to which she was subjected by her mother. When a girl of ten years old, it is said she had dressed in boy's clothes, took her with him to the camp, and instructed her in various military exercises. He died prematurely, and was followed, not long afterwards, by his wife, who held her daughter to be a ménage of her daughter, and expired recommending her to the protection of God, to shield her from the dangers to which she was exposed by her youth and inexperience. These forebodings of affection and maternal piety were but too fully realised. Deprived, at the age of fifteen, of both her parents, left entire mistress of her fortune and possessions, with unrivalled mental and personal attractions just beginning to develop themselves, the heedless girl was not long in putting the maxims of her father into practice, and adopting the profession of the regular courtesan. This character, refined no doubt though it might be, but still the Traviata from first to last, she maintained far beyond the usual period enjoyed by women of her class. It must be recorded to her credit, that she betrayed no tendencies to grossness and avarice, and was perfectly free from malice in her disposition. There can be no doubt of her possessing naturally many good and amiable qualities, and that, had her early education been more judiciously conducted, her career in life might have been very different. There seemed to be nothing that she dreaded more than forming a permanent connection by marriage. One of the most unfavourable points in her character, was the absence of maternal feeling, which, apparently, had no place in her breast. Of her two sons, one, called La Boisserie, became an officer in the French navy, and died at Toulon in 1732. The fate of the other, a son of the Marquis de Geray, and named Villiers by his father, possesses a singularly tragic interest, rivalling the celebrated story of Oedipus. His parents, at least on the mother's side, had been carefully concealed from him, and in this state of ignorance he reached the age of nineteen. Having heard of the wondrous charms of Ninon de Lenclos, which were celebrated over France, he sought and obtained an introduction to her, and became desperately enamoured at first sight. It was not long before he declared his passion, and the horror of his mother when he did so may be imagined. Not wishing, if possible, to disclose the secret, she implored the young man to
THE POPISH PLOT: OCTOBER 17. MYSTERIOUS DEATH OF SIR E. GODFREY.

Mysterious Death of Sir Edmund Godfrey.

One of the most remarkable outbreaks of popular prejudice recorded in British history, is the celebrated so-called Popish Plot in 1678, which for a time may be said to have infected the English people with an absolute frenzy, and was certainly the most widespread and national delusion under which it ever laboured. The fierceness of religious and political zeal was only exceeded by the astonishment, and all but universal, credulity that prevailed. And yet the ferment excited throughout the country was by no means wholly groundless, however extravagant may have been its development. Let us glance for a moment at the then social and political condition of England.

The settlement of Macaroni, who has familiarised his countrymen with the remarkable changes inaugurated by the Restoration, from republican theories to the doctrine of passive obedience on the one hand, and from the rigid austerity of puritanical morals to the wildest libertinism and excess on the other. For a time the court had it nearly all its own way, but it was not long before a strong reaction set in, and a jealous watch came to be maintained on the proceedings of the king and government. Foremost among the grounds of suspicion and complaint were the popish leanings of the court, and the influence universally believed to be exercised by Catholics in controlling the affairs of the nation. The avowed adherence by the Duke of York to the Romish faith, the prospect of his ascending the throne, the default of heirs of the present body, and a general disposition on the part of the authorities to relax the penal laws against the papists, excited the most lively apprehensions throughout the kingdom, apprehensions which were intensified from day to day. The dread of Puritans and sectaries began even in the church to be extinguished by the fear of the machinations of Jesuits, and the overthrow of Protestantism. A secret but thoroughly organised conspiracy was believed to be carried on for the destruction of church and state, and no mode of action, it was asserted, would be rejected, however atrocious, provided it were calculated to insure success. The great fire of London, in 1666, and subsequent calamities of a similar nature, were stoutly maintained to have been the work of the papists. The opposition, or country-party, with Lord Danby at its head, gained rapidly ground in parliament, and a formal impeachment was sent up by the Commons of the Lord-Treasurer Danby, for corrupt and unconstitutional measures. In the midst of the agitation which preceded this last measure, the revelation of the Popish Plot took place.

That a plot was really being carried on by the king and his ministers is indisputable. The secret

and disgraceful compact between Charles II. and Louis XIV., by which the former, in return for an annual pension, sold himself and his country to France, would, if successfully carried out, have resulted in the total overthrow of Protestantism by giving free scope to the ambitious schemes of Louis, who would in return have assisted his English brother in trampling into the dust all popular rights, and rendering himself an irresponsible sovereign. But the pretended conspiracy revealed by Titus Oates was only calculated to divert men's minds from the real matter in hand.

This worthy seems to have chosen the most fortunate possible conjuncture for his revelations, as, notwithstanding the gross and palpable contradictions in his statements, the infamy of his previous character, and his entire want of any trustworthy evidence to support his allegations, his monstrous fabric gained the Catholics of an atrocious conspiracy to assassinate the king, massacre all Protestants, and establish a popish dynasty in the Duke of York, was received with the utmost gravity and attention. From poverty and obscurity Oates suddenly emerged into wealth and fame, and became the hero and popular favourite of the day. He supplemented his first declaration by additional matter, and from the success which had attended it he pressed on the credulity of the public, other informers soon followed in his steps. The ferment spread like wild-fire, and no statement, however absurd, which tended to criminate the Catholics was rejected. Yet the common-sense of the nation might, in a short time, have opened its eyes, had it not been for a mysterious occurrence which gilded to madness its nerves, already so highly strung.

The first deposition of Titus Oates was made on 27th September 1678, before Sir Edmund Godfrey, one of the magistrates for Westminster, who, however, does not appear to have been a fanatical partisan of the No-Popery party, as Coleman, an agent of the Duke of York, and seriously criminated by Oates's statements, was a personal friend of his. He sent his return to him in consequence of the danger to which he might be exposed. Oates, it has been said, was a man of a melancholy temperament, and suffering at the time from depression of spirits, but this assertion was afterwards denied. He occupied a house in Green's Lane, in the Strand, and about a fortnight after the above deposition was made before him, left home at nine o'clock on the morning of Saturday the 12th of October. Shortly after this, he was seen in the neighbourhood of Marylebone, and at noon of the same day had an interview on business with one of the churchwardens of St Martin's in the Fields. From this time he was never again seen alive. Surprise was felt by his servants at home, at his neither returning in the evening nor sending any message to inform them of his intending to be absent for the night. On Monday came, to no less amaze of him; Monday, Tuesday, Wednesday, and Thursday followed with the like result. At six o'clock on the evening of the last-mentioned day (the 17th), as two men were crossing a field on the south side of Primrose Hill, they observed a sword-belt, stick, and pair of gloves lying by the side of the hedge, but paid no attention to them at the time, and continued their journey to the White House in the
neighbourhood. Arriving there, they happened to mention what they had seen to the master of the house, who thereupon recommended them to go back to the place, and offered himself to accompany them. The three accordingly started for the spot where they had seen the articles in question; and having arrived there, one of them stooped down to lift them, but happening at the same time to look into the adjoining ditch, saw there the body of a man lying face downwards. Edmund Bury, Godfrey, with a sword run through his body, his face bruised, and a livid mark round the neck, as if he had been strangled. He was conveyed at once to the White House, and information sent to the authorities. A jury was impanneled, to inquire into the cause of his death; but no definite conclusion could be come to beyond the evidence furnished by two surgeons, that his death must have been occasioned by strangulation, and his body then pierced with the sword, which had been left sticking in the wound. The ditch was dry, and there were no marks of blood in it, and his shoes were perfectly clean, as if, after being assassinated, he had been carried and deposited in the place where he was found. A large sum of money and a diamond-ring were found in his pockets, but his pocket-book and gold, he used to take notes of examinations, was missing. Spots of white wax, an article which he never used himself, and which was only employed by persons of distinction, and by priests, were scattered over his clothes; and from this circumstance people were led to conclude that the Roman Catholics were the authors of his death. The whole affair was an incredible mystery, but popular impulsion seizing hold of the circumstance that Oates had made his deposition before him, and also that no robbery had been committed, attributed at once his murder to the vengeance of the papists.

London was now in a blaze. Here, it was maintained, was a thorough confirmation of what Oates and his companions had asserted of the bloody designs of the Catholics. Stories soon came pouring in to increase and spread the clamour, and among others, informations were sworn to by persons, who pretended to have seen Sir Edmund Bury trepedden into an apartment near Somerset House, then strangled, and his body conveyed away in a sedan-chair, and thence conveyed by a man on horseback to the ditch at Primrose Hill. Though the most glaring contradictions appeared in those narratives, they were sagaciously caught up and accepted as gospel by an excited and furious people. To doubt the reality of the Popish Plot was regarded as tantamount to a participation in it. Oates, and informers of a similar type, were caressed and encouraged more than ever, and it will be readily believed, that they did not suffer public enthusiasm to languish from a lack of a proper supply of nourishment. It was at this time, as Hume remarks, ‘reason could no more be heard than a whisper in the midst of the most violent hurricane.’

From White House, the corpse of Godfrey was carried home to his own residence, where for two days it lay in state, and was visited by vast multitudes. The funeral was attended by an immense procession, at the head of which walked seventy-two of the clergy of England, in full canonicals, whilst the minister who preached a sermon on the occasion, was supported on each

side by a stalwart brother-divine, lest he should be killed by the papists! If the murder was really the work of a fanatic Roman Catholic, it was a most ill-judged procedure for the tranquillity of his fellow-religionists, as numbers of them, priests as well as laymen, were ruthlessly immolated to the popular fury. The mere fact of their being Catholics, and being charged as participants in the Popish Plot, was sufficient to insirce their condemnation with any jury. The real cause of Godfrey’s death has never been discovered, and to this day it remains one of those mysterious occurrences of which no satisfactory explanation can be given. An undoubted fact, it stands out in melancholy prominence amid the tissues of absurdities and falsehoods which compose the substance of the Popish Plot.

OCTOBER 18.

ST LUKE.

Of the companion and biographer of St Paul, little is recorded in Scripture; but from a passage in the Epistle to the Colossians we infer that he had been bred to the profession of a physician. In addition to this vocation, he is stated by ecclesiastical writers to have practised that of a painter, and some ancient pictures of the Virgin, still extant, are ascribed to his pencil. In consequence of this belief, which, however, rests on very uncertain foundations, St Luke has been regarded as the patron of painters and the fine arts. He is commonly represented in a seated position, writing or painting, whilst behind him appears the head of an ox, frequently winged. This symbol has been associated with him, to quote the words of an ancient writer, ‘because he devised about the preëstode of Jesus Christ,’ the ox or calf being the sign of a sacrifice, and St Luke entering more largely into the history of the events, than the other Evangelists, into the history of the life and sufferings of our Saviour.

Born—Pope Pius II. (Enea Silvio), 1405, Corigliano; Justus Lipsius, miscellaneous writer, 1647, Iach, Brabant; Matthew Henry, eminent divine and commentator, 1652, Broad Oak, Molehurst; François de Savié, Prince Eugène, celebrated imperial general, 1665, Paris; Richard Nash (Beau Nash), celebrated master of the ceremonies at Bath, 1674, Swancote; Peter Frederik Saum, Danish arboriculturist, 1726, Copenhagen; Jean Jacques Regis Cambodres, eminent lawyer and statesman, 1728, Montpeller; Thomas Phillips, portrait-painter, 1770, Dudley, Worcestershire.

Died—John Ziska, Hussete commander, 1424; Sarah Jennings, Duchess of Marlborough, 1744; Béné Antoine de Réaumur, practical philosopher and naturalist, 1757.

Réaumur and his Thermometer.

Béné Antoine Ferchault de Réaumur is an instance, among many, of those persons who, having devoted the greater part of their lives to scientific investigations, become known to posterity for only one, and that often a very subordinate achievement. Réaumur is now remembered almost exclusively
by his thermometer: that is to say, his mode of graduating thermometers—a very small thing in itself. Yet in his day he occupied no mean place among French savans. From 1708, when he read his first paper before the Academy of Sciences, till his death on October 18, 1787, he was incessantly engaged in investigations of one kind or other. Geometrical speculations; the strength of cordage; the development of the shells of testaceous animals; the colouring-matter of turquoise-gems; the manufacture of iron, steel, and porcelain; artificial incubation; the imitating of the famous purple dye of the ancients; the graduation of thermometers; the reproduction of the claws of lobsters and crabs; the instincts and habits of insects—all, in turn, engaged the attention of this acute and industrious man, and all furnished him with means for increasing the sum-total of human knowledge.

Scientific men, each in his own department, fully appreciate the value of Réaumur's labours; but to the world at large, as we have said, the thermometer is the only thing by which he is remembered. Almost precisely the same may be said of Fahrenheit. Had not the English persisted in using the graduation proposed by the last-named individual, his name would never have become a “household word” among us; and had not Réaumur's scale been extensively adopted on the continent, his more elaborate investigations, buried in learned volumes, would have failed to immortalize his name.

Till the early part of the last century, the scales for measuring degrees of temperature were so arbitrary, that scientific men found it difficult to understand and record each other's experiments; but Fahrenheit, in 1739, had the merit of devising a definite standard of comparison. He divided the interval between freezing water and boiling water into 180 equal parts or degrees, and placed the former at 33 degrees above the zero or point of intense cold, so that the point of boiling-water was denoted by 212°. It is supposed that the extreme cold observed in Iceland in 1709 furnished Fahrenheit with the minimum, or zero which he adopted in his thermometers; but such a limit to the degree of cold would be quite inadmissible now, when much lower temperatures are known to exist. Réaumur, experimenting in the same field a few years after Fahrenheit, adopted also the temperature of freezing water as his zero, and marked off 80 equal parts or degrees between that point and the temperature of boiling-water. Celsius, a Swede, invented, about the year 1730, a third mode of graduation, called the Centigrade; in which he took the freezing of water as the zero point, and divided the interval between that and the point of ebullition into 100 parts or degrees. All three scales are now employed—a circumstance which has proved productive of an infinite amount of confusion and error. Thus, 212° F. is equal to 90° R., or 100° C.; 60° F. is equal to 29° R., or 17° C.; the thermometer, like the names of the constellations, is difficult to make changes in any received system when it has become once established; and thus we shall continue to hear of Réaumur on the continent, and of Fahrenheit in England.

OCTOBER 18.

THE LAST LOTTERY IN ENGLAND.

On the 18th of October 1826, the last 'State Lottery', was drawn in England. The ceremony took place in Cooper's Hall, Bishopsgate Street, and although the public attraction to this last of a long series of legalized swindles was excessive, and sufficient to inconveniently crowd the hall, the lottery-office keepers could not dispose of the whole of the tickets, although all means, ordinary and extraordinary, had been resorted to, as an inducement to the public to 'try their luck' for the last time.

This abolition of lotteries deprived the government of a revenue equal to £250,000 or £300,000 per annum; but it was wisely felt that the inducement to gambling held out by them was a great moral evil, helping to impoverish many, and diverting attention from the more legitimate industrial modes of money-making. No one, therefore, mourned over the decease of the lottery but the lottery-office keepers, then a large body of men, who rented expensive offices in all parts of England.

The lottery originated among ourselves during the reign of Queen Elizabeth, when a very rich lottery—general of money, plate, and certain sorts of merchandise—was set forth by her majesty's order, 1567 A.D. The greatest prize was estimated at £5000, of which £2000 was to be paid in cash, £2000 in plate, and the remainder in good tapestry, hangings, and other curiosities, and certain sorts of good linen cloth. All the prizes were to be seen at the house of Mr Derick, the queen's goldsmith, in Cheapside; and a wood-cut was appended to the original proclamation, in which a tempting display of gold and silver plate is profusely delineated. The lots, amounting in number to 400,000, appear to have been somewhat tardily disposed of, and the drawing did not take place until January 1568-69. On the 11th of that month, it began in a building erected for the purpose, at the west door of St Paul's Cathedral, and continued, day and night, until the 6th of the following May. The price of the lots was 10s. each, and they were occasionally subdivided into sixpences and quarters; and these were again subdivided for 'the convenience of the poor.' Without some objects ostensibly propounded as an excuse to the government for founding this lottery, were the repair of the harbours and fortifications of the kingdom, and other public works. Great pains were taken to 'provoke the people' to adventure their money; and her majesty sent forth a second most persuasive and argumentative proclamation, in which all the advantages of the scheme were more clearly set forth; so that 'any scruple, doubt, fault, or misliking' that might occur, 'specially of those that be inclined to suspicions, should be removed, so that all persons have 'their reasonable contention and satisfaction.' That adventurers had 'certain doubts still, is apparent from a proclamation issued as a supplement to this from the lord mayor; in which he says, 'though the wiser sort may find cause to satisfy themselves therein, yet to the satisfaction of the scrupler sort' he deigns to more fully explain the scheme. In spite of all this, the 'wiser sort' did not rapidly buy shares, and the 'scrupler sort' held tight their purses, so that her majesty sent a somewhat
Fan-Mount Representing a Lottery.
fretful mandate to the mayor of London, and the justices of Kent, Sussex, Surrey, and Hampshire, because, 'contrary to her highness' expectation,' there were many lots unclaimed, 'either of their negligence, or by some sinister dissensions of some not well-disposed persons.' She appoints one John Johnson, gentleman, to look after her interests in the matter, and to 'procure the people as much as maybe to lay in their monies into the lots,' and orders the principal men of every parish, and in whom any default is, that this matter hath not been so well advanced as it was looked for; so that 'there shall not one parish escape, but they shall bring in some money into the lots.' This characteristic specimen of royal droogamoon for national gambling in opposition to general desire, is a very striking commencement for a history of lottery-fraud.

In the year following, a lottery for marvellously rich and beautiful armour was conducted for three days at the same place. In 1612, King James I., in special favor for the plantation of the English colonies in Virginia, granted a lottery to be held at the west end of St. Paul's, whereof one Thomas Sharples, a tailor of London, had the chief prize, which was 4000 crowns in fair plate. In 1619, another lottery was held for the same purpose. Charles I. projected one in 1630, to defray the expenses of conveying water to London, after the fashion of the New River. During the Commonwealth, one was held in Grocer's Hall by the committee for lands in Ireland. It was not, however, until some years after the Restoration that lotteries became popular. They were then started under pretence of aiding the poor adherents of the crown, who had suffered in the civil wars. Gifts of plate were supposed to be made by the crown, and thus disposed of 'on the behalf of the truly loyal indigent officers.' Like other things, this speedily became a patent monopoly, was farms by various speculators, and the lotteries were drawn in the theatres. Booksellers adopted this mode to get rid of unsalable stock at a fancy value, and all kinds of sharping were resorted to. 'The Royal Oak Lottery' was that which came forth with greatest éclat, and was continued to the end of the century; it met, however, with animadversion from the sensible part of the community, and formed frequently, as well as the patenese who managed it, a subject for the satirists of the day. In 1659, a lottery was proposed with a capital prize of a thousand pounds, which sum was to be won at the risk of one penny; for this was to be the price of each share, and only one share to win.

The rage for speculation which characterised the people of England, in the early part of the last century, and which culminated in the South Sea bubble, was favourable to all kinds of lottery speculations; hence there were 'great gooses' in whole tickets, and 'little gooses' in their subdivisions; speculators were protected by the lottery offices; even fortune-tellers were consulted about 'lucky numbers.' Thus a writer in the Spectator informs us, 'I know a well-meaning man that is very well pleased to risk his good-fortune upon the number 1711, because it is the year of our Lord.' I have been told of a certain zealous dissector, who, being a great enemy to popery, and believing that bad men are the most fortunate in this world, will lay two to one on the number 666 against any other number; because, he says, it is the number of the beast.' Guildhall was a scene of great excitement during the time of the drawing of the prizes there, and it is a fact, that poor medical practitioners used constantly to attend, to be ready to let blood in cases when the sudden proclaiming of the fate of tickets had an overpowering effect.

On the foregoing page, we have copied a very curious representation of a lottery, originally designed for the former country of the principal men of every parish, and in whom any default is, that this matter hath not been so well advanced as it was looked for; so that 'there shall not one parish escape, but they shall bring in some money into the lots.' This characteristic specimen of royal droogamoon for national gambling in opposition to general desire, is a very striking commencement for a history of lottery-fraud.

Lotteries were not confined to money-prizes, but embraced all kinds of articles. Plate and jewels were favourites; books were far from uncommon; but the strangest was a lottery for deer in Sion Park. Henry Fielding, the novelist, ridiculed the public madness in a farce produced at Drury Lane Theatre in 1731, the scene being laid in a lottery-office, and the action of the drama descriptive of the wiles of office-keepers, and the credulity of their victims. A whimsical pamphlet was also published about the same time, purporting to be a prospectus of 'a lottery for ladies;' by which they were to obtain, as chief prize, a husband and coach-and-six, for five pounds; such being the price of each share. Husbands of inferior grade, in purse and person, were put forth as second, third, or fourth rate prize; if they were so foolish as to be found, the lottery was soon advertised on a similar plan. This was legitimate satire, as so large a variety of lotteries were started, and in spite of reason or ridicule, continued to be patronised by a gullible public. Sometimes they were turned to purposes of public utility. Thus in 1736, an act was passed for building a bridge at Westminster by lottery, consisting of 125,000 tickets at £2 each. London Bridge at that time was the only means of communication, by permanent roadway, between the City and Southwark. This lottery was so far successful, that parliament sanctioned others in succession until Westminster Bridge was completed. In 1774, the brothers Adam, builders of the Adelphi Terrace and surrounding streets in the Strand, disposed of these and other premises in a lottery containing 110 prizes; the first-drawn ticket entitled the holder to a prize of the value of £5000; the last-drawn, to one of £25,000.

Lotteries, at the close of the last century, had become established by successive acts of parliament, and, being considered as means for increasing the revenue by chancellors of our exchequer, they were conducted upon a regular business footing by contractors in town and country. All persons dabbled in chances, and shares were subdivided; that no pocket might be spared. Poor persons were kept poor by the rage for speculation, in hopes of being richer. Idle hope was not the only demoralisation produced by lotteries; robbery and suicide came therewith. The most absurd chances were paraded as traps to catch the thoughtless, and all that ingenuity could suggest in the way of advertisement and puffing, was resorted to by lottery-insurance offices; even the hand-bills, with poetic or smooth rhyming, appeals to the public; and about 1820, enlisted the services of wood-engravers, to make their advertisements more attractive. The subjects chosen were generally of a humorous kind, and were frequently very cleverly treated by Cruikshank and the best men of the day. They appealed, for the most part, to minds of small calibre, by depicting people of all grades expressing confidence.
in the lottery, a determination to try their chances, and a full reliance on 'the lucky office' which issued the hand-bill. None, in his *Beery-Day Book*, vol. ii., has engraved several specimens of these 'fly-leaves,' now very rare, and only to be seen among the collections of the curious. We add three more examples, selected from a large assemblage, and forming curious specimens of the variety of design occasionally adopted. It is seldom any sentimental or serious subject was attempted, but our first specimen comes in that category. This lottery was drawn on Valentine's Day; Cupid is,

Our third specimen is selected from a series representing the itinerant traders in the streets of London, engaged in conversation on the chances of the lottery. 'This is the fishwoman, who declares:

>'Though a dob, I'm not scaly—I like a good pisse,
And I hope that good-luck will soon smile in my face;
On the 14th of June, when Prizes in shoals,
Will cheer up the coxles of all sorts of seals.'

The English government at last felt the degradation of obtaining revenues by means of the lottery, and the last act which gave it a legal existence received the royal assent on the 9th of July 1823, and soon after 'the last' was drawn in England, as described already.

Lotteries linger still upon the continent; from Hamburg we occasionally get a prospectus of some chateau and park thus to be disposed of, or some lucky scheme to be drawn; but Rome may be fairly considered as the city where they flourish best and most publicly. At certain times, the Corso is gay with lottery-offices, and busy with adventurers. All persons speculate, and a large number are found among the lower grades of the clergy. The writer was present at the drawing of the lottery which took place in November 1858, in the great square termed Piazza Navona. The whole of that immense area was crammed with people, every window crowded, the houses hung with tapestries and coloured cloths, and a showy canopied stage erected at one end of the Piazza, upon which the business of drawing was conducted. As the space was so large, and the mob all eager to know fortune's behests, smaller stages were erected midway on both sides of the square, and the numbers drawn were exhibited in frames erected upon them. Bands of military music were stationed near; the pope's guard, doing duty as mounted police. The last was by no means an unnecessary precaution, for a sham quarrel was got up in the densest part of the crowd for the purpose of plunder, and some mischief done in the turmoil. Of the thousands assembled, many were priests; and all held their numbers in their hands, anxiously hoping for good-fortune. It was a singular sight, and certainly not the most moral, to see people and clergy all eagerly engaged on the Sunday in gambling.

---

When possess'd of sufficient
We sit at our ease;
Can go where we like,
And enjoy what we please.

But when pockets are empty,  
    If forced to apply  
To some friend for assistance,  
    They're apt to deny.

Not so with friends Sivewright,  
They never say nay,  
But lead us to Fortune  
The readiest way.

They gallop on gaily;  
The fault is your own  
If you don't get a good share  
Before they're all gone.
SIR THOMAS BROWNE.

OCTOBER 19.

It was written, he declares, 'with no intention for the prose, but for his own exercise and entertainment.' For some six years it was handed about in manuscript, and on the plea of its being surreptitiously and imperfectly printed, he gave 'a true and full copy,' under his own hand, to the world in 1643. It at once excited the attention of the public, even in that stormy age, as Johnson says, 'by the novelties of paradoxes, the dignity of sentiment, the quick succession of images, the multiplicity of abstruse allusions, the subtility of disquisition, and the strength of language.' In the book he speaks much of himself, but in such terms as to pique rather than satisfy curiosity. He asserts, he understands six languages; that he is no stranger to astronomy; that he has seen many countries; and leaves us to puzzle our heads over the mysterious and solemn announcement, 'that his life has been a miracle of thirty years, which to relate were not history, but a piece of poetry, and would sound like a fable.' So far as concerns the autobiographical portions, the reader of the Religio Medici will do well to bear in mind that he is dealing with a humorist; and Browne's humour is so irresistible, that it oozes through some of his gravest passages. Coleridge describes the Religio Medici as 'a fine portrait of a handsome man in his best clothes; it is much of what he was at all times; a good deal of what he was only in his best moments. I have never read a book in which I have felt greater similarity to my own make of mind—active in inquiry, and yet with an appetite to believe—in short, an affectionate visionary! It is a most delicious book.'

The success of the Religio Medici, which was translated into Latin, and thence into French, German, Dutch, and Italian, probably tempted Browne into the publication of his second work, in 1651, entitled Pseudodoxia Epidemica, or inquiries into very many received tenets and commonly presumed truths, which examined, proved but vulgar and common errors. This curious book treats in a pedantic way of a large number of odd notions, such as, that Jews stink; that the forbidden-fruit was an apple; that storks will only live in populous and happy states; that true slaves have no cocks corrupteth not; that elephants have no joints; that a pot full of ashes will contain as much water as it would without them; that men weigh heavier dead than alive, and before meat than after; that crystal is nothing but ice strongly concealed, &c. Notwithstanding his zeal to discover old errors, he was a prey to not a few himself. 'Natural diseases,' he writes, 'are heightened to a great excess by the subtility of the devil co-operating with the malice of those we term witches, at whose instance he doth those villainies.' Sir Matthew Hale fortified himself by this opinion in condemning two poor women as witches. Further he advises, 'that to those who would attempt to teach animals the art of speech, the dogs and cats, that usually speak unto witches, they allow him ten children, and lived to be his widow. Charles Ll, in a visit to Norwich in 1671, knighted Browne. Such, in a few words, is the story of Sir Thomas Browne's life. He died on his seventy-seventh birthday, the 19th of October 1682.

The chief incident in his life was the publication of the Religio Medici—the Religion of a Physician.
SIR THOMAS BROWNE. THE BOOK OF DAYS. DEAN SWIFT.

rites of ancient nations. 'There is perhaps none of his works,' says Dr Johnson, 'which better exemplifies his reading or memory. It is scarcely to be imagined how many particulars he has amassed, in a treatise which seems to have been occasionally written.' To Hydriotaphia he added a dissertation on The Garden of Cyrus, or The Quincuncial Lozenge or Net-work Plantations of the Ancients artificially, naturally. Quincuncx order is a plantation of trees disposed originally in a square surrounding old stone trees, one at each corner, and a fifth in the middle, which disposition, repeated again and again, forms a regular grove, wood, or wilderness. The quincuncx, Browne pursues through art and nature with a pertinacity that almost leads his reader to conclude that on that figure the universe was planned.

These were all the writings Sir Thomas Browne published, but after his death a mass of papers was discovered in his study, carefully transcribed, and ready for the press. These miscellanies have been printed, and supply fresh evidence of the versatility and originality of his reading and meditation. Considering the drudgery of his practice as physician, it is surprising that he should have read and written so much; but it is recorded that he was a skilful economist of time, that he could never bear to be a minute idle, and that the hours he could steal from his patients were spent in his study. He was always cheerful, though rarely merry; and, though in his writing garrulous, in speech he was slow and weighty. In his dress he affected plainness, and was averse to all finery; and was a strong advocate for thick and warm garments, as essential to health in the English climate.

The stability the English language had acquired in the age of Elizabeth was lost under her successors, and Browne, along with Milton and others, poured a multitude of exotic words into his compositions, to the great injury of their effect. He uses conmenology, for the state of many living at the same table; paralocal, for an unreasonable doubt; and arbiterial analogies, for parts that serve some animals in the place of others, besides a host of other pedantries to even less purpose; so that his style in some parts is rather a tissue of many tongues than honest English.

DEAN SWIFT.

The life of the celebrated dean of St Patrick's presents a history at once singular and painful. Born and educated in adversity, we find him emerging, after a hard struggle, into prosperity and fame; then disappointed in his canvass for clerical honours, we see him retire from the contest, and devote himself to literature and study; but cursed by a spondee and morbid disposition, little real enjoyment is seemingly ever derived by him from any source, whilst the cold calculating selfishness which prompted him to trifle with the affections of a loving and self-sacrificing woman, entailed on him the pains of a secret and agonising remorse. Disease, bodily and mental, comes to complete his miseries, and the last days of the great satirist and politician are characterized by the most melancholy and unqualified idioqacy.

*From Marlborough's eyes the streams of dotage flow, And Swift expires a driveller and a show.*

Though born and resident in Ireland during the greater part of his life, Swift was thoroughly English both by extraction and disposition. His grandfather, the Rev. Thomas Swift, was vicar of Goodrich, in Herefordshire, four of whose sons, of whom he had ten, besides four daughters, settled in Ireland. One of these, Jonathan, who had been bred to the law, was appointed steward of the King's Inns, Dublin, but died about two years afterwards, leaving his wife, in great poverty, with an infant daughter and also pregnant. A son, who was born on 30th November 1667, and received his father's name.

Young Jonathan received his first education at a school in Kilkenny, and was afterwards sent to Trinity College, Dublin, being indebted for these advantages to his uncle, Godwin Swift, who formed the main support of his mother and her family, but seems to have bestowed his bounty in a niggardly and ungracious manner. While at college, Swift made himself specially distinguished in no way, except idling, and the perpetration of many reckless pranks. In 1688, he passed over to England, and joined there his mother, who had been residing for some time in Leicestershire. She was a relation of the wife of Sir William Temple. Introduced to this celebrated statesman, the young man was appointed private secretary, and took his abode with Sir William, at the latter's seat of Moor Park, in Surrey. Here a reformation took place in his habits; and having both gained the approbation of his patron and his patron's master, King William, who used frequently to visit at Moor Park, he was enabled in 1692 to proceed to Oxford, where he obtained the degree of M.A. in the same year. Returning to his former employment under Sir William, a disagreement arose, and Swift set off to Ireland, with the hope of pushing his way in the church. He had the mortification of being obliged to solicit his patron for a certificate before he could obtain preferment, but in 1695 was made prebend of Kilroot, in the diocese of Connor, with a revenue of a hundred a year. Life, however, in this remote locality was far too dull for him, and he was all the happier to adjust his difference with Sir William Temple, and return to his secretarieship at Moor Park. On the death of Sir William, he proceeded to London, and superintended there the publication of his patron's posthumous works.

Having accompanied Lord Berkeley to Ireland in 1699, as his chaplain, Swift was presented by him to the rectory of Agher and the vicarage of Rathbeggan and Laracor, in the diocese of Meath. At the last-named of these livings he took up his residence, and continued there, during nearly the whole of the reign of Queen Anne, to pass the life of a country clergyman, varied by occasional visits to England, with which he kept up a constant correspondence; and employing himself, from time to time, in various clerical occupations, including the celebrated Tale of a Tub, and the Battle of the Books, published anonymously in 1704, and the Predictions of Isaac Bickerstaff, Esq., in 1708. He also gave to the world several tracts, in one of which, the Letter on the Sacramental Test, he opposed strenuously the relaxation of the penal laws regarding dissenters. Swift was thoroughly a High Churchman; and though in politics attached,
both by disposition and the connections of early life, to the principles of the Revolution, he became, letterly, the sworn friend and associate of Bolingbroke, Lord Oxford, and the rest of that class of statesmen who maintained a correspondence with the exiled family in France. The utmost, however, which the Tory party bestowed on him, was the deanery of St. Patrick's Cathedral, in Dublin; and shortly afterwards, the death of Queen Anne, and the accession of the Hanoverian dynasty, shut him out effectually from all hopes of further promotion. He refrained for many years from visiting England, blinding himself to the immense popularity in Ireland by his denunciation of the unworthy system of restriction imposed on that country by the English parliament. His famous Draper's Letters, on the patent right granted to William Wood to coin farthings and halfpence for Ireland, exposed him to considerable danger from the authorities, but with the Irish raised him to the dignity of a patriot, a position which he ever afterwards maintained in their eyes. A reward of £300 was offered for the discovery of the author of the Draper's fourth letter, and a bill against the printer being about to be presented to the grand jury, the following quotation from Scripture was largely circulated in Dublin: 'And the people said unto Saul, shall Jonathan die, which hath brought this great salvation in Israel? God forbid: as the Lord liveth, there shall not one hair of his head fall to the ground; for he hath won us with God this day. So the people rescued Jonathan, that he died not.' The grand jury's verdict was ignoramus, and the patent was ultimately withdrawn from Wood, who received in compensation a yearly grant of £3000 for twelve years.

In 1736, Swift once more visited England, and in the same year appeared the celebrated Gulliver's Travels, which, published anonymously like most of Swift's writings, achieved a long European popularity, and more than any other work has conferred on him an immortal reputation. But the moody, misanthropical author cared little for the applause of mankind, whose judgments he regarded with the most withering scorn and contempt. No better proof could be afforded of the general bent of his disposition than the work just alluded to, which is one of the descriptions of the country of Houyhnhnms. For ironical and sarcastic humour, nothing can be more poignant than his Directions to Servants, which, with the utmost gravity, inculcates on domestics the performance of every act which they should not do, and the omission of every duty which they should. It was about the last literary work in which Swift engaged, and was not published till after his death.

In sketching the life of Swift, we have as yet said nothing of a circumstance which has found a prominent place in every biography. Need we say that we allude to his attachments to Stella and Vanessa? The former of these, whose proper name was Esther Johnson, and who is said to have been a natural daughter of Sir William Temple, was a pretty girl of fourteen when she first made Swift's acquaintance at Moor Park, where she was an inmate. The young secretary acted the part of tutor towards her, and a life-long attachment, on the part of Esther at least, was the result. After Swift was settled as vicar of Laracor, Stella and a female friend, named Mrs Dingley, followed him to Ireland. They generally resided in the town of Trim, but took up their abode in the vicarage at Laracor whenever its master was absent. Up to 1716, the intercourse between them seems to have been entirely of a Platonic character, but in that year—Swift having by this time become dean of St Patrick's—they were married in the deanery garden by the bishop of Clogher. This circumstance, however, was carefully concealed, and the cold-blooded indifference with which Swift could thus expose the character of a generous and loving woman to the world's asperity exhibits him in a very repugnant light. Neither did he remain constant in his attachment to her. During his visit to London about 1715, he made the acquaintance of a young lady of good position, Miss Esther Vanhomrigh, who, like Stella, has been handed down to posterity by a poetical appellation—Vanessa. Unlike her rival, however, she appears to have been of a forward, enterprising disposition, and actually made known to Swift the state of her affections; a declaration which he has been offered for the discovery of the author of the Draper's fourth letter, and a bill against the printer being about to be presented to the grand jury, the following quotation from Scripture was largely circulated in Dublin: 'And the people said unto Saul, shall Jonathan die, which hath brought this great salvation in Israel? God forbid: as the Lord liveth, there shall not one hair of his head fall to the ground; for he hath won us with God this day. So the people rescued Jonathan, that he died not.' The grand jury's verdict was ignoramus, and the patent was ultimately withdrawn from Wood, who received in compensation a yearly grant of £3000 for twelve years.

In 1736, Swift once more visited England, and in the same year appeared the celebrated Gulliver's Travels, which, published anonymously like most of Swift's writings, achieved a long European popularity, and more than any other work has conferred on him an immortal reputation. But the moody, misanthropical author cared little for the applause of mankind, whose judgments he regarded with the most withering scorn and contempt. No better proof could be afforded of the general bent of his disposition than the work just alluded to, which is one of the descriptions of the country of Houyhnhnms. Neither did he remain constant in his attachment to her. During his visit to London about 1715, he made the acquaintance of a young lady of good position, Miss Esther Vanhomrigh, who, like Stella, has been handed down to posterity by a poetical appellation—Vanessa. Unlike her rival, however, she appears to have been of a forward, enterprising disposition, and actually made known to Swift the state of her affections; a declaration which he has been offered for the discovery of the author of the Draper's fourth letter, and a bill against the printer being about to be presented to the grand jury, the following quotation from Scripture was largely circulated in Dublin: 'And the people said unto Saul, shall Jonathan die, which hath brought this great salvation in Israel? God forbid: as the Lord liveth, there shall not one hair of his head fall to the ground; for he hath won us with God this day. So the people rescued Jonathan, that he died not.' The grand jury's verdict was ignoramus, and the patent was ultimately withdrawn from Wood, who received in compensation a yearly grant of £3000 for twelve years.

In 1736, Swift once more visited England, and in the same year appeared the celebrated Gulliver's Travels, which, published anonymously like most of Swift's writings, achieved a long European popularity, and more than any other work has conferred on him an immoral reputation. But the moody, misanthropical author cared little for the applause of mankind, whose judgments he regarded with the most withering scorn and contempt. No better proof could be afforded of the general bent of his disposition than the work just alluded to, which is one of the descriptions of the country of Houyhnhnms. For ironical and sarcastic humour, nothing can be more poignant than his Directions to Servants, which, with the utmost gravity, inculcates on domestics the performance of every act which they should not do, and the omission of every duty which they should. It was about the last literary work in which Swift engaged, and was not published till after his death.
his first love, Swift regarded for a time with all the ardour of boyish affection, but in a few years his passion cooled, and an estrangement took place. Alluding to these passages in his history, it is beautifully remarked by Mr Thackeray in The English Humorists, that the book of Swift's life may be said to open at places kept by these blighted flowers!

One of the best traits in Swift's character, was his large-hearted and unostentatious benevolence. About a third of his income was devoted to charitable objects, and by his will the bulk of his fortune was devised for the foundation of an hospital for idiots, a bequest very suggestive of the melancholy fate of the testator. The anecdotes related of him as a humorist have been so often repeated as to have become, for the most part, utterly threadbare. It may be remarked on this subject, that however fond Swift might be of a joke where the weight of sarcasm rested on the shoulders of another, he had little relish for it when any of the shafts of ridicule rebounded against himself. On such occasions, he would fairly lose temper, and betray a contemptible littleness of mind. Thus he was so incensed at a Catholic priest whom he met in a friend's house, and who smartly replied to his sarcastic interrogation, Why the Catholic Church used pictures and images when the Church of England did not? with the retort: 'Because we are old housekeepers, and you are new beginners,' that he quitted the room, and refused to remain to dinner. Another time, he complained to the mistress of an inn of the sauciness of her cookmaid, who, when the dean asked her how many maggots she had got out of a piece of mutton she was scraping, answered: 'Not so many as are in your head!'

OCTOBER 20.

St Bracabias, abbot, and his companions, martyrs, in Persia, 842. St Amenia, martyr, 392. St Zeno, bishop of Florence, confess, 8th century. St Sindulphe or Sendoe, of Bohemia, 7th century. St Aidan, bishop of Mayo, 798.

BORN—Sir Christopher Wren, architect of St Paul's, 1632, East Knotley, Wilts; Stanislaus Lesinski, king of Poland, 1677; Henry John Temple, Viscount Palmerston, statesman, 1784, Broadlands, Hants.

Lord-Chancellor Andley. It was not, however, by this alliance, but by the third party that William was in later years to show that the Howard family acquired the magnificent inheritances they enjoy in Cumberland, Northumberland, and Yorkshire. Lord William was born on the 19th December 1663; and in 1686 the duke married, as his third wife, the widow of Thomas, Lord Dacre of Gililand and Greytoke, whose three daughters and co-heiresses came in ward to the duke, and were prudently destined by him for his three sons. One of the daughters was Elizabeth, who was born in the same year as Lord William Howard, was brought up with him, and became his bride when only fourteen years of age. The duke, however, did not live to see this object of his ambition realised, for Lord William was only in his ninth year when 'good' Queen Bees beheaded his father for his chivalrous devotion to Mary Queen of Scots, and Lord William and his brother were afterwards confined in the Tower for their adherence to the Catholic faith. Naworth Castle and the barony of Gililand were part of the inheritance of Lord William Howard's youthful bride, but after the attainer of the duke, the crown withheld her estates for many years, and it was not until long after her marriage that they were restored to her, and only then upon her paying Queen Elizabeth a fine of £10,000.

The vindictive persecution thus suffered by Lord William, sadly overclouded his early manhood, and the long and costly litigation for recovery of his young wife's inheritance, impoverished his estate for many years; but adversity served to develop those high qualities of energy, prudence, courage, and perseverance which distinguished him throughout his eventful life. It was not until the accession of James L., when Lord William was in his fortieth year, that the fortunes of the Howard family were restored. He was soon afterwards appointed by the king his lieutenant, and warden of the marches; and it was probably the acquisition of this onerous and martial office, that determined him to repair Naworth Castle and make it his chief abode for the future.

This old stronghold and the adjacent territory had belonged from the days of the Norman kings to the lords of Gililand—a martial race of barons of the old historic family of Vallibus or de Vaux. By an heiress, the estates came, in the reign of Henry III., to the family of De Malton, and in the following century the marriage of the heiress of the De Maltons to Ralph de Dacre brought Naworth and Gililand to that nobleman and his posterity.

In those days, a building could not put on castellated dignity without the royal licence; and accordingly, in 1338, Ralph de Dacre obtained license to castellate Naworth. He built his fortress in quadrangular form, enclosing a large courtyard, and at each angle of the south front he built a massive tower; on the other sides the building was naturally fortified by the steep declivities on the edge of which its walls were built. And so in days—

When English lords and Scottish chiefs were foes,
Stern on the angry confines Naworth rose.
In dark woods inlay'd its towers looked forth,
And frowned defiance on the growing north.

For more than two centuries and a half, and until the marriage of Lord William Howard to the
co-heiresses of Thomas, Lord Dacre, as already mentioned, the property was held by the Dacre family. It does not, however, appear to have been the scene of any very memorable events in our national annals, and the castle had fallen into decay before the reign of Elizabeth. Lord William Howard's repairs seem to have occupied from 1605 to 1620; and the architecture of the chief part of the quadrangle, as it stood down to the time of the fire in 1644, remained as he left it. Much of the massive architecture of the time of Edward III.—that is to say, Lord Dacre's work—was not only preserved at the time of Lord William's repairs, but is standing at the present day; but, conservative as has been the work of restoration, undertaken by the present Earl of Carlisle after the fire, the aspect of the old stronghold was, in 1644, more medieval than it is now. The characteristic old hall and chapel, and some other antique features of the castle, were destroyed in the fire; but the tower at the south-east angle, known as 'Lord William's Tower,' escaped destruction, and the formidable warden's own chambers, which consisted of his library, his oratory, and his bed-chamber, all reached by a narrow winding-stair, defended by doors strengthened with iron, retained, down to the time of the fire, the very furniture and books he had used, insomuch that these chambers seemed to recall the hour—

'When haleward warders paced the keep,  
And bugler blew for Belted Will.'

And when, as Sir Walter Scott remarked, the lord warden in person might be heard ascending his turret stair, and the visitor was almost led to expect his arrival. And pleasantly does the poet bring the picturesque old chieftain before us:

'Costly his garb, his Flemish ruff  
Fall'd o'er his doublet shaped of buff,  
With satin slashed and lined;  
Tawny his boot and gold his spur,  
His cloak was all of Poland fur,  
His hose with silver twined;  
His Bilboa blade, by marchmen felt,  
Hung in a broad and studded belt.'

Apropos to his costume, it may be mentioned that the very suit of black in which he is represented in the portrait (attributed to Cornelius Jansen) at Castle Howard, is mentioned in his steward's account, and appears to have cost £17, 7s. 6d. The dress is a close jacket of black figured thick silk, with rounded skirts to mid-thigh, and many small buttons; black silk is the material of the hose, and black silk stockings come above the knee; he wears a plain falling shirt-collar, the sleeves turned up at the wrist. His dress-rapiere has a gilt basket-hilt, and hangs by a narrow (not broad) belt of black velvet, with gilt hooks. So much for his costume.

There was much to occupy his energies besides the repair of his castle, for he had not only to recover and then to set in order the great inheritances he had acquired, but to govern, as one of the Lords Marchers, the turbulent border country committed to his care. It was in a state of rapine and desolation when he began his rule; but the lawless were soon made to feel the rule and presence of a great man.

He maintained at Naworth a garrison of a hundred and forty men at arms, for protection of the country and apprehension of evil-doers, and made his name a word of terror on the border lands. Yet Camden, the great antiquary, found the formidable warden occupied amongst his books, and marked them as 'an attentive and learned searcher into venerable antiquity.' His literary tastes and public duties may be said, indeed, to have blended in him the character of scholar and soldier; and it is evident that he was as well practised with the pen as with the sword.

His border stronghold of Naworth stands near the line of the old Roman Wall, and he copied for Camden the inscriptions on Roman altars and tablets, which he had collected from the vicinity. In his days, manuscripts—the spoils of the monasteries—were often to be found scattered in private hands; and Lord William himself collected some manuscripts which are now treasured in the British Museum and the Herald's College, in the collections which bear the name of the great Lord of Arundel, his illustrious nephew. Nor was he a collector only, for the same hand which drew up a list of sixty-eight felons, whom he had captured and hung, edited the chronicle of Florence of Worcester, one of the old monastic historians. A large number of his books are still in his tower at Naworth (unfortunately they have remained stowed in chests ever
since the fire); many of them are rare and early printed books, many are great and ponderous tomes, and most of them bear his annotations in his firm and distinct handwriting.

When we view him in

' The tranquil hour

Of social pleasures ill-exchanged for power,'

we see Lord William surrounded by a family circle numbering, on some festive occasions, fifty persons, for sons with their wives, and daughters with their husbands then assembled round their noble parents.

He was accustomed to travel with a large retinue, sometimes numbering eighteen persons, and the expenses of his journeys to London varied from £15 to £20 in the money of the time. When in town, he resided sometimes at Arundel House (then standing on the south side of the Strand), and sometimes at St Martin's Lane.

At length this political and martial chieftain, having won for himself the honoured distinction of Civiliser of the English Borders, having consolidated a noble inheritance for his posterity, and seen his children grow to be the comfort of his old age, died at Naworth Castle on the 20th October 1640, in his seventy-seventh year.

The repairs and restorations of Naworth Castle, made by its present noble owner, have been already adverted to: this notice should not be concluded without stating that, in these works, the original character of the picturesque old stronghold has been so well studied, that an air of antiquity seems still to pervade it, and one might expect to find the warders spell-bound in its gallery or court-yards, ready to issue with their chieftain to repel some hostile foray.

PHILIP ASTLEY.

The founder of the celebrated amphitheatre, bearing his name, and which, till its metamorphosis by Mr Boucicaut into a temple of the regular drama, formed one of the most attractive places of amusement in London to children, great and small, deserves a notice here, both from his own individual merits and the interest attaching to him as the father of the modern circus. He was a native of Newcastle-under-Lyne, and in his early years assisted his father in the occupation of a cabinet-maker; but enlisted when a stripling of seventeen, in the 15th regiment of light-horse, commanded by General Elliot. From his boyhood, he had shewn a marked predilection and aptness for equestrian exercises, for which his new mode of life supplied him with a congenial sphere, and he soon became famous as a regimental rough-rider and instructor in horsemanship. During the last years of the Seven Years' War, he served abroad on the continent, and by his steadiness and intelligence, as well as courage, displayed on numerous occasions, attained the rank of sergeant-major, but, not long afterwards he obtained his discharge from the army. The object of his doing so, appears to have been the design of turning his equestrian abilities to account in the way of public exhibition; but at first his gains in this line were very scanty, and he was obliged to eke out a living by resuming occasionally his old trade as a cabinet-maker. With a horse, which had been presented to him as a parting-gift and token of esteem by General Elliot, and another which he purchased himself, he conducted his equestrian performances in a field near the Halfpenny Hatch, Lambeth, receiving such trifling gratuities as the liberality of the spectators and passers-by might bestow. From this humble exhibition, he advanced first to the dignity of an unroofed wooden circus, erected by him in the midst of a timber-yard. Here he achieved such success as to attract the patronage of royalty, and a few years later was enabled to erect, on the same site, a spacious wooden building, which he opened in 1780 under the title of the Amphitheatre Riding-House, diversifying his feats by the introduction of musical pieces, and dancing on a regular stage with scenery. Such an interference, however, with dramatic monopoly, was not to be tolerated, and as he had obtained no licence, Astley was prosecuted and imprisoned. Through the influence of Lord Thurlow, whose daughters he had instructed in riding, he was released from confinement, and at the same time granted a licence. A rapid and uninterrupted career of success now attended him, and, from time to time, he enlarged and embellished his amphitheatre, the name of which he changed first to The Royal Grove, and afterwards to the Amphitheatre of Arts; but the title of Astley's Amphitheatre, given it by the public, has proved a more enduring epithet than either. On the breaking out of the war with the French republic, the revival of the old spirit of military enthusiasm in the breast of Astley, induced him to proceed to the Low Countries as a volunteer in the campaign there, under the Duke of York. From him he received the present of two horses, as a mark of esteem for his gallantry at the siege of Valenciennes; but the benevolence and generosity which were as conspicuous characteristics of Astley as courage, induced him to sell the steeds and employ their price in providing winter-comforts for the soldiers of his troop. The news of the burning of his amphitheatre made him hastily quit the seat of war and return to London, but the edifice was soon rebuilt and reopened. A similar disaster befell it a few years afterwards, with the same display of his own reconstructive energy on the part of the proprietor.

The death of Astley took place at Paris, in October 1814, from gout in the stomach. With the no less celebrated Franchini, he was associated in the establishment of the Cirque Olympique, in the French capital. In physical organisation, Astley presented a fine type of English vigour, being upwards of six feet high, with extraordinary muscular power, and possessing all that love for, and dexterity in managing, the horse, so eminently characteristic of his countrymen. But the warmth and generosity of his heart, so unequivocally evinced during the Low-Country campaign, as well as the unflinching bravery shewn by him on many occasions, inspire us with a much higher respect than any amount of personal ability or worldly success. And as an author, his manual of horsemanship, and his descriptive account of the theatre of war in the Netherlands, in which he himself had taken a part, if not displaying high merit in a literary point of view, are at least conspicuous for industry and good sense, and the thorough knowledge which the author possesses of his subject.
GRACE DARLING.

One of the most pleasing incidents in humble life, within the present century, was the heroic achievement of Grace Darling. Her very pretty name, too, had something to do with the popularity which she acquired; for, without attaching over-importance to the matter, there can be little doubt that lovable actions become more fixed in the public mind when connected with such gentle and pleasant names as Grace Darling and Florence Nightingale.

Grace Darling, born in November 1815, was the daughter of William Darling, keeper of the light-house on the Longstone, one of the Farne Islands, off the coast of Northumberland. They are scarcely islands, indeed, being little more than barren and desolate rocks, in most parts very precipitous, and inhabited by little besides sea-fowl. The seas rush between the islands with great violence; and the spot is so dangerous to ships passing near, that a light-house has long been maintained there. Almost shut out from the world in such a spot, Grace Darling saw very little society; yet her parents managed to give her a fair education for a girl in her station. She was described as being "remarkable for a retiring and somewhat reserved disposition, gentle in aspect, and mild and benevolent in character; of a fair complexion and comely countenance, with nothing masculine in her appearance."

It was on the 6th of September 1838, when Grace was about twenty-two years of age, that the event took place which has given her celebrity. The Forfarshire, a steamer of about 300 tons, John Humble, master, was on her way from Hull to Dundee. She had a valuable cargo, and sixty-three persons on board—the master and his wife, a crew of twenty men, and forty-one passengers. A slight leak, patched up before her departure, broke out after she ran off Flamborough Head, and rendered it difficult to maintain the fires for the engine. She passed between the Farne Islands and the mainland about six in the evening of the 8th, and then began to encounter a high sea and a strong north wind. The leak increasing, the engine-fires gradually went out; and although the sails were then used, they could not prevent the vessel from being driven southward. Wind, rain, fog, and a heavy sea, all beset the hapless vessel at once. About four o'clock on the morning of the 9th, she struck bows foremost on a precipitous part of one of the rocky islands. Some of the crew and passengers left the ship in one of the boats; two other passengers perished in the attempt to throw themselves into the boat. The females on board clustered round the master, shrieking, and imploring aid which he could not afford them. A heavy wave, striking the vessel on the quarter, raised her from the rock, and then caused her to fall violently on it again; she encountered a sharp ledge, which cut her in twain about midships; the forepart remained on the rock, while the hinder part was carried off by a rapid current through a channel called the Pifagut. In this fearful plight the remainder of the passengers and crew awaited the arrival of daylight, no one knowing how soon the waves might destroy them altogether.

At daybreak, William Darling descried them from Longstone, about a mile distant; and it soon became known at Bamborough that a ship had been wrecked. So fearfully did the waves beat against the rock, that the boatman at Bamborough refused to push off; and Darling, accustomed to scenes of danger as he was, shrank from the peril of putting off to the wreck in a boat. Not so his gentle but heroic daughter. She could see, by the aid of a glass, the sufferers clinging to the wreck; and, agonized at the sight, she entreated him to let her go with him in a boat to endeavour to rescue them. At last he yielded; the mother helped to launch the boat into the water, and the father and daughter each took an oar. And so they rowed this fearful mile, at each instant in danger of being swamped by the waves. They reached the wreck and found nine survivors. One of them, a weaver's wife, was found in the fore-cabin, exposed to the intrusion of the sea, and she had been left stiffened corpse in her arms. The whole party went with Darling and his daughter into the boat, and safely reached the light-house, where, owing to the severity of the weather, they were forced to remain two days, kindly attended to by the three inmates.
When the news of this exploit reached the coast, all Northumberland was filled with admiration; and speedily the whole kingdom was similarly affected. Grace Darling’s name became everywhere known, and she herself received attentions from all quarters. Tourists came from all parts to see the Longstone light-house, and, still more, to see Grace herself. The Duke and Duchess of Northumberland invited her and her father to Alnwick Castle, and gave her a gold watch; the silver medal of the Shipwreck Institution was awarded to her; and testimonials came from various public bodies. A purse of £700 was presented to her by public subscription. Portraits of her were eagerly sought for and purchased; and a speculating manager of a London theatre even offered a large sum to her, if she would merely sit in a boat on the stage for a few minutes, during the performance of a piece written for the occasion. But her modest and retiring disposition revolted from this last-named notoriety; she rejected the offer; and throughout the whole of her novel and tempting career, she never once departed from her gentle, womanly demeanour. Lovers, of course, she had in plenty, but she accepted none of them; she continued to reside with her father and mother at the light-house. And there she died of consumption, on the 20th of October 1842, at the early age of twenty-seven, about four years after the event which had given her fame. Long before her death, she had the means of seeing how literature was invoked in her honour; for memoirs, tales, and poems relating to her were issued from the press—such as *Grace Darling, the Heroine of the Farne Islands*; *Grace Darling, the Maid of the Isle*; and so forth. One biographer managed to fill 480 octavo pages with an account of her life and of the shipwreck!

**OCTOBER 21.**

St Hilariam, abbot, about 371. St Ursula and her companions, virgin and martyrs, 5th century. St Finian, surnamed Munn, or Munias, abbot, in Ireland, 634.

**Born.**—Marshall Auregan, Duke of Castiglione, Bonapartist general, 1757, Paris; George Colman, the Younger, dramatist and humorous writer, 1728; Samuel Taylor Coleridge, poet, 1772, Ottery St Mary, Devonshire; George Combe, phrenologist, 1789, Edinburgh.

**SAMUEL FOOTE.**

This celebrated humorist, whose comic genius procured for him the appellation of the English Aristophanes, and who, by his witty conversation, enjoyed the same pre-eminence in the society of the last, that Sydney Smith did in that of the present century, has nevertheless come now to be nearly forgotten, mainly in consequence of the ephemeral character of much of his writings, which derived a considerable portion of their zest from their singing personalities, and allusions to events of passing interest.

He was a native of Truro, in Cornwall, where his father held a good position as one of the county magistrates. Having received his primary education at the grammar school of Worcester, he was sent from thence to Oxford, and afterwards entered himself at the Temple, in London, as a law-student, but made little or no progress towards qualifying himself for that profession. The whole bent of his mind was in the direction of fun and frolic, and for several years he led the gay and dissipated life of a man about town, till his pecuniary means were wholly exhausted, and it became necessary to look about seriously for some settled mode of support. From a boy, his talent for mimicry had been conspicuous, its first display, it is said, being a recitation at his father’s table, during the Christmas holidays, of a supposed decision by the magistrates’ bench in an afflication case, in which the justices, including his own parent, were hit off in the most truthful and ludicrous manner. At college, while under the care of the provost, Dr Gower, his reckless conduct drew down upon him severe lectures from the former, who does not, however, appear to have administered them with much judgment, interlarding his obstructions with many sesquipedalian words and phrases. On such occasions, Foote would appear before his preceptor with a huge folio dictionary under his arm, and on any peculiarly hard word being used, would beg pardon with much formality for interrupting him; turn up his book, as if to find out the meaning of the learned term which had just been uttered; and then closing it, would say with the utmost politeness: ‘Very well, sir, now please to go on.’

Another of his tricks was setting the bell of the college church ringing at night, by tying a wisp of hay to the bell-ropes, which hung down low enough to be within reach of some cows that were turned out to graze in a neighbouring lane. The misjudgment of Dr Gower and the sexton, who caught hold of the peccant animal, whilst in search of the author of the mischief, and imagining that he had made a prisoner of him, provided a rich store of amusement for many days to the denizens of Oxford.

But a life of wit and pleasure cannot last for ever, and Foote, having dissipated his fortune, as already mentioned, in London, resolved to turn his talents to account, and with that view tried his fortune on the stage. His first attempt, like Lisson, was in tragedy, and he made his appearance in the character of Othello. This, however, was unsuccessful, and a few more impersonations having convinced him of his unfitness for tragedy, he exchanged the buckskin for the sock, and gained considerable celebrity by his performance of Lord Foppington in the *Rapises*, Dick in the *Confederacy*, and Bayes in the *Rehearsal*. It then occurred to him to start a performance on his own account, and he accordingly engaged the theatre in the Haymarket, or, as it was then generally termed, the *Little Theatre*. The following advertisement, in consequence, appeared in the *General Advertiser* of 29th April 1747:

‘At the Theatre, in the Haymarket, this day, will be performed, a Concert of Music, with which
will be given gratis, a new entertainment, called the Diversions of the Morning, to which will be added a farce, taken from the Old Bachelor, called the Credulous Husband. Fondlewife by Mr Foote, with an Epilogue, to be spoken by the B—d—d Coffee-house. To begin at 7 \\
This entertainment went off with great success, but was stopped in consequence of the opposition of Lacy, the patentee of Drury-Lane Theatre, who procured an interdict against its repetition on the following day, on the ground of Foote having obtained no licence for the Haymarket theatre. The latter, however, daunted, issued the following advertisement on 24th April:

"On Saturday noon, exact, at 19 o'clock, at the New Theatre, in the Haymarket, Mr Foote begs the favour of his friends to come and drink a dish of chocolate with him; and 'tis hoped there will be a great deal of comedy and some joyous spirits; he will endeavour to make the Morning as diverting as possible. Tickets for the entertainment to be had at George's Coffee-House, Temple Bar, within which no person will be admitted.—N.B. Sir Dilwyn D'Aubigny was yesterday, and Lady Betty Frisk has absolutely promised.'

This announcement attracted a considerable audience, many of whom, however, were rather bemuddled in regard to the promise of chocolate, and seem to have expected that they would be served with that refreshment. Whilst waiting in this dubiety, Mr Foote came forward and stated that he had some young performers whom he had been drilling for some time back, and that perhaps the company would have no objections to see them go through their lessons till the chocolate could be got ready. The performance then commenced in earnest, was received with immense applause, and regularly continued with the greatest success, the manager's opponents finding it useless to attempt any further objection. He then altered the time of exhibition to the evening, with the following notice:

"At the request of several persons who are desirous of spending an hour with Mr Foote, but find the time inconvenient, instead of chocolate in the morning, Mr Foote's friends are desired to drink a dish of tea with him at half an hour past 6 in the evening."

The tea proved as popular an entertainment as the chocolate, and money flowed liberally into the coffers of the host. But the death, in 1748, of a relative, who bequeathed him a large sum of money, induced Foote to resume the gay life of a gentleman at large, which he indulged for several years, residing principally, during that period, on the continent. In 1752, he again made his appearance in London, and from time to time was engaged at the principal of the London theatres, besides contributing to them various dramatic pieces. He resumed the management of the little theatre in the Haymarket in 1760, and retained it, first as lessee and afterwards as proprietor, till a few months previous to his death. A royal patent was granted to him in 1786, through the interest of the Duke of York, for the representation of dramatic pieces during the summer months, from 14th May to 14th September. For this boon he was indirectly indebted to an unlucky horse-accident which had befallen him in the duke's company, and cost him the loss of one of his limbs, necessitating him to use a cork-leg for the remainder of his life. In the eyes of some persons this might appear a judgment for the manner in which he had introduced and ridiculed on the Haymarket stage, under the character of Peter Paragon, Mr George Faulkner, printer of the 'Dubbs Journal,' a worthy man, whose chief peculiarity was to have lost a leg. But Foote was perfectly reckless how the laugh was raised, and made no exception in favour of either friends or foes.

Subsequent to this misfortune, the pecuniary circumstances of Foote were greatly improved, and for many years he continued to delight the public with his drolleries, and gather thereby a golden harvest. An unfortunate fracas, however, in which he got involved with the notorious Duchess of Kingston, whom he had introduced into a farce, 'A Trip to Calais,' under the title of Lady Kitty Crocodile, caused him so much annoyance and disquietude, as ultimately to shorten his days. His procedure in this matter is not much to his credit. Though a good deal of obscurity exists in regard to it, it was positively sworn to by the Duchess's chaplain in a recent case, and Lady Betty Frisk has absolutely promised.

'She had interest enough with the lord-chamberlain to get its representation prohibited, though it was afterwards brought out in an altered form as the Cappuccin.' The vindictive feeling, however, of the duchess, led her, through her emissaries, to get a charge of the most odious nature preferred against Foote, which does not appear to have had the slightest foundation in truth. He was honourably acquitted, but the shame and distress which he felt at the imputation of such a crime, completely prostrated him. He sank into a most depressed state of health, both of body and mind; and feeling himself unable longer to attend to his professional duties, he disposed of his theatre to Colman, in the spring of 1777. In the autumn of the same year he resolved to try the restorative effects of a visit to France, and on 20th October arrived at the Ship Inn, Dover, on his way to Calais. Here he is said to have given vent to his last flash of merriment. Going into the kitchen to order a particular dish for dinner, he encountered the cook, who, hearing that he was going to France, boasted that for her part she had never been out of her own country. 'Why, Cooky,' said Foote, 'that is very strange, for they tell me upstairs that you have been several times all over Greece.' 'They may say what they like,' she replied, 'but I never was ten miles from Dover in my life.' 'Nay,' rejoined Foote, 'that must be a fib, for I myself have seen you at Spithead.' The other servants now perceived the joke, and a universal roar pervaded the house. Foote presented to the cook a crown to drink his health and a prosperous voyage. On this, he was destined never to embark, being seized the next morning with a succession of shivering fits, of which he expired in the course of a few hours, at the age of fifty-seven. His body was removed to his house in Suffolk Street, London, and interred in Westminster Abbey.

Respecting Foote's personal character, there is not much to be said. He was one of those beings who seem to be born to be drolls, and whose irresistibly comic powers render it almost impossible to contemplate them in a moral or serious
light. The following is Dr Johnson's declaration regarding him, as related to Boswell: 'The first time I was in company with Foote was at Fitcherbert's. Having no good opinion of the fellow, I was resolved not to be pleased; and it is very difficult to please a man against his will. I went on eating my dinner pretty sullenly, affecting not to mind him; but the dog was so very comical, that I was obliged to lay down my knife and fork, through my mouth stuck into the sweetmeats, and laugh to see how it was put out. Sir, he was irresistible.' On another occasion he thus contrasts him with Garrick: 'Garrick, sir, has some delicacy of feeling; it is possible to put him out; you may get the better of him; but Foote is the most incompressible fellow that I ever knew: when you have driven him into a corner, and think you are sure of him, he runs through between your legs or jumps over your head, and makes his escape.' It must be recorded to Foote's credit that he was very generous to his poor friends, authors, actors, and others, by whom he was always surrounded, and was really a man of considerable attainments, being both a good classical scholar and well informed on all subjects of general learning.

The literary merit of his dramatic pieces is far from great indeed, and they seem throughout with passages of the raciest humour. Partly owing, however, to their personalities and allusions to events of the day, the interest in which has passed away, and also, it may be, to a certain freedom and levity of language incompatible with modern tastes, his works are now scarcely ever read or represented on the stage. They are all in the comic or satirical vein; and among them may be mentioned the names of The Author, The Lear, The Minor, The Orator, The Nabob, The Devil on Two Sticks, and The Mayor of Gavrats, in the last of which, the character of Jerry Sneak has become proverbial as an embodiment of a henpecked husband.

We shall be readily excused for introducing here a few of the sayings recorded of Foote.

While present one evening in the Audience Rooms, as the lecturer was at the 'Castle, a certain Mr. Charles Macklin, the lecturer hearing a bust of laughter in a corner of the room, looked angrily in that direction, and perceiving Foote, said pompously: 'You seem very merry, pray, do you know what I am going to say?' 'No,' replied Foote, 'do you?' On another occasion, while dining at Paris with Lord Stormont, the host descended volubly on the age of his wine, which was served out in rather diminutive decanters and glasses. 'It is very little of its age,' said Foote, holding up his glass. 'Why do you hum that air?' he said one day to a friend. 'For it ever haunted me,' was the reply. 'No wonder,' he rejoined, 'you are for ever murdering it.' A mercantile friend, who imagined he had a genius for poetry, insisted one day on reading to him a specimen of his verses, commencing with, 'Hear me, O Phoebus and most exalted Muses,' then perceiving his auditor intemperate, exclaimed, 'Pray, pray, listen.' 'I do,' replied Foote, 'nine and one are ten, go on.' Having made a trip to Ireland, he was asked, on his return, what impression was made on him by the Irish peasantry, and replied that they gave him great satisfaction, as they settled a question which had long agitated his own mind, and that was what became of the best-clothes of the English beggars. When bringing out his comedy of The Minor, considerable objections were started to its being licensed, and among other parties by the archbishop of Canterbury, Thomas Secker. Foote offered to submit the play to his revisal, with permission to strike out whatever he deemed objectionable; but this proposal the prelate wisely declined, as he observed that he should not like the author to announce the performance of the piece as altered and amended by his Grace the archbishop of Canterbury. At last, however, he was asked at a coffee-house if he had attended that day the funeral of a friend, for whom he cherished a great regard, and who happened to be the son of a baker. 'O yes,' he replied, 'poor fellow, I have just seen him shovelled into the family oven.'

The celebrated gambler, Baron Newman, having been detected at Bath in cheating at cards, was pitched out at the window. Meeting Foote shortly afterwards, he complained bitterly of the usage to which he had been subject, and asked what he should do to repair his honour. 'Do!' replied Foote, 'never play so high again in your life.'

Having once paid a professional visit to Scotland, where he was well received, he was one day dining at a gentleman's house, when an old lady present was called on for a toast, and prefixed the Third. 'Of Spain, madam,' said Foote. 'No, sir,' she replied somewhat tartly, 'of England.' 'Never mind her,' said one of the company, 'she is one of our old folks who have not got rid of their political prejudices.' 'Oh, dear sir, make no apology,' cried Foote, 'I was prepared for all this; as, from your living so far north, I suppose none of you have yet heard of the Revolution.'

A country gentleman, whom Foote was visiting, was complaining to him of the great expenses to which he had been put by the funeral of a relation, an attorney. 'Why,' said Foote gravely, 'do you bury your attorneys here?' 'Yes, to be sure,' replied the other, 'what should we do?' 'Oh, we never do that in London.' 'How do you manage then?' 'Why, when the patient happens to die, we lay him in a room overnight by himself, lock the door, throw open the sash, and in the morning he is entirely off.' 'Indeed,' said his friend, 'what becomes of him?' 'Why, that we cannot exactly tell, not being acquainted with supernatural causes. All that we know of the matter is, that there's a strong smell of brimstone in the room next morning.'

Foote's mother bore a strong resemblance to her son, both in person and disposition. From her he inherited his mirthful, as well as his extravagant propensities. Though she was heiress to a large fortune, her carelessness in pecuniary matters involved her in such embarrassments, that she at last became dependent on the bounty of Samuel, who allowed her a hundred a year. On one occasion she wrote him as follows:

'Dear Sam,

I am in prison for debt; come and assist your loving mother,

E. Foote.'

To this brief note he replied.

'Dear Mother,

So am I; which prevents his duty being paid to his loving mother by her affectionate son,

Sam. Foote.'

P.S.—I have sent my attorney to assist you; in the meantime let us hope for better days.'
One little circumstance remains to be stated in connection with Foor's domestic relations. He is generally said to have been married in early life to a Worcester lady, but the union turned out ill-assorted, and his wife was never brought forward among his London friends. They had no children, and so little can now be learned of her history, that it has come to be doubted whether he ever entered the married state at all. He used to say, laughingly, in excuse for bachelorhood, that a lady's age was no hand for picquet, twenty-five, twenty-six, twenty-seven, twenty-eight, twenty-nine, thirty, and that he had no idea of finding himself so unequally matched.

One of the most observable characteristics of English society at the present day, and perhaps of society in general, is the desire of obtaining some memorials of those who have enjoyed greatness, or have obtained notoriety whether good or bad. From the autograph of Shakespeare or Napoleon, down to the rope with which a notorious criminal was hanged, all such relics have their admirers, according to the varieties of taste in those who collect them. Lord Nelson's relics have been especially sought, and have been made the subject, not only of pamphlets and lettered correspondence, but of actions at law. We may regard as a mental relic that famous saying of Nelson: 'England expects every man to do his duty!' Sir Harris Nicolas, in his Correspondence and Letters of Nelson, deemed it worth while to ascertain as precisely as he could the circumstances under which those words were uttered. There are three accounts of the matter—one by Mr James, in his Naval History; one by Captain Blackwood, who commanded the Sentry at the battle of Trafalgar; and one by Captain Pasco, who had been Nelson's flag-lieutenant in the Victory. Sir Harris Nicolas accepts Pasco's version, because that officer had himself to signal the words by means of flags. His account runs thus: 'His lordship came to me on the poop, and after ordering certain signals to be made, about a quarter to noon, said to have been moved by the news of the battle, he added, "England expects that every man will do his duty;" and he added, "you must be quick, for I have one more to make, which is for close action." I replied: "If your lordship will permit me to substitute expecta, for confides, the signal will soon be completed, because the word expecta is in the vocabulary, whereas the word confides must be spelled!" His lordship replied in haste, and with seeming satisfaction: "That will do, Pasco; make it directly!" When it had been answered by a few ships in the van, he ordered me to make the signal for close action.' Captain Blackwood says that the correction suggested by the signal-officer was from Nelson expects to England expects; but Captain Pasco is accepted as being more probable.

Something which belonged to Nelson at the critical moments of the battles of the Nile and Trafalgar is highly prized. The coat which he wore on the first of these two occasions has been preserved ever since at Greenwich Hospital. The coat which he wore at the battle of Trafalgar has been the theme of some exciting controversies. It was said by many writers, early in this century, that he put on a full-dress uniform-coat, the stars and orders of which were so brilliant as to attract the notice of the enemy's musketeer; and that to this he probably owed his death-wound. A writer in Notes and Queries, in 1851, described a copy of Harrison's Life of Nelson, which had belonged to Dr Scott, who was the chaplain and friend in whose arms Nelson died on board the Victory. Scott had written numerous manuscript notes on the margin of the copy; one of these, relating to the story of the dress-coat, was to the following effect: 'This is wrong. Nelson wore the coat, and Scott did the day before; nor was there the smallest alteration in his dress whatsoever from other days.' He did wear his brilliant stars, however (four arranged diamond-wise, thus •••, on his breast); but they were embroidered on his undress-coat, and not fixed on temporarily with clasp, as at the present day. This veritable coat fell into the hands of Lady Hamilton, who pledged it with a London alderman for a sum of money. In 1845, after a quarrel between Sir Harris Nicolas and a curiosity-dealer concerning the mode in which the coat was obtained from the widow of the alderman, the late Prince Consort bought the Trafalgar coat and waistcoat for £150, and presented them to Greenwich Hospital, where they are now reverently preserved.

A bit of bullion fringe from Nelson's epaulet is treasured up at a present value of £200 by Mr. W. W. Whiting, who was midshipman on board the Victory at the battle of Trafalgar, wrote to the United Service Magazine, thirty-seven years afterwards (in 1842), under his higher designation of Sir George Westphal, and gave the following account of one incident on that memorable 21st of October: 'When I was carried down wounded, I was placed by the side of his lordship; and his coat was rolled up and put as the substitute for a pillow under my head, which was then bleeding very much from the wound I had received. When the battle was over, and an attempt was made to remove the cost, several of the bullions of the epaulet were found to be so firmly glued into my hair, by the coagulated blood from my wound, that the bullions, four or five of them, were cut off or plucked, and the rest, which I have still in my possession.' The coat to which this epaulet belonged was apparently the cost now displayed to visitors at Greenwich Hospital.

The musket-ball that killed the hero is in like manner treasured up as a memento. The late Sir William Beattie was, as Mr Beattie, surgeon on board the Victory, in his Authentic Narrative of the Death of Lord Nelson, he said: 'The ball struck the forepart of his lordship's epaulet, and entered the left shoulder. . . . On removing the ball, a portion of the gold lace, and part of the epaulet, together with a small piece of his lordship's coat, were found firmly attached to it.' Indeed this adhesion was almost as close as if the fragments had been inserted into the metal of the bullet while in a molten state. Captain Pasco, in his account of the battle, caused the bullet to be mounted in crystal and silver as a locket, and presented it to Mr Beattie. In 1840, this bullet-locket was in the possession of the Rev. F. W. Baker, of Bathwick. In 1851, it was stated to be in the possession of the Prince Consort.

It is known that when Nelson died, a miniature of Lady Hamilton was found suspended at his head.
breast, with a lock of her hair at the back, and her initials formed in small pearls. This miniature was sold, many years afterwards, among the effects of Sir Alexander Davidson, who had been private secretary to Nelson at the time of his death. There was also a kind of miniature casket made of the guineas which Nelson had in his pocket when he fell. The whereabouts of these two relics was earnestly inquired for after his death; and one of them was hung in a glass case by Mr. Lamb for a school-fellow. The man was manifest in the boy; dreamy, solitary, disinclined to the usual amusements of children he was an omnivorous devourer of books. He read straight through a circulating library, folio and all. At a very premature age, he writes, even before my fifteenth year, I had bewildered myself in metaphysics and theological controversy. Nothing else pleased me. History and particular facts lost all interest in my mind. Poetry itself, yea novels and romances, became insipid to me. The perusal of Bowles's Sonnets, however, so charmed him, that his lost tastes were thereby restored. Destitute of ambition, he desired to be apprenticed to a shoemaker; but by the advice and efforts of some friends, who appreciated his talents, he went to Cambridge. In a fit of depression, some say, by slighted love, and others by pecuniary difficulties, he left the university, and after wandering about the streets of London until his last penny was gone, he enlisted as a dragoon under the name of Silas Thompson Comberbatch. An officer discovering his classical attainments, elicited his secret, and his friends being communicated with, they purchased his discharge. Shortly after, in the summer of 1794, he met Southey at Oxford, at that time a fervid republican and Unitarian, and an ardent friendship ensued. Together, they planned a communist colony, to be called a Pantisocracy, and to be settled on the banks of the Susquehanna. Happily, neither of them had any money, and in the delay requisite for earning some, their vision of social bliss was dissipated, and they were rescued from a box by Bowles. On one day in October 1796, Coleridge and Southey married in Bristol sisters of the name of Fricker, penniless as themselves. Cottle, a Bristol bookseller, had promised Coleridge a guinea and a half for every hundred lines of poetry he should write, and on the strength of this promise he entered on matrimony. He retired with his bride to a small cottage at Clevedon, rented at 20 a year, and was soon lost in a variety of schemes. He projected the Watchman, a weekly newspaper, and travelled through the manufacturing districts canvassing for subscribers, and preaching wherever he stayed on Sundays in Unitarian chapels. The Watchman was commenced, but it only reached a tenth number. Rising early one morning, he found the servant lighting the fire with an extraordinary quantity of paper. Remonstrating with her on her wastefulness, 'I'm a sailor,' replied Nanny, 'why, it's only Watchmen!' From Clevedon he removed to Nether Stowey, at the foot of the Quantock Hills, where he had Wordsworth for a companion, and in that rural retreat he composed most of those pieces which have won for his name an assured place in the register of poets. In 1798, Josiah and Thomas Wordsworth, the poets' cousins, joined with funds to go to Germany to prosecute his studies. After a sojourn there of fourteen
months, he returned to England with a renewed passion for metaphysics and theology, and went to live with Southey, who had settled at Keswick. His political and religious opinions about this time underwent a great change; from a Revolutionist he passed into a Conservative, and from a Unitarian into an English Churchman: his politics and theology, however, were both held in a peculiar and philosophic sense, which were very far from being satisfactory to the orthodox. He now sought his livelihood by writing for the newspapers, and by lecturing. He contributed articles to the Morning Post and Courier. He went to Malta, and served for some months as secretary to the governor of the island. He delivered a course of lectures on poetry and the fine arts at the Royal Institution. He started the Friend, a periodical which ran to twenty-seven numbers, and then ceased. The management of a periodical, demanding method and punctuality, was the last thing for a man like Coleridge to succeed with, and to his constitutional indolence he had added the vice of opium-eating. The misery and degradation into which this practice led him were unspeakable. His earnings were spent in the purchase of the pernicious drug. His wife and family dwelt with Southey, and subsisted on his bounty. All dependence on his word was lost, and he became little better than a vagabond upon earth. Of his horrible condition he had the keenest sense, but he had no strength to break his bonds. To Cottle, the Bristol bookseller, he wrote in 1814: 'Conceive a poor miserable wretch, who for many years has been attempting to beat off pain by a constant return to the vice that reproduces it. Conceive a spirit in hell, employed in tracing out for others a road to that heaven from which his crimes exclude him! In short, conceive whatever is most wretched, helpless, hopeless, and you will form as tolerable a notion of my state, as it is possible for a good man to have!' Finally, in 1816, he was induced to place himself under the care of Mr. Gilman, a surgeon at Highgate; and nolologies is variously described by different auditors; by some, they are spoken of as inexpressibly tedious and unintelligible, and by others, as eloquent, profound, and instructive in the highest degree. Carlyle, in his graphic style, relates: 'I have heard Coleridge talk, with eager musical energy, two stricken hours, his face radiant and moist, and communicate no meaning whatsoever to any individual of his hearers. He began anywhere, and nothing could be more copious than his talk. He suffered no interruption, however reverent; hastily putting aside all foreign additions, annotations, or most ingenious desires for elucidation, as well-meaning superfluities which would clog his utterance. He had knowledge about many things and topics, much curious reading; but, generally, all topics led him, after a pass or two, into the high-seas of theoretic philosophy, the hazy infinitude of Kantean transcendentalism. Besides, it was talk not flowing anywhere like a river, but spreading everywher in inextricable currents and

SAMUEL TAYLOR COLERIDGE.
regurgitations like a lake or sea; terribly deficient in definite goal or aim, may, often in logical intelligibility; what you were to believe or do, on any earthly or heavenly thing, obstinately refusing to appear from it. So that, most times, you felt logically lost; swamped near to drowning in this tide of ingenious vocables, spreading out boundless as if to submerge the world.

De Quincey's irascibility showed itself in his gait: in walking, he rather shuffled than decisively stepped; and a lady once remarked, he never could fix which side of the garden-walk would suit him best, but continually shifted, in cork-screw fashion, and kept trying both. His indolence may, in great part, be accounted for by his lymphatic temperament—a temperament which, according to the degree of its predominance, indisposes its subject to active exertion. De Quincey, describing Coleridge in 1807, draws an accurate picture of a lymphatic man: 'In height, he might seem to be about five feet eight inches; he was in reality about an inch and a half taller, but his figure was of the order which drowns height. His person was broad and full, and tended even to corpulence; his complexion was fair, though not what painters technically style fair, because it was associated with black hair; his eyes were large and soft in their expression, with a peculiar appearance of haze or dreaminess.' Carlyle, speaking of him when about sixty, confirms the observation: 'Brow and head were round, and of massive weight, but the face was flabby and irresolute. The deep eyes, of a light hazel, were as full of sorrow as of inspiration; confused pain looked mildly from them, as in a kind of mild astonishment. The whole figure and air, good and amiable otherwise, might be called flabby and irresolute; expressive of weakness under possibility of strength. He hung loosely on his limbs, with knees bent, and stooping attitude.'

Though Coleridge's prose works are irregular and fragmentary, they have not been without considerable influence at home and in the United States; and the party in the Church of England, of which the late F. D. Maurice was the most notable representative, derives its being from his teaching. How far Coleridge's philosophy was original, is a matter of dispute among metaphysicians. It would seem to be beyond question, that to Schelling he was indebted so far as in some cases to be little more than his translator. Sir William Hamilton—a competent authority, certainly—writing of Coleridge's obligations to the Germans, styles him 'a literary reaver of the Huns."

---

**OCTOBER 22.**

St Mark, bishop of Jerusalem, confessor, 8th century.
St Philip, bishop of Hakida, and companions, martyrs, 304.
St Malo, or Melancon, bishop of Rouen, confessor, beginning of 4th century.
Saints Nuniel and Alodia, virgins and martyrs, in Spain, 9th century.
St Dennis, bishop of Fiesole, in Tuscany, confessor, 9th century.

Born—John Relahold Forster, traveller and naturalist, 1729; Direlow, West Prussia; Sir Philip Francis, reputed author of the Letters of Junius, 1740, Dublin; Dr Alexander Murray, distinguished orientalist, 1775, Dunkirk, chieftain, 485.

Died.—Charles Martel, vanquisher of the Saracens, 741, Franes; Athelstan, king of England, 940; Sir Clodesley Shovel, British admiral, 1707; William Wollaston, author of The Religion of Nature Demonstrated, 1724, Great Pinford, Suffolk; John David Michaelis, biblical artist, 1791; Gottfried, Sir Samuel Arnold, composer, 1862; Henry Richard, Lord Holland, Whig statesman and man of letters, 1840, Kensington; Sir William Meleworth, philosopher and statesman, 1855; Louis Spohr, celebrated composer, 1859, Cassel.

**SIR PHILIP FRANCIS.**

Though a man of distinguished ability, and playing a prominent part in connection with the history of British India, and the governor-generalship of Warren Hastings, towards the close of the last century, it is very probable that the name of Sir Philip Francis might have ceased to be remembered at the present day, were it not for the interest attaching to him as the supposed author of the Letters of Junius. The question of the individuality of this famous writer has been investigated with the most indefatigable and searching minuteness, and all the powers of literary and critical analysis brought to bear on its decision. To no less than thirty-five persons, including the great Earl of Chatham, the elegant and courtly Lord Chesterfield, the orator and statesman Edmund Burke, the historian Edward Gibbon, the witty politician John Horne Tooke, the demagogue John Wilkes, Horace Walpole, Henry Grattan, and Lord-Chancellor Loughborough, have these vigorous and stinging philippics been ascribed. Never was a literary secret more carefully and successfully kept, or more sedulous efforts employed to trace and ferret it out. But about forty years after the appearance of these Letters, the publication by the son of Mr Woodfall, the printer, of the private letters addressed by Junius to his father, afforded a clue to the identity of the writer, which was most ingeniously followed out by Mr Taylor, and the results given to the world in his Junius Identified. The result arrived at was the fixing of the authorship on Sir Philip Francis, then an old man upwards of seventy, whose participation in the matter had scarcely as yet been even suspected. With the position thus laid down by Mr Taylor, though speciously enough controverted by several parties, public opinion has been led generally to coincide, and it may now be almost regarded as established. To the grounds by which this belief is supported we shall shortly advert, but may, in the first place, give a brief sketch of the life of Francis.

He was a native of Dublin, and born there in 1740. His father, Dr Francis, is well known among classical scholars as the translator of Horace, and his grandfather was dean of Lismore. The family removed to England when Philip was a mere boy, and he received his education at St Paul's School, London, where he had as one of his companions Henry Woodfall, who was afterwards to become so famous as the printer and publisher of the Letters of Junius. Young Francis was early noted as a remarkably clever lad, and at the age of sixteen obtained a place in the office of the secretary of state, then held by his father's friend, Mr Fox, afterwards Lord Holland. He continued in this place under Fox's successor, Lord Chatham, but quitted
it in 1758, to act as secretary to General Bligh, and be present in that capacity at the camp in Cherbourg. Subsequently to this, he became secretary to the Earl of Kinnoull, and in 1763 received an important appointment in the War-Office, which he retained for nine years. The character which he had acquired for diplomatic abilities occasioned his being appointed, along with General Clavering and Colonel Monson, a member of the Supreme Council of Bengal, which was designed to cooperate with, but in reality check as a check on, the governor-general in the management of affairs. As might have been expected, it proved anything but a harmonious relationship; and Francis, after a six years' residence in India, and a duel with the governor-general, the celebrated Warren Hastings, which nearly proved fatal to the councillor, resigned his office, and returned to England. Not long afterwards he succeeded in getting himself returned to Parliament for Yarmouth in the Isle of Wight, and from that period till 1807, when he retired from public life, he acted as one of the most active members of the Opposition. Under the Grenville ministry, he was made a knight of the Bath, and it was even said, at one time, that he was going to be sent out to India again as governor-general. He died in St James's Square, London, in 1818.

We have now to consider the evidence as to the identity of Sir Philip with the author of the Letters of Junius. There is, first, a remarkable coincidence between the known handwriting of the former and the disguised characters made use of by the latter. Both are the productions of persons having a great command of the pen; but however successfully a person may disguise his writing, it is impossible for him to guard wholly against betraying himself through those minutiae of penmanship which every one has his own peculiar mode of executing. Thus we find that both Sir Philip Francis and Junius, instead of a round dot over the t, make use of an oblique stroke; they mark their quotations not by inverted commas, but by short perpendicular lines; and instead of marking the division of a word at the end of a line by a hyphen, do it by a colon. In the disguise of names, the formation of certain capitals, and the general style of the manuscript, there is a great similarity. It has also been found on comparing an envelope addressed by Sir Philip Francis in a feigned hand with the writing of Junius, that they were absolutely identical.

The time at which the Letters of Junius appeared coincides very closely with the theory of Francis being the writer. The publication of the first letter in the Public Advertiser took place on 21st January 1769, and of the last on 21st January 1772. Letters by the same author, under different names, and also private communications to Woodfall the printer, occur both prior and subsequent to these dates, but none before 1767 or after 1772. Now we know that from 1763 to 1773, Sir Philip Francis was in the War-Office, and in June 1773, sailed for India as a member of the Supreme Council. The intimate acquaintance of Junius with public matters, inferring often a knowledge of what was transacting behind the scenes of the administrative stage, is thus accounted for, in addition to the coincidence of date. In regard to the style and sentiments of Junius, a great similarity is traceable between them and those of Sir Philip Francis, the same vigour and terseness being conspicuous in each, with the same recklessness of assertion and pugnacity of sarcasm. Many other circumstances might be mentioned in support of the view we have indicated, but we shall only adduce, in addition, the facts that the authorship of Junius was never formally denied by Sir Philip Francis; that it was firmly believed by his widow, Lady Francis, to whom, on their marriage, he presented the book as a check on, the governor-general in the management of affairs. As might have been expected, it proved anything but a harmonious relationship; and Francis, after a six years' residence in India, and a duel with the governor-general, the celebrated Warren Hastings, which nearly proved fatal to the councillor, resigned his office, and returned to England. Not long afterwards he succeeded in getting himself returned to Parliament for Yarmouth in the Isle of Wight, and from that period till 1807, when he retired from public life, he acted as one of the most active members of the Opposition. Under the Grenville ministry, he was made a knight of the Bath, and it was even said, at one time, that he was going to be sent out to India again as governor-general. He died in St James's Square, London, in 1818.

We have now to consider the evidence as to the identity of Sir Philip with the author of the Letters of Junius. There is, first, a remarkable coincidence between the known handwriting of the former and the disguised characters made use of by the latter. Both are the productions of persons having a great command of the pen; but however successfully a person may disguise his writing, it is impossible for him to guard wholly against betraying himself through those minutiae of penmanship which every one has his own peculiar mode of executing. Thus we find that both Sir Philip Francis and Junius, instead of a round dot over the t, make use of an oblique stroke; they mark their quotations not by inverted commas, but by short perpendicular lines; and instead of marking the division of a word at the end of a line by a hyphen, do it by a colon. In the disguise of names, the formation of certain capitals, and the general style of the manuscript, there is a great similarity. It has also been found on comparing an envelope addressed by Sir Philip Francis in a feigned hand with the writing of Junius, that they were absolutely identical.

The time at which the Letters of Junius appeared coincides very closely with the theory of Francis being the writer. The publication of the first letter in the Public Advertiser took place on 21st January 1769, and of the last on 21st January 1772. Letters by the same author, under different names, and also private communications to Woodfall the printer, occur both prior and subsequent to these dates, but none before 1767 or after 1772. Letters by the same author, under different names, and also private communications to Woodfall the printer, occur both prior and subsequent to these dates, but none before 1767 or after 1772. Now we know that from 1763 to 1773, Sir Philip Francis was in the War-Office, and in June 1773, sailed for India as a member of the Supreme Council. The intimate acquaintance of Junius with public matters, inferring often a knowledge of what was transacting behind the scenes of the administrative stage, is thus accounted for, in addition to the coincidence of date. In regard to the style and sentiments of Junius, a great similarity is traceable between them and those of Sir Philip Francis, the same vigour and terseness being conspicuous in each, with the same recklessness of assertion and pugnacity of sarcasm. Many other circumstances might be mentioned in support of the view we have indicated, but we shall only adduce, in addition, the facts that the authorship of Junius was never formally denied by Sir Philip Francis; that it was firmly believed by his widow, Lady Francis, to whom, on their marriage, he presented the book as a check on, the governor-general in the management of affairs. As might have been expected, it proved anything but a harmonious relationship; and Francis, after a six years' residence in India, and a duel with the governor-general, the celebrated Warren Hastings, which nearly proved fatal to the councillor, resigned his office, and returned to England. Not long afterwards he succeeded in getting himself returned to Parliament for Yarmouth in the Isle of Wight, and from that period till 1807, when he retired from public life, he acted as one of the most active members of the Opposition. Under the Grenville ministry, he was made a knight of the Bath, and it was even said, at one time, that he was going to be sent out to India again as governor-general. He died in St James's Square, London, in 1818.

We have now to consider the evidence as to the identity of Sir Philip with the author of the Letters of Junius. There is, first, a remarkable coincidence between the known handwriting of the former and the disguised characters made use of by the latter. Both are the productions of persons having a great command of the pen; but however successfully a person may disguise his writing, it is impossible for him to guard wholly against betraying himself through those minutiae of penmanship which every one has his own peculiar mode of executing. Thus we find that both Sir Philip Francis and Junius, instead of a round dot over the t, make use of an oblique stroke; they mark their quotations not by inverted commas, but by short perpendicular lines; and instead of marking the division of a word at the end of a line by a hyphen, do it by a colon. In the disguise of names, the formation of certain capitals, and the general style of the manuscript, there is a great similarity. It has also been found on comparing an envelope addressed by Sir Philip Francis in a feigned hand with the writing of Junius, that they were absolutely identical.

The time at which the Letters of Junius appeared coincides very closely with the theory of Francis being the writer. The publication of the first letter in the Public Advertiser took place on 21st January 1769, and of the last on 21st January 1772. Letters by the same author, under different names, and also private communications to Woodfall the printer, occur both prior and subsequent to these dates, but none before 1767 or after 1772. Now we know that from 1763 to 1773, Sir Philip Francis was in the War-Office, and in June 1773, sailed for India as a member of the Supreme Council. The intimate acquaintance of Junius with public matters, inferring often a knowledge of what was transacting behind the scenes of the administrative stage, is thus accounted for, in addition to the coincidence of date. In regard to the style and sentiments of Junius, a
to drive him into a cruel course of proceeding towards his Protestant subjects. All the pledges given to them and by the edict were at once revoked, and desolation followed. 'All the iniquities inseparable from persecution,' says Hume, 'were exercised against those unhappy religionists; who became obstinate in proportion to the oppressions which they suffered, and either continued as a bond of the violence of their abhorrence of the Catholic communion, or sought among foreign nations for that liberty of which they were bereaved in their native country. Above half a million of the most useful and industrious subjects deserted France; and exported, together with immense sums of money, those arts and manufactures which had chiefly tended to enrich that kingdom. They propagated everywhere the most tragical accounts of the tyranny exercised against them, and revived among the Protestants all that resentment against the bloody and persecuting spirit of popery, to which so many incidents in all ages had given too much foundation. Near fifty thousand refugees passed over into England.'

It is sickening to go through the story of the Dreux edict, the forcible conversion of Protestants to Catholicism by means of Louis's dragoons, at Niemes and other French towns. Without dwelling upon those recitals, it may be more to the purpose to say that France injured herself in an incalculable degree by these proceedings: seeing that she drove away from her borders much of that wealth, skill, and industry which was essential to her wellbeing. A numerous body of refugees, as we have said, came to England. Many of them settled in Spitalfields, as silk-weavers; and their superior taste, skill, and ingenuity were displayed in the richness and variety of the silks, broacades, satins, and lutestrings which the looms of England afterwards produced. To this day, Spitalfields contains a larger proportion of families, whose names denote a French origin, than is customary in other parts of the metropolis. The art of paper-making, too, was greatly improved in England by this occurrence; for whereas most of our fine papers had until then been imported, now the skilled paper-makers themselves were settled in England.

It is singular, indeed, that the king's advisers should not have foreseen the result of these violent measures. First, the Protestants were excluded from all civil employments. Next, they were forbidden to hold any share in the principal silk manufactures. But when an ordinance banished all the pastors, the government were perplexed at finding that the people voluntarily shared in the banishment. It was ordered that all who attempted to leave the kingdom should be sentenced to the galleys; but this did not prevent half a million persons from fleeing to England, Holland, and Germany. The loss of so much capital, skill, and industry to France, was certainly not intended or expected by the ill-advised court.

SOME STUART STATUES.

On the 29th of October 1635, Viscount Wilmot, military governor of Portsmouth, wrote the following epistle to the mayor of that town:

'Mr. Mayor—Whereas, at my last being at Portsmouth, I did command it to you most earnestly in regard of his majesty's figure, or statue, that it hath pleased his majesty to honour your town with more than any other; so that these signs of your ins do not only obscure his majesty's figure but outface, as you yourselves may well perceive. Therefore, I desire you that you will see that such an inconveniency be not suffered; but that you will cause, against the next spring, that it be redressed, for that any disgrace offered his majesty's figure is as much as to himself. To which end I will and command all the officers and soldiers not to pass by it without putting off their hats. I hope I shall need to use no other authority to make you do it; for that it concerneth your obedience to have it done, especially now you are told of it by myself.'

The more celebrated statue of the First Charles, now standing at Charing Cross, was treated with much less respect immediately afterwards. Cast by Le Sourd about 1638, it had not been ejected when the civil war commenced, and so the parliament sold it for old metal to one John Rivet, a brazier, residing in Holborn, with strict injunctions that it should be broken into pieces. But the brazier, in defiance of those injunctions, preserved the statue intact, exhibiting some fractured bits of brass to the parliamentarians as its mutilated remains, and immediately commenced to drive a brisk trade in brass-handled knives and forks, which he sold as being partly made of the broken statue. These were eagerly purchased by both parties—by the Royalists, as sacred relics of their murdered monarch; by the Roundheads, as triumphal emblems of a vanquished tyranny. After the Restoration, the disgraced statue was exhumed from its concealment in Rivet's back-yard, and in 1674, was erected on a pedestal designed by Grinling Gibbons, on its present site. Waller, 'by four kings beloved,' wrote the following lines on the occasion:

'‘That the First Charles does here in triumph ride;  
See his son reign, where he a martyr died;  
And people pay that reverence, as they pass  
(Which then he wanted!), to the sacred brass;  
Is not the effect of gratitude.  
To which we owe the statue and the stone.  
But heaven this lasting monument has wrought,  
That mortals may eternally be taught,  
Rebellion, though successful, is but vain;  
And kings, so killed, rise conquerors again.  
This truth the royal image does proclaim,  
Loud as the trumpet of surviving fame.'

Though universally considered to be the finest of our London statues, this specimen of Le Sourd's artistic powers has not escaped adverse criticism. Connoisseurs sometimes differ in opinion, as well as persons of less aesthetic tastes. Walpole proclaims that 'the commanding grace of the figure, and the exquisite form of the horse, are striking to the most unpractised eye.' While, on the other hand, Ralph asserts that 'the man is ill designed and as tamely executed; there is nothing of expression in the face, nor character in the figure; and though it may be vulgarly admired'—(shade of Strawberry Hill! the courtly Horace vulgar!)—'it ought to be generally condemned.'

The next royal statue in chronological order, erected in London, possessed less artistic pretensions. The great civil war, though it ruined thousands, was nevertheless the cause of many
large fortunes being acquired. Robert Viner, merchant and goldsmith of London, was one of the lucky individuals thus enriched. In a single transaction, recorded by Pepys, he cleared ten thousand pounds by a timely loan to Charles II. Exuberant of loyalty, and rejoicing in the full-blowen honour of knighthood, Sir Robert determined to erect a statue to the careless monarch, whose lavish propensities and consequent necessities proved so profitable to the money-lending goldsmith. But, knowing little of art or artists, his principal object was to procure a statue as soon and cheaply as he could, and this he accomplished through one of his mercantile correspondents at Leghorn. The statue was of white marble, and having been executed in honour of John Sobieski, king of Poland, in commemoration of his great victory over the Turks, represented that hero on horseback, the animal trampling upon a prostrate Mussulman. A little alteration—not by any means an improvement—was made on the faces of the figures. Sobieski was converted into an exceedingly bad likeness of Charles, and the prostrate Mussulman transformed into Oliver Cromwell; but the artist leaving the Turkish turban on the head of the last figure, more flagrantly revealed the original import of the work. The statue was erected on a conduit in Stocks Market in 1674; and Sir Robert Viner, keeping his mayoral-feast on the same day, the king dined with him at Guildhall. On this occasion, the lord mayor, in the pride of his heart and warmth of feeling, did such justice to the various loyal toasts, that he actually began to treat the king more as a familiar friend than a most honoured guest. Charles, with his usual tact, perceiving this conduct, and not altogether unaccustomed to difficulties of the kind, after giving a hint to the nearest courtiers, attempted to steal away to his carriage, then in readiness at the gate. But Viner, seeing the intended retreat, rushed after the monarch, and seizing his hand, exclaimed with an oath: 'Sir, sir! you shall stay and take 'tother bottle!' Charles, looking over his shoulder, with a smile and graceful air, repeated the line of an old song—

'Tho' he is drunk is as great as a king,'

and at once returned to the company and 'tother bottle.'

About 1736, the citizens of London, determining to erect a residence for their chief magistrate, two sites, Stocks Market and Leadenhall Market, were proposed for the purpose. Both sites had their advocates, and considerable contention prevailed on the subject, as recorded in the following epigram of the period:

‘At Guildhall great debates arose
Twixt common-council, friends and foes,
About a lord mayor's mansion-house.
Some were for having it erected
At Stocks Market, as first projected;
But others, nor their number small,
Voted for market Leadenhall:
One of the places, all agreed,
Should for their purpose be decreed.
Whence spring this strife we're in the dark yet,
Whether to keep or make a market;
And on the affair all can be said,
They differ but as stocks or lead.'

One or two circumstances concerning the erection of the Mansion-house may be noticed here. While the discussion was in progress, some one proposed the commanding site formed by the block at the Newgate-street end of Cheapside, but without avail, Stocks Market being ultimately selected. The Earl of Burlington sent a design of Palladio to the lord mayor; but the common-council, discovering, after some inquiry, that Palladio was not a freeman of the city, but a foreigner and papist, rejected his magnificent model with contempt. A citizen was selected for architect of the Mansion-house, and as he had begun life as a ship-builder, he seems not to have forgotten his original profession, the front of the building resembling very much one of the old East India Company's ships, what sailors used irreverently to term 'tea-wagons,' with her clumsy stern and quarter-galleries. The stairs and passages in the interior of the dark edifice were little more than ladders and gangways; and a superstructure on the roof, long since taken down, was an exact resemblance of Noah's ark, as represented by a child's toy. This last appendage to the building was popularly termed 'the Mare's Nest.'

Stocks Market being selected for the mansion-house, the statue that had served to represent four different persons was taken down in 1736. The following rhymes on the occasion allude that the figure on the horse had represented Cromwell also; but this is an anachronism, the Protector being dead before Sobieski won his great battle.

‘The last dying speech and confession of the horse at Stocks market.

Ye whimsical people of London's fair town,
Who one day put up what the next you pull down;
Full sixty-one years have I stood in this place,
And never till now met with any disgrace.
What afront to crowned heads could you offer more bare,

Than to pull down a king to make room for a mayor.
The great Sobieski, on horse with long tail,
I first represented when set up for sale;
A Turk, as you see, was placed under my feet,

To prove o'er the sultan my triumph complete.
Next, when against monarchy all were combined,
I for your Protector, Old Noll, was designed.
When the king was restored, you, then, in a trice,
Called me Charles the Second, and by way of device,

Said the old whiskered Turk had Oliver's face,
Though, you know, to be conquered he never felt the disgrace.

Three such persons as these on one horse to ride—
A hero, usurer, and king all astride:
Such honours were mine; though now forced to retire,
Perhaps my next change may be something still higher.

From a fruit-woman's market, I may leap to a spire.
As the market is moved, I'm obliged to retreat,
I could stay there no longer when I'd nothing to eat;

Now the herbs and the greens are all carried away,
I must trot unto those who will find me in hay.'

For many years after the demolition of Stocks Market, the wretched statue was destitute of a fitting resting-place. Long it lay neglected in a builder's shed, till an enterprising innkeeper set it up in his yard. At last, in 1778, the corporation presented it to Robert Viner, a descendant of the loyal lord mayor, who at once took it away to decorate his country seat.
SHAKESPEARE RELICS AT STRATFORD-ON-AVON.

As one among several steps towards perpetuating the national interest in the great dramatist, the ground of his house at Stratford was purchased by public subscription on the 23d of October 1861, or rather, some of the ground which had belonged to him was purchased. The truth is, there is a difficulty in identifying some of the property; and there have been two separate purchases made in the name of the public. It is believed that the house in which Shakespeare was born still exists. His father, John Shakespeare, bought two freehold houses in Henley Street, Stratford, in 1574; and it is now the cherished theory that William was born in one of these houses ten years earlier, while his father merely rented it. The property remained with John till his death, and then it descended to William; who, in his turn, bequeathed it to his sister, Mrs Hart. It is supposed that she lived in one of the houses till her death in 1646, and that the other was converted into the 'Maidenhead Inn'; this latter became the 'Swan,' and afterwards the 'Swan and Maidenhead.' After many years, that which had been Mrs Hart's portion of the house was divided into two tenements, one of which was a butcher's shop. The butcher who occupied this shop about the year 1807, put up the inscription:

"WILLIAM SHAKESPEARE WAS BORN IN THIS HOUSE.
B. A. HOMES AND TAIRED CANT TO LET."

In more recent times the inscription was——

"THE IMMORTAL SHAKESPEARE WAS BORN IN THIS HOUSE."

It ceased to be a butcher's shop, and was rented by an old woman, who made money by showing the house to visitors. The bedroom, said to be that in which the great dramatist was born, was scribbled all over the walls and ceiling with the names of visitors, some illustrious, but the great portion obscure. The last descendant of the Harts, quitting the house under process of ejectment, took her revenge by whitewashing over all these names; and until recently had much trouble in removing the whitewash. In the condition of a show-place, that which was called Shakespeare's house, comprised about one-fourth of the original building, and consisted of a little shop, a kitchen behind, and two small rooms upstairs. Subsequently, the Royal Shaksparian Club of Stratford-on-Avon purchased some of this property; and another portion of the house was purchased afterwards, to be preserved in the name of the nation. There is no actual proof that William Shakespeare was born in this house; but Stratford has believed it ever since Shakespeare became famous. Washington Irving, delighted with the house and the few so-called relics exhibited in his day, said: 'What is it to us whether these stories be true or false, so long as we can put ourselves into the belief of them, and enjoy all the charm of the reality?' And Mr Charles Knight has said: 'Disturb not the belief that William Shakespeare first saw the light in this venerated room!' Here are also preserved, amongst other curiosities, a portrait of Shakespeare, Richard Quiney's letter to the poet asking a loan of £30, and a gold seal ring with the initials 'W. S.' upon it.

The property purchased in 1861, was land rather than houses. At the corner of Chapel Street, Stratford, was an old substantial house called New Place, which belonged to William Underhill in 1597, and was by him sold to William Shakespeare. The property was described as 'one messuage, two barns, two gardens, two orchards, and appurtenances.' In 1643, while occupied by Mrs Nash, Shakespeare's granddaughter, Queen Henrietta Maria stayed three weeks in the house, which was then owned in succession by Edward Nash, Sir Reginald Poole, Sir John Clpton, and the Rev. Francis Gastrell. This last-named owner was a most unsuitable possessor of such a place: for, in 1756, to save himself the trouble of showing it to visitors, he cut down the celebrated mulberry-tree in the garden which Shakespeare had planted with his own hands; and, in 1786, he pulled down the house itself—which he did not inhabit—in order that he might not have to pay poor-rates for it! A house which stood on the site of New Place, together with about an acre of what had been Shakespeare's garden and orchard, were purchased after some difficulty; and the property was vested in the mayor and corporation of the town, on the conditions—that no building is to be erected on the ground, and that it shall be gratuitously open to the public. At the time of the Shakespeare tercentenary, in 1864, his birthplace in Henley Street was renovated, and a fund was started for the erection of a Memorial Hall, which has since been opened and used for the representation of his plays; there is a picture gallery and library attached. The corporation decided in 1883 to acquire some of the adjacent buildings for the purpose of converting the ground into a garden.

OCTOBER 23.

Born.—Dr John Jortin, eminent critic, 1668, London; Marshal Andoche Junot, French commander, 1771, Bouy-les-Forges; Francis, Lord Jeffrey, eminent critic, 1775, Edinburgh.

Died.—Antius Manlius Torquatus Severinus Boethius, Latin philosopher, beheaded by King Theodoric, 524; William Pynson, author of Hiatrio-Mystik, or The Scowrers of Players, 1669, London; Jean Foy Vaillant, eminent medalist, 1708; Anne Oldfield, celebrated actress, 1730, London.

WALLER'S SACCHARISMA.

Dorothy Sidney, Waller's Saccharisma, lives in the memory of men as a literary curiosity; as one of the brightest ornaments of virtue in the court of Charles I., she is consigned to oblivion. Dorothy Sidney was born in 1630. She was the eldest of eight daughters, and the favourite of both parents. Her father was Robert Sidney, Earl of Leicester, and her mother, daughter of Henry Percy, ninth Earl of Northumberland.
To compile the lives of poets out of their works, is to build biography with treacherous materials, and little is known of Waller's relations to the lady of his verses, besides the meagre information which is to be found in them. It appears clear, however, that the poet proposed to her, and was somewhat the more insistent in the matter, as he was then a widower, popular at court, with a large estate and handsome person. The lady was gentle and virtuous, Waller wild and dissolute, and it might be supposed that his loose habits stood in his way. But other suitors of 'dearest Doll,' whose addresses were entertained, were by no means faultless. The truth is, the parents could countenance no one of less rank than a lord.

Waller was not inconsolable; he presently found a comforter, though we would conceive the transfer of his affections to have been a process of some difficulty:

All that of myself is mine,
Lovely Amoret, is thine;
Sacharissa's captive fain
Would unite his iron chain,
And, those scorching beams to shun,
To thy gentle shadow run.
If the soul had free election
To dispose of her affection,
I would not thus long have borne
Haughty Sacharissa's scorn:
But 'is sure some power above
Which controls our wills in love.'

Waller was soon afterwards married, as also was Sacharissa herself, on July 11, 1639, to Henry, third Lord Spencer, afterwards Earl of Sunderland. Waller's anathema on this occasion, conveyed in a letter to Lady Lucy Sidney, another of the sisters, are worthy of quotation:

'May my Lady Dorothy (if we may yet call her so) suffer as much, and have the like passion for this young lord, whom she has preferred to the rest of mankind, as others have had for her; and may this love, before the year go about, make her taste of the first curses imposed on wanton-kind—the pains of becoming a mother. May her first-born be none of her own sex, nor so like her that he may resemble her lord as much as herself. May she, that always affected silence and retiredness, have the house filled with the noise and number of her children, and hearerof of her grandchildren; and then may she arrive at that great curse, so much declined by fair ladies—old age. May she live to be very old, and yet seem young; be told so by her glass, and have no aches to inform her of the truth; and when she shall appear to be mortal, may her lord not mourn for her, but go hand-in-hand with her to that place where we are told there is neither marrying nor giving in marriage; that, being there divorced, we may all have an equal interest in her again. My revenge being immortal, I wish all this may also befall her posterity to the world's end, and afterwards.'

Lady Sunderland was not so fortunate as to have the poet's curses fulfilled. Her husband was killed at the battle of Newbury, in 1643, and his wife survived a second husband, whom she married in 1663. She died on the 26th February 1684, leaving one son and one daughter by her first, and one son by her second husband.
it seems to be clearly ascertained, that from the beginning of the insurrection to its end, nearly fifty thousand individuals were murdered in cold blood; and this is exclusive of those who fell with arms in their hands on the field of battle, or endured every indignity and suffering short of death.

**BATTLE OF EDGEHILL:** REMARKABLE CASES OF SUSPENDED ANIMATION.

The battle of Edgehill, in which both the Royalist and Parliamentary party claimed the victory, took place on the morning of Sunday, October 23, 1642. Amongst those who fell on the king's side, and were left on the field as dead, was Sir Gervase Scroop, who had fallen covered with wounds about three o'clock on Sunday afternoon. It was not till Tuesday evening that his son, who was also in the king's forces, was able to return to the battle-field to search for the body of his father. When he found it, it was perfectly naked, having been stripped, like the rest of the slain, on Sunday evening, by camp-plunderers. In this state it had lain all Sunday night, all Monday, and Monday night, and was apparently dead, having received no less than sixteen severe wounds. Monday night, it ought to be stated, had been remarkably cold and frosty. Sir Gervase's son carried him to a lodging near at hand, and fancied he felt in the body some degree of heat. 'That heat,' says Fuller, 'was, with rubbing, within few minutes, improved into motion; that motion, within some hours, into sense; that sense, within a day, into speech; that speech, within certain weeks, into a perfect recovery; living more than ten years after, a monument of God's mercy and his son's affection. The effect of his story I received from his own mouth.'

The next day (Wednesday, 26th October), another gentleman, named Bellingham, was found in a like condition among the dead, having received twenty wounds. Being carried off by his friends, he also was restored, and lived for ten days, but died subsequently from one of his wounds terminating in a gangrene. 'The story of these cases of our times,' says Clarendon, 'that both these gentlemen owed their lives to the inhumanity of those who stripped them, and to the coldness of the nights, which stopped their blood, better than all their skill and medicaments could have done, and that if they had been brought off within any reasonable distance of time after their wounds, they had undoubtedly perished.'

In connection with the subject of unexpected reanimation, the case of Sir Hugh Ackland, of Kellerton, Devonshire, may be mentioned as even more extraordinary. This gentleman was seized with a violent fever, and having apparently expired, had been laid out as dead. The nurse and two footmen were appointed to sit up through the night to watch the corpse. Lady Ackland, to cheer them, had sent them a bottle of brandy, regrettably one of the footmen, 'being an arch rogue,' said to the other: 'Master dearly loved brandy when he was alive, and now, though he is dead, I am determined he shall have a glass with us!' Accordingly, he poured out a bumper, and forced it down Sir Hugh's throat. A gurgling noise immediately ensued, accompanied with a violent motion of the neck and upper part of the chest. A terrible consternation seized the watchers, who rushed violently down stairs; 'the brandy genius' with such speed, that he fell, and rolled head-over-heels, bumping down from step to step till he reached the bottom; while the nurse screamed with terror. The noise having roused a young gentleman who was sleeping in the house, he immediately got up, and went to the room where the noise had first begun. There, to his astonishment, he saw Sir Hugh sitting upright on the bed. He summoned the servants, and ordering them to place their master in a warm bed, sent off for his medical attendants. In a few weeks, Sir Hugh was restored to perfect health, and lived many years afterwards. He often used to relate this strange story of his own resuscitation by his footman's facetious conceit, for which he is said to have bequested him a handsome annuity.

**OCTOBER 24.**

St Felix, bishop and martyr, 303. St Proclus, confessor, archbishop of Constantinople, 447. St Magloire, bishop and confessor, about 675.

* Born.—Sir James Mackintosh, politician and miscellaneous writer, 1765, Aldourie, Inverness-shire.

* Died.—Hugh Capet, king of France, 996; Jane Seymour, consort of Henry VIII, 1537, Hampton Court; Tycho Brahe, celebrated astronomer, 1546, Prague; Professor John McCullagh, scientific writer, 1847, Dublin; Daniel Webster, American statesman, 1852, Marshfield, Massachusetts.

**WORTHIES OF LINCOLNSHIRE.**

Daniel Webster.

This distinguished American statesman and orator was born at Salisbury, New Hampshire, January 18, 1782. His father, a descendant of the Puritan settlers of New England, said by Mr Webster to have been the handsomest man he ever saw, except his brother Ezekiel, was a farmer and innkeeper. He owned and cultivated a tract of land, and welcomed travellers to the hospitalities of his log-cabin. He was also a soldier in the French war, and in the revolution he was present at the battles of Saratoga, and the surrender of General Burgoyne. He afterwards became a judge of the court of Common Pleas. The son, Daniel, was educated at Dartmouth College, studied law, taught an academy, and copied deeds, to support himself and aid his brother. He was elected member to congress, became senator for Massachusetts, secretary of state under two presidents, and the first lawyer and orator of his country. He has been considered by many as the greatest man, intellectually, which America has produced. As a lawyer, he had no superior; as senator, only two or three were ever regarded as his equals in ability; while, as an orator, he stands almost alone in a nation of orators. His most remarkable efforts were his speeches in the senate—on the Greek revolution, and in his debate with Mr Hayne, of South Carolina. He has also acquired great fame by two orations—one at the laying of the cornerstone of the Bunker-Hill Monument, on the anniversary of the battle, June 17, 1825, and
the other at the completion of that structure, eighteen years after. But, in spite of his great talents, and unbounded local popularity, Mr Webster, like Mr Clay, was disappointed of his highest ambition; and his death was undoubtedly hastened by his failure to receive the nomination of his party to the presidency. Mr Webster's appearance and manner were very impressive. He was a large, massive man, with the head of a giant, deep cavernous eyes, a sallow complexion, and a deep bass voice. His manner of speaking was slow, dignified, and impressive, rising at times to great energy. His character, unfortunately, was marred by some defects. Generous to prodigality, he was a spendthrift, and unreliable in business matters. Requiring stimulants, he did not always use them in moderation. As a statesman, he was more admired than trusted. Still, his patriotism was undoubted, and his faults were most easily overlooked by those who knew him best. He embodied much of the character, the patriotism, and the ambition of the northern people, and was devoted to the preservation of the Union, as the condition of the future power and greatness of the republic. The following passage from one of his speeches, as a specimen of his oratory, and a proof of his devotion to the Union, may be almost looked upon as a prophecy, too literally and terribly fulfilled. 'When my eyes shall be turned to behold for the last time the sun in heaven, may I not see him shining on the broken and dis-honoured fragments of a once glorious union; on states dismembered, discordant, belligerent; on a land rent with civil feuds, or drenched, it may be, in fraternal blood.'

FOX-HUNTING.

Now that the cornfields have been thoroughly cleared of their produce, that the woods are strewed with fallen leaves, and the shortened days bespeak the near approach of winter, when the fields in the mornings are crisp with the glittering rime which soon dissolves beneath the autumn sunbeams, when angling for the season has fairly closed, and even the sportsman's ardour has begun to languish, then commences the most renowned and exhilarating of all rural pastimes—the thoroughly British sport of fox-hunting. The period over which it extends comprises nearly six months, from the latter part of October to the beginning of April. Much of that space is, of course, however, wholly unavailable for hunting purposes, whilst the ground is either bound by hard frost or covered with snow.

Though this sport requires, for its exercise, the possession both of a considerable amount of physical courage and activity, and of pecuniary means to sustain the expenses which it entails, there is, nevertheless, no amusement which engages so large and unwearied a party with all classes of the community. No Briton, however able he may be from the circumstances of his position to take an active part in the chase, can refrain from experiencing a mingled feeling alike of envy and admiration as he witnesses the gallant array of horsemen assemble at the 'meet;' see the grand 'burst' when the fox has been started, and the cry of 'Tallyho! Gone away!' breaks forth; and then follow with his eye the cavalcade in its exciting pursuit, as it sweeps o'er hill and dale, with the hounds in full cry, till the outlines of the figures, becoming rapidly less and less distinct, are fairly lost in the distance. A scene like this stirs the blood in the veins of the most sluggish, whilst with the devotees of the exciting sport, the enthusiasm felt is such as frequently remains unimpaired by the progress of years or the chills of age, and the grayheaded fox-hunter of threescore may often be seen following the hounds with the same ardour as the stripling of eighteen.

As is well known, much of the success of a 'run' in hunting depends on the condition of the atmosphere. When this is very dry, or when a sharp northerly breeze prevails, the scent or exhalation from the hunted animal is rarefied and dissipated, and becomes consequently impossible to be traced and followed up by the dogs. When, on the other hand, the air is moist, but without the presence of actual rain, and a gentle gale blows from the south or west, then the scent clings to the adjoining soil and vegetation; and a more favourable condition still is, when it is suspended in the air at a certain height from the earth, and the dogs are enabled to follow it breast high, at full speed, without putting their heads to the ground. In reference to this subject we may here introduce the celebrated old hunting-song, which depicts very graphically the incidents of a fox-chase:

'A southerly wind and a cloudy sky
Proclaim a hunting-morning;
Before the sun rises we nimbly fly,
Dull sleep and a downy bed scorning.
To horse, my boys, to horse, away;
The chase admits of no delay;
On horseback we've got, together we'll trot;
On horseback, on horseback, together we'll trot;
Leave off your chat, see the cover appear;
The bound that strikes first, cheer him without fear;
Drag on him! ah, wind him, my steady good hounds,
Drag on him! ah, wind him, the cover resounds.
How complete the cover and furze they draw!
Who talks of Jillisfe, or Meynell?
Young Bockwood he flourishes now through the shaw,
And Ringwood roars out in his kennel.
Away we fly, as quick as our thoughts;
The new-sown ground soon makes them fault;
Cast round the sheep's train, cast round, cast round!  
Try back the deep lane, try back, try back!  
Hark! I hear some hound challenge in yonder spring sedge;  
Comfort bitch hits it there, in that old thick hedge.  
Hark forward! hark forward! have at him, my boys.  
Hark forward! hark forward! sounds, don't make a noise!  

A stormy sky, o'ercharged with rain,  
Both hounds and huntsmen oppose;  
In vain on your mettle you try, boys, in vain,  
But down, you must to your noses.  
Each moment, now, the sky grows worse,  
Enough to make a parson curse;  
Pick through the ploughed grounds, pick through,  
pick through;  
Well hunted, good hounds, well hunted, well hunted!  
If we can get on, we shall soon make him quake;  
Hark! I hear some hounds challenge in midst of the brake;  
Tally-ho! tally-ho, there! across the green plain;  
Tally-ho! tally-ho, boys! have at him again!  

Thus we ride, whip and spur, for a two hours' chase,  
Our horses go panting and sobbing;  
See Ranter and Riot begin to race;  
Ride on, sir, and give him some mobbing.  
But hold—alas! you'll spoil our sport,  
For through the pack you'll head him short.  
Clap round him, dear Jack, clap round, clap round!  
Hark cover, hark cover, hark back, hark back!  
He's jumping and dashing in every bush;  
Little Riot has fastened his teeth in his brush!  
Whooop, whoop, whoop, he's fairly run down!  
Whooop, whoop, whoop, give Tom his half-crown!  

The leaps taken by fox-hunters during the chase form alike the most exciting and perilous part of the pastime. In Leicestershire, which is generally regarded as the hunting-county of England, two specially formidable descriptions of fences require frequently to be surmounted. These are the cox-fence and the bullfinch-fence. In the former, which is rendered necessary in the locality as an effectual barrier to the roaming of cattle from their pastures during the season of the oestrus, or gadedly, the adventitious votary of Diana finds himself confronted by a wide ditch, bordered by a strong blackthorn-hedge, and beyond that by a railing four feet in height, all of which obstacles must be cleared by him and his steed. The bullfinch-fence, on the other hand, of still more frequent occurrence, is a thick and lofty quickset-hedge, of perhaps half a century's growth, with a ditch on one side, and requiring to be charged at full speed by the horseman, who manages to push through, whilst the bushes close after him, leaving no more trace, in the words of 'Nimrod,' 'than if a bird had hopped through.' Brooks also require frequently to be crossed; and from the aversion with which many horses regard them, requiring to be urged to them at full speed, this leap is often considered as the most difficult of any. In many parts of the country, and more especially in Ireland, stone walls are of common occurrence, and to clear these with success, calls forth all the courage and enterprise of the fox-hunter. In connection with this subject, we may here allude to the celebrated feat, achieved in 1792 by Mr Bingham, of

BLOODHUNTER CLEARING A STONE WALL IN GOOD STYLE—FROM BLAINE'S 'ENCYCLOPÆDIA OF RURAL SPORTS.'
guished in sporting annals than the celebrated
Thomas Ashton Smith, of Tedworth, in Hamp-
shire, who may be said to have presented the
beau-ideal of the British fox-hunter and country
gentleman in the most splendid type of the char-
acter. Possessed of immense wealth in landed
property and otherwise, and endowed by nature
with the most herculean strength and courage, he
continued till the age of eighty to follow the
hounds with unabated vigour, having been a votary
of the chase for seventy years, and a master of
hounds for fifty. Even during the last two years
of his life, when he became unable to ride to cover,
or even face the inclemency of the weather out of
doors, he would still mount his horse, and make the
circuit of an extensive conservatory which adjoined
to and communicated with his mansion. The extent
of his experience in the sport may be estimated
from the fact that, as a master of hounds, he had
cut off no less than fifteen hundred brushes from
as many foxes. In reference to the value set by
him on a fox, an amusing anecdote is related that
one morning, while at breakfast at Tedworth, he
was observed to drop the newspaper with an
expression of horror. A lady present inquired
what was the matter. 'My Lord!' was the reply,
'a fine dog-fox has been burned alive in a barn!'

On another occasion, he had been hearing one of
the first sermons of Mr Dyson, the clergyman's son
at Tedworth, who was no less an adept in fox-
hunting than in theological studies. Mr Smith
was greatly pleased with the discourse, and on
coming out of church after service was over, he
slapped the young man on the back, and exclaimed:
'Well done, Frank, you shall have a mount on
Rory O'More on Thursday!'
The enthusiasm of the master seems to have
impacted itself to his servants, and we find the
following instance recorded of his huntsman, George
Carter. On Mr Smith's death, it was generally
expected that he would be interred in the manse-
leum, on the grounds, and under this impression,
George made, with great earnestness, the following
proposition to the friend in charge of the funeral
arrangements: 'T hope, sir, when I, and Jack
Fricker, and Will Bryce [the whippers-in] die, we
may be allowed to join him in his manse, with
Ham Ashley and Paul Potter [two hunters],
and a fine couple of his honour's hounds, in order
that we may all be ready to start again together in
the next world!'

Though the expense of maintaining a hunting-
study is considerable, amounting, in the case of the
aristocratic frequenters of Melton-Mowbray, to
£1000 per annum and upwards, whilst the yearly
sum incurred in keeping a team of fox-hounds
with accessory expenses, will fall little short of
£5000, there are, nevertheless, some remarkable
instances on record of economy in the management
of these matters. Thus, the celebrated miser, John
Elwes, whose indulgence in hunting formed a
solitary exception to his habitually penurious dispo-
sition, contrived to maintain a kennel of foxhounds
and a stable of hunters, reputed at the time to be
the best in the kingdom, at an annual outlay of
less than £300. The way in which he managed
to be said has been as follows: His huntsman,
who acted as servant of all-work, and held no
sinecure in his office, rose at four every morning,
and milking the cows, prepared breakfast for
his master and any friends that might happen to
be staying at the house. He then donned a green
coat, saddled the horse, and mounted his hounds,
and the whole party started for the chase. After
the day's 'run' was over, he would return to the
stables, rub down the horses as quickly as possible,
and then hurry into the house to lay the cloth and
wait at dinner. After this, he would betake himself
again to his outdoor duties, feed the horses and dogs,
litter them down for the night, and milk the cows.
Such multifarious avocations would seem almost
impossible to have required the hands of a Squire,
and yet Elwes used to call his huntsman an idle dog
that wanted to be paid for doing nothing. Probably
the man received occasional assistance in the per-
formance of his duties from his master's tenants,
with whom the dogs were boarded during the
summer months, as it is almost incredible other-
wise that he could have accomplished the herculean
task laid on his shoulders.
The other instance of adroit management which
we shall quote, is that of Mr Osbaldeston—not the
celebrated master of the Quorn hounds of that name,
but the younger son of a gentleman of good family
in the north of England, who, in consequence of
having contracted an impudent marriage, was turned
by his father out of doors, and obliged to support him-
self by acting as clerk to an attorney in London. His
salary amounted only to £30 per annum; and yet
on this slender income he contrived not only to
maintain himself and large family without running
into debt, but also to keep two hunters and a dozen
of hounds. This he managed to accomplish by the
following method. After business-hours, he acted
as accountant to the butchers of Clare Market,
who paid him in pieces of meat and offal. With
the first he fed himself and family, with the last his
hounds, which he kept in the garret of his house.
His horses were stabled in the cellar, and fed with
grain from an adjoining brewery, and damaged
corn from a corn-chandler, to the keeping of whose
books Mr Osbaldeston devoted one or two evenings
in the week. Serving either an indolent master,
or enabled by circumstances to make arrangements
to that effect, he contrived, during the hunting-
season, to obtain such leave of absence as permitted
him to wander in his master's kennel.

The enthusiasm for fox-hunting has not always
been confined to those whose means enabled them to
mount on horseback. A tailor of Cheltenham used
to be well known for his pedestrian activity in
following Lord Seagrave's hounds. Such was his
fleetsness of foot and knowledge of the country,
that, after following the hounds from kennel to
cover, he would continue his progress on foot
after the pack of fox-hounds, and contrived almost
always to make his appearance at the death. He
would hunt thus five days a week on foot with
Lord Seagrave, and meet the Duke of Beaufort's
hounds on the sixth. On one occasion he walked
from Cheltenham to Berkeley, a distance of twenty-
six miles, found that the hounds had gone to
Haywood, ten miles further off, proceeded thither,
and, though rather late, witnessed a splendid run.
Lord Seagrave, it is said, once offered him good
advocation as earth-stopper; but his characteristic
answer was, that he could not 'stop earths a-nights
and hunt a-days too.' Another pedestrian fox-hunter
has been known to travel on foot sixty miles a day.
The reader of the Spectator may recollect Sir
OCTOBER 25.

St. Crispin's Day.

St. Crispin and his brother Crispian were natives of Rome, and having become converts to Christianity, travelled northwards into France, to propagate the faith. They fixed their residence at Soissons, where they preached to the people during the day, and at night earned their subsistence by the making of shoes. In this they followed by the example of the apostle Paul, who worked at his craft of tent-making, and suffered himself to be a burden to no man. They furnished the poor with shoes, it is said, at a very low price, and the legend adds that an angel supplied them with leather. In the persecution under the Emperor Maximian, they suffered martyrdom, and according to a Kentish tradition, their relics, after being cast into the sea, were washed ashore at Hastings, in Sussex. In medieval art, the two brothers are represented as two men at work in a shoemaker's shop, and the emblem for their day in the Clog Almanacs is a pair of shoes.

From time immemorial, Crispin and Crispian have been regarded as the patron-saints of shoemakers, who used to observe, and still in many places celebrate, their day with great festivity and playings. One special ceremony was a grand procession of the brethren of the craft with banners and music, whilst various characters representing King Crispin and his court were sustained by different members.

At Tenby, it was customary, on the eve of St. Crispin's Day, to make an effigy of the saint, and suspend it from the steeple or some other elevated place. In the morning it was found was a mound, and carried in procession throughout the town. In front of the doors of each member of the craft the procession halted, when a document, purporting to be the last will and testament of the saint, was read, and in pursuance thereof some article of dress was left as a memento of the noisy visit. At length, when nothing remained to be distributed, the padding which formed the body of the effigy was made into a football, and kicked about by the crowd till they were tired. As a sort of revenge for the treatment of St. Crispin, his followers hung up on St. Clement's Day the effigy of a carpenter, which was treated in a similar way.

John Doe and Richard Roe.

The 24th of October 1859, witnessed the deaths of two individuals who, though personally unknown to any one, enjoyed, nevertheless, like Mrs. Gamp's Mrs. Harris, a most extensive reputation by report. Through the whole length and breadth of England, no persons were more frequently referred to (in legal documents) than John Doe and Richard Roe. Their connections with the landed property of the kingdom appeared to be both universal and multifarious. In every process of ejectment, instead of the real parties to the suit being named, John Doe, plaintiff, sued Richard Roe, defendant. Their names were also inserted in criminal proceedings as pledges to prosecute.

This well-known fiction appears to have been introduced into English legal practice about the time of Edward III., in consequence, it is said, of a provision of Magna Charta which requires the production of witnesses before every criminal trial. John Doe and Richard Roe were thenceforth inserted as the names of the alleged witnesses. By act 15 and 16 Vic. cap. 76, passed in 1855, sentence of death, to take effect on 24th October of that year, is passed on the two illustrious personages just mentioned, and it is ordered that 'instead of the present proceeding by ejectment, a writ shall be issued, directed to the persons in possession of property claimed, which property shall be pleaded in the writ with reasonable certainty.'
CHAEUR.

Many biographies of Chaucer have been written at different times, but unfortunately very little which is trustworthy is to be gleaned from them.

If the reader can succeed in deciphering the almost obliterated legend on Chaucer’s monument in Westminster Abbey, he will find it recorded that he died in the year 1400, at the age of seventy-two. Some doubt is thrown on this statement, however, by recent research, which fixes the date of his birth about 1340. This monument was not set up until about a century and a half after his death; and the poet’s own testimony points to the last-mentioned date as the most correct one.

To decide where Chaucer was born, is a still more puzzling question. Fuller inclines to think that his native place was Woodstock, in Oxfordshire. When Queen Elizabeth passed a fair stone house next to her palace in that town” to some tenant or other, this same building was described as Chaucer’s House, and retained the name long afterwards. But as we find the poet living at Woodstock in Edward III’s time, and dying there in his old age, the name of the house is accounted for. Another authority (Leland) leans to Berkshire, where Dunnington Castle, near Newbury, is said to have been Chaucer’s family property. An oak in the park there, went by the name of Chaucer’s Oak.

But afterwards find this same property in the possession of a certain Thomas Chaucer—whether he was Chaucer’s son or not. Others maintain that London can justly claim the honours; and it appears from Chaucer’s own words, in his Testament of Lore, that, whether he were born there or not, he was certainly brought up there. His words are these: “As I was in the citty of London, that is to se secours and sweetes, in which I was fourth gowne; and more kindely love have I to that place than to any other in yereith (as every kindely creature hath full appetite to that place of his kindly engendure).”

Apropos of the poet’s origin, Stowe records that “Richard Chaucer, vintner, gave, to the church of St Mary Aldermary, his tenement and tavern, with the appurtenances, in the Royal Streets the tower of St Peter, and was there buried, 1343.” Mr Furnivall has brought to light a deed of 1380, in which Chaucer describes himself as the son of John Chaucer, vintner; by other documents this John Chaucer is shown to be the son of Richard Chaucer, also a vintner, and both of London.

Chaucer was educated at Oxford or Cambridge—it cannot be ascertained which—and afterwards travelled—it is not known where, or for how long a period. He returned home to become a courtier, and continued in great favour during the long reign of the third Edward; to all appearance winning honours, gaining friends, and meriting respect; as the first post of his time.

But Chaucer gained, in Edward’s court, something more substantial than honours. He held a succession of offices, which though under such ambiguous apppellations as habe come down to us they seem to our ignorance suspicious—were probably of the nature of creditable sinecures, intended to afford the poet competence without toil. He himself informs us, that at this time the profits of his numerous grants enabled him to live with dignity and hospitality. He speaks of himself, looking back, in a sadder time: as ‘once glorious in worldly wellfellowes, and having such gode in wealthes as make men rich’. What then was one not to give to have been the guest of ‘the morning-star of song’—

“Which first made to distil and refine
The gold dew-drops of epoch and eloquence.”

Wood, in his Annals, describes Chaucer as having been a pupil of Wickliffe, when that enterprising priest was warden of Canterbury Hall. The story is too good to be true. Yet, if we see reason to reject the tradition, it is certain that Chaucer, if not a Wickliffe, sympathised with what we may call the advanced religiousists. He considered the pope to be Antichrist, and abhorred the mendicant priests. Nor did these tendencies of his shed themselves only in words. As Chaucer was a good old English yeoman, so we conceive him to be slightly belied by the meek demureness of the likeness which survives of him. Who would expect to find Jos in Good?’s Chaucer ‘two shillings for beating a Franciscan frier in Fleet Street’? Yet such was the fact.

Chaucer had a staunch friend in John of Gaunt, the Duke of Lancaster, and champion of Wickliffe. Not merely an honourable relation of patron and client, but a bond of intimate friendship, existed between them. Duchess Blanche and the duke gave Chaucer to wife a favourite of their own. This was Philippa, sister of Catharine de Boust. Catharine was a knight’s daughter, at the time John of Gaunt’s mistress, and governess to his children, and afterwards his wife.

In Richard II’s reign, when the duke’s influence declined, Chaucer got into trouble, in consequence of which he found his means considerably straitened. He involved himself in some Wickliffe disturbances, and had to seek safety in flight. He returned, venturing soon after to return to London, he was seized and imprisoned in the Tower. Here, it is said, either faltering in courage through the rigour of his confinement, or provoked by the ingratitude of certain accomplices, he informed against the rest, and regained his liberty. For some time after, though he retained apparently many of his grants, Chaucer seems to have been in rather low water. He describes himself as ‘being, as it were, in the vale of dignities of place, in which he made a gathering of worldly goods’. Soon after his release he disposed of sundry pensions, took his leave of the court, and retired to Woodstock.

It is probable that Chaucer remained for the most part in retirement during the rest of his life. He seems to have written much, if not the whole, of his Canterbury Tales during this period. He died an old man, and persisted to the last, says Wood, in his delectis of friers. ‘He is said to have died in the Roman faith. The statement has been disputed, but we scarcely see on what grounds. He does not appear to have been a Wickliffe, although he supported, in certain cases, members of that party. It must be borne in mind that hatred of monks, with their ignorance and licentiousness, and disrespect of reigning popes, worse than the monks, were not by any means in that day, nor indeed long afterwards, inconsistent with strict adherence to the Roman tenets.”
Though we have seen that his hatred of the friars was unabated to the last moment, there were some things for which Chaucer, on his dying bed, is said to have been sorry. 'Of that he wrote of love and bawdry' records Wood; 'it grieved him much on his death-bed: for one that lived shortly after his time maketh report, that when he saw death approaching, he did often cry out: 'Woe is me, woe is me, that I cannot recall and annul those things which I have written on the base and filthy love of men towards women: but, alas! they are now continued from man to man, and I cannot do what I desire.'

It is some comfort to find the old man repenting of those blemishes in his works which so often offend the reader of a more refined age. Chaucer's last words, at least, were consistent with his profession. From an old folio edition of his works, dated 1602, presented to the British Museum by Tyrwhitt in 1786, we have gleaned a little tribute to the poet, not unworthy to be recovered from the grasp of oblivion:

'A BALLEINE IN THE FRAIRES AND COMMACENATION OF MASTER GEOFFREY CHAUCER FOR HIS GOLDEN ELOQUENCE.'

Maister Geoffrey Chaucer, that now lyth in grave, The noble rhetorician, and poet of Great Britaine, That worthy was, the laurer (sic) of poetry to have For this his labour, and the palmes to attaine, Which first made to distil, and reins, The gold dewes drops, of speech and eloquence, Into English tongue, through his excellence.

It appears that Chaucer had children. He dedicates one of his treatises to a son, Lewia. Fuller mentions a son Thomas—Thomas Chaucer, 'sone son of Geffrye Chaucer, that famous poet, from whom he inherited fair lands at Dunnington Castle in this county (Berkshire), and at Ewelme, in Oxfordshire. He married Maud, daughter and co-heir of Sir John Burwash, by whom he had one only daughter, named Alice, married unto William de la Pole, Duke of Norfolk. He lyth buried under a fair tomb in Ewelme Church.' Whether this was really a son of Geoffrey Chaucer, has been doubted, with or without sufficient reason we are unable to say; but if he was, he was not, as we have seen, the 'sone son.'

THE EARL OF PETERBOROUGH.

Like Charles XII. of Sweden, the character of the great Earl of Peterborough presents a singular combination of the hero and the madman. His career in Spain, as commander of the British forces in the War of Succession, resembles more the history of Amadis or Orlando, than an episode in real warfare; and the achievements recorded of him, we find ourselves transported once more to the legendary times of chivalry. The conquest of Valencia, more especially, which he commenced with a detachment of 150 dragoons, and accomplished as much to the astonishment of his own army as to the bewildermint of the prostrated enemy, overpowers us with wonderment; and had the narrative only descended to us from antiquity, instead of being the chronicle of an undisputed fact, it would have been infallibly discredited as fabulous and extravagant. Had it not been for the mulishness of the Archduke Charles, as well as the political jealousies and dissensions at home, which prevented his plans from being carried out, and ultimately occasioned his premature recall to England, there seems little reason to doubt that Peterborough might have seated a German monarch on the throne of Spain, and reduced very materially the future arrangements of European diplomacy. But the advantages so surprisingly gained were destined ere long to be as rapidly lost; and in the battle of Almanza, after Peterborough's departure, the prestige, which the British arms had won in the siege of Barcelona and the Valencian campaign, was sadly forfeited.

Peterborough's private life was far from regular; and in all the phases of this extraordinary man's history, we perceive the same enthusiastic bravery and intellectual acumen, the same warmth and generosity of disposition, and the same eccentricities and absurdities, the last two qualities shewing themselves in his love of practical jokes and whimsical adventures. The following anecdote is related in connection with one of his youthful escapades. He was courting a young lady who was remarkably fond of birds, and had taken a completely fine canary which belonged to a widow, the keeper of a coffee-house at Charing Cross. She besought Peterborough, then Lord Charles Mor- daunt, to procure for her, as a pledge of his affection, this unrivalled songster. He offered, accordingly, an enormous sum to its owner, who, however, was so much attached to it, that she refused to part with it at any price. Determined to gain the prize, he contrived to obtain another bird of the same size and colour, but a hen, and wholly tuneless. The coveted bird was almost never allowed to be out of sight of its mistress, who sat behind the bar of the coffee-house; but one day Peterborough succeeded in getting her out of the way on some pretext, and made use of the opportunity to effect an exchange of the canaries. This was about the time of James III.'s expulsion. After the Revolution, Peterborough happened to be visiting the coffee-house where he had committed the fraud, and ventured to remark to the landlady: 'I would have bought that bird of yours, and you refused my money for it; I daresay you are by this time sorry for it.' 'Indeed, sir,' she replied, 'I am not nor would I now take any money for him;—for—would you believe it—-from the time that our good king was forced to go abroad and leave us, the dear creature has not sung a note!'

As illustrative of his puerile propensity to petty mischief, it is recorded that, one day while riding in his coach, and seeing a dancing-master, with pearl-coloured silk stockings, and otherwise spruce attired, picking his steps daintily along the street, he jumped down and pursued him with a drawn sword, forcing the poor man to run ankle-deep into the gutter, into which, however, the earl himself was also forcibly drawn. When stationed at the town of Huste, he learned that a very beautiful young lady had just taken refuge there, in a convent. Peterborough was determined to get a sight of this celebrated fair one, but he was well known as a gay Lothario, and the strictness of the lady-abbess would have opposed an effectual bar to the gratification of his wishes. Procuring the attendance, then, of an engineer-officer, he proceeded with him to the convent, and demanded admission, for the purpose of tracing out a line of defences in the garden, preparatory to converting the place into a
for protecting his position at Huet. The lady-abbess and her nuns, including the object of Peterborough's curiosity, rushed out in an agony of terror, and besought him to spare their convent. It would seem that the great general was not inexorable, and the construction of the fort was indefinitely postponed. Whether the real purpose of his visit was ever discovered by the fair nun whose beauty prompted the act, or how far she appreciated it, history does not record.

A strong antipathy existed between Peterborough and the Duke of Marlborough. On one occasion, the former was surrounded by an angry mob who took him for the duke, at that time rather unpopular. He ran a chance of receiving some violent usage, when he exclaimed: 'Gentlemen, I shall convince you by two good and sufficient reasons that I am not the Duke of Marlborough. First, I have only five guineas in my pocket; and, second, here they are at your service,' suit his action at the same time to the word, by scattering the mob amongst the crowd. He was then allowed to depart amid loud huzzas, after having thus hurled an ingeniously satirical both at the wealth and avarice of the great commander.

When very young, Lord Peterborough was married to the daughter of a Kincardineshire baronet, by whom he had two sons, who pre-deceased their father, being cut off by small-pox within six weeks of each other, and a daughter, who became Duchess of Gordon. Left a widower, and solitary in his old age, he contracted a private marriage with Miss Anastasia Robinson, a celebrated opera-singer, whose beauty and talents were only surpassed by her rare modesty and worth, and who proved to him a most devoted wife. The union was subsequently acknowledged by him, and publicly solemnised. He died at Lisbon, whither he had gone in the hope of re-establishing his failing health, at the age of seventy-seven.

DEATH OF GEORGE II.: CURIOUS SUPERSTITION.

On the morning of 26th October 1760, George II. expired suddenly at Kensington, at the age of seventy-six. The cause of death was the rupture of the right ventricle of the heart. Though never vigorous, the glories attending the British arms during the latter years of George II.'s reign were such as to conciliate largely the affections of his subjects. Frugal, penuriousness, choleric, and by no means correct in moral deportment, he was, nevertheless, honest and open in character, and possessed of considerable personal courage, as evinced by his bravery at the battle of Dettingen. To both George and his father must be accorded the credit of eminently prudent and judicious management, enabling them alike to preserve the allegiance of their subjects throughout a peculiarly difficult and critical period, and secure for the country a degree of material prosperity such as it had never before enjoyed.

Two years previous to his death, George II. had been attacked by a serious illness, which was expected to prove fatal; but he rallied, and regained for a short period the enjoyment of good health. A curious circumstance, illustrative of popular superstition, is mentioned in connection with this indisposition by Lord Chesterfield, and quoted by Earl Stanhope in his 'History of England': 'It was generally thought his majesty would have died, and for a very good reason—for the oldest lion in the Tower, much about the king's age, died a fortnight ago.'

In old times, it was said that the lions in the Tower menagerie after the reigning kings, and the fate of the royal beast was thought to be bound up with that of human majesty. The notion is humorously alluded to by Addison, in the Freeholder, where he represents the Jacobite country squires inquiring anxiously at the keeper, at the Tower, whether none of the lions had fallen sick on the taking of Perth and the flight of the Pretender.

THE BATTLE OF AZINCOURT.

In connection with St Crispin's Day occurs one of the most brilliant events of English history—the celebrated battle of Azincourt, gained, like those of Crécy and Poitiers, under an immense disparity in point of numbers on the side of the victors, and also under the most disadvantageous circumstances from the effect of fatigue and disease. The chivalrous Henry V., after proclaiming what can only be designated a most unjustifiable war with France, had embarked on an expedition for his conquest at Southampton, in August 1415, and landed near Harfleur, which he invested and captured after a siege of thirty-six days. So great, however, was the loss sustained by the English army, owing to a terrible dysentery which had broken out in the camp, that the project of re-embarking for England was seriously deliberated in a council of war. The idea was indignantly rejected by Henry, who declared that he must first see a little more of 'this good land of France.' With a greatly reduced army, he accordingly commenced a march through Normandy and Picardy to Calais; and after surmounting numerous difficulties, was engaged on 25th October, near the village of Axincourt or Agincourt, by D'Albret, the Constable of France, at the head of an army which outnumbered that of the English monarch in the proportion of at least six to one. In immediate prospect of the conflict, and in reference to the day on which it was to be fought, Shakespeare represents Henry delivering himself as follows:

'This day is call'd the feast of Crispian: He that outlives this day, and comes safe home, Will stand a tip-toe when this day is nam'd, And rouse him at the name of Crispian. He that shall live this day, and see old age, Will yearly on the vigil feast his neighbours, And say, To-morrow is Saint Crispian: Then will he strip his sleeve and show his scars, And say, These wounds I had on Crispian's day. Old men forget; yet all shall be forgot, But he'll remember, with advantages. What feats he did that day: then shall our names Be familiar in their mouths as household words— Harry the king, Bedford and Exeter, Warwick and Talbot, Salisbury and Gloucester— Be in their flowing cope freshly remember'd: This story shall the good man teach his son, And Crispin Crispian shall ne'er go by, From this day to the ending of the world, But we in it shall be remembered. We few, we happy few, we band of brothers; For he to-day that sheds his blood with me Shall be my brother; he he'ra as we are, This day shall gentle his condition:}

495
And gentlemen in England, now a-bed,
Shall think themselves accurs'd they were not here;
And hold their manhoods cheap whiles any speaks
That fought with us upon St Crispin's day.'

As in the two previous great battles between the English and French, the success of the former was mainly owing to their bowmen, whose arrows threw the French cavalry into confusion, and who themselves afterwards broke into the enemy's ranks, and did terrible execution with their hatchets and bill-hooks. The chivalry of France was fearfully thinned, upwards of 7000 knights and gentlemen, and 120 great lords perishing on the field, whilst the loss of the English did not exceed 1600 men. An immense amount of plunder was obtained by the victors, the weakness of whose army, however, prevented them from improving their advantages, and they accordingly continued their march to Calais. From this Henry embarked for England, landed at Dover, and marching in triumph from thence to London, entered that city with a long array of captives, and a pageant of imposing splendour such as had been wholly unprecedented in the case of any previous English monarch.

PUNCH AND PUNCH-BOWLS.

On the 25th October 1694, Admiral Edward Russell, then commanding the Mediterranean fleet, gave a grand entertainment at Alicante. The tables were laid under the shade of orange-trees, in four garden-walks meeting in a common centre, at a marble fountain, which last, for the occasion, was converted into a Titanic punch-bowl. Four hogheads of brandy, one pipe of Malaga wine, twenty gallons of lime-juice, twenty-five hundred lemons, thirteen hundredweight of fine white sugar, five pounds weight of grated nutmegs, three hundred toasted biscuits, and eight hogheads of water, formed the ingredients of this monster-brewage. An elegant canopy placed over the potent liquor, prevented waste by evaporation, or dilution by rain; while, in a boat, built expressly for the purpose, a ship-boy rowed round the fountain, to assist in filling cups for the six thousand persons who were present.

Punch is comparatively a modern beverage, and came to us from India, in the latter part of the seventeenth century. One of the earliest printed notices of it, is in Fryer's Travels, published in 1672, where we are told that punch is an encraving liquor, drunk on the Coromandel Coast, and deriving its name from the Indiastan word puarn, signifying five; the number of ingredients required to form the mixture. Sailors brought the novel compound from the east, and for some time it seems to have been drunk by them alone. On the first day that Henry Teonge joined the ship Assistance, as naval chaplain, in 1676, he drank part of three bowls of punch, a liquor very strange to him; and we are not surprised, when he further naively informs us, that he had considerable difficulty in finding his pillow when he attempted to go to bed. How great a stranger punch to him, they soon became intimately acquainted, for in appears from his amusing Diary, that naval officers, in those days, were ready to mix and quaff copious bowls of punch on the slightest provocation.

The Indian potion, making its way from sea to land, met everywhere with a most welcome reception. In 1680, appeared from the pen of Captain Retcliff a doggerel poem, entitled Bacchamat Coelastica, which had an immense popularity, though now almost utterly forgotten. In this effusion, Jupiter is represented with the minor deities on Mount Olympus, hearing for the first time of the novel beverage just invented on earth, and determined to try it. Accordingly, all unite to compound a jovial bowl of punch.

apo1 despactched away one of his lasses,
Who filled up a pitcher from th' well of Parnassus.
To poets new born, this water is brought;
And this they suck in for their morning's draught.

Juno for lemons sent into her closet,
Which, when she was sick, she infused into posset;
For goddesses may be asQualmish as gypies;
The sun and the moon we find have eclipses;
These lemons were called the Hesperian fruit,
When vigilant dragon was sent to look to 't.
Three dozen of these were squeezed into water;
The rest of th' ingredients in order came after.

Venus, the admirer of things that are sweet,
Without her infusion there had been but treat;
Commaned her sugar-leaves, white as her doves,
Supported to the table by a brace of young lovers,
So wonderful curious these delights were,
The sugar they strained through a sieve of thin air.

Bacchus gave notice by dangling a bunch,
That without his assistance there could be no punch,
What was meant by his sign was very well known,
For they threw in a gallon of trusty Langoon.

Mars, a blunt god, though chief of the briskers,
Was seated at table still twirling his whiskers;
Quoth he, "Fellow-gods and celestial gallants,
I'd not give a fig for your punch without Nantz;
Therefore, boy Ganymede, I do command ye
To put in at least two gallons of brandy."

Saturn, of all the gods, was the oldest,
And we may imagine his stomach was coldest,
Did out of his pouch three nutmegs produce,
Which, when they were grated, were put to the juice.

Neptune this ocean of liquor did crown,
With a hard sea-biscuit well baked in the sun.
This bowl being finished, a health was begun,
Quoth Jove, "Let it be to our creature called Man;
'Tis to him alone these pleasures we owe,
For heaven was never true heaven till now."
Since the gods and poor mortals thus do agree,
Here's a health unto Charles his Majesty.

The toasted biscuit, though long since disused as an ingredient of punch, formed, from a very early period, a favourite addition to many old English drinks. Rochester, when instructing Vulcan how to contrive him a drinking-cup, says:

'Make it so large, that filled with sack
Up to the swelling brim,
Vast toasts, on the delicious lake,
Like ships at sea may swim.'

It was from this use of toasted bread or biscuit, that we acquired the word toast as applied, in the first instance, to a beautiful woman, whose health is often drunk and, latterly, to the act of drinking the health of any person, or to any idea or sentiment, as it is termed.

The following anecdote, from the Tatler, tells us how a piece of toasted bread, in a prepared drink, became ideally connected with a lovely woman. It must be premised that, at one time, it was the
fashion for ladies, attired in elegant dresses made for the purpose, to bathe publicly in the baths of the city of Bath. "It happened, on a public day, a celebrated beauty was seen at the Cross-bath, and one of the crowd of her admirers took a glass of the water which the fair one stood, and drank her health to the company. There was in the place a gay fellow, half-fuddled, who offered to jump in, and swore though he liked not the liquor, he would have the toast. He was opposed in this resolution; yet this whim gave foundation to the present honour which is done to the lady we mention in our liquor, who has ever since been called toasting.

The five ingredients—spirit, water, sugar, lemon, and spice—from which punch derived its name, were in time reduced to four:

'Where'er a bowl of punch we take,
Four striking opposites we take—
The strong, the weak, the sour, the sweet,
Together mixed most kindly meet.
And when they happily unite,
The bowl is pregnant with delight.'

Or, as another minor poet thus describes the materials:

'Whilst I sat pensive in my elbow-chair,
Four nymphs appeared, O how divinely fair! Unda came first, in water-colours gay;
Brandysia next, as bright as Phebus' ray.
In a straw gown, then came Limonia keen,
And Saccharissa sweet, was near her seen;
They, to divert my melancholy spirit,
Me, at once, to please and entertain;
And, to relieve my grief-oppressed soul,
To mix their different quotas in a bowl.
First Unda added to the bowl her share,
Water, as crystal clear, her hand as fair:
Brandysia, next her spirit did impart,
To give a warmth and fillip to the heart;
Nor did Limonia make the drink too keen,
For Saccharissa sweetly stepp'd between.
Whilst fairest Unda pours the liquid stream,
And frailest Limonia warms the vital frame;
Whilst Saccharissa and Limonia meet
To form that grateful contrast, famed sour-sweet,
And all together make the bowl complete;
I'll drink; no longer anxious of my fate,
Nor envy the poor rich, nor little great.'

During the whole of the last century, punch ruled with sovereign sway. Besides its peculiar attractions, it had a kind of political prestige, as being the favourite beverage of the dominant Whig party; the Tories, at first, regarding it with prejudiced eyes as a foreign interloper coming in about the same time as an alien usurper. The statements of Royalists and admirals of King William, whether Dutch or English, revelled in 'punch.' The wits and essayists of Anne's Augustan age praised it as the choicest of liquors—need we speak of Johnson, Reynolds, Garrick, Fox, Sheridan, as punch-drinkers? The punch-bowl was an indispensable vessel in every house above the humblest class. And there were many kindly recollections connected with it, it being very frequently given as a present. No young married couple ever thought of buying a punch-bowl; it was always presented to them by a near relative. And the complete change in the feelings of society, as respects drinking-usages, is prominently shewn by the fact, that a punch-bowl was in the last century considered to be a very suitable present from a merchant or banker to a trusty clerk or book-keeper, or from a ship-owner to a sea-captain. Bowls were made and painted with inscriptions and devices for testimonials, denoting the honour and success of whaling-voyage from Liverpool is commemorated by a punch-bowl, given by the merchants to the fortunate captain. This bowl, on which the ship is depicted in full sail, is now in the collection of Mr. Joseph Mayer, the eminent archaeologist.

There is no error in saying, that the punch-bowl was frequently one of the most charming of household effects. In dissenters' families, from its being used as a baptismal-font, it acquired a kind of semi-sacred character; and the head of a household naturally felt a solemn, benignant pride in dispensing hospitality from the vessel in which his father, himself, and his children had been christened. Nor did the high-churchman lessen esteem the bowl. Punch, as the clergy admitted, was a thoroughly orthodox liquor; for though excess in wine was reproved by the Scriptures, there was not, from the first chapter of Genesis to the last in Revelation, one word said against punch!

Songs, innumerable, proclaimed the virtues of punch, and extolled it as a panacea for all diseases. Dr. Short, a physician of great ability and repute, writing in 1780, says that 'punch is an admirable liquor—the best liquor in the world—the universe cannot afford a better liquor for students.' But doctors differ, and Dr. Cheyne, with much better judgment, asserted that there was not one salutary ingredient in it, except the water. Alluding to its Indian origin, he termed it a 'heathenish liquor,' and stigmatised it as being 'nearest arsenic, in its deleterious and poisonous qualities.' It was, no doubt, the unhealthy qualities of punch, the horrid headaches it inflicted, that drove it completely out of use. Besides, it was a terror to tidy housewives; 'the nastiest, sloppiest alster,' as an old lady once told the writer, ever placed on a dining-room table. For a continual filling of glasses from flowing bowls, with continually increasing unsteadiness of hand, soon made a bewitched table and a drenched carpet. Punch-stains, too, were in some materials ineradicable—in black cloth particularly so, leaving small holes, as if the cloth had been burned by a strong acid.

In Scotland, the jolly topers of its western metropolis, the city of Glasgow, long enjoyed an undisputed pre-eminence in the manufacture of punch. The leading ingredients, rum and lemons, were compounded with sugar and cold water, after a peculiarly artistic fashion, which was supposed to be only known to the initiated. This famed liquor came into disrepute, on the occasion of the visitation of the cholera to Scotland, about 1833. Being proscribed by the medical faculty, it lost its hold on public favour, a position which it has never since regained. Advanced ideas on the question of temperance, doubtless also had their influence in rendering obsolete, in a great measure, this beverage, regarding which some jovial spirits of the old school, reverting sorrowfully to their youthful days, will inform you that gout has considerably increased in the west.
since the abandonment of punch for claret and champagne.

As may readily be supposed, many of the old tavern signs displayed a punch-bowl. Addison, in the *Spectator*, notices a sign near Charing Cross, representing a punch-bowl curiously garnished, with a couple of angels hovering over, and squeezing lemons into it. The most popular tavern of the last century that exhibited a punch-bowl on its sign, was the 'Spiller's Head,' in Clare Market. Spiller was a fellow of infinite jest; he started in life as a landscape painter, but taking to the stage, became a very popular actor, and was the original 'Mat of the Mint' in the *Beggar's Opera*. Akerby, his biographer, an artist also, says that Spiller, in the character of Mat, 'outdid his usual outdoings to such a degree, that whenever he sung, he executed his part with so truly sweet and harmonious a tone, and in so judicious and ravishing a manner, that the audience could not avoid putting his modesty to the blush by repeated clamours of encore.' The history of the sign is curious. Spiller, as may be learned from one of his benefit-tickets, engraved by Hogarth, was not unacquainted with the inside of a debtor's prison. During his last confinement, he so charmed one of the turnkeys with his wit, that the man, on Spiller's liberation, resigned office, and took a tavern, so that he might oftener enjoy the laughter-provoking comedian's company. As many notabilities flocked to the house for the same purpose, the original sign was considered scarcely suitable; and so, as Akerby informs us, 'by the concurrent desire of an elegant company, who were assembled there over a bowl of arrack-punch one evening, and by the generous offer of Mr Laguerre, who was one of the company, and as excellent a master in the science of painting as music, the sign was changed from the 'Bull and Butcher' to 'Spiller's Head,' and painted by the said Mr Laguerre gratis, in a manner and with a pencil that equals the proudest performances of those who have acquired the greatest wealth and reputation in the art of painting.'

The accompanying illustration, representing Spiller with a punch-bowl before him, is taken from an engraved copy of the sign in question. But here this could 'be painted and set up.

Spiller, struck down by apoplexy on the stage, had fallen a victim to the pernicious bowl. And so the following lines were painted beneath the figure:

'View here the wag, who did his mirth impart,
With pleasing humour, and diverting art.
A cheerful bowl in which he took delight,
To raise his mirth, and pass a winter's night.
Joyful and merry did he end his days,
In comic scenes and entertaining plays.'

The 'Spiller's Head' was a favourite haunt of the wits and artists of the Hogarthian era. At a later period, when Clare Market was voted low, and 'Old Slaughters' became the artists' house of resort, they were waited on there by a witty waiter, whom they named Suck, from his habit of slowly drinking out of the bowls of punch, as he carried them upstairs to the company. This practice, however disgusting it would be considered now, was then looked upon as a mere trifling indiscretion, and forgiven in consideration of the waiter's wit and birth, he being, according to his own account, an illegitimate son of the renowned Spiller.

**THE CHURCH BUILT BY THE PRESIDENT OF THE MEDMENHAM CLUB.**

On the 25th of October 1761, the six musical bells of West Wycombe chimed their first peal, to announce the completion of the tower which forms part of one of the most extraordinary churches in the kingdom. The old church was entirely demolished, with the exception of a portion of the tower and chancel, which were again united by the new nave, and made to suit its peculiar and original design. The only door into it is through the tower at the west end; and such is the effect of its general appearance, that if a stranger were brought into it blindfolded through the grave-yard, he could scarcely believe himself in a place of Christian worship. It is a large oblong room, sixty feet in length, and forty in width; the ceiling is flat, and painted in mosaic pattern, with a festooned border on the side-walls, where they join the ceiling. The windows, which are large and numerous, are the common sashes of the period, each with a
window-seat, that opens, so as to form a cupboard; the floor is paved with black and white marble in lozenges; the seats are moveable benches. The pulpit and reading-desk, which stand respectively on each side of the entrance to the chancel, are mahogany arm-chairs, with a book-stand in front. Each stands on a low chest of drawers, and when required for divine service, the drawers are pulled out to form steps for the minister to enter. The clerk’s desk is somewhat similar, but stands at a distance down the nave. The font, placed in the centre, is of marble; it is about the size, and has the appearance of a small wash-hand basin; four doves are placed round the verge of the font; and it rests on a slender pillar, round which a serpent is entwined, as if pursuing the doves. It is said that the nave was thus constructed, that it might be used for convivial and other secular meetings, the window-seats being wine-bins, and cupboards for domestic utensils.

"Ah! well-a-day!—but this seems wondrous strange! Is this a mart where gossips sell and buy? A room for lectures, or a stock exchange? Is that, which seems a pulpit to the eye, A desk, where auctioneers their labours ply?"

Moutrie.

The chancel, which is very small, can scarcely be seen from the nave, for the entrance is so blocked up on both sides by the manorial pews, or rather galleries, that the passage between is exceedingly narrow. When entered, it has a rich and gorgeous appearance. The ceiling is brilliantly painted with a representation of the Last Supper; the windows are filled with stained glass; the altars are of massive oak, elaborately carved; the communion-table inlaid with mosaic-work; and the floor paved with fine polished marble. Yet the whole has a secular appearance.

The tower, which has large unsightly windows, is surmounted by a low spire, on which is placed a large hollow ball forming a room, with a seat round it that will hold twelve persons. But as it is entered by a ladder outside the spire, few persons have the nerve to make themselves acquainted with its interior. On the north wall, outside the church, which is dedicated to St Lawrence, there is a representation of him suffering martyrdom on a gridiron, with this inscription: 'Though I give my body to be burned, and have not charity, it profiteth me nothing.' And on the south side, there is a sun-dial, with this text: 'Keep thy tongue from evil-speaking, lying, and slandering.' Near the east end of the church is erected a large hexagonal mausoleum, without a roof. This singular building contains niches and recesses for sepulchral urns and monuments, and stands, together with the church, on a very high hill apart from the village. When seen at a distance, it is impossible to describe the odd appearance which the whole pile presents—the ball above the tower looking as if flying in the air.

These remarkable structures were built by the gay and eccentric Sir Francis Dashwood, about the time he became Lord le Despencer. He was the originator and president of the notorious Medmenham Club, or Monks of St Francis, as they named themselves, assuming the garb, but not the austerities, of that order. About half-way down the hill is an excavation, a quarter of a mile long, and running under the church, which is also said to have been his lordship's work, but more probably he only adapted it to his fancy. It is entered by a massive door, formed in an artificial ruin, and
consists of a series of lofty caves, connected by a passage, which is in some places divided into two or three parts by huge pillars of chalk, left to support the roof. Near the middle of the excavation, there is a small pool, which is now crossed by stepping-stones, but formerly, it is said, it could only be passed in a boat. The excavation terminates in a large, lofty, circular cavern, with a vaulted roof, in which is a book for a lamp or chandelier. Here, according to local tradition, the Medmenham Club occasionally held its meetings. And certainly, if its president wished to be near his home, this spot would be convenient, being only half a mile distant. So also, if the club desired special secrecy, no place could be more suitable, seeing that when the door at the entrance was barred from within, and the pool, which the monks called the Styx, was crossed in their boat, their doings in this cavern would be as secure from interruption from the rest of the world, as if they were actually being enacted in the infernal regions themselves. But it is probable, notwithstanding all that has been said on the subject, that nothing was really practised either here, or at Medmenham, their usual place of meeting, more profane or immoral than what was openly practiced in most of the convivial societies of that period. This was strenuously maintained in his old age by the last surviving member of the society. And doubtless it was only the mystery and eccentricities with which they chose to invest their proceedings, that gave rise to so many foolish tales and conjectures respecting their doings. As to the assertions and insinuations against them by the author of Chrysalis, they are unworthy of credit, since his description of their place of meeting shows that he had no personal knowledge of the subject. Medmenham Abbey is not, as he states, in an island, but beautifully situated on the north bank of the Thames; and the room in which the club met remains just as described by Langley in 1797, and is now frequently used by picnic-parties. The rest of the building, though occupied by cottagers, has been so slightly altered externally, that the whole has realised the appearance predicted by Langley seventy years ago. The additional ruined tower, cloister, and other corresponding parts, as he says, were made with so much taste and propriety, that, now they have become clothed with ivy and mosses, they can scarcely be distinguished from the ancient remains; and the whole building has now assumed such a natural and picturesque appearance, that more than one eminent artist has chosen it for the subject of his pencil, probably regarding the whole as the interesting remains of an ancient monastery.

OCTOBER 26.

St Evaristus, pope and martyr, 112. Saints Lucian and Marcian, martyrs, 260.

Born.—Charles François Dupuis, astronomer, 1742. Tric-Chateau, near Chaumont; George James Danton, revolutionary leader, 1759, Avr-wor-Aube.

Died.—Abubeda, Mohammedan historian, 1831, Syria; Samuel Pseudonis, distinguished jurist, 1694, Berlin; Sir Charles Eden, portrait-painter, 1723; Dr Philip Doddridge, eminent divine and author, 1751, Lisbon.

Danton, more than any man whom the French Revolution threw to the surface, realises the popular idea of a revolutionist. In person he was almost gigantic—tall and muscular. His head was large, and covered with stiff black hair, and his eyebrows bushy. His features were bold and irregular, and were by some called ugly; but when lit up by the fire of his intellect, their coarseness disappeared in harmony. His voice was powerful—in the outbursts of his oratory, terrible—and was likened to thunder and a lion’s roar. Courage, audacity, and power were manifest in his bearing, and his career did not belie his appearance.

He was born in 1759 at Arcis-sur-Aube, of well-to-do farming-people, and was educated for a lawyer. He went to Paris to finish his studies, and there commenced practice as a barrister. He sought the acquaintance of Mirabeau, Camille Desmoulins, Robespierre, Marat, and others, notable for their devotion to revolutionary ideas. He lived economically, and spent his days in the assembly and his nights at the clubs. He ventured to speak, and the discourse of the people of the chamber to the orator a great power had arisen. Danton attached himself to the Girondists, and, says Lamartine, ‘Madame Roland flattered him, but with fear and repugnance, as a woman would pat a lion.’

Daily he grew in popularity, and with Marat led the formidable club of Cordeliers. The court sought his influence by bribes, and in the spring of his strength he exclaimed: ‘I shall save the king or kill him!’ The revolution, however, was greater than Danton. He who would live in it was forced to run with it or be trampled in its path. After the flight of Louis to Varennes, he advocated his dethronement, and declared in the assembly that hesitation in pronouncing the throne vacant, would be the signal for general insurrection. When Prussia, in 1793, invaded France in vindication of royalty, and spread terror on every side, Danton, by his brave words, gave courage to the nation. ‘Legislators!’ said he, ‘it is not the alarm-cannon that you hear: it is the pas-de-charge against our enemies. To conquer them, to hurl them back, what do we require? Il nous faut de l’audace, et encore de l’audace, et toujours de l’audace: To dare, and again to dare, and without end to dare!’ In a few weeks, fourteen republican armies were in the field, repelling the allied forces with a vigour and success which set Europe aghast. For the king’s death Danton voted, but, like the Abbé Siéyès, assigned no reason. In his defiant style, he said: ‘The coal-seekers threaten us; we hurl at their feet, as gage of battle, the head of a king.’

Under the Revolution, Danton was first a minister of justice, and then president of the Committee of Public Safety—a body of six men, who were intrusted with absolute executive power, and who therefore bear the infamy of the Reign of Terror. In the course of events, Robespierre and Danton came face to face as rivals for the leadership of Paris, and in Paris, of France. Danton was luxurious, reckless, generous, and frank; on the other hand, Robespierre was sanguine, cold, severe, cautious, and uncompromising. In Robespierre’s presence, Danton’s power seemed to desert him, as
SIR GODFREY KNELER.

SIR Godfrey Kneller was the favourite painter of portraits in England, from Charles II.'s time to the reign of George I.

He was born at Lubeck in 1648. After having been some time a painter, he came to England in the ordinary course of his travels. When here, by a series of accidents, he was employed to paint Charles II. and the Duke of Monmouth, and gave such satisfaction, by his portraits of these personages, that he found it profitable to remain in the country.

HORACE WALPOLE maintains that Kneller, had he chosen to turn his attention to high art, would have made an artist of the first class: as it was, he only painted portraits, and some of those in a very inferior manner. The reason which he assigned for his choice of portrait-painting above other branches of art, was that of a man who cared more for his rank on this earth than his rank in the universe. 'Painters of history,' he observed, 'make the dead live; and do not begin to live themselves till they are dead. I paint the living, and they make me live.'

Certainly, so they did. Kneller lived in magnificent style, lost £20,000 by the Southsea affair, and died in possession of £2000 a year. His accumulation of wealth bears witness to his popularity. He had the honour of painting ten crowned heads. These were Charles II., James II. and his queen, William and Mary, Anne, George I., Louis XIV., Peter the Great, and the Emperor Charles VI. Besides these, he painted many other illustrious personages; among whom were Addison, Bishop Burnet, John Locke, Lady Mary Wortley Montagu, Pope, Newton, &c. He painted the beauties of Hampton Court for King William, and likewise perpetrated on canvas the members of the Kit-Cat Club. These celebrated portraits of the most distinguished Whigs of that day were painted for Jacob Tonson, the secretary of the club.

Mr Christopher Cat, pastry-cook, of King Street, Westminster, and keeper of the tavern where the club met, was thus immortalised.

James was sitting to Kneller at the very minute that the news reached him of the arrival of the Prince of Orange. The picture was for Pepys, who had been a favourite and faithful servant. James told the painter to proceed with his work, that his good friend Pepys might not be disappointed.

Kneller was knighted in 1699 by William, and made a baronet in 1715 by George I. He was always a vain man, a weakness for which his friend, Pope, incessantly ridicules him in his letters. The poet furnished an inscription (by no means a brilliant specimen of his genius) to Sir Godfrey's monument in Westminster Abbey, for the erection of which the latter himself bequeathed the sum of £300.

THE FOUNDER OF MERTON COLLEGE.

A codicil to the will of Walter de Merton, leaving the residue of his property to his college, bears date October 26, 1277. This ecclesiastic was one of the four lord-chancellors to whom Oxford is so largely indebted. These were Walter de Merton, who founded Merton College; William de
Wykeham, the founder of New College; William of Waynflete, who founded Magdalen College; and Thomas Wolsey of Ipswich, the founder of Christchurch College. Walter de Merton may be said to have exercised the most influence of the four upon Oxford, because it was he who introduced the collegiate system; the others only elaborated and extended it. In the same way Merton College must be considered the most interesting, if not the most beautiful, because it was the germ whence the rest were developed. The foundation of this establishment appears to have been a scheme to which Chancellor Merton gave his whole heart. There were, doubtless, halls of greater antiquity, but they consisted only of lodgings for the scholars. The scheme of Walter provided a chapel, with residence for chaplains, and accommodation for a warden having charge of the scholars, within the same premises. The endowments speak of a strong influence exerted on behalf of his favourite project, for the lands forming great part of the revenue are widely scattered, meaning, it would seem, the gifts of numerous nobles. There are lands and houses and chantries of churches beyond the Tyne, pertaining to Merton College.

Following the rule, that the affix to a Christian name denoted a birthplace, Walter's biographers have mentioned Merton, in Surrey, as the place of his nativity. This is, however, conjectural; and there is equal probability that he was born at Basingstoke, where it is certain his parents lived, died, and were buried. In his after-days, he founded a hospital in Basingstoke to the memory of his father and mother. The day of his death, and the place at which it occurred, are as uncertain as those of his birth; but his will directed that he should be buried in his cathedral of Rochester. The intermediate events of his life are scarcely better known. He was lord-chancellor of England more than once; but whether he received the seals of office twice or thrice, is not quite apparent. Bishop Hobhouse considered he was chancellor twice during the reign of Henry III.; and it is certain that he fulfilled the duties of the chancellorship for the two years preceding the coronation of Edward I. When that event took place, Walter retired from public life, and settled at the seat of Rochester. A view of his life is a commentary upon his times. Scholar and ecclesiastic, he was chosen by the most powerful nobles in the land, who would not so trust each other, to hold the highest post.

THE TWO BIG BENNS.

No bell ever underwent such a career of misfortune as that which was intended for use in the new Houses of Parliament. From the time when that immense structure was commenced, it was resolved that both the clock and the hour-bell should be the largest ever seen in this country; but it was not till 1844 that the late Sir Charles Barry solicited tenders for their construction. The first of these courses was the clock, and it would be of little use here to elucidate, fifteen years elapsed before the clock was finished and actually at work in its place; this was in 1859. The clock is not only the largest but one of the most accurate we possess. The ponderous weights hang down a shaft 160 feet deep, and require winding-up only once a week. The pendulum, 15 feet long, weighs 680 pounds; and so delicate is its action, that a small weight of only one ounce, placed on a particular part of the apparatus, will alter the rate of the clock one second per week. On the four sides of the clock-tower are dial-rooms, each a large apartment, traversed by mechanism which communicates motion from the clock to the hands. Each of the four clock-dials is 22 4 feet diameter; and the mere cast-iron framework of each dial weighs no less than 4 tons. The hour-figures are 2 feet high and 6 feet apart, and the minute marks are 14 inches apart. The outer point of the minute-hand makes a sudden leap of 7 inches every half minute. The hands weigh more than two hundredweight the pair; the minute-hand being 16 feet long, and the hour-hand 9 feet. In order to render the dials visible at night, each dial-face is glazed with enamelled or opalised glass, with 60 gas-jets behind it.

Such is the magnificent clock, for which suitable bells were sought to be made. The original scheme was for a clock that would strike the hours on a bell of eight to ten tons, and chime the quarters upon eight smaller bells. It was afterwards decided that there should be only four bells for the chimes, in addition to the great hour-bell. In the four corners of the bell-room these bells are placed; the first with a weight of 4 4 tons, and yielding the musical note B; the second, weight 2 tons, and note E; the third, weight 1 3 ton, and note G; and the fourth, weight 1 4 ton, and note C. By varying the order in which these are struck, they produce four chimes or partial melodies, at the four divisions of each hour; and at the full or completed hour, the whole sixteen sounds form a simple but beautiful melody in the key of E major. These four bells were made and hung nearly in the manner first designed; but the fifth—the king of the belfry, that was to hang in the vacant space between them—has not been so fortunate. It was to have been about 9 feet in diameter, 9 inches thick at the sound-bow, and to weigh 14 tons—nearly three times the weight of the great bell of St Paul's Cathedral. It was to be struck by a hammer of a ton weight, and was then to yield the note E, one octave lower than the E of the chimes, and forming a musical chord with the whole of them. The bell was designed by Mr E. B. Denison, who, as an amateur, has displayed considerable skill in the theory of clock and bell work. After much disputing between commissioners, architects, and others, it was cast in August 1856, at Stockton-on-Tees, in Yorkshire. The mould was six weeks in preparation. The metal was melted in two furnaces, each containing ten tons. Eighteen out of the twenty tons of molten metal were poured into the mould, producing a bell about 8 feet high and 9 4 in diameter at the mouth. When turned and trimmed and finished, it weighed about 15 tons—a little more than had at first been required. This ponderous mass was then carefully conveyed to London, and placed for a time at the foot of the clock-tower, where it was visited by multitudes of persons. Every Saturday it was struck a certain number of blows, that the quality and loudness of the sound might be tested. On one occasion,
the E was found to be a dull and uncertain sound; and this leading to a close scrutiny, it was found that, owing to a flaw in the metal, the bell was practically useless, and would ultimately be broken by the blows of the hammer. It was deemed a fortunate circumstance that the discovery was made before the bell had been raised into the tower. Offer was made to have been named 'St. Stephen'; but a random sobriquet used in the Times, 'Big Ben,' caught the taste of the public; and in October 1867, it was known all over the country that 'Big Ben was cracked.' There then ensued another series of disputations, accusations, and counter-accusations. Another bell was cast by another bell-founder; it was somewhat less in weight than the former, but was made to yield the same tone. In October 1868, it was raised into its place, a task requiring very perfect appliances; for the weight, raised to a height of nearly 200 feet, was not less than 25 tons, or 56,000 pounds—including bell, cradle, chains, and tackle.

Thus was Big Ben the second cast on the 10th of April, taken out of the mould on the 24th, sent to Wellingborough, tried on the 28th, tried on the 1st and 3rd, tried on the 18th of June, and finally raised to its destined place in October. During November, Big Ben underwent a long series of blows with hammers weighing from 4 to 7 hundredweight each. The clock was put up in its place, and for some time the inhabitants of the metropolis heard the chime-bells every quarter of an hour, and Big Ben every hour. But another misfortune arose: Ben, the second cracked like Ben the first. Then ensued an accusation, a bitter controversy, and a lawsuit; and then fragments of Big Ben were analysed by Professor Tyndall and Dr. Percey; while Professor Airy tried to ascertain whether the bell might still be used, though cracked. The subject of Big Ben became almost ludicrous. Not only was the deep E of the bell not to be heard, but the other four were silenced also, and the clock was stopped; insomuch that Earl Derby, in June 1860, said in the House of Lords: 'We all know the circumstances under which we have been deprived of the doubtful advantage of hearing the tones of the great bell; but when a clock ceases to address itself to the sense of hearing, that is no reason it should decline to present itself to the sense of sight. One of the hands has disappeared altogether, and the other stands at twelve; so that it has the merit of being right at least once in the twelve hours.' The earl spoke of the 'doubtful' advantage of hearing the bell. It appears that the tone, when very slowly repeated, had a melancholy and depressing effect on many persons, and was not much liked by those who were attending parliament, or the other place. On the other hand, Mr. Earl Grey, speaking after the Earl of Derby, rejoiced that the great bell had been cracked, and that no attempt would be made to make the clock speak to their ears again in the old tone.

The two Big Bens cost the country nearly £4000, all expenses included. One was broken up and removed; the other, the last of flaw, tried for a while, was condemned, widened by filing, in order to prevent vibration; in calm weather it can now be heard over the greater part of London.
doctrines, who denounced the cruel persecutions of the papists, not on the ground of religious liberty, but on that of impiety in destroying the holders of the true faith. All sects, and even that to which Servetus belonged, agreed in the duty of exterminating heretics and unbelievers by the sword. Viewed in this light, we can therefore by no means regard Calvin as the unwarranted murderer of Servetus, seeing that he had the approval of the most eminent divines and writers of his day for the deed which was perpetrated under his sanction. But, abstractedly considered, it was a most foul and unjust action, and has left an indelible stain on the memory of the great reformer. An offence was committed, in the first instance, against the law of nations, by assuming jurisdiction over an absolute stranger, a citizen of another country, and who was merely passing through the city of Geneva. No moral or political offences were imputed to the prisoner, who seems, through his whole life, to have been of the most unblemished behaviour, and however offensively he might at times himself, had never committed a greater transgression than claiming the right of interpreting the Scriptures according to the dictates of his own judgment. That he was sincere in his belief, is evident from the constancy with which he maintained his principles to the last. And the injustice of refusing to allow him the aid of an advocate—though such an interdiction was in accordance with the laws of the state—and the strong personal animus by which Calvin seemed to be inspired in his procedure towards Servetus, must ever excite the utmost indignation and regret.

The personal character of this victim of intolerance has been variously represented by the partisans and enemies of Calvin—the former depicting him as a man of weak intellect, arrogant and overbearing, but withal cowardly and subservient, and displaying in his conduct a total absence of truth and candour; whilst by the latter he is held up to admiration, as possessing every quality which contributes to form a hero and martyr. Neither of these portraits is correct. It must be admitted that in his defence before the inquisitors at Geneva, he made many statements which, whatever palliation might be made for him unthinking, were indubitably false; and that when defending himself before the council of Geneva, he was most intemperate in his abuse of Calvin. But, on the other hand, there can be no doubt of his sincerity in the pursuit of truth, however much opinions may differ as to his having attained that object. His moral purity was unimpeachable, and in point of learning, industry, and scientific skill, he must be admitted to have fallen little, if at all, behind the most distinguished men of his century.

IDA PFIEFFER.

Among the many travellers who at different times have journeyed over and explored the various countries of our globe, the name of Madame Ida Pfeiffer records itself as one of the most extraordinary and peculiar of the class. The mere fact of a woman accomplishing such an amount of travel, would in itself be an unprecedented circumstance; but when we reflect, in addition, that by herself, unattended, and but scantily provided with funds, she forced her way
through savage and inhospitable lands, where in some cases the foot of the European had never before trod, and where she experienced every imaginable species of danger and privation, our wonder and interest are heightened tenfold, and with this sense of lively curiosity to know something of the personal history of so unaccustomed and adventurous a wanderer. This feeling is in nowise diminished by the perusal of the various narratives of her journeys, written in the most simple, unpretending style possible, without making the least pretence to scientific or politico-economical knowledge, but displaying, nevertheless, a fund of shrewd observation and sound common sense, combined with great dramatic and descriptive interest.

The maiden-name of this celebrated traveller was Reyser, and she was the third child of a wealthy merchant in Vienna, where she was born in October 1797. Being the only girl in a family of six, she freely shared in childhood in the sports of her brothers, and was encouraged in such tender years to show her part in boy's dress, and take part in all sorts of rough games and pranks. This state of matters continued till her father's death, when Ida was about nine years old. A few months after this event, her mother, thinking she had worn the male attire long enough, obliged her to change her trousers for petticoats, an order which occasioned her such grief and indignation, that she actually made herself ill, and by the doctor's advice she was allowed to resume her former costume, and continued to wear it till the age of thirteen. For a time she maintained the character of an incorrigible hoyden. Considering the pianoforte as too much of a feminine instrument, she resisted long being taught its use, and would actually often cut her fingers, or burn them with sealing-wax, to unfit them for practising. Had she been allowed, she would have gladly made herself a proficient on the violin. While she was still a very young girl, a young man was received into Madame Reyser's house as tutor to the family, and it was not long before a warm attachment sprang up between him and Ida. Influenced by this new feeling, she abandoned her old masculine tendencies, and resolved herself absolutely to embrace the acquisition of female accomplishments, useful and ornamental. The object of her attachment was in every way worthy of her, of unblemished character and manners, and greatly beloved by the whole family, her mother included. Having obtained subsequently a good situation in the Austrian civil service, he made a formal offer of his hand; but through some unaccountable caprice, her mother positively refused her consent, and even regarded the young man from that time forward with feelings of the deepest aversion. Ida inherited a considerable fortune from her father, and it was probably with the idea of her contracting a splendid alliance that she was thwarted in her present wishes. But though many other eligible suitors professed themselves, she would listen to none of them, and the result was a sad series of domestic contentions. Worn out at last by importunity, she consented to receive the proposals of Dr Pfeiffer, an advocate of considerable celebrity in Lemberg, but twenty-four years older than herself, and a widower with a grown-up son. He was a man of the highest honour and integrity, almost too much so, as would seem from his subsequent history; and though there was never any profound feeling of sympathy between him and his wife, he treated her throughout with the most uniform kindness and attention. But in the event of the denunciation of abuses stirred him up many enemies, and he was obliged to resign his appointment of counsellor at Lemberg, and remove to Vienna, where from being looked on by the authorities with suspicion, as an enemy of existing institutions, the same star of ill-fortune pursued him, and he was soon reduced to great straits. His generosity also was excessive, rendering him the dupe of numerous individuals, who borrowed large sums of money from him, including his wife's fortune, which was lent to a friend in pecuniary embarrassment, and entirely lost. The distress to which his family was subjected in consequence of these acts of improvidence is thus stated by Madame Pfeiffer:

'Heaven only knows what I suffered during eighteen years of my married life—not, indeed, from any ill treatment on my husband's part, but from poverty and want! I came of a wealthy family, and had been accustomed, from my earliest youth, to order and comfort; and now I frequently knew not where I should lay my head, or find a little money to buy the commonest necessaries. I performed household drudgery, and endured cold and hunger; I worked secretly for money, and gave lessons in drawing and music; and yet, in spite of all my exertions, there were many days when I could hardly put anything but dry bread before my poor children for their dinner. I might certainly have applied to my mother or my brothers for relief, but my pride revolted against such a course. For years I fought with poverty, and concealed my real position: often was I brought so near to despair, that the thought of my children alone prevented me from giving way. At last the urgency of my necessities quite broke my spirit, and I had recourse several times to my brothers for assistance.'

Perseverance and self-denial enabled Madame Pfeiffer to struggle through her difficulties, give her two sons a good education, and see them prosperously establish themselves now at liberty to indulge that darling wish of her heart, the desire of seeing strange countries, which had haunted her from girlhood, but which circumstances had hitherto prevented her from gratifying. The feeling may indeed be regarded as eccentric, which could prompt the mother of a family, at the age of forty-five, and almost wholly inexperienced in travelling, to set forth on such an expedition. But she quitted no duties at home to embark on it, and as she had so bravely fulfilled these in the day of privation and trial, she may well be excused for following her own inclinations afterwards, when the doing so involved no dereliction of maternal or conjugal obligations. The funds which she possessed were by no means ample, but adversity had taught her economy, and her own nature was one that shrank not from hardship and privation. Her first journey was a visit to the Holy Land, which she accomplished in 1843, proceeding down the Danube to the Black Sea and Constantinople, thence to Syria and Palestine, and returning by way of Egypt, Sicily, and Italy. An
account of her tour was published the following year under the title of *A Journeys to the Holy Land*, and, meeting with considerable success, provided her with funds for a second journey, which she accomplished in 1845, to Iceland and Scandinavia. Her journal of this expedition was also published, and by the proceeds which she derived from this, as well as from the sale of the geological and botanical specimens which she had collected, she was enabled to make a third and more ambitious undertaking—that of a voyage round the world. In June 1846, she sailed from Hamburg for Rio Janeiro, from thence rounded Cape Horn to Valparaiso, crossed the Pacific to Otaheite, and afterwards visited China, Ceylon, and India, traversing the latter country from Calcutta to Bombay. She then sailed for Bushire, in Persia, the interior of which country she intended to have visited, but was prevented by the disturbances which had broken out there, and directed her steps instead to Asiatic Turkey, where she visited Bagdad, the ruins of Babylon and Nineveh, and afterwards passed through Armenia and the Caucasus to the Black Sea. In this portion of her journey she underwent the greatest hardships in the shape of heat, discomfort, and scanty fare, besides being exposed to constant danger from the attacks of robbers. After voyaging across the Black Sea to Constantinople, and touching in her way at Sebastopol and Odessa, she returned by Greece and the Ionian Islands to Trieste, and arrived in Vienna in November 1846, in the midst of the confusion after the recapture of the city by Prince Windischgrätz from the revolutionary party.

The interest already excited in Madame Pfeiffer was greatly intensified by the publication of the narrative of her third journey, which, under the title of *A Lady's Voyage Round the World*, was translated both into English and French with much success. Her craving for travel was far from being extinguished, and rather stimulated by what she had gone through. A grant of £160 was made her by the Government of Austria, and with her resources thus supplemented, she set out upon a second voyage round the world, proceeding first to London, and thence taking ship for the Cape of Good Hope. Arriving here, she hesitated awhile between an exploring expedition into the interior of the African continent and a voyage to Australia, and at last sailed to Singapore and Sarawak. She was hospitably received by Sir James Brooke, and traversed a great portion of Borneo, including the country of the savage Dyaks. She then visited Java and Sumatra, including in the latter island the cannibal tribes of the Bataas, where she made a narrow escape from being killed and eaten, and afterwards voyaged to the Moluccas and Celebes. From this she crossed the Pacific to California, and subsequently sailed to Panama and Lima. Her intention was to cross the Cordilleras to the Amazon, and make her way down that river to the east coast; but after several attempts, in which she visited Quito and witnessed an eruption of the volcano of Cotopaxi, she found herself so thwarted by the treachery of the natives and other causes, besides narrowly escaping death on two occasions by drowning and a fall from her mule, that she abandoned all idea of proceeding further in this direction, and crossing the Isthmus of Panama to Aspinwall, sailed to New Orleans. She then made the tour of the United States and Canada, and having embarked for England, landed at Liverpool in the end of 1846. Before returning home, she made a voyage to the island of St Michael, in the Azores, where one of her sons was settled, and reached Vienna by way of Lisbon, Southampton, and London. An account of her adventures appeared shortly afterwards, under the title of *My Second Journey Round the World*.

After having scarcely rested for a year at home, Madame Pfeiffer set out again on her travels, her main object of curiosity being the island of Madagascar, so thoroughly still an almost terra incognita to Europeans. Proceeding through Germany to Berlin and Hamburg, she sailed for Holland, and there, after previously making excursions to London and Paris in quest of information regarding her route, embarked for Cape Town, and from thence made her way to Madagascar by the Mauritus. After landing in the island, and visiting Tamanarivo, the capital, she was glad to retreat from it with life, having undergone an attack of the malignant Madagascar fever and a captivity of a fortnight, during which she and her European companions were almost hourly expecting death by the orders of the blood-thirsty queen Ranavola. And from the hardships and malady which had befallen her, Madame Pfeiffer was destined never to recover. Having returned to the Mauritius, she was attacked with such a violent access of fever, that her life was despaired of; she rallied, nevertheless, so far as to be able to embark for London, and arrived there in the month of June 1858. From this she sailed to Hamburg and then paid a visit to Berlin and Cracow, in the hope of re-establishing her health. For some time she steadily resisted all the solicitations of her friends to return to her native Vienna; but finding her illness rapidly gaining upon her, she at last consented, and was removed there to the house of her brother, Charles Reyner. Here, after undergoing great suffering for about a month, she expired in October 1858. Her diary of the last and fatal journey to Madagascar was given to the world after her death by her son Oscar.

October 28.

St Simon the Canaanite, apostle. St Jude, apostle. St Faro, bishop of Meaux, confessor, 872. St Neot, anchorite and confessor, 9th century.

Born.—Desiderius Erasmus, distinguished scholar and writer, 1467, Rotterdam; Dr Nicholas Brady, versifier of the Psalms, 1659, Brandon, Cork; Sir David Dalrymple, Lord Hailes, historical writer, 1776, Edinburgh; Emmanuel Marshal Grouchy, Bonapartist commander, 1766, Paris.

Died.—Maxentius, Roman emperor, drowned in Tiber, 313; Alfred the Great, king of England, about 900, Winchester; Michael le Teller, chancellor of France, 1665, Paris; John Wallis, eminent mathematician, 1703, Oxford; John Locke, philosopher, 1704, Oates, Essex; Prince George of Denmark, husband of Queen Anne of England, 1708; John Smestow, engineer, 1792, Authorpo, near Leeds; Charlotte Smith, novelist, 1808, Tiford, Surrey.
with the despoticm and burdensome ordinances of the old faith, or the austerities and fiery zeal of the new. It is stated, however, that the friends in whose arms he expired were Protestants, and that, in his dying moments, he commended himself to God and Christ alone, rejecting all the ceremonies of the Romish Church.

THE ALFRED JEWEL.

It may well be said, that of the many monarchs who have been endowed with the appellation Great, Alfred of England was one of the very few who really merited the distinguished title. The materials for his history are indeed scanty, yet they team with romance of the highest and most instructive character—namely, that which represents a good man heroically contending with the greatest difficulties, until, by energy and perseverance, he ultimately overcomes them. His desperate conflicts with the invading Danes, and the various fortunes of the respective parties; Alfred's magnanimity and prudence, whether as conqueror or fugitive; his attachment to literature and the arts; his unwearied zeal to promote the moral, social, and political progress of his subjects—all make even the minutest details of his history of surpassing interest to all educated Britons.

The remarkable jewel, represented in the engraving, was found, in 1893, at Newton Park, a short distance north of the site of Ethelney Abbey, in Somersetshire, near the junction of the rivers Parret and Thone. It is now preserved in the Ashmolean Museum, at Oxford; and, independent of its bearing the name of Alfred, is a most interesting specimen of Anglo-Saxon art. The inevitable melting-pot has left few similar specimens of that age, but we know there must have been many, for the business of a goldsmith was held in high repute by the Anglo-Saxons, and a poem in that language,
on the various conditions of men, contains lines that may be translated thus:

‘For one a wondrous skill
in goldsmith’s art
is provided,
full oft he decorates
and well adorns
a powerful king’s noble,
and he to him bestows
land in recompense.’

As an essay on the importance of art, it informs us that, when the great monarch had secured peace and protection to his subjects, he resolved to extend among them a knowledge of the arts. For this purpose he collected, from many nations, an almost innumerable multitude of artificers, the most expert in their respective trades. Among these were not a few workers in gold and silver, who, acting under the immediate instruction of Alfred, executed, with incomparable skill, many articles of these metals. From the circumstance of the jewel having inscribed on it, in Saxon characters, *Alfred me haest geworcan* (Alfred had me wrought), we may reasonably conclude that it was made under his own superintendence; and further, from its richness of workmanship and material, that it was a personal ornament worn by the good king himself. The lower end of the jewel, as represented in the engraving, is formed into the head of a griffin, a national emblem of the Saxons. From the mouth of this figure issues a small tube, crossed in the interior by a minute pin of gold. The latter is evidently intended to connect the ornament with the collar or band by which it was suspended round the neck; the general flatness of form indicating that it was worn in that manner. Antiquaries have not agreed as to the person represented on one side of the jewel. Some have supposed it to be the Saviour, others St Cuthbert, or Pope Martin. But the opinion, that it represented Alfred himself, symbolising his kingly office, is as general and tenable as any yet advanced upon the subject.

**CHARLOTTE SMITH: FLORA’S HORLOGE.**

In the days of our grandfathers, this lady enjoyed a considerable reputation, both as a novelist and poet, though her lucubrations in both capacities are now almost forgotten. Two works of fiction composed by her, *Emeline*, or the *Orphan of the Castle*, and the *Old Manor-House*, are mentioned by Sir Walter Scott in terms of high commendation. An assiduous marriage proved the source of an infinite series of troubles, and various domestic bereavements, combined latterly with bodily infirmities, saddened an existence which, during the greater part of its course, was more characterised by clouds than sunshine.

The annexed poem exhibits a pleasing specimen of Mrs Smith’s talents, and is here introduced as appendix to the character of the Book of Days, presenting, as it does, the idea of a calendar, or dial of Flora. The phenomenon of the sleep of plants, or the closing and reopening of the petals of flowers at certain hours, was, as is well known, the discovery of the great botanist Linnaeus.

**FLORA’S HORLOGE.**

‘In every cope and sheltered dell,
Unveiled to the observant eye,
Are faithful monitors, who tell
How pass the hours and seasons by.

The green-robed children of the spring
Will mark the periods as they pass,
Mingle with leaves Time’s feathered wing,
And bind with flowers his silent glass.

Mark where transparent waters glide,
Soft flowing o’er their tranquil bed;
There, cradled on the dimpling tide,
Nymphs ease their lovely head.

But conscious of the earliest beam,
She rises from her hummed nest,
And seen reflected in the stream
The virgin whiteness of her breast.

Till the bright Daystar to the west
Declines, in ocean’s surge to lave;
Then, folded in her modest vest,
She slumbers on the rocking wave.

See Hieracium’s various tribe,
Of plump seed and radiate flowers,
The course of Time their blooms describe,
And wake or sleep appointed hours.

Broad o’er its imbricated cup
The Goat’s beard spreads its golden rays,
But shuts its cautious petals up,
Retreating from the noon tide blaze.

Pale as a pensive cloistered sun,
The Bethlehem Star her face unveils,
When o’er the mountain peers the sun,
But shades it from the vesper gales.

Among the loose and arid sands
The humble Arenaria creeps;
Slowly the Purple Star expands,
But soon within its calyx sleeps.

And those small bells so lightly rayed
With young Aurora’s rosy hue,
Are to the noon tide sun displayed,
But shut their plaits against the dew.

On upland slopes the shepherds mark
The hour, when, as the dial true,
Cichorium to the towering lark
Lifts her soft eyes serenely blue.

And thou, “wee crimson tipped flower,”
Gatherest thy fringed mantle round
Thy bosom, at the closing hour,
When night-drops bathe the turfy ground.

Unlike Silene, who declines
The garish noon tide’s blazing light;
But when the evening crescent shines,
Gives all her sweetness to the night.

Thus in each flower and simple bell,
That in our path betrodden lie,
Are sweet remembrancers who tell
How fast the winged moments fly.”
SCHINDERNANES ('JOHN, THE SCROCHER').

At the close of the last century, and the beginning of the present, the borderland between France and Germany was infested by bands of desperates, who were a terror to all the peaceful inhabitants. War, raging with great fury year after year, had brought the Rhenish provinces into a very disorganised state, which offered a premium to every species of lawless violence. Bands of brigands roamed about, committing every kind of atrocity. They were often called Chauffeurs or Scorchers; because they were accustomed to hold the soles of their victims' feet in front of a fierce fire, to extract a revelation of the place where their property was concealed. Sometimes they were called Garroters or Stranglers (from garrot, a stick which enabled the strangler to twist a cord tightly round the neck of his victim). Each band had a camp or rendezvous, with lines of communication throughout a particular district. The posts on these lines were generally poor country-taverns, the landlords of which were in league with the band. And not only was this the case, but from Holland to the Danube, the chauffeurs could always obtain friendly shelter at these houses, with means for exchanging intelligence with others of the fraternity. The brigands concocted for their own use a jargon composed of French, German, Flemish, and Hebrew, scarcely intelligible to other persons. Not unfrequently magistrates and functionaries of police were implicated with this confederacy. Names, dress, character, complexion, and feature were changed with wonderful ingenuity by the more accomplished leaders; and women were employed in various ways requiring tact and finesse. The more numerous members of the band, rude and brutal, did the violent work which these leaders planned for them. Many, called apprentices, inhabited their own houses, worked at their own trades, but yet held themselves in readiness, at a given signal understood only by themselves, to leave their homes, and execute the behests of the leaders. They were bound by oaths, which were rarely disregarded, an assassin's poniard being always ready to avenge any violation. Most of these apprentices were sent far off to distant countries, far removed from their homes, when lawful work was to be done. A Jewish spy was generally concerned in every operation of magnitude: his vocation was to pick up information that would be useful to the robber-chief, concerning the amount and locality of obtainable booty. For his information, he received a stipulated fee, and then made a profit out of his purchase from the robbers of the stolen property.

Schindernanés, or 'John the Scrocher,' was the most famous of all the leaders of these robbers. His real name was Johann Buckler; but his practice of chauffage, or scorching the feet of his victims, earned for him the appellation of Schindernanés. Born in 1779, near the Rhine, he from early years loved the society of those who habitually braved all law and control. As a boy, he joined others in stealing meat and bread from the comissariat-wagons of the French army at Kreuznach. He joined a party of bandits, and was continually engaged in robberies: he was often captured, but as frequently escaped with wonderful ingenuity, and his audacity soon led to his being chosen captain of a band. There was something in his manner which almost paralysed those whom he attacked, and rendered them powerless against him. On one occasion, when alone, he met a large party of Jews travelling together. He ordered them imperiously to stop, and to bring him their purses one by one, which they did. He then searched all their pockets; and, finding his carbine in the way, told one of the Jews to hold it for him while he rifled their pockets! This also was done, and the carbine handed to him again. Sometimes he would summon a farmer or other person to his presence, and tell him to bring a certain sum of money, as a ransom, or purchase-price of safety in advance; and such was the terror at the name of Schindernanés, that these messages were rarely disregarded. As the French power became consolidated on the left bank of the Rhine, Schindernanés found it expedient to limit his operations to the right bank; and the prisons of Coblenz and Cologne were filled with his adherents. Like Robin Hood, he often lived on the expense of the rich; but, unlike the hero of Sherwood Forest, he was often cruel. The career of Schindernanés virtually terminated on the 31st of May 1803, when he was finally captured near Limburg; but his actual trial did not take place till the closing days of October 1803, when evidence sufficient was brought forward to convict him of murder, and he was condemned to death.

Mr Leitch Ritchie has made this redoubtable bandit the hero of a romance—Schindernanés, the Robber of the Rhine. In his Travelling Sketches on the Rhine, and in Belgium and Holland, he has also given some interesting details concerning Schindernanés himself, and the chauffeurs generally. Among many so-called wives, one named Julia was especially beloved by him, and she and a brother-robbber named Petzer, were with him when captured. 'At his trial,' says Mr Ritchie in the second of the above-named works, 'he was seen frequently to play with his young infant, and to whisper to his wife, and press her hands. The evidence against him was overpowering, and the interest of his audience rose to a painful pitch. When the moment of judgment drew near, his fears for Julia shook him like a leaf; he frequently cried out, clasping his hands: "She is innocent! The poor young girl is innocent! It was I who seduced her!" Every eye was wet, and nothing was heard in the profound silence of the moment, but the sobs of women. Julia, by the humanity of the court, was sentenced first; and Schindernanés embraced her with tears of joy when he heard that her punishment was limited to two years' confinement. His father received twenty-two years' of fetters; and he himself, with nineteen of his band, was doomed to the guillotine. The execution took place on the 21st of November 1803, when twenty heads were cut off in twenty-six minutes. The bandit-chief preserved his intrepidity to the last.'

Concerning the chauffeurs or bandits generally, it may suffice to say that when Bonaparte became First Consul, he determined to exterminate them. One by one the miscreants fell into the hands of justice. For many years the alarmists in France had been in the habit of insinuating that the bandits were prompted by the exiled royalists, or
by the English; but it was perfectly clear that they needed no external stimulus of this kind. After the death of Schinderhannes, the bands quickly disappeared.

"Riding the Stang," or "Rough Music."

Punishments for minor offences were formerly designed to produce shame in the delinquents by exposing them to public ridicule or indignation. With this view, the execution of the punishment was left very much in the hands of the populace. Such was the practice in the case of the brands, the cucking-stool, the whirligig, the drunkard's clock, the stocks, the pillory, etc., all of which have been either legally abolished or banned by the progress of civilization. There is, however, one species of punishment belonging to the above category, which the people seem determined to retain in their own hands, and enforce whenever they judge it expedient so to do. It was exercised, to the knowledge of the writer, on the 26th of October, and ten following days, Sunday excepted, in the year 1862. The punishment in question, called in the north of England "Riding the Stang," and in the south "Rough Music," is not noticed in the Popular Antiquities by Bourn and Brand, but is of frequent occurrence in most of our English counties. If a husband be known to beat his wife, or allow himself to be hen-pecked—if he be unfaithful to her, or she to him—the offending party, if living in a country village, will probably soon be serenaded with a concert of rough music. This harmonious concert is produced by the men, women, and children of the village assembling together, each provided with a suitable instrument. These consist of cows' horns, frying-pans, warming-pans, and tea-kettles, drummed on with a large key; a spoon is used as cymbals; fire-shovels and tongs rattled together; tin and wooden pails drummed on with iron pokers or marrow-bones—in fact, any implement with which a loud, harsh, and discordant sound can be produced. Thus provided, the rustics proceed to the culprit's house, and salute him or her with a sudden burst of their melodious music, accompanied with shouts, yells, hisses, and cries of "Shame! shame! Who beat his wife? I say, Tom Brown, come out and shew yourself!" and all such kind of taunts and ridicule as rustic wit or indignation can invent. The village humorist, often with his face blacked, or coloured with chalk and reddle, and his body grotesquely clothed and decorated, acts the part of herald, and, in all the strong savour of rustic wit and drollery, proclaims the delinquencies of the unhappy victim or victims. The proclamation, of course, is followed by loud bursts of laughter, shouts, yells, and another tremendous serenade of "rough music," to the melody of which the whole party march off, and proceed through the village, proclaiming in all the most public parts the burden of their song. This hubbub is generally repeated every evening, for a week or a fortnight, and seldom fails to make a due impression on the principal auditor; for "Music hath charms to soothe the savage breast;"

and the writer can testify that, at least in one instance, where police and magistrates had tried in vain to reform a brutal husband who had beaten and ill-treated his wife, his savage breast was tamed by the magic strains of "rough music." He was never known to beat his wife again, and acknowledged that the sound of that music never ceased to "charm" his waking thoughts, and too often formed "the melody of his dreams."

In the northern counties, this custom, as before mentioned, is called "riding the stang," because there, in addition to rough music, it is the practice to carry the herald astride on a stang—the north—country word for pole—or in a chair fastened on two poles, to make him more conspicuous. He is, too, always provided with a large frying-pan and key or hammer, and, after beating them together very vigorously, makes his proclamation in rhyme, using the following words, varied only to suit the nature of the offence:

"Ran, tan, tan; ran, tan, tan,
To the sound of this pan;
This is to give notice that Tom Trotter
Has beaten his good wo-man!
For what, and for why?
'Cause she ate when she was hungry,
And drank when she was dry.
Ran, tan, ran, tan, tan,
Hurray—hurray! for this good wo-man!
He beat her, he beat her, he beat her indeed,
For spending a penny when she had need.
He beat her black, he beat her blue;
When Old Nick gets him, he'll give him his due;
Ran, tan, tan, ran, tan, tan,
We'll send him there in this old frying-pan;
Hurray—hurray! for his good wo-man.
The ‘ran-tan’ chorus is shouted by the whole crowd, and repeated after every line. The practice is varied in different places by the addition of an effigy of the culprit riding on an ass, with his face towards the tail, and by other freaks of local humour, suggested perhaps by some peculiarity of the occasion.

This mode of manifesting the popular feeling was in vogue when Hadíbras was written; and though then often including additions better omitted, was observed in other respects much as at the present day:

'And now the cause of all their fear
By slow degrees approached so near,
They might distinguish different noise
Of horns and pans, and dogs and boys,
And kettle-drums, whose sullen lab
Sounds like the hooping of a tub;
And followed with a world of tall-lads,
That merry ditty troll'd, and ballads.

Next pans and kettles of all keys,
From trebles down to double base;

And at fit periods the whole rout
Set up their threats with clausorous shout.'

Such ceremonies as we have above described are known on the continent by the name of the Charivari, and also of Katsenmarkt (Anglo-Saxon, cat-wounding). Latterly, in France, the charivari took a political turn, and gave name to a satirical publication established in Paris in 1832. The same title, as all our readers know, was adopted as an accessory designation by the facetious journalists, Mr Punch.

OCTOBER 29.

St Narcissus, bishop of Jerusalem, 2d century. St Chief of Theoderius, abbot, about 757.

JOHN KEATS.

It is a satisfaction to know that the well-worn story about John Keats being killed by the Quarterly Review—a story endorsed by Shelley, and by Byron in Don Juan:

'Poor fellow! His was an untoward fate;
The strange the mind, that very fiery particle,
Should let itself be snuffed out by an article'—
is untrue. Croker’s criticism did gall the vanity of which Keats, in common with all poets, possessed an ample share; but he was far too self-assured and pugnacious to suffer dangerously from what anybody might say of him.

Keats was the son of a livery-stable keeper, who had risen to comfort by marrying his master’s daughter, and was born in Moorfields, London, in 1795. His father, who is described as an active, energetic little man, of much natural talent, was killed by a fall from a horse when John was in his ninth year. His mother, a tall woman with a large oval face and a grave demeanour, after lingering for several years in consumption, died in 1810. A fortune of two thousand pounds was inherited by John.

Keats, as a boy in Finsbury, was noted for his pugnacity. It was the time of the great French war, and children caught the martial spirit abroad. In the house, in the stables, in the streets with his brothers, or with any likely antagonist, he was ready for a tussle. He was sent to a board school at Enfield, kept by the father of Mr Charles Cowden Clarke, by whom he is remembered for his terrier-like character, as well as for his good-humour and love of frolic. From school he was taken, at the age of fifteen, and apprenticed for five years to a surgeon and apothecary at Edmonton; an easy distance from Enfield, so that he used to walk over whenever he liked to see the Clarices and borrow books. He was an alert and indiscreet reader, and shewed no peculiar bias in his tastes; until, in 1812, he obtained in loan Spenser’s Fairy Queen. That poem lit the fire of his genius. He could now speak of nothing but Spenser. A world of delight seemed revealed to him. ‘He ramped through the scenes of the romance,’ writes Mr Clarke, ‘like a young horse turned into a spring-meadow;’ he got whole passages by heart, which he would repeat to any listener; and would dwell with ecstasy on fine phrases, such as that of ‘the sea-shouldering whale.’ This intense enjoyment soon led to his trying his own hand at verse, and the chief end of his existence became henceforward the reading and writing of poetry. With his friend Cowden Clarke, then a youth like himself, he spent long evenings in enthusiastic discussion of the English poets, feeling a characteristic preference for passages of sweet sensuous description, such as are found in the minor poems of Chaucer, Shakespeare, and Milton, and throughout Spenser, rather than for those dealing with the passions of the human heart. By Clarke he was introduced to Greek poetry, through the medium of translations. They commenced Chapman’s Homer one evening, and read till daylight. Keats sometimes shouting aloud with delight as some passage of special energy struck his imagination. Therewith began that remarkable affiliation of his mind to the Greek mythology, which gave to his works so marked a form and colour. From Edmonton he removed to the city for the purpose of ‘walking the hospitals,’ and became acquainted with Leigh Hunt, Shelley, Hazlitt, Godwin, Haydon, and other literary and artistic men, the society his mind expanded and strengthened. At Haydon’s one evening, when Wordsworth was present, Keats was induced to recite to him his Hymn to Pan, which Shelley had praised as ‘his surest pledge of ultimate excellence.’ Wordsworth listened to the end, and then grimly remarked: ‘It is a pretty piece of paganism!’
In 1817, Keats published his first book of poems, which attracted no attention. Next year he tried again, and brought out *Endymion, a Poetic Romance*, for which he was ridiculed as a Cockney-poet in the *Quarterly and Blackwood’s Magazine*, and recommended "to go back to his gallipot," and reminded that "a starved apothecary was better than a starved poet." In 1820 appeared *Lamia, the Eve of St. Agnes, and other Poems*; these three small volumes, issued within three years, comprised the finished business of his literary life.

Keats was of low stature, considerably under middle size. His shoulders were very broad, and his legs so short, that they quite marred the proportion of his figure. "His head," says Leigh Hunt, "was a puzzle for the phrenologists, being remarkably small in the skull—a singularity he had in common with Byron and Shelley, whose hats I the other was holding to my mouth a nectarine, and thereon he proceeds to describe the nectarine in a way which might cause a sympathetic mouth to water with desire. In his *Ode to the Nightingale*, these lines will be remembered:

\[ \text{"O for a draught of vintage, that hath been Cool'd a long age in the deep-delved earth; Tasting of Flora and the country-green, Dance, and Provencal song, and amber-burnt mirth! \}}\]

O for a beaker full of the warm South.
Full of the true, the blushful Hippocrene,
With beaded bubbles winking at the brim,
And purple-stained mouth;
That I might drink, and leave the world unseen,
And with thee fade away into the forest dim."

Observe how every line turns on sensuous delight. With this key, it is truly interesting to examine the poems of Keats, and find how it opens their meaning and reveals their author. In this respect, Keats was the antipodes of Shelley, whose verse is related to mental far more than sensuous emotions.

In 1820, pulmonary consumption appeared in the hitherto healthy constitution of Keats. Getting into bed one night, he coughed, and said: "That is blood—bring me the candle;" and after gazing on the pillow, turning round with an expression of sudden and solemn calm, said: "I know the colour of that blood, it is arterial blood—I cannot be deceived in that colour; that drop is my death-warrant. I must die!" He passed through the alternations common to consumptive patients—sometimes better and sometimes worse. His mind, at the same time, was torn with passion and anxiety. His inheritance of £2000 was gone, and he had abandoned the idea of being a surgeon. He was deeply in love, but he had no means of maintaining a wife. A brief and futile attempt was made to earn a living by writing for the magazine. Meanwhile his disease made rapid progress. Accompanied by Mr. Severn, a young friend and artist, by whom he was tended with most affectionate care, he set out to spend the winter in Italy. His sufferings, physical and mental, were intense. A keen sorrow lay in the thought that he had done nothing worthy of abiding fame. "Let my epitaph be," said he: "Here lies one whose name was writ in water." He died at Rome in the arms of Severn on the 23rd of February 1821, aged twenty-five years and four months. His last words were: "Thank God, it has come!" His body was interred in the Protestant cemetery at Rome; a beautiful spot, where violets and daisies blow the winter through, and, in the words of Shelley, "making one in love with death, to think one should be buried in so sweet a place." Hither, a few months later, were Shelley's own ashes brought to rest under a stone bearing the inscription: "Cor Cordium."

To trace the career of Sir Walter Raleigh, and extricate his character from the perplexing confusion of contemporary opinion, is an undertaking of considerable difficulty. One principal cause of this is to be found in the heterogeneous qualities of the man. Soldier and poet, sailor and historian, court favourite and roving adventurer, his biographers have been at a loss under what category to place him. He was, says the writer of a little
book, printed in London in 1677, and entitled The Life of the Valiant and Learned Sir Walter Raleigh, Knight, with his Tryal at Winchester, statesman, navigator, and statesman. He seems to be born to that only which he went about, so dexterous was he in all his undertakings, in court, in camp, by sea, by land, with sword, with pen.

Although Raleigh exerted himself so much in the service of his country, what he did was, for the most part, so out of the way of ordinary men's doings, that even history seems perplexed to discover what to record of him. We are told how he won Elizabeth's favour at the first by laying his rich cloak in the mire to save her majesty's slippers. We are told how he wrote one line of a couplet, when growing restless with the dilatory manner which the queen had in promoting her favourites, and that the queen herself designed to complete it. We are told how he introduced the poet Spenser to the court, and quarrelled with Essex. Such trivial glimpses as these are almost all we get of him.

The little book above mentioned, by the way, gives a different edition of the far-famed couplet to the one we have been used to. We quote the account given: 'To put the queen in remembrance, he wrote in a window obvious to her eye:

"Fain would I climb, yet fear I to fall."

Which her majesty, either espionage or being shewn, under-wrote this answer:

"If thy heart fail thee, climb not at all."

Raleigh feared no man and no quarrel, and stood his ground against all. He was no eyecounter. He must have had a clever wit, joined with his manliness and impetuousity, for he managed to retain Elizabeth's good graces to the last; while the less fortunate Essex died on the scaffold.

Raleigh had a restless spirit, which made him at once innovator and adventurer. He was always making new discoveries. In his dress he was singular, his armour was a wonder, his creed his own concocting. He it was who introduced tobacco; which Elizabeth, strangely enough, judging by her commercial spirit, regarded as a useful article, but which seemed to James an execrable nuisance. The El Dorados which he went in search of were innumerable; and as he joined with these mine-finding expeditions a large amount of carrack-stopping, he won himself at last the characteristic appellation of The Soverays of Spain, and for this Spain, relentless, had his head in the end.

The day of Elizabeth's death was the birthday of Raleigh's misfortunes. He never was a favourite with James from the first. It is not long before we find him brought up for trial for high treason, in what has always been called Raleigh's Conspicuity—so called, it may be, because Raleigh had the least to do with it of any of those involved; or perhaps, which is more likely, because it was a puzzle to everyone how such a man as Raleigh could have been connected with it.

Having been previously examined in July, Raleigh was brought to trial at Winchester, on November 17, 1603. Throughout the whole, he is described as conducting himself with spirit, as rather shewing love of life than fear of death, and replying to the insulting language of Sir Edward Coke, the king's attorney, with a dignity which remains Coke's lasting reproach.

Coke's unprovoked insults were abominable. He called Raleigh, for instance, 'the absolute traitor that ever was.' To which Raleigh only rejoined: 'Your phrases will not prove it, Mr Attourney.' What a speech was this for the king's advocate: 'Thou hast a Spanish heart, and thyself art a spider of hell!' The following is a specimen of the style of bickering which went on on the occasion:

"Raleigh, I do not hear yet that you have spoken one word against me; here is no treason of mine done. If my Lord Cobham be a traitor, what is that to me? Coke. All that he did was by thy instigation, thou viper; for I thou thee, thou traitor. Raleigh. It becometh not a man of quality and virtue to call me so; but I take comfort in it, it is all you can do. Coke. Have I angered you? Raleigh. I am in no case to be angry.

Here Lord-Chief Justice Popham seems ashamed, and puts in an apology for his friend on the king's side: 'Sir Walter Raleigh, Mr Attourney speaketh out of the zeal of his duty for the service of the king, and you, for your life: be candid on both sides.' [A curious observation!]

In one instance, Coke was so rude that Lord Cecil rose and remarked: 'Be not so impatient, Mr Attourney, give him leave to speak.' And so we are informed: 'Here Mr Attourney sat down in a chafe, and would speak no more, until the commissioners urged and entreated him. After much ado he went on,' &c.

Raleigh had but one real witness against him, and that was Lord Cobham, the head of the plot, and Raleigh's personal friend. It seems that Cobham, in a temporary fit of anger—Raleigh seems to have inculcated him in the first instance—described Raleigh as the instigator of the whole business. Coke produced a letter, written by Cobham, which seemed to enclose the matter in a nutshell, for it was very explicit against Raleigh. Raleigh pleaded to have his letters produced in court, but this was refused. Raleigh had his reasons for this, for at the last minute he pulled out a letter, which Cobham had written to him since the one to Coke, in which that lord begged pardon for his treachery, and declared his friend innocent. And so it appeared that he was, although he evidently had more knowledge of matters than was good for his safety. But a minor point, which was brought forward at last, was like the springing of a mine, and spoiled Raleigh's case. It affirmed that Sir Walter Raleigh had been dealt with to become a spy of Spain, at a pension of £1500 per annum. This might have been a trap set by Spain, but, at anyrate, Raleigh did not deny the fact, and so the evidence turned against him. He was sentenced, with disgraceful severity, to be hanged, drawn, and quartered.

Raleigh wrote a letter to his wife, while in expectation of death. A private communication like this letter gives us a better insight into his conscience, and also into his so-called 'atheism,' than could be got from any other source—

"I sued for my life, but (God knows) it was for you."
WALTER RALEIGH.

THE BOOK OF DAYS.

and yours that I desired it: for know it, my dearest wife, your child is the child of a true man, who, in his own respect, despiseth death and his misshapen and ugly forms. I cannot write much. God knows how hardly I steal this time when all sleep, and it is also time for me to separate my thoughts from the world. My body, which living was denied you, and either lay it in Sherburn or in Exeter Church, by my father and mother. [Is not this the last wish of all rovers?] I can say no more, time and death calleth me away. The everlasting God, powerful, infinite, and everlasting God Almighty! [Is this an atheistic sound?] Who is goodness itself, the true Light and Life, keep you and yours, and have mercy upon me, and forgive my persecutors and false accusers. [Why, this is very Christianity!] send us to meet in his glorious kingdom. My dearest wife, farewell, bless my boy, pray for me, and let my true God hold you both in his arms. — Yours that was, but now not my own.

WALTER RALEIGH.

After all, Raleigh was not executed. He lived yet a dozen years a prisoner in the Tower, his wife with him, and wrote his famous History of the World. When he could no longer rove over the whole earth, he set himself to write its history. He won the friendship of Prince Henry, who could never understand how his father could keep so fine a bird in a cage; and when the boy was twelve years old, his brother set the bird at liberty, but he died. At length James released Raleigh, and sent him on one more mining expedition to South America, with twelve ships and abundance of men. But secretly, out of timidity, James informed Spain of the whole scheme, and the expedition failed. A town was burned, and the Spanish ambassador, Gondomar, became furious. Raleigh knew what to expect; but, having bound himself to return, he did return. He was immediately seized; and, without any new trial, was beheaded on his old condemnation, to appease the anger of Spain, upon Thursday, the 29th of October 1618, in Old Palace Yard, Westminster.

Raleigh died nobly. The bishop who attended him, and the lords about him, were astonished to witness his serenity of demeanour. He spoke to the Lord Admiral to deseem the king to allow his scandalous writings, deeming him, to be written after his death — the only one which was written, strange to say, was James’s Apology — and he observed calmly: ‘I have a long journey to go, therefore must take leave.’ He fingered the axe with a smile, and called it ‘a sharp medicine,’ a sound cure for all diseases; and laid his head on the block with these words in conclusion: ‘So the heart be right, it is no matter which way the head lies.’

Thus, says our little book, ‘died that knight who was Spain’s scourge and terror, and Gondomar’s triumph; whom the whole nation pitied, and several princes interceded for; Queen Elizabeth’s favourite, and her successor’s sacrifice. A person of so much worth and so great interest, that King James would not execute him without an apology; one of such incomparable policy, that he was too hard for Essex, was the envy of Leicester, and Cecil’s rival, who grew jealous of his excellent parts, and was afraid of being supplanted by him.’

The following is Raleigh’s last poem, written the night before his death, and found in his Bible, in the Gate-house, at Westminster:

Sir W. RALEIGH THE NIGHT BEFORE HIS DEATH.

‘Even such is time, which takes in trust
Our youth, our joys, and all we have,
And pays us but age and dust;
Which in the dark and silent grave,
When we have wandered all our ways,
Shut up the story of our days:
And from which grave, and earth, and dust,
The Lord shall raise me up, I trust.’

THE HERMIT OF GRUB STANN.

Amongst the many histories of extraordinary characters, who from various motives have secluded themselves from the world, probably few have created more interest than Mr Henry Welby, the individual about to be recorded. He was a native of Lincolnshire, where, in the neighbourhood of Grantham, his descendants still live. The family is ancient, and of high position, as may be inferred from several of its members having sat in parliament for the county of Lincoln, in the times of the Henries and the Edwards, and from others having filled the post of sheriff — an office in those days held only by men of the highest status.

About the time of Queen Elizabeth, we find Mr Henry Welby residing at Goshall, an ancient village near the Lincolnshire bank of the river Humber, nearly opposite to Kingston-upon-Hull. He was the inheritor of a considerable fortune, and all accounts that have been published concerning him, represent him as a highly-accomplished, benevolent, and popular gentleman. In this neighbourhood, he seems to have lived for a number of years, and then to have quitted it to reside in London, under the singular circumstances now to be detailed, as related in a curious work, published in 1637, under the following title: The Phemio of these late Times; or the Life of Henry Welby, Esq., who lived at his House in Grub Street, Forty-four years, and in that Space was never seen by any: And there died, Oct. 29, 1646, aged Eighty-four. Showing the First Occasion and Reason thereof.

With Epitaphs on the late Deceased Gentleman; who lyeth interred in St Giles’ Church, near Cripplegate, London.

In the preface to this singular pamphlet, the following passage occurs: ‘This Gentleman, Master Henry Welby, was Forty Years of Age before he took this solitary Life. Those who knew him, and were conversant with him in his former Time, do report, that he was of a middle Stature, a Brown Complexion, and of a Pleasant Chearful Countenance. His Hair (by reason no Barber came near him for the Space of so many Years) was much overgrown; so that he, at his Death, appeared rather like a Hermit of the Wilderness, than Inhabitant of a City. His Habit was plain, and without Ornament; of a sad-coloured Cloath, only to defend him from the Cold, in which there could be nothing found existed which the least Imagination of Pride or Vain-Glory.

The various accounts which have been published of this remarkable man, agree in the main, but differ in one or two particulars. For instance, in one it is stated that it was his brother, whose conduct led to the strange results recorded; and, in another, that it was merely a dream. In the present notice, we have adhered to the narrative.
THE HERMIT OF GRUB STREET.

OCTOBER 29.

The Hermit of Grub Street.

Mr. Welby's eccentricities were known to the world in 1637. It thus records the history of Mr. Welby's eccentricities.

The Occasion was the Unkindness, or the Unnaturalness and Inhumanity of a younger Brother, who, upon some Discontent or Displeasure conceived against him, rashly and resolutely threatened his death. The two Brothers met face to face, the younger drew a Pistol, charged with a double Bullet, from his side, and presented upon the Elder, which only gave fire, but by the

HENRY WELBY, THE GRUB-Street HERMIT.

miraculous Providence of God, no farther Report. At which the Elder, seeing him, disarmed him of his tormenting Engine, and so left him; which, bearing to his Chamber, and desiring to find whether it was merely a false Fire to frighten him, or a Charge speedily to dispatch him, he found Bullets, and thinking of the danger he had escaped, fell into many deep Considerations. He then grounded his irrevocable Resolution to live alone. He kept it to his dying day.

That he might the better observe it, he took a very fair House in the lower end of Grub-street, near unto Cropley, and having contracted a numerous Retinue into a small and private Family, having the House before prepared for his purpose, he entered the Door, choosing to himself, out of all the Rooms, three private Chambers best suiting with his intended Solitude; the First for his Diet, the Second for his Lodging, and the Third for his Study—one within another. While his Diet was set on the table by one of his servants—an old Maid—he retired into his Lodging-chamber; and while his Bed was making, into his Study; and so on, till all was clear. And there he set up his Rest, and in forty-four years never, upon any

Occasion how great soever, issued out of those Chambers, till he was borne thence upon Men's shoulders; neither in all that time did Son-in-law, Daughter, Grandchild, Brother, Sister, or Kinsman, Stranger, Tenant, or Servant, Young or Old, Rich or Poor, of what Degree or Condition soever, look upon his Face, saving the ancient Maid, whose Name was Elizabeth, who made his Fire, prepared his Bed, provided his Diet, and dressed his Chamber; which was very seldom, or upon an extraordinary Necessity that he saw her; which Maid-servant died not above Six Days before him.

In all the Time of his Retirement he never tasted Fish nor Flesh. He never drank either Wine or Strong Water. His chief Food was Oatmeal boiled with Water, which some People call Gruel; and in Summer, now and then, a Salad of some cool, choice Herbs. For Dainties, or when he would feast himself, upon a High Day, he would eat the Yoke of a Hen's Egg, but no part of the white; and what Bread he did eat, he cut out of the middle part of the Loaf, but of the Crust he never tasted; and his continual Drink was Four-shilling Beer, and no other; and now and then, when his Stomack served him, he did eat some

515
kind of Suckets;* and now and then drank Red Cow's Milk, which Elizabeth fetched for him out of the Fields, hot from the Cow; and yet he kept a bountiful Table for his Servants, with Entertainment sufficient for any Stranger, or Tenant, who had occasion of Business at his House.

1. Christmas holidays, at Easter, and upon other Festival days, he had great Cheer provided, with all Dishes seasonable with the Times, served into his own Chamber, with Store of Wine, which his Maid brought in; when he himself would pin a clean Napkin before him, and putting on a pair of white Holland Sleeves, which reached to his Elbows, called for his Knife, and cutting Dishes after Dishes up in Order, send one to one poor Neighbour, the next to another, &c., whether it were Brawn, Beef, Capon, Goose, &c., till he had left the Table quite empty. Then would he give thanks, lay by his Linnen, put up his Knife again, and cause the Cloth to be taken away; and this would he do, Dinner and Supper, without tasting one Morsel himself; and this Custom he kept to his dying Day! Indeed, he kept a kind of continual Feast, so he devoted himself unto continual Prayer, saving those Seasons which he dedicated to his Study; For you must know that he was both a Scholar and a Linguist; neither was there any Author worth the Reading, either brought over from beyond the Seas, or published here in the Kingdom, which he refused to buy, at what dear Rate soever; and these were his Companions in the Day, and his Counsellors in the Night; insomuch that the Saying may be verified of him—Nonquiescens venustus solus, quam cum solus—He was never better accompanied, or less alone, than when alone. Out of his private Chamber, which had a prospect into the Street, if he spied any Sick, Weak, or Lame, would presently send after them, to comfort, Cherish, and Strengthen them; and not a Trifle to serve them for the present, but such as would relieve them many Days after. He would, moreover, send what Neighbour served industriously in their Callings, and who had great Charge of Children; and if their Labour or Industry could not sufficiently supply their Families, to such he would liberally send, and relieve them according to their Necessities.†

Taylor, the 'Water Poet,' thus commemorates the reclusion of Grub Street:

*Old Henry Welby—well be't than for ever,
Thy Purgatory's past, thy Heaven ends never.
Of eighty-four years' life, full forty-four
Man saw thee not, nor e'er shall see thee more.
'Twas Fiesty and Penitence caus'd thee
So long a Pris'ner (to thyself) to be:
Thy bounteous House within express'd thy Mind,
Thy Charity without, the Poor did find.
From Wine thou wast a duteous Rechabite,
And Flesh so long Time shunn'd thy Appetite:
Small-Bear, a Caudle, Milk, or Water-gruel,
Strengthen'd by Grace, maintain'd thy daily Duell
'Gainst the bewitching World, the Flesh, the Fiend,
Which made thee live and die well: there's an End.'

A more recent work gives us the information, that Mr Welby had an only child, a daughter, who was married to Sir Christopher Hildyard, Knight of Winsted, in Yorkshire, and left three sons: 1. Henry, who married Lady Anne Leke, daughter of Francis, first Earl of Scarborough; and of this marriage the late Right Hon. Charles Tennyson D'Eyncourt is a descendant. 2. Christopher. 3. Sir Robert Hildyard, an able and royalist commander, who, for his gallant services, was made a knight-baronet, and afterwards a baronet.

OCTOBER 30.

St Martin the Centurion, martyr. 289. St Germanus, bishop of Capua, confessor, about 540. St Asterius, bishop of Amasea in Pontus, beginning of 6th century.

Born.—Jacques Amyot, translator of Plutarch, 1519, Melun; Cardinal Cesar Baronius, historical writer, 1538, Sora; George II. of England, 1683, Hanover; Richard Brinsley Sheridan, dramatist and politician, 1751, Dublin; James Perry, editor of the Morning Chronicle, 1765, Abergavenny.

Died.—Antinous, favourite of the Emperor Hadrian, drowned in the Nile, 130 a. d.; James Sturmy, Protestant champion, 1653, Stourbridge; Charles Alexandre de Calonne, financier to Louis XVI., 1809, Paris; Rev. John Whitsaker, historical writer, 1808, Ross-Lea (Yorkshire); Edmund Cartwright, inventor of the power-loom, 1823, Hastings; Rev. Charles Maturin, dramatist and tale-writer, 1834; Thomas, Earl of Dundonald, distinguished naval commander, 1860, Kensington.

BURNING OF THE TOWER OF LONDON.

On the night of Saturday the 30th of October 1841, the great armory or storehouse, a large and imposing range of buildings, forming part of the Tower of London, and situated on the north side of its precincts, to the east of St Peter's Chapel, was entirely consumed by fire, which had broken out in the Round or Bowyer Tower immediately adjoining. The cause of this calamitous event appears to have been the overheating of the flue of a stove, the prolific origin of so many conflagrations. The edifice destroyed had been founded by James II., and completed in the reign of William and Mary, their majesties celebrating the conclusion of the work by visiting the Tower and partaking of a splendid banquet in the great hall of the new building. This magnificent apartment, occupying the whole of the first-floor, was afterwards employed as a storehouse for small-arms, 150,000 stand of which were destroyed by the fire. On the ground-floor a number of cannon and other trophies, taken in the field, were deposited. Though a loss, estimated at upwards of £200,000, was sustained, it was matter for congratulation that the older portions of the Tower, so interesting by their historical associations, escaped almost unjured. The Great, or White Tower, was for a time in imminent danger, and the Jewel Tower was so exposed to the flames, that it was believed impossible to avert its destruction. But fortunately both buildings were preserved.

In connection with the Jewel Tower, an interesting incident, as well as a remarkable instance of personal bravery, ought not to be forgotten. We refer to the removal of the Regalia, which, for a
second time in their history, though in different circumstances, made as narrow an escape from destruction as when, upwards of a century and a half previously, they were rescued from the fangs of Blood and his associates. On the intelligence of a fire having broken out, Mr W. P. Pierse, superintendent of one of the divisions of the metropolitan police, proceeded with a detachment of constables to the Tower. Shortly after his arrival, the flames made such rapid advances in the direction of the Jewel House, that it was deemed expedient at once to remove the Regalia and crown-jewels to a place of safety. Accompanied by Mr Swifte, the keeper of the Jewel House, and other officials, including several of the Tower wardens, Mr Pierse entered the building in question. To get hold of the jewels was now the difficulty, as these treasures were secured by a strong iron grating, the keys of which were in the possession of the lord chamberlain, or elsewhere deposited at a distance, and not a moment was to be lost. Crow-bars were procured, and a narrow aperture made in the grating so as to allow one person. Through this opening Mr Pierse descended, others following, and the key from his pocket, and by means of a crowbar, and hand through from the inside the various articles of the Regalia. One of these, a silver font, was too large thus to be passed, and it consequently became necessary to break away an additional bar of the grating. While the warders were employed in effecting this, repeated cries were heard from outside, calling to the party within the Jewel House to leave the building as the fire was close upon them. Determined, however, to accomplish the behest which he had undertaken, Mr Pierse unfinishingly retained his post within the grating, and at last succeeded in rescuing the font. The precious articles were all conveyed safely to the governor's house, and a most extraordinary spectacle presented itself in the warders carrying the crowns and other appurtenances of royalty between groups of soldiers, policemen, and firemen.

The heat endured by the party in the Jewel House was such as almost to reduce their garments to a charred state. Some public reward to Mr Pierse, who had thus so gallantly imperilled himself to save the Regalia of the United Kingdom, would, we should imagine, have been a fitting tribute to his bravery. But no such recompense was ever bestowed.

THE RHYNIE TOLL, OR THE CUSTOM OF CHEWTWODE MANOR.

Many ancient rights and customs, which have long since lost much of their significance, and perhaps now appear to modern notions ridiculous, are nevertheless valuable when viewed in connection with history. For they often confirm and illustrate historic facts, which, from the altered state of the country, would otherwise be unintelligible, and perhaps discredited at the present day. Such a custom or privilege is still possessed and exercised in connection with the manor of Chetwode, in Bucks, which, although very curious both in its origin and observance, has escaped the notice of Blount and other writers on the ‘jocular customs of some manors.’

The manor of Chetwode—a small village about five miles from Buckingham—has been the property of the Chetwode family from Saxon times. Though of small extent, it is the paramount manor of a liberty or district embracing several other manors and villages which are required to do suit and service at the Court-Leet held at Chetwode every three years. The Lord of Chetwode Manor has the right to levy a yearly tax called the ‘Rhynie Toll,’ on all cattle found within this liberty, between the 30th of October and the 7th of November, both days inclusive. The commencement of the toll, which is proclaimed with much ceremony, is thus described in an old document of Queen Elizabeth’s reign:

‘In the beginning of the said Drift of the Common, or Rhynie, first at their going forth, they shall blow a wake-shall, or horn, immediately after the sunrising at the mansion-house of the manor of Chetwode, and then in their going about they shall blow their horns the second time in the field between Newton Purcell and Barton Hartshorne, in the said county of Bucks; and also they shall blow their horns a third time at a place near the town of Fimnere, in the county of Oxford; and they shall blow their horns the fourth time at a certain stone in the road leading to the town of Brackley, and there to give the poor sixpence; and so, going forward in this manner about the said Drift, shall blow the horn at several bridges called Thornbridge, King’s Bridge, and Bridge Mill. And also they shall blow their horns at the Pound Gate, called the Lord’s Pound, in the parish of Chetwode. . . . And also (the Lord of Chetwode) has always been used by his officers and servants to drive away all foreign cattle that shall be found within the said parishes, fields, &c., to impound the same in any pound of the said towns, and to take for every one of the said foreign beasts two pence for the mouth, and one penny for a foot, for every one of the said beasts. All cattle thus impounded at other places were to be removed to the pound at Chetwode; and if not claimed, and the toll paid, within three days following, after the rising of the sun, the bailiff or officers of the lord for the time being, shall blow their horns three times at the gate of the said pound, and make proclamation that if any persons lack any cattle that shall be in the same pound, let them come and shew the marks of the same cattle so claimed by them, and they shall have them, paying unto the lord his money in the manner and form before-mentioned, otherwise the said cattle that shall so remain, shall be the lord’s as strays.’ This toll was formerly so rigidly enforced, that if the owner of cattle so impounded made his claim immediately after the proclamation was over, he was refused them, except by paying their full market price.

Though the custom is still regularly observed, it has undergone some changes since the date of the above document. The toll now begins at nine in the morning instead of at sunrise, and the horn is first sounded on the church-hill at Buckingham, and gingerbread and beer distributed among the assembled boys, the girls being excluded. The officer then proceeds to another part of the liberty on the border of Oxfordshire, and there, after blowing his horn as before, again distributes gingerbread and beer among the assembled boys. The toll is then proclaimed as begun, and collectors are stationed at different parts to enforce it, at the rate of two shillings a score upon all cattle and swine.
passing on any road within the liberty, until twelve o'clock at night on the 7th of November, when the 'Rhynie' closes.

The occupiers of land within the liberty have long been required to compound for the toll by an annual payment of one shilling. The toll has sometimes been refused, but has always been recovered with the attendant expenses. It realised about £30 a year before the opening of the Buckinghshire Railway; but now, owing to Welsh and Irish cattle being sent by trains, it does not amount to above £4, and is let by the present lord of the manor for only £1, 5s. a year.

The existence of this toll may be traced to remote antiquity, but nothing is known of its origin except from local tradition, which, however, in this case, has been so remarkably confirmed, that it may safely be credited. The parish of Chetwode, as its name implies, was formerly thickly wooded; indeed, it formed a part of an ancient forest called Rookwood, which is supposed to have been conterminous with the present liberty of Chetwode. At a very early period a vast part of this forest was infested with an enormous wild boar, which became the terror of the surrounding country. The inhabitants were never safe from its attacks; and strangers, who heard of its ferocity, were afraid to visit, or pass through, the district; so that traffic and friendly intercourse were seriously impeded, as well as much injury done to property, by this savage monster. The Lord of Chetwode, like a true and valiant knight, determined to rid his neighbourhood from this pest, or to die in the attempt. Bent on this generous purpose, he saddled forth into the forest, and, as the old song has it—

"Then he blew a blast full north, south, east, and west—
Wind well thy horn, good hunter!
And the wild boar then heard him full in his ears,
As he was a jovial hunter."

Then he made the best of his speed unto him—
Wind well thy horn, good hunter!
Swift flew the boar, with his tusks answer'd with gore,
To Sir Ryalas, the jovial hunter.

Then the wild boar, being so stout and so strong—
Wind well thy horn, good hunter!
With a bark he rent the trees as he rapped him along.
To Sir Ryalas, the jovial hunter.

Then they fought four hours in a long summer day—
Wind well thy horn, good hunter!
Till the wild boar fain would have got him away
From Sir Ryalas, the jovial hunter.

Then Sir Ryalas he drew his broad-sword with might—
Wind well thy horn, good hunter!
And he fairly cut the boar's head off quite,
For he was a jovial hunter!

Matters being thus settled, the neighbourhood rung with the praises of the gallant deed of the Lord of Chetwode, and the news thereof soon reached the ears of the king, who 'liked him so well of the achievement,' that he forthwith made the knight tenant of coverts, and constituted his majesty the lord of all the manors within the limits and extent of the royal forest of Rookwood. Moreover, he granted to him, and to his heirs for ever, among other immunities and privileges, the full right and power to levy every year the Rhynie Toll, which has already been described.

Such is the purport of the Chetwode tradition, which has descended unquestioned from times immemorial, and received, about forty years ago, a remarkable confirmation. Within a mile of Chetwode manor-house there existed a large mound, surrounded by a ditch, and bearing the name of the 'Boar's Pond.' It had long been overgrown with gorse and brambles, when, about the year 1810, the tenant, to whose farm it belonged, thinking to bring it into cultivation, began to fill up the ditch by levelling the mound. He never cleared the latter about four feet, he came on the skeleton of an enormous boar, lying flat on its side, and at full length. Probably this was the very spot where it had been killed, the earth around having been heaped over it, so as to form the ditch and mound. The space formerly thus occupied can still be traced. It extends about thirty feet in length, and eighteen in width, and the field containing it is called the 'Boar's Head Field.' The jaw and other portions of the skeleton are now in the possession of Sir John Chetwode, Bart., the present lord of the manor. There is a somewhat similar tradition at Boarstall, which stands within the limits of Bornwood Forest, as Chetwode does within those of Rookwood. These forests formerly adjoined, and formed a favourite hunting-district of Edward the Confessor and his successors, who had a palace or hunting-lodge at Borghill (Scrill), where the two forests met.*

That the mere killing of a boar should be so richly rewarded, may appear incredible. But many a wild-boar of old was so powerful and ferocious, that he would even attack a lion; while such was his stubborn courage that he would never yield till actually killed or disabled. The classic reader may here recall to mind the celebrated tale, in Greek mythology, of the Calydonian boar, which ravaged the fields of Aetolius, and was ultimately slain by Meleager, with the help of Theseus, Jason, and other renowned heroes. Such, indeed, was the nature of the wild-boar, that most of the early poets have chosen it as the finest animal to illustrate the indomitable courage of their heroes; thus Homer:

"Forth from the portals rushed the intrepid pair,
Opposed their breasts, and stood themselves the war.
So two wild-boars spring furious from their den,
Roused with the cries of dogs and voice of men;
On every side the cracking trees they tear,
And root the shrubs, and lay the forest bare;
They gash their tusks, with fire their eyeballs roll,
Till some wide wound lets out their mighty soul."

And Spenser, perhaps not without the charge of plagiarism, has the same illustration:

"So long they fight, and fell revenge pursue,
That fasting, each themselves to breathe let,
And oft refreshed, battle oft renew;
As when two boars with ranking malice met,
Their gory sides fresh bleeding fiercely rent,
Till breathless both, themselves aside retire,
Where foaming wrath their cruel tusks they whet,
And trample the earth the while they may inspire;
Then back to fight again, new breathed and entire."

Such animals were most dangerous, not only to
travellers and unarmed rustics, but to the hunting-expeditions of the king and his nobles. It need not, therefore, surprise us to find that the destruction of a wild-boar ranked, in the middle ages, among the deeds of chivalry, and won for a warrior almost as much renown as the slaying an enemy in the open field. So dangerous, indeed, was the hunting of wild-boars, even when the hunter was armed for the purpose, that Shakespeare represents Venus as dissuading Adonis from the practice:

O be advis'd! thou know'st not what it is
With thine own point a church-infant to gore,
Whose tusks never sheath'd be whetted still,
Like to a mortal butcher, bent to kill.
His brawny sides, with hairy bristles arm'd,
Are better proof than thy spear's point can enter;
His short thick neck cannot be easily harm'd;
Being tred'n on the lion he will venture.

Such hunting-expeditions were generally fatal to some of the dogs, and occasionally to one or more of the hunters. Such was the case with Robert de Vere, ninth Earl of Oxford, who was killed in 1398 by the boar he was pursuing.

The knight of Chetwode, then, who from benevolent motives encountered and slew the boar that ravaged his neighbourhood, deserved to be richly rewarded, and what reward could be more appropriate than the privilege of claiming a yearly toll over those roads which he had thus rendered secure? Perhaps, too, the exacting of toll for nine days was conducted in the period during which the gallant knight persisted before he achieved his object.

Such a custom, as the Rhyne Toll, is not without its use. It is a perpetual memorial, perhaps more convincing than written history, of the dangers which surrounded our ancestors, and from which our country has happily been so long delivered, that we can now scarcely believe they ever existed.

OCTOBER 31.

St Quirinus, martyr, 387. St Pollian, martyr, 655.
St Wulfgar, Bishop of Hexham, 954.

Halloween.

There is perhaps no night in the year which the popular imagination has stamped with a more peculiar character than the evening of the 31st of October, known as All Hallow's Eve, or Halloween. It is clearly a relic of pagan times, for there is nothing in the church-obseravance of the ensuing day of All Saints to have originated such extraordinary notions as are connected with this celebrated festival, or such remarkable practices as those by which it is distinguished.

The leading idea respecting Halloween is that it is the time of all others, when supernatural influences prevail. It is the night set apart for a universal walking abroad of spirits, both of the visible and invisible world; for, as will be afterwards seen, one of the special characteristics attributed to this mystic evening, is the faculty conferred on the immortal principle in humanity to detach itself from its corporeal tenement and wander abroad through the realms of space. Divination is then believed to attain its highest power, and the gift asserted by Glendower of calling spirits "from the vasty deep," becomes available to all who choose to avail themselves of the privileges of the occasion.

There is a remarkable uniformity in the fireside customs of this night all over the United Kingdom. Nuts and apples are everywhere in requisition, and consumed in immense numbers. Indeed the name of "Nutcrack Night," by which it is known in the north of England, indicates the predominance of the former of these articles in making up the entertainments of the evening. They are not only cracked and eaten, but made the means of vaticination in love-affairs. And here we quote from Burns's poem of Halloween:

'"The auld guidwife's well-howrodit nits
Are round and round divided,
And many lads' and lasses' fates
Are there that night decided:
Some kindie, coothie, side by side,
And burn theither trimly;
Some start awa wi' sassy pride,
And jump out-owre the chymly
Fu' high that night.
Jean slips in twa wi' bentie e's;
Wha 'twas, she wadna tell;
But this is Jock, and this is me,
She says in to herself;
He blessed owre her, and she owre him,
As they wad never mair part;
Till, fuf! he started up the lane.
And Jean had o'en a sair heart.
To see 't that night.'

Brand, in his Popular Antiquities, is more explicit: 'It is a custom in Ireland, when the young women would know if their lovers are faithful, to put three nuts upon the bars of the grate, naming the nuts after the lovers. If a nut cracks or jumps, the lover will prove unfaithful; if it begins to blaze or burn, he has a regard for the person making the trial. If the nuts named after the girl and her lover burn together, they will be married.'

As to apples, there is an old custom, perhaps still observed in some localities on this merry night, of hanging up a stick horizontally by a string from the ceiling, and putting a candle on the one end, and an apple on the other. The stick being made to twirl rapidly, the merry-makers in succession leap up and snatch at the apple with their teeth (no use of the hands being allowed), but it very frequently happens that the candle comes round before they are aware, and scorches them in the face, or anoints them with grease. The disappointments and misadventures occasion, of course, abundance of laughter. But the grand sport with apples on Halloween, is to set them afloat in a tub of water, into which the juveniles, by turns, duck their heads with the view of catching an apple. Great fun goes on in watching the attempts of the younger in the pursuit of the swimming fruit, which wriggles from side to side of the tub, and eludes all attempts to capture it; whilst the disappointed aspirant is obliged to abandon the chase in favour of another whose turn has now arrived. The apples provided with stalks are generally caught first, and then comes the tug of war to win those which possess no such appendages. Some competitors will defy such up the...
apple, if a small one, into their mouths. Others plunge manfully overhead in pursuit of a particular apple, and having forced it to the bottom of the tub, seize it firmly with their teeth, and emerge, dripping and triumphant, with their prize. This adventurous procedure is generally rewarded with a hurrah! by the lookers-on, and is recommended, by those versed in Halloween-aquatics, as the only sure method of attaining success. In recent years, a practice has been introduced, probably by some tender mammas, timorous on the subject of their offspring catching cold, of dropping a fork from a height into the tub among the apples, and thus turning the sport into a display of marksmanship. It forms, however, but a very indifferent substitute for the joyous merriment of ducking and diving.

It is somewhat remarkable, that the sport of ducking for apples is not mentioned by Burns, whose celebrated poem of Halloween presents so graphic a picture of the ceremonies practised on that evening in the west of Scotland, in the poet’s day. Many of the rites there described are now obsolete or nearly so, but two or three still retain place in various parts of the country. Among these is the custom still prevalent in Scotland, as the initiatory Halloween ceremony, of pulling kni-stocks or stalks of colewort. The young people go out hand-in-hand, blindfolded, into the kailyard or garden, and each pulls the first stalk which he meets with. They then return to the fireside to inspect their prizes. According as the stalk is big or little, straight or crooked, so shall the future wife or husband be of the party by whom it is pulled. The quantity of earth sticking to the root denotes the amount of fortune or dowry; and the taste of the pith or custo indicates the temper. Finally, the stalks are placed, one after another, over the door, and the Christian names of the persons who chance thereafter to enter the house are held in the same succession to indicate those of the individuals whom the parties are to marry.

Another ceremony much practised on Halloween, is that of the Three Dishes or Luggies. Two of these are respectively filled with clean and foul water, and one is empty. They are ranged on the hearth, when the parties, blindfolded, advance in succession, and dip their fingers into one. If they dip into the clean water, they are to marry a maiden; if into the foul water, a widow; if into the empty dish, the party so dipping is destined to be either a bachelor or an old maid. As each person takes his turn, the position of the dishes is changed. Burns thus describes the custom:

‘In order, on the clean hearth-stane,
The luggies three are ranged,
And every time great care is ta’en
To see them duly changed.
Auld uncle John, wha wedlock’s joys
Sin’ Mar’s year did desire,
Because he gat the toom dish thrice,
He heaved them on the fire
In wrath that night.

The ceremonies above described are all of a light sportive description, but there are others of a more weird-like and fearful character, which in this enlightened incredulous age have fallen very much into desuetude. One of these is the celebrated spell of eating an apple before a looking-glass, with the view of discovering the inquirer’s
HALLOWEEN. OCTOBER 31.

HALLOWEEN.

future husband, who it is believed will be seen peeping over her shoulder. A curious, and withal, cautious, little maiden, who desires to try this spell, is thus represented by Burns:

"Wee Jenny to her grannie says:
Will ye go wi' me, grannie?
I'll eat the apple at the glass,
I get free uncle Johnny."

A request which rouses the indignation of the old lady:

"She fuffs her pipe wi' sic a lunt,
In wrath she was see vap'rin',
She no'ts na, an sizable bunt
Her brow new worsted apron
Out through that night.

"Ye little skelpie-limmer's face!
I daur you try sic sportin',
As seek the foul thief any place,
For him to spare your fortune:
Now with your headly to a sight,
Great cause ye hae to fear it;
For mony a nae has gotten a fright,
And lived and died deelecred,
On sic a night."

Granny's warning was by no means a needless one, as several well-authenticated instances are related of persons who, either from the effects of their own imagination, or some thoughtless practical joke, sustained such severe nervous shocks, while essaying these Halloween-spells, as seriously to imperil their health.

Another of these, which may perhaps be termed swallowed, rites of All Hallows' Eve, is to wet a shirt-sleeve, hang it up to the fire to dry, and lie in bed watching it till midnight, when the apparition of the individual's future partner for life will come in and turn the sleeve. Burns thus alludes to the practice in one of his songs:

"The last Halloween I was wan'kin,
My droukit sack-sleeve, as ye ken;
But the ghosties cam' up the house stankin',
And the very grey breaks o' Tam Glen!"

Other rites for the invocation of spirits might be referred to, such as the sowing of hemp-seed, and the winding of three times the action of exposing corn to the wind. In all of these the effect, sought to be produced is the same—the appearance of the future husband or wife of the experimenter. A full description of them will be found in the poem of Burns, from which we have already so largely quoted. It may here be remarked, that popular belief ascribes to children born on Halloween, the possession of certain mysterious faculties, such as that of perceiving and holding converse with supernatural beings. Sir Walter Scott, it will be recollected, makes use of this circumstance in his romance of The Monastery.

In conclusion, we shall introduce an interesting story, with which we have been favoured by a lady. The leading incidents of the narrative may be relied on as correct, and the whole affair forms a matter of curious thought on the subject of Halloween divination.

Mr and Mrs M—— were a happy young couple, who, in the middle of the last century, resided on their own estate in a pleasant part of the province of Leinster, in Ireland. Enjoying a handsome competence, they spent their time in various rural occupations; and the birth of a little girl promised to crown their felicity, and provide them with an object of perpetual interest. On the Halloween following this last event, the parents retired to rest at their usual hour, Mrs M—— having her infant on her arm, so that she might be roused by the slightest uneasiness it might exhibit. From teething or some other ailment, the child, about midnight, became very restless, and not receiving the accustomed attention from its mother, cried so violently as to waken Mr M——. He at once called his wife, and told her the baby was uneasy, and received no answer. He called again more loudly, but still to no purpose; she seemed to be in a heavy uneasy slumber, and when all her husband's attempts to rouse her by calling and shaking proved ineffectual, he was obliged to take the child himself, and try to appease its wakings. After many vain attempts of this sort on his part, the little creature at last sobbed itself to rest, and the mother slept on till a much later hour than her usual time of rising in the morning. When Mr M—— saw that she was awake, he told her of the restlessness of the baby during the night, and how, after having tried in vain every means to rouse her, he had at last been obliged to make an awkward attempt to take her place, and lost thereby some hours of his night's rest. "I, too," she replied, "have passed the most miserable night that I ever experienced; I now see that sleep and rest are two different things, for I never felt so unfreshed in my life. How I wish you had been able to awake me—it would have spared me some of my fatigue and anxiety! I thought I was dragged against my will into a strange part of the country, where I had never been before, and, after what appeared to me a long and weary journey on foot, I arrived at a comfortable-looking house. I went in longing to rest, but had no power to sit down, although there was a nice supper laid out before a good fire, and every appearance of preparations for an expected visitor. Exhausted as I felt, I was only allowed to stand for a minute or two, and then hurried away by the same road back again; but now it is over, and after all it was only a dream." Her husband listened with interest to this, and then sighing deeply, said: "My dear Sarah, you will not long have me beside you; whoever is to be your second husband played last night some evil trick of which you have been the victim." Shocked as she felt at this announcement, she endeavoured to suppress her own feelings and rally her husband's spirits, hoping that it would pass from his mind as soon as he had become engrossed by the active business of the day.

Some months passed tranquilly away after this occurrence, and the dream on Halloween night had well-nigh been forgotten by both husband and wife, when Mr M——'s health began to fail. He had never been a robust man, and he now declined so rapidly, that in a short time, notwithstanding all the remedies and attentions that skill could suggest, or affection bestow, his wife was left a widow. Her energetic mind and active habits, however, prevented her from abandoning herself to the desolation of grief. She continued, as her husband had done during his life, to farm the estate, and in this employment, and the education of her little girl, she found ample and salutary
occupation. Alike admired and beloved for the judicious management of her worldly affairs, and her true Christian benevolence and kindliness of heart, she might easily, had she been so inclined, have established herself respectively for a second time in life, but such a thought seemed never to cross her mind. She had an uncle, a wise, kind old man, who, living at a distance, often paid a visit to the widow, looked over her farm, and gave her useful advice and assistance. This old gentleman had a neighbour named C—, a prudent young man, who stood very high in his favour. Whenever they met, Mrs M——'s uncle was in the habit of rallying him on the subject of matrimony. On one occasion of this kind, C— excused himself by saying that it really was not his fault that he was still a bachelor, as he was anxious to settle in life, but had never met with any woman whom he should like to call his wife. 'Well, C—,' replied his old friend, 'you are, I am afraid, a saucy fellow, but if you put yourself into my hands, I do not despair of suit ing you.' Some bantering then ensued, and the colloquy terminated by Mrs M——'s uncle inviting the young man to ride over with him next day and visit his niece, whom C— had never yet seen. The proffer was readily accepted; the two friends started early on the following morning, and after a pleasant ride, were approaching their destination. Here they descried, at a little distance, Mrs M—— retreating towards her house, after making her usual maternal inspection of her farm. The first glance which Mr C—— obtained of her made his heart violently, and the more he looked his agitation increased. Then laying his hand on the arm of his friend, and pointing his finger in the direction of Mrs M—— he said: 'Mr C——, we need not go any further, for if ever I am to be married, there is my wife!' 'Well, C——,' was the reply, 'that is my niece, to whom I am about to introduce you; but tell me,' he added, 'is this what you call love at first sight, or what do you mean by your sudden decision in favour of a person with whom you have never exchanged a word?' 'Why, sir,' replied the young man, 'I find I have betrayed myself, and must now make my confession. A year or two ago, I tried a Halloween-spell, and sat up all night to watch the result. I declare to you most solemnly, that the figure of that lady, as I now see her, entered my room and looked at me. She stood a minute or two by the fire and then disappeared as suddenly as she came. I was wide awake, and felt considerable remorse at having thus ventured to tamper with the powers of the unseen world; but I assure you, that every particular of her features, dress, and figure, have been so present to my mind ever since, that I could not possibly make a mistake, and the moment I saw your niece, I was convinced that she was indeed the woman whose image I beheld on that never-to-be-forgotten Halloween.' The old gentleman, as may be anticipated, was not a little astonished at his friend's statement, but all comments on it were for the time put a stop to by their arrival at Mrs M——'s house. She was glad to see her uncle, and made his friend welcome, performing the duties of hospitality with a simplicity and heartiness that were very attractive to her stranger-guest. After her visitors had refreshed themselves, her uncle walked out with her to look over the farm, and took opportunity, in the absence

of Mr C——, to recommend him to the favourable consideration of his niece. To make a long story short, the impression was mutually agreeable. Mr C——, before leaving the house, obtained permission from Mrs M—— to visit her, and after a brief courtship, they were married. They lived long and happily together, and it was from their daughter that our informant derived that remarkable episode in the history of her parents which we have above narrated.

Died.—John Paleologus, Greek emperor, 1448; John Bradshaw, presiding judge at trial of Charles I, 1659; Victor Amadeus, first king of Sardinia, 1752; William Augustus, Duke of Cumberland, 1785; Jean Pierre Brioc, distinguished Girondist, guillotined, 1793.

The Luck of Edenhal.

At Edenhal, the seat of the ancient family of Mungrave, near Penrith, in Cumberland, the curious drinking-cup, figured below, is preserved as one of the most cherished heir-looms. It is composed of very thin glass, ornamented on the outside with a variety of coloured devices, and will hold about an

THE LUCK OF EDENHAL.

English pint. The legend regarding it is, that the butler of the family having gone one night to draw water at the well of St Cuthbert, a copious spring in the garden of the mansion of Edenhal, surprised a group of fairies dispersing themselves beside the well, at the margin of which stood the drinking-glass under notice. He seized hold of it, and a struggle for its recovery ensued between him and the fairies. The elves were worsted, and, thereupon took to flight, exclaiming:

'If this glass do break or fall,
Farewell the luck of Edenhal!'

The extreme thinness of the glass rendering it very liable to breakage, was probably the origin of
the legend, which has been related of this goblet from time immemorial. Its real history cannot now be ascertained, but from the letters I.H.S. inscribed on the top of the case containing it, it has been surmised to have been originally used as a chalice. In the preceding drawing, fig. 1 represents the glass, fig. 2 its leathern case, and fig. 3 the inscription on the top of the latter.

The wild and hair-brained Duke of Wharton is said, on one occasion, to have nearly destroyed the Luck of Edenhall, by letting it drop from his hands; but the precious vessel was saved by the presence of mind of the butler, who grasped it in a napkin.

The same nobleman enjoys the credit of having composed a burlesque poem in reference to it, written as a parody on "Cherry O'Ness," and which commences thus:

"God prosper long from being broke
The Luck of Edenhall!"

The real author, however, was Lloyd, a boon-companion of the dukes. Uhl, the German poet, has also a ballad, "Das Glück von Edenhall," based on this celebrated legend.

VISIT OF MARIE DE MEDICI TO ENGLAND.

On the 31st of October 1638, Marie de Medici arrived in the city of London, on a visit to the English court. Though she was received with all the honours due to the queen-dowager of France, and the mother of Henrietta, queen of England, yet both court and people considered the visit ill-timed, and the guest unwelcome. Bishop Laud, in his private diary, noticing her arrival, says that he has "great apprehensions on this business. For indeed," he continues, "the English people hate or suspect her, for the sake of her church, her country, and her daughter; and having shifted her residence in other countries, upon calamities and troubles which still pursue her, they think it her fate to carry misfortunes with her, and so dread her as an ill-boding meteor."

Daughter of the Grand Duke of Tuscany, Marie de Medici, for more reasons of state, was married to Henry IV., king of France. Henry gained by her the heir he desired, but her unsociable, haughty, and intolerable disposition, rendered his life miserable, and it is still considered a doubtful question, whether she was not privy to the plot which caused his death by assassination in 1610. On this event taking place, she attained the height of her power, in acquiring the regency of France; but fully as feeble-minded as she was ambitious, she suffered herself to be ruled by the most unworthy favourites, and the inevitable result was quickly followed. She was deserted, however, for her service, one person of conduct and abilities, who cannot be passed over without notice. Attracted by the eloquent sermons of a young Parisian ecclesiastic, named Armand de Plessis, Marie appointed him to be her almoner, and afterwards made him principal secretary of state; but this man, better known by his later title of Cardinal Richelieu, was hated to beget her evil genius and bitterest enemy. During the seven years in which the regency of Marie de Medici lasted, France was convulsed with broils, cabals, and intrigues. At length her son, Louis XIII., assuming the government, caused his mother's unworthy favourite, the Marshal d'Ancre, to be murdered, and his wife to be tried and executed for the alleged crime of sorcery; the wretched woman to the last asserting that the influence of a strong mind over a weak one was the only witchcraft she had used.

Marie would have contended against her son in open war, but Richelieu joining the king, and threatening to imprison her for life, she was forced, in 1631, to take refuge at Brussels, where she lived for seven years, supported by a pension from the Spanish court, her daughter Elizabeth being wife of Philip IV. of Spain. Her loneliness increasing, but ever foiled by the superior diplomacy of Richelieu, she fled from Brussels to Holland, greatly to the indignation of Philip, who at once stopped her allowance, refusing even to pay the arrears then due to her. It seems as if the fates had combined to punish this miserable old woman, for, besides the popular commotions excited by her intrigues, disasters not attributable to her presence—namely, pestilence, famine, and war—overtook her footsteps. Richelieu would have allowed her a liberal annuity, if she would only return to Italy; but this her pride would not permit her to do; moreover, it would be giving up the field to an enemy and rival, whom she still hoped to overcome. So she begged her son-in-law, Charles I., to receive her in England, a request he, with his usual imprudence, generously granted; for he had been forced, by repeated remonstrances of parliament, a few years previous, to dismiss his own queen's foreign chaplains and servants; and it was not likely that her mother, who brought over a new train, should escape unnoticed. There were, indeed, strong reasons for Laud's forebodings and the people's fears. She had a grand reception, however. Waller, the court-poet, dedicated a poem to her, commencing thus:

"Great Queen of Europe! where thy offspring wears All the chief crowns; where princes are thy heirs: As welcome thou to sea-girt Britain's shore, As erst Leicester, who fair Cynthia bore! To Delos was—"

St James's Palace was given to her as a residence, where she kept a petty court of her own. Charles, it is said, allowing her the large sum of £40,000 a year annually disposed of, cared nothing for the populace ever regarded her as an enemy, and in the excitement caused by Strafford's trial, she was mobbed and insulted, even in the palace of St James's. She applied to the king for protection, but he, being then nearly powerless, could do no more than refer her to parliament. The Commons allowed her a temporary guard of one hundred men, petitioning the king to send her out of the country; and not unwisely, for if she went at once to vote her £10,000, with an intimation that they might send more to her, if she were well out of England. The question was, where could she go! seeing that no country would receive her. At last having secured a refuge in the free city of Cologne, she left England in August 1641, the Earl of Arundel, at the king's request, accompanying her. Lilly, with a feeling less would scarcely have expected, thus notices her departure. 'I beheld the old queen-mother of France departing from London. A sad spectacle it was, and produced tears from my eyes, and many other beholders, to see an aged, lean, decrepit,
poor queen, ready for her grave, necessitated to depart hence, having no place of residence left her, but where the courtesy of her hard fate assigned. She had been the only stately magnificent woman of Europe, wife to the greatest king that ever lived in France, mother unto one king and two queens. The misfortunes of this woman attended her to the last. Her friends, under the circumstances, thought it most advisable to invest the £10,000 given her by parliament in an English estate, and as the civil war broke out immediately after, she never received the slightest benefit from it. She died the year following at Cologne, in a garret, destitute of the common necessaries of life. Chigi, the pope's legate, attended her when dying, and induced her to express forgiveness of Richelieu's ingratitude. But when further pressed to send the cardinal, as a token of complete forgiveness, a valued bracelet, that never was allowed to leave her hand, she muttered: 'It is too much!' turned her face to the wall, and expired.

The illustration representing Marie's public entrance into London is considered peculiarly interesting; the engraving from which it is taken being one of the only two street-views extant of the city previous to the great fire. The scene depicted is about the middle of Cheapside; the cross, which stood near the end of Wood Street, forming a conspicuous feature. This was one of the crosses erected by Edward I, in memory of his beloved queen, Eleanor of Castile. It had been frequently repaired and refurbished for various public occasions. Towards the end of Elizabeth's reign, it received some injuries from the ultra-Protestant party; but these were repaired, the iron railing put round the base (as seen in the engraving) and the upper part gilded, in honour of James I's first visit to the city. Those were the last repairs it ever received. After sustaining several petty injuries from the Puritans, the House of Commons decreed that it should be destroyed; and in May 1643, the order was carried into effect amid the shouts of the populace.

The building to the right, eastward of the Cross, represents the Standard, which, with a conduit attached, stood nearly opposite the end of Milk Street. Stow describes it exactly as represented in the engraving—a square pillar, faced with statues, the upper part surrounded by a balcony, and the top crowned with an angel or a figure of Fame, blowing a trumpet. The numerous signs seen in the illustration, exhibit a curious feature of old London. The sign on the right is still a not uncommon one, 'the Nag's Head,' and the bush or garland suspended by it, shows that it was the sign of a tavern. When every house had a sign, and the shop-windows were too small to afford any index of the trade carried on within, publicans found it convenient to exhibit the bush. But when a tavern was well established, and had acquired a name for the quality of its liquors, the garland might be laid aside; for, as the old proverb said, 'Good wine needs no bush.'
Next was November; he full gross and fat,
As fed with lard, and that right well might seeme;
For he had been a fattening hogs of late,
That yet his browes with sweat did reek and storm,
And yet the season was full sharp and broom;
In planting eake he took no small delight:
Whereon he rode, not caste was to deeme;
For it a dreadful Centaure was in sight,
The seed of Saturne and fair Nais, Chiron hight.

SPENSER.

(DESCRIPTION.)

WHAT an uproar there is in the old woods when the November winds lift up their mighty voices, and the huge trees clashing together, like the fabled giants battling with knotted clubs against the invisible assailant, whose blows they feel but cannot see struck, so wage war on one another! On every hand we hear the crash and fall of mighty branches, and sometime a large tree torn up by the roots comes down, quick as an avalanche, levelling all it falls upon, where it lies with its blackening leaves above the crushed underwood like some huge mammoth that has perished. The sky is low and gloomy and leaden-coloured, and a disheartening shadow seems to fall on everything around. We see swine rooting in the desolate cornfields, among the black and rotten stubble, while the geese come dragged and dirty from the muddy pond, which is half-choked up with fallen leaves. On the cold naked hedge a few ears, which the birds have long since emptied, hang like funeral-wreaths over the departed harvest. The rain raineth every day on the heaps and haws.
and autumn berries, and beats the brown seed
vessels of the dead flowers into the earth, while
the decayed leaves come rolling up to make a covering
for their graves. In some low-lying dank corner
a few blackened bean sheaves, that never ripened,
are left to rot; and if you walk near them, you see
the white mould creeping along the gaping pods.
There is a deadly small from slimy water flags
and rotting sedge beside the stagnant mares, and at
every step your footprint is filled up with the
black ooze of the saturated soil the moment it is
made. You see deserted sheds in the fields where
the cattle sheltered, rent and blown in; and if you
enter one to avoid the down-pouring torrent, the
dull gray November sky is seen through the gaping
thatch, even in the puddle on the floor where the
water has lodged. The morsel of hay in the
corner you would vainly sit down upon is mouldy,
and as you look at the beam which spans across,
you fancy some one must have hanged himself on
it, and hurried out again into the pouring rain.

November is the month of Winter, who comes,
with his sharp winds and keen frosts, to cut down
every bladed and leafy bit of green that is standing
up, so that it may make more room for the
flakes to fall on the level waste, and form a great
bed for Winter to sleep upon. He blows all the
decaying leaves into dreary hollows, to fill them up,
so that when Winter is out on the long dark nights,
or half-blinded with the great feathery flakes, he
may not fall into them. If a living flower still
stands above its dead companions, it bends its head
like a mourner over a grave, and seems calling on
our mother earth to let in. The swollen streams
run and hurry along, as if they were eager to
bury themselves in the great rivers, for they have
no flowers to mirror, no singing of birds to tempt
them to linger among the pebbles and listen, no
green bending sprays to toss to and fro, and play
with on their way, and they seem to make a deep
complaining as they rush along between the high
bubbling banks. The few cattle that are out
stand huddled together, while the deep snow clings
other with its breath, or turned round to shut out
the gloomy prospect that surrounds them, laying
down their ears at every whistle of the wind through
the naked hedges. Even the clouds, when they
break up, have a ragged and ragged look, and
appear to wander homeless about the sky, for there
is no golden fire in the far west now for them to
gather about, and sun themselves in its warmth;
the sky seems in doubt and fear, as if trying to
find the blue sky they have lost. The
woodman returns home at night with his head
bent down, feeling there is nothing cheerful to
look round, while his dog keeps close behind,
seeming to avail himself of the little shelter his
master affords from the wind, while they move on
together. The pleasantest thing we see is the bundle
of staves he carries on his shoulders, as it
reminds us of home—the crackling fire, the clean-
swept hearth, and the cozy looking kettle, that
sits 'singing a quiet tune,' on the hob. We
piety the poor fellow with the bundle under his arm,
who stands looking up at the guide-post where three
roads meet, and hope he has not far to go on such
a stormy and moonless night.

But amid all these images of desolation, which
strike the eye most vividly through missing the
richly coloured foliage that threw such beauty
over the two preceding months, November has still
its berries which the early frosts have ripened to
perfection. Turn the eye wheresoever we may,
during our walks, here and there abound on the
hawthorn hedges, and where the wild roses of
summer hang swaying in the wind. The Bramble
berries, which cottage children love to gather,
bearessing their pretty faces with the fruit, have
now their choicest flavour, and melt in the mouth
when eaten, looking like beautiful ornaments
carved in jet as they rock in the autumn winds.
Many a poor village housewife brings a smile to
the children's faces as she places her blackberry
pie or pudding on the table, for it is a fruit that
requires but little sugar, and is a cheap luxury
added to the usual scanty meal. Then there are
the slope and bullaces, almost always to be found
in old hedges which at this season have a misty
blue bloom on them, equal to any that we see
on the grape. These the country people gather
and keep sound through all the long winter,
and they are equal in flavour to the finest damsons
our orchards can produce. Though many varieties
of plum trees have been brought to England at
different times, yet it is to the sloe and bullace we
are indebted for our serviceable plums, as these
shrubs are indigenous, and have been brought to
perfection by cultivation through many centuries.
The dewberry bears so close a resemblance to the
blackberry when ripe, that it is not easy to
distinguish the difference. When in flower, it is as
beautiful as the blossoms of the wild rose, the fruit
has also a blue bloom on it like the plum, which
is never found on the blackberry; the divisions
of the berry are also larger, and not so numerous.
Often, is seems growing among the ling, the pretty
cloudberry, only just overtopping the heather,
for it is seldom more than a foot high, and its fruit
is of a splendid orange colour when ripe, though
rather too acid to please every taste. But of all the
little berry-bearing beetles, none beat the bilberry
when in bloom, for it is then covered with rosy-
coloured waxed to wee, and it is the
hedge plants excel, and for which we marvel
it has not been more cultivated. Birds are partial
to this berry, which bears a grape-like bloom,
and game fed upon it is said to be as superior in
flavour as mutton, fed on pastures abounding in
wild-thyme, is to that fattened only on grass. But
the fairy of our shrubs—which may rank with the
craven mouse among animals, and the humming
birds among the feathered race—is the tiny cran-
berry, which you must bend the back to find, as it
only grows three or four inches high. Whether our
grandmother had some secret art of preserving
these delicious berries, which is now lost—or the
fruit has deteriorated in flavour—we cannot tell, but
somehow we fancy that cranberries have not the
delicious taste now which they had in our boyish
days.

The most wonderful plant that bears berries, is
the butcher's broom, which may be seen covered
with fruit as large as cherries, in the very depth of
winter. Both flower and berry grow out of the
very middle of the leaf, and it would make a pleasant change in our Christmas decoration, as it
is an evergreen, and quite as beautiful as the holly.
The black berries of the privet remain on the
branches all winter long, and are found there when
the sprays are covered with the fresh green leaves of
spring. These berries are much harder than our his and haws, and retain their fulness when all the other huckleberries are withered and tasteless, though the birds generally seem to leave them till the last, as if they only ate them when nothing else could be got. They make a grand show with their large clusters amid the nakedness of winter, though almost failing to attract the eye now if seen beside the wild-cornel or dogwood-berries. Autumn has nothing more beautiful than the wild-cornel, with its deep-purple berries hanging on rich red-coloured branches, and surrounded with golden, green, and crimson foliage, as if all the richest hues of autumn were massed together to beautify it, and wreath the black purple of the berries. Another tree, which scarcely arrests the eye in summer, now makes a splendid show, for the seed-vessels appear like roses, the capsules separating like the petals of the Queen of Flowers, for such is the appearance of the spindle-tree. The woody nightshade, whose purple petals and deep golden anthers enhanced the hedge-row a few weeks ago, is now covered with clusters of scarlet berries, not unlike our red garden currants; while both the foliage and berries of the guelder-rose seem kindled into fiery red. But the beauty of the chameleon of shrubs in autumn, its bunches of rich-looking fruit changing from a beautiful green to a rich red, and then to the colour of the darkest of black-heart cherries, and looking equally as luscious to the eye, though it would be dangerous to eat so many as we might of the real cherries without harm. Beside all these, and many other beautiful berries, we have now the fruits all ablaze with beauty—vegetable relics of an old world—and many of them as pleasing to the eye as our choicest flowers. Where is there a grander sight than a long moonland covered with bracken at the close of autumn?—the foliage of the trees is not to be compared with that outspread land of crimson and gold. And there is such a forest small about it—then that real country aroma, which we get a sniff of in villages where they have only wood lives—for there is nothing else to compare with the small of farm where it covers long leasues of wild moonland.

Many little animals are busy, during the autumn, in laying up stores for winter; for though some of them sleep away the greater portion of the cold season, a change in the weather often causes them to awake, when they have recourse to the provision they have saved, and as soon as the mild warm weather is again succeeded by cold, they coil themselves up, and sleep again. The hibernation of the squirrel is shorter than that of any of our winter-sleeping animals, for he is up and away as soon as he is awakened by a mild atmosphere, and as he has generally more than one larder, enjoys himself until slumber again overtakes him; for we can imagine, from his active habits, that he is not likely to remain in his nest while there is a glimpse of warm sunshine to play in. The hedgehog is a sound sleeper, and stores up no provision, though its hibernation is sometimes broken during a very mild winter, when it may at times be found in the night, searching for food under the sheltered hedges. The pretty dormouse coils itself up like a ball of twine in its winter-nest, curling the tail around the head to the other side of its back, as if tying itself together before going to sleep. Should it awake, there is store of food at hand, which it holds in its forepaws like the squirrel, while sitting up to munch an acorn, hop, or haw, or whatever is stored up, and it is a great hoarder of various kinds of seeds. But few of these torpid animals store their granaries better than the long-tailed field-mouse; considering its smallness, the quantity of corn that has been found in a single nest is amazing. Even if we reckon it to be carried from the harvest-field a full ripe ear at a time, it must have made many journeys to accumulate so much food. Nothing seems to come amiss to it, for if there has been no cornfield at hand, its hoard has been found to consist of nuts, and acorns, gathered from the neighbouring wood, which has sometimes been five or six hundred yards from its nest. Above five hundred nuts and acorns have been taken out of its storehouse; and as it can hardly be supposed that so small an animal could carry more than one at a time, we have proof of its industry in the hoard it must have laboured so hard to get together. One might suppose that, early in autumn, when the weather is fine, these little animals would give themselves up to enjoyment, instead of carrying the many loads they do to. But the hibernatingant is the contrary. The ant lays up no store at all, though it has so often supplied an image of industry in poetry. It is not only one of the sleepiest of insects in winter, but when applied as chloroform, soon stoops the senses in forgetfulness. The ancient Greeks were acquainted with its drowsy properties, and availed themselves of it. Some naturalists say that the hibernating mammals we have glanced at spread out their provisions in the sun to dry and ripen before carrying them into their nests. That this may be the case, we can hardly doubt, having seen ears of corn, nuts, acorns, and seeds, about the roots of trees, at a considerable distance from the spots where they were grown, and in such positions as they could not have fallen into, even had they been shaken down by the wind. The foresight of these hibernating mammals is proved through a layer of air, and they may awaken, long weeks before they retire to their winter-sleep. Nor is it less wonderful to note the going out and coming in of the migrating-birds in autumn; for though all our songsters that are migratory have long since gone, we now hear the screaming of coming flocks in the still night—the clamour of voices high overhead, which is sometimes startling in the star-lighted silence. Most of our aquatic birds and the night, though long strings of wild-geese are often seen forming a V-like figure in the air, as they wings their way to our fenny and marshy lands in the daytime. If flying low enough, the leader of the van, forming the point of V or A, who seems to cleave the air, to make a passage for his followers, will be seen after a time to fall into the rear, when another bird takes his place, until in time all falls back, as if through fatigue; nor can there be any doubt that the leader, who first pierces the air, through which the whole flock passes, has to exert himself more than his followers. Though the heron may now and then be seen, standing as motionless as if sculptured in marble, at some bend of a river or stream, it is now rather a scarce bird, for there are not more than four or five heronries in England, in which they build and breed close together like rooks. The heron shits
from place to place in search of food, but, like several other of our birds, is not migratory, though it may be seen in some parts of our island at this season, where it rarely appears during any other portion of the year. It flies very high, and in dull weather may often be heard, while on the wing, far beyond the reach of the eye. At first there appears something strange and mysterious in birds coming over to winter with us, and migrating again at the first appearance of spring, and never, or very rarely, staying to breed with us. One of our celebrated naturalists argues that the sun is the great moving-power; that they are again forced northward in spring by the same impulse which brings back again our summer singing-birds; 'all seeking again those spots where they first saw the light, there to rear their young;' and that a failure of temperature and food causes them to follow the sun in autumn. Some think that from the time a bird remains with us, a calculation might be made as to the distance it goes after leaving our shores. We have been so long since they remain a month or so longer with us than others, they do not fly so far away as those which migrate earlier. But the rapidity of the flight of a bird, and its power of remaining on the wing, are objects of consideration; and though the swallow is among the last to leave us, it would fly treble the distance in a few hours than many other birds that leave us earlier, and have neither its strength nor stretch of wing to carry them a great distance. As to the time of departure or arrival of our passenger-birds, that must always depend upon the state of the season at the point of departure; for, as we have before remarked, they can know nothing of the backwardness or forwardness of the autumn or spring in the countries they visit, no more than they can tell before they arrive here whether our April is green, or has had all its buds bitten off by a killing frost, such as we well remember to have seen. Take the dates of the departures and arrivals of our birds from the calendars of some of the most celebrated English naturalists, and they will be found to vary at times a month or more in different years, especially the arrivals. A summer abounding in insect-food will cause birds to leave us earlier, after a forward spring, because their young were sooner hatched, and are stronger and better able to accompany their parents than they would have been had they left the shell later, and been pinched while fed by the parent-birds, through a scarcity of food. The sky-lark, which has long been silent, may now be heard in open sunny places; and we find, from a note made four years ago, that we heard it singing on the downs in Surrey in December.

The poetry of home, which we carry with us unconnectedly with us, we were never more beautifully illustrated than in the poor emigrant’s sky-lark, which he carried with him when he left this country for America. Crowds of English settlers used to collect round his hut to hear it sing, and one of them offered all he had in the world—his horse and cart—for the bird, but the owner refused to part with it. We are indebted to the Rev. J. G. Wood, which shows how the hearts of the rudest class of men are touched at times by some trifle which brings back again home with all its old boughs rustling before the ‘inward eye.’ No matter in what form it appears, but anything which causes us to turn to nature with an affectionate feeling, elevates both mind and heart, inspires love, and makes us better, for we can hardly do so without catching some glimpses of the Great Creator, which carries the mind far beyond the object that surrounds us, to the thoughts of those higher destinies which the soul is heir to, and may be ours if we do not sell our godlike birthright.

By the end of this month our gardens look desolate. The few chrysanthemums that have survived have a drogled and dirty look after the frost and rain, and nothing out of doors, excepting the evergreens, remind us of the green flush of departed summer. There is the tapping of rain on our windows, and the roaring of the wind through the long dark nights. The country-roads are soft, and we stick in the mire at every step if we traverse those rutted lanes, which were so delightful to walk along only a few short weeks ago. Even the heart of a brave man beats quicker, who, after passing a treeless and houseless moor, hears the rustling of the leaves or the shriek of the gull on the gibbet-post, as he turns to enter the high dark wood, which, when he has groped through, still leaves him a long leagure from the solitary toll-gate—the only habitable spot he will pass before reaching home. For now, in the solemn language of the Holy Bible, we have many a day ‘of darkness and of gloominess, of clouds and of thick darkness, even very dark, and no brightness in it, for the land is darkened.’

(HISTORICAL.)

November was styled by the ancient Saxons Wint-monat, or the wind-month, from the gales of wind which are so prevalent at this season of the year, obliging our Scandinavian ancestors to lay up their keels on shore, and refrain from exposing themselves on the ocean till the advent of more genial weather in the ensuing year. It bore also the name of Blot-monath, or the bloody-month, from the circumstance of its being customary then to slaughter great numbers of cattle, to be salted for winter use. The epithet had possibly also reference to the sacrificial rites practised at this time.

CHARACTERISTICS OF NOVEMBER.

On the 23d of this month, the sun enters the sign of Sagittarius or The Archer, an emblem said to express the growing predominance of cold which now shoots into the substance of the earth, and suspends the vegetative powers of nature. The average temperature of the British Islands for the middle of November is about 43°. On the 1st of the month, the sun rises in the latitude of London at 7.11, and sets at 4.49.

November is generally regarded as the gloomiest month of the year, and it is perhaps true that less enjoyment is derivable in it from external objects than in any other of the twelve divisions of the calendar. It is popularly regarded as the month of blue devils and suicides. Leaden skies, choking fogs—more especially in London—and torrents of rain, combined frequently with heavy gusts of wind, which shake down the last remaining leaves from the trees, are phenomena of normal occurrence in November, and certainly by no means
conducive to buoyancy and cheerfulness of spirits. Summer and autumn, with their exhilarating influences, have fairly departed, and winter, in its gloomiest phases, is approaching, whilst the hilarity and joyousness of the Christmas-season are still far off. The negative character of November, as exemplified in a foggy day of that month in London, is very happily depicted in the following lines, by the prince of modern humorists, Thomas Hood—

‘No sun—no moon!
No morn—no noon—
No dawn—no dusk—no proper time of day—
No sky—no earthly view—
No distance looking blue—
No road—no street—no “Father side the way”—

First of November.

All-Saints-Day.

This festival takes its origin from the conversion, in the seventh century, of the Pantheon at Rome into a Christian place of worship, and its dedication by Pope Boniface IV, to the Virgin and all the martyrs. The anniversary of this event was first celebrated on the 1st of May, but the day was subsequently altered to the 1st of November, which was thenceforth, under the designation of the Feast of All Saints, set apart as a general commemoration in their honour. The festival has been retained by the Anglican Church.

Born.—Benvenuto Cellini, celebrated silversmith and sculptor in metal, 1500, Florence; Denzil Hollie, reforming patriot, 1597, Houghton, Northamptonshire; Sir Matthew Hale, eminent judge, 1609, Aiderley, Gloucestershire; Nicolas Boileau, poetical satirist, 1638, France; Bishop George Horne, biblical expositor, 1730, Oatham, near Maidstone; Lydia Huntley Sigourney, American poet, 1791, Norwich, United States; Dick—Charles II. of Spain, 1700; Dr John Radcliffe, founder of the Radcliffe Library, Oxford, 1714; Dean Humphrey Prideaux, author of “A Connection of the History of the Old and New Testament, 1724, Norwich; Louria de Keroualle, Duchess of Portsmouth, mistress of Charles II., 1744; Alexander Cruden, author of the Concordance, 1770, InLington; Edward Shuttle, comedian, 1776; Lord George Gordon, originator of the No-Papery Riot of 1780, 1783, Newport, London.

SIR MATTHEW HALE: DRINKING OF HEALTHS.

The illustrious chief-justice left an injunction or advice for his grandchildren in the following terms: ‘I will not have you begin or pledge any health, for it is become one of the greatest artifices of drinking, and occasions of quarrelling in the kingdom. If you pledge one health, you oblige yourself to pledge another, and a third, and so onwards; and if you pledge as many as will be drunk, you must be debauched and drunk. If they will needs know the reason of your refusal, it is a fair answer: “That your grandfather that brought you up, from whom, under God, you have the estate you enjoy or expect, left this in command with you, that you should never begin or pledge a health.”’

Sir Matthew might well condemn health-drinking, for in his days it was used, or rather abused, for the encouragement of excesses at which all virtuous persons must have been appalled. The custom has, however, a foundation and a sanction in the social feelings, and consequently, though it has had many ups and downs, it has always hithtero, in one form or another, maintained its ground. As far back as we can go amongst our ancestors, we find it established. And, notwithstanding the frowns of refinement on the one hand, and tee-totalism on the other, we undoubtedly see it occasionally practised.

Among the earliest instances of the custom may be cited the somewhat familiar one of the health, said to have been drunk by Rowena to Vortigern, and which is described by Vegetian after this fashion: ‘She came into the room where the king and his guests were sitting, and making a low obeisance to him, she said: “Wass haul, bifold Cyming” (Be of health, Lord King). Then, having drunk, she presented it [the cup] on her knees to the king, who, being told the meaning of what she said, together with the custom, took the cup, saying: “Drink haul” [Drink health] and drank also.’

William of Malmsbury adverts to the custom thus: ‘It is said it first took its rise from the death of young King Edward (called the Martyr), son to Edgar, who was, by the contrivance of Elfride, his step-mother, traitorously stabbed in the back as he was drinking.’ The following
curious old delineation, from the Cotton Manuscript, seems to agree with the reported custom. The centre figure appears to be addressing himself to his companion, who tells him that he pledges him, holding up his knife in token of his readiness to assist and protect him:

PLEDGING HEALTHS—NO. 1.

In another illustration of the same period, the custom of individuals pledging each other on convivial occasions is more prominently represented:

The following account of a curious custom in connection with the drinking of healths, is from a contribution to *Notes and Queries*, by a Lichfield correspondent, who says, that in that ancient city,

PLEDGING HEALTHS—NO. 2.

it has been observed from time immemorial, at dinners given by the mayor, or at any public feast of the corporation. The first two toasts given are 'The Queen,' and 'Weale and worship,' both which are drunk out of a massive embossed silver cup, holding three or four quarts, presented to the corporation in 1666, by the celebrated Elias Ashmole, a native of the city. The ceremony itself is by the same writer thus more particularly described: 'The mayor drinks first, and on his rising, the persons on his right and left also rise. He then hands the cup to the person on his right side, when the one next to him rises, the one on the left of the mayor still standing. Then the cup is passed across the table to him, when his left-hand neighbour rises; so that there are always three standing at the same time—one next to the person who drinks, and one opposite to him.' From the curious old letter of thanks for this cup we quote the following lines: 'Now, sir, give us leave to conclude by informing you that, according to your desire (upon the first receipt of your Fodales Charitatis, at the sign of the George for England), we filled it with Catholic wine, and devoted it to a sober health to our most gracious king, which (being of so large a continent) pass the hands of thirty to pledge; nor did we forget yourself in the next place, being our great Messer.' This letter of thanks is dated, 'Lichfield, 26th January 1666.' The whole of the original letter appears in Harwood's *Lichfield*.

The custom as practised in the passing of the
renowned "loving-cup," at the lord mayor's feasts in London, is too well known to require further notice. Another writer in Notes and Queries says, that the same observance always had place at the parish meetings, and churchwardens' dinners, at St Margaret's, Westminster: the cover of the loving-cup being spread over the head of the person drinking by his neighbours on his right and left hand.

It appears from Barrington's Observations on the Ancient Statutes (1766), that the custom prevailed at Queen's College, Oxford, where the scholars who wait upon their fellows place their two thumbs on the table. The writer adds: 'I have heard that the same ceremony is used in some parts of Germany, whilst the superior drinks the health of the inferior. The inferior, during this, places his two thumbs on the table, and therefore is incapacitated from making any attempt upon the life of the person who is drinking.' The writer on the Lichfield custom also adverts to this, by the by, when he says that, 'he presumes that though the ceremony is different, the object is the same as that at Queen's College—viz., to prevent injury to the person who drinks.'

The practice would appear to have had its origin at the time when the Danes bore sway in this country. Indeed, some authors deduce the expression, 'I'll pledge you,' in drinking, from this period. It seems that the Northmen, in those days, would occasionally stab a person while in the act of drinking. In consequence, people would not drink in company, unless some one present would be pledged or, if necessary, that they should come to no harm whilst thus engaged. Nay, at one time, the people became so intimidated that they would not dare to drink until the Danes had actually pledged their honour for their safety!

In Beaumont and Fletcher's days, it was the custom for the young gallants to stab themselves in their arms, or elsewhere, in order to 'drink the health' of their mistresses, or to write their name in their own blood! The following passage occurs in Pepys's Diary relative to 'health-drinking': 'To the Rhine wine-house, where Mr Moore shewed us the French manner, when a health is drunk, to bow to him that drunk to you, and then apply yourself to him, whose lady's health is drunk, and then to the person that you drink to, which I never knew before: but it seems it is now the fashion.'

The following remarkable and solemn passage is found in Ward's Living Speeches of Dying Christians (in his Sermons): 'My Saviour began to mee in a bitter cup; and shall I not pledge him? i.e., drink the same.'

Records of the custom in many countries, and in many ages, might be multiplied ad infinitum. It is beyond our present purpose, however, to give any further illustrations, beyond the following curious extract from Rich's Irish Hobble, or the English Hoe and Ores (1617). After a long and wholesome, though severe, tirade against drunkenness, the quaint old writer says: 'In former ages, they had no conceits whereby to draw on drunkenness; their best was, I drink to you, and I pledge you; till at length some shallow-witted drunkard found out the carouse, which shortly after was turned into a hearty drought: but now it is ingined [enjoined] to the drinking of a health, an invention of that worth and worsewiseness, as it is pitty the first founder was not hanged, that wee might have found out his name in the ancient record of the Hangman's Register! The institution in drinking of a health is full of ceremonie, and observed by tradition, as the peiplates doe their praying to saints.' The singular writer then adds his description of the performance of the custom:

'He that begins the health, hath his prescribed orders; first voucinguer his head, he takes a full cup in his hand, and setting his countenance with a grave aspect, he pays for audience. Silence being once obtained, hee begins to breath out the name, perdauenture of some honorable personage that is worthy of a better regard than to have his name polled at so unifying a time, amongst a company of drunkards; but his health is drunken to, and hee that pledgeth must likewise of [off] with his cap, kisse his fingers, and bowing himselfe in signe of a reuerent acceptance. When the leader sees his follower thus prepared, he soupes [sups] up his breath, turns the bottom of the cuppe vpward, and in ostentation of his dexteritie, gius the cup a phylip [fillip], to make it cry thorouge [a sort of ming sound, denoting that the vessel was emptied of its contents]. And thus the first scene is acted.—The cup being newly replenished to the breath of a haire, he that is the pledger must now begin his part, and thus it goes round throughout the whole company, provided alwayes by a canon set downe by the first founder there must be three at the least still vouchser, till the health hath had the full passage; which is no sooner ended, but another begins againe, and he drinks a health to his Lady of little worth, or, perchance, to his Light-heel'd mistres.'

The cautious old writer just referred to, adds the following remarks in a marginal note: 'He that first inneted that wes of drinking healths, had his braines beat out with a potter-pot: a most just end for inventors of such notorious abuses. And many in pledging of healths have ended their lives presently [early], as example lately in London.'

A few notices may be appended of the anathemas which have been hurled at the custom of drinking healths. The first of these is a singular tract published in 1692, 'by William Pryme, Gent., proving the drinking and pledging of Healths to be sinful, and utterly unlawful unto Christians.' At the Restoration, this work had become scarce, and 'it was judged meet that Mr William Pryme's notable book should be reprinted, few of them being to be had for money.' The loyalty of the English to Charles II., was shown by such a frequency of drinking his health, as to threaten to disturb the public peace, and occasion a royal proclamation, an extract from which is subjoined.

C. R.

Our dislike of those, who under pretence of affection to us, and our service, assume to themselves a Liberty of Reviling, Threatning, and Reproaching of others. There are likewise another sort of men, of whom we have heard much, and are sufficiently ashamed, who spend their time in Taverns, Tipling-houses, and Debauches, giving no other evidence of their affection to us, but in Drinking our Hailzes.'

The following is from a work published about this period:

'Of Healths drinking, and Heavens doom thereon: Part of a Letter from Mr Ab. Ramebotham.'
Within four or five miles of my house, the first of July (as I took it), at a town called Gainsingham,* there were three or four persons in a shopkeeper's house, drinking of Strong waters, and of Healths, as 'tis spoken. And all of a sudden there came a flame of fire down the chimney with a great crack, as of a canon, or grenade; which for the present struck the men as dead.

But afterwards they recovered; and one of them was, as it were, shot in the knee, and so up his Breeches and Doublet to his shoulder; and there it brake out, and split and brake in pieces the window, and set the house on fire; the greater part of which burned down to the ground.

This hath filled the Country in wonder, and many speak their judgements both on it, and of the persons...

ABR. RAMBOOTHAM.'

JOHN RADCILFF.

John Radcilff, whose name is perpetuated in so many memorials of his munificence, was born at Wakefield, in Yorkshire, February 7, 1650, and educated at the Universities where he studied medicine. His books were so few in number, that on being asked where was his library, he pointed to a few vials, a skeleton, and a herbal, in one corner of his room, and exclaimed, with emphasis: 'There, sir, is Radcilff's library!' In 1675, he took his degree of M.B., and began to practise in Oxford, where, by some happy cures (especially by his cooling treatment of the small-pox), he soon acquired a great reputation. In 1682, he took the degree of M.D., and went out a Grand Compounder; an imposing ceremony in those days, and for a century afterwards, all the members of the college walking in procession, with the candidate himself, bareheaded, to the Convoction House. Radcilff now removed to London, and settled in Bow Street, Covent Garden, where he soon received daily, in fees, the sum of twenty guineas, through his vigorous and decisive method of practice, as well as his pleasantry and ready wit—many, it is said, even feigning themselves ill, for the pleasure of having a few minutes' conversation with the facetious doctor. The garden in the rear of his house, in Bow Street, extended to the garden of Sir Godfrey Kneller, who resided in the Piazza, Covent Garden. Kneller was fond of flowers, and had a fine collection. As he was intimate with the physician, he permitted the latter to have a door into his garden; but Radcilff's servants gathering and destroying the flowers, Kneller sent him notice that he must shut up the door. Radcilff replied peevishly: 'Tell him he may do anything with it but paint it.' And I,' answered Sir Godfrey, 'can take anything from him but physic.'

Radcilff showed great sagacity in resisting the entreaties of the court-chaplains to change his religion and turn papist; and when the Prince of Orange was invited over, Radcilff took care that no imputation of guilt could, by any possibility, attach to him afterwards, had the Revolution not succeeded. He had, two years previously, been appointed physician to the Princess Anne; and when King William came, Radcilff got the start of his majesty's physicians by curing two of his favourite foreign attendants; for which the king gave him five hundred guineas out of the privy-purse. But Radcilff declined the appointment of one of his majesty's physicians, considering that the settlement of the crown was then but insecure. He nevertheless attended the king, and for the first eleven years of his reign, received more than 600 guineas annually. In 1689, he succeeded in restoring the King William sufficiently to enable him to join his army in Ireland, and gain the victory of the Boyne. In 1691, when the young Prince William, Duke of Gloucester, was taken ill of fainting fits, and his life was despaired of, Radcilff was sent for, and restored the little patient, for which Queen Mary ordered her chamberlain to present him with a thousand guineas. He was now the first physician of the day; and his neighbour, Dr. Gibbons, received £1000 per annum from the overflow of patients who were not able to get admission to Radcilff.

In 1692, he sustained a severe pecuniary loss. He was persuaded by his friend, Betterton, the famous tragedian, to risk £3000 in a venture to the East Indies; the ship was captured by the enemy, with her cargo, worth £230,000. This money was not recovered, and Radcilff had to rely on his dissataggious intelligence at the Bull's Head Tavern, in Clare Market (where he was enjoying himself with several persons of rank), with philosophic composure; desiring his companions not to interrupt the circulation of the glass, for that he had no more to do but go up so many pair of stairs, to make himself whole again.

Towards the end of 1694, Queen Mary was seized with small-pox, and the physicians were most alarming; her majesty's physicians were at their wits' end, and the privy-council sent for Radcilff. At the first sight of the prescriptions, he rudely exclaimed, that 'her majesty was a dead woman, for it was impossible to do any good in her case, where remedies were given that were so contrary to the nature of the distemper; yet he would endeavour to do all that lay in him to give her ease.' There were some faint hopes for a time, but the queen died. Some few months after, Radcilff's attendance was requested by the Princess Anne. He had been drinking freely, and promised speedily to come to St James's; the princess grew worse, and a messenger was again despatched to Radcilff, who, on hearing the symptoms detailed, swore by his Maker, 'that her highness' distemper was nothing but the vapours, and that she was in as good a state of health as any woman breathing, could she but believe it.' No skill or reputation could excuse this rudeness and levity; and he was, in consequence, dismissed. But his credit remained with the king, who sent him abroad to attend the Earl of Albemarle, who had a considerable command in the army; Radcilff remained in the camp only a week, succeeded in the treatment of his patient, and received from King William £1200, and from Lord Albemarle 400 guineas and a diamond ring. In 1697, after the king's return from Loo, being much indisposed at Kensington Palace, he sent for Radcilff; the symptoms were droptical, when the physician, in his odd way, promised to try to lengthen the king's days, if he would forbear making long visits to the Earl of Bradford, with whom the king was wont to drink very hard. Radcilff left behind him a recipe, by following which the king was enabled to go abroad, to his palace at Loo, in Holland.
DR RADCLIFFE. NOVEMBER 1.

ALEXANDER CRUDE.

In 1899, the Duke of Gloucester, heir-presumptive to the crown, was taken ill, when his mother, the Princess Anne, notwithstanding her antipathy, sent for Radcliffe, who pronounced the case hopeless, and abused the two other physicians, telling them that it would have been happy for this nation had the first been bred up a basket-maker (which was his father's occupation), and the last continued making a havoc of nouns and pronouns, in the quality of a country schoolmaster, rather than attempt by their reach, in whatsoever practice of an art which he was an utter stranger to, and for which he ought to have been whipped with one of his own rods.

At the close of this year, the king, on his return from Holland, where he had not been abstemious, being much out of health, again sent for Radcliffe to Kensington Palace; when his majesty, shewing his swollen ankles, exclaimed: 'Doctor, what think you of this?' 'Why, truly,' said Radcliffe, 'I would not have your majesty's two legs for your three kingdoms.' With this ill-timed jest, though it passed unnoticed at the moment, his professional attendance at court terminated.

Anne sent again for Radcliffe in the dangerous illness of her husband, Prince George. His disease was dropsy, and the doctor, unused to flatter, declared that the prince had been so tampered with, that nothing in the art of physic could keep him alive more than six days; and his prediction was verified.

When, in July 1714, Queen Anne was seized with the sickness which terminated her life, Radcliffe was sent for; but he was confined by a fit of gout to his house at Cachall. He was accused of refusing to give his professional advice to his sovereign, and in consequence of this report, dust scarcely ventured out of doors, as he was threatened with being pulled to pieces if ever he came to London.

Radcliffe died November 1, 1714, 'a victim to the ingratitude of a thankless world, and the fury of the gout.' By his will he left his Yorkshire estate to University College, Oxford, and £5000 for enlargements of the library; to St Bartholomew's Hospital, the yearly sum of £500 towards mending their diet, and £100 yearly for the buying of linen; and £40,000 for the building of a library at Oxford, besides £150 a year for the librarian's salary, £100 a year for the purchase of books, and another £100 for repairs. The smallness of the annual sum provided for the purchase of books is remarkable, and gave occasion to the animadversion, that the main object of the testator was to erect a splendid monument to himself. The bulk of the remainder of his property he left in trust for charitable purposes. The Radcliffe Library is one of the noblest architectural adornments of Oxford. It was designed by Gibbs, and is built on a circular plan, with a spacious dome. It was originally called the Physic Library, and the books which it contains are particularly confined to works on medicine and natural science.

ALEXANDER CRUDE.

This persevering and painstaking compiler, who was appointed by Sir Robert Walpole bookseller to the queen of George II., died at his lodgings in Camden Street, Islington, November 1, 1770. The Concordance, which has conferred celebrity on his name, was published and dedicated to Queen Caroline in 1737. He was permitted to present a copy of it in person to her majesty, who, he said, smiled upon him, and assured him she was highly obliged to him. The expectations he formed of receiving a solid proof of the queen's appreciation of the work, were disappointed by her sudden death within sixteen days of his reception. Twenty-four years afterwards, he revised a second edition, and dedicated it to her grandson, George III. For this, and a third edition issued in 1768, his book-sellers gave him £200.

He was often prominently before the public as a very eccentric enthusiast. Three times, during his life, he was placed in confinement by his friends. On the second of these occasions, he managed to escape from a private lunatic asylum in which he was chained to his bedstead; when he immediately brought actions against the proprietor and physician. Unfortunately for his case, he stated it himself, and lost it. On his third release, he brought an action against his sister, from whom he claimed damages to the amount of £10,000, for authorising his detention. In this suit also he was unsuccessful. In the course of his life, he met with many rebuffs in the prosecution of projects in which he rashly embarked, as he considered for the public good; for all of which he solaced himself with printing accounts of his motives, treatment, and disappointments.

One of his eccentricities consisted in the assumption of the title of Alexander the Corrector. In the capacity implied by this term, he stopped persons whom he met in public places on Sundays, and admonished them to go home and keep the Sabbath-day holy; and in many other ways addressed himself to the improvement of the public morals. He spent much of his earnings in the purchase of tracts and catechisms, which he distributed right and left; and gave away some thousands of handbills, on which were printed the fourth commandment. To enlarge, as he thought, his sphere of usefulness, he sighed for a recognition of his mission in higher places; and, to attain this end, succeeded, after considerable solicitation, in obtaining the signatures of several persons of rank to a testimonial of his zeal for the public good. Armed with this credential, he urged that the king in council, or an act of legislature, should formally constitute him Corrector of Morals. However, his chimerical application was not entertained.

Another eccentricity arose out of the decided part he took against Mr Wilkes, when that demagogue agitated the kingdom. He partly expressed his intense feeling in his usual mode—by pamphlet; but more especially evinced his aversion by effacing the offensive numeral No. 45, wherever he found it chalked up. For this purpose, he carried in his pockets a large piece of sponge. He subsequently included in this obliteration all the obscene inscriptions with which idle persons were permitted at that time to disgrace blank walls in the metropolis. This occupation, says his biographer Blackburn, from its retrospective character, made his walks very tedious. His erratic benevolence prompted him to visit the prisoners in Newgate daily, instruct them in the teachings of the gospel, and encourage them to pay attention, by gifts of money to the most
diligent. This good work he was, however, induced to relinquish, by finding that his hardened pupils, directly he had turned his back, spent these sums in intoxicating liquors. While so engaged, he was able to prevail upon Lord Halifax to commute a sentence of death against Richard Potter, found guilty of uttering a forged will, to one of transportation. Still animated with a desire to regenerate the national morals, he besought the honour of knight-hood, no, not for himself, but for the sake of the value of the crown, but from a conviction that that dignity would give his voice more weight. In pursuit of the desired distinction, he seems to have given a great deal of trouble to the lords in waiting and secretaries of state, and probably exceeded the bounds of their patience, for, in a commendation of Earl Falkelt, he admits that less-afflicted noblemen got quit of his importunities by flight. This year, he says, in a statement of his attendance at court, 'being goutish in his feet, could not run away from the Corrector as others were apt to do.' In 1754, he offered himself as a candidate to represent the city of London in parliament. In this contest, he issued the most singular addresses, referring the sheriffs, candidates, and livemakers to consider his letters and advertisements published for some time past, and especially the appendix to Alexander the Corrector's Adventures. If there is just ground to think that God will be pleased to make the Corrector an instrument to reform the nation, and particularly to promote the reformation, the peace, and prosperity of this great city, and to bring them into a more religious temper and conduct, no good man, in such an extraordinary case, will deny him his vote. And the Corrector's election is believed to be the means of paving the way to his being a Joseph, and an useful and prosperous man.' He also presented his possible election in the light of the fulfilment of a prophecy. But the be-wigged, and buttoned, and knee-breeched, and low-shoed electors only laughed at him. He consigned himself for the disappointment with which this new effort was attended, as in former ones, by issuing a pamphlet.

The most singular of Cruden's pamphlets detailed his love adventures. He became enamoured of Miss Elizabeth Abney. The father of this lady, Sir Thomas Abney, was a successful merchant, who was successively sheriff, alderman, lord mayor of London, and one of the representatives of the city in parliament. He was a person of considerable consequence, having been one of the founders of the Bank of England, of which he was for many years a director; but his memory is especially honoured from the fact of its being interwoven with that of Dr Watts, who resided with him at Stoke-Newington. His daughter inherited a large fortune; and to become possessed of both, became the Corrector's sanguine expectation. Miss Abney was deaf to his entreaties. For months he persisted in soliciting her, with letters, memorial, and remonstrances. When she left home, he caused 'praying-bills' to be distributed in various places of worship, requesting the prayers of the minister and congregation for her preservation and safe return; and when this took place, he issued further bills to the same congregations to return thanks. Finding these peculiar attentions did not produce the desired effect, he drew up a long paper, which he called a Declaration of War, in which he declared he should compass her surrender, by shooting off great numbers of bullets from his camp; namely, by earnest prayer to Heaven day and night, that her mind might be enlightened and her heart softened. His grotesque courtship ended in defeat: the lady never relented. The precision and concentration of thought required in his literary labours, the compilation and several revisions of his Concordance, his verbal Index of Milton's works, his Dictionary of the Holy Scriptures, his Account of the History and Excellency of the Holy Scriptures, and his daily employment on the journal in which the letters of Junius appeared, as corrector of the press, render Cruden's aberrations the more remarkable. And a still more curious circumstance, consists in the fact that his vagaries failed to efface the esteem in which he was regarded by all who knew him, more especially by his biographers, Blackburn and Chalmers; the latter of whom said of him, that he was a man to whom the religious world lies under great obligation, 'whose character, notwithstanding his mental infirmities, we cannot but venerate; whom neither infirmity nor neglect could debase; who sought consolation where only it could be found; whose sorrows served to inflame in us the distresses of others; and who employed his prosperity to relieve those who, in every sense, were ready to perish.' Are there many men more worthy of a column in the Book of Days?

EXPULSION OF THE JEWS FROM ENGLAND.

In the course of the year of grace, 1929, three daughters of Edward I. were married. The old chroniclers relate wondrous stories of the prodigious magnificence of those nuptials; nor are their recitals without corroboration. Mr Herbert, a late librarian of the city of London, discovered in the records of the Goldsmith's Company, the actual list of valuables belonging to Queen Eleanor, and it reads more like an extract from the Arabian Nights, than an early English record. Gold chalices, worth £293 each, were given to each one of those beautiful ladies. The large ones, figure in it; small silver cups are valued at £118 each—what were the large ones worth, we wonder!—while diamonds, sapphires, emeralds, and rubies, sparkle among all kinds of gold and silver utensils. Modern historians refer to the old chronicles, and this astounding catalogue of manufactured wealth, as a proof of the attainments in refinement and art which England had made at that early period. But there is a reverse to every medal, and it is much more probable that these records of valuables are silent witnesses to a great crime—the robbery and expulsion of the Jews, proving the general barbarity and want of civilisation that then prevailed.

Not long before this year of royal marriages, Edward, mourning on a sick-bed, made a solemn vow, that if the Almighty with letters, memorials, and remonstrances. When she left home, he caused 'praying-bills' to be distributed in various places of worship, requesting the prayers of the minister and congregation for her preservation and safe return; and when this took place, he issued further bills to the same congregations to return thanks. Finding these peculiar attentions did not produce the desired effect, he drew up a long paper, which he called a Declaration of War, in which he declared he should compass her surrender, by shooting off great numbers of bullets from his camp; namely, by earnest prayer to Heaven day and night, that her mind might be enlightened and her heart softened. His grotesque courtship ended in defeat: the lady never relented. The precision and concentration of thought required in his literary labours, the compilation and several revisions of his Concordance, his verbal Index of Milton's works, his Dictionary of the Holy Scriptures, his Account of the History and Excellency of the Holy Scriptures, and his daily employment on the journal in which the letters of Junius appeared, as corrector of the press, render Cruden's aberrations the more remarkable. And a still more curious circumstance, consists in the fact that his vagaries failed to efface the esteem in which he was regarded by all who knew him, more especially by his biographers, Blackburn and Chalmers; the latter of whom said of him, that he was a man to whom the religious world lies under great obligation, 'whose character, notwithstanding his mental infirmities, we cannot but venerate; whom neither infirmity nor neglect could debase; who sought consolation where only it could be found; whose sorrows served to inflame in us the distresses of others; and who employed his prosperity to relieve those who, in every sense, were ready to perish.' Are there many men more worthy of a column in the Book of Days?
of the Jewish race, that many members of it had been in England from a very early period; but their first regular establishment in any number dates from the Norman Conquest, William having promised them his protection. The great master of romance has, in Ivanhoe, given a general idea how the Jews were treated; but there were particular horrors perpetrated on a large scale, quite unfit for relation in a popular work. In short, it may be said that when the Jews were most favoured, their condition was to our ideas intolerable; and yet it should be recorded in favour of our ancestors, that even then the Jews were rather more mildly treated in England than in the other countries of Europe.

When Edward returned from despoiling and banishing the Jews of Guillaume, his subjects received him with rapturous congratulations. The constant drain of the precious metals created by the Crusades, the almost utter deficiency of a currency for conducting the ordinary transactions of life, had caused the whole nation—clergy, nobility, gentry, and commoners—to become debtors to the Jews. If the king, then, would graciously banish them from England as he had from Guillaume, his subjects' debts would be sponged out, and he, of course, would be the most glorious, popular, and best of monarchs. Edward, however, did not see the affair exactly in that light. Though, in case of an enforced exodus, he would become entitled to the Jewish possessions, yet his subjects would be greater gainers by the complete abolition of their debts. In fact, the king, besides his own part of the spoil, claimed a share in that of his subjects, but after considerable deliberation the matter was thus arranged. The clergy agreed to give the king a tenth of their chattels, and the laity a fifteenth of their lands; and so the bargain was concluded to the satisfaction and gain of all parties, save the miserable beings whom it most concerned.

On the 31st of August 1290, Edward issued a proclamation commanding all persons of the Jewish race, under penalty of death, to leave England before the 1st of November. As an act of gracious condescension on the part of the king, the Jews were permitted to take with them a small portion of their movables, and as much money as would pay their travelling expenses. Certain ports were appointed as places of embarkation, and safe-conduct passes to those ports were granted to all who chose to pay for them. The passes added more to the royal treasury than to the protection of the fugitives. The people—that is to say, the Christians—rose and robbed the Jews on all sides, without paying the slightest respect to the dearly-purchased protections. All the old historians relate a shocking instance of the treatment the Jews received when leaving England. Holinshed thus quaintly tells the story:

'A sort of the richest of them being shipped with their treasure, in a mighty tall ship which they had hired, when the same was under sail, and got down the Thames, towards the mouth of the river, the master-mariner betought him of wile,
The Book of Days.

Great Earthquake at Lisbon.

And though Pope, when describing the Temple of Dulness, says:

‘De Lyra there a dreadful front extends,’

both parties, at the period of the Reformation, agreed in saying:

‘Si Lyra non lyraisset, Lutherus non salisasset.’

‘If Lyra had not piped, Luther would not have danced.’

From the expulsion down to the period of the Commonwealth, the presence of a few Jews was always tolerated in England, principally about the court, in the capacity of physicians, or foreign agents. Early in 1646, the wise and tolerant Protector summoned a council to deliberate on the policy of allowing Jews to settle once more in England. That all parties might be represented, Cromwell admitted several lawyers, clergymen, and merchants, to aid the council in its deliberation. The lawyers declared that there was no law to prevent Jews settling in England; the clergy asserted that Christianity would be endangered thereby; and the merchants alleged that they would be the ruin of trade. Many of the arguments employed on this discussion were again used in the late debates on the admission of Jews into parliament. The council sat four days without coming to any conclusion: at last Cromwell closed it by saying, that he had sent for them to consider a simple question, and they had made it an intricate one. That he would, therefore, be guided by Providence, and act on his own responsibility. A few days afterwards, he announced to his parliament that he had determined to allow Jews to settle in England, and the affair was accomplished. In May and June 1656, a number of Jews arrived in London, and their first care was to build a synagogue, and lay out a burial-ground. The first interment on their burial-register is that of Isaac Britto, in 1657.

The Great Earthquake at Lisbon in 1755.

One of the most awful earthquakes ever recorded in history, for the loss of life and property thereby occasioned, was that at Lisbon on the 1st of November 1755. Although equalled, perhaps, in the New World, it has had no parallel in the Old. About nine o’clock in the morning, a hollow thunder-like sound was heard in the city, although the weather was clear and serene. Almost immediately afterwards, without any other warning, such an upheaval and overturning of the ground occurred as destroyed the greater part of the houses, and buried or crushed no less than 30,000 human beings. Some of the survivors declared that the shock scarcely exceeded three minutes in duration. Hundreds of persons lay half-killed under stones and ruined walls, shrieking in agony, and imploring aid which no one could render. Many of the churches were at the time filled with their congregations; and each church became one huge catacomb, entombing the hapless beings in its ruins. The earth was upturned in as many minutes, destroyed the number of lives above mentioned; but there were counted twenty-two shocks altogether, in Lisbon and its neighbourhood, destroying in the whole very nearly 60,000
lives. In one house, 4 persons only survived out of 38. In the city-prison, 800 were killed, and 1300 in the general hospital.

The effects on the sea and the sea-shore were scarcely less terrible than those inland. The sea retired from the harbour, left the bar dry, and then rolled in again as a wave fifty or sixty feet high. Many of the inhabitants, at the first alarm, rushed to a new marble quay which had lately been constructed; but this proceeding only occasioned additional calamities. The quay sank down into an abyss which opened underneath it, drawing in along with it numerous boats and small vessels. There must have been some actual closing up of the abyss at this spot; for the poor creatures thus engulfed, as well as the timbers and other wreck,

LISBON.

disappeared completely, as if a cavern had closed in upon them. The seaport of Setubal, twenty miles south of Lisbon, was engulfed and wholly disappeared. At Cadiz, the sea rose in a wave to a height of sixty feet, and swept away great part of the mole and fortifications. At Oporto, the river continued to rise and fall violently for several hours; and violent gusts of wind were actually forced up through the water from chasms which opened and shut in the bed beneath it. At Tetuan, Fez, Marocco, and other places on the African side of the Mediterranean, the earthquake was felt nearly at the same time as at Lisbon. Near Marocco, the earth opened and swallowed up a village or town with 8000 inhabitants, and then closed again. The comparisons which scientific men were afterwards able to institute, showed that the main centre of the disturbance was far out in the Atlantic, where the bed of the ocean was convulsed by up-and-down heavings, thereby creating enormous waves on all sides. Many of the vessels out at sea were affected as if they had struck suddenly on a sand-bank or a rock; and, in some instances, the shock was so violent as to overturn every person and everything on board. And yet there was deep water all round the ships.

Although the mid-ocean may have been the focus of one disturbance which made itself felt as far as Africa in one direction, England in another, and America in a third, Lisbon must unquestionably have been the seat of a special and most terrible movement, creating yawning gaps in various parts of the city, and swallowing up buildings and people in the way above described. Many mountains in the neighbourhood, of considerable elevation, were shaken to their foundations; some were rent from top to bottom, enormous masses of rock were hurled from their sides, and electric flashes issued from the fissures. To add to the horrors of such of the inhabitants as survived the shocks, the city was found to be on fire in several places. These fires were attributed to various causes—the domestic fires of the inhabitants, the furniture and timbers that were hurled promiscuously upon them; the large wax-tapers which on that day (being a religious festival) were lighted in the churches; and the incendiary mischief of a band of miscreants, who took advantage of the terror around them by setting fire to houses in order to sack and pillage. The wretched inhabitants were either paralysed with dismay, or were too much engaged in seeking for the mangled corpses of their friends, to attend to the fire; the flames continued for six days, and the
half-roasted bodies of hundreds of persons added to the horrors.

Mr. Mallet, in his history of earthquakes (which traces them to a kind of earth-wave propagated with great velocity), states that the earthquake which nearly destroyed Lisbon was felt at Loch Lomond in Scotland. 'The water, without any apparent cause, rose against the banks of the loch, and then subsided below its usual level: the greatest height of the swell being two feet four inches. In this instance, it seems most probable that the amplitude of the earth-wave was so great, that the entire cavity or basin of the lake was nearly at the same instant tilted or canted up, first at one side and then at the other, by the passage of the wave beneath it, so as to disturb the level of the contained waters by a few inches—just as one would cant up a bowl of water at one side by the hand.'

ALL-HALLOW-TIDE CUSTOMS AT THE MIDDLE TEMPLE.

In the reign of Charles I., the young gentlemen of the Middle Temple were accustomed at All-Hallow-Tide, which they considered the beginning of Christmas, to associate themselves for the festive objects connected with the season. In 1629, they chose Bulstrode White lockes as Master of the Revels, and used to meet every evening at St Dunstan's Tavern, in a large new room, called 'The Oracle of Apollo,' each man bringing friends with him at his own pleasure. It was a kind of mock parliament, where various questions were discussed, as in the modern debating societies; but these terrible proceedings were seasoned with mirthful doings, to which the name of Revels was given, and of which dancing appears to have been the chief. On All-Hallows-Day, the master [White locke, then four-and-twenty], as soon as the evening was come, entered the hall, followed by sixteen revellers. They were proper handsome young gentlemen, habited in rich suits, shoes and stockings, hats and great feathers. The master led them in his bar gown, with a white staff in his hand, the music playing before them. They began with the old masques; after which they danced the Bravos, and then the master took his seat, while the revellers flaunted through galleries, corantes, French and country dances, till it grew very late. As might be expected, the reputation of this dancing soon brought a store of other gentlemen and ladies, some of whom were of great quality; and when the ball was over, the festive-party adjourned to Sir Sydney Montague's chamber, lent for the purpose to our young president. At length the court ladies and grandees were alluread—to the contentment of his vanity it may have been, but entailing on him serious expense—and there was great striving for places to see them on the part of the London citizens. To crown the ambition and vanity of all, a great German lord had a desire to witness the revels, then making such a sensation at court, and the Templars entertained him at great cost to themselves, receiving in exchange that which cost the great noble very little—his avowal that 'there was no such noble college in Christendom as theirs.'—Memoirs of Bulstrode Whitelockes, by R. H. Whitelockes, 1890, p. 56.

* Incorrectly written Bravos in the authority quoted.

NOVEMBER 2.

All Souls, or the Commemoration of the Faithful Departed. St Victorinus, bishop and martyr, about 304. St Markian, anchorite and confessor, about 357. St Vulgan, confessor, 7th century.

All-Souls-Day.

This is a festival celebrated by the Roman Catholic Church, on behalf of the souls in purgatory, for whose release the prayers of the faithful are this day offered up and masses performed. It is said to have been first introduced in the ninth century by Odilon, abbot of Cluny; but was not generally established till towards the end of the tenth century. Its observance was esteemed of such importance, that in the event of its falling on a Sunday, it was ordered not to be postponed till the Monday, as in the case of other celebrations, but to take place on the previous Saturday, that the souls of the departed might suffer no detriment from the want of the prayers of the church. It was customary in former times of this day, for persons dressed in black to traverse the streets, ringing a diurnal-toned bell at every corner, and calling on the inhabitants to remember the souls suffering penance in purgatory, and to join in prayer for their liberation and repose. At Naples, it used to be a custom on this day to throw open the charnel-houses, which were lighted up with torches and decked with flowers, while crowds thronged through the vaults to visit the bodies of their friends and relatives, the fleshless skeletons of which were dressed up in robes and arranged in niches along the walls. At Salerno, also, we are told, that a custom prevailed, previous to the fifteenth century, of providing in every house on the eve of All-Souls-Day, a sumptuous entertainment for the souls in purgatory who were supposed then to revisit temporarily, and make merry in the scene of their earthly pilgrimage. Every one quitted the habitation, and after spending the night at church, returned in the morning to find the whole feast consumed, it being deemed eminently insipid if a morsel of victuals remained uneaten. The thieves who made a harvest of this pious custom, assembling, then, from all parts of the country, generally took good care to avert any such evil omen from the inmates of the house by carefully caring off whatever they were unable themselves to consume. A resemblance may be traced in this observance, to an incident in the story of Bel and the Dragon, in the Apocrypha.

Born.—Dr William Vincent, scholar and miscellaneous writer, 1739; Marie Antoinette, queen of Louis XVI., 1755; Vienna; Field-Marshal Radetzky, celebrated Austrian commander, 1766; Castle of Tremsitz, Bohemia; Edward, duke of Kent, father of Queen Victoria, 1767.

Died.—Dr Richard Hooker, author of the Socio-political Policy, 1600; Bishop's House; Richard Bancroft, archbishop of Canterbury, 1610; Lavenham; Sophia Dorothea, consort of George I. of England, 1726; Castle of Ahlen, Hanover; Alexander Menskoff, Russian statesman and general, 1729; Siberia; Princess Amelia, daughter of George III., 1810; Wiesbaden; Sir Samuel Romilly, eminent lawyer and philanthropist, 1816; Sir Alexander Burns, diplomatist, murdered at Cabul, 1841; Eneas Tiegen, Swedish poet, 1846; Westoe, Sweden; Dr Richard Mant, theological and miscellaneous writer, 1848; Ballymoney, Antrim.
SIR SAMUEL ROMILLY.

The revocation in 1688, by Louis XIV., of Henry IV.'s Edict of Nantes, by which for nearly a hundred years Protestants had enjoyed at least toleration, cost France dearly, but greatly enriched England by the immigration of a multitude of skilful artisans, who introduced to the land of their adoption many forms of useful and elegant industry. None of these industries thrived in England only by their manual skill. The names of their descendants appear with distinction in almost every department of our national life, but few with a more radiant glory than encircles the head of Sir Samuel Romilly.

His grandfather came from Montpellier, and settled in the neighbourhood of London as a wax-blacker. His father was a jeweller, and in Firth Street, John, he was born on the 1st of March 1757. As a boy, he received an indifferent education at the French Protestant school, but as soon as he had left it, he diligently applied himself to self-culture. What business he should follow, he could not decide. A solicitor's was thought of, a merchant's office was tried, and then his father's shop, but none pleased him. Meanwhile, he studied hard and became a good Latin scholar. Eventually, he was articled for five years to one of the sworn clerks in Chancery. In his leisure, he read extensively, but with method, governing himself with a strict rein. At the expiration of the five years, it had been his intention to purchase a seat in the Six Clerks' Office, and there quietly settle for life; but his father needed the requisite funds in his business, and Romilly, deprived of this resource, determined to qualify himself for the bar. Severe mental application brought on ill-health, and to recruit his strength he made a journey to Switzerland. In Paris, he formed the acquaintance of D'Alembert, Diderot, and other thinkers of their school, and their influence had considerable effect in moulding his opinions towards liberalism and reform.

In 1783, Romilly was called to the bar, but he had to wait long ere he was rewarded with any practice. When briefs did at last fall to his lot, it very soon became manifest that they were held by a master; he gave his conscience to all he undertook, and wrought out his business with efficiency. Solicitors who trusted him once were in haste to trust him again, and a start in prosperity being made, success came upon him like a flood. His income rose to between £5000 and £1000 a year, and in his diary, he congratulates himself that he did not press his father to buy him a seat in the Six Clerks' Office. Lord Brougham says: 'Romilly, by the force of his learning and talents, and the most spotless integrity, rose to the very heights of professional ambition. He was beyond question or pretence of rivalry the first man in the courts of equity in this country.'

Miraudeau visited London in 1784, and introduced Romilly to the Marquis of Lansdowne, who was so impressed with the young man's genius, that he twice offered him a seat in parliament; but Romilly was too proud to sit under even such liberal patronage. Not until 1806 did he enter the House of Commons, and then as Solicitor General in the Whig government, styled 'All the Talents,' formed after the death of Pitt. That administration lasted little more than a year, but Romilly remained a member of the House for one borough or another to the end of his life. In parliament, he was felt as a great power, and his speeches and votes were invariably on the Whig and progressive side. His oratory, which some competent judges pronounced the finest of his age, was usually listened to with rapt attention; a passage in his speech in favour of the abolition of the slave trade received the singular honour of three distinct rounds of applause from the House.

Romilly's grand claim to remembrance, however, rests on his humane efforts to mitigate the Draconic code of English law. Nearly three hundred crimes, varying from the most frightful atrocity to keeping company with gipsies, were indiscriminately punishable with death. As a consequence, vice flourished, for, as Lord Eldon said, 'too severe laws are never executed.' He had long meditated over the matter, and after discussing various schemes of procedure, he cautiously ventured, in 1808, to bring in a bill to repeal the statute of Elizabeth, which made it a capital offence to steal privately from the person of another. This he succeeded in getting passed. He next, in 1810, tried a bolder stroke, and introduced three bills to repeal several statutes, which punished with death the crimes of stealing privately in a shop goods to the value of 5s., and of stealing to the amount of 40s. in dwelling-houses, or in vessels in navigable rivers. All three were lost! He did not despair, however, but kept agitating, and renewed his motions session after session. He did not live to reap success, but he cleared the way for success after him.

Romilly had married, in his forty-first year, Miss Garbett, a lady of rare intelligence, whom he first met at the Marquis of Lansdowne's, and their union proved eminently happy. After twenty years of conjugal felicity, she fell into delicate health. In 1818 there was a dissolution of parliament, and as an evidence of the respect in which Romilly was held, the electors of Westminster placed his name at the head of the poll, although he declined to spend a shilling or solicit a vote. Never, alas! was he destined to sit for Westminster. Public honours were vapid whilst his beloved partner lay nigh unto death. On the 20th of October she died. The shock was dreadful to Romilly. In his agony he fell into a delirium, and in a moment, when unwatched, he sprang from his bed, cut his throat, and expired in a few minutes. The sad event took place in his house, Russell Square, London, 2d November 1818. When Lord Eldon, next morning, took his seat on the bench, and saw the vacant place within the bar where for years Romilly had pleaded before him, iron man though he was, his eyes filled with tears. 'I cannot stay here!' he exclaimed, and rising in great agitation, broke up his court.

In one grave the bodies of husband and wife were laid at Knill, in Herefordshire. It is a singular circumstance, that in the parish church of St Bride, Fleet Street, there is a tablet on the wall with an inscription to the memory of Isaac Romilly, F.R.S., who died in 1759 of a broken heart, seven days after the decease of a beloved wife.

539
FUNERAL OF A JEWISH RABBI

Romilly's style of speech was fluent, yet simple, correct and nervous, and without ornament of any kind. His reasoning was clear and accurate, and seemed to the hearer intelligible without an effort. His voice was deep and sonorous, and his presence full of severe and solemn dignity. To these oratorial powers he brought great earnestness; whatever he undertook, he fulfilled with all his might. The cause of his client he made his own, and he was reckoned to run the fairest chance of victory who had Romilly for his advocate.

FUNERAL OF A JEWISH RABBI

There are not often opportunities, in England, of witnessing the funeral obsequies of the great priests or rabbis among the Jews; because that peculiar people do not form so large a ratio to the whole population here as in many continental countries, and consequently do not comprise so many sacerdotal officers. One of the few instances that have occurred, took place on the 2d of November 1842. Dr Herschel, who had been chief rabbi of England for forty-two years, was buried on this day. At ten o'clock in the morning, the body, in a plain deal-coffin covered with a black cloth, was removed from his residence in Burly Court, St Mary Axe, to the chief synagogue in Duke's Place, Houndsditch. It was supported and followed by twenty-four leading members of the Hebrew persuasion, including Sir Moses Montefiore. During the progress from the door of the synagogue to the ark, a special service was chanted by the Rev. Mr Asher, the principal reader; and after the bier had been placed before the ark, an impressive ceremonial took place. The ark was covered with black cloth; the whole of the windows were darkened; the synagogue was illuminated by wax-tapers; and the whole place assumed a sombre and imposing aspect. This portion of the religious ceremony having been completed, a procession was formed to convey the remains of the venerable rabbi to their last resting-place, the Jews' burial-ground, at Mile End. In the procession were the boys, from Hurl Street, Mile End, the body was carried into a sort of hall, in the centre of which it was placed. The reader, then, taking his position at the head of the coffin, repeated a burial-service. At the conclusion of the prayers, the coffin was borne to the grave. Several brown-paper parcels, sealed with wax, containing papers and documents, were thrown into the grave, in obedience to instructions left by the deceased; and a large box containing one of the laws of Moses, written by Rabbi Herschel himself on parchment, was also, as his special request, consigned to the grave with him. The shops of the Jewish tradesmen along the line of route were closed as the procession passed, the ceremony altogether occupying five hours.

NOVEMBER 3.

St Papoul or Pappius, priest and martyr, 3d century.
St Fleur, bishop and confessor, about 389.
St Rumald or Ramold, confessor, patron of Buckleigh and Buckingham.
St Wencesfrid or Winiifred, virgin and martyr, in Wales.
St Hubert, bishop of Liege, confessor, 727.
St Malschy, archbishop of Arnhagh, confessor, 1145.

ST RUMALD.

They who have read Foxe's Martyrology, will perhaps remember that several Lollards who, to save their bodies from the stake, renounced the 'new doctrine,' were nevertheless required to walk to Buckingham, and present an offering at the shrine of St Rumald. Now this St Rumald, whose name is also written Rumold, and Grumbald, was a very remarkable saint. According to Leland, who copies from a monkish life of him, he was the son of the king of Northumbria by a Christian daughter of Penda, king of Mercia. He was born at Sutton, in Northamptonshire, but not far from the town of Buckingham. Immediately he came into the world, he exclaimed: 'I am a Christian! I am a Christian! I am a Christian!' He then made a full and explicit confession of his faith; desired to be forthwith baptized; appointed his own godfathers; and chose his own name. He next directed a certain large hollow stone to be fetched for his font; and when some of his father's servants attempted to obey his orders, but found the stone far too heavy to be removed, the two priests, whom he had appointed his godfathers, went for it, and bore it to him with the greatest ease. He was baptized by Bishop Widerin, assisted by a priest named Eadwold, and immediately after the ceremony he walked to a certain well near Buckleigh, which now bears his name, and there preached for three successive days; after which he made his will, bequeathing his body after death to remain at Sutton for one year, at Buckleigh for two years, and at Buckingham ever after. This done, he instantly expired. After this three-days' existence, the miraculous infant was buried at Sutton by Eadwold the priest; the next year he was translated by Bishop Widerin to Buckleigh; and the third year after his death, his remains were carried to Buckingham, and deposited in a shrine, in an aisle of the church which afterwards bore his name. Shortly before the year 1477, Richard Fowler, Esq., chancellor to Edward IV., began to rebuild this aisle, but died before its completion. In his will, therefore, he made this bequest: 'Item, I wolfe that the aforesaid Isle of St Rumwold, in the aforesaid church prebendale of Bucks, where my body and other of my friends lyen buried, the which isle is begunne of new to be made, be fully made and performed up perfectly in all things att my costs and charge; and in the same isle that there be made of new a tumbre or shrine for the saide saint where the old is now standing, and that it be made curiously with marble in length and breadth as shall be thought by myn executors most convenient, consideration had to the rone, and upon the same tombe or shrine I will that there be sett a coffin or a chest.

* See notice of St Winifred at p. 6 of this volume.
curiously wrought and gilt, as it appertained for to lay in the bones of the same saint, and this also to be doan in all things at my cost and charge.' This extreme care for the relics of the infant saint clearly shows that they were held in high veneration at this period, and they continued to be the object of pilgrimages till the middle of the sixteenth century.

There was also a famous image of St Rumald at Boxley, in Kent. This statue or image was very small and hollow, and light, so that a child of seven years old might easily lift it, but, for some reason or other, it occasionally appeared so heavy that persons of great strength were unable to move it. 'The moving hereof,' says Fuller, 'was made the condition of women's chastity. Such who paid the priest well, might easily remove it, whilst others might tug at it to no purpose. For this was a contrivance of the chest—that it was fastened with a pin of wood by an invisible stainer behind. Now, when such offer to take it who had been bountiful to the priest before, they bare it away with ease, which was impossible for their hands to remove who had been close-fasted in their confessions. Thus it moved more laughter than devotion, and many chaste virgins and wives went away with blushing faces, leaving (without cause) the suspicion of their wantonness in the eyes of the beholders; whilst others came off with more credit (because with more coin) though with less chastity.' Fuller concludes the Legend of St Rumald with this remark: 'Reader, I partly guess by my own temper how this is mixed with the reading hereof, whose soul is much divided betwixt several actions at once:—1. To frown at the impudence of the first inventors of such improbable untruths.—2. To smile at the simplicity of the believers of them.—3. To sigh at that well-intended devotion abused with them.—4. To thank God that we live in times of better and brighter knowledge.'

A memorial of the saint is still preserved at Buckingham in the names of Well Street, and St Rumald's Lane; and a well at Bradclay bears his name.

It is not unworthy of observation, that Butler, in his Lives of the Saints, gives but a brief account of Rumald; and though acquainted with Leland's account of him, passes lightly over the miraculous story, only saying: 'He died very young on the 3d of November, &c.'

Born.—Lucan, Latin poet, 39 A.D., Cordova.
Died.—Constantinus, Roman emperor, 361, Moscrows, Cicilia; Pope Leo the Great, 461; James II, king of Aragon, 147, Barcelona; Thomas de Montaigue, Earl of Salisbury, killed in France, 1429; Bishop Robert Lovth, biblical writer, 1787, Fulham; Theophilus Lindsay, Unitarian divine, 1808; Dr Felix Mendelssohn Bartholdy, musical composer, 1847, Leipzig.

SPURS AND SPUR-MONEY.

Among the privy-purse expenses of Henry VII., in the year 1485, appears the following item: 'To the children for the king's spurs, 4d.' And between June 1530 and September 1539, no less than three payments of 6s. 8d. are recorded as made by his successor's paymaster to the Constables of Wyndesor in rewards for the king's spurs.

* Lipscomb's Buckinghamshire, ii. 578.

Apropos of these entries, Mr Markland quotes a note from Gifford's edition of Ben Jonson, stating that from the disturbance of divine service in the cathedrals (more especially in St Paul's) by the jingling of the spurs of persons walking in their precincts, a trifling fine was imposed upon offenders in this way, called 'spur-money,' the money which was left to the beadles and singing-boys. It seems to us that the connection between the text and note is rather doubtful,—indeed, Mr Markland himself says, 'it must first be shewn that it prevailed at so early a period.' Nicholas supposed that in the above cases the money was paid to redeem the royal spurs from the choristers, who claimed them as their periogies at installations, or at the annual feast in honour of St George. Spur-money, as a penalty to be paid for wearing spurs in a cathedral, seems to have been thoroughly established in the seventeenth century. In the Gull's Horn-Book, Decker, advising his readers how they should behave in St Paul's, says: 'Be sure your silver spurs clog your heels, and then the boys will swarm about you like so many white butterflies; when you are in the chancel, and have your perfumed embroidered purse—the glorious sight of which will entice many countrymen from their devotion to wondering—and quoit silver into the boy's hands, that it may be heard above the first lesson, although it be read in a voice as big as one of the great organs.' That the custom was not confined to St Paul's, is proved by a passage in Bay's Second Itinerary—July 26, 1681. We began our journey northwards from Cambridge, and that day, passing through Huntingdon and Stilton, we rode as far as Peterborough, twenty-five miles. There I first heard the cathedral service. The choristers made us pay money for coming into the quire with our spurs on. Another old writer complains that the boys neglect their duties to run about after spur-money. Modern choristers are not so bad as that, but they look sharply after their rights. Some few years ago, a visitor to Hereford Cathedral declined to satisfy the demands of the boys, who thereupon seized his hat, and decamped with it. The indignant despiser of old customs, instead of redeeming his property, laid a complaint before the bench; but the magistrates astonished him by dismissing the case on the grounds that the choristers were justified in keeping the hat as a lien for the payment of the customary fine. There was one way of escaping the tax, the spur-wearer being held exempt if the youngest chorister present failed to repeat his gamut correctly upon being challenged to do so. This curious saving-clause is set forth officially in a notice issued by the dean of the chapel-royal in 1622:

'If any knight or other person entitled to wear spurs, enters the chapel in that guise, he shall pay to the quiresters the accustomed fine; but if he command the youngest quirester to repeat his gamut, and he fail in the so doing, the said knight or other shall not pay the fine.'

By enforcing this rule, the Iron Duke once baffled the young assailants of his purse. When a similar claim was made against the Duke of Cumberland (afterwards king of Hanover) in Westminster Abbey, he ingeniously evaded it by insisting that he was privileged to wear his spurs in the place in which he had been invested with them.

On the belfry-wall of All Saints Church,
Humour, praises his horse as 'a fiery little slave, he runs like a—— Oh, excellent, excellent!—with the very sound of the spur!' And when an explanation of the latter phrase is demanded, replies: 'Oh, it's your only humour now extant, sir—a good jingle, a good jingle.'

NOVEMBER 4.

ST EMERIO.

On this day was honoured St Emerio, the pious son of the pious St Stephen, king of Hungary in the eleventh century. Emerio was a very promising man, both as a prince and an apostle of Christianity; and he might have attained greater eminence if he had not been carried off by death in the lifetime of his father. As it is, this somewhat obscure Hungarian saint has been a person of some consequence in the world, for from his name has come that of one of the great divisions of the earth. Through his celebrity, his name became a popular one: it was conferred, in the fifteenth century, in the Italian form of Amerigo, upon an Italian named Vespucci. Vespucci did the world some service in extending the knowledge of the continent which Columbus had discovered; and by a strange current of circumstances, this continent came to be recognised by the name America, in honour of Signor Vespucci. When St Stephen was choosing a name for his first-born son, how little could he have imagined that the one he chose was to be the parent of the noted word America!

In an article on surnames derived from Christian names, which appeared in the Gentleman's Magazine for July 1775, Amory and Emerio are set down as derived from Emerio.

Died.—John Benbow, British admiral, 1702, Jamaica; Charles Churchill, satirical poet, 1765, Boulogne-sur-Mer; Josiah Tucker, D.D., dean of Gloucester, political economist, 1799; Paul Delaroche, celebrated painter, 1855, Paris.

'OLD BENBOW.'

Benbow occupies a place in the naval literature of England which is likely to be permanent. Not because he was a better admiral than many who have lived in later days, but because he had much of that personal daring which is so dear to popular notions. A coarse rough man he was, anything but a gentleman in external demeanour; and, as we shall see, this roughness had something to do with the disaster which cost him his life. Sea story-tellers and sea song-writers, however, are never frightened by such characteristics. Benbow's last fight figures in the Deeds of

So, fastidious Briak in Every Man out of his 542
Naval Daring. Dibdin, in his song of Jervis for Ever, begins—

*You've heard, I s'pose, the people talk
Of Benbow and Boscawen,
Of Anson, Poocock, Vernon, Hawke,
And many more then going.*

The immediate object of the song is to praise Jervis, whose great victory in Dibdin's day earned for him the earldom of St Vincent; but the name of Benbow occurs in this and many other sea-songs as that of an unquestioned hero of old times. Born in 1650, he entered the naval service so early that almost his whole life was spent on ship-board; and he was known generally as a rough and ready officer to whom nothing came amiss. On one occasion, when a naval service of some peril was suggested for an aristocratic officer, whose friends expressed apprehension of the result, the king (William III) laughingly replied: 'Send for honest Benbow.'

The enterprise which is especially associated with Benbow's name was the following. During the war with France in 1703, Admiral Ducasse, with a French squadron of five large ships, threatened one of our West India Islands. Benbow sailed after him with seven ships, and overtook him on the 18th of August. On giving the signal for his ships to engage, there was soon evidence that something was wrong; the ships held back, and Benbow was unable to commence his fight with the enemy. It afterwards appeared that Benbow's offensive manners had led to a rupture between him and most of his captains; and that those officers took the indefensible course of shewing their hostility just when the honour of the country demanded their prompt obedience to orders. Next morning the admiral again put forth the signal to advance; but five out of the seven ships were three or four miles astern of him, as if the captains had agreed that they could not assist him. Vexed and irritated, but undaunted as usual, Benbow went into action, two ships against five, and maintained the contest during the whole day. His one cosoljutor, the Ruby, becoming disabled, he sent her to be taken to Jamaica to refit. Again he signalled to the five captains, and received some equivocal excuse that the enemy were too strong, and that he had better not attack them. Left still more to his own resources, he renewed the fight on the 31st with one ship, the Breda, against five. Three different times did Benbow in person board the French admiral's ship, and three times was he driven back. He received a severe wound in the face, another in the arm, and his right leg was shattered by a chain-shot. Still the heroic man would not give in. He caused his cot to be brought up upon deck; and there he lay, giving orders while his shattered limbs were bleeding. When one of his lieutenants expressed regret at the leg being broken, Benbow replied: 'I am sorry for it too; but I had rather have lost them both than have seen the dishonour brought upon the English nation. But—do you hear—if another shot should take me off, behave like brave men, and fight it out.' At this time, all the other English ships being inactive and at a distance, most of the French ships concentrated their fire on the Breda; and Benbow was only just able to extricate her, and sail to Jamaica. Admiral Ducasse knew very well that his squadron had been saved through the disgraceful conduct of Benbow's captains, and he was too true a sailor to regard it in any but the proper light. He sent the following letter to Benbow:

'Sir—I had little hope on Monday last but to have supped in your cabin; but it pleased God to order it otherwise, and I am thankful for it. As for those cowardly captains who deserted you, hang them up; for, by God, they deserve it! Yours, &c.,

Ducasse.'

When Benbow reached Jamaica, he ordered the captains into arrest, and caused a court-martial to be held on them, under the presidency of Rear-Admiral Whetstone. Captain Hudson, of the Penelope, died before the trial; Captains Kirby and Wade were convicted and shot; Captain Constable was cashiered and imprisoned. Two others had signed a paper engaging not to fight under the admiral; but there were extenuating circumstances which led to their acquittal. One of these two was Captain Walton of the Ruby; he had signed the paper when drunk (naval captains were often drunk in those days); but he repented when sober, and rendered good service to the admirals. He was the officer who, sixteen years afterwards, wrote a despatch that is regarded as the shortest and most fitting in which a naval victory was ever announced:

'Captorbury, off St. Lucia,
16th August 1718.

Sir—we have taken and destroyed all the Spanish ships and vessels that were upon the coast; the number as per margin. Yours, &c.,

G. WALTON.

To Sir George Frye,
Commander-in-chief.'

Poor Benbow sank under his mortification. The evidence elicited at the court-martial was sufficient to shew that he was not to blame for the escape of the French squadron; but the rough sailor could not bear it; the disgrace to the nation fretted him, and increased the malignity of his wounds; he dragged on a few weeks, and died on November 4. No monument, we believe, records the fame of 'Old Benbow;' his deeds are left to the writers of naval song and story.

CHURCHILL.

A short life, a busy, and a notorious, was Churchill's. In a day he found himself famous; for less than four years, from 1761 to 1764, he was one of the most prominent figures in London, and then he died.

The son of a clergyman, he was born in Westminster in 1731, and was destined by his father for his own profession. Educated at Westminster school, he had for companions Warren Hastings; two poets, William Cowper and Robert Lloyd; and two dramatists, George Colman and Richard Cumberland. Ere Churchill was out of his boyhood he married his life: at the age of seventeen, he married a girl within the rules of the Fleet. For the church he had no inclination, but in addition to pleasing his father, it was now necessary for him to earn a living for himself and family. As soon, therefore,

* That is, to have been taken prisoner.
as he was of canonical age, he was ordained and entered on a country curacy; and, as he says, 'prayed and starved on forty pounds a year.' In 1785, his father died, and, out of respect for his memory, his parishioners elected his son to succeed him. At the age of twenty-seven, Churchill returned to London, and was installed as curate and lecturer of St. John's, Elingingham, Westmorland. There he had a better income, but in his duties he had no joy or even satisfaction. He wrote, and wrote truly:

'I kept those sheep,
Which, for my curse, I was ordain'd to keep,
Ordain'd, alas! to keep through need, not choice...
Whilst sacred dulness ever in my view,
Sleep at my bidding crept from pew to pew.'

In London, Churchill met his school-fellow Robert Lloyd, who was serving as usher in Westminster school. Lloyd was a wild fellow, and was as sick of the drudgery of his calling as was Churchill of his. To literary tastes, they both united a passion for conviviality, and together committed many excesses. Mrs. Churchill, it is said, was as imprudent as her husband. Their first holiday in person, the difficulties, and Churchill had to settle with his creditors for 5s. in the pound. About the same time, Lloyd threw up his situation as usher, and resolved to seek his living in authorship, and Churchill determined to follow his example.

He first tried his fortune with two poems, with which no bookseller would have anything to do, but he was not to be beaten. For two months he closely attended the theatres, and made the leading actors the theme of a critical and satirical poem, entitled The Rosciad. No bookseller would buy it, even for five guineas; but not to be baffled this time, Churchill printed it at his own expense. In March 1761, the Rosciad appeared anonymously as a stirring pamphlet, and a few days sufficed to prove that 'a hit' had been made. Who was the author, became the principal topic of the period. The poor players ran about like so many stricken deer. The reviewers were busy with guesses as to the authorship, and, in self-defence, Colman disowned it, and Lloyd disowned it. Churchill soon put an end to the mystery. In an advertisement, he announced himself as the satirist, and promised a second poem, An Apology Addressed to the Critical Reviewers. The Apology struck as great terror among the authors as the Rosciad among the actors. On every side he was assailed in Churchills, Anti-Rosciads, and such like. In a few months, it is asserted, he cleared a thousand pounds. The money he used well. To his wife, from whom he was now separated, he made a handsome allowance; every man from whom he had borrowed money he repaid with interest; and his creditors, to their glad surprise, received the remaining fifteen shillings in the pound.

His habits now became openly licentious. He doddled the clerical costume, and walked abroad in a blue coat with metal buttons, a gold-laced waistcoat, a gold-laced hat and ruffles. He seduced a young woman, and lived with her as his wife. His parishioners remonstrated, and he resigned his curacy. He published Night, a poem, as an apology for his nocturnal orgies, maintaining, as if any excuse could be entertained for his own misdemeanours, that open licentiousness was better than hypocrisy. Night was followed by The Ghost, a satire on the Cock-Lane spirit-rappings, in which Dr. Johnson, who had called Churchill a shallow fellow, was ridiculed as Pomposo.

Satire is a dangerous business. Little Pope had a tall Irishman to attend him when he published the Dunciad, but Churchill was well able to take care of himself. Of himself he wrote:

'Broad were his shoulders,
Vast were his bones, his muscles twisted strong,
His face was short, but broader than his thought....
His arms were two twin oaks, his legs so stout,
That they might bear a mansion-house about,
Nor were they, look but at his body there,
Design'd by fate a much less weight to bear.'

He stalked about the streets with a bludgeon, and parties who had met to devise retaliation, and who were observed talking loud against the 'Satirical Parson' in the Bedford Coffee-house, quietly dispersed when a brawny figure appeared, and Churchill, drawing off his gloves with a particularly slow composure, called for a dish of coffee and the Rosciad.

John Wilkes was in those days at the outset of his career, when it was hard to tell whether he was a patriot or a knave. He sought Churchill's acquaintance, and they became fast friends. Lord Bute was ruler of England under the young king, George III., and a popular cry arose that the revenue had become the prey of Scotchmen. Under the inspiration of Wilkes, Churchill commenced a satire on Scotland, and as he advanced with the work, Wilkes praised it exultingly. 'It is personal, it is poetical, it is political,' cried the delighted demagogue. 'It must succeed!' In January 1763, the Prophecy of Famine appeared. It conveyed a thoroughly Cockney idea of Scotland, but in spite, or perhaps because, of its extravagance, it was intensely popular, and spread dismay among the ranks of Scottish place-hunters. It was a new deal of Churchill's own. It was not to be outdone. He took an odd form. 'I remember well,' says Dr. Kippis, that Churchill dressed his younger son in a Scottish plaid, like a little Highlander, and carried him everywhere in that garb. The boy being asked by a gentleman with whom I was in company, why he was clothed in such a manner answered with great vivacity: 'Sir, my father hates the Scotch, and does it to plague them!''

Churchill was associated with Wilkes in the publication of the North Briton, and when, in consequence of No. 45 charging the king with falsehood, a general warrant was issued for the apprehension of its authors, printers, and publishers, Churchill was included. He chanced to call on Wilkes whilst he was debating with the officers who had come to arrest him. With much presence of mind, Wilkes addressed him as Mr. Thomson, saying: 'Good-morrow, Mr. Thomson. How does Mrs. Thomson do to-day? Does she dine in the country?' Churchill was sharp enough to take the hint. He thanked Wilkes, said Mrs. Thomson then waited for him, that he had only come to ask how Mr. Wilkes was, and took his leave. He hurried home, secured his papers, and retired to the country, whither no attempt was made to follow him.

To Hogarth's pencil, Churchill gave somewhat of his fame. Hogarth had published a caricature of
November 4.

Marriage of William and Mary.

Wilkes with his squint, by which the demagogue is better known to posterity than by all the busts and pictures by which his admirers sought to glorify his name, Churchill thereon addressed As Epistle to William Hogarth, which appeared in July 1763, and which, Carlyle describing as 'the most bloody performance of my time.' Ere the month was out, Hogarth took his revenge in a shilling print, entitled 'The Bruiser, C. Churchill (once the Rev.), in the character of a Russian Hercules, regaling himself after having killed the monster Caricatura, that so sorely galled his virtuous friend, the heaven-born Wilkes.' All who have turned over Hogarth, will remember the bear in torn clerical bands, and with paws in ruffles, holding a pot of porter and a knotted club with Lyceos and North Britons graven over it, and a pig-dog treating his poems with gross indignity.

Whatever Churchill wrote, sold, and sold for good prices, and he kept publishing pamphlet after pamphlet as occasion moved him. He wrote of this momentous war as commencing in place and mean, but ever and anon occurred a line or a passage of extraordinary vigour and felicity; and for these he will probably be read as long as English literature endures.

A sudden desire to see Wilkes induced Churchill to set off for Boulogne in October 1764. On the 29th of that month he was seized there with fever. Feeling the hand of death was on him, he sat up in bed and dictated a brief will, leaving to his wife an annuity of £60, and another of £60 to the girl he had seduced, and providing for his two boys. On the 4th of November he died. His body was brought over to Dover, where in the Church of St Martin it lies buried. The news of his death reached Robert Lloyd as he was sitting down to dinner. He sickened, and thrust away his plate untouched. 'I shall follow poor Charles,' was all he said, as he went to the bed from which he never rose again. Churchill's favourite sister, Patty, to whom Lloyd was betrothed, sank next under the double blow, and in a few weeks joined her brother and lover. Thus tragically ended Churchill's brief and boisterous career.

Marriage of William and Mary.

Not the least important of the collateral causes, which led to the downfall of the Stuart dynasty in these kingdoms, was the marriage of William, Prince of Orange, to his fair cousin, the Princess Mary of York, on the 4th of November 1677. William arrived in England on the 19th of October previous, to seek the hand of the princess, and conclude a treaty with England, by which the war between France and Holland could be terminated, and peace restored to Europe. Charles II. was in favour of the marriage; his brother James, the bride's father, was not; both, however, were equally anxious to commit the prince to a treaty before the nuptials were solemnised. But the wise hero of Nassau would not speak of politics till he saw the princess, nor enter into any engagement until the marriage was finally settled. Such being his determination, little time was wasted in diplomacy. Whatever dark forebodings the Duke of York might have entertained, were overruled by the king; and the royal pair were married in St James's Palace, then the residence of the duke, at nine o'clock on a quiet Sunday evening; a passage leading from the bedroom of the princess being fitted up as a temporary chapel for the occasion. The royal etiquette of the day permitted few spectators; those present were the king and queen, the Duke of York and his family, Prince William, with their pages and personal attendants. Compton, bishop of London, performed the ceremony, the king giving away the bride. On the question being asked, 'Who giveth this woman?' Charles exclaimed, 'I do;' a reply not to be found in the matrimonial service of the church. At the words, 'With all your worldly goods I thee endow,' William, in accordance with the Dutch custom, placed a handful of gold coin on the prayer-book, at which the king cried out to the bride: 'Pick it up—pick it up! it is all clear gain!' Immediately after the ceremony, the royal party received the congratulations of the chief officers of state and foreign ambassadors; and at eleven o'clock the bride and bridegroom retired to rest. All the absurd and indecent wedding-customs of the older work were common to this occasion: the cake was eaten, the bride-guest drunk, the stockings thrown, and the curtain drawn, the last by the king himself, who, as he did it, shouted, 'St George for England!' Indeed, the marriage of the Third George with Queen Charlotte, was the first royal wedding in this country at which those customs, 'more honoured in the breach than in the observance,' were finally dispensed with.

This 'Protestant Alliance,' as it was termed, diffusing a general satisfaction over the land, was celebrated with great rejoicing. At Edinburgh, the Duke of Lauderdale announced the welcome intelligence from the Cross, which was hung with tapestry, and decorated with arbours formed of many hundreds of oranges. Then the duke, several of the nobility, the lord provost and civic magistrates, drank the healths of the royal family; the conduits ran with wine, and sweetmeats were thrown among the crowd; while the guns of the castle thundered in unison with the huzzas of the populace.

William was anxious to return to Holland immediately after his marriage, the more so because small-pox had broken out in St James's Palace, and his wife's beloved sister, the Princess Anne, was lying dangerously ill of it. But the queen's birthday falling on the 16th of November, he was induced to wait for the festivities of that occasion, intended to be celebrated with extra pomp on account of the wedding. On the evening of that day, the following Epithalamium, composed by Walker, was sung by the royal musicians before the assembled company at Whitehall.

As once the lion honey gave,
Out of the strong such sweetness came
A royal hero, no less brunt
Produced this sweet, this lovely dame.

To her, the prince that did oppose
Such mighty armies in the field,
And Holland from prevailing foe
Could so well free himself, does yield.

Not Belga's fleet (his high command),
Which triumphs where the sun does rise;
Not all the force he
Could guard him from her conqu'ring eyes.

Orange with youth experience has;
In action young, in council old:
Orange is what Augustus was—
Brave, wary, provident, and bold.
On that fair tree, which bears his name,
Blossoms and fruit at once are found;
In this fair world admire the same,
His flowery youth with wisdom crown'd.

An easterly wind, much against his inclination, detained William in London four days longer. On the morning of the 19th November, the wind veering to the westward, immediate advantage was taken of the change. At the last moment, previous to her departure, the Princess of Orange took leave of Queen Catherine. Seeing her niece in tears, the queen, by way of consolation, said: 'When I came hither from Portugal, I had not even seen King Charles.' To which the princess replied: 'Remember, however, you came to England, but I am going out of it.' The king, Duke of York, and a large party, taking boats at Whitehall, accompanied the newly-married couple to Erith, where they all dined; then travelling by land to Gravesend, the prince and princess went on board the yachts provided to convey them to Holland. Nat Lee, the more than half-crazy dramatist, saw the embarkation, which he thus describes:

'I saw them launch; the prince the princess bore,
While the sad court stood crowding on the shore.
The prince still bowing on the deck did stand,
And held his weeping consort by the hand.
Which waving off, she bade them all farewell,
And went, as if she would the briny ocean swell.'

The wind again becoming unfavourable, William landed at Sheerness, and, accompanied by his bride and four attendants, made an excursion to Canterbury. Here he put up at an inn, and his cash falling short, he despatched his favourite Bentinck to the mayor and corporation, requesting a supply of money. The municipal authorities were taken by surprise. Strongly suspecting that the self-styled royal party were impostors, some of the council advised their immediate arrest and commitment to prison; others, with more prudence, recommended less stringent measures; but all agreed not to part with one farthing of money; and so the evasive reply was given to Bentinck, that the corporation had no funds at disposal. In the meantime, Dean Tillotson of the Cathedral, the shadowy figure of a刹sbrooke clothier, heard of the strange affair, and making his way to the inn, saw and recognised the princess. Rushing back to the deanery, he collected all his ready money and plate, and returning to the inn, presented it to the prince. Twelve years afterwards, when William and Mary were king and queen of England, this service of the far-seeing dean was not forgotten. He was made Clerk of the Closet to their majesties, and soon after consecrated Archbishop of Canterbury.

The dean's interposition made a magical change in the state of affairs. The suspicious landlord, who had been inconveniently pressing his foreign guests for the amount of his bill, became in a moment the most obsequious of mortals. The gentlemen of Kent, now knowing who it was they had among them, crowded with their congratulations, and more substantial presents, to the prince and princess. William remained at the inn four days longer, and then left for Margate, where he embarked on the 28th of November; and after a short but stormy passage, the only lady on board unaffected by sea-sickness being the princess, he arrived safely in Holland.

The 8th of November marks the anniversary of two prominent events in English history—the discovery and prevention of the gunpowder treason, and the inauguration of the Revolution of 1688 by the landing of William III in Torbay. In recent years, an additional interest has been attached to the date, from the victory at Inkerman over the Russians, in the Crimea, being gained on this day in 1854.

Like the Bartholomew massacre at Paris in 1672, and the Irish massacre of 1641, the Gunpowder Plot of 1605, standing as it were midway, at a distance of about thirty years from each of these events, has been the means of casting much obloquy on the adherents of the Roman Catholic religion. It would, however, be a signal injustice to connect the Catholics as a body with the perpetration of this atrocious attempt, which seems to have been solely the work of some fanatical members of the extreme section of the Jesuit party.

The accession of James I. to the throne had raised considerably the hopes of the English Catholics, who, relying upon some expressions which he had made use of while king of Scotland, were led to flatter themselves with the prospect of an unrestricted toleration of the practice of their faith, when he should succeed to the crown of England. Nor were their expectations altogether disappointed. The first year of James's reign shows a remarkable diminution in the amount of fines paid by popish recusants into the royal exchequer, and for a time they seem to have been comparatively unmolested. But such halcyon days were not to be of long continuance. The English parliament was determined to discountenance in every way the Roman Catholic religion, and James, whose pecuniary necessities obliged him to court the good-will of the Commons, was forced to comply with their importunities in putting afresh into execution the penal laws against papists. Many cruel and oppressive severities were exercised, and it was not long till that persecution, which is said to make 'a wise man mad,' prompted a few fanatics to a scheme for taking summary vengeance on the legislature by whom these repressive measures were authorised.

The originator of the Gunpowder Plot was Robert Catesby, a gentleman of ancient family, who at one period of his life had become a Protestant, but having been restored to the Catholic religion, had endeavoured to atone for his apostasy by the fervour of a new zeal. Having revolved in his own mind a project for destroying, at one blow, the King, Lords, and Commons, he communicated it to Thomas Winter, a Catholic gentleman of Worcestershire, who at first expressed great horror, but was afterwards induced to co-operate in
the design. He it was who procured the co-adjutormship of the celebrated Guido or Guy Fawkes, who was not, as has sometimes been represented, a low mercenary ruffian, but a gentleman of good family, actuated by a spirit of ferocious fanaticism. Other confederates were gradually assumed, and in a secluded house in Lambeth, oaths of secrecy were taken, and the communion administered to the conspirators by Father Gerard, a Jesuit, who, however, it is said, was kept in ignorance of the plot. One of the party, named Thomas Percy, a distant relation of the Earl of Northumberland, and one of the gentleman-pensioners at the court of King James, agreed to hire a house adjoining the building where the parliament met, and it was resolved to effect the purpose of blowing the legislature into the air by carrying a mine through the wall. This was in the spring of 1604, but various circumstances prevented the commencement of operations till the month of December of that year.

In attempting to pierce the wall of the Parliament House, the conspirators found that they had engaged in a task beyond their strength, owing to the immense thickness of the barrier. With an energy, however, befitting a better cause, they continued their toilsome labours; labours the more toilsome to them, that the whole of the confederates were, without exception, gentlemen by birth and education, and totally unused to severe manual exertion. To avert suspicion while they occupied the house hired by Percy, they had lain in a store of provisions, so that all necessity for going out to buy these was obviated. Whilst in silence and anxiety they plied their task, they were startled one day by hearing, or fancying they heard, the tolling of a bell deep in the ground below the Parliament House. This cause of perturbation, originating perhaps in a guilty conscience, was removed by an appliance of superstition. Holy-water was sprinkled on the spot, and the tolling ceased. Then a rumbling noise was heard directly over their heads, and the fear seized them that they had been discovered. They were speedily, however, reassured by Fawkes, who, on going out to learn the cause of the uproar, ascertained that it had been occasioned by a dealer in coal, who rented a cellar below the House of Lords, and who was engaged in removing his stock from that place of deposit to another. Here was a golden opportunity for the conspirators. The cellar was forthwith hired from the coal merchant, and the working of the mine abandoned. Thirty-six barrels of gunpowder, which had previously been deposited in a house on the opposite side of the river, were then secretly conveyed into this vault. Large stones and bars of iron were thrown in, to increase the destructive effect of the explosion, and the whole was carefully covered up with fagots of wood.

These preparations were completed about the month of May 1605, and the confederates then separated till the final blow could be struck. The time fixed for this was at first the 3d of October, the day on which the legislature should meet; but the opening of parliament having been prorogued by the king to the 5th of November, the latter date was finally resolved on. Extensive preparations had been made during the summer months, both towards carrying the design into execution, and arranging the course to be followed after the
destruction of the king and legislative bodies had been accomplished. New confederates were assumed as participants in the plot, and one of these, Sir Everard Digby, agreed to assemble his Catholic friends on Dunmore Heath, in Warwickshire, as if for a hunting-party, on the 5th of November. On receiving intelligence of the execution of the scheme, they would be in full readiness to complete the revolution thus inaugurated, and settle a new sovereign on the throne. The proposed successor to James was Prince Charles, afterwards Charles I., seeing that his elder brother Henry, Prince of Wales, would, it was expected, accompany his father to the House of Lords, and perish along with him. In the event of its being found impossible to gain possession of the person of Prince Charles, then it was arranged that his sister, the Princess Elizabeth, should be seized, and carried off to a place of security. Guy Fawkes was to ignite the gunpowder by means of a slow-burning match, which would allow him time to escape before the explosion, and he was then to embark on board a ship waiting in the river for him, and proceed to Flanders.

The fatal day was now close at hand, but by this time several dissensions had arisen among the conspirators on the question of giving warning to some special friends to absent themselves from the next meeting of parliament. Catesby, the prime mover in the plot, protested against any such communications being made, asserting that few Catholic members would be present, and that, at all events, 'rather than the project should not take effect, if they were as dear unto me as mine own son, they also must be blown up.' A similar stoicism was not, however, shared by the majority of the confederates, and one of them at least made a communication, by which the plot was discovered to the government, and its execution prevented.

Great mystery attaches to the celebrated anonymous letter received on the evening of 26th October by Lord Mounteagle, a Roman Catholic nobleman, and brother-in-law of Francis Tresham, one of the conspirators. Its authorship is ascribed, with great probability, to the latter, but strong presumptions exist that it was not the only channel by which the king's ministers received intelligence of the schemes under preparation. It has even been surmised that the letter was merely a blind, concerted by a previous understanding with Lord Mounteagle, to conceal the real mode in which the conspiracy was unveiled. Be this as it may, the communication in question was the only avowed or ascertained method by which the king's ministers were guided in detecting the plot. It seems also now to be agreed, that the common story related of King James's sagacity in deciphering the meaning of the writer of the letter, was merely a courtly fiction, invented to flatter the monarch and procure for him with the public the credit of a subtle and far-seeing perspicacity. The enigma, if enigma it really was, had been read by the ministers Cecil and Suffolk, and communicated by them to various lords of the council, several days before the subject was mentioned to the king, who at the time of the letter to Lord Mounteagle being received was absent on a hunting-expedition at Royston.

Though the conspirators were made aware, through a servant of Lord Mounteagle, of the discovery which had been made, they nevertheless, by a singular infatuation, continued their preparations, in the hope that the true nature of their scheme had not been unfolded. In this delusion it seems to have been the policy of the government to maintain them to the last. Even after Suffolk, the lord chamberlain, and Lord Mounteagle had
actually, on the afternoon of Monday the 4th November, visited the cellar beneath the House of Lords, and there discovered in a corner Guy Fawkes, who pretended to be a servant of Mr Percy, the tenant of the vault, it was still determined to persist in the undertaking. At two o'clock the following morning, a party of soldiers under the command of Sir Thomas Knevet, a Westminster magistrate, visited the cellar, seized Fawkes at the door, and carried him off to Whitehall, where, in the royal bedchamber, he was interrogated by the king and council, and from thence was conveyed to the Tower.

It is needless to pursue further in detail the history of the Gunpowder Plot. On hearing of Fawkes's arrest, the remaining conspirators, with the exception of Tresham, fled from London to the place of rendezvous in Warwickshire, in the desperate hope of organizing an insurrection. But such an expectation was vain. Pursued by the civil and military authorities, they were overtaken at the mansion of Holbeach, on the borders of Staffordshire, where Catesby and three others, refusing to surrender, were slain. The remainder, taken prisoners in different places, were carried up to London, tried, and condemned with their associate Guy Fawkes, who from having undertaken the office of firing the train of gunpowder, came to be popularly regarded as the leading actor in the conspiracy. Leniency could not be expected in the circumstances, and all the horrid ceremonies attending the deaths of traitors were observed to the fullest extent. The executions took place on the 30th and 31st of January, at the west end of St Paul's Churchyard.

Some Catholic writers have maintained the whole Gunpowder Plot to be fictitious, and to have been concocted for state purposes by Cecil. But such a supposition is entirely contrary to all historical evidence. There cannot be a shadow of a doubt, that a real and dangerous conspiracy was formed; that it was very nearly successful; and that the parties who suffered death as participators in it, received the due punishment of their crimes. At the same time, it cannot be denied that a certain amount of mystery envelopes the revelation of the plot, which in all probability will never be dispelled.

Guy Fawkes's Day.

Till 1689, a special service for the 5th of November formed part of the ritual of the English Book of Common Prayer; but by a special ordinance of the Queen in Council, this service, along with those for the Martyrdom of Charles I, and the Restoration of Charles II, has been abolished. The appointment of this day, as a holiday, dates from

an enactment of the British parliament passed in January 1606, shortly after the narrow escape made by the legislature from the machinations of Guy Fawkes and his confederates.

That the gunpowder treason, however, should pass into oblivion is not likely, as long as the well-known festival of Guy Fawkes's Day is observed by English juveniles, who still regard the 5th of November as one of the most joyous days of the year. The universal mode of observance through all parts of England, is the dressing up of a scarecrow figure, in such cast-habitations as can be procured (the head-piece, generally a paper-cap, painted and knotted with paper strips in imitation...
of ribbons), parading it in a chair through the streets, and at nightfall burning it with great solemnity in a huge bonfire. The image is supposed to represent Guy Fawkes, in accordance with which idea, it always carries a dark lantern in one hand, and a bunch of matches in the other. The procession visits the different houses in the neighbourhood in succession, repeating the time-honoured rhyme—

'Remember, remember!  
The fifth of November,  
The Gunpowder treason and plot;  
There is no reason  
Why the Gunpowder treason  
Should ever be forgot!'

Numerous variations and additions are made in different parts of the country. Thus in Islip, Oxfordshire, the following lines, as quoted by Sir Henry Ellis in his edition of Brand's Popular Antiquities, are chanted:

'The fifth of November,  
Since I can remember,  
Gunpowder treason and plot:  
This is the day that God did prevent,  
To blow up his king and parliament.  
A stick and a stake,  
For Victoria's sake;  
If you won't give me one,  
I'll take two:  
The better for me,  
And the worse for you.'

One invariable custom is always maintained on these occasions—that of soliciting money from the passers-by, in the formula, 'Pray remember Guy!' or 'Please to remember Guy!' or 'Please to remember the bonfire!,'

In former times, in London, the burning of the effigy of Guy Fawkes on the 5th of November was a most important and portentous ceremony. The bonfire in Lincoln's Inn Fields was conducted on an especially magnificent scale. Two hundred cart-loads of fuel would sometimes be consumed in feeding this single fire, while upwards of thirty 'Guys' would be suspended on gibbets and committed to the flames. Another tremendous pile was heaped up by the butchers in Olare Market, who on the same evening paraded through the streets in great force, serenading the citizens with the famed 'marrow-bone-and-cleaver' music. The uproar throughout the town from the shouts of the mob, the ringing of the bells in the churches, and the general confusion which prevailed, can but faintly be imagined by an individual of the present day.

The ferment occasioned throughout the country by the 'Papal Aggression' in 1850, gave a new direction to the genius of 5th of November revellers. Instead of Guy Fawkes, a figure of Cardinal Wiseman, then recently created 'Archbishop of Westminster' by the pope, was solemnly burned in effigy in London, amid demonstrations which certainly gave little evidence of any revolution in the feelings of the English people towards the Romish see. In 1857, a similar honour was accorded to Nana Sahib, whose atrocities at Cawnpore in the previous month of July, had excited such a cry of horror throughout the civilised world. The opportunity also is frequently seized by many of that numerous class in London, who get their living no one exactly knows how, to earn a few

The Revolution of 1688: Political Servility.

On 5th November 1688, William, Prince of Orange, landed in Torbay, an event which, if we consider the important results by which it was followed, may perhaps be regarded as the most critical of any recorded in English history. It forms the boundary, as it were, between two great epochs—those of arbitrary and constitutional government—for the great Civil War, in the middle of the seventeenth century, can scarcely be regarded as more than a spasmodic effort which, carried to excess, overshot the mark, and ended by tearing into the air a time, of a way more odious and intolerable, in many respects, than that whose overthrow had cost so much destruction and bloodshed.

We hear much of the folly of King James, and of all the other causes of his dethronement, but nothing of the culpable conduct of large official bodies, and of many individual subjects, who made it their business to encourage him in his sadlly exomoneous course, and to flatter him into the conviction that he might go any lengths with impunity. About a month before the landing of the Prince of Orange, the lord mayor, aldermen, sheriffs, &c., of the city of London sent the intimated monarch an address, containing these words: 'We beg leave to assure your majesty that we shall, with all duty and faithfulness, cheerfully and readily, to the utmost hazard of our lives and fortunes, discharge the trust reposed in us by your majesty, according to the avowed principles of the Church of England, in defence of your majesty and the established government.'

The lieutenanty of London followed in the same strain: 'We must confess our lives and fortunes are but a mean sacrifice to such transcendant goodness; but we do assure your majesty of our cheerful offering of both these and all you have sometimes named, who shall disturb your peace upon any pretence whatever.'

The justices of peace for the county of Cumberland said: 'The unexpected news of the intended invasion of the Dutch fills us with horror and amazement, that any nation should be so transcendentally wicked as to be undenly to interrupt the peace and happiness we have enjoyed; therefore, we highly think it our duty, chiefly at this juncture, to offer our lives and fortunes to your majesty's service, not doubting but a happy success will attend your majesty's arms. And if your majesty shall think fit to display your royal standard, which we heartily wish and hope you'll never have occasion to do, we faithfully do promise to repair to it with our persons and interest.'

The privy-council of Scotland express themselves thus: 'We shall on this, as on all other occasions, shew all possible alacrity and diligence in obeying your majesty's commands, and be ready to expose our lives and fortunes in the defence of your sacred majesty, your royal consort, his Royal Highness the Prince of Scotland, &c.' Nor were the Scottish peers, spiritual and temporal, behindhand on this occasion,
ABANDONMENT OF ONE OF THE ROYAL TITLES

On the 5th of November 1800, it was settled by the privy-council, that in consequence of the Irish Union, the royal style and title should be changed on the 1st of January following—namely, from "George III, by the grace of God, of Great Britain, France, and Ireland, King, Defender of the Faith;" to "George III, by the grace of God, of the United Kingdom of Great Britain and Ireland, King, Defender of the Faith." And thus the title of king of France, which had been borne by the monarchs of this country for four hundred and thirty-two years—since the forty-third year of the reign of the Third Edward—was ultimately abandoned. It was the Salic law which excluded Edward from the inheritance of France; but Queen Elizabeth claimed the title, nevertheless, asserting, as it is said, that if she could not be queen, she would be king of France. And it is the more singular that Elizabeth should have retained the title, for, in the second year of her reign, it was agreed, in a treaty made between France and England, that the king and queen of France [Francis II. and his consort Mary of Scotland] should not, for the future, assume the title of king or queen of England or Ireland.

The abandonment of the title of 'King of France,' led to our foreign official correspondence being carried on in the English language instead of in French, as previously had been the custom. A droll story, in connection with this official regulation, is told by an old writer. During the war between England and Spain, in the time of Queen Elizabeth, commissioners were appointed on both sides to treat of peace. The Spanish commissioners proposed that the negotiations should be carried on in the French tongue, observing sarcastically, that "the gentlemen of England could not be ignorant of the language of their fellow-subjects, their queen being queen of France as well as of England." "Nay, in faith, gentlemen," dryly replied Dr. Dale, one of the English commissioners, "the French is too vulgar for a business of this importance; we will therefore, if you please, rather treat in Hebrew, the language of Jerusalem, of which your master calls himself king, and in which you must, of course, be as well skilled as we are in French."

One of the minor titles held by the kings of England, who were also Electors of Hanover, was very enigmatical to Englishmen, particularly when expressed by the following initials, S.R.I.A.T. Nor even when it was extended thus, Sacri Romani Imperii Archi-Thesaurus, and translated into English as, 'Arch-Treasurer of the Holy Roman Empire,' was it less puzzling to the initiated. The arch-treasurership of the German empire, was an office settled upon the electors of Hanover, in virtue of their descent from Frederick, Elector Palatine; but its duties were always performed by the deputy, who was in the habit of denying any concern in the ordinary administration of the imperial treasury; but, of course, his duties being confined to processions, coronations, and other great public ceremonies, when he carried a golden crown before the emperor, and distributed money and gold and silver medals among the populace.

NOVEMBER 6.

Born.—Julian, Roman emperor, 381, Constantinople; James Gregory, inventor of the reflecting-telescope, 1638, Aberdeen; Colley Cibber, dramatist, 1671, London.

Died.—Caliph Omar, assassinated at Jerusalem, 644; Pope Innocent VII., 1406; Sir John Falstaff, English knight, 1460, Norwich; Prince Henry, son of James I. of England, 1612; Gustavus Adolphus, king of Sweden, killed at battle of Lutzen, 1632; John IV., the Fortunate, king of Portugal, 1656; Bernard de Jussieu, distinguished botanist, 1777, Paris; Louis Joseph, Duke of Orleans, guillotined at Paris, 1793; Princess Charlotte of England, daughter of George IV., 1817, Claremont.

GUSTAVUS ADOLPHUS.

Napoleon, than whom there could be no more capable judge, placed Gustavus Adolphus among the eight great captains of the world, a list of warriors which commenced with Alexander and ended with himself. With small means Gustavus was called to do much, and genius eked out the deficiency. By the discipline, by original organisation, tactics, and strategy, he created, a little host perform the service of a mighty one, and in the process reconstructed the art of war. Mediæval routine vanished under his blows, and modern military science may be said to date from his practice.

He was born in 1594; and, ere he was seventeen, he inherited the Swedish throne by the death of his father, Charles IX. There was a law which pronounced the sovereign a minor until he had attained his twenty-fourth year, but Gustavus had shown so many signs of manliness, that it was set aside in his favour. It is told of Charles IX., that when abandoning in council designs to which he felt himself unequal, he would, as if in a spirit of prescience, lay his hand on the fair head of his boy Gustavus, and say: "He will do it; he will!"

Into an inheritance of trouble the young man entered. Denmark, Russia, and Poland were at active enmity with Sweden. First, he beat off the Danes; then he attacked the Russians, and took from them all the territory by which they had access to the Baltic. He next invaded Poland, with which he carried on an eight years' war, and closed the contest with the acquisition of a great part of

351
Livonia, and the town of Riga. In these conflicts he acquired a rare stock of experience, and trained an army of veterans to his hand. Meanwhile, his home-government was well conducted by his chancellor or prime minister, the sage Oxenstierna—who wrote to his son when perplexed in some diplomatic entanglement: 'You do not know yet, my son, with what little wisdom mankind is governed.' Gustavus answered: 'You are too phlegmatic, and if somewhat of my heat did not mingle with your phlegm, my affairs would not succeed so well as they do;' to which Oxenstierna answered: 'Sire, if my phlegm did not mingle some coolness with your heat, your affairs would not be so prosperous as they are;' whereon both laughed heartily. A temper which on provocation rose to fury, was one of the characteristics of Gustavus. In his wrath against pillage by his followers, it is related that he dragged forth a delinquent soldier by the hair of his head, exclaiming: 'It is better that I should punish thee, than that God should punish thee, and me, and all of us on thy account;' and ordered him off to instant execution. His proneness to anger he confessed. All commanders, he said, had their weaknesses; such as his drunkenness; such as his avarice; his own was cholera, and he prayed men to forgive him.

That most dreadful war, which lasted for thirty years, from 1618 to 1648, and devastated and depopulated Germany, was raging. Tilly, and the imperial troops, were committing frightful atrocities on the Protestants of Bohemia. Austria, moreover, had menaced and insulted Sweden. Gustavus was not only a Protestant, but a zealous one, and naturally, the eyes of suffering Protestantism turned to him for help, whose fame as a warrior filled Europe. After fair consideration he determined to intervene, and on the 29th of May 1630, when all those measures were arranged, he appeared in the Diet at Stockholm, to bid its members farewell. Taking his daughter, Christina, in his arms, he predicted her future under a banner amidst the sobs and tears of the assembly. 'Not lightly, or wantonly,' he said, 'am I about to involve myself and you in this new and dangerous war; God is my witness that I do not fight to gratify my ambition. The emperor has wronged me most shamefully in the person of my ambassador; he has supported my enemies, persecuted my friends and brethren, trampled my religion in the dust, and even stretched his revengeful arm against my crown. The oppressed states of Germany call loudly for aid, which, by God's help, we will give them. I am fully sensible of the dangers to which my life will be exposed. I have never shrunk from dangers, nor is it likely that I shall escape them all. Hitherto, Providence has wonderfully protected me, but I shall at last fall in defence of my country.' Then adjuring all to do their duties in his absence, he bade them 'a sincere—it may be—an eternal farewell.'

Gustavus led over to Germany an army of 16,000 men, in which were many volunteers from Scotland, and among them David Leslie, one of his ablest officers—whom Cromwell, in after-years, miraculously defeated at Dunbar. As soon as God gave him leave to work the first two of the causes he had espoused began to mend. The courtiers of Vienna consoled themselves in saying, he was a snow-man, and would surely melt as he advanced southwards! Tilly, his antagonist—the ugly, little, Jesuit-turned soldier, and esteemed the first general of his age—took his measures more wisely: not to be beaten by Gustavus, he said, was as creditable as to be victorious over other commanders. Tilly soon furnished evidence of the truth of his estimate. Gustavus carried all before him in north Germany, and on the 7th of September 1631, he met Tilly himself before Leipzig, and in a hard-fought field utterly defeated him. A second time, in April 1632, he encountered Tilly on the borders of Bavaria, and again defeated him. In this battle Tilly lost his life by a cannon-ball, which broke his thigh.

The Germans were astonished at the strict discipline which distinguished the Swedish army. All disorders were punished with the utmost severity, particularly impiety, theft, gambling, and duelling. Every regiment assembled round its chaplain for morning and evening prayer. The hardships of the war he shared with his soldiers. The peasants of Bavaria would long tell the tale, how, as he forced them to drag his artillery, he would come among them with kind words, and instructions how to place it, or to defend it by occasional flurries. His attention to trifles, his free intercourse with his men, he used to defend in saying: 'Cities are not taken by keeping in tents; as boys, in the absence of the schoolmaster, shut their books; so my troops, without my presence, would slacken their blows.' In all his actions, he moved under profound religious feeling. 'Pray constantly: praying hard is fighting hard,' was his favourite appeal to his soldiers. 'You may win salvation under my command, but hardly riches,' was his encouragement to his officers. He was often wounded, for he exposed himself freely in battle, and by no entreaty could he be persuaded to be more careful. 'My hour,' he would say, 'is written in heaven, and cannot be reversed on earth.'

Tilly being gone, Wallenstein was appointed to command the Imperialists. The opposing armies met on the field of Lützen, and on the 6th of November 1632, Gustavus opened the battle. In the morning, he knelt in front of his lines and offered up a prayer. Then he gave out Luther's Hymn, and a well-known hymn, said to be his own, beginning—

'Fare thee well, thou little chosen band.'

'God with us!' was the battle-word. All being ready, he cry aloud: 'Now, in God's name, let us at them! Jesus, Jesus, Jesus, let us fight for the honour of thy holy name!' and dashed at the enemy. A pistol-shot broke his arm. 'It is nothing: follow me!' he exclaimed; but his strength failing, he turned his horse's head, and muttered to the Duke of Leuchtenberg by his side: 'Cousin, take me hence, for I love seconds.' As he turned, an Austrian trooper shouted: 'Art thou here? I have long sought for thee!' and discharged his carbine into the king's shoulder. Gustavus fell from his horse, with the last words, 'My God!' The tidings flew through the army that the king was slain; that he was taken prisoner; and in revenge and in despair his men fought, as Schiller says, 'with the grim fury of lions,' until victory crowned the day. Defaced with wounds, trodden under
feet of horses, the body of Gustavus was drawn from beneath a heap of slain, and laid, amid weeping, with his fathers in Sweden. The neighbourhood of the place where he fell is marked to this day by a porphyritic boulder, with the simple inscription, 'G. A.—1632.'

Thus died Gustavus Adolphus, in his thirty-eighth year, and in the third of his championship of Protestantism. His success had begun to awaken alarms among his allies, who feared in him a possible Protestant emperor, yet of this ambition he gave no sign. 'The devil,' he told his chaplain, who found him reading his Bible—'the devil is very near at hand to those who are accountable to none but God for their actions.' What might be his dreams we can never know, but he had left one of the noblest and purest memories in history. Had he lived, it is likely he would have ended quickly that awful war which afflicted Germany for sixteen years after him. Oxenstien lived to look after the interests of Sweden, and at the peace succeeded in annexing the Baltic province of Pomerania, held by Sweden until 1815, when it was ceded to Prussia.

DEATH OF THE PRINCESS CHARLOTTE.

The sensation excited throughout the country by this melancholy event was of no ordinary description, and even at the present day it is still vividly remembered. It was indeed a most unexpected blow, the shining virtues, as well as the youth and beauty of the deceased, exciting an amount of affectionate commiseration, such as probably had never before attended the death of any royal personage in England. A parallel to the feeling thus excited has only appeared in recent years on the occasion of the demise of the consort of our beloved sovereign—the good Prince Albert.

In the Princess Charlotte, the whole hopes of the nation were centered. The only child of the Prince Regent and Caroline of Brunswick, she was regarded as the sole security for the lineal transmission to posterity of the British sceptre, her uncles, the Dukes of Clarence, Kent, Cumberland, and Cambridge being then all unmarried. Well-grounded fears were entertained that through her death the inheritance of the crown might pass from the reigning family, and devolve on a foreign and despotic dynasty. These apprehensions were dispelled by the subsequent marriage of the Duke of Kent, and the birth of the Princess Victoria, who, in her actual occupancy of the throne, has realised all the expectations which the nation had been led to entertain from the anticipated accession of her cousin.
In May 1816, the Princess Charlotte was married to Prince Leopold of Saxe-Coburg. Their union had been the result of mutual attachment, not of political expediency, and in the calm tranquillity of domestic life, they enjoyed a degree of happiness such as has not often been the lot of royal personages. The princess's approaching confinement was looked forward to by the nation with affectionate interest, but without the least apprehension as to the result. Early in the morning of Tuesday the 4th of November, she was taken ill, and express was sent off to the great officers of state, including the Archbishop of Canterbury and the Lord Chancellor, who immediately attended. Everything seemed to go on favourably till the evening of the following day (Wednesday), when at nine o'clock the princess was delivered of a stillborn child. This melancholy circumstance, however, did not appear to affect the princess so seriously as to give any cause for alarm, and about midnight it was deemed expedient to leave her to repose, and the attentions of the nurse, Mrs Griffiths. Ere half an hour elapsed, the latter observed such an alarming change in her patient, that she at once summoned Prince Leopold and the medical attendants, who hurried to the chamber. The princess became rapidly worse, and in about two hours expired.

After the grief of the nation had somewhat subsided, the feeling of sorrow was succeeded by one of anger. It was said that the medical attendants of the princess had mismanaged the case, and a careless and negligent, it was affirmed, had been shewn which would have been scandalous had the fate of the humblest peasant-woman been concerned. Extreme caution must be observed in dealing with these popular reports, considering the general propensity in human nature to slander, and the tendency to find in the deaths of eminent personages food for excitement and marvel. There really appears to have been some blundering in the case, but that this was the occasion of the princess's death, we have no warrant for believing. It is a curious circumstance, that Sir Richard Croft, the physician against whom the public odium was chiefly directed, committed suicide ere many months had elapsed.

A SAILOR'S LETTER.

When Louis XVIII, under the title of the Count de Lille, was obliged to quit the continent after the peace of Tilsit, and take refuge in England, he landed at Yarmouth from the Swedish frigate, Freya, and was rowed ashore by a boat's crew from H.M.S. Majestic. Pleased with the attention shewn him, the royal exile left fifteen guineas as a gerdon to the men to drink his health. The honest men, in obedience to an order which had formerly been issued on the subject of taking money from strangers, refused to avail themselves of this munificence. The present case, however, being rather an exceptional one, the men held "a talk" on the matter, when they resolved to transmit to Admiral Russell the letter, of which the following is a literal copy:

Majestic, 6th day of November 1807.

Please your honour. We held a talk about that there £15 was sent us, and hope no offence, your

Honour. We don't like to take it, because, as we knows fast stuff, that it was the true king of France that went with your honour in the boat, and that he and our own noble king, God bless 'em both, and give every one his right, is good friends now; came besides that, your honour in the grand order, long ago, to give any money from no body, and we never did take none; and Mr Leneve, that steered your honour and that king, says he won't have no hand in it, and so does Andrew Young, the proper cozen; and we hopes no offence — so we all, one and all, begs not to take it at all. So no more at present.

From your honour's dutiful servants.

(Signed) 
Andrew Young, Cozen; James Macon; Lewis Bryan; James Lord; James Hood; W. Edwards; Jan. Holahaw; Thomas Laurie; Thomas Simmers; Thomas Kesane; Simon Duff; W. Fairclough; John Cherchil; Thomas Lawrence; Jacob Gabriel; William Muzzy.

How the admiral responded to this communication, we are not informed, but it is to be hoped that the worthy tars were eventually permitted to share among them the gift from Louis. As a specimen of blunt and unadorned honesty, the above composition is perhaps unrivalled.

THE LITTLEBOETH LEGEND.

Aubrey appears to have been the first to put into circulation a romantic story of Elizabeth's time regarding Littlecote Hall, in Wiltshire, which at that period was acquired by the Lord Chief-Justice Popham, in the person of whose family it has since remained. The account given by Aubrey states that Dayrell, the former proprietor, called a midwife, blindfolded, to his house one night, by whom one of his serving-women was delivered of a child, which she saw him immediately after throw upon the fire; that the poor woman was afterwards able to discover and identify the house where this horrid act had been committed; and that Dayrell, being tried for murder before Chief-Justice Popham, only saved his life by giving Littlecote, and money besides, to the judge as a bribe.

When Lord Webb Seymour was living in Edinburgh, in the early years of the present century, he communicated a traditions version of this story to Sir Walter Scott, who wrought it up a sketch of it as a ballad in his romance of Bokkeby, and printed it in full in the notes to that poem. Though Lord Webb's story has thus been brought well into notice, we are induced to have it repeated here.

"It was on a dark rainy night in November, that an old midwife sat musing by her cottage-fire, when on a sudden she was startled by a loud knocking at the door. On opening it, she found a horseman, who told her that her assistance

* William, Prince of Orange, married for a day or two in his advance upon London, November 1838, at Littlecote Hall, which Lord Maonley speaks of to our own times, not more on account of its venerable architecture and furniture, than on account of a horrid and mysterious crime which was perpetrated there in the days of the Tudors. William entertained King James's commissioners in the old hall of the manor. 'hang,' says Lord Maonley, 'with costs of mall which had seen the wars of the Roses, and with portraits of gallants who had adorned the court of Philip and Mary.'
was required immediately by a person of rank, and that she should be handsomely rewarded; but that there were reasons for keeping the affair a strict secret, and, therefore, she must submit to be blindfolded, and to be led unawares to the bedchamber of the lady. With some hesitation the midwife consented; the horseman bound her eyes, and placed her on a pillion behind him. After proceeding in silence many miles through rough and dirty lanes, they stopped, and the midwife was led into a house, which, from the length of her walk through the apartments, as well as from the sounds about her, she discovered to be the seat of wealth and power. When the bandage was removed from her eyes, she found herself in a bedchamber, in which were the lady on whose account she had been sent for, and a man of a haughty and ferocious aspect. The lady was delivered of a fine boy. Immediately the man commanded the midwife to give him the child, and, catching it from her, he hurried across the room, and threw it out of the back of the fireplace where it was burnt in the chimney. The child, however, was strong, and by its struggles rolled itself upon the hearth, when the ruffian again seized it with fury, and, in spite of the intercession of the midwife, and the most piteous entreaties of the mother, thrust it under the grate, and, raking the live coals upon it, soon put an end to its life. The midwife, after spending some time in inquiring all the relief in her power to the wretched mother, was told that she must be gone. Her former conductor appeared, who again bound her eyes, and conveyed her behind him to her own home: he then paid her handsomely, and departed. The midwife was strongly agitated by the horrors of the preceding night, and she immediately made a deposition of the facts before a magistrate. Two circumstances afforded hopes of detecting the house in which the crime had been committed: one was, that the midwife, as she sat by the bedside, had, with a view to discover the place, cut out a piece of the bedcurtain, and sewn it in again; the other was, that as she had descended the staircase, she had counted the steps. Some suspicions fell upon one Darrell, at that time the proprietor of Littlecote House and the domain around it; but after some deliberation, with eyes bandaged to his face, he was released by the midwife, and Darrell was tried at Salisbury for the murder. By corrupting his judge, he escaped the sentence of the law; but broke his neck by a fall from his horse while hunting, in a few months after. The place where this happened is still known by the name of Darrell's Stile—a spot to be dreaded by the peasant whom the shades of evening have overtaken in that condition.

Scott further added a legend to much the same purport, which was current in Edinburgh in his childhood. In this case, however, it was a clergyman who was brought blindfolded to the house, the object being to have spiritual consolation administered to a lady newly delivered of an infant. Having performed his part, he was rewarded, enjoying to secrecy on pain of death, and buried off, but the dead is not restored. He heard the report of a pistol, and the tragedy is presumed to have been completed when he learned next morning that the house of a family of condition, at the head of the Canongate, had been totally consumed by fire during the night, involving the death of the daughter of the proprietor, 'a young lady eminent for beauty and accomplishments.' After many years, feeling uneasy about the secret, he imparted it to some of his brethren, and it thus acquired a certain degree of publicity. The diarist, however, has given no reason why the story was not conspicuous, and the story in some degree forgotten, when a fire broke out again on the very same spot where the house of *** had formerly stood, and which was now occupied by buildings of an inferior description. When the flames were at their height, the tumult, which usually attends such a scene, was suddenly suspended by an unexpected apparition. A beautiful female, in a night-dress extremely rich, but at least half a century old, appeared in the very midst of the fire, and uttered these tremendous words in her vernacular idiom: "Aase burned, twace burned, the third time I'll scare ye all!" The narrator adds: 'The belief in this story was formerly so strong, that, on a fire breaking out, and seeming to approach the fatal spot, there was a good deal of anxiety testified lest the apparition should make good her determination to be present."

A correspondent of Notes and Queries (April 10, 1856), affirms that this story was current in Edinburgh before the childhood of Sir Walter Scott, and was generally credited, at least as regards the murder part of it. He mentions a person acquainted with Edinburgh from 1743, who used to tell the tale, and point out the site of the house. The present writer knew a lady older than Sir Walter Scott, who had heard the story as a nursery one in her young days, and she offered to point out to him the site of the burned house—which, however, death unexpectedly prevented her from doing. Keeping in view Scott's narration, which assigns the head of the Canongate as the place, it is remarkable that a great fire did happen there at the end of the seventeenth century, and the lofty buildings now on the spot date from that time.

It is not calculated to support the credit of the Littlecote legend, that there is another of the same kind localised in Edinburgh. Nor is this all. A similar tale is told by Sir Nathaniel Wraxall, in which an Irish physician, named Ogilvie, resident at Rome about 1743, is represented as taken with eyes bandaged to his face, where he was called upon to bleed to death a young lady who had dishonoured her family—the family proving afterwards to be that of the Duke de Bracciano. This story was communicated to Wraxall by the celebrated Lady Hamilton, and to support its credibility he relates another incident, of the verity of which he had been assured at Vienna and other German cities. About the year 1774, some persons came to the house of thestraburg executioner, and engaged him to accompany them on a private professional excursion across the frontier, the object being to put to death a person of high rank. They particularly enjoined him to bring the sword with which he was accustomed, in the discharge of his ordinary functions, to beheld malfeasance of duty, and accompanied with his conductors, he passed the bridge over the river, to Kehl, the first town on the eastern bank of the Rhine; where they acquainted him that he had a considerable journey to perform, the object of which must be carefully concealed, as the person intended to be put to death was an individual of great distinction. They added that he must not...

565
oppose their taking the proper precautions to prevent his knowing the place to which he was conveyed. He acquired, and allowed them to hoodwink him. On the second day, they arrived at a moated castle, the draw-bridge of which being lowered, they drove into the court. After waiting a considerable time, he was then conducted into a spacious hall, where stood a scaffold hung with black cloth, and in the centre was placed a stool or chair. A female shortly made her appearance, habited in deep mourning, her face wholly concealed by a veil. She was led by two persons, who, when she was seated, having first tied her hands, next fastened her legs with cords. As far as he could form any judgment from her general figure, he considered her to have passed the period of youth. Not a word was uttered; neither did she utter any complaints, or attempt any resistance. When all the preparations for her execution were completed, on a signal given he unloosed the instrument of punishment; and her head being forcibly held up by the hair, he severed it at a single stroke from her body. Without allowing him to remain more than a few minutes, he was then handomely rewarded, conducted back to Kehl by the same persons who had brought him to the place, and set down at the end of the bridge leading to Strausburg.

'I have heard the question frequently agitated, during my residence in Germany, and many different opinions stated, relative to the lady thus asserted to have been put to death. The most generally adopted belief rested on the Princess of Tour and Taxis, Augusta Elisabeth, daughter of Charles Alexander, Prince of Wirtemberg. She had been married, at a very early period of life, to Charles Anselm, Prince of Tour and Taxis. Whether it proceeded from mutual incompatibility of character, or, as was commonly pretended, from the princess's intractable and ferocious disposition, the marriage proved eminently unfortunate in its results. She was accused of having repeatedly attempted to take away her husband's life, particularly when they were walking together near the castle of Donau-Stauf, on the high bank overlooking hanging the Danube, when she endeavoured to precipitate him into the river. It is certain, that about the year 1773 or 1774, a final separation took place between them, at the prince's solicitation. The reigning Duke of Wirtemberg, her brother, to whose custody she was consigned, caused her to be closely immured in a castle within his own dominions, where she was strictly guarded, no access being allowed to her. Of the last-mentioned fact, there is little doubt; but it may be considered as much more problematical, whether she was the person put to death by the executioner of Strausburg. I dined in the autumn of the year 1778 with the Prince of Tour and Taxis, at his castle or seat of Donau-Stauf, near the northern bank of the Danube, a few miles from the city of Ratisbon. He was then about forty-five years of age, and his wife was understood to be in confinement. I believe that her decease was not formally announced as having taken place, till many years subsequent to 1778; but this circumstance by no means militates against the possibility of her having suffered by a more summary process, if her conduct had exposed her to merit it; and if it was thought proper to inflict upon her capital punishment. The private annals of the great houses and sovereigns of the Germanic empire, if they were divulged, would furnish numerous instances of similar severity exercised in their own families during the seventeenth and eighteenth centuries.'

JOHN KYRIE, 'THE MAN OF ROSS.'

John Kyriel, an active and benevolent man, whose good deeds ought to win the admiration of all, irrespective of fame derived from other sources, has become notable because Pope called him 'The Man of Ross,' and wrote a poem in his praise. Few who visit the pleasant town of Ross, in Herefordshire, fail to inquire about John Kyriel; and their interest in his kind doings mingles with the delight which that beautiful neighbourhood always imparts to strangers. The picturesque church, with the pew in which the good man sat for so many years; the bust and the monumental inscription within the church; the beautiful avenue of trees, called the Prospect, or the Man of Ross's Walks; in the heart of the church; the house which he built for himself; his arm-chair in the club-room of the little inn—all remain objects of interest to the present day.

John Kyriel was a gentleman of limited means, possessing a small estate in and near Ross, in the latter half of the seventeenth century. A friend from another county once called him 'The Man of Ross'; and Kyriel liked the name, because it 'conveyed a notion of plain, honest dealing and unaffected hospitality.' He formed a terrace, or pleasant walk between a field of his and the river Wye, and planted it with trees. He was always ready to plan walks and improvements for his friends, who were glad to avail themselves of his skill in such matters. Expenditures he could not indulge in, for his income was limited to £500 a year. The town being insufficiently supplied with water, Kyriel dug an oval basin of considerable extent in his field, lined it with brick, paved it with stone, and caused the water from the river to be forced into it by an engine, and conveyed by underground pipes to fountains in

JOHN KYRLE, "THE MAN OF ROSS." 

NOVEMBER 7.

TYBURN.

the streets. This was the work noticed by Pope in the lines:

"From the dry rock, who bade the waters flow?
Not in vast columns tost,
Or in proud fells magnificently lost;
But clear and artless, pouring through the plain,
Health to the sick, and solace to the swain."

Kyrle next headed a subscription for making a causeway along the low ground between the town and the bridge. It was so well planned that the county authorities afterwards adopted and extended it as part of the high-road to Hereford and Monmouth. The beautiful spire of the church being in an insecure state, Kyrle devised a mode of strengthening it, procured an assessment to pay for the repairs, contributed himself beyond his share of the assessment, and superintended the execution of the work. Pope was wrong in attributing to him the actual building of the spire:

"Who taught that heaven-directed spire to rise;"

and even of the church itself:

"Who builds a church to God, and not to fame."

To the renovated church Kyrle presented a great bell, which was cast in his presence at Gloucester; he threw into the crucible his own large silver tankard, having first drunk his favourite toast of "Church and King!" There was at Ross a grant renewed by successive lords of the manor, of certain tolls on all corn brought to market; the grant was bestowed as a weekly donation of bread to the poor. Kyrle acted as the almoner to the lords of the manor, and won golden opinions by his manner of fulfilling the duties of that office:

"Behold the market-house, with poor o'erspread; The Man of Ross divides the weekly bread."

A multitude of other kindly actions endeared him to his townsmen; and when he died (November 7, 1724), the inhabitants felt that they had indeed lost a friend. It is wonderful what he did with his £2500 a year, aided by the liberality which he was the means of developing in other persons.

Many a闻名 exploit was told of the Man of Ross. When he was planting the elm-walk, it was his wont to sally forth with a spade on one shoulder, and a wooden bottle of liquor for a labourer and himself. On one occasion, this labourer, drinking out of the bottle, did not cease till he had emptied it. Kyrle said to him: "John, why did you stop when I called to you?" "Why, sir," said the man, "don't you know that people can never hear when they are drinking?" The next time Mr Kyrle applied himself to the bottle, the man placed himself opposite to him, and opened his mouth as if bawling aloud, till Kyrle had finished. The draught ended, Kyrle asked: "Well, John, what did you say?" "Ah, you see, sir," said the man, "I was right; nobody can hear when he is drinking!" The Man of Ross lived and died a bachelor, under the housekeeping care of a maiden cousin—Miss Bubb. He disliked crowds and assemblies; but was very fond of snug social parties, and of entertaining his friends on market-days and fairs. His dishes were plain and according to the season. He liked a goose on his table, liked to carve it, and liked to repeat the well-worn old joke about 'cooking one's goose,' and so forth. Roast-beef he always reserved for Christmas-day. Malt liquor and Herefordshire cider were his only beverages. His 'invitation dinners' comprised nine, eleven, or thirteen persons, including Miss Bubb and himself; and he did not seem satisfied unless the guests mustered one of these aggregates. At his kitchen-fire there was a large block of wood, in lieu of a bench, for poor people to sit upon; and a piece of boiled beef, with three pecks of flour made into loaves, was given to the poor every Sunday. He loved a long evening, enjoyed a merry tale, and always appeared discomposted when it was time to separate. At his death, at the age of eighty-four, he had neither debts nor money, so closely did his income and his expenditure always agree. He left £40 to the Blue Coat School of Ross, and small legacies to the old workmen who had assisted him in his numerous useful works. About a year after John Kyrle's death, a tradesman of the town came to his executor, and said privately to him: "Sir, I am come to pay you some money that I owed to the late Mr Kyrle." The executor declared that he could find no entry of it in the accounts. "Well, sir," said the tradesman, "that I am aware of. Mr Kyrle said to me, when he lent me the money, that he did not think I should be able to repay it in his lifetime, and that it was likely you might want it before I could make it up; and so, said he, I won't have any memorandum of it, besides what I write and give you with it; and do you pay my kinsman when you can; and when you shew him this paper, he will see that the money is right, and that he is not to take interest."

TYBURN.

This celebrated place of execution, which figures so prominently in the records of crime, is said to have been first established in the reign of Henry IV., previous to which "The Elms" at Smithfield seems to have been the favourite locality for the punishment of malefactors. The name is derived from a brook called Tyburn, which flowed down from Hampstead into the Thames, supplying in its way a large pond in the Green Park, and also the celebrated Rossmond's Pond in St. James's Park. Oxford Street was, at an earlier period, known as Tyburn Road, and the now aristocratic locality of Park Lane, bore formerly the name of Tyburn Lane, whilst an iron tablet attached to the railings of Hyde Park, opposite the entrance of the Edgeware Road, informs the passer-by that here stood Tyburn turnpike-gate, so well known in old times as a landmark by travellers to and from London.

The gallows at Tyburn was of a triangular form, resting on three supports, and hence is often spoken of as 'Tyburn's triple tree.' It appears to have been a permanent erection, and there also stood near it wooden galleries for the accommodation of parties who came to witness the infliction of the last penalty of the law; such exhibitions, it is needless to state, were generally regarded by the spectators as interesting and instructive spectacles. Considerable disputation has prevailed as to the real site of the gallows, but it now appears to be pretty satisfactorily ascertained that it stood at the east end of Connaught Place, where the latter joins the Edgware Road, and nearly opposite the entrance to Upper Seymour Street. A lane led from the Uxbridge Road to the place of execution, in the
vicinity of which, whilst excavating the ground for buildings, numerous remains were discovered of the criminals who had been buried there after undergoing their sentence.

Among remarkable individuals who suffered death at Tyburn, were the Holy Maid of Kent, in Henry VIII's reign; Mrs Turner, notorious as a poisoner; Miss Laker, celebrated as the inventor of yellow starch; John Felton, the assassin of the Duke of Buckingham; the renowned burglar Jack Sheppard, and the thief-taker Jonathan Wild; Mrs Brownrigg, rendered proverbial by her cruel usage of apprentices; and the elegant and courtly Dr Dodd, whom pecuniary embarrassments—the result of a life of extravagance and immorality—buried into crime.

The last malefactor executed here was John Austin, on 7th November 1763, for robbery with violence. At that period the place of execution for criminals convicted in the county of Middlesex, was transferred from Tyburn to Newgate, where, on the 9th of December following the date just mentioned, the first capital sentence, under the new arrangements, was carried into effect. We are informed that some opposition was made by persons residing around the 10th Ballast to this abandonment of the old locality at Tyburn, but the answer returned by the authorities to their petition was, that 'the plan had been well considered; and would be persevered in.' Our readers do not require to be informed that the place thus appointed is still the scene of public executions, now happily of much less frequent occurrence than formerly.

Those curious documents, called Tyburn Tickets were certificates conferred under an act passed in the reign of William III, on the prosecutors who had succeeded in obtaining the capital conviction of a criminal. The object of the enactment was to stimulate individuals in the bringing of offenders to justice; and in virtue of the privilege thus bestowed, the holder of such a document was exempted 'from all manner of parish and ward offices within the parish wherein such felony was committed;' which certificate shall be enrolled with the clerk of the peace of the county on payment of 1s. and no more. These tickets were transferable, and sold like other descriptions of property. The act by which they were established was repealed in 1818, but an instance is related by a contributor to Notes and Queries of a claim for exemption from serving on a jury being made as late as 1866 by the holder of a Tyburn ticket.

The conveyance of the criminals from Newgate to Tyburn by Holborn Hill and the Oxford Road, afforded, by the distance of space traversed, an ample opportunity to all lovers of such sights for obtaining a view of the ghastly procession. A court on the south side of the High Street, St Giles's, is said to derive its name of Boot Yard, from the circumstance of criminals in ancient times on their way to execution at Tyburn, being presented at the hospital of St Giles's with a large bowl of ale, as the last refreshment which they were to partake of on this side of the grave. Different maxims came ultimately to prevail in reference to this matter, and we are told that Lord Ferrers, when on his way to execution in 1766, for the murder of his land-steward, was denied his request for some wine and water, the sheriff stating that he was sorry to be obliged to refuse his lordship, but that by recent regulations they were enjoined not to let prisoners drink when going to execution, as great indecencies had been frequently committed in these cases, through the criminals becoming intoxicated.

One of the most vigorous drawings by Hogarth represents the execution of the Idle Apprentice at Tyburn—a fitting termination to his disreputable career. Referring to this print, and the remarkable change which has taken place in a locality formerly associated only with the most repulsive ideas, Mr Thackeray makes the following observation in his English Humorists: 'How the times have changed! . . . . On the spot where Tom Idle (for whom I have an unaffected pity) made his exit from this wicked world, and where you see the hangman smoking his pipe as he reclines on the gibbet, and views the hills of Harrow or Hampstead beyond—a splendid marble arch, a vast and modern city—clean, airy, painted drab, populous with nurserymaids and children, the abodes of wealth and comfort, the elegant, the prosperous, the polite Tyburnians rise, the most respectable district in the habitable globe!'

The Four Crowned Brothers, martyrs, 304. St Willehad, confessor, bishop of Bremen, and apostle of Saxony, end of 8th century. St Godfrey, bishop of Amiens, confessor, 1118.

Born.—Edward Pocock, oriental scholar, 1804, Oxford; Captain John Byron, celebrated navigator, 1728, Newstead Abbey.

Died.—Pope Boniface II, 633; Louis VIII, king of France, 1226; Montesquieu; Duns Scotus, theologian and scholar, 1308; Cologne; Cardinal Kippen, governor of Spain during minority of Charles V., 1517; John Milton, great English poet and prose writer, 1674, London; Madame Roland, revolutionist, guillotined at Paris, 1793; Thomas Bewick, wood-engraver, 1838, Gateshead; George Pocock, dean of Sry, mathematician, 1653, Sry.

MADAME ROLAND.

The terrible French Revolution brought many women as well as men into prominence—some for their genius, some for their crimes, and some for their misfortunes. Among the number was Madame Roland. She was born at Paris in 1766; her maiden name being Manon Phillipon. Her father was an artist of moderate talent; her mother a woman of superior understanding and great sweetness of disposition. Manon made rapid progress in painting, music, and general literature, and became an accomplished girl. She was very religious at first, but afterwards adopted the views then so prevalent in France, and allowed her imagination to get the better of her religion. Plutarch's Lives gave her an almost passionate longing for the fame of the great men of past ages; and at the age of fourteen she is said to have wept because she was not a Roman or Spartan woman. In 1781, she married M. Roland, a man twenty years her senior, and much respected for his ability and Integrity. During several years, she divided her time between the education of her young daughters, and visiting her husband in his duties as inspector of manufactures. Together they visited England, Switzerland, and other countries, and imbibed a taste for
many liberal institutions and usages which were
denied to France under the old Bourbon régime.
At length the outburst came—the French struggle
for liberty in 1789—so soon to degenerate into
ruthless anarchy. The Rolands accepted the new
order of things with great avidity. M. Roland was
elected representative of Lyon to the National
Assembly; and he and his wife soon formed at
Paris an intimacy with Mirabeau and other leading
spirits of the Revolution. While the Revolution was still
and its best days. There was a party among the
Revolutionists, called the Girondists, less violent and
sanguinary than the Jacobins; and to this
moderate party the Rolands attached themselves.
When a Girondist ministry was formed, Roland
came Minister of the Interior, or what we should
call Home Secretary. He appeared at the court of
the unfortunate Louis XVI in a round hat, and
with strings instead of buckles in his shoes—a
departure from court-customs which was interpreted
by many as symbolic of the fall of the monarchy;
while his plain uncompromising language gave
further offence to the court. Madame Roland
assisted her husband in drawing up his official
papers; and to her pen is attributed the famous
warning-letter to the king, published in May 1792.
It occasioned the dismissal of M. Roland from the
ministry, but the dreadful doings on the 10th of
August terrified the court, and Roland was again
recalled to office. By this time, however, the
Revolution had passed into its hideous phase; the
populace had tasted blood, and, urged on by the
Jacobins, had entered upon a course distasteful to
the Rolands and the Girondists generally. When
the massacres of the 2d of September took place,
Roland boldly denounced them in the National
Convention; but Robespierre, Marat, Danton, and
the other Jacobins, were now becoming too
powerful for him. Especially bitter was the wrath of
these men towards Madame Roland, whose bold-
ness, sagacity, and sarcasm had often thwarted
them. The lives of herself and her husband were
not considered safe; and arrangements were made
for them to sleep away from their regular home,
the Hotel of the Interior, without making the
change publicly known. But this deception was
little suited to the high spirit of Madame Roland.
She said on one occasion: 'I am ashamed of
the part I am made to play. I will neither disguise
myself nor leave the house. If they wish to
assassinate me, it shall be in my own house.'

The crisis came. On the 31st of May 1793,
nearly forty thousand of the rabble were marched
against the National Convention by the Jacobins,
as the most effectual means of putting down the
Girondists. In the evening of the same day,
Madame Roland was cast into prison—her husband
being at the time away from Paris, for his own
safety. She never again obtained her liberty, or
saw her husband. Her demeanour was firm and
admirable; while ardently advocating what she
demed reasonable individual and national freed-
men, she never hesitated to denounce the men
who, by their sanguinary deeds, were sending a
thrill of horror through Europe; but in her more
silent hours she grieved for her husband and
daughter, and for the many friends who were
falling under the guillotine. At her jailer's
converted to friends by her fascinating manner
and general amiability; but they could do nothing
to avert her fate. She devoted all her leisure hours
in prison to the composition of her Mémoires; in
which she delineated, with much sprightliness and
grace, the events of her happy youth, and with
great judgment and mournful pathos, the fearful
turmoil of her later years. At one time, during
her three months' imprisonment, she almost deter-
mined to take poison, like many miserable creatures
around her; but her better nature came to her aid,
and she resolved to meet her fate bravely. It was
a horrible time. On the 16th of October, the
unfortunate Marie Antoinette was guillotined.
Later in the same month, twenty of the leading
Girondists—all personal friends of the Rolands—
shared the same fate. And then came the turn of
Madame Roland. After being successively impris-
ioned in the Abbeye, Sainte Pélage, and the Con-
ciergerie, she was brought to trial as an accomplice
of the Girondists. A few days previous to this,
Chauvieu, Madame Roland's advocate, visited her
in prison, to confer respecting her defence. Inter-
rupting him in his observations, she took a ring
off her finger, and said: 'Do not come to-morrow
to the Tribunal; you would endanger yourself
without saving me. Accept this ring as a simple
token of my gratitude. To-morrow, I shall cease
to exist.' At the trial, she appeared dressed care-
fully in white, with her beautiful black hair desc.
ending to her waist. Unmoved by the insults to

MADAME ROLAND.

which she was subjected by her brutal judges, she
maintained unruffled a dignity of demeanour which
might have suited a Roman matron of old; but
her death was a predetermined matter, and she was
remorselessly condemned. On the fatal day, and
at the same hour and place with herself, a man was
to be guillotined. To die first on such an occasion
had become a sort of privilege among the wretched
victims, as a means of avoiding the agony of seeing
others die. Madame Roland waived this privilege
in favour of her less courageous companion. The
executioner had orders to guillotine her before
the man; but she entreated him not to shew the
impoliteness of refusing a woman's last request.
As she passed to the scaffold, she gazed on a
gigantic statue of Liberty erected near it, and
exclaimed: 'O Liberty! how many crimes are
committed in thy name.' The guillotine then took the life of one who was, perhaps, the most remarkable woman of the French Revolution.

The fate of M. Roland was scarcely less romantically tragic. He had lain concealed for some time in Rouen, but on hearing of his wife's death, he set out on the road to Paris, and walked as far as Baudouin. Here he quit the highway, entered an avenue leading to a private mansion, and sitting down at the foot of a tree, passed a cane-sword through his body. A paper was found beside him with the following inscription: 'Whoever you are who find me lying here, respect my remains; they are those of a man who devoted his whole life to being useful, and who died as he had lived, virtuous and honest.'

BEWICK, THE ENGRAVER.

Thomas Bewick owes his celebrity to his knowledge of animals, and the admirable manner in which he applied this knowledge to the production of illustrated works on natural history. Born at Chertsey, in Northumberland, in 1753, he has left us in his autobiography an interesting account of his introduction to engraving. Amongst some indications of taste in this direction, he was, in 1767, apprenticed to Mr Ralph Beilby, of Newcastle-on-Tyne, an engraver of door-plates and clock-faces, and occasionally of copper-plates for illustrating books. 'For some time after I entered the business,' he says, 'I was employed in copying Copeland's Ornaments; and this was the only kind of drawing upon which I ever had a lesson given me from any one. I was never a pupil to any drawing-master, and had not even a lesson from William Beilby, or his brother Thomas, who, along with their other profession, were also drawing-masters. In the later years of my apprenticeship, my master kept me so fully employed that I never had any opportunity for such a purpose, at which I felt much grieved and disappointed. The first job that was sent me was the cutting of the lines on the diagrams (which my master finished) for the Lady's Diary, on which he was employed by Charles (afterwards the celebrated Dr Hutton); and etching sword-blades for William and Nicholas Oley, sword manufacturers, &c., at Shotley Bridge. It was not long till the diagrams were wholly put into my hands to finish. After that, I was kept closely employed upon a variety of other jobs; for such was the industry of my master that he refused nothing, coarse or fine. He undertook everything, which he did in the best way he could. He fitted up and tempered his own tools, and adapted them to every purpose; and taught me to do the same. This readiness brought me in an overflow of work; and the workplace was filled with the coarsest kinds of steel stamps, pipe moulds, bottle moulds, brass-clock faces, door-plates, coffin-plates, bookbinders' letters and stamps, steel, silver, and gold seals, mourning-rings, &c. He also undertook the engraving of arms, crests, and cyphers on silver, and every kind of job from the silversmiths; also engraving bills of exchange, bank-notes, invoices, account-heads, and cards. These last he executed as well as did most of the engravers of the time; but what he excelled in was ornamental silver engraving.' This, of course, was a strange way of introduction to the higher departments of art; but it was not a bad one for such a person as Bewick, who had the germ of a true artist within him. 'While we were going on in this way,' his narrative proceeds, 'we were occasionally applied to by printers to execute wood-cuts for them. In this branch my master was very defective. What he did was wretched. He did not like such jobs. On this account they were not given to me; and the opportunity this afforded of drawing the designs on the wood was highly gratifying to me. It happened that one of these, a cut of the "George and Dragon" for a bar-bill, attracted so much notice, and had so many praises bestowed upon it, that this kind of work greatly increased. Orders were received for cuts for children's books; chiefly for Thomas Saint, printer, Newcastle, and successor of John White, who had rendered himself famous for his numerous publications of histories and old ballads... My time now became greatly taken up with designing and cutting a set of wood-blocks for the Story Teller, Gay's Fables, and Select Fables; together with cuts of a similar kind for printers. Some of the Fable cuts were thought so well of by my master, that he, in my name, sent impressions of a few of them to be laid before the Society for the encouragement of arts, and I obtained a premium. This I received shortly after I was out of my apprenticeship, and it was left to my choice, whether I would have it in a gold medal or money (seven guineas). I preferred the latter; and I never in my life felt greater pleasure than in presenting it to my mother.'

Once favoured with the good opportunity thus afforded to him, Bewick did not fail to make use of it. Authors and publishers found him to be useful in wood engraving generally, and he earned a living at this while preparing for higher labours in art. In 1773, he engraved cuts for Dr Hutton's Mathematics, and for Dr Horsey's edition of Sir Isaac Newton's works. Coming to London in 1776, he executed work for various persons; but he did not like the people nor the people. 'Wherever I went,' he says in the work already quoted, 'the ignorant part of the Cockneys called me "Scottichman." At this I was not offended; but when they added other impudent remarks, I could not endure them; and this often led me into quarrels of a kind I wished to avoid, and had not been used to engage in. It is not worth while noticing these quarrels, but only as they served to help out my dislike to London.'

Having returned to the north, Bewick applied himself to his favourite pursuit of designing and engraving wood-cuts in natural history, and eked out his income meanwhile by what may be termed commercial engraving. Abbots Fables, History of Quadrupeds, History of Birds, Hutchinson's History of Durham, Parnell's Hermit, Goldsmith's Deserted Village, Liddell's Tour in Scotland engaged his attention by turn, whilst at the same time he employed himself in a totally different department of the engraver's art—that of executing copper-plates for bank-notes.

It may be worth mentioning here, that cottages, in Bewick's early days, seem to have been adorned with large wood-cuts, as they are now with cheap coloured lithographs. "I cannot help lamenting," he observes, "that, in all the vicissitudes..."
which the art of wood engraving has undergone, some species of it is lost and done away. I mean the large blocks with the prints from them, so common to be seen when I was a boy, in every cottage and farmhouse throughout the country. These blocks, I suppose, from their appearance, must have been cut on the plank way on beech, or some other kind of close-grained wood; and from the immense number of impressions from them, so cheaply and extensively spread over the whole country, must have given employment to a great number of artists in this inferior department of wood-cutting; and must also have formed to them an important article of traffic. These prints, which were sold at a very low price, were commonly illustrative of some memorable exploits; or were, perhaps, the portraits of eminent men who had distinguished themselves in the service of their country, or in their patriotic exertions to serve mankind.

Bewick has acquired a deserved reputation as well for the lifelike correctness of his drawing as the allegorical and imaginative charm with which he has invested all his productions. His sense of humour was also remarkably strong, and manifests itself very prominently in the vignettes and tail-pieces with which his History of Quadrupeds is embellished, though it is to be regretted that he has not unfrequently allowed this propensity to conduct him beyond the limits of decorum. The amability and domesticity of his temper is very pleasingly shewn in a letter, addressed to a friend in 1826, of which the following is an extract: 'I might fill you a sheet in dwelling on the merits of my young folks, without being a bit afraid of any remarks that might be made upon me, such as, 'Look at the old fool, he thinks there is nobody has sic baime as he has!' In short, my son and three daughters do everything in their power to make their parents happy.'

A visitor to the South Kensington Museum will find a series of Bewick's designs, illustrative of the progress of wood engraving. This reviver of the art in modern times, died in 1858, at the age of seventy-six.

NOVEMBER 9.

The Lord Mayor's Show.

Shorn of its antique pageantry, and bereft of its ancient significance, the procession that passes through London to Westminster every 9th of November, when the mayor of London is sworn into office, becomes in the eyes of many simply ludicrous. It is so, if we do not cast a retrospective glance at the olden glories of the mayoralty, the original importance of the mayor, and the utility of the civic companies, when the laws of trading were as little in force as ill defined. These were companies guarded and enforced the best interests of the traders who composed their fraternities. The Guildhall was their grand rendezvous. The mayor was king of the city, and poets of no mean fame celebrated his election, and invented pageantry for exhibition in the streets and halls, rivalling the court masques in costly splendour. Of all this nothing remains but a few men in armour and a few banners of the civic companies, to appeal for respect in an age of utilitarianism, already too much inclined to sneer at 'old institutions' and 'the wisdom of our ancestors.' Yet such displays are not without their use in a national as well as historical point of view. The history of trade is the true history of civilization.

In the great struggle that overthrew feudalism, the most important combatants were the men whose lives and fortunes were endangered in the course of the difficult conduct of trade between the great continental cities. The poor nobility, and their proud and impoverished descendants, frequently lived only by rapacious tolls, exacted from merchants passing through their territory, or by their castles. Sometimes these traders and their merchandise were seized and detainted till a large ransom was extorted; sometimes they were robbed and murdered outright. In navigating the Rhine and the Danube, the boats were continually obliged to pay toll in passing the castles, then literally dens of thieves; and 'the robber knights' of Germany were the terror of all travellers by land. The law was then powerless to punish these nobles, for they held sovereign power in their petty territories, and kings and emperors cared little to quarrel with them in favour of mere traders. The pages of Froissart narrate the contempt and hatred felt by the nobles for the commonalty, and the jealousy which they entertained of the wealth brought by trade. It became, therefore, necessary for merchantmen to band together, and pay for armed escorts, as they still do in the east; this ultimately led to trading leagues between large towns, ending in the famed Hansa or the League of the North German cities, which first established trade on a secure basis, and gave to the people wealth and municipal institutions, leading to the establishment of Hotels de Ville and Mayoralities, rivaling the chateaux and stately pomp of the old nobility.

The magistrates, chosen by popular voice to protect the municipality, were inaugurated with popular ceremonies; and these public celebrations occupied the same place in the estimation of the people, that the court ceremonies and tournaments did in that of the aristocracy. Ultimately, the wealthy townsmen became as proud as the nobles, and rivalled or outdid them upon all occasions where public display was considered needed. When sovereigns entered the cities, they were received by persons habituated in classic or mythological costumes, who welcomed them in set-speeches, the invention of the best poets procurable. Elaborately decorated triumphal arches spanned the streets through which they passed; pageants, arranged on prepared stages, awaited their approach.
at street-corners; and on the arrival of the august guests, the characters embodied in these poured forth complimentary speeches, or sang choruses with music in their honour.

The trading companies of London imitated their continental brethren in observances of the same kind. In the thirteenth and fourteenth centuries, they rode forth in great state to meet and welcome kings or their consorts, when they came to the 'camera regia,' as they termed the city of London. Foreign potentates and ambassadors received similar honours, in order that the dignity of the city might be properly upheld. When the day came to honour their own chief magistrate, of course they were still more pleased to make public displays. Hence the mayor was inaugurated with much pomp. He went to Westminster in his gilded barge, after a noble fashion; and as he returned, he was greeted by mythological and emblematic personages stationed in pageants by the way, their speeches being prepared by civic poets-laureate, who numbered among them such men as the dramatists Peele, Dekker, Webster, Munday, and Middleton.

Giants seem to have been the most general, as they were always the most popular adjuncts, to these civic displays, at home and abroad. They were intimately connected with the old mythic

![Image of two giants in Guildhall]

histories of the foundation of cities, and still appear in continental pageantry; the London giants being two ponderous figures of wood, stationary in the Guildhall. The giants of Antwerp, Douai, Ath, Lille, and other cities of the Low Countries, are from twenty to thirty feet in height, and still march in great public processions. They occasionally unite to swell the cortège in some town, on very great occasions, except the giant of Antwerp, and he is too large to pass through any gate of the city.

In English records, we read of giants stationed on London Bridge, or marching in majority processions; the same thing occurring in our large provincial towns, such as Chester, York, and Norwich. In 1413, when Henry V. made his triumphal entry to London, after the victory of Azincourt, a male and a female giant stood at the Southwark gate of entry to London Bridge; the male bearing the city keys, as if porter of London. In 1432, when Henry VI. entered London the same way, 'a mighty giant' awaited him, at the same place, as his champion. He carried a drawn sword, and by his side was an inscription, beginning:

'All those that be enemies to the king,
I shall them clothe with confusion.'

In 1554, when Philip and Mary made their public entry into London, 'two images, representing two giants, the one named Corineus and the other Gogmagog, holding between them certain Latin verses,' were exhibited on London Bridge. When Elizabeth passed through the city, January 12, 1558—the day before her coronation—the final exhibition was at Temple Bar, which was "finedly dressed" with the two giants, who held
between them a poetic recapitulation of the pageant exhibited.†

The earliest printed description of the shows on Lord Mayor’s Day, is that by George Peele, 1585; when Sir Wolstan Dixie was installed.† The pageants were then occupied by children, appropriately dressed, to personate London, the Thames, Magnanimity, Loyalty, &c.; who complimented the mayor as he passed. One ‘apparelled like a Moor,’ at the conclusion of his speech, very sensibly reminded him of his duties in these words:

‘This now remains, right honourable lord,
That carefully you do attend and keep
This lovely lady, rich and beautiful,
The jewel wherewithal your sovereign queen
Hath put your honour lovingly in trust,
That you may add to London’s dignity,
And London’s dignity may add to yours.’

A very good general idea of these annual pageants may be obtained from that concocted by Anthony Munday in 1616, for the maycality of Sir John Leman, of the Fishmongers’ Company. The first pageant was a fishing-boat, with fishermen ‘seriously at labour, drawing up their nets, laden with living fish, and bestowing them bountifully upon the people.’ These moving pageants were placed on stages, provided with wheels, which were concealed by drapery, the latter being painted to resemble the waves of the sea. This ship was followed by a crowned dolphin, in allusion to the mayor’s arms, and those of the company, in which dolphins appear; and ‘because it is a fish inclined much by nature to music and poet, rideth on his back.’ Then followed the king of the Moors, attended by six tribunes in horseback. They were succeeded by a ‘lemon-tree richly laden with fruit and flowers,’ in punning allusion to the name of the mayor; a fashion observed whenever the name allowed it to become practicable. Then came a bower adorned with the names and arms of all members of the Fishmongers’ Company who had served the office of mayor; with their great hero, Sir William Walworth, inside; an armed officer, with the head of Wat Tyler on one side, and the Genius of London on another. The crowning angel with golden wings, on the other. Lastly, came the grand pageant drawn by mermen and mermaids, ‘memorizing London’s great day of deliverance,’ when Tyler was slain; on the top sat a victorious Angel, and King Richard was represented beneath, surrounded by impersonations of royal and kingly virtues.‡

There is still preserved, in Fishmongers’ Hall, a very curious contemporary drawing of this show; a portion of it is here copied, depicting the lemon-tree; it will be perceived that the pelican (emblematic of self-sacrificing pity) is in front. At the foot of the tree sit five children, resembling the five senses, according to the words written upon the original; to which is added the information that this pageant ‘remained in the Fishmongers’ Hall for an ornament’ during the mayoralty.

Throughout the reign of James I, the inventive faculty of the city post continued to be thus taxed for the yearly production of pageantry. When the great civil war broke out, men’s minds became too seriously occupied to favour such displays; and the gloomy puritanism of the Cromwellian era put a stop to them entirely. For sixteen years no record is given of them; in 1655, the mayor, Sir John Detrick, attempted a restoration of the old shows, by introducing the crowned Virgin on horseback; in allusion to the arms of the Mercers’ Company, of which he was a member. In 1657, Sir R. Chiverton restored the gallery, two leopards led by Moors, a giant who walked on stilts; and a pageant, with Orpheus, Pan, and the Satyres.

With the Restoration came back the old city-shows in all their splendour. In 1660, the Royal Oak was the principal feature in compliment to Charles II, and no expense was spared to make a good display of other inventions, ‘there being twice

* We quote from a small volume devoted to the history of The Giants in Guildhall, with an Account of other Civic Giants, at Home and Abroad, by F. W. Fairbollt, F.S.A.; to which we must refer the reader who may take an interest in a subject that demands larger space than we have at command. We may here merely add, that the names Gog and Magog, applied to the Guildhall Giants, are comparatively modern, formed by breaking one name into two. The old legendary history of London relates that Gogmagog was an ancient British giant, overthrown by Corinæus, a gigantic follower of Brutus of Troy, who invaded England, and first founded London, under the name of Troynovant, or New Troy. The oldest figure in the Guildhall is supposed to represent Gogmagog, the younger Corinæus. They were carved by the civic carpenter, Richard Saunders, in 1707.

† It may be curious to many readers if we here note the fact, that value of these old pamphlets. The copy bought for the Guildhall Library of Poole’s pageant cost £20; it consists of four leaves only, thus valued at £5 each!

‡ Abridged from Fairbolt’s History of Lord Mayor’s Pageants, privately printed by the Percy Society, 1843. In these volumes a succinct account (with extracts) is given of each year’s display, as far as it can be ascertained from the examination of the rare descriptive pamphlets, in the Bodleian, Guildhall, and British Museum libraries; or those of private collectors, as well as from notices gleaned from our historians.
as many pageants and speeches as have formerly shown,' says the author, John Tatham, who was for many years afterwards employed in this capacity. He was succeeded by Thomas Jordan, who enlivened his pageantry with humorous songs and merry interludes, suited to Cavalier tastes. The king often came to the mayor's feast, and when Sir Robert Viner, the great banker (as related in 
Spectator, 463), entertained the king in 1674, both got so merry at the feast, that the mayor lost all notion of rank; followed the king, who was about to depart, and impatiently on his return, said 'to take another bottle.' Charles good-humouredly allowed himself to be half-dragged back to the banquetting hall, humming the words of the old song:

"The man that is drunk is as great as a king!"

A loose familiarity was indulged in by the citizens, rather starting to modern ideas. Thus, when the mayor went in his barge, accompanied by all the civic companies in their barges, as far as Chelsea, in 1682, to welcome and accompany the king in his progress down the river from Hampton Court to Whitehall, their majesties were thus addressed by the speaker in the waterman's barge:

"God bless thee, King Charles, and thy good woman there; and lest creatures' featis, I warrant thee, and a true. Go thy ways for a wag! thou hast had a merry time on't in the west; I need say no more! But do'st hear me, don't take it in dudgeon that I am so familiar with thee; thou may'st rather take it kindly, for I am not always in this good humour; though I thee thee and thou thee, I am no Quaker, take notice of that.

The Plague, and the Great Fire, were the only causes of interruption to the glory of the lord mayor's show during the reign of Charles, until the quarrel broke out between court and city, which ended in the abrogation of the city charter, and the nomination of mayor and aldermen by the king. When Charles was morally and magisterially at his worst, a song was composed for the inspection of one of his creatures (Sir W. Pritchard, 1692), declaring him to be a sovereign—

"In whom all the graces are jointly combined,
Whom God as a pattern has set mankind!"

The citizens were insulted in their own hall when the king was 'pleased to appoint' Sir H.ulse the following year, and a 'new Irish song' was composed for the occasion, one verse running thus:

"Visions, seditions, and railing petitions,
The rabble believe are wondrous merry;
All can remember the fifth of November,
But no man the thirtieth of January.

Talking of treason, without any reason,
Hath lost the poor city its bountiful charter;
The Commons haranguing will bring them to hanging,
And each puppy hopes to be Knight of the Garter."

In 1687, James II. dined with the lord mayor, and introduced the pope's nuncio at the foreign ministers' table. The pageants for the day were got up, as the city poet declares, to express 'the many advantages with which his majesty has been pleased so graciously to indulge all his subjects, though of different persuasions.' The value of this author's flattery may be judged from the fact, that the song he composed in praise of James, was used in praise of William III. two years afterwards, when he and his queen honoured the civic feast.

In 1691, Elkanah Settle succeeded to the post of city-laureate, and contributed the yearly pageants until 1708, when the printed descriptions ceased. Settle once occupied an important position in the court of Charles II., and his wretched plays and poems were praised by Dryden from political than poetic motives. He occupies a prominent position in Pope's 
Dunciad, where the glories of the mayoralty shows are said to

'Live in Settle's numbers one day more.'

This last of the city bards ultimately wrote drolls for Bartholomew Fair, and in his old age was obliged to sell a livelihood, to rear in the body of a painted dragon, which he had invented for these shows. His works display 'a plentiful lack of wit'; but he had a sense of gorgeous display, that much pleased the populace. The pamphlet descriptive of his inventions for 1698 contains a spirited engraving (see the next page) of the Chariot of Justice, in which the goddess sits, accompanied by Charity, Concord, and other Virtues; the chariot being drawn by two unicorns, guided by Moors, sounding forth the fame of the honourable Company of Goldsmiths.' Settle generally contrived to compliment, however absurdly, the company to which the mayor belonged; and on one occasion, when a grocer was elected, introduced Diogenes in a currant-butt!

The last great show was in 1702. The mayor was then a member of the Vintners Company, and their patron, St Martin, appeared, and divided his cloak among the beggars, according to the ancient legend; an Indian galleon followed, which was rowed by bacchanales, and carried Bacchus on board; then came the Chariot of Ariadne; a Scene at a Tavern; and an 'Arbour of Delight,' with Satyrs carousing. It was a costly and stupid display. An entertainment was prepared for the following year, but the death of Prince George of Denmark, the husband of Queen Anne, frustrated it. The altered taste of the age, and the inutility of such displays, led to their abandonment; the land-rocession being restricted to a few occasional impersonations, a few men in armour, and some banner-bearers.

In 1706, the lord mayor's feast was held a few days before Christmas, and is thus described by a contemporary. 'The Duke of Marlborough sat on the right hand of the Lord Mayor, in the middle of an oval table, and the Lord High Treasurer on his left, and the rest of the great men according to their deserts and places. The Queen, Prince, Emperor, Duke of Savoy, and other princes allies' healths were drunk; and when the Lord Mayor offered to begin that of the Duke of Marlborough, his Grace rose up twice at table, and would not permit it till that of the Lord Mayor was drunk. His Grace and the rest of the great men, so soon as dinner was over (which was about eight o'clock), took coach and returned to court. The claret that was drunk cost 1s. 6d. a bottle, and the music 50 lbs.'

The mayor rode on horseback in the civic..."
procession until 1712, when a coach was provided for his use. In 1787, the gorgeous fabric which is still used on these occasions was constructed at a cost of £1065, 3s.; the panels were painted by Cipriani. Royally generally viewed the show from a balcony at the corner of Paternoster Row, as depicted in the concluding plate of Hogarth's 'Industry and Idleness,' which gives a vivid picture of this 'gaudy day' in the city. Afterwards Mr Barclay's house, opposite Bow Church, was chosen for the same purpose. Some few modern attempts have been made to resuscitate the old pageants. In 1837, two colossal figures of the Guildhall Giants walked in the procession. In 1841, a ship fully rigged and manned was drawn through the streets on wheels;

the sailors were personated by boys from the naval school at Greenwich. But the most ambitious, and the last of these attempts, was made in 1853, when Mr Fenton, the scenic artist of Sadler's Wells Theatre, and Mr Cooke of Astley's, under the superintendence of Mr Bunning, the city architect, reproduced the old allegorical cars, with modern improvements. First came a 'Chariot of Justice,' drawn by six horses; followed by standard-bearers of all nations on horseback; an Australian cart drawn by oxen, and containing a gold-digger employed in washing quartz; then came attendants carrying implements of industry; succeeded by an enormous car drawn by nine horses, upon which was placed a terrestrial globe, with a throne upon its summit, on which sat Peace and Prosperity, represented by two young ladies from Astley's. Good as was the intention and execution of this pageant, it was felt to be out of place in this modern age of utilitarianism; and this 'turning of Astley's into the streets,' will probably never be again attempted. Soon after this the city barges were sold, and the water-pageant abolished.

The yearly procession to Westminster is now aborn of all dignity or significance. The banquet in Guildhall is now the great feature of the day. The whole of the cabinet ministers are invited, and their speeches after dinner are expected to explain the policy of their government. The cost of this feast is estimated at £2000. Half of this sum is paid by the mayor, the other half is divided between the two sheriffs. The annual expense connected with the office of mayor is over £25,000. To meet this there is an income of about £5000; other sums accrue from fines and taxes; but it is expected, and is indeed necessary, that the mayor and sheriffs expend considerable sums from their own purses during their year of office; the mayor seldom parting with less than £10,000.

NOVEMBER 10.

Born.—Mahomet, or Mohammed, Arabian prophet, founder of Islamism, 570, Mecca; Martin Luther, German reformer, 1483, Eisleben, Saxony; Robert Devereux, Earl of Essex, favourite of Queen Elizabeth, 1567, Netherwood, Herefordshire; Oliver Goldsmith, poet and dramatist, 1728, Pallamore, Ireland; Granville Sharp, slavery abolitionist and miscellaneous writer, 1734, Durham; Friedrich Schiller, poet and dramatist, 1759, Marbach, Württemberg.
Ralph Allen: Fielding's 'Allworthy.'

For his public usefulness in improving the national means of epistolary correspondence, the name of Ralph Allen is entitled to rank with those of John Palmer and Sir Rowland Hill; yet we may in vain search for his name in the biographical dictionaries. But for the notice which Pope has taken of him in his verses, it almost appears as if we should have known nothing whatever of one of the noblest characters of any age or country.

To give the reader an idea of the services which Allen rendered to the postal institutions of the country, it will only be necessary to state that in the reign of Queen Anne (1710), all previous acts relating to the post-office were abrogated, and the entire service was placed under a warden, who was officially spoken of as 'the act of settlement.' Under this new statute, increased powers were given to the post-office authorities, and the entire service rapidly improved; while each year saw considerable sums added to the available revenue of the country. This progress, however, arose from improvements which had been effected on post-roads alone; and although the new act gave facilities for the establishment of 'cross-posts,' they were not attempted till the year 1720, when a private individual undertook to supply those parts of the country, not on the line of the great post-roads, with equal postal facilities. That individual was Mr Ralph Allen, who, at the time, filled the office of deputy-postmaster of Bath. Mr Allen, who, from his position, must have been well aware of the defects of the existing system, proposed to the government to establish cross-posts between Exeter and Chester, going by way of Bristol, Gloucester, and Worcester; connecting, in this way, the west of England with the Lancashire districts and the mail route to Ireland, and giving independent postal inter-communication to all the important towns lying in the direction to be taken. Previous to this proposal, letters passing between neighbouring towns were conveyed by strangely circuitous routes; for instance, letters from Cheltenham or Bath for Worcester or Birmingham, required to go first to the metropolis, and then to be sent back again by another post-road. This manner of procedure, in those days of slow locomotion, caused serious delays, and frequently great inconvenience. Mr Allen's proposition necessitated a complete reconstruction of the mail routes; but he proved to the Lords of the Treasury that this was a desideratum—that it would be productive to the revenue and beneficial to the country. By his representations, he succeeded in inducing the executive to grant him a lease for life of all the cross-posts that should be established. His engagements bound him to pay a fixed rental of £6000 a year, and to bear all the costs of the entire estate. In return, was assured under what he belonged to him. The enterprise was remunerative from the first. From time to time, the contract was renewed, always at the same rental; each time, however, the government required Allen to include other branches of road in his engagement (the new districts were never burdened to him for more than a few weeks), till at his death the cross-posts had extended to all parts of the country. Towards the last, this private project had become so gigantic as to be nearly unmanagable, and the time was anxiously awaited when it should become merged in the general establishment. Mr Allen died in 1764, when the post-office authorities absorbed his department, and managed it so as to quadruple the amount of proceeds in two years.

Mr Allen had reaped golden harvests. In an account which he left at his death, he estimated the net profits of his contract at £10,000 annually—a sum which, during his term of office, amounted, on his own shewing, to nearly half a million sterling! Whilst in official quarters his success was greatly envied, he commanded, in his private capacity, universal respect. In the only short account of this estimable man which we have seen, a contemporary writer states, that he 'was not more remarkable for the ingenuity and industry with which he made his fortune, than for his benevolence, charity, generosity, and kindness with which he spent it.' It is certain that he bestowed a considerable part of his income in works of charity, and in supporting needy men of letters. He was a great friend and benefactor of Fielding; and in Tom Jones, the novelist has gratefully drawn Mr Allen's character in the person of Allworthy. He enjoyed the friendship of Chatham; and Pope, Warburton, and other men of literary distinction, were his familiar companions. Pope has celebrated one of his principal virtues, unassuming benevolence, in the well-known lines:

'Let humble Allen, with an awkward shame,
Do good by stealth, and blush to find it fame.'

Mr Allen divided his time between the literary society of London and his native city of Bath, near which city stood his elegant villa of Prior Park. A codicil to his will, dated November 19, a short time before his death, contains the following bequest: 'For the last instance of my friendly and grateful regard for the best of friends, as well as for the most upright and ablest of ministers that has adorned our country, I give to the Right Honourable William Pitt the sum of one thousand pounds, to be disposed of by him to any of his children that he may be pleased to appoint.'

The Times Testimonial.

A remarkable instance was afforded, a few years ago, of the power of an English newspaper, and its appreciation by the commercial men of Europe. It is known to most readers at the present day, that the proprietors and editors of the daily papers make strenuous exertions to obtain the earliest possible information of events likely to interest the public, and take pride in insuring for this information all available accuracy and fulness; but it bequest: 'For the last instance of my this cost incurred by so doing. None but wealthy proprietors could venture so much, for an object, whose importance and interest may be limited to a single day's issue of the paper.
In 1841, Mr O'Reilly, the Times correspondent at Paris, received secret information of an enormous fraud that was said to be in course of perpetration on the continent. There were fourteen persons—English, French, and Italian—concerned, headed by a French baron, who possessed great talent, great knowledge of the continental world, and a most polished exterior. His plan was one by which European bankers would have been robbed of at least a million sterling: the conspirators having reaped about £100,000, when they were discovered. The grand coup was to have been this—to prepare a number of forged letters of credit, to present them simultaneously at the houses of all the chief bankers in Europe, and to divide the plunder at once. How Mr O'Reilly obtained his information, is one of the secrets of newspaper management; but as he knew that the chief conspirator was a man who would not scruple to send a pistol-shot into any one who frustrated him, he wisely determined to date his letter to the Times from Brussels instead of Paris, to give a false scent. This precaution, it is believed, saved his life. The letter appeared in the Times on 26th May. It produced a profound sensation, for it revealed to the commercial world a conspiracy of startling magnitude. One of the parties implicated, a partner in an English house at Florence, applied to the Times for the name of its informant; but the proprietors resolved to bear all the consequences. Hence the famous action, Bogle v. Lawson, brought against the printer of the Times for libel, the proprietors, of course, being the parties who bore the brunt of the matter. As the article appeared on 26th May, and as the trial did not come on till 16th August, there was ample time to collect evidence. The Times made immense exertions, and spent a large sum of money, in unravelling the conspiracy through the verdict was virtually an acquittal, but under such circumstances that each party had to pay his own costs. The signal service thus rendered to the commercial world, the undaunted manner in which the Times had carried through the whole matter from beginning to end, and the liberal way in which many thousands of pounds had been spent in so doing, attracted much public attention. A meeting was called, and a subscription commenced, to defray the cost of the trial, as a testimonial to the proprietors. This money was nobly declined in a few dignified and grateful words; and then the committee determined to perpetuate the memory of the transaction in another way. They had in their hands £3700, which had been subscribed by 38 public companies, 64 members of the city corporation, 58 London bankers, 120 London merchants and manufacturers, 116 county bankers and merchants, and 21 foreign bankers and merchants. In November, the committee made public their mode of appropriating this sum: namely, £1000 for a ‘Times Scholarship’ at Oxford, for boys in Christ’s Hospital; £1000 for a similar scholarship at Cambridge, for boys of the city of London School; and the remainder of the money for four tablets, to bear suitable inscriptions to be put up at the Royal Exchange, on the roof of Christ’s Hospital, one at the City of London School, and one at the Times printing-office.

St Martin, the son of a Roman military tribune, was born at Sabaria, in Hungary, about 316. From his earliest infancy, he was remarkable for mildness of disposition; yet he was obliged to become a soldier, a profession most uncongenial to his natural character. After several years’ service, he retired into solitude, from whence he was withdrawn, by being elected bishop of Tours, in the year 374. The zeal and piety he displayed in this office were most exemplary. He converted the whole of his diocese to Christianity, overthrowing the ancient pagan temples, and erecting churches in their stead. From the great success of his pious endeavours, Martin has been styled the Apostle of the Gauls; and, being the first confessor to whom the Latin Church offered public prayers, he is distinguished as the father of that church. In reverence of his original profession, he is also frequently denominated the Soldier Saint.

The principal legend, connected with St Martin, forms the subject of our illustration, which represents the saint, when a soldier, dividing his cloak with a poor naked beggar, whom he found perishing with cold at the gate of Amiens. This cloak, being most miraculously preserved, long...
formed one of the holiest and most valued relics of France; when war was declared, it was carried before the French monarchs, as a sacred banner, and never failed to assure a certain victory. The oratory in which this cloak or cape—French, chaps—was preserved, acquired, in consequence, the name of chapelle, the person intrusted with its care being termed chaplain; and thus, according to Collin de Plancy, our English words chapel and chaplain are derived. The canons of St Martin of Tours and St Gratian had a lawsuit, for sixty years, about a sleeve of this cloak, each claiming it as their property. The Count Larchefoulx, at last, put an end to the proceedings, by sacrili- ciously committing the contested relic to the flames.

Another legend of St Martin is connected with one of those literary curiosities termed a palindrome. Martin, having occasion to visit Rome, set out to perform the journey thither on foot. Satan, meeting him on the way, took the holy man for not being a conveyance more suitable to a bishop. In an instant the saint changed the Old Serpent into a mule, and jumping on its back, trotted comfortably along. Whenever the transformed demon slackened pace, Martin, by making the sign of the cross, urged it to full speed. At last, Satan utterly defeated, exclaimed:

'Signa to Signa; temere me tangis et angis; Roma subi subito motibus ibit amor.'

In English—Cross, cross thyself; thou plaguest and vexest me without necessity; for, owing to my exertions, thou wilt soon reach Rome, the object of thy wishes. The singularity of this distich consists in its being palindromical—that is, the same, whether read backwards or forwards.

Angis, the last word of the first line, when read backwards, forming signa, and the other words admitting of being reversed, in a similar manner.

The festival of St Martin, happening at that season when the new wines of the year are drawn from the lees and tasted, when cattle are killed for winter food, and fat geese are in their prime, is held as a feast-day over most parts of Christendom. On the same day, in English almanacs, the day is marked by the figure of a goose; our bird of Michaelmas being, on the continent, sacrificed at Martinmas. In Scotland and the north of England, a fat ox is called a mar, clearly from Martinmas, the usual time when beves are killed for winter use. In Tusser's Husbandry, we read:

'When Easter comes, who knows not then, That veal and bacon is the man? And Martinmas beef doth bear good tack, When country folk do dainties lack.'

Barnaby Googe's translation of Neogorgia shows us how Martinmas was kept in Germany, towards the latter part of the fifteenth century—

'To belly clear, yet once again, Doth Martin more inlane, Whom all the people worshipeth With roasted geese and wine. Both all the day long, and the night, Now each man open makes His vessels all, and of the must,* Off times, the last he takes,

* New wine not fully fermented.
Brookes, a cripple, of uncouth mien, eccentric manners, and great violence of temper, peculiarities which gained him the sobriquet of 'Pontius Pilate.' Many stories are told of his rude manners and impetuous disposition. He removed to Manchester while Joshua was yet a child, and, in his later years, occupied a house in a passage in Long Millgate, opposite the house of Mr Lawson, then high-master of the Manchester Grammar School. At that school Joshua received his education, and being a boy of quick parts, was much noticed by the Rev. Thomas Aynscoth, one of the Fellows of the Collegiate Church, by whose assistance, and that of some of the wealthier residents of Manchester, his father was enabled to send him to Oxford, where he was entered at Brasenose College.

The father went round personally to the houses of various rich inhabitants, to solicit pecuniary aid to send his son to college. Joshua took his degree of M.A. in 1771. In 1789, he was nominated by the warden and fellows of Manchester to the perpetual curacy of the chapelery of Chariton-cum-Hardy, which he resigned in December, 1790, on being appointed to a chaplaincy in the Manchester Collegiate Church, which he held till his death. During his chaplaincy of thirty-one years, he is said to have had no married, and but few more persons than any other clergyman in the kingdom. He inherited much of his father's mental constitution, especially his rough manners and extreme irascibility; but the influence of education and a sense of what his position demanded, tended somewhat to temper his eccentricities. It is curious to mark the reflection of the illiterate father's temperament and disposition in the educated son. The father was fond of angling, and having once obtained permission to fish in the pond of Strangeway's Hall, he had an empty hoghead placed in the field, near the brink of the pond, and in this cask—a sort of vulgar Diogenes in his tub—he frequently spent whole nights in his favourite pursuit. In his later years, while sitting at his door, as was his custom, his strange appearance and unassuming dress, and especially his white haired head, attracted the notice of a market-woman, who, in passing, made some rude remark. Eager for revenge, and yet unable to follow her by reason of his lameness, old Brookes despatched his servant for a sedan-chair, wherein he was conveyed to the market-place; and, having singled out the object of his indignation, he belaboured her with his crutch with such fury, that she had to be rescued by a constable. He was of interminable habits and extreme coarseness in speech, and was always getting involved in disputes and scraps. Joshua, to his honour, always treated the old man with respect and forbearance; and, after getting the chaplainy, he maintained his father for many years till the latter's death. Such was the father. A few traits of the son will complete this strange picture of a pair of Manchester originals in the last century. Young Brookes was at one time an assistant-master at the Grammar School, where he made himself very unpopular with the boys, especially the senior classes, being constantly involved in warfare with them, both in person and in literary. Sometimes he would singly defy the whole school, and be forcibly ejected from the school room, fighting his way against his numerous assailants, and hurling reproaches at them as 'blockheads.' On one occasion, the arrival of the head-master alone saved him from being pitched over the school-yard parapet-wall, into the river Irk, many feet below. The upper-scholars not only ridiculed him in lampoons, but fathered verses upon him, as that celebrated wit, Bishop Mansel, did upon old Viner. He was sadly vexed by a mischievous rascal writing on his door: 'Odi profanum Bruna' [the Lancashire pronunciation of his name] 'et arceo.' Nor was he less annoyed by a satirical effusion occasioned by his inviting a visitor to dine with him, and entertaining him only with a black-pudding. The lampoon in question commenced with—

'O Jotty, you dog!  
Your house, we well know,  
Is head-quarters of prog!'

'Jotty Bruna,' as he was usually called, may be regarded as a perpetual cracker, always ready to go off when touched or jostled in the slightest degree. He was no respecter of persons, but warred equally and indifferently with the passing chimney-sweep, the huxter, the mother who came too late to be churched, and with his superiors, the warden and fellows. He was not above breaking up a dinner, even at the table, and studiously outdid them. By an occasional occasion, for some trivial misbehaviour, expelled him from the chapter-house, until he should make an apology. This he sturdily refused to do; but would put on his surplice in an adjoining chapel, and then, standing close outside the chapter-house door, in the south aisle of the choir, would exclaim to those who were passing on to attend divine service: 'They won't let me in. They say I can't behave myself.' At another time, he was seen, in the middle of the service, to box the ears of a chorister-boy, for coming late. Sometimes, while officiating, he would leave the choir during the musical portion of the service, go down to the side-aisles, and chat with any younger till the time came for his clerical functions being required in person. Once, when surprise was expressed at his unexampled negligence, 'Oh! they frequently come out while they're singing Ta Daum.' Talking in this strain to a very aged gentleman, and often making use of the expression, 'We old men,' Mr Johnson (in the dialect then almost universal in Manchester) turned upon him with the question: 'Why, how owd art ta? 'I'm sixty-foive,' says Jotty. 'Sixty-foive! I rejoined his agéd interlocutor; 'why t's as lad; here's a penny for thee. Goo, buy thysell! a penny-poss [pia]. So Jotty returned to the reading-desk, to read the morning-lesson, a penny richer. A child was once brought to him to be christened, whose parents desired to give it the name of Bonaparte. This designation he not only refused to bestow, but entered his refusal to do so in the register of baptisms. In the matter of marriages his conduct was peremptory and arbitrary. He so frightened a young wife, a parishioner of his, who had been married at Eccles, by telling her of consequent danger to the rights of her children, that, to make all right and sure, she was re-married by Joshua himself at the Collegiate Church. Once, when marrying a number of couples, it was found, on joining hands, that there was one woman without any bridegroom. In this dilemma, instead of declining to marry this luckless bride, Joshua
required one of the men present to act as bridegroom both to her and his own partner. The lady interested, objecting to so summary a mode of getting over the difficulty, Joshua replied: ‘I can’t stand talking to thee; prayers’ [that is, the daily morning-service] ‘will be in directly, thou must go and find him after.’ After the ceremony, the defaulter was found drunk in the ‘Ring of Bells’ public-house, adjoining the church. The church-yard was guarded by an old constable with a sharp-ridged coping, to walk along which required nice balancing of the body, and was one of the favourite ‘cradles’ [feats] of the neighbouring boys. The practice greatly annoyed Joshua; and one day, whilst reading the burial-service at the grave-side, his eye caught a chimney-sweep walking on the wall. This caused the eccentric chaplain, by abruptly giving an order to the beadle, to make the following interpolation in the solemn words of the funeral-service: ‘And I heard a voice from heaven, saying’——— ‘Knock that black rascal off the wall!’ This contretemps was the subject of a caricature by a well-known character of the day, ‘Jack Betty;’ who, on a prosecution for libel being instituted, left Manchester. After a long absence he returned, and on his entertaining Joshua to dinner, he was readily forgiven. Another freak of this queer parson was to leave a funeral in which he was officiating, cross the churchyard to the adjacent Half Street, and enter a confectioner's shop, kept by a widow, named Cloves, where he demanded a supply of horsemouth-lozenges for his throat. Having obtained these, which were never refused, though he never paid for them, he would composedly return to the grave, and resume the interrupted service. In his verbal encounters, he sometimes met with his match. One day, ‘Jimmy Watson,’ better known by his sobriquet of ‘Doctor,’ having provoked Joshua by a pun at his expense, the chaplain exclaimed: ‘Thou’rt a blackguard, Jimmy!’ The Doctor retorted: ‘If I be not a blackguard, Josse, I’m next to one.’ On another occasion, he said to Watson: ‘This churchyard, the cemetery of the Collegiate Church, must be enclosed; and we shall want a lot of railing.’ The Doctor archly replied: ‘That can’t be, Josse; there’s railing enough in the church daily.’ In his last illness, the parish-clerk came to see him. Joshua had lost the sight of one eye, and the clerk venturing to say that he thought the other eye was also gone, the dying man (who had remained silent and motionless for hours), with a flash of the old fire, shouted twice: ‘Thou’rt a liar, Bob!’ A few days afterwards, both eyes were closed in death. He died unmarried, in the sixty-eighth year of his age, and was buried at the south-west end and corner of the Collegiate Church. Poor Joshua! a very ‘Ishmael’ all his life, he found rest and peace at last. A man of many foibles and failings, he was free from the grosser vices, and in all the private relations of life he was exemplary.

THE DAY OF DUEPS:

TRIUMPH OF CARDINAL RICHELIEU.

This whimsical title has been given to the 11th of November 1630, on the occasion of the triumph of Cardinal Richelieu over his enemies, who imagined that they had succeeded in casting him to the ground, never again to rise. The intriguing and ambitious Marie de’ Medici had prevailed on her son, the fickle and weak-minded Louis XIII., to dismiss Richelieu from the office of prime-minister, and raise to that dignity the latter’s mortal enemy, the Marshal de Marillac. The wily priest appears to have been fairly rendered prostrate, and unable to avert the ruin which seemed ready to fall on him, when he was persuaded by his friends to return to Paris, with a view of being of use to the favourite of the king. With this view he proceeded to Versailles, then only a small hunting-lodge, which Louis XIII. had recently purchased, and had an interview with his sovereign. The result of this memorable visit was that Louis surrendered himself again into the cardinal’s hands, with a feebleness similar to what he had previously shown in dismissing him from his presence. But Richelieu, by this coup de main, succeeded in riveting the chains on Louis more firmly than they had been before, and established for himself an absolute sway, which he retained till his death. As may be expected, he did not fail to confirm his power by taking signal vengeance on his enemies, and among others, on the Marshal de Marillac, whom he caused ere long to be brought to the scaffold.

BURNING OF THE ‘SARAH SANDS.’

One of the finest examples on record, of the saving of human life by the maintenance of high discipline, during trying difficulties, was afforded during the burning of the Sarah Sands, a transport steamer employed by the government in 1857. She was on her passage from England to India, with a great part of the 54th Regiment of Foot on board, intended to assist in the suppression of the Indian mutiny; the number of persons was about 400, besides the ship’s crew. The vessel, an iron steamer of 2000 tons burden, arrived at a spot about 400 miles from Mauritius; when, at three in the afternoon on the 11th of November, the cargo in the hold was set on fire by the order of the Captain Castle, commanding the ship, and Lieutenant-Colonel Moffatt, commanding the troops, at once concerted plans for maintaining discipline under this terrible trial. Some of the men hauled up bales after bale of government stores from the hold; some took in sail, and brought the ship before the wind; some ran out lengths of hose from the fire-engine, and poured down torrents of water below. It soon became evident, however, that this water would not quench the flames, and that the smoke in the hold would prevent the men from longer continuing below. The colonel then ordered his men to throw overboard all the ammunition in the starboard magazine. But the larboard or port magazine was so surrounded with heat and smoke, that he hesitated to command the men to risk their lives there; and he therefore called for volunteers. A number of brave fellows at once stepped forward, rushed to the magazine, and cleared out all its contents, except a barrel or two of powder; several of them, overpowered with heat and smoke, fell by the way, and were hauled up senseless. The fire burst up through the decks and cabins, and was intensified by a fierce gale which happened to be blowing at the time. Oars and boats were thrown into the sea; the men rushed to lower the boats, and to provide for so many as he could. This was admirably done. The boats
were launched without accident, the troops were mustered on deck, there was no rush to the boats, and the men obeyed the word of command with as much order as if on parade—the greater number of them embarking in the boats. A small number of women and children who were on board, were lowered into the life-boat. All these filled boats were ordered to remain within reach of the ship till further orders. The sailors then set about constructing a mass of spare parts, to be ready in case of emergency. Meanwhile the flames had made terrible progress; the whole of the cabins and saloons were one body of fire; and at nine in the evening the flames burst through the upper deck and ignited the mizzen rigging. During this fearful suspense, the barrel or two of powder left in one of the magazines exploded, and blew out the port-quarter of the ship—shewing what would have been the awful result had not the heroic men previously removed the greater part of the ammunition. As the iron bulk-head of the after-part of the vessel continued to resist the flames, Captain Castle resolved to avail himself of this serviceable aid as long as possible; to which end the men were employed for hours in dashing water against the bulk-head, to keep it cool. When fire seised the mizzen-mast and main-mast as sailors rushed up with wet blankets, and alloyed its fearful progress. This struggle between human perseverance and devastating flames continued until two o'clock in the morning, when, to the inexpressible delight of all, the fire was found to be lessening; and by daylight it was extinguished. The horrors of the situation were, however, not yet over. The after-part of the ship was a mere hollow burned shell; and as the gale still continued, the waves poured in tremendously. Some of the men were set to the pumps, some baled out water from the flooded hold with buckets; while others sought to prevent the stern of the ship from falling out by passing hawser round and under it, and others tried to stop the leak in the port-quarter with spare sails and sail canvas. The water-tanks in the hold, having got loose, were dashed from side to side by the violence of the gale, and battered the poor ship still further. At two in the afternoon (twenty-three hours after the fire had been discovered), the life-boat was hauled alongside, and the women and children taken on board again. All the other boats, except the gig, were in like manner brought alongside, and the soldiers re-embarked; the gig had been swamped, but all the men in her were saved. During thirty-six hours more, nearly all the soldiers were assisting the sailors in working the pumps, and clearing the ship of water; while the captain succeeded at length in getting the ill-fated ship into such trim as to be manageable. He then steered towards the Mauritius, which he reached in eight days. The achievement was almost unparalleled, for the vessel was little else than a burned and battered wreck. Not a single person was lost; the iron bulk-head was the main material source of safety; but this would have been of little avail had not discipline and intrepidity been shewn by those on board.

The sense of the 'honour of the flag' came out strikingly during the peril. When the ship was all in flames, it would seem as though the colours of the 5th were in the aft-part of the saloon. Quartermaster Richmond rushed down, snatched the Queen's colours, brought them on deck, and fainted with the heat and smoke; when recovered, he made another descent, accompanied by Private Wills, brought up the regimental colours, and again fainted, with a result which proved nearly fatal.

CUSTOM OF KNIGHTLOW CROSS.

To the philosophical student of history, and all who feel an interest in the progressive prosperity of our country, and the often slow and painful steps by which that prosperity has been reached, any custom, however insignificant in itself, which tends to throw light upon the doings of our ancestors, is of great interest.

But in our search after such landmarks, as it were, of our country's history, we are too apt to overlook what is most patent to us all, and so it is that a custom which, in all probability, obtained in the days of our Saxon forefathers, long before William of Normandy set foot upon our land, is at the present day carried on close to us, unheeded and unknown to the majority of our readers. The custom to which we refer is the payment to the Lord of the Hundred of Knightlow of Wroth or Wart money as sailors protection, and probably also in lieu of military service.

The scene of these payments is Knightlow Cross, Streton-on-Dunamore, near Rugby, Warwickshire. Here, at the northern extremity of the village, in a field by what used to be the Great Grovehad Road, stands a stone, the remains of Knightlow Cross. The stone now to be seen is the mortice-stone of the ancient cross, and is similar to the stones still in existence at St Thomas's Cross, between Clifton-upon-Dunamore and Newton. The stone stands on a knoll or tumulus, having a fir-tree at either corner, and from it a fine view of the surrounding country is obtained; the spires of the ancient city of Coventry being plainly visible in the distance.

It is a singular circumstance, that the field in which it stands is a field held by a Mr Robinson of Streton, but the mound upon which the stone stands belongs to the Lord of the Hundred, his Grace the Duke of Buccleuch and Queensberry. The mound is an ancient British tumulus, one of a chain (still or very lately) to be traced from High Cross—the ancient Roman station Benonis—southward down the Fosse Road. The intermediate links are at Wulpston Brinklow, near Wittingbrook and Clondeasy Bush, but the latter, we regret to say, has been removed.

Monday morning, the 11th of November 1869, was the day for the payment of this Wroth Silver, as it is called, and a drive in the gray light of a November morning, took us to the spot half an hour before sunrise, but not before groups of villagers and others had begun to collect to witness or take part in this curious old custom. The land-agent of the lord of the hundred arrived soon after, and proceeded at once to read the notice requiring the payment to be made, proclaiming that in default of payment, the forfeit would be 'twenty shillings for every penny, and a white bull with red ears and a red nose.' The names of the parishes and persons liable were then read out, and the various amounts were collected in a neat little cavity in the stone, and taken from thence by the attendant bailiff. After the ceremony, the
actors in the scene—that is, those persons, numbering about forty, who paid the money into the stone—proceeded to the Frog Hall, where a substantial breakfast was provided for them at the expense of the Duke of Buckingham. There is a tradition in the neighbourhood of the forfeiture of a white bull having been demanded and actually made. Of this, however, there is no record, and it is certain that, of late years, the pecuniary part of the forfeit only has been insisted upon.

Respecting this custom, Dugdale, in his history of Warwickshire, gives the following account:—

'There is also a certain rent due unto the Lord of this Hundred, called Wroth-money, or Worthing-money, or Stowff-penny, probably the same with Ward-penny. Denarii vicecomiti vel alias castellaneis porsoluti ob castrorum presidium vel ecubusias agendas,' says Sir H. Spelman in his Glossary, (fol. 568—569). This rent must be paid every Martinmas-day, in the morning, at Knightlow Cross, before the sun riseth; the person paying it must go thrice about the cross, and say "The Wrath Money," and then lay it in the hole of the said cross before good witness, for if it be not duly performed, the forfeiture is 30s. and a white bull.'

Altogether, this custom forms a singular and interesting instance of a usage or rite surviving for centuries amidst revolutions, and civil wars, and changes of rulers and circumstances. Though its real origin has been lost, it still remains as a relic of feudal government, and may possibly be handed down to generations yet to come, as a memorial of a state of chronic warfare and depredation.

The Order of Fools.

On 12th November 1381, the above association is said to have been founded by Adolphus, Count of Cleves, under the title of 'D'Order can't Gesslichap.' Though bearing a designation savouring so strongly of absurdity and contempt, the members of which this order was composed were noblemen and gentlemen of the highest rank and renown, who thus formed themselves into a body for humane and charitable purposes. We should be doing these gallant knights a grievous injustice were we to connect them with the Feast of Fools, and similar absurdities of medieval times. They were, in fact, not greatly dissimilar to the 'Odd Fellows,' 'Foresters,' and similar associations of the present day, which include within their sphere of operations benevolent and useful as much as convivial and social objects.

The insignia borne by the knights of this order consisted of the figure of a fool or jester, embroidered on the left side of their mantles, and depicted dressed in a red and silver vest, with a cap and bells on his head, yellow stockings, a cup filled with fruits in his right hand, and in his left a gold key, as symbolic of the affection which ought to subsist between the members of the society.

A yearly meeting of the brotherhood of Fools took place at Cleves on the first Sunday after Michaelmas-day, when a grand court was held, extending over seven days, and all matters relating to the welfare and future conduct of the order were revolved and discussed. Each member had some special character assigned to him, which he was obliged to support, and the most cordial equality everywhere prevailed, all distinctions of rank being laid aside.

The Order of Fools appears to have existed down to the beginning of the sixteenth century, but the objects for which it was originally founded seem, as in the case of the Knights Templars, to have gradually been lost sight of, and ultimately became almost wholly forgotten. The latest allusion to it occurs in a German translation of Sebastian Brand's celebrated Navis Stultifera, or Ship of Fools, published at Strasburg in 1520.

Akin to the Order of Fools was the 'Respublica Binepis,' which was founded by some Polish noblemen about the middle of the fourteenth century, and derived its name from the estate of its principal originator. Its constitution was modelled after that of Poland, and, like that kingdom, it too had its sovereign, its council, its chamberlain, its master of the chase, and various other offices. Any member who made himself conspicuous by some absurd or singular propensity, received a recognition of this quality from his fellows by having assigned to him a corresponding appointment in the society. Thus the dignity of master of the hunt was conferred on some ill-fated hero who carried to an absurd extreme his passion for the chase, whilst another person given to gasconading and boasting of his valorous exploits, was elevated to the post of field-marshal. No member could decline acceptance of any of these functions, unless he wished to make himself an object of still greater ridicule and anathemisation. At the same time, all persons given to lampooning or personal satire were excluded from admission to the association. The order rapidly increased in numbers from the period of its formation, and at one time comprised nearly all the individuals attached to the Polish court. Like the German association, its objects were the promotion of charity and good-feeling, and the repression of immoral and absurd habits and practices.

PLAyroop-HOURS IN THE OLDEN TIME.

By a police regulation of the city of Paris, dated 19th November 1609, it is ordered that the players at the theatres of the Hôtel de Bourgogne and the Marais shall open their doors at one o'clock in the
afternoon, and at two o'clock precisely shall commence the performance, whether there are sufficient spectators or not, so that the play may be over before half-past four. This ordinance, it was enacted, should be in force from the Feast of St Martin to the 16th of the ensuing month of February. Such hours for visiting the playhouse seem peculiarly strange at the present day, when the doors of theatres are seldom opened before half-past six in the evening, or shut before midnight. But our ancestors both closed and opened the day much earlier than we do now, and observed much more punctually the old recipe for health and strength, 'to rise with the lark and lie down with the lamb.' The same early hours for theatrical representations that seem thus to have prevailed in Paris were, during the seventeenth century, no less common in England, where, as we learn from the first playbill issued from the Drury Lane Theatre in 1663, the hour for the commencement of the representation was three o'clock in the afternoon. The badness of the streets, and the danger of traversing them in dark nights from the defective mode of lighting, combined with the absence of an efficient police and the dangers from robbery and violence, all had their influence in rendering it very undesirable to protract public amusements beyond nightfall in those times.

ANCIENT FORKS.

From a passage in that curious work, Coryate's Crudities, it has been imagined that its author, the strange traveller of that name, was the first to introduce the use of the fork into England, in the beginning of the seventeenth century. He says that he observed its use in Italy only 'because the Italian cannot by any means endure to have his dish touched with fingers, seeing all men's fingers are not alike clean.' These 'little forks' were usually made of iron or steel, but occasionally also of silver. Coryate says he 'thought good to imitate the Italian fashion by this forked cutting of meat,' and that hence a humorous English friend, 'in his merry humour, doubted not to call me furcefer, only for using a fork at feeding.' This passage is often quoted as fixing the earliest date of the use of forks; but they were, in reality, used by our Anglo-Saxon forefathers, and throughout the middle ages. In 1334, some labourers found, when cutting a deep drain at Sevington, North Wilts, a deposit of seventy Saxon pennis, of sovereigns ranging from Conwulf, king of Mercia (796 A.D.), to Æthelstan (878–890 A.D.); they had been packed in a box of which there were some decayed remains, and which also held some articles of personal ornament, a spoon, and the fork, which is first in the group here engraved. The fabric and ornamentation of this fork and spoon would, to the practised eye, be quite sufficient evidence of the approximate era of their manufacture, but their juxtaposition with the coins confirms it. In Akerman's Pagan Saxondom, another example of a fork, from a Saxon tumulus, is given: it has a bone-handle, like those still manufactured for common use. It must not, however, be imagined that they were frequently used; indeed, throughout the middle ages, they seemed to have been kept as articles of luxury, to be used only by the great and noble in eating fruits and preserves on state occasions. A German fork, believed to be a work of the close of the sixteenth century, is the second of our examples. It is surmounted by the figure of a fool or jester, who holds a saw. This figure is jointed like a child's doll, and tumbles about as the fork is used, while the saw alights upside down the handle. It proves that the fork was treated merely as a luxurious toy. Indeed, as late as 1682, Heylin, in his Cosmography, treats them as a rarity: 'the use of silver forks, which is by some of our spruce gallants taken up of late,' are the words he uses. A fork of this period is the third of our selected examples; it is entirely of silver, the handle elaborately engraved with subjects from the New Testament. It is one of a series so decorated, the whole of our engraved examples being at present in the collection of Lord Londo-}

**NOVEMBER 13.**

THE STAMFORD BULL-RUNNING.

From time immemorial down to a late period, the 13th of November was annually celebrated, at the town of Stamford, in Lincolnshire, by a public amusement termed a Bull-running. The sport was latterly conducted in the following manner: About a quarter to eleven o'clock, on the feast-day, the bell of St Mary's commenced to toll as a warning for the thrusters to be cleared of infirm persons and children; and precisely at eleven, the bull was let out into a street, blocked up at each corner by a barricade of carts and wagons. At this moment, every post, pump, and 'coigne of vantage' was occupied, and those happy enough to have such protections, could grin at their less fortunate friends, who were compelled to have recourse to flight; the barricades, windows, and house-tops being crowded with spectators. The bull, irritated by hats being thrown at him, and other means of annoyance, soon became ready to run; and then, the barricades being removed, the whole crowd, bull, men, boys, and dogs, rushed helter-skelter through the streets. One great object being to 'bridge the bull,' the animal was, if possible, compelled to run upon the bridge that spans the Welland. The crowd then closing in, with audacious courage surrounded and seized the animal; and, in spite of its size and strength, by main force tumbled it over the parapet into the river. The bull then swimming ashore, would land in the meadows, where the run was continued; the miry, marshy state of the fields at that season of the year, and the falls and other disasters consequent thereon, adding greatly to the amusement of the mob. The sport was carried on till all were tired; the animal was then killed, and its flesh sold at a low rate to the people, who finished the day's amusement with a supper of bull-beef.

A local historian thus informs us how the sport was conducted in the seventeenth century. 'The butchers provide the bull, and place him over-night in a stable belonging to the alderman; the next morning, proclamation is made by the alderman that each one shall put up his shop-door and gate, and none, under pain of imprisonment, do any violence to strangers; for the preventing whereof (the town being a great thoroughfare), a guard is appointed for the passing of travellers through the same without hurt. None to have any iron upon their bull-club, or other staves, which they pursue the bull with; which proclamation being made, and the gates all shut up, the bull is turned out of the alderman's house, and then hirvive-aktivy, tag-rag, men, women, and children of all sorts and sizes, with all the dogs in the town, running after him, spattering dirt in each other's faces, that one would think them to be so many furies started out of the infernal regions for the punishment of Cerberus, as when Theseus and Perillus conquered the place, as Ovid describes it:"

'A ragged troop of boys and girls
Do follow him with stones,
With clubs, with whips, and many nips,
They tear his skin from bones.'

According to tradition, the origin of the custom dates from the time of King John; when, on one day, William, Earl of Warren, standing on the battlements of the castle, saw two bulls fighting in the meadow beneath. Some butchers coming to part the combatants, one of the bulls ran into the town, causing a great uproar. The earl, mounting his horse, rode after the animal, and enjoyed the sport so much, that he gave the meadow, in which the fight began, to the butchers of Stamford, on condition that they should provide a bull, to be run in that town annually, on the 13th of November, for ever after. There is no documentary evidence on the subject, but the town of Stamford undoubtedly holds certain common rights in the meadow specified, which is still termed the Bull-meadow.

Bull-running was, for a long period, a recognised institution at Stamford. A mayor of the town, who died in 1786, left a sum of money to encourage the practice; and, as appears by the vestry accounts, the churchwardens annually gave money to aid the bull-running. In 1788, the first attempt was made by the local authorities to stop the custom, the mayor issuing a curious proclamation, stating that bull-running was contrary to religion, law, and nature, and punishable with the penalty of death. The Earl of Exeter, who lived

'At Burleigh House, by Stamford town,' lent his personal influence to the mayor on this occasion; but the bull was run, and both the earl and mayor were insulted by the mob. In 1789, the mayor having obtained the aid of a troop of dragoons, met the bull at St George's Gate, as it was being driven into the town by the bull-woman—a virago dressed in blue ribbons, who officiated on these occasions, and followed by the ballards, a name given to the admirers and supporters of bull-running. On the mayor appealing to the officer of dragoons to stop the procession, the latter refused to interfere, alleging that the people were peaceably walking on the highway. 'In that case,' replied the mayor, 'your men are of no use here.' 'Very well,' said the officer, 'I shall dismiss them.' The dismissed dragoons, to their great glee, joined the ballards, and the bull was run as usual. For a long time afterwards, the ballards received no opposition. The towns-people, delighted with the sport, subscribed for a second annual bull-running, which took place on the Monday after Christmas Day; and there were several occasional bull-runnings every year, the candidates for representing Stamford in parliament being always found willing to give a bull for the purpose.

In 1831, the Conservative party canvassed the borough under a flag bearing the representation of a bull. Several clergy and others demonstrated against this mode of obtaining popular support, distinctly declaring they would not vote, if the
obnoxious banner were not laid aside. But many persons of station, and well-known humanity, defended the practice of bull-running, alleging that it was an old-fashioned, manly, English sport; inspiring courage, agility, and presence of mind under danger; and, as regards inhumanity, it was not by any means so cruel to the brute creation, nor so perilous to the life and limb of man, as fox-hunting.

In 1836, the Society for Prevention of Cruelty to Animals made its first public appearance as an opponent of the practice. One of its officers was sent to Stamford on bull-running day, and, being more bold than prudent, was roughly hustled by the crowd. This interference of the society, however well-meant, had a very different effect to that desired; instead of discouraging the practice, the people of Stamford were thereby stimulated to support it. 'Who or what is this London Society,' they asked, 'that, usurping the place of constituted authorities, presumes to interfere with our ancient amusement?'

In 1836, the society sent several of its officers and agents to Stamford. The 13th falling that year on Sunday, the bull was run on the following day; in the evening, the populace respected the interdicts of the society, by assaulting them, and breaking some windows. At the following Lent Assizes for Lincolnshire, the society preferred bills of indictment before the Grand Jury, against eight persons, for 'conspiring to disturb the peace by riotously assembling to run and torment a bull' at Stamford, on the 14th of November previous. True bills being found against the men, bench-warrants were obtained, and they were arrested to take their trials at the ensuing midsummer assizes. As is well known, this mode of proceeding behind a man's back, as it were, which deprives the accused of the fair advantage allowed by law, in giving him a copy of the depositions of the witnesses against him, is looked upon with deserved disfavour by both the judges and people of England. Moreover, the conduct of the society in pursuing the expensive machinery of the grand assizes of law in operation against poor labouring men, for a trumpery street squabble, created a strong feeling in Stamford and its neighbourhood.

A subscription was immediately opened, to raise a defence-fund for the prisoners, many subscribing who utterly detested bull-running, but considered the society's proceedings to be over-officious, unjust, and arbitrary. The manager of Stamford theatre, to his immense popularity, gave a benefit in aid of the defence-fund, the piece selected being Colman's comedy of John Bull; and altogether, a considerable sum was collected. At the trial, Sergeant Goulborne, and the leading barristers on the circuit, were retained for the prosecution. The council for the defence could not deny the riot, but pleaded use and custom, and the ignorance of the prisoners, who believed that valuable common rights were preserved to the town by the act of bull-running. Judge Park, when summing up, told the jury that no use or custom could justify a riot. Five of the prisoners were acquitted, three only being found guilty; these last were discharged on giving bail to appear to receive judgment, at the Court of Queen's Bench, when called upon.

The bullards, according the result of the trial as a victory, determined to have a grand run in 1837. Influence, however, had been brought to bear on the Home Secretary, who wrote to the mayor of Stamford, impressing upon him the necessity of taking active measures to prevent a proceeding so illegal and disgraceful as bull-running. The mayor, accordingly, swore in more than two hundred special constables to his assistance; but their opposition being lukewarm, the bull was run with greater 'splat' than ever. In 1838, the Home Secretary determined to put down the custom. Several days before the 13th, a troop of the 14th Dragoons, and a strong force of metropolitan police, were sent to Stamford, and a considerable body of special constables were sworn in. The commanders of the military and police, having viewed the field of action, consulted with the mayor. As prevention was better than cure, and there could be no bull-run without a bull, measures were taken accordingly. The town was strictly searched, and two bulls being found, the animals were taken and confined in an inn-yard, under a picket of dragoons. Sentries were then placed on all the outlets of the town, and parties patrolled the roads night and day, to prevent a bull from being brought in. The eventful 13th arrived, and though the streets were crowded with bullards, the authorities were perfectly master of the scene. The complacency of St. Mary's till the time-honoured bull-warning. But at the last stroke of the bell, their fancied security was rudely dissipated by the well-known shouts of 'Hoy! bull! hoy!' from a thousand voices; a noble bull having appeared, as if by magic, in the principal street. There never was such a run! The wild excitement of the scene was enhanced by the bellowing dragoons galloping thither and hither, in vain attempts to secure the animal. The metropolitan police, with greater valour than discretion, formed in a compact phalanx on the bridge; but the bull, followed by the bullards, dashed through them as an eagle might through a cobweb. After a run of some hours, the bull came to bay in the river, and was then captured by the authorities. An attempt was made to lead it to the bullyard, but the bull was beyond in the inn-yard. This led to a collision between the military and the people, stones and brickbats were thrown, and sabre cuts returned in exchange; but, on the dragoons being ordered to load with ball-cartridge, the mob dispersed. Where did the strange bull, a very valuable animal, so miraculously spring from? This enigma was soon solved by its being claimed by a certain noble lord. He had been sending it in, a covered wagon, from one of his estates to another, and, by a 'curious coincidence,' it happened to pass through Stamford on the very day and hour its presence was required by the bulliards, who, seizing the wagon, released the animal. Whether the coincidence were accidental or designed, the preceding explanation, if not quite satisfactory, produced a great deal of good-humoured laughter.

In 1839, a stronger force of military and police was sent to Stamford; every precaution was taken, yet some treacherous special constables smuggled a bull into the town, and the bullards had their last run. The animal, however, being young and docile, did not afford much sport, being soon captured by the authorities. In the following year, as bull-running day drew near, the people of Stamford began to count the cost of their amusement. The
military, metropolitan police, and special constables of the two previous years, had cost them more than £600—a sum which might, with greater fitness, have been laid out on certain town improvements, then much wanted. So the townsmen forwarded a memorial to the mayor, to be laid before the Home Secretary, pledging themselves that, if no extraneous force of military or police were brought into the town, nor expense incurred by appointing special constables, they, the subscribers, would prevent bull-running from taking place in Stamford during that year. The townsmen were wisely taken at their word, and there never has been a bull-run in Stamford since that time.

The highly-exciting nature of the amusement gave bull-running a charm to vulgar minds, that can scarcely now be understood or appreciated. For weeks before and after the 15th of November, the bullard's song might be heard re-echoing through all parts of Stamford. As a curious and almost forgotten relic of an ancient sport, it cannot be entirely unworthy of a place in these columns.

**THE BULLARD'S SONG.**

COME all you bonny boys,  
Who love to bait the bonny bull,  
Who take delight in noise,  
And you shall have your bellyful.

On Stamford's town Bull-running Day,  
We'll shew you such right gallant play,  
You never saw the like, you'll say,  
As you shall see at Stamford.

Earl Warren was the man,  
That first began this gallant sport;  
In the castle he did stand,  
And saw the bonny bulls that fought.

The butchers with their bull-dogs came,  
These sturdy stubborn bulls to tame,  
But more with madness did inflame,  
Enraged, they ran through Stamford.

Delighted with the sport,  
The meadows there he freely gave,  
Where these bonny bulls had fought.  
The butchers now do hold and have;

By charter they are strictly bound,  
That every year a bull be found;  
Come, fight your face, you dirty clown,  
And stumpe away to Stamford!

Come, take him by the tail, boys—  
Bridge, bridge him if you can;  
Prog him with a stick, boys;  
Never let him quiet stand;

There every street and lane in town,  
We'll Chey-chase him up and down.  
You sturdy bung-straws' ten miles round,  
Come, stumpe away to Stamford.'

The old bullards are now nearly all dead; but the song, with various additions and variations, may still be occasionally heard. Mr. Burton, writing in 1846, says: 'Every incident that calls to the mind of the lower classes their ancient holiday, is seized with enthusiasm, and the old bull-tune is invariably demanded, when anything in the shape of music attracts the attention. At the theatre, whenever there is a full house, 'Bull! bull!' is invariably pealed from some corner of the gallery. The magic word immediately fills the mouth of every occupant of that part of the building; it is echoed from the pit, and order and quiet is out of the question till the favourite tune has been played.'

**SHOOTING-STARS.**

During three successive years, from 1831 to 1833, the 13th of November was marked by a magnificent display of shooting-stars on the lawn, to the great astonishment of various visitants to our globe respecting whose real nature and origin science is still so perplexed. The first of these brilliant exhibitions was witnessed off the coasts of Spain, and in the country bordering on the Ohio. The second is thus described by Captain Hammond of H.M.S. Resolute, who beheld it in the Red Sea, off Mocha. 'From one o'clock a.m. till after daylight, there was a very unusual phenomenon in the heavens. It appeared like meteors bursting in every direction. The sky at the time was clear, the stars and moon bright, with streaks of light, and thin white clouds interspersed in the sky. On landing in the morning, I inquired of the Arabs if they had noticed the above. They said they had been observing it most of the night. I asked them if ever the like had appeared before. The oldest of them replied that it had not.' The area over which this phenomenon was seen extended from the Red Sea westwards to the Atlantic, and from Switzerland to the Mauritius.

But the most imposing display of shooting-stars on record occurred on the third of these occasions—that is, on 13th November 1833. It extended chiefly over the limits comprised between longitude 61° in the Atlantic, and 100° in Central Mexico, and from the latitude of the great lakes of North America, to the West Indies. From the appearance presented, it might be regarded as a grand and portentous display of nature's fireworks. Seldom has a scene of greater or more awful sublimity been exhibited than at the Falls of Niagara on this memorable occasion, the two bounding powers of nature, water and fire, engaging, as it were, in an emulative display of their grandeur. The awful roar of the cataract filled the mind of the spectator with an infinitely heightened sense of sublimity, when its waters were lighted up by the glare of the meteoric torrent in the sky. In many parts of the country, the people were terror-struck, imagining that the end of the world was come; whilst those whose education and vigour of mind prevented them from yielding to such terrors, were, nevertheless, vividly reminded of the grand description in the Apocalypse, 'The stars of heaven fell unto the earth, even as a fig-tree casteth her untimely figs, when she is shaken of a mighty wind.'

The most probable theory as to the nature of shooting-stars is, that they form part of the solar system, revolving round the sun in the same manner as the planetoids, but both infinitely smaller in size, and subject to great and irregular perturbations. The latter cause brings them not unfrequently within the limits of the earth's atmosphere, on entering which they become luminous from the great heat produced by the sudden and violent compression which their transit occasioned. Having thus approached the earth with great
velocity, they are as rapidly again withdrawn from it into the realms of space. It is very possible, moreover, that the fiery showers which we have just described, may be the result of a multitude of these meteors encountering each other, whilst the aërolites, or actual meteoric substances, which occasionally fall to the surface of the earth, may be such of these bodies as have been brought so far within the influence of terrestrial gravity as to be rendered subject to its effects.

NOVEMBER 14.

St Dubricius, bishop and confessor, 6th century. St Laurence, confessor, archbishop of Dublin, 1180.

Born.—Benjamin Hoadly, bishop of Bangor, eminent Whig prelate, 1676, Westerham, Kent; Adam Gottlob Oehlenschläger, Danish poet, 1779, Copenhagen; Sir Charles Lyell, geologist, 1797, Kinmordy, Pembrokeshire.

Died.—Gottfried Wilhelm Leibnitz, mathematician and moral philosopher, 1716, Hanover; George William Frederick Hegel, German philosopher, 1831, Berlin; Dr John Abercrombie, physician and moral writer, 1844, Edinburgh.

LEIBNITZ.

Leibnitz is one of the great names of literature:

'A man so various that he seemed to be Not one, but all mankind's epitome.'

Nevertheless, though his title to fame is everywhere confessed, few at this day, with the exception of some arduous students, are practically conversant with its grounds. Leibnitz was one of the chief intellectual forces of his age, but as a force he was more remarkable for quantity than intensity. He bestowed himself in a multitude of pursuits and he excelled in all, but he produced no master-piece—nothing of which it could be said, It is the best of its kind. He was a universal genius; his intellect was as capacious as harmonious, and a storehouse for all knowledge; but his mind was lost by reason of its universal sympathies. To be remembered for ever by some work requires that the whole energy, at least for a time, be given to one work. 'Even great parts,' says Locke, writing of Leibnitz in 1697, 'will not master any subject without great thinking.' Leibnitz was the son of a professor of jurisprudence in the university of Leipsic, in which city he was born in 1646. He was a precocious child, and from his boyhood displayed that love of learning and speculation which distinguished him through life. He gives an amusing account of his efforts when a youth of fifteen, during long solitary walks in the wood of Rosenthal, near Leipsic, to adjust the claims of the Ancients and Moderns—of Aristotle and Descartes, and the reluctance with which, when conciliation was impossible, he was compelled to make an election. His talents, as manifested at the university, and his publications, early brought him into notice, and found him patrons among the princes of Germany. He travelled over the continent, visited England, and everywhere made the acquaintance of men of science and letters. An amusing anecdote is told of him when at sea in a tempest off the Italian coast. The sage captain attributed the storm to the presence of the heretical German, and presuming him ignorant of the Italian language, began to deliberate with the crew on the propriety of throwing the Lutheran Jonah overboard. Leibnitz, with much presence of mind, got hold of a roseary and began to tell his beads with vehement devotion. The ruse saved him. At Nürnberg, he heard of a society of alchemists who were prosecuting a search for the philosopher's stone. He wished to join them, and compiled a letter from the writings of the most celebrated alchemists and sent it to them. The letter consisted of the most obscure terms he could find, and of which, he says, he did not understand.
a syllable. The illuminati, afraid to be thought ignorant, invited him to their meetings and made him their secretary. Though Leibnitz could thus quiz the alchemists, he believed, to the end of his life, in the reality of the object of their labours.

In the leisure which various pensions secured him, he followed his versatile inclinations with indefatigable industry. Mathematics, jurisprudence, theology, philology, history, antiquities, the classics, all shared his attention, and in all of these branches of knowledge the world heard his voice with respect. The ancient languages he knew well, and was tolerably acquainted with more than half-a-dozen of the modern. He had notions about calculating machines, about improved watches, about a universal alphabet, about hydraulic engines, about swift carriages, by which the journey of one hundred and fifty miles, between Amsterdam and Hanover, might be done in twenty-four hours; and about a hundred other things. He dabbled in medicine, in everything; there was nothing, in fact, in which he could not be interested. In his Prolegomena, he throws out thoughts, which, Dean Buckland observes, contain theories of the most wild and extravagant speculations in geology. His memory was quick and tenacious; he made notes as he read, but he had seldom to refer to them, for he seemed to forget nothing. George I. used to call him his living dictionary. At the age of seventy, he could recite hundreds of lines of Virgil without an error.

In mathematics, if anywhere, his genius shewed itself supreme, and between him and Sir Isaac Newton a bitter controversy broke out as to the credit of the invention of the differential calculus. The question has been thoroughly and tediously debated, but the following points are now considered as tolerably clear: 1st. That the system of fluxions invented by Newton is essentially the same as the differential calculus invented by Leibnitz, differing only in notation; 2d. That in 1665, nineteen years before Leibnitz published his method, and eleven years before he communicated it to Newton; 3d. That both Leibnitz and Newton discovered their methods independently of each other, but that Newton had priority; and 4th. That although the honour belongs to both, yet, as in every other great invention, they were but the individuals who combined the scattered rays of their predecessors, and gave a method, a notation, and a name to the doctrine of infinitesimal quantities.

As a theologian and metaphysician, Leibnitz was eclectic rather than original. His temper was truly catholic; he differed from others with reluctance; and it seemed to be one of his keenest delights to reconcile apparent contrarieties. Hence one of his schemes was the incorporation of the various sects of Protestantism, preparatory, if possible, to the inclusion of Rome, with concessions, in one grand Christian community. In philosophy, he had a doctrine called Pre-established Harmony, by which he professed to explain the relations between Deity, the Human Mind, and Nature. It met with wide discussion and some acceptance in the lifetime of Leibnitz, but Pre-established Harmony has long passed out of memory except in histories of philosophy.

One of the warmest admirers of Leibnitz was Sophia Charlotte, wife of Frederick, the first king of Prussia, a great lover of show and ceremony, for which his consort had a quiet contempt. Leibnitz called her 'one of the most accomplished princesses of earth,' and by the world she was known as the republican and philosophic queen. To Leibnitz, 'is grand Leibnitz,' as he styled him, she resorted for counsel in all her theorical and practical difficulties, and not seldom to his perplexity, wanting to know, he said: 'Je pourquoi du pourquoi' (the why of the why). Weared with the emptiness of courtiers, she wrote on one occasion: 'Leibnitz talked to me about the infinitely little; mon Dieu, as if I did not know enough of that!' This bright soul died at thirty-six, to the great grief of Leibnitz. On her death-bed she said she was very happy; that the king would have a fine opportunity for display at her funeral; and, above all, that now she was going to satisfy her curiosity about a great many things of which Leibnitz could tell her nothing. With many other crowned heads Leibnitz held intercourse more or less intimate. Peter the Great consulted him as to the best means for the civilization of Russia, and rewarded his suggestions with the title of Chancellor of State, and a pension of a thousand roubles.

Leibnitz was only able to get through his multifarious business by persistent assiduity. He carried on a most extensive correspondence, and wrote his letters with great care, sometimes three or four times over, and made them the repositories of his most valued ideas and conjectures. His life was sedentary almost beyond example. Sometimes for weeks together he would not go to bed, but sat at his desk till a late hour, then took two or three hours of sleep in his chair, and resumed work at early dawn. He was a bachelor, and had no fixed hours for his meals; but sent to a tavern for food, when hungry and at leisure. His head was large and bald, his hair fine and brown, his face pale, his sight short, his shoulders broad, and his legs crooked and ungracefully. He was spare and of middle height, but in walking, he threw his head so far forward as to look from behind like a hunchback. His neglect of exercise told severely on him as he advanced in life. He became plagued with rheumatic gout, his legs ulcerated, and he aggravated his ailment by compressing afflicted parts with wooden vices to stop the circulation of the blood, and dull the sense of pain. He died in Hanover in 1716, in his seventieth year, from the effects, it is said, of an untried medicine of his own concoction. He was buried on the esplanade of his native city of Leipzig, where a monument, in the form of a temple, with the simple inscription, 'Ossa Leibniti,' marks the spot.

**DISCOVERY OF THE SOURCES OF THE NILE.**

It is curious to look back to the days when Bruce the traveller published his celebrated work on Africa, and claimed to have discovered the true sources of the mysterious river which flows so many hundreds of miles through that continent. Comparing that narrative with one which has appeared in 1853, we see that Bruce was in the wrong; that he may have discovered a source but not the source; and that a long series of intermediate investigations was needed to arrive at a true solution of the interesting problem. No blame to James Bruce.
for all this. He was really a sagacious and enterprising man; and although some doubt was thrown upon his truthfulness during his life, he is now believed to have been veracious to the extent of his knowledge. His error concerning the sources of the Nile may well be excused, considering the harassing difficulties of the problem.

Glancing at a map of Africa, we see that the Nile is formed by several branches, which meet in Nubia, and flow northward through Egypt into the Mediterranean. The principal or chief of the branches, the Albarah, rises in about 13° N. lat., 40° E. long.; and joins the main river near 18° N. lat., 34° E. long. It was visited by Salt and by Pearce, and has been often noticed by travellers in Abyssinia. The middle, or second, of the three branches, known as the Bahir-al-Asrek, or Blue Nile, is, by excellence, the river of Abyssinia, winding through and about that country in a very remarkable way. Bruce traced it upwards until it became a mere streamlet in 11° N. lat., 37° E. long., near the village of Geeshe, whence it flows by Sennaar to its junction with the greater Nile at Khartoum. The westernmost and largest branch, the Bahir-al-Asrek, or White Nile, is extremely circuitous in its route, winding through the countries of Darfur and Kordofan in a very intricate way.

Now it is the Bahir-al-Asrek, or Blue Nile, which Bruce considered to be the true original river, and which, on the 14th of November 1770, he believed himself to have traced up to its source. In the preface to his Travels (written in 1790, and, as is supposed, not so accurately as if he had allowed less than twenty years to elapse) he said: 'I hope that what I have said will be thought sufficient to convince all impartial readers that these celebrated sources have, by a fatality, remained to our days as unknown as they were to antiquity; no good or genuine voucher having yet been produced capable of proving that they were before discovered, or seen by any traveller, from the earliest ages to this day. And it is with confidence I propose to my reader, that he will consider me as still standing at the fountain, and patiently hear from me the recital of the origin, course, nature, and circumstances of this the most famous river in the world, which he will in vain seek from books, or from any other human authority whatever, and which by the care and attention I have paid to the subject, will, I hope, be found satisfactory here.'

Bruce was all the more proud of his achievement, because the ancients had believed that the Bahir-al-Abiad was the true Nile, an opinion which he claimed to have shown fallacious. The ancients were right, however, and Bruce wrong. Step by step the White Nile has been traced to points nearer and nearer to the equator, and therefore nearer to its source. Linant, in 1827, ascended as far as Aleia, in 15° N. lat. In 1842, Werner, hearing an expedition sent out by the pasha of Egypt, reached to 5° N. lat., and was told by the natives that the source was still far distant. In 1845, M. D’Abbadie thought he had reached the source of the Nile; but Beke afterwards showed that the stream reached by D’Abbadie was only an affluent of the Bahir-al-Abiad, and expressed an opinion that the real source is even beyond the equator. M. Knobloch has now laid a missionary establishment at Khartoum, went up the White Nile as far as 4° N. lat., and saw that river still far away to the south-west.

The grand discovery of all, that the Nile really rises in south latitude, and crosses the equator, was made by Captains Grant and Speke, whose names have become thereby renowned throughout Europe. In 1858, Captain Speke reached a very beautiful lake, the Victoria Nyanza, while journeying westward from Zanzibar. The head of this lake is three degrees south of the equator. He found the lake to be a large sheet of fresh water, lying on a plateau or table-land, from 3000 to 4000 feet above the level of the sea. The lake, to use the language of Captain Speke, 'looked for all the world like the source of some great river; so much so, indeed, that I at once felt certain in my own mind it was the source of the Nile, and noted it accordingly.' It was the bold guess of a sagacious and experienced man. The Victoria Nyanza is really the head-water of the Nile, being fed immediately by a range of lofty mountains in the interior. Its most southern affluent is the Leewenwbu or Shimeeyu. Stanley, who sailed round the lake in 1875, and who explored the head-waters of the Congo, confirmed Speke's discovery. It is thus settled that the Nile flows uninterruptedly from the lake to the Mediterranean, through no less than thirty-four degrees of latitude, and along a course exceeding 2000 miles in length, in a straight line, and perhaps 3000, allowing for windings. Captain Speke was prevented from putting his speculation to the test in 1859 or 1860; but in 1861 and 1862, accompanied by Captain Grant, he traced the course of the great river down from the lake to the ocean—not actually keeping the stream in view the whole of the way, but touching it repeatedly here and there, in such a way as to leave no doubt that it is the Nile.

Thus the somewhat magniloquent terms in which Bruce announced his discoveries have not proved to be justified. The post of honour is to be given, not to the Blue Nile, but to the White Nile, and at a point nearly a thousand miles further south than was reached by Bruce.

**NOVEMBER 15.**

St Euginius, martyr, 275. St Malo or Maclo, first bishop of Alesith in Brittany, 565. St Leopold, Marquis of Austria, confessor, 1136. St Gertrude, virgin and abbess, 1292.

**BORN.**—Andrew Marvell, poet and politician, 1629; Kingston-upon-Hull; William Pitt, great Earl of Chatham, 1708, Boconnoc, Cornwall; William Cowper, poet, 1731, Great Berkhamstead, Hertfordshire; Sir William Herschel, astronomer, 1738, Hanover; John Casper Lavater, physiognomist, 1741, Zurich; Rev. James Scholedeld, scholar and classical editor, 1789, Henley on Thames.

**DIED.**—Albertus Magnus, celebrated schoolman, 1280; Cologne; Mrs Anne Turner, executed as an accomplice in murder of Sir Thomas Overbury, 1615, London; John Kayler, great astronomer, 1630, Rome; Francis, first earl of Arundel, Duke of Buckingham and Hertford, 1666, Rome; John Hales, London; James, Duke of Hamilton, killed in a duel in Hyde Park, 1712; Christopher Gluck, composer, 1787, Vienna; Bishop Tomline, author of Refutation of Calvinism, 1827; Count Rossli, minister of interior, Papal States, assassinated, 1848, Rome; Johanna Kinkel, German novelist and musician, 1858.
ANDREW MARVELL.

It is pleasant to observe how the respect for 'honest Andrew Marvell' outlives all the political changes which succeed each other at fitful intervals in England; it is a homage to manliness and probity. During his life, from 1630 to 1678, he was mixed up with many of the exciting controversies of the times; but it was in the last eighteen years of his life, when Charles II. was king, that the Marvell attained his highest eminence. He served as member of parliament for Kingston-upon-Hull; he trusted the electors, and they trusted him; and there has never been known in the history of our parliament a connection more honourable than that between him and his constituents. He used to write constantly to them about the state of public affairs; and his letters have considerable historical value, as much as they supply contemporary evidence of the proceedings in high places. The court-party could not be very much pleased at the publication of such a letter, as the following, from Andrew Marvell to his constituents at Hull:

'The king having, upon pretence of the great preparations of his neighbours, demanded £300,000 for his navy (though, in conclusion, he hath not sent out any); that the parliament should pay his debts, which the minds of wits or no partime, and house of commons, our house gave several bills. You see how far things were stretched beyond reason, there being no satisfaction how those debts were contracted; and all men foreseeing that that was given would not be applied to discharge the debts, which I hear are, at this day, risen to four millions, but diverted as formerly. Nevertheless, such was the number of the constant couriers, increased by the apostate patriots, who were bought off for that term, some at six, others at ten, one at fifteen thousand pounds in money; besides what offices, lands, and reversions to others, that it is a mercy they gave not away the whole land and liberty of England. The Duke of Buckingham is again £140,000 in debt; and by this prerogative, his creditors have time to tear all his lands to pieces. The House of Commons has run almost to the end of their line, and are grown extremely chargeable to the king and odious to the people. They have signed and sealed ten thousand a year more to the Duchess of Cleveland, who has likewise near ten thousand a year out of the new farm of the country excise of beer and ale; five thousand a year out of the post-office; and, they say, the reversion of all the king's leases, the reversion of all places in the custom-house, the green wax, and indeed, what not. All promotions, spiritual and temporal, pass under her cognizance.'

The particular incident which has stamped the name of Andrew Marvell with the impress of honesty, has been narrated under different forms; but the following is its substance, as given by one writer: 'The borough of Hull chose Andrew Marvell, a man of little fortune, and maintained him in London for the service of the public. His understanding, integrity, and spirit were dreadful to the then infamous administration. Persuaded that he would be theirs for properly asking, the ministers sent his old school-fellow, the Lord Treasurer Danby, to renew acquaintance with him in his garret. At parting, the lord treasurer, out of pure affection, slipped into his hand an order upon the treasury for one thousand pounds, and then went into his chariot. Marvell, looking at the paper, calls after the treasurer: 'My lord, I request another moment.' They went up again to the garret, and Jack, the servant-boy, was called. "Jack, child, what had I for dinner yesterday?" "Don't you remember, sir? You had the little shoulder of mutton that you ordered me to bring from a woman in the market." "Very right, child. What have I for dinner to-day?" "Don't you know, sir, that you bade me lay by the blade-bone to broil?" "Tis so; very right, child; go away. My lord, do you hear that? Andrew Marvell's dinner is provided. There's your piece of paper; I want it not. I know the sort of kindness you intended. I live here to serve my constituents; the ministry may seek men for their purpose; I am not one.'

The setting of this story is somewhat too dramatic, but there is reason to believe that the truth of it is quite true. It is further said, that, though he thus rejected the money, he was in straitened circumstances at the time, insomuch that he was obliged, as soon as Danby had departed, to send to a friend to borrow a guinea.

MRS TURNER.

The beauty of this woman, and her connection with the mysterious death of Sir Thomas Overbury, who was poisoned in the Tower through her agency, have invested her name with a species of romance in the annals of crime. Though she undoubtedly merited her fate, both she and her accomplices were merely the minor parties in this nefarious transaction, the principal criminals being the Earl and Countess of Somerset, who, though tried and condemned, received the king's pardon, and after undergoing an imprisonment of some years, were allowed to retire into the country and obscurity. The whole affair forms a singular episode in the reign of James I., and by no means reflects credit on that weak monarch.

When Robert Carr or Ker, a young Scottish adventurer of the border-family of Ferniehirst, established himself so rapidly in the good graces of his sovereign, rising suddenly to the most influential posts in the kingdom, Sir Thomas Overbury acted as his bosom-friend and counsellor, and furnished him with most useful and judicious advice as to the mode of comporting himself in the new and unwonted sphere in which he was thus placed. Carr unfortunately, however, cast his eyes on the Countess of Essex, the beautiful and factitious daughter of the Earl of Suffolk, who had been married when a girl of thirteen to the Earl of Essex, son of the unfortunate favourite of Queen Elizabeth, and who himself afterwards became so noted in the reign of Charles I., as the commander of the parliamentary army. This object of illicit love was but too ready to respond to the addresses of Carr, now created Viscount Rochester, having, it is believed, owed much of the depredity of her disposition to the pernicious lessons of Mrs Turner, who lived as a dependent and companion to his daughter in the house of the Earl of Suffolk. This abandoned Mentor afterwards became the wife of a physician, at whose death, owing to the extravagant manner in which both she and her husband had lived, she was left in very straitened circumstances,
and was only too glad to become again the confidante and adviser of the Countess of Essex in her amours with Rochester. Not content with the gratification of their unlawful passion, the guilty pair sought to legalise their connection by a marriage, to which it was of course necessary that the Countess should, in the first place, obtain a divorce from her husband. Sir Thomas Overbury, who had hitherto concurred with and aided Rochester in his amours, now opposed the marriage-scheme, knowing the odium his pupil would excite by contracting such a union, and dreading also the influence which the Countess’s relations, the Howards, would thereby obtain. He counselled Rochester strongly against thus committing himself, and enlarged, in rather emphatic terms, on the depraved character of his proposed wife. These speeches were reported by the infatuated favourite to the Countess, who thereupon vowed the destruction of Overbury. First, she offered £1000 to Sir John Wood to murder the object of her resentment in a duel. Then Rochester and she concocted a scheme by which, on the favourable occasion, and with reputations of Overbury on the ground of having shewn contempt for the royal authority, was committed to the Tower, where he was detained a close prisoner under the guardianship of a new lieutenant, wholly in the interest of his enemies, who had procured the removal of the former governor of the fortress.

Meantime a divorce had been instituted by the Countess of Essex against her husband, and a majority of the common council had been appointed by the king to try the case, was found servile enough to pronounce sentence of dissolution. The day before this deliverance was given, Sir Thomas Overbury died in the Tower, from an infectious disease, as was alleged, and was hastily and clandestinely buried. No doubt was entertained by the public that he had been poisoned; but the matter was passed over without investigation, and for some months Rochester, now Earl of Somerset, beaked with the partner of his guilt in all the sunshine of fashion and royal favour. But the king’s fickle temper ere long caused his downfall. The presentation at court of a new minion, George Villiers, afterwards the celebrated Duke of Buckingham, effected such a change in the affections of the king as completely to supplant the old favourite, who was exposed unshielded to the machinations of his enemies, and the just indignation of the people. On a warrant from the Lord Chief-justice Coke, he and his wife were arrested for having occasioned the death of Sir Thomas Overbury, and along with them the parties of inferior rank who had acted as their accomplices. These were Mrs Turner; Elwes, the lieutenant of the Tower; Weston, the warder who had been intrusted with the immediate custody of the prisoner; and Franklin, an apothecary. The proofs adduced against them were sufficiently strong to insure their condemnation, and their own confessions left subsequently no doubt of their guilt. It appeared that Mrs Turner and the Countess of Somerset had had frequent consultations with a certain Dr Forman, a celebrated conjurer in Lambeth, who enjoyed a high reputation as a compounder of love-philtres, and was consulted in that capacity by many of the most fashionable ladies of the day. He died before the proceedings under notice were instituted, and it does not appear that he had any active concern in the murder of Overbury; but the fact of two of the accused parties having had dealings with a soi-disant wizard increased immensely the popular horror. As regards the perpetration of the murder, it was shown that Mrs Turner procured the poison from Franklin the apothecary, and handing it to the warder, Weston, the latter, under her instructions, and with the complicity of Elwes, the lieutenant of the Tower, administered it to the prisoner in small doses, in various kinds of food, and at different times, extending over a period of some months.

The criminals were all executed at Tyburn. The enduring of the last penalty of the law by Mrs Turner, which took place on 16th November 1616, excited an immense interest. She had made herself famous in the fashionable world as the inventor of a yellow starch, and, in allusion to this circumstance, Lord Chief-justice Coke, who had already addressed her in sufficiently contumelious terms, telling her, categorically, that she had been guilty of Overbury’s murder, added that as she was the inventor of yellow-starched ruffs and cuffs, so he hoped that she would be the last by whom they would be worn. He, accordingly, gave strict orders that she should be hanged in that attire, which she had rendered so fashionable. This addition to the sentence was fully carried out; and the fair demon, Mrs Turner, on the day of her execution, came to the scaffold arrayed as if for some festal occasion, with face rouged, and a ruff stiffened with yellow starch round her neck. Numerous persons of quality, ladies as well as gentlemen, went in their coaches to Tyburn to see the last of Mrs Turner. She made a very penitent end, and the object contemplated by the Lord Chief-justice was fully attained, as the yellow ruff was never more worn from that day.

As already mentioned, the principal criminals, the Earl and Countess of Somerset, experienced no further penalty than an imprisonment of some years in the Tower. The partial pardon thus accorded to Carr, seems to have been extorted by fear from the king, who dreaded the revelation, by his former favourite, of some discreditless secret.

‘OLD PARR.’

Though several sceptical individuals, denying the possibility of the life of man being protracted beyond the period of a hundred years, have maintained that no such instance of longevity can be produced, there is abundant and satisfactory evidence to confute this statement, and establish indisputably the fact of the existence of numerous centenarians both in ancient and modern times. One of these instances, that of ‘Old Parr,’ whose extreme and almost antediluvian age has become proverbial, rests on such well-authenticated grounds, that no reasonable doubt can be entertained as to its truth.

The Christian name of this venerable patriarch was Thomas, and he was born at Winninngton, in the parish of Alberbury, Shropshire, in 1422. His father, John Parr, was an agriculturist’s labourer, and Thomas throughout his long life followed the same occupation. Till the age of eighty, he continued a bachelor, and then married his first
wife, with whom he lived for thirty-two years. About eight years after her death, when he himself was a hundred and twenty years old, he married for the second time. Having, in 1635, attained the wonderful age of a hundred and fifty-two years and upwards, he was visited in that year by the Earl of Arundel, who, having gone down to see some estates of his in Shropshire, was attracted by the reports which reached him of so remarkable an old man. His lordship was greatly struck by the intelligence and venerable demeanour of Thomas Parr, who was thereupon induced to pay a visit to London; the earl, as we are informed, commanding a litter and two horses (for the more easy carriage of a man so enfeebled and worn with age) to be provided for him; also that a daughter-in-law of his (named Lucye), should likewise attend him, and have a horse for her own riding with him; and to cheer up the old man, and make him merry, there was an antique-faced fellow, called Jacke, or John the Foole, with a high and mighty no beard, that had also a horse for his carriage. These all were to be brought out of the country to London, by easy journeys, the charges being allowed by his lordship; and likewise one of his honour's own servants, named Brian Kelly, to ride on horseback with them, and to attend and defray all manner of reckonings and expenses; all which was done accordingly.

It would have been better, however, had Lord Arundel left the old man undisturbed in his native parish. Partly owing to the fatigues of the journey, partly to the crowds of visitors who thronged to see him, and above all to the unwonted mode of life which he led, Parr, ere many months were over, fell ill and died. He was buried on 15th November 1635, in Westminster Abbey, where a monument was erected to his memory. After death his body was examined by the celebrated Dr Harvey, who found it remarkably stout and healthy, without any trace of decay or organic disease, so that had it not been for the abnormal

influences to which he had been subjected for a few months previous to his death, there seems little doubt that Parr might have attained even a much greater age.

The principal authority for the history of Old Parr is John Taylor, the 'Water Poet,' who, while the patriarch was residing in London, about a month before he died, published a pamphlet, entitled The Olde, Olde, very Olde Man; or The Age and Long Life of Thomas Parr. From the period at which this work was issued, we are warranted in placing considerable reliance on its statements, which appear never to have been controverted. In addition to those above quoted, we are informed by Taylor that, at the age of a hundred and five, Parr was obliged, in consequence of an intrigue with Catharine Milton, whom he afterwards married as his second wife, to do penance in a white sheet at the door of the parish church of Alberbury. When presented to Charles I at court, that monarch observed to him: 'You have lived longer than other men, what have you done more than other
men?" Parr's reply was: "I did penance when I was a hundred years old." In the meeting of the venerable patriarch with the British sovereign, a parallel is almost suggested with the grand simplicity in which the presentation of Jacob to Pharaoh is recorded in the Book of Genesis.

Thus Parr seems, through life, to have been of temperate and industrious habits, of which the following metrical account is given by Taylor:

'Good wholesome labour was his exercise,
Down with the lamb, and with the lark would rise:
In mire and toiling sweat he spent the day,
And to his team he whistled time away:
The cock his night-clock, and till day was done,
His watch and chief sundial was the sun.
He was of old Pythagoras' opinion,
That green cheese was most wholesome with an onion;
Coodle messin bread," and for his daily swig,
Milk, butter-milk, and water, whey and whig;
Sometimes meths or gin, and by fortune happy,
He sometimes sipped a cup of ale most nappy,
Cyder or perry, when he did repair
'T Whitson ale, wake, wedding, or a fair;
Or when in Christmas-time he was a guest
At his good landlord's house amongst the rest:
Else he had little leisure-time to waste,
Or ate at the ale-house huff-cap ale to taste;
His physic was good butter, which the soil
Of Salop yields, more sweet than candied oil;
And gargle he esteemed above the rate
Of Venice treacle or best mituricide.
He entertained no gout, no ache he felt,
The air was good and temperate where he dwelt;
While mavisies and sweet-tongued nightingales
Did chant him roundelayes and madrigales.
Thus living within bounds of nature's laws,
Of his long-lasting life may be some cause.'

There was doubtless something peculiar in Parr's constitution which enabled him to resist so long the effects of age and natural decay. As a corroboration of the theory of the hereditary transmission of qualities, it is a curious circumstance that Robert Parr, a grandson of this wonderful old man, who was born at Kinver in 1633, died in 1717, at the age of a hundred and twenty-four. Perhaps one of the most ingenious devices in the art of quackery is that by which a well-known medicine, bearing Parr's name, is vaunted to the public as the mysterious preparation by which he was enabled to attain the extraordinary age of a hundred and fifty-two. The portrait which is frequently attached to the puffing placard advertising these drugs, is derived from a likeness of Old Parr, drawn by the celebrated painter Rubens.

In the Gentleman's Magazine for March 1814, a view, which we have copied (see the preceding page), is given of Old Parr's cottage, in the parish of Alberbury; Roddneys Pillar, on the Breidden Hill, appears in the distance. It is also stated in the work referred to, that the cottage has undergone very little alteration since the period when Parr himself occupied it, and that a corner beside the huge mishapen chimney is shown as the place where the Nestor of Shropshire used to sit.

* Maalin bread, bread made of a mixture of several kinds of flour. The word is derived from the French sauter to mix, and possibly also from the German mixen. Other forms of the term are maasin, maaslin, and mazulinn, the last of which is well known in Scotland as an epithet for a certain description of bannocks or cakes, made of a mixture of barley and peas meal, and styled from this circumstance mazulinn bannocks.
phalia, some of the wiseracres of that day connected
the two phenomena together as probable cause and
effect. When Lima and Callao were destroyed by an
earthquake in 1746, the diaster was imputed to a
small comet in the absence of any more proba-
dle delinquent. A church clock, destroyed by a
meteoric stone; an unusually large flock of wild
pigeons in America; the disasters which were
experienced by the Christians at the hands of the
Turks in 1456; a fit of sneezing that became very
prevalent in some parts of Germany; the deaths
of eminent persons in various countries—all were
believed to have been either produced or prefigured
by comets which appeared in certain years. That
of two things which occurred nearly at the same
time, one is the cause of the other, is a very popular
and easy mode of philosophising. M. Arago
adduces, in illustration of this point, the anecdote
told by Bayle, of a lady who never looked out of
the window of her apartment, situated in the
greatest thoroughfare of Paris, and saw the street
filled with carriages, without imagining that her
appearance at the window was the cause of the
crowd.

The reason why Halley's comet, or rather Halley's
remarkable prediction concerning the comet, has had
some influence in lessening these vague specula-
tions, is because a regular and periodical occur-
rence of any event takes away from it much of a
capricious or uncertain character. After Flamsteed
had written down his careful observations on the
comet of 1606, Sir Isaac Newton was able to determine
what kind of curve it marked out in the heavens;
and then Dr. Halley proceeded to investigate, in a
very elaborate way, whether any two recorded
comets were really two successive appearances of
the same celestial body. He found reason to believe
that the comets of 1531, 1607, and 1682
were in fact one and the same comet, which takes
about seventy-six years to perform its remarkable
journey round the sun. After making corrections for
a few disturbing causes, he boldly declared his
belief that the comet would appear again late in
1758 or early in 1759; and, with a pardonable self-respect,
he appealed to posterity not to lose
sight of the fact, that if the comet should really
return about that period, the prediction of such a
result was due to an Englishman. As the period
approached, the great French mathematicians
Clairaut, D'Alembert, and Lalande calculated the
probable disturbance which the planets would
produce on such a comet; and they agreed that
the month of April 1759 would be the probable
time of reappearance, or rather, of the perihelion
of the comet—that is, its nearest approach to the
sun. The comet was sighted on the 26th December
1758, and passed its perihelion on March 18,
1759. This would have been a great triumph to
Halley, if he could have lived to see it. All
Europe agreed that this particular comet should
be called Halley's Comet, in honour to the man
who had so boldly and successfully predicted its
periodicity. Then, as time passed on, arose the
question—'Will this comet re-appear after another
interval of about seventy-six years, say in 1835?'
In 1812, Danoisene calculated that the comet
could return to the same place on 5th November
in that year. In 1829, Pontecoulant, another great
mathematician, explained his reasons for selecting
the 14th of November as a more probable date.

Two learned Germans, Rosenberger and Lehmann,
also investigated the same intricate problem; the
one named the 11th of November, the other the
28th, as the day of perihelion. At last, when the
year 1835 arrived, all the astronomers in Europe
were pointing their telescopes towards the heavens,
under the belief that the comet would begin to be
visible some time in August. They were right.
On the 5th of August M.M. Dumoulin and De
Vico, at the observatory of Rome, detected the
comet; it became visible to the naked eye towards
the end of September, attained its greatest brilliancy
about the middle of October, and passed its
perihelion on 15th November—within one single
day of the time calculated by Pontecoulant! All
this is very wonderful to persons unskilled in
astronomical mathematics; but so certain do
avans now feel about it, that they decide that the
recorded comets of 1278, 1456, 1531, 1607,
1682, 1758, and 1835 were only so many successive
appearances of Halley's comet, at intervals of about
seventy-six years apart. There is not the slightest
doubt among them that Halley's comet will appear
again in or about the year 1811, although possibly
not one of our present astronomers will be alive in
that year.

By thus substituting regularity for uncertainty,
Halley's labours on the subject of comets have
effectually reformed popular notions concerning
those wondrous visitants.

NOVEMBER 16.

St. Eucherius, bishop of Lyon, confessor, 450. St.
Edmund, confessor, archbishop of Canterbury, 1242.

BORN.—Tiberius, Roman emperor, 42 B.C.; John
Freihersheim, scholar and critic, 1658, Ulm; Jean de
Rond d'Alembert, encyclopedist, 1717, Paris; Francis
Davy, artist, 1793, Wexford.

DIED.—Anfirc, eminent Saxon prelate, 1005, Canter-
bury; Margaret, queen of Malcolm Canmore of Scotland,
1093; Henry III. of England, 1272, Westminster; Perkin
Warbeck, pretender to English crown, executed, 1499;
Pierre Nicole, logician, of Font Royel, 1654, Clermont.
James Ferguson, astronomer, 1778, London; Jean
Lambert Tallien, Terrorist leader, 1820; George Wombwell,
celebrated menagerie proprietor, 1850, Northallerton,
Yorkshire; James Ward, animal painter, 1859, Ockham,
Herts.

ST. MARGARET, QUEEN OF SCOTLAND.

Many of the saints in the Romish calendar rest
their claims to the title on grounds either wholly
or partially fabulous, or which at best display a
merit of a very dubious order. It is, however,
satisfactory to recognise in the memory of Malcolm
Canmore many of those traits which contribute to
form a character of sterling virtue, to whose
memory persons of all creeds and predilections
must pay a respectful homage. It is true that
much of our information regarding her is derived
from the report of her confessor Turgot, whom
clerical prejudices, as well as the inducements of
personal friendship and courtly policy, may have
led to delineate her with too flattering a pencil.
Enough, however, remains after making all due
deductions on this score, to confirm the idea.
popularly entertained in Scotland of the excellence of Queen Margaret. The niece of King Edward the Confessor, and the granddaughter of Edmund Ironside, the colleague of Canute, her youth was spent in exile, and under the proversibly salutary discipline of adversity. Her father and uncle narrowly escaped destruction at the hands of Canute, who, on the murder of their father, Edmund, sent the two young princes to the court of the king of Sweden, with instructions to put them to death privately. The chivalrous monarch refused to stoop to such a deed in innocent blood, and sent the royal youths to Solomon, king of Hungary, by whom they were hospitably received and educated. Edmund the elder brother died, but Edward the younger married Agatha, a German princess, by whom he became the father of Edgar Atheling, Christina, and Margaret. On the death of Harold, at the battle of Hastings, Edgar Atheling made an attempt to vindicate his right to the English crown against William the Conqueror, but his unenergetic character was quite unable to cope with the vigour and resources of the latter, and Edgar and his sister Margaret were consequently obliged to fly the kingdom. They were shipwrecked on the coast of Scotland, and courteously received by King Malcolm Canmore, who was speedily captivated by the beauty and amiable character of Margaret. Her marriage to him took place in the year 1070, at the castle of Dunfermline, a place described by Fordun as surrounded with woods, rocks, and rivers, almost inaccessible to men or beasts by its situation, and strongly fortified by art. Margaret was at this time about twenty-four years of age. On her journey northwards to Dunfermline, she crossed the Firth of Forth at the well-known point where it narrows above Inverkeithing, and which since that event has been known by the designation of the Quensferry. A stone is also still shewn on the road, a little below Dunfermline, called Queen Margaret's Stone, on which she is traditionally said to have rested. Of the palace or castle where she resided at Dunfermline, a small fragment still remains enclosed within the romantic grounds of Pittencroif, and known as Malcolm Canmore's Tower.

The union thus consummated was followed by a numerous offspring—six sons and two daughters. Three of the sons, Edgar, Alexander, and David ascended successively the throne of Scotland, and the elder daughter Maud or Mathildes married Henry I, king of England. To the education of her children Margaret seems to have devoted herself with the most sedulous attention. She procured for them the best preceptors and teachers, she foresaw the times afforded, and is said to have been particular in inculcating on them the necessity of restraining and correcting the frowardness of youth, by a proper exercise of discipline. Her own temper, however, appears to have been of the sweetest and most placid kind, and she was beloved among her servants and dependents for her innumerable acts of generosity and complaisance. To the good God, or rather to the charity of this world, become careless of eternal life. This in the presence of Him, who is now our only witness, I beseech you to promise and to perform. Her death at the last was accelerated by the news which she received of the death of her husband and eldest son before the castle of Alnwick, in Northumberland, an expedition in which she had vainly
endevoured to dissuade Malcolm from taking part in person. While lying on her couch one day, after having offered up some fervent supplications to the Almighty, she was surprised by the sudden entrance of her third son Edgar, from the army in England. Divining at once that some disaster had happened, she exclaimed: 'How fares it with the king and my Edward?' and then, on no answer being returned: 'I know all, I know all!' by this holy cross, by your filial affection, I adjure you, tell me the truth.' Her son then replied: 'Your husband and your son are both slain.' The dying queen raised her eyes to heaven and murmured: 'Praise and blessing be to thee, Almighty God, that thou hast been pleased to make me endure so bitter anguish in the hour of my departure, thereby, as I trust, to purify me in some measure from the corruption of my sins; and thou, Lord Jesus Christ, who through the will of the Father, hast enlivened the world by thy death, oh I deliver me.' In pronouncing the last words, she expired on the 16th of November 1093, at the comparatively early age of forty-seven. She was canonized by Pope Innocent IV in 1251, but in the end of the seventeenth century, her festival was removed by the orders of Innocent XII, from the day of her death to the 10th of June. She was interred in the church of the Holy Trinity, at Dunfermline, which she had founded, and which, upwards of two hundred years afterwards, received the corpse of the great King Robert. At the Reformation, the remains of Queen Margaret and her husband were conveyed privately by some adherents of the old religion to Spain, and deposited in a chapel which King Philip II built for their reception, in the palace of the Escorial. Here their tomb is said still to be seen, with the inscription: 'St Malcolm, King, and St Margaret, Queen.' The head of Queen Margaret, however, is stated to be now deposited in the church of the Scots Jesuits, at Douay.

MR WOMBWELL.

As a celebrity of his kind, George Wombwell deserves notice both for his own untiring industry and skill, and the prominence with which, for a long series of years, his name was familiar to the public, and more especially to the juvenile branches of the community. When a boy, he shewed great fondness for keeping birds, rabbits, dogs, and other animals, but the circumstance which led to his becoming the proprietor of a menagerie was for the most part accidental. A shoemaker by trade, and keeping a shop in Soho, he happened one day to pay a visit to the London Docks, where he saw some of the first boa constrictors which had been imported into England. These reptiles had then no great favour with showmen, as much from fear as ignorance of the art of managing them, and their success was in consequence of his celebrity afterwards became. Wombwell purchased a pair for £75, and in the course of three weeks realised considerably more than that sum by their exhibition. He used afterwards to declare, that he entertained rather a partiality for the serpent tribe, as they had been the means of first opening his path to fame and fortune. Stimulated by the success thus achieved, he commenced his celebrated caravan pilgrimages through the United Kingdom, visiting all the great fairs, such as those of Nottingham, Birmingham, Glasgow, and Donnybrook. In time, he amassed a handsome independence, but could never be prevailed on to retire to the enjoyment of ease and affluence, and he died, as he had lived, in harness. Neither did he ever abandon the closest attention to all matters connected with the menagerie, and might often be seen scrubbing and working away, as indefatigably as the humblest servant attached to the establishment. At the time of his death, Wombwell was possessed of three huge menageries, which travelled through different parts of the country, and comprised a magnificent collection of animals, many of them bred and reared by the proprietor himself. The cost of maintaining these establishments averaged at least £25 a day. The losses accruing from mortality and disease form a serious risk in the conduct of a menagerie, and Wombwell used to estimate that from this cause he had lost, from first to last, from £12,000 to £15,000. A fine ostrich, valued at £200, one day pushed his bill through the bars of his cage, and in attempting to withdraw it, broke his neck. Monkeys, likewise, frequently entailed great loss from their susceptibility to cold, which frequently, as in the case of human beings, cut them off by terminating in consumption. As regards the commercial value of wild beasts, we are informed that tigers have sometimes been sold as high as £300, and at other times might be had for £100. A good panther is worth £100, whilst hyenas range from £20 to £40 each, and zebras from £150 to £300. We suspect that the profits of menagerie proprietors are at the present day considerably curtailed, when the establishment of zoological gardens, and the general declension of fairs and shows in the popular estimation, must have sensibly diminished the numbers of persons who used to flock to these exhibitions.
NOVEMBER 17.

St Dionysius, archbishop of Alexandria, confessor, 265. St Gregory Thaumaturgus, bishop and confessor, 270. St Anian or Agnian, bishop of Orleans, confessor, 448. St Gregory, bishop of Tours, confessor, 699. St Hugh, bishop of Lincoln, confessor, 1250.

SIR JOHN MANDEVILLE.

On 17th November 1372, died at Liège the celebrated Sir John Mandeville or De Mandeville, who may be allowed to take rank as the father of English travellers, and the first in point of time, of that extended array of writers, who have made known to their countrymen, by personal inspection, the regions and peoples of the distant East. The ground traversed by him was nearly similar to that journeyed over in the previous century by the celebrated Venetian, Marco Polo, whose descriptions, however, of the countries which he visited must be admitted to be both much fuller and consonant to truth than those of his English successor. Whilst the Italian traveller restricts himself, in the main at least, to such statements as he was warranted in making, either as eye-witnesses of the circumstances described, or as communicated to him by trustworthy authorities, it is to be regretted that a great portion of Sir John Mandeville’s work is made up of absurd and incredible stories regarding oriental productions and manners, which he has adopted without question, and incorporated into his book, from all sources of legendary information, classic, popular, and otherwise. Yet after carefully winnowing the chaff from the wheat, there remains much curious and interesting matter, which may be accepted as presenting a correct picture of Eastern Asia in the fourteenth century, as it appeared to a European and Englishman of the day. Even the purely romantic and legendary statements in the narrative have their value as illustrating the general ideas prevalent in medieval times on the subject of oriental countries. Many of these travellers’ wonders, so familiar to all who have read (and who has not in his childhood?) Sir Walter Scott, will be found referred to in the work of Sir John Mandeville.

Of the history of this enterprising traveller we know little beyond what he himself informs us in the introduction to his narrative. From this, and one or two other sources, we learn that he was born at St Albans, in Hertfordshire, about 1300; devoted himself to mathematics, theology, and medicine (rather a heterogeneous assemblage of studies), and for some time followed the profession of a physician. This last occupation he abandoned for it for a very short time, and in 1322, he started on an eastern tour, the motives for which seem to have been principally the love of adventure, and desire of seeing strange countries, and above all others, the Holy Land, regarding which the recent fervour of the Crusades had excited an ardent interest in Western Europe. On Michaelmas-day, 1323, he quitted England on his travels, proceeding in the first instance to Egypt, into the service of whose sultan he entered, and fought for him in various campaigns against the Bedouin Arabs. He succeeded in ingratiating himself considerably with his employer, who, according to Mandeville’s account, thus testified his sense of the Englishman’s merits.

‘And he would have marryed me full highly to a great princes daughter, gif that I would have forsaken my law and my beleve. But, I thank God, I had no wille to do it, for nothing that he behighten me.’

From Egypt Sir John proceeded to the Holy Land, and from thence continued his peregrinations till he reached the dominions of the great Khan of Tartary, a descendant of the celebrated Genghis, whose sovereignty extended over the greater part of Central and Eastern Asia, including the northern provinces of China or Cathay, as it was then termed by Europeans. Under his banners Mandeville took service, and fought in his wars with the king of Manci, whose territories seem to have corresponded to the southern division of the Celestial Empire. He appears subsequently to have travelled over the greater part of the continent of Asia, and also to have visited some of the East Indian Islands. The kingdom of Persia is described by him, and also the dominions of that celebrated medieval, and semi-mythical potentate, Prester John, whom from Mandeville’s account we would infer to have been one of the princes of India, whilst other chroniclers seem to point to the sovereign of Abyssinia.

After an absence of nearly thirty-four years, Sir John returned to his native country, and published an account of the regions visited by him in the East, which he dedicated to Edward III. It is to be regretted that in this there is so little personal narrative given, all reference to his own adventures being nearly comprised in the meagre and unsatisfactory statements which we have above furnished. Subsequently to its publication, Sir John seems to have gone again abroad on his travels, but the history of his latter days is very obscure. All that can be definitely ascertained is, that he died at Liège, in Belgium, and was buried in a convent in that town.

A manuscript of Sir John Mandeville’s travels, belonging to the fourteenth century, is preserved in the Cottonian collection in the British Museum. The first printed English edition was that issued from the Westminster press in 1496, by Wyclif de Worsa. During the fourteenth and fifteenth centuries, the work enjoyed a great reputation, second only to Marco Polo’s, as an authority on all questions of oriental geography, and was translated into several languages.
Queen Elizabeth's Day.

Violent political and religious excitement characterised the close of the reign of King Charles II. The unconstitutional acts of that sovereign, and the avowed tendency of his brother toward the Church of Rome, made thoughtful men uneasy for the future peace of the country, and excited the populace to the utmost degree. It had been usual to observe the anniversary of the accession of Queen Elizabeth with rejoicings; and hence the 17th of November was popularly known as 'Queen Elizabeth's Day,' but after the great fire, these rejoicings were converted into a satirical saturnalia of the most turbulent kind. The Popish Plot, the Meal-tub Plot, and the murder of Sir Edmund Godfrey, had excited the populace to anti-papistical demonstrations, which were fostered by many men of the higher class, who were members of political and Protestant clubs. Roger North, who lived in these turbulent times, says that the Earl of Shaftesbury was the prime mover in all that opposed the court-party, and the head of the Green Ribbon Club, who held their meetings at the 'King's Head Tavern,' at the corner of Chancery Lane. They obtained a rope from the green ribbon worn in their hats, to distinguish them in any street-engagement from clubbists of an opposite party. North says, 'this copious society were a sort of executive power in and about London; and by correspondence, all over England.' They organised and paid for the great ceremonial processions and pope-burnings that characterised the years 1679-1681, and which were well calculated to keep up popular excitement, and infame the minds of the most peaceable citizens.

From the rare pamphlet, London's Defiance to Rome, which describes the magnificent procession and solemn burning of the pope at Temple Bar, November 17, 1679, we learn that 'the bells generally about the town began to ring about three o'clock in the morning;' but the great procession was deferred till the whole was attended with one hundred and fifty flambeaux and lights, by order; but so many more came in volunteers, as made up some thousands. . . . At the approach of evening (all things being in readiness), the solemn procession began, setting forth from Moorgate, and so passing first to Aldgate, and thence through Leadenhall Street, by the Royal Exchange through Cheapside, and so to Temple Bar. Never were the balconies, windows, and houses more numerous lined, or the streets closer thronged, with multitudes of people, all expressing their abhorrence of popery with continued shouts and exclamations, so that 'tis modestly computed that, in the whole progress, there could not be fewer than two hundred thousand spectators. The way was cleared by six platoon-men in caps and red waistcoats, followed by a bellman bearing his lantern and staff, and ringing his bell, crying out all the way in a loud but dolesome voice: 'Remember Justice Godfrey!' He was followed by a man on horseback, dressed like a Jesuit, carrying a dead body before him, 'representing Justice Godfrey, in like manner as he was carried by the assassins to Primrose Hill.' We copy from a very rare print of the period, this, the most exciting part of the evening's display. Godfrey was a London magis-

Procession on 17th Nov. 1679 commemorative of the murder of Sir Edmund Godfrey.

sword run through his body, to make it appear that by falling upon it intentionally, he had committed suicide; but wounds in other parts of his person, and undeniable marks of strangulation, testified the truth. There was little need for a bellman to recall this dark deed to the remembrance of the Londoners. The excitement was increased by another performer in the procession, habited as a priest, 'giving pardons very plentifully to all those that should murder Protestants, and proclaiming that mortalium.' He was followed by a train of other priests, and 'six Jesuits with bloody daggers;' then, by way of relief, came 'a consort of wind-music.' This was succeeded by a long array of Catholic church dignitaries, ending with the pope, in a lofty glorious pageant, representing a chair of state, covered with scarlet, richly embroidered and fringed, and bedecked with golden balls and crosses.' At his feet were two boys with censors, at his back his holiness's proxy-custos (the degraded scaramouch, Anglico, the devil), frequently caressing, hugging, and whispering him, and oftimes instructing him aloud to destroy his majesty, to forge a Protestant plot, and to fire the city again, to which purpose he held an infernal torch in his hand.' When the procession reached the foot of Chancery Lane, in Fleets Street, it came to a stop; then having entertained the thronging spectators for some time with the ingenious fireworks, a vast bonfire being prepared just over against the Inner Temple gate, his holiness, after some compliments and relucances, was decently toppled from all his grandeur into the flames.' This concluding fest was greeted by a prodigious shout, that might be heard far beyond Somerset House, where the Queen Catharine was lodged at that time, but the ultra-Protestant author of this pamphlet, anxious to make the most of the public lungs, declares 'twas believed the echo, by continued reverberations before it ceased, reached Scotland, France, and even Rome itself, damping them all with a dreadful astonishment.'

This show proved so immensely popular, that it was reproduced next year, with additional political pageantry. Justice Godfrey, of course, was there, but Mrs Colliers and the Meal-tub figured also,
accompanied by four Protestants, 'in bipartite garments of black and white,' to indicate their trimming vaccination; followed by a man bearing a banner, on which was inscribed, 'We Protestants in Masquerade usher in Popery.' Then came a large display of priests and clerical dignitaries, winding up with the pope, represented with his foot on the neck of the Emperor Frederick of Germany. After him came Donna Olimpia, and nuns of questionable character; the procession concluding with a scene of the trial, and execution by burning, of a heretic. This procession was also 'lively represented to the eye on a copper-plate,' and we copy as much of it as depicts the doings in Fleet Street, from Temple Bar to Chancery Lane. At the corner of the lane is the King's Head Tavern, the rendezvous of the Green Ribbon Club, agreeing exactly with North's description: 'This house was doubly balconied in the front for the clubsters to issue forth in fresco, with hats and no perukes; pipes in their mouths, merry faces, and dilated throats for vocal encouragement of theconcept below, at the bonfires.' From this house to the Temple Gate, lines cross the street for fireworks to pass. The scene is depicted at the moment when the effigy of the pope is pushed from his chair of state into the huge bonfire below, as if in judgment for the fate of the Protestant who is condemned to the stake in the pageant behind him. North speaks of the numerous platoons and volleys of squibs discharged 'amid shouts that 'might have been a cure of deafness itself.' Dryden alludes to the popularity of the show in the epilogue to his Cid, when, after declaring he has done his best to entertain the public, he adds:

'We know not what you can desire or hope, To please you more, but burning of a pope!'

In the Letters to and from the Earl of Derby, he recounts his visit to this pope-burning, in company with a French gentleman who had a curiosity to see it. The earl says: 'I carried him within Temple Bar to a friend's house of mine, where he saw the show and the great concourse of people, which was very great at that time, to his great amusement. At my return, he seemed frightened that somebody that had been in the room had known him, for then he might have been in some danger, for had the mob had the least intimation of him, they had torn him to pieces. He wondered when I told him no manner of mischief was done, not so much as a head broke; but in three or four hours were all quiet as at other times.' In 1689, the court professed great alarm lest some serious riots should result from these celebrations, and required the mayor to suppress them; but the civic magnates declined to interfere, and the show took place as usual. The following year it was announced that the pageantry should be grander than ever, but the mayor was now the nominee of the king,* and effectually suppressed the display, patrolling all the streets with officers till midnight, and having the City trained-bands in reserve in the Exchange, and a company of Horse Guards on the other side of Temple Bar. 'Thus ended these Diavolarii,' says Roger North.

Under somewhat similar excitement, an attempt was made in the reign of Queen Anne to reproduce these inflammatory processions and pageants. The strong feeling engendered by the claims of the High-church party under Dr Sacheverell, and fears entertained of the Pretender, led their opponents to this course. The pageants were constructed, and the procession arranged; but the secretary of state interfered, seized the stuffed figures, and prevented the display. It was intended to open the procession with twenty watchmen, and as many more link-boys; to be followed by bagpipers playing Lilliburlero, drummers with the pope's arms in mourning, 'a figure representing Cardinal Gualteri, lately made by the Pretender Protector of the English nation, looking down on the ground in a sorrowful posture.' Then came burlesque representatives of the Romish officials; standard-bearers 'with the pictures of the seven bishops who were sent to the Tower; twelve monks representing the Fellows who were put into Magdalen College, Oxford, on the expulsion of the Protestants by James II.' These were succeeded by a number of friars, Jesuits, and cardinals; lastly came 'the pope under a magnificent canopy, with

* Charles had suspended the City charter, and the mayor—Sir John Moore—was a mere tool of the court, not elected by the citizens, but placed in office by the king.
Sir Henry Lee, accompanied by the Chevalier St George on the left, and his counsellor the Devil on the right. The whole procession cloe'd by twenty men bearing streamers, on each of which was wrought these words:

"God bless Queen Anne, the nation's great defender!
Keep out the French, the Pope, and the Pretender."

"After the proper ditties were sung, the Pretender was to have been committed to the flames, being first absolved by the Cardinal Gualteri. After that, the said cardinal was to have been absolved by the Pope, and burned. And then the devil was to jump into the flames with his holiness in his arms." The very proper suppression of all this absurd profanity was construed into a ministerial plot against the Hanoverian succession. The accession of George I, a few years afterwards, quieted the fears of the nation, and 'Queen Elizabeth's Day' ceased to be made a riotous political anniversary.

---

Sir Henry Lee.

At a tournament held on the 17th November 1699, the first anniversary of the accession of Queen Elizabeth to the throne, Sir Henry Lee, of Quarendon, made a vow of chivalry, that he would, annually, on the return of that auspicious day, present himself in the tilt-yard, in honour of the queen; to maintain her beauty, worth, and dignity, against all-comers, unless prevented by age, infirmity, or other accident. Elizabeth having graciously accepted Sir Henry as her knight and champion, the nobility and gentry of the court, incited by so worthy an example, formed themselves into an honourable society of Knights Tilteurs, which, yearly assembling in arms, held a grand tourney on each successive 17th of November. In 1690, Sir Henry, feeling himself overtaken by age, resigned his assumed office of Queen's Knight, having previously received her majesty's permission to appoint the famous Earl of Cumberland as his successor. The resignation was conducted with all due ceremony. The queen being seated in the gallery, with Viscount Turenne, the French ambassador, the Knights Tilteurs rode slowly into the tilt-yard, to the sound of sweet music. Then, as if sprung out of the earth, appeared a pavilion of white silk, representing the sacred temple of Vesta. In this temple was an altar, covered with a cloth of gold, on which burned wax candles, in rich candlesticks. Certain princely presents were also on the altar, which were handed to the queen by three young ladies, in the character of vestals. Then the royal choir, under the leadership of Mr Hales, sang the following verses, as Sir Henry Lee's farewell to the court:

590

'My golden locks, time hath to silver turned,
(Oh time too swift, and swiftness never ceasing).
My youth 'gainst age, and age at youth have spurned;
But spurned in vain, youth waneth by increasing.
Beauty, strength, and youth, flowers fading beauteous,
Duty, faith, and love, are roots and ever green.'
SIR HENRY LEE.

My helmet, now, shall make a hive for bees,  
And lover's songs shall turn to holy psalms:  
A man-at-arms must now sit on his knees,  
And feed on prayers, that are old age's alma.  
And so, from court to cottage, I depart,  
My saint is sure of mine unperturbed heart.

And when I sadly sit in homely cell,  
I'll teach my swains this carol for a song,  
Blest be the hearts, that think my sovereign well,  
Cursed be the souls, that think to do her wrong.  
Goddess vouchsafe this aged man his right,  
To be your beardman, now, that was your knight.

After this had been sung, Sir Henry took off his armour, placing it at the foot of a crowned pillar, bearing the initials E.R. Then kneeling, he presented the Earl of Cumberland to the queen, beseeching that she would accept that nobleman for her knight. Her majesty consenting, Sir Henry armed the earl and mounted him on horseback; he then arrayed himself in a peaceful garb of black velvet, covering his head with a common buttoned cap of country fashion.

At Ditchley, a former seat of the Lees, Earls of Litchfield, collateral descendants of Queen Elizabeth's knight, there was a curious painting of Sir Henry and his dog, with the motto, 'More Faithful than Favoured.' The traditional account of this picture, a copy of which is here engraved, is that Sir Henry, on retiring to rest one night, was followed to his bedroom by the dog. The animal, being deemed an intruder, was at once turned out of the room; but howled and scratched at the door so piteously that Sir Henry, for the sake of peace, gave it readmission, when it crept underneath the bed. After midnight, a treacherous servant, making his way into the room, was seized and pinned to the ground by the watchful dog. An alarm being given, and lights brought, the terrified wretch confessed that his object was to kill Sir Henry and rob the house. In commemoration of the event, Sir Henry had the portrait painted, as a monument of the gratitude of the master, the ingratitude of the servant, and the fidelity of the dog. It is very possible that this anecdote and picture may have given rise to the well-known story of a gentleman rescued from murder, at a lonely inn, by the fidelity and intelligence of his dog, who, by preventing him from getting into bed, induced him to suspect some treacherous design on the part of his landlord, who, at midnight, with his accomplices, ascended through a trap-door in the floor of the apartment, but were discomfited and slain by the gentleman, with the aid of the faithful animal.

Sir Henry died at the age of eighty, in the year 1611. About fifty years ago, his epitaph could still be deciphered in the then ruined chapel of Quarendon, in Buckinghamshire.

November 18.

BORN.—Pierre Bayle, celebrated critic and controversial writer, author of Dictionnaire Historique et Critique, 1647; Carlo-en-Comté, Foix; Sir David Wilkie, painter, 1785; Manse of Culca, Fifehire.

Died.—Cardinal Reginald Pole, eminent ecclesiastic, 1656; Othbert Tunstall, bishop of Durham, 1559; Jacob Bohme, or Böhm, celebrated mystic writer, 1624; Albrecht Seidenberg, Upper Luatia; Dr T. F. Dibdin, author of numerous bibliographical works, 1847; Charles Heath, line-engraver, 1848; Captain George William Manby, inventor of apparatus for saving life in shipwrecks, 1854, near Yarmouth; Professor Edward Forbes, eminent naturalist, 1854; Edinburgh; Frank Stone, artist, 1859.

CARDINAL POLE.

Cardinal Pole was, among many such, the most remarkable man of his time. The unyielding uprightness with which he preserved his conduct true to his convictions, made him many enemies among those he opposed. By his faithful and energetic adherence, during the reigns of Henry and Edward, to the papal see, even, as it must have seemed to many, at the expense of the liberty of his country, as well as by the active share which he took in the retrogressive measures of Mary, he rendered himself unpopular with the English people. But ever adhering to the nobility of his birth, with the additional lustre of nobility of mind, he merited respect by his singular learning, his purity of conscience, his uniform consistency, his genuine piety, and the most refined and amiable manners.

Reginald Pole was the son of Richard Pole, Lord Montague, cousin-german to Henry VII.; his mother was Margaret, daughter of George, Duke of Clarence, brother to Edward IV. Born in 1560, he was educated for the church from his earliest years, first by the Carthusians, at Sheen, in Surrey, and afterwards by the Carmelites of Whitefriars. He entered Magdalen College, Oxford, as a nobleman, at the age of twelve. He early obtained various preferments, among others the Deanery of Exeter. He resided abroad several years, under Henry VIII.'s patronage; after the restoration of England, he retired into seclusion to prosecute, uninterrupted, his devotional studies.

Pole's first great trial was his rupture with Henry. After fruitless endeavours, often renewed on the king's part, to induce the churchman to acquiesce in Catherine's divorce, and the rejection of the papal supremacy, and equally vain attempts, and as often reiterated on the side of Pole, to avoid coming to any decision, he was finally induced to declare his opinion, and as he expressed it fully, with the utmost honesty, and with considerable eloquence, he was duly placed under ban, and a price set on his head. Pole kept clear of the danger, and Henry had to content himself with depriving him of all his prefersments, and his two brothers and aged mother of their lives.

In the same proportion as the positions of Henry were alienated from the uncompromising counsellor, the Roman see took him into favour. He was created a cardinal, and employed on several important trusts. He actively exerted himself in the formation of a league which should have for its object the restoration of England to the Catholic faith; and, in 1546, along with two other cardinals, he represented the pope at the Council of Trent. In 1549, Pole was elected to the popedom; but as
the election was tumultuous, he refused to accept its decision. Upon this the conclave proceeded to elect him again, and this decision also, somewhat arrogantly, he set aside, saying: 'God was a God of light and not of darkness;' and bidding them wait for the morning. The Italians, disconcerted, proceeded once more to an election, and this time the friends of the cardinal were outvoted.

Soon after this, Pole obtained leave to retire from all public offices; but Mary succeeding to the English throne, he accepted the appointment of legate to her court; and being at once freed by parliament from the charge of treason, on which he had been banished, took his seat in the House of Peers. He applied himself with zeal to the furtherance of that cause to which he had always firmly clung, and saw his efforts successful. How far he was instrumental in promoting the cruel persecutions which have invested the reign of Mary with such horror, cannot now be very clearly ascertained, but the general mildness and rectitude of his character warrant us in forming the belief that these atrocities met, at least on his part, with no zealous encouragement.

Owing to the success Cranmer as archbishop of Canterbury, endeavoured to hinder Pole from obtaining the vacant office; but dying in the midst of his schemes, the cardinal was consecrated soon afterwards, in February 1556. The reigning pope opposed Pole's promotion, but the queen's support rendered the opposition futile. Brighter times seemed to await him. But falling sick, he only survived to receive the, to him, fatal news of the death of Mary, and followed his mistress in the space of sixteen hours.

Pole was buried at Canterbury. His funeral was magnificent, but his epitaph was humble, being only: "Deo resistente postea."
but Böhme had an answer for them all. The elector was so pleased with his demeanour, that he led Böhme aside, and sought from him some information for himself. One of the examiners, Dr Meisner, is reported to have said: 'Who knows but God may have designed him for some extraordinary work? And how can we, with justice, pass judgment against what we understand not? Certainly he seems to be a man of wonderful gifts in the Spirit, though we cannot at present, from any sure ground, approve or disapprove of many things he holds.' After this trial and charitable acquittal, Böhme returned to Görlitz, where he died on Sunday, 18th November 1624. Early in the morning of that day, he called his son Tobias, and asked him whether he did not hear sweet music. Tobias said, 'No.' Then said Böhme: 'Open the door, that you may hear it.' In the afternoon he asked the time, and was told three o'clock. 'My time,' he said, 'is not yet; three hours hence is my time.' When it was near six, he took leave of his wife and son, blessed them, and said: 'Now I go hence into paradise!' and bidding his son turn him, he heaved a sigh, and departed.

Böhme was a little man, withered, and with almost a mean aspect. His forehead was low, and his temples prominent; his nose was large and hooked, his eyes blue and quick, his beard short and scanty, his voice thin and gentle, and his speech and manners modest and pleasing. His writings are voluminous, but they were nearly all composed in the last seven years of his life. They form a wonderful mélange of alchemy, astrology, soothsaying, theology, and mystical conceptions concerning things supernatural and infernal. He wrote slowly, but steadily, and without revision, and his style is diffuse, inmethodical, and obscure. The verdict of a cursory reader of Böhme is commonly one of perplexity or disgust, yet he has never lacked patient students, who have professed to find in his pages a wisdom as profound as unique. Amongst these have been many Germans, and in latter days, Schelling, Hegel, Frederick Schlegel, Novalis, and Tieck. In England, William Law, the author of A Serious Call to a Devout and Holy Life, was an ardent disciple of Böhme's, and Henry More, the Platonist, and Sir Isaac Newton, were his reverent admirers. Böhme's works have been translated from the German into Dutch, French, and English, but have long ago ceased to be printed; nevertheless, there exists a demand for them, and second-hand booksellers have seldom one of his volumes long in stock.

Sir David Brewster, in his Life of Sir Isaac Newton, observes that Newton, at one period of his life, was a believer in alchemy, and devoted much time to the study and practice of its processes. The Rev. William Law has stated that there were found among Sir Isaac's papers large extracts from Jacob Böhme's works, written with his own hand; and that he had learned, from uncollatable authority, that Newton, in the early part of his life, had been led into a search for the Philosopher's Tincture, treated of by Böhme. It would appear that Sir Isaac actually set up furnaces, and spent several months in quest of the tincture.

A LADY'S FACE ADORNED WITH PATCHES (TEMP. CHARLES I.)
FROM FAIRHOLT'S 'COSTUMES IN ENGLAND.'

is well if one black patch will serve to make their faces remarkable, for some fill their visages full of them, varied into all manner of shapes.' He gives a cut (which we copy) of a lady's face patched

* See notice of 'The Man in the Iron Mask' at page 60 of this volume.
† The fashion was common with the Roman dames in the latter days of the Empire.
in the then fashionable style, of which it might well be sung—

'Her patches are of every cut,
Every sort, round, square, or flat.
Here's all the wandering planets' signs,
And some of the fixed stars.'

The coach-and-horses patch was an especial favourite. The author of England's Vanity (1583) is quoted thereby into a kind of grim humour:

'Methinks the mourning-coach and horses all in black, and plying on their foreheads, stands ready harnessed to whirl them to Acheron, though I pity poor Charon for the darkness of the night, since: the moon on the cheek is all in eclipse, and the poor stars on the temples are clouded in sable, and no comfort left him but the lozenges on the chin, which, if he please, may pick off for his cold.'

Mr Pepys has duly recorded his wife's first appearance in patches, which seems to have taken place without his concurrence, as three months after this he makes an entry in his Diary: 'My wife seemed very pretty to-day, it being the first time I had given her leave to wear a black patch.' And a week or two later, he declares that his wife, with two or three patches, looked far handsomer than the Princess Henrietta. Lady Castlemaine, whose word was law, decreed that patches could not not be worn with mourning; but they seem to have been held proper on all other occasions, being worn in the afternoon at the theatre, in the parks in the evening, and in the drawing-room at night. Puritanical satirists, of course, did not leave the fair patchers unmolested. One Smith printed An Invective against Black Spotted Faces, in which he warned them:

'Hellgate is open day and night
To such as in black spots delight.
If pride their faces spotted make,
For pride then hell their souls will take.
If folly be the cause of it,
Let simple fools then learn more wit.
Black spots and patches on the face
To some women bring disease.
Lewd harlots by such spots are known,
Let harlots then enjoy their own.'

Fashion, however, as usual, was proof against the assaults of rhyme or reason, and spite of both, the ladies continued to cover their faces with black spots. When party-feeling ran high in the days of Anne, we have it on the Spectator's authority, that politically-minded dames used their patches as party symbols: the Whigs patching on the right, and the Tories on the left side of their faces, while those who were neutral, decorated both cheeks. The censorious say that the men whose hearts are aimed at, are very often the occasion that one part of the face is thus dishonoured and lies under a kind of disgrace, while the other is so much set-off and adorned by the owner; and that the patches turn to the right or to the left according to the principles of the man who is most in favour. But whatever may be the motives of a few fantastic coquettes, who do not patch for the public good so much as for their own private advantage, it is certain that there are several women of honour who patch out of principle, and with an eye to the interests of their country. Nay, I am informed that some of them adhere so steadfastly to their party and are so far from sacrificing their zeal for the public to their passion for any particular person, that in a late draught of marriage-articles, a lady has stipulated with her husband that whatever his opinions are, she shall be at liberty to patch on which side she pleases.'

'This was written in 1711, and in 1764 the patch was not only still in existence, but threatening to overwhelm the female face altogether. A writer in the World for that year says: 'Though I have seen with patience the cap diminishing to the size of a patch, I have not with the same unconcern observed the patch enlarging itself to the size of a cap. It is with great sorrow that I already see it in possession of that beautiful mass of blue which borders upon the eye. Should it increase on the side of that exquisite feature, what an eclipse have we to dread! but surely it is to be hoped the ladies will not give up that place to a plaster, which the brightest jewel in the universe would want lustre to supply. And if one man find it difficult to wean themselves from patches all at once, shall be allowed to wear them in whatever number, size, or figure they please, on such parts of the body as are, or should be, most covered from sight. And any lady who prefers the simplicity of such ornaments to the glare of her jewels, shall, upon disposing of the said jewels for the benefit of the foundling hospital, be permitted to wear as many patches on her face as she has contributed hundreds of pounds to so laudable a benefaction, and so the public be benefited, and patches, though not ornamental, be honourable to see.'

This valuable suggestion was lost upon the sex, for Anstey enumerates

'Velvet patches à la grecque,' among a fine lady's necessities in 1766; they seem, however, to have fallen from their high estate towards the beginning of the present century, for the books of fashion of that period make no allusion to them whatever, but they did not become utterly extinct even then. A writer in 1826, describing the toilet-table of a Roman lady, says: 'It looks nearly like that of our modern belles, all loaded with jewels, bodkins, false hair, fillets, ribbons, washes, and patchboxes; and the present generation may possibly witness a revival of the fashion, as it has witnessed, on other occasions, of the ridiculous, ungraceful, intrusive hoop-petticoat.'

Long as patching lasted, it was but a thing of a day compared with the more reprehensible custom of painting—a custom common to all ages, and pretty nearly all countries, since Zezebel "painted her face and tired her head and looked out at a window," as the avenging Jehu entered in at the gate. There is evidence of Englishwomen using paint as early as the fourteenth century, and the practice seems to have been common when Shakespeare tried his 'prentice hand on the drama. In his Love's Labour's Lost, he makes the witty Biron ingeniously defend his dark lady-love—

'If in black my lady's brow be decked,
It mourns that painting and usurping hair,
Should rival dotes with a falscly fair;
And therefore is she born to make black fair.
Her favour turns the fashion of the days;
For native blood is counted painting now;
And therefore red that would avoid displeasure,
Paints itself black to imitate her brow.'
And when bitter Philip Stubbs complains that his countrywomen are not contented with a face of heaven's making, but must ‘sacratete the Lord's workmanship' with far-fetched, dear-bought trumpery, and cosmetics, the worthy Puritan only echoes Hamlet's reproach: 'I have heard of your paintings too, well enough. God hath given you one face, and you make yourselves another.' When Sir John Harrington declared he would rather salute a lady's glove than her lip or her cheek, he justified his seeming bad taste with the rhyme—

‘If with my reason you would be acquainted,
Your gloves perfumed, your lip and cheek are painted.'

Overbury describes a lady of the period as reading her face in the glass every morning, while her maid stood by ready to write 'red' here, and blot out 'pale' there, till art had done its best or worst. No wonder the Steadfast Shepherd exclaims:

'Shew me not a painted beauty,
Such impostures I defy!'

Court-ladies, nevertheless, continued to wear artificial red and white, till the court itself was banished from England.

As long as the Commonwealth existed, no respectable woman dared to paint her cheeks; but Charles II. had not been a year at Whitehall, before the practice was revived, to the disgust of Evelyn and the discontent of Pepys. The latter vows he loathes Nelly Gwyn and Mrs Knipp (two of his especial favourites), and hates his relative, pretty Mrs Pierce, for putting red on their faces. Bulwer says: 'Sometimes they think they have too much colour, then they use art to make them pale and fair; now they have too little colour, then Spanish paper, red-leather, or other cosmetic rubries must be had.' A little further on he accuses the gallants of beginning 'to vie patches and beauty spots, nay, painting, with the tender and fantastical ladies.' Among these fantastical dames, we are sorry to say, Waller's Saccharissa must be numbered. The poet complains—

'Pygmalion's fate reversed is mine;
His marble took both flesh and blood;
All that I worshipped as divine,
That beauty—now 'tis understood,
Appears to have no more of life
Than that whereof he framed his wife.'

Saccharissa deserved the reproaches of her lover more than Mary of Modena did the rebukes of her consort, for she rouged, contrary to her own inclination, merely to please her husband.

Painting flourished under Anne. An unfortunate husband writes to the Spectator in 1711, asking, if it be the law that a man marrying a woman, and finding her not to be the woman he intended to marry, can have a separation, and whether his case does not come within the meaning of the statute. 'Not to keep you in suspense,' he says; 'as for my dear, never man was so enamoured as I was of her fair forehead, neck, and arms, as well as the bright jet of her hair; but to my great astonishment, I found they were all the effect of art. Her skin is so tarnished with this practice, that when she first wakes in a morning, she scarce seems young enough to be the mother of her whom I carried to bed the night before. I shall take the liberty to part with her by the first opportunity, unless her father will make her portion suitable to her real, not her assumed countenance.' The Spectator enters thereupon into a description of the Picts, as he calls the painted ladies. 'The Picts, though never so beautiful, have dead, uninformed countenances. The muscles of a real face sometimes work with soft passions, sudden surprises, and are flushed with agreeable confusions, according as the object before them, or the ideas presented to them, affect their imaginations. But the Picts behold all things with the same air, whether they are joyful or sad; the same fixed insensibility appears on all occasions. A Pict, though she takes all that pains to invite the approach of lovers, is obliged to keep them at a certain distance; a sigh in a languishing lover, if fetched too near, would dissolve a feature; and a kiss snatched by a forward one, might transform the complexion of the mistress to the admirer. It is hard to speak of these false fair ones without saying something uncomplaisant, but it would only recommend them to consider how they like coming into a room newly painted; they may assure themselves the near approach of a lady who uses this practice is much more offensive.'

If Walpole is to be believed, Lady Mary Wortley Montagu not only used the cheapest white paint she could get, but kept it on her skin so long, that it was obliged to be wraped off her. More than one belle of his time killed herself with painting, like beautiful Lady Coventry, whose husband used to chase her round the dinner-table, that he might remove the obnoxious colour with a napkin! Would that we could say that rouge, pearl-powder, and the whole tribe of cosmetics were strangers to the toilet-tables of our own day—a glance at the shop-window of a fashionable perfumer forbids us laying the flatteringunction to our soul, that ladies no longer strive to

'With curious arts dim charms revive,
And triumph in the bloom of fifty-five;
and tempts us, in the words of an old author, to an exclam: 'From beef without mustard, from a servant who overvalues himself, and from a woman who painteth herself, good Lord, deliver us!'

NOVEMBER 20.

Born.—Jean Francois de la Harpe, miscellaneous writer (Loye ou Cours de la Littérature); Thomas Chatterton, poet, 1752; Bristol; Louis Alexandre Berthier, Prince of Wagram, general of Napoleon, 1758, Versailles.

Died.—Sir Christopher Hatton, statesman and courtier of Queen Elizabeth, 1601; Caroline, queen of George II. of England, 1787; Cardinal de Polignac, statesman and dean of letters, 1741, France; Alfred Tucker, author of The Light of Nature Pursued, 1774, Betchworth Castle, near Dorking; Roger Payne, celebrated bookbinder, 1797; Mountstuart Elphinstone, Indian diplomatist, 8a., 1859, Hookeward Park, Surrey.
THE CAPE OF GOOD HOPE DOUBLED.

VASCOS DA GAMA.

The doubling of the Cape of Good Hope by Vasco da Gama, on the 20th of November 1497, was a notable event in the world's history—not on account of the actual discovery of that cape, which had been made some years earlier, but from the solution of an important question, whether or not India could be reached from Europe by sea. Columbus, we know, sought to reach that far-famed land of gold and diamonds, perfumes and spices, by a western route across the Atlantic. He discovered America instead, and those islands, which we now call the West Indies, owe their name to the geographical error which formerly prevailed regarding their position. The Spanish monarchs, who first fostered and then neglected Columbus, countenanced those projects which led to the discovery, conquest, and settlement of various parts of America, but the kings of Portugal, some years after this, perceived the enterprising voyages by which South Africa and India were laid open to Europeans.

With the assistance of a map of Africa, the reader can easily trace the steps by which these discoveries were effected. In the year 1412, Prince Henry of Portugal, a man gifted far beyond the average intelligence of his age, determined to send out a ship to explore the west coast of Africa, by sailing southward from the Straits of Gibraltar. The first voyage was not attended with much success; but the prince pursued the scheme at intervals for many years. In 1415, one of the exploring vessels thus sent out reached as far as Cape Non. In 1418, John Gonzalez Zano and Tristan Vaz Teixeira, two gentlemen of Prince Henry's court, made a voyage which enabled them to discover the island of Madeira. After a period of several years, marked by discoveries of a minor character, Gillianes doubled Cape Bojador in 1433—an event which led Pope Martin V., in the plenitude of liberalities and inducements, to bestow on the king of Portugal all that might be afterwards discovered in Africa and India; a papal concession that gave rise to serious international disputes in after-days. In 1441, Antonio Gonzales and Nuno Tristao reached as far as Cape Blanco. This progress was followed by Vicente de Lagos and Aloisio de Cada Mosto, who, in 1444, advanced to the river Gambia, and by Cada Mosto, who, in 1446, reached Senegal and Cape Verde. A long interval now ensued, unmarked by any discoveries of importance on the west African coast. In 1470, the Portuguese discoveries recommenced with a voyage by Fernando Gonzalez nearly as far south as the equator. The northern limit of the kingdom of Congo was reached; and in 1484 the river of the same name was attained by Diego Cano. Then came discoveries of a far more important description. King John of Portugal, in 1486, sent out two expeditions to discover an eastern route to India, and likewise the whereabouts of the mysterious potentate known as Prester John. The latter eluded all search, but India did not. One of the expeditions proceeded through Egypt and down the Red Sea, and, amid many difficulties, crossed the Arabian Sea or Indian Ocean to Calicut, in India. The other, under Bartholomew Diaz, comprising two caravels and a small store-ship, proceeded southward beyond the latitude of the Cape of Good Hope; and Diaz doubled it, or went round it from west to east without knowing it. He coasted a thousand miles of the African shores never before seen by Europeans; and though difficulties prevented him from crossing over to India, he had the joy of finding, on his return, that he had really reached and passed the cape which forms the southern extremity of Africa. He called it Cabo Tormentoso, the Cape of Torments, or Tempests, on account of the rough weather which he experienced there; but the king said: 'No, it shall be the Cape of Good Hope, or the discovery is one of great promise.' At last came the expedition of Vasco da Gama, to which all the above were preliminary. King Emanuel of Portugal (King John's son) sent him out in 1497, in command of three vessels, with 160 men. He doubled the cape on 20th November, sailed northward, and discovered Sofala, Mozambique, and Melinda; and then, guided by an Indian pilot, he crossed the ocean from Melinda to Calicut, the distance being 5,000 miles. All that followed was a mere finishing of the great problem: Vasco da Gama was the first who made the entire voyage from Western Europe to India, so far as records enable us to judge.

ROGER PAYNE.

In the last century, when the pursuit of book-collecting was almost approaching to the nature of a mania, a great want was felt of an artist capable of providing suitable habiliments for the treasures of literature—of constructing caskets worthy of the jewels which they enshrined. When the demand comes to be made, the means of supply are seldom far distant; and, at this eventful crisis, as Dr Dibdin informs us, Roger Payne rose like a star, diffusing lustre on all sides, and rejoicing the hearts of all true sons of bibliomania. The individual who could excite such lively enthusiasm was simply a bookbinder, but of such eminence in his art, as to render all his works exceedingly valuable. For taste, judicious choice of ornament, and soundness of workmanship, Payne was unrivalled in his day, and some maintain that he has never been equalled in subsequent times. But whatever lustre Roger may have diffused, it was by his handicraft alone; in person he was a filthy, ragged, ale-soaked creature, with a fooliah, and even fierce indifference to the common decencies of life. His workshop was a deplorable filthy den, unapproachable by his patrons; yet, when he waited on his distinguished employers, he made no alteration in his dress. The Countess of Spencer's French maid fainting when she saw such a specimen of humanity in conversation with her mistress, Payne, like others of this kind of temper, thought he thus shewed his manliness, for a Quixotic spirit of independence was one of his failings, though in speech and writing he ever displayed the greatest possible humility.

In spite of his eccentric habits, Payne might have made a fortune by his business, and ridden in a carriage, as finely decorated as the books he bound. The rock on which he split was the excessively ardent devotion which he cherished for strong ale. In one of his account-books, still preserved, we find one day's expenditure thus recorded: 'For bacon, one halfpenny; for liquor, 596.'
ROGER PAYNE

November 20.

One shilling, reminding us of a snatch of a song in the old comedy of Gammer Gurton's Needle:

'When I saw it bootned, not,
Out of doors, I hied me,
And caught a slip of bacon,
When I thought that no one spied me.
Which I intended not far hence,
Unless my purpose fail,
Shall serve for a shoeing-horn,
To draw on two pots of ale.'

Ale may be said to have been meat, drink, washing, and lodging for the wretched Roger. When remonstrated with by his friends and patrons, and told that sobriety, like honesty, was the best policy, and the only road that led to health and wealth, he would reply by chanting a verse of an old song in praise of his favourite beverage, thus:

'All history gathers
From ancient forefathers,
That ale's the true liquor of life;
Men lived long in health,
And preserved their wealth,
Whilst barley-broth only was rife.'

Payne could rhyme on his darlimg theme; his trade-bills are preserved as great curiosities, for they mostly contain unbusiness-like remarks by this eccentric original. On one, delivered for binding a copy of Barry's work on the Wines of the Ancients, he wrote:

'Homer the bard, who sung in highest strains,
Had, festive gift, a goblet for his pains;
Flaxman gave him Virgil, and bare;
And barley-wine first from Egypt's learned shore,
Be this the gift to me from Calvert's store.'

Payne's chef-d'œuvre is a large paper copy of the famous folio Aeschylus, known to collectors as the Glasgow Aeschylus, being printed, with the same type as the equally famous Glasgow Homer, by Foullis, in that city in 1795. This book, bound for Lord Spencer, contains the original drawings executed by Flaxman, and subsequently engraved and dedicated to the mother of the earl. Dibdin, in the Aides Althorpianse, describes it as the most splendid and interesting work in Europe. Payne's bill for binding it is verbatim, literal, and punctuating, as follows:

'Aeschylus Glasgow. MDCCLXX. Flaxman Illustratur. Bound in very best manner, sewed with strong silk, every sheet round every band, not false bands; The Back lined with Russia Leather, Curr Exceeding Large; Finished in the most Magnificent Manner. Bound in Morocco, Expressive of The High Rank of The Noble Patrons of the Designs. The second Parts Finished in the most elegant Taste with small Tool Gold Borders Studded with Gold; and small Tool Plates of the most exact Work, Measured with the Compasses. It takes a great deal of Time, marking out the different Measures; preparing the Tools, and making out New Patterns. The Book finished in compartments with parts of Gold Studded Work. All the Tools except Studded points are obliged to be worked off plain first—and afterwards the Gold laid on and Worked off again. And this Gold Work requires Double Gold, being on Rough Grained Morocco, The Impressions of the Tools must be fitted and covered at the bottom with Gold to prevent flaws and cracks...£12 12 0

Fine drawing paper for Inlaying the designs 5a. 6d. Finest Pick Lawn paper for Interleaving the Designs 1a. 6d. One yard and a half of Silk 10a. 6d. Inlaying the Designs at 6d. each 32 Designs £1, 1s. 4d...

Mr Morton adding borders to the Drawings...£1 1 0

£16 7 0

Another bill, delivered to Dr Mosely, Payne's medical attendant, runs thus:

'Harmony of the World, by Haydon: London 1642. Bound in the very best manner; the book sewed in the very best manner with white silk, very strong, and will open easy; very neat and strong boards; fine drawing-paper inside stained to suit the colour of the book. The outsides finished in the Rosicrucian taste—very correct measured work. The inside finished in the Druid taste, with Acorus and SS. studded with Stars, &c., in the most magnificent manner. So neat, strong, and elegant as this book is bound, the binding is well worth 12s., and the inlaying the frontispiece, cleaning and mending, is worth 5s. To Dr Mosely's great goodness, I am so much indebted, that my gratitude sets the price for binding, inlaying, cleaning, and mending at only...£20 10 6

Payne, for a long time, lived and worked alone in his filthy den; but towards the close of his career, he took in, as a fellow-labourer, an excellent workman named Weir. This man was a regularly 'dubbed ale-knight,' loved barley-wine to the full as much as his partner, and used to sing:

'Ale is not so costly,
Although that the most fine,
Too long by the oil of the barley,
Yet may they part late,
At a reasonable rate.
Though they come in the morning early.
Sack is but single broth,
Ale is meat, drink, and cloth.'

Sobriety may not be always a bond of union, but inebriation is a certain source of discord, and not only words, but frequently blows were exchanged between the two artists. Weir's wife was a famous cleaner of old books, and she went with her husband to Toulouse, where they exercised their skill and art, for several years, in binding and repairing the valuable library of Count Macarthy. Payne ended his wretched existence on the 20th of November 1797, and was soon followed by Weir to the bourse whence no man returneth. After their deaths, Mrs Weir was employed to clean and repair the books, parchments, vellums, &c., in the Register Office at Edinburgh. Lord Frederick Campbell was so much pleased with her good-conduct, and marvellously successful labours in this capacity, that he had her portrait drawn and engraved. Her chef-d'œuvre was a copy of the FActs of Arms and Chivalry, printed by Carton, and bound by Payne. At the Roxburgh sale, this book was brought to the hammer. As a work printed by Carton, bound by Payne, and cleaned by Weir does not occur every day, the excitement and sensation when Mr Evans put it up was immense; nor was it finally knocked down till the biddings reached the high figure of three hundred and thirty-six pounds.
THE BRITISH NIMROD.

In a letter, dated 20th November 1611, from John Chamberlain, a gentleman and scholar, in the reign of James I., to his friend Sir Dudley Carleton, we find, amid other items of news, the following passage regarding the king and queen:

'Vee king is hunting at Newmarket, and the queen so benevolently pleased the king was afterwards accorded with the hart in pursuance.

This brief sentence exhibits very comprehensively the ruling passions of those two royal personages. Queen Anne was no less fond of court masques and balls, than her consort was of the chase. His flatterers bestowed on him the title of the British Solomon, and extolled him as the most profoundly wise sovereign that had ever sat on a throne, but with much greater appropriateness, as far at least as regarded enthusiasm for, and devotedness to, sport, they might have dubbed him the British Nimrod. From his early youth in Scotland, the love of the chase was with him an overpowering and absorbing passion, and he gave so much time to it, that the extent of his studies and his knowledge becomes the more a wonder. It took him much away from state business, and proved a serious anxiety to all the gentlemen of his court. — Who would be required to accompany him after the stag for six hours in order to get five minutes' conversation with him; but he was never at a loss for something to say in excuse of this misspending of time. "My health," he would say, "is necessary for the state; the chase is necessary for my health: ergo, it is doing the public a service if I hunt." This logic from royal lips was irresistible. The king's sports were chiefly pursued in his own parks; but he was not less willing to let his bugle waken the echoes in those of his chief nobles, who were but too happy to contribute to his gratification that they might establish themselves in his favour.

Now and then, some one of the favoured few permitted to ride with him, has, luckily for us, sought to enliven his letters to absent friends with little sketches of the adventures that fell out on these merry hunting-mornings; and in the State Papers we meet with a series of detached photographs, which, brought together, form a not uninteresting picture. Bravely responding to the sharp sting of 'Ripon rowses,' we seem to witness the pure-blooded iron gray that carried England's fortunes, dash onwards, to be again at the head of the field, which he had momentarily lost. Down the steep, along the valley, through the centre of its shallow river's bed, sweep onwards the gallant cavalcade, scattering the shingle with their horses' hoofs, and throwing up the water in broad glistening sheets. A bugle-note from some distant forester falls on the ear. The game's 'at soil.' Another five minutes' sweep round that elbow of the stream, and then stands once on the bank of the green, knee-deep in the amber pool, his broad dun haunches firm against the lichen-covered rock; his beamy antlers lowering from side to side, as the clustering hounds struggle and swim around him, straining their blood-shot eyes. The king, pleased, yet flushed and pale with excitement, his hunting-garb soiled with mire and bog-water from spurl to boot, and his hat up just in time to witness the finish, for Bran and Buciar, Ringwood and 'Jewell' (prime leader of the royal pack) have fastened upon the quarry's throat. And when the deer has been broken up, and whilst the foresters, all unbonneted, wind the customary merr upon their bugles, our royal woodsman is plunging his unbooted limbs in the beast's warm, reeking entrails: an extraordinary panacea, recommended by the court-physician, Sir Theodore Mayerne, as the 'sovereignst thing on earth,' for those gouty and rheumatic twinges, which too emphatically marked the British king, though how 'every inordinate cup is unblest and the ingredient thereof a devil,' though the warning produced no practical result.

It is amusing enough to note how cheaply and contemptuously James held the judgment of such as presumed to differ from him in their estimation of his favourite sports and his style of indulging in them. Great was his disgust when he heard that his brother-in-law, Christian, king of Denmark, who visited England in 1606, had spoken slightingly of English hunting in general, saying it was an amusement in which more horses were killed in jest, than in the Low-Country wars were consumed in earnest. James, after indulging in a few expletives, which it is as well to omit, sarcastically growled forth the reply: 'That he knew not what sport the old Danish gods, Thor and Woden, might partake of in their Scandinavian heaven, but flesh and blood could shew no better than he had done.'

A prince thus enamoured of the pleasures of a sportsman's life, could hardly be expected to endure otherwise than impatiently the sedentary duties of his council-chamber. They were, indeed, utterly distasteful to him; and so, likewise, by association, were those assembled there—Egerton, Buckhurst, Dorset, Naunton, Winwood, Nottingham, &c.; lord-keepers, lord-treasurers, lord-admirals, and lord-chamberlains. Debates about the most signal means of curbing Gondomar's haughty insolence, which but reflected the arrogance of his master, or upon the policy of the Spanish match, were often abruptly terminated by the monarch rising from his chair with a yawning remark, that he had worked long enough; so he was off towards Royston, to have a flight with the new Spanish falcon. 'His majesty,' writes Sir Dudley Carleton, already referred to, having broken up the council, rides straight to Royston, 'with all his hunting-crew, a small train of forty persons;' and again: 'the king is at the inn at Ware, with his hawks.' Unfortunately, he neglects to satisfy inquisitive posterity who read his pleasant letters more than two centuries afterwards, whether James, and his small hunting-crowd of forty persons, passed their nights, one and all, in the great bed which is so inseparably associated in our ideas with that town.

Cecil, styled by his master—who had a characteristic nickname for every one about him—'my little beagle,' because, like that diminutive hound, he was small of stature, and indefatigable in hunting

* James's practice invariably, whenever the deer was run down and killed.
† State Papers, 1606.
‡ There is extant a paper in James's handwriting, indorsed, 'A memorial for Sunday—being the king's notes of various points of business to be dispatched with his Council—the little Beagle—and the Bishops of Canterbury.'
down—not hares and conies, but conspiracies—
(men say he invented far more than he discovered)
was almost the only one of his ministers for
whom James felt any personal regard, although he
often growled at the king's expensive hobbies,
which, he said, 'cost chaff.' 'I must build a fleet.'
Once when he lay ill of a fever, and the
king was about to quit London on a sporting-tour,
he received a visit of condolence from his sovereign,
who comforted him with these words: 'that he
was very sensible of his sickness, and must have a
care of his well-doing; "For," quoth James, as he
pressed his hand at parting, "should aught unto
ward occur to thee, my little beagle, there were
no more safe hunting for the king of England."

The probability of being assassinated in his solitary
gallop through the lonely forest, was ever present
to the royal mind; and his preservation he attributed
wholly to the untiring vigilance of his astute
secretary. Nor were his fears at all unfounded.
Among the State Papers is a declaration of one
Captain Newell, that a soldier named Pitt-James
had said, 'I could make a puff that would send
some high enough and low enough to hell
ere long; and that he would shoot the king
in the woods of Royston,' with many similar affidavits.

Our modern English sovereigns are satisfied with
the modest parade of a single master-hunterman
and one pack of buck-hounds. But the first
English king of the Stuart race maintained at least
seven establishments at the same number of
hunting-lodges—at Royston, Hitchinbrooke, Theobalds,
Windsor, Newmarket, Nonsuch, Hampton
Court—with hounds for the chase in St John's
Wood, and the great woods stretching around
Newington. Possibly the reader may be rather
astonished to hear of great stags and fallow-deer
roaming wild in the two last-named suburbs of
London, and that James maintained a large staff of
foresters and keepers to preserve the pheasants,
hares, conies, &c., swarming in their leaflly
covets.
The one, he now sees covered with pleasant villas,
rising from the midst of grounds adorned with all
the cunning of horticulture—elegant retirements
for the refined and wealthy; the other, chiefly
a squalid, densely-populated quarter—possessed by
the sons of poverty and toil, and little suggestive
of the accessories to sylvan sport. Our old friend,
Sir Dudley Carleton, viewed them under a different
aspect. 'The king,' he says, 'went this evening to
lie at Lord Arundel's, in Highgate, that he may
be nearer and readier to hunt the stag on the morrow,
in St John's Wood.' His son, Charles I, one
Monday morning unharboured a buck from a great
successful dingle at Newington, where, twenty-four
hours previously, a knot of poor trembling Puritans
had sheltered themselves and their worship from
the persecution of Archbishop Laud. 'We took,'
says that zealous churchman in a letter to Wind-
bank, dated Fulham, June 1632—'another con-
venticle of separatists in Newington Woods, in
the very brake where the king's stag was to be lodged,
for his hunting next morning.'

But Charles and James had distinct packs of hounds for the several kinds of chase in
which he indulged—stag, red deer, roebuck, fox,
wolf, hare, and otter—beside ban, bear, and bulldog,
with a nobleman for their keeper; and teams

of spaniels, indispensable to his superb hawking
establishments. These necessarily demanded
a large suite of attendants, whose names sound
strange in the ears of modern sportsmen. There
were masters of the game, sergeants of the stag-
hounds, 'lumbermen' of the buckhounds, yeomen
and children of the lease, tents and toils (the latter
being small pages who held relays of fresh dogs at
openings of the forest), keepers of the royal fishing-
cormorants, of the elephants, camels, and other
'tame beasts,' located in St James's Park. His
majesty, we are told, once experienced some incon-
venience at his hunting-seats, from the crowding
about him of certain over-zealous country gentle-
men, eager to gaze upon their sovereign 'taking
says,' or to assist at the ceremony of cutting up a
fat stag.

One day when the court was at Rufford, says one
of Lord Stafford's letters, 'the loss of a stag, and
the hounds hunting foxes instead of deer—put the
king into a marvellous chafe, accompanied by
those ordinary symptoms (sighs) better known to
the courtiers than to our rural swains. In
the height whereof comes a clown galloping in,
and staring full in his face. "Mass!" quoth the
intruder, "am I come forty miles to see a fellow!"
and presently turns about his horse, and away he
goes faster than he came; the oddness whereof
caused his majesty and all the company to burst
out into a vehement laugh, and so the fume was
for that time happily dispersed.' Yet was his
majesty 'merry against the hair,' however genuine
might be the glee of his courtiers. 'He that very
day,' says John Chamberlain, 'erected a new office,
and made Sir Richard Wigmore "marshal of the
field." He is to take order that the king be not
attended by any but his own followers; nor
interrupted nor hindered in his sports by idle
spectators.' During one season, the king hunted in
the Fen country, where the deer not unfrequently
sought safety in the meres, surrounded by dreary
marshes, impassable to sportmen and dogs. The
farmen, like the Bretons dwelling in the
Landes of France, traversed their boggy soil on stilts;
and a party of them being hired on one occasion to
drive out the game, and doing their work off-hand
and coarsely, James was so gratified therewith, and so
amused by their singular appearance when stalking
through the water, like a flight of fishing-cranes,
that he signified his gracious pleasure to 'erect
a new office.' Accordingly, one day after a jovial
hunting-dinner, he chose Sir George Carew as
leader of the stillermen—who was to be ready with
his squad in uniform, whenever the royal hounds
hunted that district.

Although passing a considerable portion of his
life in the saddle, James was not a very skilful
horseman, as is testified by the many and dangerous
falls recorded of him, through which he was some-
times at the point of death. Every precaution
was therefore resorted to, to lessen or avert the peril
incident to the headlong pace which the king fear-
lessly maintained in order to be well ahead of the
finish. The high-sheriff of Herts, Thomas Wilson,
writing to the constables of Sandon, Ketehall, and
other towns of the county, informs them of the
'king's express command that they give notice to
occupants of arable land, not to plough their fields
in narrow ridges, nor to suffer swins to go abroad
unringed, and root holes, &c., to the endangering
of his majesty and the prince in hawking and hunting; they are also to take down the high bounds between lands which hinder his majesty's ready passage.*

Although his various kennels contained, at a moderate calculation, little short of two hundred couple of hounds, and the cost of their maintenance and equipages was a serious draught upon his privy purse,† James never deemed himself properly furnished, while a single house of reputation remained in possession of his subjects. The writer has seen a score or two of docquets, empowering his officers everywhere to seize hounds, beagles, spaniels, and 'mongrels' for his majesty's disport; and his chief huntsman had a similar warrant to take by force every canine celebrity known to exist in three counties. On the occurrence of any of those hunting casualties, where his dogs got mauled by horse-kicks, or being ridden over, &c., he vented his indignation in the most outrageous language; yet there, as indeed in almost every transaction of his life, he showed himself as placable as he was momentarily irate. There is a pleasant instance of this feeling mentioned in one of the letters already quoted. 'The king,' says the writer, 'is at Tibbolds, and the queen gone or going there then. At their last meeting at Tibbolds, which was about a fortnight since, the queen, shooting at a deer with her crossbow, mistook her mark, and killed Jewell, the king's most special and principal hound, at which he stormed exceedingly awhile, swearing many and great oaths. None would undertake to break unto him the news, so they were fain to send Archie the fox hunter. At their last meeting at Tibbolds, which was about a fortnight since, the queen, shooting at a deer with her crossbow, mistook her mark, and killed Jewell, the king's most special and principal hound, at which he stormed exceedingly awhile, swearing many and great oaths. None would undertake to break unto him the news, so they were fain to send Archie the fox hunter. At the meeting best, he was not so pacified, and with much kindness wished her not to be troubled with it, for he should love her never the worse, and the next day sent her a jewell worth £2000, as a legacy from his dead dog.' Love and kindness increase daily between them, and it is thought they were never on better terms. Doubtless this opportunity of perpetrating a practical joke upon the majesty of his most principal hound, went a great way in reconciling the royal punter to his loss and to the queen.

Love and kindness increase daily between them, and it is thought they were never on better terms. Doubtless this opportunity of perpetrating a practical joke upon the majesty of his most principal hound, went a great way in reconciling the royal punter to his loss and to the queen.

November 21

The Presentation of the Blessed Virgin Mary, St. Galgano, pope and confessor, 405; St. Columban, abbot and confess. 615.
time, occupied by milliners and haberdashers (who sold mouse-traps, bird-cages, shoe-horns, lanterns, and other heterogeneous commodities), armourers, apothecaries, booksellers, goldsmiths, and dealers in glass. The open court below must have presented a curious scene when viewed by the merchants of different nations, in the picturesque dresses of their respective countries.

On the 4th July 1575, Sir Thomas Gresham made a will whereby he bequeathed legacies to his nieces and other relations, and to several of his 'prentises.' He also directed black gowns, of 6s. 8d. the yard, to be given to a hundred poor men and a hundred poor women, to bring him to his grave in his parish church of St Helen's. By another will, made on the following day, he shewed most memorably that he had never forgotten what he learned at the university, and that it was the wish of his heart to extend to others through all time the aids to learning which he had himself enjoyed. Accordingly, he bequeathed one moiety of his income in the Royal Exchange to the Corporation of London, and the other moiety to the Mercers' Company, and charged the corporation with the nomination and appointment of four persons to lecture in divinity, astrology, music, and geometry. To each of these lecturers he directed an annual payment to be made of £60, and another yearly payment of £6, 13s. each, to eight 'almofolk,' to be appointed by the corporation, and who should inhabit his almshouses at the back of his mansion. For the prisoners in each of five London prisons, he provided the annual sum of ten pounds. The wardens and commonalty of the Mercers' Company were charged to nominate three persons to read in law, physic, and rhetoric, within Gresham's dwelling-house; and out of the moiety vested in the company, to pay each lecturer £60 a year; to pay to Christ Church Hospital lately the Greyfriars, to St Bartholomew's Hospital, to the hospital for the poor in Southwark, and for the prisoners in the 'Counter in the Powlitry,' £10 each, annually, and to apply £100 a year, for four quarterly 'feasts or dymnars,' for the whole company of the corporation in the Mercers' Hall. The house itself, with the garden, stables, and appurtenances, were vested in the mayor, commonalty, and citizens, and in the wardens and commonalty of mercers, in trust to allow the lecturers to occupy the same, and there to inhabit and study, and daily to read the several lectures. He appointed his wife executrix, 'in wyche behalfe' (adds the testator) 'I doe holly put my trust in her, and have no doubt but she will accomplish the same accordingly, and all other things as shall be requisite or expedient for both our honnesties, names, and good reportes in this transitory world, and to the profit of the common well, and relyffe of the carfull and trewe people, according to the plesaun and will of Almyghtyte God, to whom be all honnor and glory, for ever and ever!' This will was in the handwriting of Sir Thomas Gresham himself, and was proved on the 29th November 1579, five days after the testator's death. He was honourably interred in the church of St Helen's, and there his sculptured altar-tomb remains.

* See notice and engraving of the old Royal Exchange, in vol. l. pp. 152, 153.

In June 1597, the year after the death of Lady Anne, Sir Thomas's widow, the daily lectures commenced according to his will; and thenceforth, for a long course of years, his mansion-house was known as 'Gresham College,' and the chief part of the buildings was hired by the merchants of different nations, in the picturesque dresses of their respective countries.

The house escaped the Great Fire of London; and when the Mansion House of London, and Gresham's Exchange, and the houses of great city companies lay in ruins after that event, Gresham College was for a time employed as the Exchange of the merchants, and afforded an asylum to the lord mayor, and the authorities of the Mercers' Company. But Gresham College acquired a more illustrious association, for it may be regarded as the cradle of the Royal Society, which, in the early part of its history, viz. from 1660 to 1710, held its meetings here, when it numbered among its associates the names of Newton, Locke, Petty, Boyle, Hooke, and Evelyn. In 1768, however, a legislative act of Vandalism put an end to the collegiate character of Gresham's Institution, and the mansion and buildings were sold to government, to form a site for the Excise Office. As compensation to the lecturers for the loss of their lodgings, their salaries were raised to £100 a year. The lectures were afterwards read for some time at the Royal Exchange, but a new college was erected and opened on the 2d November 1843. Gresham's Royal Exchange was destroyed, as we all know, in the Great Fire. It was rebuilt on a larger scale, but similar plan. This building was accidentally destroyed by fire on the 10th January 1838, and replaced by the present stately structure which wisely perpetuates the memory of the renowned Sir Thomas Gresham.

JOHN HILL.

Biography, combining instruction with amusement, not unfrequently exhibits, in one and the same character, examples of excellence to be fearlessly followed, and of weaknesses to be as sedulously shunned. As an instance of the advantages to be achieved by unwearied industry and rigid economy of time, the career of John Hill may be adduced as one well worthy of praise and imitation; while it also shows the baleful and inevitable results of an unbridled vanity acting on a weak, malevolent, and contentious disposition. If I hamsmel has his hand against every man, he must expect, as a natural consequence, that every man's hand will be against him. One of the various nicknames given to Hill by his contemporaries, was Dr Atall, sufficiently illustrative of his character. For players, poets, philosophers, physicians, antiquaries, critics, commentators, free-thinkers, and divines, were alternately selected by him as objects of satire or invective. And thus it happens, that while Hill's voluminous, and in many instances, useful works, are almost forgotten, and his valuable services to the then infant science of botany scarcely recognised at the present day, his name is principally preserved in the satirical apecies and epigrams launched at him by those whom he had wantonly provoked and insulted.

Hill was the son of a worthy Lincolnshire clergyman, and having been educated as an apothecary, he opened a shop in St Martin's Lane, London. Marrying before he had established a
business, the res augustra domi obliged him to look for other means of support. The fame of Linnaeus, and the novelty of his sexual system of botany, then producing a great sensation throughout Europe, Hill determined to turn his attention to that science, for which he undoubtedly had a strong natural taste. Patronised by the Duke of Richmond and Lord Petre, he was employed by them to arrange their gardens and collections of dried plants. He then conceived a scheme of traversing Great Britain to collect rare plants, and to select number of which, prepared in a peculiar manner, and accompanied by descriptive letterpress, he proposed to publish by subscription. This plan failing, he tried the stage as an actor, but without success, falling even in the appropriate character of the half-starved apothecary in Romeo and Juliet. Reinquishing the sock and buckskin, he returned to the mortar and pestle, and while struggling for a living in his original profession, he turned his attention to literature. His first work was a translation of Theophratus On Gems, which, being well and carefully executed, established his reputation as a scholar, and procured him fame, friends, and money. Having at last found the tide that leads to fortune, Hill was not slow to take advantage of it. He wrote travels, novels, plays; he compiled and translated with marvellous activity and industry: works on botany, natural history, and gardening—in short, on every popular subject—flowed, as it were, from his ready pen. From these sources he derived for several years an annual income of £1500.

Obtaining a diploma in medicine from the College of St Andrews, Hill, with this passport to society, set up his carriage, and entered on the gay career of a man of fashion. He commenced the British Magazine, and, in addition to his other labours, published a daily essay in the Advertiser, under the title of the 'Inspector.' Notwithstanding all this employment, he combined business with pleasure, by being a constant attendant at all places of public amusement, and thus procured the scandalous anecdotes with which he so freely dispensed in his periodical writings. About this time he came into collision with Garrick, Hill having composed a farce called the Route, and presented it to a charitable institution as 'a piece written by a person of quality.' The play was acted under Garrick's management, for the benefit of the charity, but received little favour; and, on the second night of its representation, it was hissed and hoisted through the whole house. Wild with rage and disappointment, the doctor disgorge his spite in venomous paragraphs against the manager. To which Garrick simply replied:

'For physic and farces,
His equal there scarce is;
His farces are physic,
His physic a farce is!'

Hill returned to the attack with a paper, entitled A Petition from the Letters I and U to David Garrick. In this, these letters are made to complain bitterly of the grievances inflicted on them by the actor, through his inveterate habit of banishing them from their proper places, as in the words virtue, and ungrateful, which he pronounced warts and ingrateful. Garrick again replied with an epigram, in which he had decidedly the best of it:

'If 'tis true, as you say, that I've injured a letter,
I'll change my note soon, and I hope for the better.
May the right use of letters, as well as of men,
Hereafter be fixed by the tongue and the pen;
Most devoutly I wish, that they both have their due,
And that I may be never mistaken for U.'

When all London was gulled by the story of Elizabeth Canning, Hill's natural shrewdness saw through the imposture. In a pamphlet he successfully opposed the current of popular opinion, and was applauded by the discerning few, who had escaped that strange intoxication by public and other controversies. Was Henry Fielding, the goodness of whose heart made him, in this instance, the dupe of female artifice and cunning.

When writing under the character of the 'Inspector,' Hill adopted a whimsically dishonest stratagem, to laud, without manifest inconsistency, some persons whom a little before he had eulogised. He published anonymously the first number of a periodical, entitled the Impertinent, in which he violently attacked the poet Smart; but took care, in the next 'Inspector' to defend him with faint praise, and rebuke the cruel treatment of him by the Impertinent. When Smart discovered this treacherous trick, he published a keen satire, entitled The Hilliad, in which he represents as follows a gipsy fortune-teller inducing Hill to abandon the pease for the pen:

'In these three lines athwart thy palm I see
Either a tripped or a triple-tree,
For oh! I ken by mysteries profound,
Too light to sink, thou never canst be drowned—
Whate'er thy end, the Fates are now at strife,
Yet strange variety shall check thy life—
Thou grand dictator of each public show,
Wit, moralist, quack, harlequin, and beam,
Survey man's vice, self-praised and self-preferred,
And be the Inspectors of the infected herd;
By any means aspire at any ends,
Bessamess exiles, and cowardice defends.
The chequered world's the poet's farewell,
Beware of Irishmen—and learn to spell.'

The allusion in the last line refers to an Irish gentleman, named Brown, who, having been libelled in the 'Inspector,' retaliated by publicly beating the doctor in the rotunda at Kameleigh Gardens (see cut on the following page). Hill received the buffeting with humility, but to shew that such meekness of conduct was attributable rather to stoicism than to a want of personal courage, he immediately afterwards published an account of himself having once given a beating to a person, whom he named Mario. A wag, doubting this story, wrote—

'To beat one man, great Hill was fated'

'What man?' 'A man whom he created'

Indeed, Hill did not claim for himself a high standard of truthfulness; he sometimes acknowledged in the 'Inspector' that he had told falsehoods, thus giving occasion for another epigram:

'What Hill one day says, he, the next, does deny,
And candidly tells us it is all a lie;
Dear doctor, this candour from you is not wanted;
For why should you own it? 'tis taken for granted.'

Hill, however, considered himself a moralist, a friend and supporter of piety and religion. He
published a ponderous guinea quarto on God and Nature, written professedly against the philosophy of Lord Bolingbroke; and every Saturday's 'Inspector' was devoted to what he termed 'a lay-sermon,' written somewhat in the Oxfrod-Henley style, and affording subject-matter for the following epigrammatic parody:

'Three great wise men, in the same era born, Britannia's happy island did adorn; Henley in care of souls, displayed his skill, Rock alone in physic, and in both John Hill; The force of nature could no further go, To make a third, she joined the former two.'

Rock was a notorious quack of the period. Being one day in a coffee-house on Ludgate Hill, a gentleman expressed his surprise that a certain physician of great abilities had but little practice, while such a fellow as Rock was making a fortune. 'Oh!' said the quack, 'I am Rock, and I shall soon explain the matter to you. How many wise men, think you, are in the multitude that pass along this street?' 'About one in twenty,' replied the other. 'Well, then,' said Rock, 'the nineteen come to me when they are sick, and the physician is welcome to the twentieth.'

And to the complexion of quackery did Hill come at last. His mind, from over-production, became sterile; his slovenliness of compilation, and disregard for truth, sank his literary reputation as fast as it had risen. When his works found no purchasers, the publishers ceased to be his bankers. He had lived in good style on the malice and fear of the community, he now found resources in its credulity. He brought out certain tinctures and essences of simple plants, sage, valerian, borage, or water-dock, asserting that they were inauspicious panaceas for all the ills that flesh is heir to. Their sale was rapid and extensive, and whatever virtues they may have possessed, no one can deny that they were peculiarly beneficial to their author, enabling him to have a town-house in St James' Street, a country-house and garden at Baywater, and a carriage to ride in from one to the other. The quires of the epigram-writers were once more filled by these medicines, and thus some of their arrows flew—

'Thou essence of dock, of valerian, and sage, At once the disgrace and pest of this age; The worst that we wish thee, for all of thy crimes, Is to take thy own physic, and read thy own rhymes.'

To this another wit added:

"The wish must be in form reversed, To suit the doctor's crimes, For, if he takes his physic first, He'll never read his rhymes."

Hill, or some one in his name, replied:

'Ye desperate junto, ye great, or ye small, Who combat dukes, doctors, the devil, and all! Whether gentlemen-scribblers or poets in jail, Your impertinent wishes shall never prevail; I'll take neither sage, dock, nor balsam of honey: Do you take the physic, and I'll take the money.'

The latter end of Hill's life was better than the beginning. Though his first wife was the daughter of a domestic servant, he succeeded in obtaining, as a second helpmate, a sister of Lord Ranelagh. At the parties of the Duchess of Northumberland, he was a frequent guest, and he acquired the patronage of the Earl of Bute. His last and most valuable work, a monument of industry and enterprise, was...
a complete *Vegetable System*, in twenty-four folio volumes, illustrated by 1600 copper-plates, representing 26,000 plants, all drawn from nature. This work was in every respect far in advance of its period, and entailed a heavy pecuniary loss on its author. A copy of it, however, which he presented to the king of Sweden, was rewarded with the order of the Polar Star, and from thenceforth the quondam apothecary styled himself Sir John Hill.

Lord Bute appointed him to the directorship of the royal gardens, with a handsome salary, but it does not seem that the grant was ever confirmed. In spite of the efficacy of his *Tincture of Bardana*, which Hill warranted as a specific for gout, he died of that disease on the 21st of November 1775. The following is the last fling which the epigrannistiae had at him:

'Poor Doctor Hill is dead! Good Jack!'
'Of what disorder?'
'An attack
Of gout.'
'Indeed! I thought that he
Had found a wondrous remedy.'
'Why, so he had, and when he tried,
He found it true—the doctor died!'

MARY BERRY.

This lady, who died in Curzon Street, Mayfair, on 21st November 1852, at the age of ninety, formed one of the last remaining links which connected the life and characters of the latter half of the last century with the present. Both she and her younger sister Agnes enjoyed the acquaintance and friendship of the celebrated Horace Walpole, Earl of Orford, who, after conferring to that title, made a proser, though an unaccepted one, of his hand and coronet to Mary Berry. These two ladies were the daughters of Mr Robert Berry, a gentleman of Yorkshire origin, but resident in South Audley Street, London. Walpole first met them, it is said, at Lord Strafford's, at Wentworth Castle, in Yorkshire, and the friendship thus formed was a lasting one. The Misses Berry afterwards took up their abode at Twickenham, in the immediate neighbourhood of Strawberry Hill, with whose master a constant interchange of visits and other friendly offices was maintained. Horace used to call them his two wives, corresponded frequently with them, told them many stories of his early life, and what he had seen and heard, and was induced, by these friends, who used to take notes of his communications, to give to the world his *Reminiscences of the Courts of George I. and II.*

On Walpole's death, the Misses Berry and their father were left his literary executors, with the charge of collecting and publishing his writings. This task was accomplished by Mr Berry, under whose superintendence an edition of the works of Lord Orford was published in five volumes quarto. He died a very old man at Genoa, in 1817, and his daughters, for nearly forty years afterwards, continued to assemble around them all the literary and fashionable celebrities of London. Agnes, the younger Miss Berry, predeceased her sister by about a year and a half.

Miss Berry was an authoress, and published a collection of Miscellanies, in two volumes, in 1844. She also edited sixty Letters, addressed to herself and sister by Horace Walpole; and came chivalrously forward to vindicate his character against the sarcasm and aspersions of Lord Macaulay in the *Edinburgh Review.*

NOVEMBER 22.

Saints Philemon and Appia. St Cecilia, or Cecily, virgin and martyr, 230. St Theodora the Stuclite, abbot, 9th century.

ST CECILIA.

This saint was a Roman lady of good family, and having been educated as a Christian, was desirous of devoting herself to heaven by a life of celibacy. Compelled, however, by her parents to wed a young nobleman named Valerian, she succeeded in converting both her husband and his brother to Christianity, and afterwards shared with them the honours of martyrdom. Accounts differ as to the death which she suffered, some asserting that she was boiled in a caldron, and others that she was left for days to expire gradually after being half decapitated. The legend states that the executioner, after striking one blow, found himself unable to complete his task.

St Cecilia is generally regarded as the patroness of church-music, and, indeed, of music generally; but the reason for her holding this office is not very satisfactorily explained. Butler says that it was from her assiduity in singing the divine praises, the effect of which she often heightened by the aid of an instrument. She is generally represented singing, and playing on some musical instrument, or listening to the performance of an angelic visitant. This last circumstance is derived from an ancient legend, which relates that an angel was so enraptured with her harmonious strains as to quit the abodes of bliss to visit the saint. Dryden thus alludes to the incident in his *Ode for St Cecilia's Day*:

'At last divine Cecilia came,
Inventress of the vocal frame;
The sweet enthusiast from her sacred store,
Enlarg'd the former narrow bounds,
And added length to solemn sounds,
With nature's mother-wit, and arts unknown before.
Let old Timotheus yield the prize,
Or both divide the crown;
He rais'd a mortal to the skies;
She drew an angel down.'

About the end of the seventeenth century, the practice was introduced of having concerts on St Cecilia's Day, the 22d of November. These were highly fashionable for a time; the words of the pieces performed being frequently from the pen of writers like Dryden, Addison, and Pope, and the music composed by artists like Purcell and Blow.

_Born._—Professor Dugald Stewart, celebrated metaphysician, 1758, Edinburgh.

_Died._—Pope John XXIII., 1419, Florence; Robert Lord Clive, founder of the British empire in India, 1774, Moreton Bay, near Drayton.; John Blackhouse, botanist, 1819, Bath; François Le Vaillant, African traveller, 1824, La Roche, near Lounax; Sir Henry Havelock, Indian general, 1857, Lucknow; Professor George Wilson, author of various scientific works, 1839, Edinburgh; Father Lacordaire, eminent French prelate, 1881, Lorraine.
FATHER LACORDAIRE.

The Frenchman has an inborn aptitude for oratory, and seldom, for any period, are the pulpit and tribune of his nation deprived of the illumination of genius. Among the greatest of modern French orators was the Abbé Lacordaire. Paris is not a city in which priests are popular, but for years, the delivery of a discourse by him had only to be announced and assembled a crowded audience, waiting with breathless interest for the words from his mouth.

He was the son of a country physician, and was born in 1802. Educated for the law, he went to Paris in 1822, for the purpose of being called to the bar. He evinced remarkable abilities, and his success as an advocate was regarded as certain. Professing deistical opinions, he suddenly, to the astonishment of his acquaintance, proclaimed his intention of becoming a priest, and straightway, on his twenty-third birthday, he entered the ecclesiastical seminary of St Sulpice. In after-life, he frequently repeated that neither man nor book was the instrument of his conversion, but that a sudden and secret stroke of grace opened his eyes to the nothingness of religion. In a single day he became a believer; and once a believer, he wished to become a priest.

For some years, life passed smoothly with Lacordaire in the fulfilment of a variety of ecclesiastical duties. The only singularity about him was his political liberalism, which he retained as firmly as in the days when a student and barrister. This liberalism drew him into association with Lamennais and Montalembert, and together they started a newspaper, L'Avenir, in 1830. Its device was, 'God and Liberty'; that is to say, the pope and the people, ultramontanism in religion and radicalism in politics. L'Avenir quickly brought its conductors into a blaze of notoriety, into lawsuits with the government, and into controversy with bishops; but what they gained in fame they lost in money, and they were compelled to stop their newspaper. Lamennais, of course, after twenty-five years; all the light and strength she afforded to a young man unknown to her. Her counsel preserved me alike from despondency and the opposite extreme. As long as her health permitted, she was always among Lacordaire's hearers. 'Should you like to see the preacher's mother?' was asked of two persons who were listening to him in Notre-Dame. 'Why, she died ten years ago!' was the answer. 'No, there

she is, look at her,' and the speaker pointed to Madame Swetchoine, hidden behind a pillar, whose constant attention to, and manifest happiness in, the discourse of the preacher, gave rise to this very natural mistake.

Lacordaire made his first essay as a preacher in 1833, and failed completely. Montalembert and others who heard him unanimously agreed, 'He is a talented man, but will never make a preacher,' and Lacordaire was of the same opinion. Nevertheless, he tried again in the following year, and was instantly successful. By some means his tongue had lost its power and passion, tenderness, irony, and wit burst freely from his lips. One day, for the benefit of certain scoffers, he exclaimed: 'Gentlemen, God has made you witty, very witty indeed, to show you how little he cares for the wit of man.' His fame grew daily. The archbishop of Paris called him to mount the pulpit of Notre-Dame; and on one occasion, rising from his throne, in the presence of an immense audience, he greeted the orator with the title of 'our new prophet.'

From this excess of glory he retired for seclusion, for two or three years. He wandered and praying in the basilicas of the Eternal City, he became convinced that it was his mission to revive the order of Dominican friars in France. Having secured the requisite authority, he reappeared in Notre-Dame, clothed in the white woollen habit of the order, with shaven head and black scapular. The novelty lent fresh piquancy to his oratory, and Lacordaire, in Notre-Dame, became one of the lions of Paris, whom everybody, who could possibly do so, felt bound to see and hear. In his zeal, he assumed the name of Dominic, wrote a life of the saint, and defended the Institution. At the same time he contended, with all the vigour of a reformer, for freedom of opinion. 'Public conscience,' he said in one of his sermons, 'will always repel the man who asks for exclusive liberty, or forgets the rights of others; for exclusive liberty is but a privilege, and a liberty forgetful of others' rights is nothing better than freemasonry. Yes, Catholics, know this well: if you want liberty for yourselves, you must help the pope to carry their ecclesiastical controversy to Rome, and insisted on Gregory XVI pronouncing a decision. To their intense chagrin, the pope issued an encyclical letter condemning the politics of L'Avenir. Lacordaire and Montalembert bowed to the papal authority, but Lamennais, after a fierce struggle with himself, passed into open rebellion, in which he continued to the end of his life.

At this time, Lacordaire made the acquaintance of Madame Swetchoine, a Russian lady of rank, who, having become a Roman Catholic, resided in Paris, where her house, for more than forty years, was the resort of the most brilliant society of 'the faithful.' To Lacordaire she became more than a mother. 'Her soul,' he wrote, 'was to mine what the sun is to the plants shuttered by the walls; and I still remember, after twenty-five years, all the light and strength she afforded to a young man unknown to her. Her counsel preserved me alike from despondency and the opposite extreme.' As long as her health permitted, she was always among Lacordaire's hearers. 'Should you like to see the preacher's mother?' was asked of two persons who were listening to him in Notre-Dame. 'Why, she died ten years ago!' was the answer. 'No, there
relief, that in 1854 he was appointed to the
direction of the free college of Sozère, and preached
his last sermon in Paris. Once only was he
recalled from his provincial solitude. In 1860, he
was elected to fill the chair in the French Academy,
left vacant by M. de Tocqueville. He was intro-
duced by M. Guizot, and his installation had all the
significance of a political demonstration. Montal-
embert prayed him to remain in Paris for a day or
two, but after some little hesitation he answered:
'No, I cannot; it would perhaps prevent some of
my children, who are preparing for the coming
festival, from going to confession. No one can say
what the loss of one communion may be in the life
of a Christian.' With such zeal did he give himself
to his new duties, that Sozère, under his care,
took rank as the first school in the south of France.

His observance of monastic rule was rigorous in
the extreme, and his health suffered by his austeri-
eties. 'The great men of antiquity were poor,' he
used to say. 'Luxury is the rock on which every
one splits to-day. People no longer know how to
live on little. A great heart in a little house is of all
things here below that which has ever touched me
most.' Despite the simplicity and poverty of his
habits, there was in him a spirit for precision, neat-
ness, and good order, which altogether redeemed
them from meaness. During the last two years of
his life, he was the subject of a cruel disease, against
the influence of which he battled resolutely.
Finally, he had to give up, saying: 'This is the
first time that my body has withstood my will.'
He died on the 22d of November 1861; his last
words were: 'My God! open to me—open to me!'

To Protestants and Catholics, Lacordaire was
a paradox, and in this lay one reason for the interest
he excited. The faithful child of Rome and the
democrat were hard to reconcile, yet in him they
seemed to be united in all sincerity. In theology,
he was no innovator; whatever might be his
vehemence, he never lapsed from orthodoxy. He
was a sentimentalist, not a philosopher; a patriot,
not a statesman. It was his business to nourish his
diuacy, his brilliancy, not depth nor originality of idea,
which drew crowds to hear him. He was, what is
a very rare thing, a real extemporaneous speaker.
He had a wonderful power of improvisation. He
prepared his discourses by short but intense labour,
and made no notes. Reporters took down what he
said, and, with slight revision, he sent their copy to
the press. Readers usually feel them tame and
abounding in platitudes, but no orator can be judged
truly in print. Like an actor, he must be seen to
be appreciated. One day, in the pulpit, Lacordaire
said: 'By the grace of God, I have a horror for
what is commonplace;' whereon, observes his friend
and admirer Montalembert, 'He was never more
mistaken in his life;' but it demands no ordinary genius to bewitch the world with common-

ROBIN HOOD.

Much controversy has prevailed with respect to
this celebrated outlaw, and the difficulty, or rather
impossibility, of now obtaining any information
regarding his history that can be relied on as
authentic, will, in all likelihood, render him over a
words were: 'My God! open to me—open to me!'

The commonly-received belief regarding Robin
Hood is, that he was the captain of a band of
robbers or outlaws, who inhabited the forest of
Sherwood, in Nottinghamshire, and also the wood-
lands of Barnsdale in the west Riding of
Yorkshire. They supported themselves by
levying toll on wealthy travellers, more especially
ecclesiastics, and also by hunting the deer and
wild animals of the forest. Great generosity is
ascribed to Robin, who is represented as preying only
on the wealthy and avaricious, whilst he carefully
eschewed all attacks on poor people or women, and
was ever ready to succour depressed innocence and
worth by his purse as well as his sword and bow.
He is recorded to have cherished a special enmity
towards the sheriff of Nottinghamshire, whom, on
one occasion, under the guise of a butcher,
and pretending that he had some horned cattle
to dispose of, he entrapped into the forest of
Sherwood, and only released on the payment of a
swinging ransom. Bishops and rich ecclesiastics
were the objects of his especial care, but he was,
nevertheless, a religiously-disposed man, and never failed regularly to hear mass or
perform his orisons. He even retained in his band
a domestic chaplain, who had descended to posterity
by the appellation of Friar Tuck, and been immor-
talised in "The Brushe." The lieutenant of this renowned
captain was a tall stalwart fellow called John
Little, but whose name, for the sake of the indis-
ceruous contrast it presented, was transmuted into
Little John. Other noted members of the band
were William Scadlock, George-a-Green, and Much
the miller's son. A mistress has also been assigned
to Robin Hood, under the epithet of 'Maid Marian,'
who followed him to the greenwood, and shared
his dangers and toils.

The same popular accounts represent this gay
outlaw as living in the period extending from the
reign of Henry II, through those of Richard L. and
John, to that of Henry III. We are informed that
he was born at Locksley, in the county of Notting-
ham, about 1160 A. D.; that from having dissipated
his inheritance through carelessness and extrava-
gance, he was induced to adopt the life of an
outlaw in the forests; and that after having, with
the band which he had collected around him, success-
fully conducted his predatory operations for a long
course of years, and set all law and magistrates at
defiance, he at last, in his eighty-seventh year, felt
the infirmities of age coming upon him, and was
induced to enter the convent of Kirklees, in York-
shire, to procure medical assistance. The prioresse,
who is described as a relation—by some, an aunt—
of his own, was led, either through personal enmity
or the instigation of another, to cause the death of
Robin Hood, an object which she accomplished by
opening a vein or artery, and allowing him to bleed
to death. The date assigned to this event is
November 1247. It is stated that when Robin
perceived the treachery which had been practised
on him, he summed all his remaining strength,
and blew a loud blast on his bugle-horn. The
well-known call reached the ears of his faithful
lieutenant, Little John, who forthwith hastened
from the adjoining forest, and arriving at the

606
priory, forced his way into the chamber where his
dying chieftain lay. The latter, according to the
story in the ballad, makes the following request:

'Give me my bent bow in my hand,
And an arrow I'll let free,
And where that arrow is taken up,
There let my grave digged be.'

The bow being then put into his hands by Little
John, Robin discharged it through the open case-
ment, and the arrow alighted on a spot where,
according to popular tradition, he was shortly
afterwards buried. A stone, carved with a florid
cross and an obliterated inscription, marks the
place of sepul-
ture, and the
whole has been in recent times
surrounded by
an enclosure, as
shewn in the
accompanying
engraving. This
probably genu-
ine memorial of
Robin Hood, is
situated on the
extreme edge of
Kirklees Park,
not far from
Huddersfield.
The site which it occupies is bold
and picturesque, commanding an
extensive view of what was
formerly forest-
land, and which
still displays
clumps of garri-
ced oaks, scat-
tered up and
down, mingled
with furze and
scrub.

Finally, we
are informed by
several old bal-
lads, and also by some writers of a later age, that
this prince of robbers was no other than the Earl
of Huntington, who, from misfortunes or his own
mismangement, had been compelled to adopt a
predatory life.

The above statements, with many additions and
variations by way of embellishment, are all set
forth in the numerous ballads which profess to
record the exploits of Robin Hood and his 'merry
men.' A collection of these, under the title of
A Lytell Gest [histoire] of Robyn Hood, from a
manuscript apparently of the latter end of the
fourteenth century, was printed by Winkyn de
Words, one of the earliest English printers, about
1495. It forms the most satisfactory and reliable
evidence that we possess of the life and deeds of
the sylvan hero, and comprises one or two circum-
stances which, as we shall shortly see, go far to
substantiate the fact of the actual existence of
Robin Hood.

The Lytell Gest is divided into eight parts or
fytes, as they are called; the seventh of which, and
part of the eighth, narrate an adventure of Robin
with 'King Edward,' who, at the end of the sixth
fyte, is styled 'Edwarde our comly kyngye.' The
only monarch of that name whom we can consist-
ently believe to be here referred to, is the light-
hearted and unfortunate Edward II, who is de-
scribed as having immediately before made a
progress through Lancashire. His father, Edward I,
ever was in Lancashire after he became king; and
Edward III, if he was ever in that county at all,
was certainly never there during the earlier years
of his reign, whilst, as regards the subsequent years
of his government, we have indisputable evidence
that Robin Hood had by that time become a
historical personage, as at all events an exist-
ence of the past. But with respect to Edward II,
contemporary proof is furnished, that in the
autumn of the year 1333, and not long after the defeat
and death of his great enemy and kinsman, the
Earl of Lancas-
ter, he made a
progress through the counties of
Lancashire,
Yorkshire, and
Nottingham.
Here a coinci-
dence occurs be-
tween a histori-
cal fact and the
incidents related in the ballad.

According to
these last, King
Edward having
arrived at Nottingham, resolves forthwith on the
extermination of Robin Hood and his band, to
whose depredations he imputes the great diminu-
tion that had lately taken place in the numbers of
the deer in the royal forests. A forester under-
takes to guide him to the haunts of the outlaw,
and Edward and his train, disguised like monks—
certainly rather an unkingly masquerade; but
Edward II. had little kinglyness about him—so set
for the place, and on the way thither are suddenly
encountered by Robin and his men, to whom the
pseudo-abbot represents that he has only with him
£40. The half of this he is obliged to give up, but
is courteously permitted to retain the remaining
moiety. After transacting this little matter of
business, Robin invites the abbot and his party to
dine with him—an invitation doubtless not to be
resisted in the circumstances. After dinner, a
shooting-match commences, and in course of this
the real rank of the pretended abbot is discovered,
and Robin, falling down on his knees, cries

\[\text{ROBIN HOOD'S GRAVE.}\]
for himself and retainers. The king grants it, but on condition that the outlaw chief shall quit his present mode of life, and accompany his sovereign to court, where he is promised a place in the royal household. To this he readily consents, and accompanies the king first to Nottingham, and afterwards to London, where, for nearly a year, he 'furnished in the young's course.'

Now it is at least a singular coincidence, that in the records of the household expenses of Edward II., preserved in Exchequer, the name of 'Robyn Hode' occurs several times as a 'valet' or porter of the chamber in the period from the 25th of April to the 22d of November 1324, but no mention of him occurs either previous to the former or subsequent to the latter of these dates. This was the very time during which, according to the ballad, Robin Hood lived at court. The following is the entry on the 23d of November above referred to, which, on the assumption of the ballad-hero and the person there named being the same individual, may be regarded as the latest historical record which we have of that personage. 4 Robyn Hod jadys un des porteurs por cas qil ne posil plaire son maistre, a demaundement de sa grace. 5

To Robin Hood, by command, owing to his being unable any longer to work, the sum of 5s. 6 is unnecessary to remind the reader, that such a sum represented in those days a much greater value than at the present time.

In the ballad under notice, we are informed that Robert, after having remained in the king's service for about a twelvemonth, became weary of the court, and longed for the free and joyous life of Sherwood Forest. The king consents to let him go, but only for a short period—a condition which Robin thoroughly disregards after regaining his liberty. Rapturously welcomed by his old associates, and reinstated as their leader, he continues for twenty-two years to lead the life of a robber-chief, and dies at last through treachery in Kirklees Priory, as already mentioned.

For the coincidences above related, between historical facts and the poetical narrative detailed by the compiler of the Lytell Geste, we are indebted to the researches of the late Rev. Joseph Hunter, who, in an ingenious tract, entitled The Ballad-Hero, Robin Hood, has endeavoured, and we think not un成功fully, to vindicate the real existence of this renowned outlaw against the arguments of those who would represent him as a mere poetical abstraction or myth. To the latter view of his character, we shall now advert.

There is no tendency which has been more characteristic of the present century, than that of investigating the foundations by which historical records are supported, sift ing the evidences authentic, and endeavouring by an analysis of the materials in the crucible of research, to eliminate whatever has been intermingled of false or romance. Ruthless and un sparing has been the process, sweeping and stupendous, in many instances, the demolition thereby occasioned, but the results have in the main been beneficial, and the cause of truth, as well as the progress of human knowledge, been signally benefited. In some instances, however, it cannot be denied that this sceptical and overturning tendency has been carried to an extreme. With a rashness, equivalent to the unhesitating faith which made our fathers accept as undoubtedly fact whatever they found recorded in ancient annals, our critical archæologists of the present day seem not unfrequently to ignore, superciliously, all popular traditions or belief, and transfer, indiscriminately, to the region of myth or fable, the individuals whose actions form the subjects of these popular histories. Such a fate has, with other heroes of folk-lore, been assigned to Robin Hood and Sherwood Forest. It has been maintained by many distinguished antiquaries, including Mr. T. Wright, in our own country, and Grimm in Germany, that Robin Hood is a mere fanciful abstraction, a poetical myth, or 'one amongst the personages of the early mythology of the Teutonic people.' It has been gravely conjectured that his name, 'Robin Hood,' is a corruption for 'Robin of the Wood,' and that he is to be only regarded as a mythical embodiment of the spirit of unrestrained freedom and sylvan sport. The principal grounds on which this argument is maintained, are the absence of any direct historical evidence regarding him; the numbers of places in widely-separated parts of the country, which are associated with him and bear his name; a supposed resemblance between many of the circumstances related of him, and those recorded of various legendary personages throughout Europe.

Where parties have been led to form such views as those above indicated, it requires irrefragable evidence to convert them to an opposite way of thinking. And, doubtless, as far as regards Robin Hood, it is almost hopeless to expect that anything more than what we have hitherto obtained, will be procured to elucidate his history. But the whole weight of inferential evidence seems to be on the side of those who would retain the notion of his having been a real personage. There is nothing, as Mr. Hunter remarks, supernatural in the attributes or incidents recorded of him. These are nothing more than what can be supposed to have belonged, or happened to an English yeoman, skilled in all manly sports, more especially in the use of the bow, and naturally endowed with a generous and genial disposition. Much embellishment and romantic fiction has, doubtless, been superadded to his history; but that the leading features of it, as popularly detailed, rest at all events on a basis of fact, is, in our opinion, satisfactorily established.

It will be observed that Mr. Hunter, in fixing the reign of Edward II. as the period in which Robin Hood flourished, departs from the commonly-received notion, which represents him as living in the time of Richard I. and John. In this view he is supported by all the evidence that can be gathered from actual documents, and also by the statements in the poem of the Lytell Geste; whilst the other notion has no ground to rest on beyond the vague and uncertain authority of tradition, or of chroniclers who wrote long after the events which they profess to record. And it may here also be mentioned, that in the period immediately following Robin Hood's supposed withdrawal from court, Mr. Hunter discovered, in the court-rolls of the Manor of Wakefield, the name of a certain 'Robertas Hood,' residents in a west tower, and a suitor in the manorial court. The adjoining district of Beamsdale, in the West Riding, was no less a haunt of Robin Hood and his followers, than Sherwood Forest, in Nottinghamshire. And another singular
circumstance is, that the wife of this Robertus Hooe is mentioned under the name of Matilda, the title given by some old ballads to Robin Hood's wife, who, however, exchanges it for Marion when she follows him to the forest.

The statement that Robin Hood was the Earl of Huntingdon, seems to rest mainly on an epitaph manufactured in after-times, and on one or two obscure expressions found in ancient writers. Upon a slimy foundation of this kind, Dr Stukeley has built a regular genealogy of Robin Hood, representing his real name as Robert Fitzooth, Earl of Huntingdon. No reliance whatever can be placed on this view of the question, and it is certainly wholly opposed to the few items of historical evidence which have already been adduced.

The earliest demonstrable allusion to Robin Hood in English literature, occurs in Longland's 'Vision of Piers Ploughman,' a poem belonging to the middle of the fourteenth century. A character, allegorising Sloth, is represented as saying:

'I can not perfitly my paternoster as the prest it sayeth,
But I can ryme of Robyn Hode and Randolf, Earl of Chester.'

By thus coupling his name with that of the Earl of Chester, a real personage, this passage affords a presumption that Robin Hood was likewise no creation of the imagination. That the fact of his being mentioned at this date, discords the argument of his having lived only a few years previously, cannot warrantably be maintained, seeing it was a perfectly common practice in the days of manufast to celebrate the deeds of personages, actually living at the time, as well as of those who belonged to a former age.

Assuming Robin Hood and his band to have had a real existence, it becomes a matter of interesting speculation, to conjecture whether any peculiar circumstance in the history of the time can have given rise to this singular society in the form of Nottingham, and the West Riding. M. Thierry, in his 'History of the Norman Conquest,' has represented Robin Hood as the chief of a small body of Saxons, who, in these remote fastnesses, defied successfully the authority of the Norman sovereigns. Another writer has imagined them to be a remnant of the followers of the celebrated Simon de Montfort, Earl of Leicester, who was slain at the battle of Evesham. But Mr Hunter's conjecture is at least as plausible as any—that they were persons who had taken part in the rebellion against Edward II., of his cousin, Thomas, Earl of Lancaster, which had been suppressed by the battle of Boroughbridge, in March 1322. A summary vengeance was taken on the earl, who, with a number of his most distinguished followers, was beheaded at his own castle of Pontefract. Many other chiefs were executed in different places. It is reasonable, however, to conjecture that numerous individuals who had taken part in the insurrection, would contrive to evade pursuit by retreating to remote fastnesses. In this way, a band like Robin Hood's might be formed under the leadership of a bold and energetic captain. The immense popularity which the Earl of Lancaster enjoyed in the West Riding, will tend still farther to explain the favour and good-will with which Robin Hood and his followers seem to have been generally regarded by the peasantry. And a coincidence is thus established between the date of the battle and the progress of Edward II., already mentioned, in the autumn of the following year, through the northern counties of England.

The circumstance of so many places throughout the country bearing the name of Robin Hood—such as Robin Hood's Hill, Robin Hood's Chair, Robin Hood's Bay, &c.—is derived, with great probability, from the practice which prevailed both in England and Scotland, of celebrating on May-day certain sports under the designation of Robin Hood Games. These consisted of a personation of the various characters, which, according to the popular ballads, made up the court or retinue of the king of Sherwood Forest. The reader will find a notice of them at p. 580 of the first volume of this work. From certain places being selected for the observance of these festivities, and also, it may be, from some renowned performer in the games having been connected with a particular locality, the name of Robin Hood has frequently, in all likelihood, been associated with places which he never once visited. Doubtless, however, one or two of these spots are of a more genuine character; such as the grave at Kirkless Priory, and Mr Hunter is inclined to believe, the well, known as 'Robin Hood's Well,' a little to the north of Doncaster, on the Great North Road, leading from that town to Ferrybridge.

NOVEMBER 23.

St Clement, pope and martyr, 100. St Amphiballos, bishop of Ionnium, confessor, 100. St Daniel, bishop and confessor, 545. St Tron, confessor, 698.

Born.—John Wallis, mathematician, 1616. Ashford, Kent; Dr Thomas Birch, historical and biographical writer, 1706, London.

Died.—Louis, Duke of Orleans, brother of Charles VI., assassinated at Paris, 1407; Thomas Tallis, composer of church music, 1585, Greenwich; Richard Hakluyt, chronicler of voyages and travels, 1616; William Bentinck, first Earl of Portland, favourite of William III., 1709; Antoine Francois Prevot, novelist, 1763; Forest of Charny; Thomas Henderson, professor of astronomy, &c., 1844; Sir John Barrow, author of biographies and books of travel, 1846, London.

ARDEN OF FAVERSHAM.

One of the most terrible tragedies in private life—afterwards dramatised as a tragedy for the stage by George Lillo—was that known in connection with the name of Arden of Faversham. In 1539, Henry VIII. having ordered the principal part of the monastic buildings at Faversham, in Kent, to be pulled down, granted the site of the abbey, with some adjoining lands, to Sir Thomas Cheynwy, who alienated them five years afterwards to Mr Thomas Arden, or Ardern, a gentleman of Faversham. It was this Arden whose atrocious murder, while mayor of the town in 1580, became lastingly impressed on the history of Kent. From Holinshed's 'Chronicles' are derived all the later narratives of the event which is now proceeded to relate. Arden's wife, 'Mistress Alice, young, tall,
and well-favoured of shape and countenance,' formed a criminal connection with a paramour named Moysby, 'a black, swart man.' Moysby had been servant to Sir Edward North, Alice's father-in-law; and then settled as a tailor in London. The infatuated wife, lost to all sense of duty and morality, conspired with Moysby to put an end to her husband's existence, in order that she might marry the profligate 'black, swart man.' They employed as their confederate one John Green, a dressmaker, who took the alias Goddith of the same town; and 'one Black Will, of Calyce (Calais), a murderer, which murderer was privily sent for to Calyce by the earnest sute, appoyntment, and confedarcy of Alice Arden and Thomas Moysby. The conspirators watched Master Arden 'walking in Poules' (St Paul's Cathedral, the nave of which was a public Promenade in those days), but could not find an opportunity to murder him; they then lay in wait for him on Rainham Down, and a second time in the Broomy Close (two places near Faversham), but on all these occasions failed in obtaining an opportunity. The wicked wife then laid a plot for murdering her husband in his own house. She procured the services of Moysby's sister, Cicely Pounder, and of two of Arden's domestic servants, Michael Sauderson and Richard Stafil. On a particular day selected—Sunday, too—Black Will was hidden in a closet at the end of Arden's parlour. After supper, Arden sat down to play some kind of game with Moysby; Green stood at Arden's back, holding a candle in his hand, 'to shadowe Black Will when he should come out;' and the other conspirators had their cue. At a given signal in the game, 'Black Will came with a napkyn in his hand, and sodenly came behind Arden's back, threw the said napkyn over his hedd and face, and strangled him; and forthwith Moysby stopt to him, and straks him with a taylor's great pressinge-iron upon the scull to the braines, and immediately drew out his dagger, which was grete and broad, and therewith cut the said Arden's throate.' It is added that 'Mistresse Alice herselfe, with a kniffe, gave him seven or eight pricks into the breast.' When Black Will had helped to drag the dead body into the closet, he went to Cicely Pounder's house, received eight pounds for his nefarious services, and left Faversham. Cicely then went to Arden's habitation, and assisted in bearing the corpse out into a meadow, called the Almery Croft, behind the house; 'where they laid him on his back in his night-gown, with his slippers on.' We are told by the chronicler, that the doubly-wicked Alice and her companions 'danced, and played on the virginals, and were merrie.' It would appear to have been their intention to make the towns-people aware of an entertainment, with dancing and music, having been given by Arden to his friends on that evening, and to induce them to come, so as to avoid the neighbours in night-clothes, that the unfortunate man had been murdered by some one during the night. On the following morning, Alice seems to have alarmed the town with an announcement of her husband's absence from the house, and her fears for his safety. A search was made by the towns-people, and the dead body was found in the Croft. But here occurred one of those trifling incidents which generally tend to the discovery of a murder. Some of the people 'saw a long ruache or two from the parlour-floor [there were no carpets in those days], stuck between one of his slippers and his foot.' Suspicions being aroused, the house was searched, and it was soon found that Arden had been murdered in his own parlour. Very likely Alice's conduct as a wife had already attracted public attention; for she was at once accused of the murder. Her courage gave way, and she cried out: 'Oh the bloud of God help! for this bloud I shedd.' One by one, as evidence came home to them, the guilty confederates suffered the punishment due to their crimes. Mistress Alice was burned at Canterbury; Moysby was taken in bed, and was afterwards hung at Smithfield; Green was hung at Faversham; Black Will escaped for many years, but was at length taken, and hanged on a scaffoale at Plashing; Bradsaw was hanged in chains at Canterbury; Cicely Pounder was hanged at Smithfield; Sauderson was drawn and hanged at Faversham; and Elizabeth Stafford was burned at the same place. It was, in truth, a time when hanging and burning, drawing and quartering, were fearfully rife as punishments for criminals. It was long said that no grass would grow on the spot where Arden's dead body was found; some, in accordance with the superstitious notions of the time, attributed this to the murder; while others declared that 'the field he hadde cruelly taken from a widow woman, who had curst him most bitterly, even to his face, wishing that all the world might wonder on him.'

A tragedy, entitled Arden of Faversham, was printed in 1592, and was at first attributed to Shakespeare. In after-times, the subject was made the groundwork of a play by Lillo, author of George Barnwell and Fatal Curiosity. It is believed that an old house, still standing at Faversham, near the Abbey Gateway, is that in which the terrible crime was committed; and a low-arched door, near the corner of the Abbey wall, is pointed out as that through which the murdered Arden was carried out to the Croft.

PLUGGING LOBSTERS' CLAWS.

There is a curious practice followed by dealers in lobsters, arising out of the action of the wonderful claws with which these crustaceans are provided. We do not refer here to the retail-fishmongers of London and other towns, but to the boilers and wholesale-dealers. Concerning the mode of obtaining the supplies of this favourite delicacy, a writer in the Quarterly Review (No. 189) says: 'Where do all the lobsters come from? The lovers of this most delicious of all the crustaceous tribe will probably be astonished to learn that they are mainly brought from Norway. France and the Channel Islands, the Orkneys and the Shetlands, no, it is true, can produce a rival to the Norwegian market; but fully two-thirds are relentlessly, and with much pinching and twisting, dragged out of the thousand rock-bound inlets which indent the Norwegian coast. They are conveyed alive in a screw steamer, and by smacks, in baskets, sometimes to the extent of twenty thousand in a night, to Great Grimsby, and are then forwarded to town by the Great Northern Railway: another ten thousand arriving perhaps from points on our own coast.
THE CIRCLE OF CARLISLE HOUSE, SOHO SQUARE.

In the bankrupt list of The London Gazette for November 1773, the attention of the public was called, somewhat significantly, to 'Teresa Cornelys, Carlisle House, St Ann, Soho, dealer.' It will not be uninteresting to the reader to have some account of the nature of Teresa Cornelys's dealings.

This lady, by birth a German, and during many years a public singer in Italy and Germany, settled in London somewhere about the year 1756 or 1757; and for twenty years after that time she entertained the public, 'the votaries of fashion of both sexes,' with a series of entertainments, masked balls, and the like, at once 'fascinating and elegant.' These entertainments were held in the suitable mansion of Carlisle House, Soho Square, and figure largely in contemporary papers.

The first printed document referring to Mrs Cornelys, convinces us at once that she must have been a woman of fact. The date of it is, February 18, 1763: 'On Saturday last, Mrs Cornelys gave a ball at Carlisle House, to the upper-servants of persons of fashion, as a token of the sense she has (did not Circe herself insin this little notice?) of her obligations to the nobility and gentry, for their generous subscription to her assembly. The company consisted of 220 persons, who made up fourscore couple in country-dances; and as scarce anybody was idle on this occasion, the rest sat down to cards.'

The nobility and gentry who patronised Carlisle House, did so by paying an annual subscription, in consideration of which they received a ticket, which gave them the run of all that was there, whether it were a ball, or a masked ball, or 'a grand concert of vocal and instrumental music.' Also, it appears, they had the privilege of lending these tickets to friends—a great convenience—provided they wrote 'the name of the person upon the back of the said ticket, to whom they have lent it; *[here the English is again a little Germanised] 'to prevent any mistake.' No doubt single tickets for particular evenings, and the special benefit of non-subscribers, were to be had.

Notwithstanding her great success, for it seems to have been by no means inconsiderable, Mrs Cornelys had her troubles. It was natural that competition should originate opposition establishments. But on her part the best of feeling is always to be promised. ' Whereas it has been industriously reported, to the disadvantage of Mrs Cornelys, that she has expressed herself dissatisfied with a subscription now on foot, to build a large room in opposition to hers; she esteems it her duty, in this public manner, to declare that she never once entertained a thought so unjust and unreasonable.' Nay, so satisfied is she with matters in general, that her longing for 'fatherland' is perceptibly on the decline. ' She humbly hopes she has not been wanting in duty and gratitude to her protectors, and cannot sufficiently be thankful for the comfort she enjoys in this happy country, which she hopes never to leave.'

Mrs Cornelys seems to have spared no money or pains to have everything in keeping with the tastes of her illustrious friends. The expense of the alterations and additions to Carlisle House in Soho Square, and of the 'new embellishments and
THE CIRCLE OF CARLISLE HOUSE.  THE BOOK OF DAYS.  MERMAIDS.

furniture, amounted for the year 1785, alone to 'little less than £3000,' and made that house, in the news-writer's opinion, 'the most magnificent place of public entertainment in Europe.' To one of the rooms was added, 'the most curious, singular, and superb ceiling that ever was executed or even thought of:' and to obviate certain complaints of excessive heat, she arranged to have 'tea below stairs and ventilators above,' and succeeded so admirably, that subscribers were no longer subjected to 'the least danger of catching cold.' To relieve the press of the distinguished crowd, in its entrance and exit, she provided an additional door, and also 'a new gallery for the dancing of cotillons and allemandes, and a suite of new rooms adjoining;' in consequence of which she was most reluctantly compelled to charge subscribers an additional guinea.

On February 27, 1770, Mrs Cornelys's continued efforts were rewarded with a most magnificent masquerade.

First, as to the numbers who attended, 'Monday night the principal nobility and gentry of this kingdom, to the number of nearly eight hundred, were present at the masked ball, at Mrs Cornelys's, in Soho Square.'

Next, as to the stir it made in the neighbourhood. 'Soho Square and the adjacent streets were lined with thousands of people, whose curiosity led them to get a sight of the persons going to the masquerade; nor was any coach or chair suffered to pass unviewed, the windows being obliged to be let down, and lights held up to display the figures to more advantage.'

One does not wonder at the anxiety of the rabble to see all that was to be seen, for 'the richness and brilliancy of the dresses,' we are told, 'were almost beyond imagination; nor did any assembly ever exhibit a collection of more elegant and beautiful female figures.'

And now for the company. The reader may form a faint idea: 'Among them were Lady Waldegrave, Lady Pembroke, the Duchess of Hamilton, Mrs Crewe, Mrs Hodges, Lady Almeria Carpenter, &c.'

The characters assumed by the company were extremely ridiculous. Sir R. Phillips appeared as 'a double man, half-miller, half-chimney sweeper.' There was also 'a figure of Adam in flesh-coloured silk, with an apron of fig-leaves,' who, in spite of the fig-leaves, must have seemed rather out of keeping. The Earl of Carlisle figured as a running footman; Mr James, the painter, as Midas. The Duke of Devonshire was 'very fine, but in no particular character.' And 'Lord Ed—h, in the character of an old woman, was full as lovely as his lady.'

But the ladies were not to be outdone on this festive occasion. 'The Countess-Dowager of Waldegrave wore a dress richly trimmed with beads and pearls, in the character of—'we are sorry to observe it—'Jane Shore.' Many indulged a classical fancy. 'The Duchess of Bolton, in the character of Diana, got Sir Stanhope, a Melpsomene, a striking fine figure.' 'Lady Augustus Stuart, as a Vestal, and Lady Caroline, as a Fille de Patmos, showed that true elegance may be expressed without gold and diamonds.' Others took a more modern turn. 'The Countess of Pomfret, in the character of a Greek sultana, and the two Miss

Fredericks, who accompanied her, as Greek slaves, made a complete group; and to eclipse all, 'Miss Monckton, daughter to Lord Galway, appeared in the character of an Indian sultana, in a robe of golden cloth of gold, and a rich veil. The sole of her habit were embroidered with precious stones, and she had a magnificent cluster of diamonds on her head: the jewels she wore were valued at £20,000.'

But all these brilliant achievements, it seems, were to have an end. The opening of the Pantheon shattered Mrs Cornelys to some extent. Then, unfortunately, there were certain 'Bills of Indictment preferred to the Grand Jury.' These Indictments instigated of Mrs Cornelys, 'that she does keep and maintain a common disorderly house, and did permit and suffer divers loose, idle, and disorderly persons, as well men as women, to be and remain during the whole night, rioting and otherwise misbehaving themselves.'

Upon this the nobility and gentry, we presume, to be on the safe side of rumour, transferred their patronage mostly to the Pantheon. For in July 1772, 'the creditors of Mrs Cornelys, of Carlisle House, Soho Square,' were 'most earnestly requested to deliver forthwith a particular account of their several and respective demands on the said Mrs Cornelys, to Mr Hickey, in St Alban's Street.' And at last our little register, from the London Gazette, of 'Teresa Cornelys, Carlisle House, St Ann, Soho, dealer,' closes the scene.

We hear a great deal more of Carlisle House, and the desperate struggle which it made, apparently with not much success, to regain its position; but it is enough. Mrs Cornelys ultimately retired into private life, and died at a very advanced age, August 19, 1797, in the Fleet Prison.

MERMAIDS.

Mermaids have had a legendary existence from very early ages; for the Syrens of the ancients evidently belonged to the same remarkable family. Mermen and mermaids—men of the sea, and women of the sea—have been as stoutly believed in as the sea-serpent, and on very much the same kind of evidence. Sometimes, as expressed in Haydn's Mermaid's Song, there is a slight touch of romance connected with the matter: as where the mermaid offers the tempting invitation:

'Come with me, and we will go Where the rocks of coral grow.'

But the romance is somewhat damped when the decidedly fishy tail is described. The orthodox mermaid is half-woman, half-fish; and the fishy hair is sometimes depicted as being doubly-tailed. The heraldry of France and Germany often exhibits mermaids with two tails among the devices; and in the Basle edition of Ptolemy's Geography, dated 1640, a double-tailed mermaid figure on one of the plates. Shakespeare makes many of his characters talk about mermaids. Thus, in the Comedie of Errors, Antipholus of Syracuse says:

'Oh, train me not, sweet mermaid, with the note!'  

And in another place:

'I'll stop mine ears against the mermaid's song.'

In the Midsummer-Night's Dream, Oberon says:

'I heard a mermaid on a dolphin's back.'
In *Hamlet*, the queen, speaking of Ophelia's death, says:

*'Her clothes spread wide; and mermaid-like, Awhile they bore her up.'*

In two other passages, he makes his characters say:

*'I'll drown more sailors than the mermaids shall!'*

And:

*'At the helm a seeming-mermaid steers.'*

But in all these cases Shakespeare, as was his wont, made his characters say what they were likely to think, in their several positions and periods of life.

Notices of mermaids are scattered abundantly in books of bygone times; sometimes in much detail, sometimes in a few vague words. In Merulo's *Voyage to Congo*, in 1682, mermaids are said to be very plentiful all along the river Zaire. A writer in *Notes and Queries*, in November 1886, lighted upon an old Scotch almanac, called the *Aberdeen Almanack or New Prophecies for the Year 1688*; in which the following curious passage occurs: *'To conclude for this year 1688. Near the place where the famous Doe payeth his tribute to the German Ocean, if curious observers of wonderful things in nature will be pleased thither to resort the 1, 13, and 29 of May, and in divers other times in the ensuing summer, as also in the harvest-time, to the 7 and 14 October, they will undoubtedly see a pretty company of Mar Mairds, creatures of admirable beauty, and likewise hear their charming sweet melodious voices:*

*'In well-tun'd measures and harmonious lays, Ertol their Maker and his bounty praise; That godly honest men, in everything, In quiet peace may live, GOD SAVE THE KING!*'*

The piety and loyalty of these predicted mermaids are certainly remarkable characteristics. In another part of Scotland, about the same period, a real mermaid was seen, if we are to believe Brand's *Description of Orkney and Shetland*, published in 1701. Two fishermen drew up with a hook a mermaid, 'having face, arms, breast, shoulders, &c., of a woman, and long hair hanging down the neck; but the nether-part from below the waist hidden in the water.' One of the fishermen, in his surprise, drew a knife and thrust it into her heart; 'whereupon she cried, as they judged, "Alas!" and the hook giving way, she fell backwards, and was seen no more.' In this case the evidence went thus—Brand was told by a lady and gentleman, who were told by a bailie to whom the fishing-boat belonged, who was told by the fishermen; and thus we may infer as we please concerning the growth of the story as it travelled.

In 1775, there was a very circumstantial account given of a mermaid, which was captured in the Grecian Archipelago, in the preceding year, and exhibited in London. *'It has,' as the *Annual Review* of that day said, *'the features and complexion of a European. Its face is like that of a young female; its eyes of a fine light blue; its nose small and handsome; its mouth small; its lips thin, and the edges of them round like those of a codfish; its teeth small, regular, and white; its chin well shaped; its neck full; its ears like those of the eel, but placed like those of the human species; and behind them are the gills for respiration, which appear like curls. Some (mermaids) are said to have hair upon the head; but this has none, only rolls instead of hair, that at a distance may be mistaken for curls. But its chief ornament is a beautiful membrane or fin, rising from the temples, and gradually diminishing till it ends pyramidically, forming a foretop like that of a lady's head-dress. It has no fin on the back, but a bone like that of the human species. Its breasts are fair and full, but without nipples; its arms and hands are well proportioned, but without nails on its fingers; its belly is round and swelling, but no navel. From the waist downwards, the body is as respects like a codfish. It has three sets of fins, one above another, below the waist, which enables it to swim out upon the sea; and it is said to have an enchanting voice, which it never exerts except before a storm.'* Here there is no great intricacy of evidence, for a writer in the *Gentleman's Magazine* also said he saw this particular mermaid—which, however, he described as being only three feet long, tall and all. But a sad blow was afterwards given to its reputation, by a statement that it was craftily made up out of the skin of the angle-shark.

In *Mrs Morgan's Tour to Milford Haven in the Year 1785*, there is an equally circumstantial account of a mermaid observed by one Henry Reynolds, in 1782. Reynolds was a farmer of Pen-y-hold, in the parish of Castlemartin. One morning, just outside the cliff, he saw what seemed to him a person bathing, with the upper part of the body out of the water. Going a little nearer, to see who was bathing in so unusual a place, it seemed to him like a person sitting in a tub. Going nearer still, he found it to resemble a youth of sixteen or eighteen years of age, with a very white skin. The continuation of the body below the water, seemed to be a brownish substance, ending with a tail, which seemed capable of waving to and fro. 'The form of its body and arms was entirely human; but its arms and hands seemed rather thick and short in proportion to its body. The form of the head and all the features of the face were human also; but the nose rose high between, and the eyes, was pretty long, and seemed to terminate very sharp.' Some peculiarities about the neck and back are then noticed, as also its way of washing its body. 'It looked attentively at him and at the cliffs, and seemed to take great notice of the birds flying over its head. Its looks were wild and fierce; but it made no noise, nor did it grin, or in any way distort its face. When he left it, it was about a hundred yards from him; and when he returned with some others to look at it, it was gone.' We hear nothing further of this merman or merboy; but on looking at the roundabout evidence of the story, we find it to be thus—A paper containing the account was sent to *Mrs Morgan*; the paper had been written by a young lady, pupil of *Mrs Moore*, from an oral account given to her by that lady; *Mrs Moore* had heard it from Dr George Phillips; and he had heard it from Henry Reynolds himself—from all of which statements we may infer that there were abundant means for converting some peculiar kind of fish into a merman without imputing intentional dishonesty to any one. Something akin to this kind of evidence is observable in the account of a mermaid seen in Caithness in 1809, the account of which attracted much attention in
THANKSGIVING-DAY IN AMERICA.

THE BOOK OF DAYS.

England as well as in Scotland, and induced the Philosophical Society of Glasgow to investigate the matter. The editor of a newspaper who inserted the statement had been told by a gentleman, who had been shown a letter by Sir John Sinclair, who had obtained it from Mrs Innes, to whom it had been written by Miss Mackay, who had heard the story from the persons (two servant girls and a boy) who had found the strange animal in the water. So it is with all these stories of mermaids when investigated. There is always a fish at the bottom of it—either a living fish of peculiar kind, which an ignorant person thinks bears some resemblance to a human being; or a fish which becomes marvellous in the progress of its description from mouth to mouth; or a dead fish's skin manufactured into something that may accord with the popular notions regarding these beings. Mr. George Cruikshank, in 1822, made a drawing of a mermaid, which was exhibited in St. James's Street, and afterwards at Bartholomew Fair; it drew crowds by its ugliness, and showed what wretched things will suffice to gull the public—although, of course, outside the booth at the fair there was a picture of the orthodox mermaid, with beautiful features and hair, comb in one hand, mirror in the other, and so forth. This was probably the identical mermaid, respecting which the lord chancellor was called upon to adjudicate, towards the close of November 1822. There was a disputed ownership, and his lordship expressed his satisfaction that he was not called upon to decide whether the animal was a man, woman, or mermaid; but only to say to whom it rightfully belonged.

Thanksgiving-Day in America.

The great social and religious festival of New England, from which it has spread to most of the states of the American republic, is a legacy of the Puritans. They abolished Christmas as a relic of popery; or of preciosity, which they held in nearly equal detestation, and passed laws to punish its observance; but, wanting some day to replace it, the colonial assemblies, and, later, the governors of the states, appointed every year some day in autumn, generally toward the end of November, as a day of solemn prayer and thanksgiving for the blessings of the year, and especially the bounties of the harvest.

Thanksgiving-day is always celebrated on Thursday, and the same day is chosen in most of the states. The governor's proclamation appointing the day, is read in all the churches, and there are appropriate sermons and religious exercises. Families, widely scattered, meet at the bountiful thanksgiving-dinners of roast turkeys, plum-pudding, and mince and pumpkin pies. The evenings are devoted by the young people to rustic games and amusements.

The subjects of the thanksgiving-sermons are not unfrequently of a political character, and in the chief towns of the union, those of the most popular preachers are generally published in the newspapers. The thanksgiving-festival, though widely celebrated, is not so universally respected as formerly, as the influx of Roman Catholics and Episcopalian has brought Christmas again into vogue, which is also kept by the Unitarians with considerable solemnity. As a peculiar American festival it will, however, long be cherished by the descendants of the Puritans.

NOVEMBER 25.

St. Catharine, virgin and martyr, 4th century. St. Erasmus or Elm, bishop and martyr, 4th century.

ST. CATHARINE.

Among the earlier saints of the Roman calendar, St. Catharine holds an exalted position, both from rank and intellectual abilities. She is said to have been of royal birth, and was one of the most distinguished ladies of Alexandria, in the beginning of the fourth century. From a child she was noted for her acquirements in learning and philosophy, and while still very young, she became a convert to the Christian faith. During the persecution instituted by the Emperor Maximinus II., St. Catharine, assuming the office of an advocate of Christianity, displayed such cogency of argument and powers of eloquence, as thoroughly silenced her pagan adversaries. Maximinus, troubled with this success, assembled together the most learned philosophers in Alexandria to confute the saint; but they were both vanquished in debate, and converted to a belief in the Christian doctrines. The enraged tyrant thereupon commanded them to be put to death by burning, but for St. Catharine he reserved a more cruel punishment. She was placed in a machine, composed of four wheels, connected together and armed with sharp spikes, so that as they revolved the victim might be torn to pieces. A miracle prevented the completion of this project. When the executioners were binding Catharine to the wheels, a flash of lightning descended from the skies, severed the cords with which she was tied, and shattered the engine to pieces, causing the death both of the executioners and numbers of the bystanders. Maximinus, however, still bent on her destruction, ordered her to be carried beyond the walls of the city, where she was first scourged and then beheaded. The legend proceeds to say, that after her death her body was carried by angels over the Red Sea to the summit of Mount Sinai. The celebrated convent of St. Catharine, situated in a valley on the slope of that mountain, and founded by the Emperor Justinian, in the sixth century, contains in its church a marble sarcophagus, in which the relics of St. Catharine are deposited. Of these the skeleton of the hand, covered with rings and jewels, is exhibited to pilgrims and visitors.

A well-known concomitant of St. Catharine, is the wheel on which she was attempted to be tortured, and which figures in all pictured representations of the saint. From this circumstance are derived the well-known circular window in ecclesiastical architecture, termed a Catharine-wheel window, and also a firework of a similar form. This St. Catharine must not be confounded with the equally celebrated St. Catharine of Sienna, who lived in the fourteenth century.

* See p. 396 of this volume.
Born.—Lopes de la Vega, great Spanish dramatist, 1565, Madrid; Charles Kemble, actor, 1775, Bremen; Henry Mayhew, popular writer, 1812, London.

Died.—Pope Lincoln III, 1182; Andrea Doria, Genoese admiral and patriot, 1560, Genoa; Edward Alleyn, actor, founder of Dulwich College, 1626, Dulwich; John Tillotson, archbishop of Canterbury, eminent Whig divine, 1694, Lambeth; Dr Isaac Watts, poet and hymn-writer, 1748, Stains-Newington; Henry Baker, author of *The Microscope Made Easy*, 1774, London; Richard Glover, poet, 1785; Thomas Amory, eccentric author, 1785; Sir Augustus Wall Callcott, landscape painter, 1844, Kensington; John Gibson Lockhart, son-in-law and biographer of Sir Walter Scott, 1854, Shibden; Rev. John Kitts, illustrator of the Bible and sacred history, 1854, Cannstadt, near Stuttgart; Angus B. Beach, miscellaneous writer, 1856, London.

THE FOUNDER OF DULWICH COLLEGE.

Edward Alleyn, the son of an innkeeper, was born at the sign of the ‘Pye,’ in Bishopsgate, London. In the days before theatres were specially erected for the purpose, the yards of old inns, surronded by tiers of wooden galleries, were particularly eligible for the representation of plays. Young Alleyn must, therefore, have been early accustomed to witness stage-performance. His father dying, and his mother marrying again one Browne, an actor and haberdasher, Alleyn was bred a stage-player, and soon became the Roscius of his day. Ben Jonson thus bears testimony to his merit:

"If Rome so great, and in her wisest age,
Feared not to boast the glories of her stage,
As skilful Roscius and grave *Esop*, men,
Yet crowned with honours as with riches then;
Who had no less a trumpet of their name
Than Cicero, whose every breath was fame;
How can such great example die in me,
That Alleyn, I should pause to publish thee?
Who both their graces in thy self hast more
Outstrip, than they did all that went before:
And present worth in all dost so contract,
As others speak, but only thou dost act.
Wear this renown: 'tis just, that who did give
So many poets life, by one should live.'

Exactly so, the poor player struts and frets his hour upon the stage, then dies, and is heard no more, but the poet lives for all time; and it was a brave thing for rare old Ben to acknowledge this, in the last two of the preceding lines:

"'Tis just that who did give
So many poets life, by one should live.'

Alleyn has been termed the Garrick of Shakespeare’s era, and was no doubt intimate with the bard of Avon, as well as with Ben Jonson. A story is told of this grand trio spending their evening, as was their wont, at the Globe, in Blackfriars. On this occasion, Alleyn jocularly accused Shakespeare of having been indebted to him for Hamlet’s speech, on the qualities of an actor’s excellency. And Shakespeare, seemingly not relishing the innuendo, Jonson said with all the air of needeth no contention you stole it from Ned, no doubt; do not marvel: have you not seen him act, times out of number?"'

Alleyn’s first wife was Joan Woodward, the step-daughter of one Henlalow, a theatrical speculator and pawnbroker; a thrifty man, withal, well calculated to foster and develop the acquisitive spirit, so characteristic of the future life of his stepson-in-law. Soon after his marriage, Alleyn commenced to speculate in messuages and lands—buying and selling—and his exertions were so successful that he had to have been attended with profit. Amongst his other purchases, are inns of various signs—as the ‘Barge,’ the ‘Bell and Cock’ at the Bankside; the ‘Boar’s Head,’ probably the very house immortalised by his friend and fellow-actor Shakspeare, in *Eastcheap*; the parsonage of Firle, in Sussex, and the manor of Kennington in Surrey, may be added as instances of the curious variety of Alleyn’s property. Being appointed to the office of royal beaward, he became keeper and proprietor of the bear-garden, which, besides bringing him an income of £500 per annum, led him to speculate in bulls, bears, lions, and animals of various kinds. One of the papers in Dulwich College, is a letter from one Fawnt, a trainer of fighting-bulls, who writes as follows:

"Sir, Alleyn, marked the grace of God, I understood by a man, who came with two bears from the garden, that you have a desire to buy one of my bulls. I have three western bulls at this time, but I have had very ill-luck with them, for one has lost his horn to the quick, that I think he will never be able to fight again; that is my old Star of the West, he was a very easy bull; and my bull Bevis, he has lost one of his eyes, but I think if you had him, he would do you more hurt than good, for I protest he would either throw up your dogs into the lofts, or else ding out their brains against the grates, so that I think he is not for your turn. Besides, I esteem him very high, for my Lord of Rutland’s man bad me for him twenty marks. I have a bull, which came out of the west, which stands me in twenty nobles. If you should like him, you shall have him of me. Faith he is a marvellous good bull, and such a one as I think you have had but few such, for I assure you that I hold him as good a double bull as that you had of me last is a single, and one that I have played thirty or forty courses, before he hath been taken from the stake, with the best dogs.

Though Alleyn had, without doubt, a keen eye for a bargain, a ready hand to turn a penny, and an active foot for the main chance, he was, unlike many men of that description, of a true, affectionate, and kindly nature; ever anxious for the welfare and happiness of his home and its inmates. In his letters, when from home, he playfully styles his wife ‘mecho, mounsi, and mouse’; speaks of her father as ‘Daddy Henlalow;’ and her sister, as ‘Sister Bess;’ or ‘Bess Dodipoll,’ the latter appellation probably derived from some theatrical character. When the plague was raging, in his absence from London, he thoughtfully and playfully writes to his wife:

‘My good, sweet mouse, keep your house fair and clean, which I know you will, and every evening throw water before your door; and have in your windows good store of rose and herb of grace, and pray, that the grace must be obtained by prayers; and so doing, no doubt but the Lord will mercifully defend you.’

His interest in home matters, among all his more money-making transactions, never seems to flag. On another occasion he writes:

‘Mouse, you send me no news of any things;’
THE BOOK OF DAYS.

Dr. Kitto.

You should send me of your domestical matters, such things as happen at home, as how your distilled water proves, or this or that.

It is little wonder to us, that such a man, when finding himself advanced in years, without an heir, should devote his property to the benefit of the poor. But the bad repute, that so anciently attached to an actor's profession, made the circumstance appear on a fair day a miracle, which, of course, was explained by its consequent myth. According to the latter, Alleyn, when acting the part of a demon on the stage, was so terrified by the apparition of a real devil, that he forthwith made a vow to bestow his substance on the poor, and subsequently fulfilled this engagement by building Dulwich College.

The bad odour in which an actor was formerly held, is clearly exhibited by Fuller, who, speaking of Alleyn, quaintly says: 'In his old age, he made friends of his unrighteous mammon, building therewith a fair college at Dulwich, for the relief of poor people. Some, I confess, count it built on a foundered foundation, seeing, in a spiritual sense, none is good and lawful money, save what is laid out in holy charity. But, in one case, such as condemn Master Alleyn herein, have as bad shillings in the bottom of their own bags, if search were made therein. Thus he, who outacted others, outdied himself before his death.'

In further evidence of the disrespect attaching to actors in these days, it may be mentioned here, probably for the first time in print, that Isaac Walton, in his life of Dr. Donne, has unworthy suppressed his name, that in an antechamber of the reviewer, Constance, was Alleyn's second wife. There were other reasons, however, for maintaining a prudent silence on that point; by a letter preserved at Dulwich, it would appear that Donne attempted to cheat Alleyn out of his wife's dowry.

Exercising his practical genius, Alleyn had his college built during his lifetime. In 1619, it was occupied by a school, that in an antechamber of the reviewer, founder read the Act of creation; and the party, consisting of the Lord Chancellor, the Earl of Arundel, Inigo Jones, and others of similar position and consequence, went to dinner. Each item of the feast, and its price, is carefully recorded in Alleyn's diary. Suffice it to say here, that they had beef, mutton, venison, pigeons, godwits, oysters, anchovies, grapes, oranges, &c., the whole washed down by eight gallons of claret, three quarts of sherry, three quarts of white wine, and two hogsheads of beer.

Alleyn then took upon himself the management of his college of God's Gift; living in it among the twelve poor men and twelve poor children, whom his bounty maintained, clothed, and educated. Here he was visited by the wealthy and noble of the land; and here he lost his faithful partner, Joan Woodward, and soon after married Constance, daughter of Dr. Donne. Alleyn administered the affairs of his college till his death, which took place in the sixty-first year of his age, on the 23d of November 1636. With a pardonable wish to preserve his name in connection with the charity he founded, Alleyn appointed that the master and industrious gotten, should always be of the blood and surname of Alleyn. So strictly was this rule kept, that one Anthony Allen, a candidate for the mastership, was rejected in 1670, for want of a letter in his name; but that objection has since been overruled.

Alleyn did not forget the people among whom he was born, nor those among whom he made his money. By his last will and testament Edward Alleyn, Esquire, Lord of the Manor of Dulwich, founded ten almshouses, for ten poor people of the parish of St. Botolph's, Bishopsgate; and ten almshouses for ten poor people of the parish of St. Saviour's, Southwark, where his bear-garden had so splendidly flourished. And, forgetting the ill-treatment he received from his father-in-law, he amply provided for his widow with a legacy of £1800; no mean fortune according to the value of money in those days.

Dr. Kitto.

Per arduas was the motto graven on John Kitto's seal, and a more apt one he could scarcely have chosen. He was born in Plymouth in 1804, and as an infant was so puny, that he was hardly expected to live. He was carried in arms long after the age when other children have the free use of their limbs, and in his earliest recollections was a headache, which afflicted him with various intermissions to the end of his days. His father was a master-builder, and was daily sinking in the world through intemperate habits. Happily the poor child had a grandmother, who took a fancy for him, and had him to live with her. She was a simple and kindly old woman, and entertained her little Johnny for hours with stories about ghosts, wonders, when the lookout, of which she seemed to have an exhaustless store. She taught him to sew, to make kettle-holders, and do patchwork, and in fine weather she led him delightful strolls through meadows and country lanes. As he grew older, a taste for reading shewed itself, which grew into a consuming passion, and the business of his existence became, how to borrow books, and how to find means to buy them. He had to leave school, and that between his eighth and eleventh years, frequently interrupted by seasons of illness. When he was ten, his affectionate grandmother became paralysed, and he had to return to his parents, who found him a situation in a barber's shop. One morning a woman called, and told Kitto she wished to see his master. The guileless boy went to call him from the public-house, and in his absence she made off with the razors. In his rage at the loss, the barber accused Kitto of boasting a confederate in the theft, and instantly discharged him.

His next employment was as assistant to his father, and in this service occurred the great misfortune of his life. They were repairing a house in Batter Street, Plymouth, in 1817, and John had just reached the highest round of a ladder, with a load of slates, and was in the act of stepping on the roof, when his foot slipped, and he fell from a height of five-and-thirty feet on a stone pavement. He bled profusely at the mouth and nostrils, but not at the ears, and neither legs nor arms were broken. For a fortnight he lay unconscious. When he recovered, he wondered at the silence around him, and asking for a book, was answered by signs, and then by writing on a slate.

'Why do you write to me?' exclaimed the poor sufferer. 'Why do you not speak? Speak! speak!'
There was an interchange of looks and seeming whispers; the fatal truth could not be concealed; again the screech took his pencil, and wrote: "You are deaf!" Deaf he was, and deaf he remained until the end of his life.

If the prospect of poor Kitto's life was dark before, it was now tenfold darker. His parents were unable to assist him, and left him in idleness to pursue his reading. He wandered and grooped in the mud of Plymouth harbour for bits of old rope and iron, which he sold for a few pence with which to buy cheap hand-coloured pictures and sold them to children for their half-pence. He wrote labels, to replace those in windows, announcing 'Logins for singel men,' and hawked them about town with slight success. By none of these means could he keep himself in food and raiment, and in 1819, much against his will, he was lodged in the workhouse, and set to learn shoe-making. His gentle nature and studious habits attracted the attention and sympathy of the master, and procured him a number of indulgences. He commenced to practice literary composition, and quickly attained remarkable facility and elegance of style. He began to keep a diary, and was prompted by the master to write lectures, which were read to the other workhouse boys. At the end of 1821, he was apprenticed to a shoemaker, who abused and struck him, and made him so miserable, that the idea of suicide not infrequently arose to tempt him. Here, however, Kitto's pen came to his effectual help, and his well-written complaints were the means of the dissolution of his apprenticeship and re-admission to the workhouse after six months of intolerable wretchedness. Meanwhile the literary ability of the deaf pauper-boy began to be known; he was allowed to read in the Public Library; and some of his essays were printed in the Plymouth Journal. In the end there was written in the admission-book of the workhouse—"John Kitto discharged, 1823, July 17th. Taken out under the patronage of the literati of the town."

Kitto's first book appeared in 1825, consisting of Essays and Letters, with a short Memoir of the Author. It brought him little profit, but served to widen his circle of friends. One of these, Mr. Grove, an Exeter dentist, invited him to his house, and liberally undertook to teach him his own art; but after a while, hoping to turn his talents to better account, he had him introduced to the Missionary College at Islington, to learn printing. From thence he was sent to Malta, to work at a press there; but Kitto was much more inclined to private study than to mechanical occupation, and his habits not giving satisfaction to the missionaries, he returned to England in 1839, and set out with Mr. Grove on a religious mission to the east. For four years he travelled in Russia, the Caucasus, Armenia, and Persia. Whilst living at Bagdad in 1831, the plague broke out, in which about fifty thousand perished, or nearly three-fourths of the inhabitants of the city. In this dreadful visitation, Mr. Grove lost his wife. Kitto was restored to his native land in safety in 1833, with a mind enriched and enlarged with a rare harvest of experience.

Anxious, because with no certain means of livelihood, he fortunately procured an introduction to the secretary of the Society for the Diffusion of Useful Knowledge, and was employed by Mr. Charles Knight as a contributor to the Penny Magazine. Proving a capable and steady workman, he obtained the promise of constant occupation, on the strength of which he married, and in his wife found a helpmate literary and domestic. Mr. Knight, in 1835, projected a Pictorial Bible, with notes, and intrusted the editorship to Kitto. It was published in numbers, it was praised everywhere, it sold well, and its execution clearly indicated the line in which Kitto was destined to excel. He was next engaged on a Pictorial History of Palestine, then on a Cyclopedia of Biblical Literature, and finally on eight volumes of Daily Bible Illustrations. Besides these, he produced a number of minor works in illustration of the Scriptures, and started and edited a quarterly Journal of Sacred Literature. These writings made the name of Kitto a familiar word in every religious household in the land, and in 1860 he was placed for a pension of £100 a year on her Majesty's civil list, in consideration of his services.

Kitto was a ready writer, but at the same time painstaking and correct; and the production of such a mass of literature as lies under his signature, within a period of less than twenty years, entailed the necessity of perpetual labour. 'The working-day of the British Museum,' he wrote to Mr. Knight, 'is six hours—mine is sixteen hours.' His deafness,
abstinence from work for a year or two; but he insisted on completing his literary engagements, and alleged, truly, that he had a wife and ten children to provide for. A number of his admirers subscribed ample funds to justify some years of repose, and in the August of 1864 he retired to Cannstadt, in Württemberg, but it was too late. On the 25th of November he died at Cannstadt, and was there buried.

In his seventeenth year, Kitch wrote this description of himself, which, making allowance for age, might serve for his picture at fifty, with the addition perhaps of an inch or two to his stature.

'I am four feet eight inches high; my hair is stiff and coarse, of a dark-brown colour, almost black; my head is very large, and, I believe, has a tolerable good lining of brain within. My eyes are brown and large, and are the least unexceptionable part of my person; my forehead is high, eyebrows bushy; my nose is large; my mouth very big; teeth well enough; my limbs are not ill-shaped; my legs are well-shaped.'

DOUBLE-CONSCIOUSNESS: ALTERNATE SANITY AND INSANITY.

An inquest, held in London on the 25th of November, 1835, afforded illustrative testimony to that remarkable duality, double-action, or alternate action of the mind, which physicists and medical men have so frequently noticed, and which has formed the basis for so many theories. Mr. Macquerell, a gentleman connected with the East India Company, and resident in London, committed suicide by taking prussic acid, while labouring under an extraordinary paroxysm of delusions. During a period of four years, he had had these delusions every alternate day. Dr. James Johnson, his physician, had bound himself by a solemn promise to the unhappy man, never to divulge to any human being the exact nature of the delusions in question. Fulfilling this promise, he avoided giving to the jury any detailed account. The doctors stated that the delusions under which his patient laboured, while accompanied by most dreadful horrors and depression of mind, had not the remotest reference to any act of moral guilt, or to any circumstance in which the community could have an interest, but turned on an idle circumstance equally unimportant to himself and to others, but still were capable of producing a most extraordinary horror of mind.' Mr. Macquerell called his two sets of days his 'good days' and 'bad days.' On his bad days he would, if possible, see no one, not even his physician. On his good days he talked earnestly with Dr. Johnson concerning his malady; and said that although what he suffered on his bad days in body and mind might induce many men to rush madly upon suicide for relief, yet he himself had too high a moral and religious sense even to be guilty of such an act. The delusion, Dr. Johnson declared, was not of a kind that would have justified any restraint, or any imputation of what is usually called insanity. It was on one subject only, a true monomania, that a hallucination prevailed. Whether in London or the country, travelling by road or by sea, this monomania regularly returned every alternate day, beginning when he woke in the morning, and lasting all the day through.

The miserable victim felt the first attack of it at a period of unusual excitement and disappointment; and from that time it gradually strengthened until his death—leaving him on the intermediate days, however, a clear-headed and perfectly sane man:—nay, a highly-educated gentleman, of very superior intellectual powers. On two different occasions, his alternations of good and bad days influenced his proceedings in a curious manner. On each day what had been done the day before. It was just before the era of railways, when long journeys occupied two or more days and nights in succession. At one time, he secured a passage in the mail to Paisley; but on reaching Manchester he quitted the coach, and returned by the first conveyance to London. Again he quitted London by mail for Paisley, but turned back at Birmingham. A third time he engaged a place in the mail to Paisley, but did not start at all, and sent his landlord to make the best bargain he could with the clerk at the coach-office for a return of a portion of the fare. It would appear that his good days gave him an inducement to travel northward, but the bad days then supervened, and changed his plans. He committed suicide, in spite of his oft-expressed religious views, on one of his good days (for the persons in whose house he lived kept a regular account of these singular alternations), having been apparently worn out with the unutterable miseries of one half of his waking existence.

Dr. Wigan, in his curious view of insanity, does not mention this particular case; but he adduces two others of alternate sanity and insanity, or at least double manifestations of mental power. 'We have examples of persons who, from some hitherto unexplained cause, fall suddenly into, and remain for a time, in a state of existence resemblingsomnambulism; from which, after many hours, they gradually awake—having no recollection of anything that has occurred in the preceding state; although, during its continuance, they had read, written, and conversed, and done many other acts implying an exercise, however slight, of understanding. They sing or play on an instrument, and yet, on the cessation of the paroxysm, are quite unconscious of everything that has taken place. They now pursue their ordinary business and avocations in the usual manner, perhaps for weeks; when suddenly the somnambulistic state recurs, during which all that had happened in the previous attack comes vividly before them, and they remember it as perfectly as if that state of existence were the regular habitual mode of existence of the individual—the healthy state and its events being now as entirely forgotten as were the disordered ones during the healthy state. Thus it passes on for many months, or even years.' Again, in one peculiar form of mental disease, an adult becomes a perfect child, is obliged to undertake the labour of learning again to read and write, and passes gradually through all the usual elementary branches of education—makes considerable progress, and finds the task becoming daily more and more easy; but is entirely unconscious of all that had taken place in the state of health. Suddenly she is seized with a kind of fit, or with a sleep of preternatural length and intensity, and awakes in full possession of all the acquired knowledge.
which she had previously possessed, but has no remembrance of what I will call her child state, and does not even recognise the persons or things with which she then became acquainted. She is exactly as she was before the first attack, and as if the disordered state had never formed a portion of her existence. After the lapse of some weeks, she is again seized as before with intense somnolency, and after a long and deep sleep wakes up in the child state. She has now a perfect recollection of all that previously occurred in that state, resumes her tasks at the point where she had left off, and continues to make progress as a person would do who was of that age and under those circumstances; but has once more entirely lost all remembrance of the persons and things connected with her healthy [or adult] state. This alternation recurs many times, and at last becomes the established habit of the individual—like an incurable aqua. There are numerous recorded cases in which a person knows that he or she is subject to alternate mental states, and can reason concerning the one state while under the influence of the other. Humboldt's servant, a German girl, who had charge of a child, entertained to be sent away; for whenever she undressed it, noticed the whiteness of its skin, she felt an almost irresistible desire to tear it in pieces. A young lady in a Paris asylum had, at regular intervals, a propensity to murder some one; and when the paroxysm was coming on, she would request to be put in a strait-jaistcoat, as a measure of precaution. A country-woman was seized with a desire to murder her child whenever she put it into her cradle, and she used to pray earnestly when she felt this desire coming on. A butcher's wife often requested her husband to keep his knives out of her sight when her children were nigh; she was afraid of herself. A gentleman of good family, and estimable disposition, had a craving desire, when at church, to run up into the organ-loft and play some popular tune, especially one with jocular words attached to it. All these cases, and many others of a kind more or less analogous, Dr Wigan attributes to a duality of the mind, connected with a duality of the brain. He maintains that the right and left halves of the brain are the only two distinct brains, dividing between them the organism of the mental power. Both may be sound, both may be unsound in equal degree, both may be unsound in unequal degree, or one may be sound and the other unsound. The mental phenomena may exhibit, consequently, varying degrees of sanity and insanity. This view has not met with much acceptance among physiologists and psychologists; but, nevertheless, it is worthy of attention.

NOVEMBER 26.

Born.—Sir James Ware, antiquary, 1594, Dublin; Dr William Derham, natural philosopher, 1667, Stowton, near Worcester.

Died.—Prince William, son of Henry I. of England, drowned in the White Ship, 1120; John Spotwood or Spotswod, archbishop of St Andrews, Scottish ecclesiastical historian, 1639; Philippe Quiaqueau, tragic dramatist, 1668, Paris; John Elwes, noted editor, 1795, Marcham, Berkshire; Dr Joseph Black, eminent chemist, 1799, Edinburgh; John Loudon Macadam, improver of roads, 1836; George, Lord Nugent (poetry, biography, &c.), Lillies, Bucks; Marshal Soult, Duke of Dalmatia, 1856, Souli-Berg; Vincens Friesmit, founder of hydrotherapy, 1861, Giesenberg.

JOHN ELWES.

On the 28th November 1796, died John Elwes, Esquire, a striking example of the importance of poverty of wealth when it does not enlarge the understanding, or awaken the social affections, and, consequently, cannot purchase common comforts for its wretched possessor. Elwes was the son of a successful brewer in Southwark, named Meggot. Evil tendencies of mind are as hereditary as diseases of the body. Elwes's mother starved herself to death, and his paternal uncle, Sir Harvey Elwes, was a notorious miser, from whom by one of those fortuitous turns of events that sometimes throws great wealth into the power of those who have least occasion for it, John Elwes derived his name and a vast fortune.

If Elwes had been a mere miser, his name might well have been omitted from this collection; but the extraordinary man possessed qualities which, if they had not been suppressed by the all-absorbing passion of avarice, entitled him to the love and esteem of his friends, and might have advanced him to the respect and admiration of his countrymen. In spite of his penurious disposition, he had an unshaken gentleness of manner, and a pliancy of temper not generally found in a miserable money accumulator. One day he was out shooting with a gentleman who exhibited constant proofs of unskilfulness; so much so, that at last, in firing through a hedge, he lodged several shots in the miser's cheek. The awkward sportsman, with great embarrassment and concern, approached to apologise, but Elwes anticipated apology by holding out his hand, and saying: 'My dear sir, I congratulate you on improving; I thought you would hit something in time!'

Those afflicted by a habitual love of money are seldom scrupulous respecting the means of increasing their stores; yet Elwes abstained from usury on principle, considering it an unjustifiable method of augmenting his fortune. And contrary to an ostentatious meanness, too generally prevalent at the present day, by which many indulge in luxuries at the expense of others, Elwes's whole system of life and saving was founded on pure self-denial. He would walk miles in the rain, rather than hire a conveyance; and sit hours in wet clothes, rather than incur the expense of a fire. He would advance a large sum to oblige a friend, and on the same day risk his life to save paying a penny at a turnpike. He would eat meat in the last stage of putrefaction, 'the charnel-house of sustenance,' rather than allow a small profit to a butcher.

Like most of his class, Elwes was penny-wise and pound-foolish; not unfrequently losing the sheep for the half-penny worth of an ox. He suffered his spacious country mansion to become uninhabitable, rather than be at the cost of a few necessary repairs. A near relative once slept at his seat in the country, but the bedchamber was
open to wind and weather, and the gentleman was
awakened in the night by rain pouring in upon
him. After searching in vain for a bell, he was
necessitated to move his bed several times, till a
place was at last found, where rain did not reach.

On remarking the circumstance to Elwes in the
morning, the latter said: 'Ay! I don't mind it
myself, but to those who do, that is a nice corner
in the room.'

Elwes had an extensive property in houses in
London, and as some of his houses were frequently
without a tenant, he saved the price of lodgings by
occupying any premises that might happen to be
current. Two beds, two chairs, a table, and an old
woman, were all his furniture, and with these,
whenever a tenant offered, he was ready to remove
at a moment's warning. It was then not easy to
find him, or to know what part of the town might
be his residence. Colonel Timms, his nephew,
and heir to his entailed estates, was on one occasion
anxious to see Elwes. After some inquiries, he
learned accidentally that his uncle had been seen
going into an uninhabited house in Great Marl-
borough Street. No gentleman, however, had been
seen about there, but a boat-boy recollected observ-
ing that he was seen going in and out. He knocked
at the door after him. Colonel Timms knocked at
the door, but no one answering, sent for a blacksmith,
and had the lock forced. The lower part of the
building was all closed and silent; but, on
ascending the staircase, moans were heard, appar-
etly proceeding from a person in great distress.

Entering a room, the intruders found, stretched
out on an old pallet-bed, seemingly in death, the
wretched figure of Elwes. For some time he
remained insensible, till some cordials were adminis-
tered by a neighbouring apothecary; then he
sufficiently recovered to be able to say that he had,
believed, been ill for two or three days, and
that there was an old woman in the house, but for
some reason or other, she had not been near him;
that she had paid him herself, but that she had
recovered, he supposed, at last, and

Colonel Timms and the apothecary repairing to
the garret, they found the old woman stretched
lifeless on the floor, having apparently been dead
for two days.

When his inordinate passion for saving did not
interfere, Elwes would willingly exert himself to
the utmost to serve a friend. He once escorted
two old ladies from a long and troublesome eccle-
siastical suit, by riding sixty miles at night, and
at a moment's warning. Such wonderful efforts
would he make with alacrity, and at an advanced
age, to serve a person for whom no motives or
entreaties could have prevailed on him to part
with a shilling. In this, and all his long journeys,
a few hard-boiled eggs, a dry crust carried in his
pocket, the next stream of water, and a spot of
fresh grass for his horse, while he reposed beneath
a hedge, were the whole of the travelling expenses
of both man and beast. The ladies asked a neigh-
bouring gentleman how they could best testify
their thanks for such a service. 'Send him
airpence,' was the reply, 'for then he will be
delighted by gaining twopence by his journey.'

Elwes was not, encouraging no art, advancing
no science, working no material improvement
on his estates or country, diffusing no blessings
around him, bestowing no benevolence upon the
poor and needy, and shewing few signs of parental
care or affection. He never was married, but was
the father of two natural children, to whom he
bequeathed the greater part of his disposable
property. Education he despised, and would lay
out no money upon it. 'The surest way,' he
constantly affirmed, 'of taking money out of people's
pockets, is by putting things into their heads.'

and no doubt he felt it for his property, for a prey
to every sharper who could put a scheme
into his head by which he imagined that money
might be got. Elwes has been compared to a great
pike in a fishpool, which, ever voracious and
unsatisfied, clutches at everything, until it is at
last caught itself. With a mind incapable of taking
comprehensive ideas of money-matters, and a
constant anxiety to grasp the tangible results of
his speculations, Elwes either disinclined or was too
indolent to keep regular accounts, and the conse-
quencc was that £160,000 of bad debts were owing
to him at his death.

As we approach the last scene of all, the cruel
tyranny of avarice, over its wretched slave, becomes
more and more appalling. Comfortably domiciled
in his son's house, Elwes fears that he shall die in
poverty. In the night he is haunted by the
imaginary robbers, and crying: 'I will keep my
money! I will! Don't rob me! Oh don't!' A
visitor hears a footsteps entering his room at night,
and naturally asks, 'Who is there?' On which a
tremulous voice replies: 'Sir, I beg your pardon,
my name is Elwes, I have been unfortunate enough
to be robbed in this house, which I believe is mine,
but all the money I have in the world—of five
guineas and a half, and half-a-crown.' A few days
after, the money is found, where he had hidden it,
behind a window-shutter. And a few days more,
Elwes is found in bed, his clothes and hat on, his
staff in his hand. His son comes to the bedside,
and the father whispers John: 'I hope I have left
you as much as you wished.' The family doctor is
sent for, and, looking at the dying miser, says:
'That man, with his original strength of consti-
tution, and life-long habits of temperance, might have
lived twenty years longer, but for his continual
anxiety about money.'

This notice of Elwes cannot be better concluded
than in the following summary of his character, by
his friend and acquaintance of many years, Mr
Topham. 'In one word, his [Elwes] public charac-
ter lives after him pure and without stain. In
private life, he was chiefly an enemy to himself.
To others, he lent much; to himself, he denied
everything. But in the pursuit of his property,
or in the recovery of it, I have it not in my remem-
brance one unkind thing that ever was done by
him.'

JOHN LOUDOUN MACADAM.

Though neither a soldier nor a statesman, and
laying no claim to distinction on the score either
of literary or scientific achievement, the practical
abilities of Macadam have, nevertheless, added a
word to the English language, and earned for him
the tribute of a grateful remembrance as one of the
most important of our public benefactors. The
traveller as he bows smoothly along the even and
well-kept turnpike-road, whether in gig, stage-
coach, or chaise, may bless fervently the memory
of the road-reformer of the nineteenth century, whose macadamised highways have tended so much to increase the comfort as well as diminish the dangers of vehicular locomotion. The means employed were of the simplest and most efficacious kind, an improvement on the original idea, have rendered the public roads throughout the British islands, if not superior, at least second to none in the world.

John Loudoun Macadam was born at Ayr on the 21st September 1756. His father was a landed proprietor, who died when John was about fourteen, and the young man was thereupon sent to the office of an uncle, a merchant in New York. Here he remained for a number of years, and on the war of independence breaking out, established for himself a lucrative business as an agent for the sale of prizes. The termination of hostilities, however, in favour of the colonists, found him nearly penniless, and he returned to his native country. For some time after he resided in the neighbourhood of Moffat, and subsequently removed to Sauchie, where for thirteen years he acted as deputy-lieutenant of the county, and a member of the commission of the peace. Being here engaged in the capacity of trustee on certain roads, his mind was first led to revolve some scheme for a general amelioration of the system of highways throughout the kingdom, and he continued for many years to study and experiment on the subject. Having been appointed, in 1796, agent for victualling the navy in the western ports of Great Britain, he took up his abode at Falmouth, but afterwards removed to Bristol. In 1816, he was appointed surveyor of the Bristol roads, and here he first seriously set himself to work to carry into actual operation the improvements which he had been pondering over for so many years. The main feature of his plan was to form a bed of fragments of stone—granite, whinstone, or basalt—none of which should be too large to pass through an iron ring two and a half inches in diameter. The stratum or bed of such materials was to be from six to twelve inches in thickness, and it was left to be brought into compactness and smoothness by the action of the vehicles passing over it. Though now approaching sixty years of age, Mr Macadam set himself with all energy to carry out this scheme, and before he died, he had the satisfaction of seeing his system of roadmaking generally adopted, though the only reward he reaped for his labours was a grant of £3000 from parliament, and the repayment of a large sum, amounting to several thousands more, which he proved before a committee of the House of Commons to have been expended by him from his own resources in perfecting his plan. He died at Moffat on 23rd November 1836, in the eighty-first year of his age, leaving behind him the reputation of one of the most honourable and disinterested of men.

The great drawback from the virtues of Mr Macadam's plan, lies in the difficulty of obtaining a smooth surface. Without a firm substructure, the subjacent materials are apt to work up amongst those of the macadam bed. It is also found that carriages encounter a prodigious friction from these materials, until they have been somewhat beaten down; and that, even then, the wheels will be found to have left great longitudinal indentations or hollows, with rough ridges between, altogether at issue with true smoothness. The first objection was overcome by the great engineer Telford, who suggested a causewayed substructure as a basis for the bed of small stones. The second difficulty can be to a large extent overcome, by causing a heavy roller to pass in the first place over the bed of macadamised fragments, so as to jam them down into a compact cake, on which the carriages may then pass with comparative facility. But though this plan commends itself to the simplest common sense, and is very generally practised in France, the idea of its advantages seems never yet to have dawned upon the British intellect. Accordingly, the macadamised road is still, with us, a martyrdom to horses; and it is not too much to say, that the thoroughfares of London present, during a third part of all time, frictional difficulties ten times more than there is any just occasion for, and require four times the amount of renewal and expense which is strictly necessary.

The Hottentot Venus.

Early in the present century, a poor wretched woman was exhibited in England under the appellation of the Hottentot Venus. With an intensely ugly figure, distorted beyond all European notions of beauty, she was said by those to whom she belonged to possess precisely that kind of shape which is most admired among her countrymen, the Hottentots. Mr Bullock, proprietor of a 'Museum' in which many exhibitions were held in those days, was applied to in 1810 by a Mr Dunlop, surgeon of an African ship, to purchase a beautiful camelopard skin. On account of the high price asked, the negotiation broke off; but at a second interview, Dunlop informed Mr Bullock that he had brought a Hottentot woman home with him from the Cape, whom he had engaged to take back again in two years; that she was an object of great curiosity; and that a person might make a fortune in two years by exhibiting her. Mr Bullock, however, did not close with the offers made to him, and the black woman was sold—for it appears to have been virtually a sale—by the surgeon to another person. Then came forth the advertisements and placards concerning the Hottentot Venus. She was exhibited on a stage two feet high, along which she was led by her keeper, like a wild beast; being obliged to walk, stand, or sit, as he ordered her. The exhibition was so offensive and disgraceful, that the attorney-general called for the interference of the lord chancellor on the subject. He grounded his application on the fact, that the poor creature did not appear to be a free agent, and that she was little other than a slave or chattel. She and her keeper were of a kind of low Dutch, such as is known on the Hottentot borders of Cape Colony. It was observed, on one occasion, while being exhibited, that on her not coming forward immediately when called, the keeper went to her, and holding up his hand menacingly, said something in Dutch which induced her to come forward. She was often heard, also, to have deep sighs in the course of the exhibition, and displayed great sameness of temper. A Dutch gentleman, on one occasion, interrogated her how far she was a willing participator in the exhibition; but her keeper would not allow her to answer the questions. The publicity
given to the matter in the Court of Chancery, soon caused the disappearance of the Hottenot Venus from the public gaze, but of the subsequent history of the poor woman herself we have no information.

WILLIAM OF WYKEHAM.

William of Wykeham, probably one of the most popular characters in English history, was born of humble parents in the obscure Hampshire village from which he derives his surname. Nicholas Uvedale, the lord of the manor, attracted by the child's intelligence, sent him to school at Winchester. When still a youth, William became his patron's secretary, and being lodged in a lofty tower of Winchester Castle, there acquired the enthusiastic admiration of Gothic architecture, which laid the foundation of his future fortune. The young secretary visited the neighbouring churches, cathedrals, and castles; he measured, studied, and compared their various beauties and defects; and then considered how such stately edifices had been erected; and figured in his own imagination others of still finer and grander proportions. So, when introduced by his patron to King Edward III., he was qualified to assist that monarch in planning and directing the building of his palatial castle at Windsor. Wykeham thus became the king's favourite and secretary; and subsequently applying himself to politics, he was made keeper of the Privy Seal; then entering the church, he became bishop of Winchester, and soon afterwards lord chancellor of England.

William, however, had nearly lost the favour of the king. When Windsor Castle was completed, the architect caused to be placed over the great gate, the words, THIS MADE WYKEHAM. The inscription was considered to be an arrogant assumption to himself, of all the honour and glory resulting from the great undertaking. The king, at first, was displeased, but William soon satisfied the money by the following explanation. In the inscription, the word Wykeham was, according to the idiom of the English language, in the accusative case, and, accordingly, the inscription did not mean that Wykeham made this building, but that the construction of the building made Wykeham, raising him from a poor lad to be the king's favourite architect. And when the heralds were searching themselves to find suitable arms for Wykeham, he gave them as his motto, MANNER MARY THE MAN; whereby meaning that a man's real worth is to be estimated, not from the outward and accidental circumstances of birth and fortune, but from the acquirements of his mind and his moral qualifications.

The biography of William of Wykeham, being part of the history of England, is rather beyond our scope. Ever desirous of the education and manners which he acquired at Winchester had made a man of him, he founded Winchester school, for the benefit of future generations. As a necessary adjunct and accessory to the school, he founded New College at Oxford. The publication of the charter of foundation of the latter establishment, bears date the 28th of November 1379. During his long term of fourscore years, William devoted himself to acts of benevolence and charity. The immense fortune he acquired was expended with equal munificence. He contributed greatly to the promotion of sound education in England, while his skill as an architect was matched by an extraordinary aptitude for civil and ecclesiastical business. His talents and benevolence were not confined to scholastic and ecclesiastical edifices alone; he constructed roads and bridges, and regulated traffic on highways. He was buried in his own church at Winchester Cathedral, and whether the result of care or accident, it is pleasing to have to relate that Wykeham's tomb, of white marble, has never been desecrated. Many other tombs have suffered dilapidation in that cathedral, and other places, during the many political and religious changes that have occurred since Wykeham was interred; but his revered effigy, in pontifical robes, seems as if scarcely a few darks had elapsed since it left the hand of the sculptor.

NOVEMBER 27.

Advent Sunday.

The four weeks immediately preceding Christmas are collectively styled Advent, a term denoting approach or arrival, and are so called in reference to the coming celebration of the birth of our Saviour. With this period, the ecclesiastical or Christian year is held to commence, and the first Sunday of these four weeks is termed Advent Sunday, or the first Sunday in Advent. It is always the second Sunday to the feast of St. Andrew, whether before or after that day; so that in all cases the season of Advent shall contain the uniform number of four Sundays. In 1864, Advent Sunday falls on the 27th of November, the earliest possible date on which it can occur.

Bona.—Francisco d'Aubigné, Marquise de Maintenon, second consort of Louis XIV., 1655, Niort; Henri François d'Agenais, chancellor of France, 1665, Limoëges; Robert Lowth, bishop of London, biblical critic, 1710; John Murray, publisher, 1773.

Dieu.—Horace, lyric and satirical poet, 8 B.C.; Claudio, first king of France, 511, Paro; Maurice, Roman emperor, beheaded at Chalcedon, 602; Louis, Chevalier de Bocan, executed at Paris for conspiracy, 1674; Basil Montague, O.C. (writings on philosophical and social questions, &c.), 1851, Bouleym.

THE GREAT STORM.

Early on the morning of Saturday, the 27th November 1703, occurred one of the most terrific storms recorded in our national history. It was not merely, as usually happens, a short and sudden burst of tempest, lasting a few hours, but a fierce and tremendous hurricane of a week's duration, which attained its utmost violence on
THE GREAT STORM.  

NOVEMBER 27.

The day above mentioned. The preceding Wednesday was a peculiarly calm, fine day for the season of the year, but at four o’clock in the afternoon a brisk gale commenced, and increased so strongly during the night, that it would have been termed a great storm, if a greater had not immediately followed. On Thursday, the wind slightly abated; but on Friday it blew with redoubled force till midnight, from which time till daybreak on Saturday morning, the tempest was as its character. In some collections of dates the Great Storm is placed under the 26th of November, it actually took place on the following day. Immediately after midnight, on the morning of Saturday, numbers of the affrighted inhabitants of London left their beds, and took refuge in the cellars and lower apartments of their houses. Many thought the end of the world had arrived. Defoe, who experienced the terrors of that dreadful night, says: ‘Horror and confusion seized upon all; no pen can describe it, no tongue can express it, no thought conceive, it, unless some of those who were in the extremity of it.’ It was not till eight o’clock on the Saturday morning, when the storm had slightly lulled, that the boldest could venture forth from the shelter of their dwellings, to seek assistance, and inquire for the safety of friends. The streets were then thickly strewn with bricks, tiles, stones, lead, timber, and all kinds of building materials. The storm continued to rage through the day, with very little diminution in violence, but at four in the afternoon heavy torrents of rain fell, and had the effect of considerably reducing the force of the gale. Ere long, however, the hurricane recommenced with great fury, and in the course of the Sunday and Monday attained such a height, that on Tuesday night few persons dared to go to bed. Continuing till noon on Wednesday, the storm then gradually decreased till four in the afternoon, when it terminated in a dead calm, at the very hour of its commencement on the same day of the preceding week.

The dangerous and dangerous absurd practice of building chimneys in stacks, containing as many bricks as a modern ordinary-sized house, was attended by all its fatal consequences on this occasion. The bills of mortality for the week recorded twenty-one deaths in London alone, from the fall of chimneys. After the tempest, houses bore a resemblance to skeletons. Fortunately, three weeks of dry weather followed, permitting the inhabitants to patch up their dwellings with boards, tarpsaulins, old sails, and straw; regular repairs being in many instances, at the time, wholly impossible. Plain tiles rose in price from one guinea to six pounds per thousand; and pantiles from fifty shillings to ten pounds, for the same number. Bricklayers’ wages rose in proportion, so that even in the case of large public edifices, the trustees over a thousand on them merely a temporary repair, till prices should fall. During 1704, the Temple, Christ’s Hospital, and other buildings in the city of London, presented a remarkable appearance, patched with straw, reeds, and other thatching materials.

At Wells, the bishop of that diocese and his wife were killed, when in bed, by a stack of chimneys falling upon them. Defoe, from personal observation, relates that, in the county of Kent alone, 1107 dwelling-houses and barns were levelled by the tremendous force of the hurricane. Five hundred grand old trees were prostrated in Penshurst, the ancient park of the Sidneys, and numerous orchards of fruit-trees were totally destroyed.

The same storm did great damage in Holland and France, but did not extend far to the northward; the border counties and Scotland receiving little injury from it. The loss sustained by the city of London was estimated at one million, and that of Bristol at twenty thousand pounds. Great destruction of property and loss of life occurred on the river Thames. The worst period of the storm there, was, from midnight to daybreak, the night being unusually dark, and the tide extraordinarily high. Five hundred watermen’s wherries, 300 ship-boats, and 130 barges were destroyed; the number of persons drowned could never be exactly ascertained, but 22 dead bodies were found and interred.

The greatest destruction of shipping, however, took place off the coast, where the fleet, under the command of Sir Cloudesley Shovel, had just returned from the Mediterranean. The admiral, and part of his ships anchored near the Gunfleet, rode out the gale with little damage; but of the vessels lying in the Downs few escaped. Three ships of 70 guns, one of 64, two of 56, one of 48, and several other smaller vessels, were totally destroyed, with a loss of 1500 officers and men, among whom was Rear-Admiral Beaumont.

It may surprise many to learn that the elaborate contrivances for saving life from shipwreck date from no distant period. Even late in the last century, the dwellers on the English coasts considered themselves the lawful heirs of all drowned persons, and held that their first duty in the case of a wreck was to secure, for their own behoof, the property which Providence had thus cast on their shores. That they should exert themselves to save the lives of their fellow-creatures, thus imperilled, was an idea that never presented itself. Nay, superstition, which ever has had a close connection with self-interest, declared it was unlucky to rescue a drowning man from his fate. In the humane endeavour to put an end to this horrible state of matters, Burke, in 1776, brought a bill into parliament, enacting that the value of plundered wrecks should be levied from the inhabitants of the district where the wreck occurred. The country gentlemen, resenting the bill as an attack on their vested interests, vehemently opposed it. The government of the day also, requiring the votes of the county members to grant supplies for carrying on the war against the revolting American colonies, joined in the opposition, and threw out the bill, as will Whitehead expresses it:

‘To make Squire Booby’s willing, 
To grant supplies at every check. 
Give them the plunder of a wreck, 
They’ll vote another shilling.’

This allusion to the change which has taken place in public feeling on the subject of wrecks, was rendered necessary to explain the following incident in connection with the Great Storm. At low water, on the morning after the terrible hurricane, more than two hundred men were discovered on the treacherous footing of the Goodwin Sands, crying and gesticulating for aid, well knowing...
that in a very short time, when the tide rose, they would inevitably perish. The boatmen were too busy, labouring in their vocation of picking up portable property, to think of saving life. The mayor of Deal, an humble slopseller, but a man of extraordinary humanity for the period, went to the custom-house, and begged that the boats belonging to that establishment might be sent out to save some, at least, of the poor men. The custom-house officers refused, on the ground that this was not the service for which their boats were provided. The mayor then collected a few fellow-tradesmen, and in a short speech so inspired them with his generous emotions, that they seized the custom-house boats by force, and, going off to the sands, rescued as many persons as they could from certain death. The shipwrecked men being brought to land, naked, cold, and hungry, what was to be done with them? The navy agent at Deal refused to assist them, his duties being, he said, to aid seamen wounded in battle, not shipwrecked men.

The worthy mayor, whose name was Powell, had therefore to clothe and feed these poor fellows, provide them with lodgings, and bury at his own expense some that died. Subsequently, after a long course of petitioning, he was reimbursed for his outlay by government; and this concession was followed by parliament requesting the queen to place shipwrecked seamen in the same category as men killed or wounded in action. The widows and children of men who had perished in the Great Storm, were thus placed on the pension list.

The most remarkable of the many edifices destroyed during that dreadfule night was the first Eddystone light-house, erected four years previously by an enterprising but incompetent individual, named Winstanley. He had been a mercer in London, and, having acquired wealth, retired to Littletbury, in Essex, where he amused himself with the curious but useless mechanical toys that preceded our modern machinery and engineering, as alchemy and astrology preceded chemistry and astronomy. As a specimen of these, it is related that, in one room of his house, there lay an old slipper, which, if a kick were given it, immediately raised a ghost from the floor; in another room, if a visitor sat down in a seemingly comfortable armchair, the arms would fly round his body, and detain him a close prisoner, till released by the ingenious inventor. The light-house was just such a specimen of misapplied ingenuity as might have been expected from such an intellect. It was built of wood, and deficient in every element of stability. Its polygonal form rendered it peculiarly liable to be swept away by the waves. It was no less exposed to the action of the wind, from the upper part being ornamented with large wooden candlesticks, and supplied with useless vanes, cranes, and other 'top-hamper,' as a sailor would say. It is probable that the design of this singular edifice had been suggested to Winstanley by a drawing of a Chinese pagoda. And this light-house, placed on a desolate rock in the sea, was painted with representations of suns and compasses, and mottoes of various kinds; such as Post Tenebras Lux, GLORY BE TO GOD, PAX IN BELLO. The last was probably in allusion to the building's fancied security, amidst the wild war of waters. And that such peace might be properly enjoyed, the light-house contained, besides a kitchen and accommodation for the keepers, a state-room, finally carved
and painted, with a chimney, two closets, and two windows. There was also a splendid bedchamber, richly gilded and painted. This is Winstanley's own description, accompanying an engraving of the light-house, in which he complacently represents himself fishing from the state-room window. One would suppose he had designed the building for an eccentric ornament to a garden or a park, were it not that, in his whimsical ingenuity, he had con

trived a kind of movable shoot on the top, by which stones could be showered down on any side, on an approaching enemy. Men, who knew by experience the aggressive powers of sea-waves, were not unmindful of the danger, and Winstanley, but he declared that he was so well assured of the strength of the building, that he would like to be in it during the greatest storm that ever blew under the face of heaven. The confiding architect had, a short time previous to the Great Storm, gone to the light-house to superintend some repairs. When the fatal tempest came, it swept the flimsy structure into the ocean, and with it the unfortunate Winstanley, and five other persons who were along with him in the building.

There is a curious bit of literary history indirectly connected with the Great Storm. Addison, 'distressed by indigence,' wrote a poem on the victory of Blenheim, in which he thus compares the Duke of Marlborough, directing the current of the great fight, to the Spirit of the Storm—

'So when an angel, by divine command,
With rising tempests shakes a guilty land,
Sea-pale Britannia past,
Calm and serene, he drives the furious blast.
And pleased th' Almighty's orders to perform,
Rides in the whirlwind, and directs the storm.'

Lord Godolphin was so pleased with this simile, that he immediately appointed Addison to the Commission of Appeals, the first public employment conferred on the essayist.

CIRCUMSTANCES AT THE DEATH OF THOMAS, LORD Lyttelton.

Thomas, second Lord Lyttelton, who died November 27, 1779, at the age of thirty-five, was as remarkable for his reckless and dissipated life—not to speak of impious habits of thought—as his father had been for the reverse. One of the wicked actions attributed to him, was the seduction of three Misses Amphlett, who resided near his country residence in Shropshire. He had just returned from Ireland—where he left one of these ladies—when, residing at his house in Hill Street, Berkeley Square, he was attacked with suffocating fits of a threatening character. According to one account, he dreamed one night that a flittering bird came to his window, and that presently after a woman appeared to him in white apparel, who told him to prepare for death, as he would not outlive three days. He was much alarmed, and called for a surgeon, who found him in a profuse perspiration, and to whom he related the circumstances which had occurred.* According to another account, from a relative of his lordship, he was still awake when the noise of a bird fluttering at the window called his attention; his room seemed filled with light, and he saw in the recess of the window a female figure, being that of a lady whom he had injured, who, pointing to the clock on the mantel-piece, then indicated that his hour was at hand, and in a severe tone that, at that hour on the third day after, his life would be concluded, after which she vanished and left the room in darkness.

That some such circumstance, in one or other of these forms, was believed by Lord Lyttelton to have occurred, there can be no reasonable doubt, for it left him in a depression of spirits which caused him to speak of the matter to his friends. On the third day, he had a party with him at breakfast, including Lord Fortescue, Lady Flood, and two Misses Amphlett, to whom he remarked: 'If I live over to-night, I shall have jockeys the ghost, for this is the third day.' The whole party set out in the forenoon for his lordship's country-house, Pit Place, near Epsom, where he had not long arrived when he had one of his suffocating fits. Nevertheless, he met with his friends at five o'clock. By a friendly trick, the clocks throughout the house, and the watches of the whole party, including his lordship's, were put forward half an hour. The evening passed agreeably; the ghostly warning was never alluded to; and Lord Lyttelton seemed to have recovered his usual gaiety. At half-past eleven, he retired to his bedroom, and soon after got into bed, where he was to take a dose of rhubarb and mint-water. According to the report afterwards given by his valet,* he kept every now and then looking at his watch. He ordered his curtains to be closed at the foot. It was now within a minute or two of twelve by his watch: he asked to look at mine, and seemed pleased to find it nearly keep time with his own. His lordship then put both to his ear, to satisfy himself that they went. When it was more than a quarter after twelve by our watches, he said: 'This mysterious lady is not a true prophetess, I find.' When it was near the real hour of twelve, he said: 'Come, I'll wait no longer: get me my medicine; I'll take it, and try to sleep.'Perceiving the man stirring the medicine with a toothpick, Lord Lyttelton scolded him, and sent him away for a tea-spoon, which never returned. He found his master in a fit, with his chin, owing to the elevation of the pillow, resting hard upon his neck. Instead of trying to relieve him, he ran for assistance, and when he came back with the alarmed party of guests, Lord Lyttelton was dead.

* Gentlemen's Magazine, 1815, p. 397.
† J. W. Croker (Notes to Boswell's Life of Johnson).
appeared before him at his bedside, in his robe-de-chambre and night-cap. Mr. Andrews looked at him some time, and thought it so odd a freak of his friend, that he began to reproach him for his folly in coming out so late at night without notice, as he could find no accommodation.

"However," said he, "I'll get up, and see what can be done." He turned to the other side of the bed, and rang the bell, when Lord Lyttelton disappeared. His servant soon after coming in, he inquired: "Where is Lord Lyttelton?" The servant, all astonishment, declared he had not seen anything of his lordship since they left Pit Place. "Pshaw! you fool, he was here this moment at my bedside." The servant persisted that it was not possible. Mr. Andrews dressed himself, and with the assistance of the servants, searched every part of the house and garden; but no Lord Lyttelton was to be found. Still Mr. Andrews could not help believing that Lord Lyttelton had played him this trick, till, about four o'clock the same day, his servant arrived to inform him of his lordship's death, and the manner of it.

An attempt has been made to invalidate the truth of this recital, but on grounds more than usually weak. It has been surmised that Lord Lyttelton meant to take poison, and imposed the story of the warning on his friends; as if he would have chosen for a concealment of his design, a kind of imposture which, as the opium of mankind goes, is just the most hard of belief. This supposition, moreover, overlooks, and is inconsistent with, the fact that Lord Lyttelton was deceived as to the hour by the tampering with the watches; if he meant to destroy himself, he ought to have done it half an hour sooner. It is further affirmed—and the explanation is said to come from Lord Fortescue, who was at the party at Pit Place—that the story of the vision took its rise in a recent chase for a lady's pet-bird, which Lord Lyttelton declared had been shamefully reproduced to him in his dreams.* Lord Fortescue may have been induced, by the usual desire of escaping from a purely natural theory, to surmise that the story had some such foundation; but it coheres with no other facts, and fails to account for the impression on Lord Lyttelton's mind, that he had been warned of his coming death—a fact of which all his friends bore witness. On the other hand, we have the Lyttelton family fully of belief that the circumstances were as here related. Dr. Johnson tells us, that he heard it from Lord Lyttelton's uncle, Lord Westoote, and he was therefore willing to believe it.† There was, in the Dowager Lady Lyttelton's house, in Portugal Street, Grosvenor Square, a picture which she herself executed in 1760, expressly to commemorate the event; it hung in a conspicuous part of her drawing-room. 'The dove appears at the window, while a female figure, habited in white, stands at the foot of the bed, announcing to Lord Lyttelton his dissolution. Every part of the picture was faithfully designed, after the description given to her by the valet-de-chambre who attended him, to whom his master related all the circumstances.'* The evidence of Mr. Andrews is also highly important. Mr. J. W. Croker, in his notes on Boswell, attests that he had more than once heard Mr. Andrews relate the story, with details substantially agreeing with the recital which we have quoted from the Gentleman's Magazine. He was unquestionably good evidence for what occurred to himself, and he may be considered as not a bad reporter of the story of the ghost of the lady which he had heard from Lord Lyttelton's own mouth. Mr. Croker adds, that Mr. Andrews always told the tale 'reluctantly, and with an evidently solemn conviction of its truth.' On the whole, then, the Lyttelton ghost-story may be considered as not only one of the most remarkable from its compound character—one spiritual occurrencesupporting another—but also one of the best authenticated, and which it is most difficult to explain away, if we are to allow human testimony to be of the least value.

PITT AND HIS TAXES.

The great increase in taxation subsequent to the conclusion of the first American war, is a well-known circumstance in modern British history. The national debt, which, previous to the commencement of the Seven Years' War in 1755, fell short of £276,000,000, was, through the expenses necessitated by that conflict, increased to nearly £129,000,000 at the peace of Paris in 1763, while, twenty years subsequently, at the peace of Versailles, in 1783, the latter amount had risen to upwards of £244,000,000, in consequence of the ill-advised and futile hostilities with the North American colonies. When William Pitt, the youngest premier and chancellor of exchequer that England had ever seen, and at the time only twenty-four years of age, came into office in December 1763, on the dismissal of the Coalition cabinet, he found the finances in such a condition as to necessitate the imposition of various new taxes, including, among others, the levying of an additional rate on windows, and also of duties on game-certiﬁcates, hackney-coaches, and saddle and race horses. This may be regarded as the commencement of a train of additional burdens on the British nation, which afterwards, during the French war, mounted to such a height, that at the present day it seems impossible to comprehend how our fathers could have supported so crushing a load on their resources. Opposite views prevail as to the expediency of the measures followed by England in 1793, when the country, under the leadership of such champions as Pitt and Burke, drifted into a war with the French republic; a war, however, which, in the conjuncture of circumstances attending the relations between the two countries, must have almost inevitably taken place, sooner or later. At the present day, indeed, when more who attested the fact. 'This stone,' says Howel, 'is to be seen in a stone-cutters' shop in Fleet Street, on which were stated the deaths of four persons of a family named Oxenham, who had been visited just before their demise by a black crow, which fluttered into their beds or about the bed on which they lay. At the bottom of the inscriptions were given the names of sundry persons, 626

† Boswell.
* The circumstance of the bird is remarkable. James Howel, in one of his Familiar Letters, dated July 3, 1755, gives an account of a black crow which fluttered into his window while he was preparing in a stone-cutter's shop in Fleet Street, on which were stated the deaths of four persons of a family named Oxenham, who had been visited just before their demise by a black crow, which fluttered into their beds or about the bed on which they lay. At the bottom of the inscriptions were given the names of sundry persons.
PITT AND HIS TAXES. NOVEMBER 28. THE REV. LANGTON FREEMAN.

liberal and enlightened ideas prevail on international questions, and we have also had the benefit of our fathers' experience, such a consumption might possibly have been avoided. Of the straightforwardness and vigorous ability of Pitt throughout his career, there can be no doubt, however one-sided he may have been in his political sympathies; and a tribute of respect, though opinions will differ as to its grounds, is undoubtedly due to 'the pilot that weathered the storm.'

The taxes imposed by Pitt, as might have been anticipated, caused no inconsiderable amount of grumbling among the nation at large. This grumbling, in many instances, resolved itself into waggish jests and caricatures. The story of the Edinburgh wit, who wrote 'Pitt's Works, vol. i., vol. ii.,' &c., on the walls of the houses where windows had been blocked up by the proprietors in consequence of the imposition of an additional duty, is a well-known and threadbare joke. Another jest, which

![A Defiance to Pitt's Horse-Tax - A Farmer Riding His Ox to Stockport Market.]

took a practical form, was that concocted by a certain Jonathan Thatcher, who, on 27th November 1784, in defiance of the horse-tax, imposed a few months previously by Pitt, rode his cow to and from the market of Stockport. A contemporary caricature, representing that scene, is herewith presented to our readers as a historical curiosity.

NOVEMBER 28.

St Stephen, the Younger, martyr, 764. St James of La Marce of Aconn, confessor, 1476.

Born.—Captain George William Manby, inventor of life-saving apparatus for shipwrecks, 1765, Hilgay, Norfolk; Victor Cousin, moral philosopher, 1792.

Died.—Pope Gregory III., 741; Dunsii, the Bastard of Orleans, 1485; Edward Plantagenet, Earl of Warwick, beheaded, 1499; Cartouche, celebrated robber, executed at Paris, 1721; Charles Buller, statesman and writer, 1848, London; Washington Irving, eminent popular writer, 1849, Irvington, New York; Baron G. C. J. Benzen, Prussian statesman, philosophical writer, 1860, Bona.

THE REV. LANGTON FREEMAN AND HIS SINGULAR MAUSOLEUM.

Among the numerous individuals who have rendered themselves conspicuous by eccentricities of character, few, perhaps, are more noteworthy than an English clergyman who died about eighty years ago.

The Rev. Langton Freeman, whose baptism is registered on 28th November 1710, was rector of Bilton, in Warwickshire. He resided at the retired and somewhat secluded village of Whilton, in Northamptonshire, some ten or twelve miles distant, from which he rode on Sundays to Bilton, to perform his ministerial duties. He was a bachelor, which may, in some measure, account for the oddities which have rendered his name famous in the neighbourhood where he dwelt. Living, as he did, in an old manor-house, and occupying so honoured a position in society, few persons would suppose that a clergyman and gentleman could be guilty of such meanness as to beg his Sunday-dinner from a labouring-man, and occasionally also help himself from the larder of a richer friend. But, to do him justice, the reverend soner remembered all these petty thefts, and in his will bequeathed a recompense to those whom, in his lifetime, he had robbed.
His will is dated 16th September 1783, and his death took place the 9th of October in 1784. That portion of the testament relating to his burial is very curious, and runs thus:—

"In the name of God, amen. I, the Reverend Langston Freeman, of Whilton, in the county of Northampton, clerk, being in a tolerable good state of bodily health, and of a perfect sound and disposing mind, memory, and understanding (praised be God for the same), and being mindful of my death, do therefore make and ordain this my last Will and Testament, as follows: And principally I commend my soul to the mercy of God through the merits of my Redeemer. And first, for four or five days after my decease, and until my body grows offensive, I would not be removed out of the place or bed I shall die on. And then I would be carried or laid in the same bed, decently and privately, in the summer-house now erected in the garden belonging to the dwelling-house, where I now inhabit in Whilton aforesaid, and to be laid in the same bed there, with all the appurtenances thereto belonging; and to be wrapped in a strong, double winding-sheet, and in all other respects to be treated as near as may be to the description we receive in Holy Scripture of our Saviour's burial. The doors and windows to be locked up and bolted, and to be kept as near in the same manner and state they shall be in at the time of my decease. And I desire that the building, or summer-house, shall be planted around with evergreen-plants, and fenced off with iron or oak pales, and painted of a dark-blue colour; and for the due performance of this, in manner aforesaid, and for keeping the building ever the same, with the evergreen-plants and rails in proper and decent repair, I give to my nephew, Thomas Freeman, the manor of Whilton, &c."

All these instructions appear to have been faithfully carried out, and Mr Freeman was duly deposited in the singular mausoleum which he had chosen. Till within the last few years, the summer-house was surrounded with evergreens; but now the palings are gone, the trees have been cut down, and the structure itself looks like a ruined hovel.

There is a large hole in the roof, through which, about two years ago, some men effected an entrance. With the aid of a candle they made a survey of the burial-place and its tenant; the latter, a dried up, skinny figure, having apparently the consistence of leather, with one arm laid across the chest, and the other hanging down the body, which, though never embalmed, seems to have remained perfectly incorruptible.

It is rather singular that there is nothing whatever in the parish register respecting the burial of the Rev. Langton Freeman. This may be accounted for, however, by the circumstance of his having been buried in consecrated ground.

WASHINGTON IRVING.

Were the fact not familiar to every one, most English readers of the Sketch-Book, Bracebridge Hall, and the lives of Goldsmith and Columbus, would be surprised to learn that they were written by an American; though, indeed, an American to whom England gave success and fame.

Washington Irving's father was a Scotchman, and his mother an Englishwoman. William Irving went to New York about 1763, and was a merchant of that city during the revolution. His son, Washington, was born April 3, 1783, just as the War of Independence had been brought to a successful termination; and he received the name of its hero, of whom he was destined to be the, so far, most voluminous biographer. His best means of education was his father's excellent library, and his older brothers were men of literary tastes and pursuits. At sixteen, he began to study law, but he never followed out the profession. He was too modest ever to address a jury, and in the height of his fame, he could never summon the resolution to make a speech, even when toasted at a public dinner. Irving was early a traveller. At the age of twenty-one, he visited the south of Europe on a tour of health and pleasure. On his return to New York, he wrote for his brother's newspaper; joined with Paulding, Halleck, and Bryant in the Salamundi—papers in the fashion of the Spectator; and wrote a comic history of the early settlement of New York, purporting to be the production of a venerable Dutchman, Diedrich Knickerbocker. This work had a great success, and so delighted Sir Walter Scott, that when the author visited him in 1830, he wrote to thank Campbell, who had given him a letter of introduction, for 'one of the best and pleasantest acquainances he had met in many a day.' Sir Walter did not stop with compliments. Irving could not find a publisher for his Sketch-Book, being perhaps too modest to push his fortunes with the craft. He got it printed on his own account by a person named Miller, who failed shortly after. Sir Walter introduced the author to John Murray, who gave him £200 for the copyright, but afterwards increased the sum to £400. Irving then went to Paris, where he wrote Bracebridge Hall, and made the acquaintance of Thomas Moore and other literary celebrities. From then
he proceeded to Dresden, and wrote the Tales of a Traveller; but he found his richest mine in Spain, where, for three months, he resided in the palace of the Alhambra, and employed himself in ransacking its ancient records. Here he wrote his Life and Voyages of Columbus (for which Murray paid him 3000 guineas), the Conquest of Granada, Voyages of the Companions of Columbus, &c.

By this time America, finding that Irving had become famous abroad—as American authors and artists mostly do, if at all, according to an old proverb—begged him to accept the post of secretary of legation at London; a highly honourable office indeed, but, in point of emolument, worth only £200 a year. The Oxford University having conferred on him the honorary degree of D.C.L., and one of George IV.'s gold medals, the Americans, a modest people, always proud of European recognition, made him minister at the court of Spain. On his return to America, he retired to a beautiful country-seat, 'Sunny Side,' built in his own 'Sleepy Hollow,' on the banks of the Hudson, where he lived with his brother and nieces, and wrote Astoria, Captain Bonneville, Goldsmith, Mahomet, and his last work, the life of his great namesake, Washington. He was never married. In his youth he loved one who died of consumption, and he was faithful to her memory. He died, November 28, 1859, sincerely mourned by the whole world of literature, and by his own countrymen, who have placed his name at the head of the list of authors whom they delight to honour.

—

NOVEMBER 29.

St Saturninus, bishop of Toulouse, martyr, 257. St Radbod, bishop of Utrecht, confessor, 918.

Born.—Margaret, daughter of Henry VII, and queen of James IV, of Scotland, 1489; Sir Philip Sidney, poet, 1554; Penhallow, Kent; Dr Peter Heylin, theological and historical writer, 1600, Bewford, Oxfordshire; John Ray, eminent naturalist, 1628, Black Notley, Essex.

Died.—Pope Clement IV, 1268, Pistoia; Philippe le Bel, king of France, 1314, Fontainebleau; Robert Mortimer, paramour of Isabella, Edward II's queen, executed at Smithfield, 1330; Charles IV, Emperor of Germany, 1378, Prague; Cardinal Thomas Wolsey, minister of Henry VIII, 1530, St Mary's Abbey, Leicester; Frederick, Elector Palatine, son-in-law of James I of England, 1632, Metz; Brian Walker, bishop of Chester, editor of the Polyglot Bible, 1661, London; Prince Rupert, of Bavaria, cavalier-general, 1682, London; Marcello Malpighi, eminent anatomist, 1694, Rome; Anthony Wood or A Wood, antiquarian writer, 1695, Derby; Maria Theresa, queen of Hungary, 1780, Vienna.

THE EARL OF MARCH: 'MORTIMER'S HOLE.'

To the traveller approaching Nottingham by rail from the Derby side, the commanding position of its ruined castle cannot but be an object of interest. Though commerce has completely surrounded the rock it stands upon with workshops, wharves, and modern dwelling-houses, the castle seems literally 'to dwell alone.' Associations of a character peculiar to itself cluster round it. It has a distinctive existence—claims a distinct parentage from the puny, gorging ejections beneath it—and soars as much beyond them by the events it calls to mind, as by its proud and lofty position. Its history, in fact, is intertwined in the history of the nation; and part of the story and shame of its country's deeds rests upon it.

The old castle must have frowned with unusual gloominess when Isabella, queen of Edward II, and her unprincipled paramour, Mortimer, took up their abode in it. The queen had rebelled against and deposed her husband. Mortimer had accomplished his death. And with the young king, Edward III, in their tutelage, they tyrannised over the country, and squandered its treasures as they pleased.

As a fresh instance of her favour, the frail princess had recently elevated Mortimer to the earldom of March. But the encroaching arrogance of the haughty minion was awakening in the minds of the barons a determination to curb his insolence and overgrown power. This spirit of revenge was still further inflamed by the murder of the king's uncle, the Earl of Kent, who appears to have been slain merely to shew that there was none too high to be smitten down if he dared to make himself obnoxious to the profligate rulers. The bow, however, was this time strained beyond its strength. The blow that was intended to quell the rising storm of indignation, rebounded, with increased force, on the guilty Mortimer, and proved his own destruction. For all parties, weary of his insolence and oppression, were forgetting their former feuds in the common anxiety to work his overthrow, and this last savage act of his government aroused them to a full sense of their danger, and gave increased intensity to their hatred and desire of vengeance. Besides which, they saw in the young king, now in his eighteenth year, signs of growing impatience of the yoke which Mortimer, as regent, had imposed on his authority. Daily they poured complaints into the royal ear of the profligacy, the excursions, and the illegal practices of the paramour, and found in Edward a willing listener. At length he was brought to see his own danger—to look upon Mortimer as the murderer of his father and uncle, the usurper of power which ought to be in his hand, the spoiler of his people, and the man who was bringing daily dishonour to himself and the nation by an illicit connection with his royal mother. He determined, accordingly, to humble the pride of the arrogant chief, and redress the public grievances.

A parliament was summoned to meet at Nottingham, about Michaelmas 1330. The castle was occupied by the dowager-queen and the Earl of March, attended by a guard of a thousand and eighty knights, with their followers; while the king, with his queen, Philippa, and a small retinue, took up his abode in the town. The number of their attendants, and the jealous care with which the castle was guarded, implied suspicion in the minds of the guilty pair. Every night the gates of the fortress were locked, and the keys delivered to the queen, who slept with them under her pillow. But with all their precautions, justice was more than a match for their villany. Sir William Mountacute, under the sanction of his sovereign, summoned to his aid several nobles, on whose loyalty and good faith he could depend, and obtained
the king's warrant for the apprehension of the Earl of March and others. The plot was now ripe for execution. For a time, however, the inaccessible nature of the castle-rock, and the vigilance with which the passes were guarded, appeared to present an insuperable obstacle to the accomplishment of their designs. Could Sir William Eland, the constable of the castle, be won over, and induced to betray the fortress into their hands? The experiment was worth a trial, and Mountacute undertook the delicate task. Sir William joyfully fell in with a proposition which enabled him at once to testify his loyalty to his sovereign and his detestation of the haughty tyrant. The result of the interview is thus quaintly described by one of the old chroniclers, whose manuscript is quoted by Deering:

"Tho saide Sir William Montagu to the constabill in heronye of all them that were helping to the quarrel. "Now certis dere firendes us behoveth for to warke and done by your Queryntyse to take the Mortimer, sith ye be the keeper of the castell and have the kayes in your warde." "Sir," quod the constabill, "woll ye understonde that the yates of the castell beth loken with lokys, and Queen Isabella sent hidyder by night for the kayes thereof, and they be layde under the chemell of her beddis hede unto the mowre, and so I may not come into the castell by the yate no manner of wyse; but yet I know another wyre by an aley that stretchith outh of the warde under the earthe into the castell that goeth into the west, which aley Queen Isabell, ne none of her meayne, ne the Mortimer, ne none of his companys knoweth it not, and so I shall lede you through the aley, and so ye shall come into the castell without spyes of any man that beth your enemies."

Everything being now arranged, on the night of Friday, October 19, 1330, Edward and his loyal associates were conducted by Sir William Eland through a secret passage in the rock to the interior of the castle. Proceeding at once to a chamber adjoining the queen's apartment, they found the object of their search in close consultation with the bishop of Lincoln and others of his party. The Earl of March was seized; Sir Hugh Turplinton and Sir John Monmouth, two of the state-guards, were slain in attempting to rescue him from the king's associates; and the queen, hearing the tumult, and suspecting the cause, rushed to the room in an agony of terror, exclaiming: 'Fair son, fair son, have pity on the gentle Mortimer.' Notwithstanding the cries and entreaties of the weeping Isabella, her beloved earl was torn from her presence, and hurried down the secret passage by which his captors entered, and which has ever since been designated Mortimer's Hole. With so much secrecy and despatch was this stratagem executed, that the guards on the ramparts of the castle were not disturbed, and the good people of Nottingham knew nothing of the enterprise till the following day, when the arrest of Mortimer's sons and several of his adherents by the royalists, gave a significant and acceptable indication that the luxurious and profligate usurpation of the Earl of March had at length been terminated by kingly authority.

Mortimer was conveyed by a strong guard to the Tower of London. Edward repaired to Leicester, whence he issued writs for the assembling of a new parliament at Westminster, for the purpose of hearing charges against the late administration, and redressing the grievances under which the kingdom had laboured. At this parliament Mortimer was impeached and convicted in a most summary manner of high treason, and other crimes. No proof in evidence of his guilt was heard, and he was condemned to die as a traitor, by being drawn and hanged on the common gallows; a sentence which was executed at 'The Elme,' in Smithfield, on the 29th of November 1330. His body was
THE FALL OF WOLSEY.

Any new information regarding the history of Cardinal Wolsey must ever be welcome. A few items of this description were some years ago obtained from a state manuscript of the reign of Henry VIII., then in the possession of Sir Walter C. Trevelyan, Bart., F.S.A., a former family descendent upon the side of the chaplains to King Henry. Through him it may have found its way to the venerable seat of Nettlescombe, in the county of Somerset, where this manuscript, relating to domestic expenses and payments, has, for some centuries, been deposited.

Mr. Payne Collier, in describing this document to the Society of Antiquaries, says:—We pass over the manner in which Wolsey appears, without check or control, to have issued his written warrants or verbal commandments for payments of money for nearly all purposes, and upon all occasions, even for the despatch of his own letters to Rome; an entry of this kind is made in the first month to which the manuscript applies. Neither is it necessary to dwell upon the items which relate to the known part he took upon the trial of Queen Katharine, an event which forms an important portion of the subject nearly all the authorities, from Hall to Lord Herbert of Cherbury, concur. It is to be observed, with reference to the transactions in which Wolsey was concerned, that no warrant was issued by him for the payment of any sum of money after the 19th of June 1532, when Sir Thomas Fitzgerald, the Irish knight, had a present made to him of £20, 13s. 4d., the order for which was given by Wolsey. After this date, the warrants were those of the king, or of particular officers, and it does not seem that the cardinal was allowed to interfere; for his disgrace had then commenced, in consequence of the vexatious postponements in the trial of the divorce. Neither does his name occur again in this document, until we come upon it, as it were, by surprise, where he is one of the cardinal and bishop of Winchester, in connection with a payment to him of one thousand marks out of the revenues of Winchester.

The terms are remarkable. "Item, paid to the Lord Cardinall of York and Bishop of Winchestre, xviiij die Martii, by the Kynge's warrante, dated at Windsour, xvj die Martii, in the advancement of his hole yeares pension of M. mra. by the yere, out of the bishopricks of Winchester, which yere shall fully ende and romme at Mischilmes next cumming—polxviij, xviij, iij." This quotation is valuable, both biographically and historically, since it settles the question, whether the sum granted to Wolsey were 1000 marks, as Stow, in his Annals asserts; or 4000 marks, as it stands in some manuscripts of Cavendish's life of the cardinal. By the above entry, confirmed by a subsequent passage in Cavendish, it is clear that, in consideration of the necessities of the cardinal, it was to be allowed him beforehand. After all his pomp and prosperity—after all his vast accumulations of wealth—after all his piles of plate, and heaps of cloth of gold, and costly apparel—Wolsey, in March 1530 (judging from this entry), was reduced to the necessity of obtaining a loan of a thousand marks; this, too, to carry him to his exile at York, whither his enemies had, by this date, induced the sike, selfish, and luxurious king to banish his former favourite.

Of Wolsey's subsequent residence at Cawood, we find in this manuscript, an 'Item to David Vincent, by the king's warrant, for his charge, being sent to Cawood, in the north countrie, at suche time as the cardenall was sicke.' As the sum charged was considerable—namely, £26, 6s. 8d. (more than £200 present money)—we may infer, perhaps, the messenger, whom Cawood, style his fellow Vincent,' made some stay there, watching the progress of Wolsey's illness, and sending intelligence to the king, who was more anxious for the death than for the life of his victim, in order that he might seize upon the remains of his movables. It is quite evident that the cardinal was not, at this period, so destitute as many have supposed, and that he had carried with him a very large quantity of plate, of which the king possessed himself the moment the breath was out of the body of its owner. Among the payments for January, 29 Henry VIII., we read, in the Trevelyan manuscript, that two persons were employed three entire days in London, 'weighing the plate from Cawood, late the Cardinal's.' Such are the unceasing terms used in the original memorandum, communicating a striking fact, of which we now hear for the first time.

From Cawood, as is well known, Wolsey was brought to the Earl of Shrewsbury's seat, at Sheffield Park; and thither messengers were unexpectedly sent to convey the cardinal to the Tower. This state manuscript shows that Sir William Kingston, captain of the guard, was sent to arrest the cardinal; and that forty pounds were paid to Kingston in November 1530, for the expenses of his journey, as follows: 'Item, to Sir William Kingston, knight-capitaine of the kinges garde, sent to Tharle of Shrewsbury with divers of the kinges garde, for the conveyance of the Cardinall of Yorke to the Tower of London, in prast for their charges.' The cardinal was taken ill on the road; the Earl of Shrewsbury encouraged him to hope for recovery, but the cardinal replied that he could not live, and discovered learnedly about his ailment, dysentery, which he said, within eight days, if there were no change, would necessarily produce 'exorrition of the entrails, or delirium, or death.' This was on the eighth day, when he confidently expected his death; and he expired after the clock had struck eight, according to his own prediction; 'the very hour,' says Shakespeare, 'himself had foretold would be his last.' He had reached Leicester three days previously: as he entered the gate of the monastery, he said: 'Father abbot, I am come to lay my bones among you;' and so the event proved: the monks carried him to his bed, on which he expired on the 29th of November 1530. Shakespeare has little altered the words he used by the death-bed, though they were spoken to Kingston, and not, as in the play, to Cromwell:

'But had I served my God with half the zeal
I served my king, he would not in mine age
Have left me naked to mine enemies.'

Henry VIII., Act iii. sc. 2.

It is a curious and novel circumstance, brought to light in the document before us, that, exactly
two months before the day of Wolsey's death, the dean and canons of Cardinal's (now Christ-church) College, Oxford, had so completely separated themselves from Wolsey, and from all the interest which he had taken in their establishment, that, instead of resorting to him for the comparatively small sum of £184, for the purpose of carrying on the architectural works, they applied to the king for the loan of the money. The entry of this loan is made in the state document under consideration, 'upon an obligation to be repaid agayne, on this side of Christmas next coming': if he had known this trifling advance could not be made out of the royal purse, filled to repletion by the sacrifice of Wolsey, without an express stipulation that the money was to be returned before Christmas.

Everything in Wolsey (says Mr Collier), his vices and his virtues—were great. He seemed incapable of mediocrity in anything: voluptuous and profuse, rapacious and of insatiable ambition, but too magnanimous to be either cruel or revengeful, he was an excellent master and patron, and a fair and open enemy. If we despise the abjectness which he exhibited in his first fall, let it be remembered from and to what he fell—from a degree of wealth and grandeur which no subject on earth now enjoys, to a condition of ignominy and want, with all the terrible and unknown consquences to which he might be exposed from the merciless and unscrupulous temper of the king.

A picturesque tower or gate-house, the only remains of Wolsey's palace, exists, to this day, at Eashe. Its erection has been commonly attributed to the cardinal; he is, however, thought to have had little time for building at Eashe; and the architecture of the towers is of an earlier period than Wolsey's. With better authority, the erection of this building is attributed to Bishop Winifleet, who preceded the cardinal in the possession of the see of Winchester by about eighty years, and is known to have erected 'a stately brick mansion and gate-house' in Eashe Park. It is now luxuriantly mantled with ivy; the interior has a very skilfully-wrought newel staircase, of brick; and in the roof is introduced the principle of the ogee arch, a supposed invention of much later date.

In estimating the abjectness of Wolsey, we should also take into account the abject submission which he had long been taught to exhibit before the tyrant—

'Whose smile was transport, and whose frown was fate.'

Of this arbitrary sovereign, one circumstance is disclosed by Cavendish, utterly surpassing all the measures of common iniquity. When Wolsey was sued in a prebendry by Henry's order, and all his movables were seized, the chest which contained a dispensation under the king's sign-manual for the very facts on which he was proceeded against, was withheld, and he was prevented from adducing a document, which, if law and reason had any scope, would have preserved him. His misfortunes, and the conversation of some devout and mortised Carthusians, appear to have awakened the first sense of genuine religion in his mind. During his retreat at Cawood, while the king was persecuting him with one refinement of ingenuous cruelty after another, he was calm and composed; and here, for the first time, he seems to have exercised, or even comprehended, the character of a Christian bishop. He reconciled enemies, he preached, he visited—nay, he was humble. But this character he was not long permitted to sustain. He had talents for popularity, which, in his delicate and difficult circumstances, he was, perhaps, not sufficiently reserved in displaying. He was preparing to be enthroned at York, with a degree of magnificence which, though far inferior to that which had been practised by his predecessors, was yet sufficient to awaken the jealousy of Henry. The final interest at Cawood enraged the king, as well as uncharitable, to suppose what there is no proof of—that he died of poison, either administered by himself or others. The obvious and proximate cause of his death was disease. A great heart, oppressed with indignities, and beset with dangers, at length gave way; and Wolsey, under circumstances affecting from Cavendish, received, in Leicester Abbey, the two last charities of a death-bed and a grave.

THE FIRST NEWSPAPER PRINTED BY STEAM.

The 9th of November 1814 forms an important date in the history of printing, and consequently in that of civilisation. It was the day on which a newspaper was for the first time printed by steam, instead of manual power. It seems appropriate to assert that the Times, the newspaper which of all others throughout the world is now regarded as the most influential, should have been the one that inaugurated this vast improvement. The common printing-press, though much improved during the second half of the last century, could seldom strike off more than two or three hundred impressions per hour, with one man to ink the type, and another to work the press. To set forth the importance of machine-printing, it is only necessary to remark that, without such an invention, the production of a large impression of a newspaper was mechanically impossible, as the news would have been stale before the end of the impression was accomplished. In 1790, Mr W. Nicholson obtained letters-patent for a machine similar in many respects to those which were to be seen years later; but it does not appear that he brought his invention into practice. Steam-power, it was known, would effect movements in machinery of almost every imaginable kind; but it was the enterprise of the proprietors of the Times that enabled inventors to surmount the difficulties of applying such power to printing-presses.

It was the second Mr John Walter (the son of the first and the friend of the present proprietor), whose management of the Times began in 1803, that gave so immense an impetus to rapid printing. It took many hours to strike off the 3000 or 4000 copies of which the daily issue of the Times then consisted; and Mr Walter was dissatisfied with that slow process. In 1804, Thomas Martyn, a compositor in his employment, produced a model of a self-acting machine for the press; and Walter supplied him with money to continue his ingenious labours. The pressmen, however, were so bitterly hostile to any such innovation, that Martyn was placed almost in fear of his life; and as Walter did not at this time possess a very large capital, the scheme fell to the ground. John Walter, however, was not a man to be beaten by
difficulties; he bore in mind Martyn's invention, and bid his time. He encouraged inventors from all quarters; and as his pecuniary means increased, he became able to pay them well for their services. In 1814, he met with a few complaints that König's patent for a printing-machine should be tried—not in the actual printing-office of the Times, but in adjoining premises, for fear of the hostility of the pressmen. König and his assistant, Bauer, worked quietly in these premises for many months, gradually perfecting the machine. The proceedings on the momentous 29th of November were highly characteristic of Mr Walter. The night on which this curious machine was first brought into use in its new abode, says his biographer, was one of great anxiety, and even alarm. The suspicious pressmen had threatened destruction to any one whose inventions might suspend their employment—"destruction to him and his trade." They were directed to wait for expected news from the continent. It was about six o'clock in the morning, when Mr Walter went into the press-room, and saw his machines working; he told them that the Times was already printed by steam; that if they attempted violence, there was a force ready to suppress it; but that if they were peaceable, their wages should be continued to every one of them till similar employment could be procured. The promise was no doubt faithfully performed; and, having so said, he distributed several copies among them. Thus was this most hazardous enterprise undertaken and successfully carried through; and printing by steam, on an almost gigantic scale, given to the world.

The leading article of the Times, on the 29th of November 1814, adverted to the great event in the following terms: "Our journal of this day presents to the public the practical result of the greatest improvement connected with printing, since the discovery of the art itself. The reader of this paragraph now holds in his hands one of the many thousand impressions of the Times newspaper which were taken off last night by a mechanical apparatus. A system of machinery, almost organic, has been devised and arranged, which, while it relieves the human frame of its most laborious efforts in printing, far exceeds all human powers in rapidity and despatch. That the magnitude of the invention may be justly appreciated by its effects, we may inform the public that, after the letters are placed by the compositors, and enclosed in what is called the "form," little more remains for man to do than to attend upon and watch this unconscious agent in its operations. The machine is then merely supplied with paper. Itself places the form, inks it, adjusts the paper to the newly-inked type, stamps the sheet, and gives it forth in the hands of the attendant, at the same time withdrawing the form for a fresh coat of ink, which itself again distributes, to meet the ensuing sheet, now advancing for impression; and the whole of these complicated acts is performed with such a velocity and simultaneousness of movement, that no less than 1100 sheets are impressed in one hour. That the completion of an invention of this kind, not the effect of chance, but the result of mechanical combinations, methodically arranged in the mind of the artist, should be attended with many obstructions and much delay, may be readily admitted. Our share in the event has, indeed, only been the application of the discovery, under an agreement with the patentees, to our own particular business; yet few can question that König's invention is the best tribute of praise, which we are capable of offering to the inventor of the printing machine, comprised in the description, which we have feebly sketched, of the powers and utility of the invention. It must suffice to say further, that he is a Saxon by birth; that his name is König; and that the invention has been executed under the direction of his friend and countryman, Bauer. We have now before us two consecutive numbers of the Times—the last that was printed at the hand-press (November 29, 1814), and the first that was printed by machinery (November 29); the latter is far clearer and more beautiful, than the former—possibly because a new font of type was used. König's machine was, however, very complicated, and was soon afterwards superseded by one invented by Messrs Applethorpe and Cowper. As improved, this machine ultimately printed 8000 impressions per hour, but was superseded by the Hoe machine. This in its turn gave way to the famous Walter press, patented in 1866, which prints at an average rate of 18,000 copies per hour, and can do good work at the rate of 17,000 copies.

REMARKABLE WAGERS.

On Monday, 29th November 1773, Mr Foster Powell, an attorney's clerk, commenced a journey from London to York and back again, on foot; a feat which he accomplished in the space of six days, reaching York on the Wednesday evening, and starting again the following morning for London, where he arrived on the evening of Saturday, the 4th December. By this extraordinary effort of pedestrianism, he netted the sum of a hundred guineas, which had been staked on his success.

It has been remarked that a collection of curious or foolish wagers you may make an interesting volume. After much ransacking, we have succeeded in unearthing a few of the most remarkable instances, which we now present to our readers.

A wager is said to have been won by Sir Walter Raleigh from the Virgin Queen, on the question of how much smoke is contained in a pound of tobacco. A pound of the article in question was weighed, burned, and then weighed again in ashes. The question was held to be satisfactorily settled by determining the weight of the smoke as exactly that of the tobacco, before being burned, minus the residuum of ashes. The fact of the ashes having received an additional weight by combination with the oxygen of the atmosphere, and also the circumstance of numerous imperceptible gases being evolved by the process of combustion, were alike unheeded. This is one of those wagers which cannot be won.

Sir John Pakington, called 'Lusty Pakington,' and by Queen Elizabeth, 'My Temperance,' laid a wager of £3000 to swim against three noble courtiers from Westminster Bridge to Greenwich, but her majesty interposed to prevent any further.
procedure on the bet. A gentleman of the name
of Corbet, a distinguished family near Shrewsbury,
betted that his leg was the handsomest in the
county or kingdom; and staked immense estates
on the point. He won the wager, and a picture is
still preserved in the family mansion, representing
the process of measuring the legs of the various
contestants. A dispute of a similar kind, between
twelve gentlemen in a public house at Birmingham,
occaisioned a considerable amount both of amuse-
ment and scandal in the Modern Athens, about
half a century ago. It is recorded of Lord Spencer,
that he cut off his coat-tails, and laid a successful
wager that such a mutilated style of garment
would become fashionable. And an amusing bet,
though for the very trifling amount of five shillings,
is related to have been decided in 1806, in the
Castle-yard, York, between Thomas Hodgson and
Samuel Whiteside, as to which should succeed in
assuming the most singular and original character.
Hodgson appeared decorated with ten guineas, five
guineas, and guinea notes on his coat and waistcoat,
a row of five guinea notes and a purse of gold
round his hat, whilst to his back a paper was
attached, with the words, “John Bull.” White-
side was like one of the scrubbers at the end of the
last century, the scene being one of the vaults beneath
Westminster Abbey.

It is only consistent with the British propensity
for sport and athletic effort, that so many wagers
should be recorded in connection with feats of
pedestrianism. Thus we are told that on the 24th
July 1750, a man upwards of forty years of age,
for a wager of fifty guineas, ran from Shore-ditch
to the eight mile-stone beyond Edmonton in fifty
minutes, having been allowed an hour for per-
forming the exploit. In 1763, one of the Glouces-
tershire militia undertook, for a wager of £200, to
walk from London to Bristol in twenty hours.
This he accomplished in nineteen hours and thirty-
five minutes, having quitted London at midnight,
and arrived at Bristol the following evening. In
the same year, a shepherd ran on Moulsey Hure,
in a mile and a half, having engaged to do so in an hour and a half.
And in July 1789, was completed the famous
pedestrian feat of Captain Barclay, who won £3000
on a wager that he would walk a thousand miles
in a thousand successive hours. The captain’s entry
to Newmarket after the accomplishment of his
undertaking, was heralded by a peel of bells. Numerous other pedestrian bets of a similar char-
acter to Barclay’s have subsequently been made,
and are familiar to all readers of sporting liter-
ature.

Till recently, the fulfilment of an obligation con-
stituted by wager, contrary to what has all along
prevailed in Scotland, could be enforced in English
courts of law. Latterly, indeed, they were looked
upon with great disfavour; but the judges, never-
theless, still found occasion for the recognition of them, however contrary such matters
might seem to legal seriousness and dignity. A
case of the few cases recorded are curious enough.
Perhaps one of the most noted is the action tried
before Lord Mansfield in July 1777, on a wager
which had been laid regarding the sex of the
celebrated Chevalier D’Eon. A great deal of
evidence, much more curious than edifying, was
brought forward; and it was maintained by the
defendant, that the action ought to be dismissed as

the chronicle of occurrences, that a young Irish
gentleman, on 21st September of that year, started
for Constantinople, having engaged to walk from
London to Constantinople and back again within a
year. Twenty thousand pounds are stated as being
dependent on the issue of the wager, but we have
no further accounts of the affair.

The subject-matter of wagers has sometimes
taken rather a grim form. A well-known story
is related of a member of a party of revellers who
engaged, in a fit of bravado, to enter the vault of a
church at midnight, and in proof of his having
done so, to stick a fork into a coffin which had been
recently deposited there. He accomplished his
object, and was returning triumphantly, when he
felt himself suddenly caught, and was so over-
powered by terror that he fell into a swoon, and
was found in this condition shortly afterwards on
the floor of the vault by his companions, who,
alarmed at his long absence, had come out to look
for him. The fork which he had stuck into the
coffin had caught hold of his long cloak, and thus
occasioned a fit of terror which had nearly proved
fatal. An incident of this nature is credibly
recorded to have taken place in London in the last
century, the scene being one of the vaults beneath
Westminster Abbey.
a gambling, indecent, and unnecessary proceeding. The lord chief-justice, however, took a different view, and while expressing a strong disapproval of such conduct, laid down that penalties proceeding on wages were not contrary to the law of England, and that therefore the jury should find a verdict for the plaintiff. A verdict for £700 was accordingly returned. In another case before Lord Mansfield, in the Court of King’s Bench, the sum of 500 guineas was sought to be recovered by Lord March from Mr Pigott, on a wager which the plaintiff had laid with the defendant as to whether Sir William Codrington or old Mr Pigott should first die. The latter died suddenly of gout in the head the morning previous to the laying of the wager. Owing to this circumstance, the defendant maintained that there was no bet; but the court and jury ruled otherwise, and a verdict was returned for the full amount claimed, and costs. An amusing case is related to have been tried at the Kingston assizes, where Mr Courtney was sued for the payment of 100 guineas on a wager which had been laid that the plaintiff should furnish three horses which should go ninety miles in three hours. This he performed to the letter, but it was by starting all the three horses together, so that they had only thirty miles each to run within the three hours, an undertaking which they accomplished with the utmost ease. The court supported the defendant’s view of the transaction, that it was an unfair bet, and a verdict in his favour was consequently given. In another action, tried before the Court of Common Pleas, the plaintiff sought to enforce a claim on a wager for ‘a rump and dozen,’ which Sir James Mansfield was inclined to dismiss, because he did not judicially know the meaning of ‘a rump and dozen,’ but he was overruled by Mr Justice Heath, who remarked that they knew quite well precisely that ‘a rump and dozen’ meant a dinner and wine, an agreement, as his lordship observed, in which he could discover no illegality.

Many similar cases might be related, but we shall restrict ourselves to two more. One of these was an action brought at the York assizes in 1812, by the Reverend R. Gilbert against Sir Mark M. Sykes, Bart. At a dinner-party in his own house, the latter made a wager on the result of the match which Marylebone Cricket Club was about to play against the Duke of Cambridge’s Eleven. Mr Sykes bet that his Eleven would win, and Mr Gilbert agreed to wager £100 on the other side. The match being finished, Mr Gilbert lost the wager and refused to pay it, and an action was brought to enforce the fulfillment of the obligation. It was contended by the defendant’s counsel, that he had been surprised into the bet by the clergyman’s hasty acceptance of it, and also that the transaction was an illegal one, seeing that Mr Gilbert, having a beneficial interest in the life of Bonaparte, might, in the event of invasion, be tempted to use all means for the preservation of the life of the Emperor. The court returned a verdict for the defendant; but on the case being brought before the Court of King’s Bench, a rule was granted by Lord Ellenborough, to shew cause why the verdict should not be set aside and a new trial granted, as in his lordship’s opinion the fact of a contract was clearly established, and unless anything of an immoral or impolitic tendency could be proved, the agreement must be supported. On the ground last mentioned, the rule was ultimately discharged and a new trial refused; the judge finding that such a wager was illegal, from its tendency to produce public mischief, as, on the one hand, an undue interest was created in the preservation of the life of a public enemy, and on the other, a temptation might be induced to plot the assassination of Bonaparte, any suspicion of which ought to be carefully guarded against by the nation at large.—The other case to which we have referred, was an action brought on a wager, that the celebrated Johanna Southcott would be delivered of a son, on or before the 1st of November 1814. As the party in question was a single woman, it was held that no claim of action could be sustained, as the wager involved the perpetration of an immorality. On similar grounds, it has been ruled that no action was maintainable on a bet respecting the issue of a boxing-match, such a proceeding being a breach of the peace.

By the gambling act passed in 1845, all agreements whatever founded on any gaming or betting transaction, are declared absolutely null and void, and no action for their enforcement can be sustained. The courts of law have thus been saved the expenditure of much valuable time, to the postponement often of important business, on the discussion of frivolous and unmeaning questions.

ST ANDREW.

St Andrew was the son of Jonas, a fisherman of Bethsaida, in Galilee, and was the brother of Simon Peter, but whether elder or younger we are not informed in Scripture. He was one of the two disciples of John the Baptist, to whom the latter exclaimed, as he was passing by: ‘Behold the Lamb of God!’ On hearing these words, we are informed that the two individuals in question followed Jesus, and having accosted him, were invited by the Saviour to remain with him for that day. Thereafter, Andrew went in quest of his brother Simon Peter, and brought him to Christ, a circumstance which has invested the former apostle with a special pre-eminence.

After the Ascension, the name of St Andrew is not mentioned in the New Testament, but he is believed to have travelled as a missionary through Asiatic and European Scythia; to have afterwards passed through Thrace, Macedonia, and Epirus into Achaea; and at the city of Patra, in the last-named region, to have suffered martyrdom about 70 a.d. The Roman proconsul, it is said, caused him to be first scourged and then crucified. The latter punishment he underwent in a peculiar manner, being fastened by cords instead of nails to the cross, to produce a lingering death by hunger and thirst; whilst the instrument of punishment itself, instead of being T-shaped, was in the form of an X, or what is termed a cross decussate. We are further
informed that a Christian lady of rank, named Maximela, caused the body of St Andrew to be embalmed and honourably interred; and that in the earlier part of the fourth century, it was removed by the Emperor Constantine to Byzantium, or Constantinople, where it was deposited in a church erected in honour of the Twelve Apostles. The history of the church does not end here, for we are informed that, about thirty years after the death of Constantine, in 368 A.D., a pious Greek monk, named Regulus or Rule, conveyed the remains of St Andrew to Scotland, and there deposited them on the eastern coast of Fife, where he built a church, and where afterwards arose the renowned city and cathedral of St Andrews. Whatever credit may be given to this legend, it is certain that St Andrew has been regarded, from time immemorial, as the patron saint of Scotland; and his day, the 30th of November, is a favourite occasion of social and national reunion, amid Scotchmen residing in England and other places abroad.

The commencement of the ecclesiastical year is regulated by the feast of St Andrew, the nearest Sunday to which, whether before or after, constitutes the first Sunday of Advent, or the period of four weeks which heralds the approach of Christmas. St Andrew's Day is thus sometimes the first, and sometimes the last festival in the Christian year.

Born.—Sir Henry Savile, eminent scholar and mathematician, 1549, Over-Broadcly, Yorkshire; Jonathan Swift, humorous and political writer, 1667, Dublin; John Toland, sceptical writer, 1669, Ireland; Mark Lemon, dramatist and miscellaneous writer, 1690, London.

Died.—Sulpicius Severus, 406 a.d.; Edmund Ironside, king of England, 1016; William Gilbert, celebrated writer on magnetism, 1603; Colchester; John Selden, politician, and legal writer, author of Table-talk, 1654, London; Maurice de Saxa, 1750, Castle of Chambord; James Sheridan Knowles, dramatist, 1892, Torquay.

SELDEN.

The seventeenth century was rich in great lawyers, but few could take precedence of John Selden. In the contests between the Stuarts and their parliaments he was constantly referred to for advice, and his advice he gave without fear or favour. James I, in 1621, cast him into prison for counselling the Commons to resist his will, and in 1629 Charles I committed him to the Tower for a similar offence; yet neither the tyranny of the crown nor the applause of the people could make him swerve from his persistent integrity. He was not a cold-blooded reasoner, but a patriot, whose motto was 'Liberty above all,' nevertheless his patriotism distinctly showed, that in the tumult and excitement of a stormy age he preserved his reason and independence unimpaired. A mediator is usually an unpopular character, but Selden commanded the respect alike of Royalist and Roundhead. Clarendon writes of him: 'Mr Selden was a person whom no character can flatter, or transmit in any expressions equal to his virtues. He was of so stupendous learning in all kinds, and in all languages, that a man would have thought he had been entirely conversant among books, and had never spent an hour but in reading and writing; yet his humanity, courtesy, and affability was such, that he would have been thought to have been bred in the best courts, but that his good-nature, charity, and delight in doing good, and in communicating all he knew, exceeded that breeding.' Selden's learning was indeed prodigious. From his youth he was a hard student, and as having a rare memory, he seldom forgot what he had read. While quite a young man, he had earned a high reputation as a jurist. He was no orator, but men resorted to him for his opinion rather than his rhetoric, and his practice lay rather in his chamber than in the law-courts. He wrote many books; and a History of Tiles, published in 1618, provoked much excitement in consequence of his denying the divine, while admitting the legal right of the clergy to tithes. He was summoned in consequence before the High Commission Court, but without further result than the exaction from him of an expression of sorrow for creating disturbance, no retractation being made of the opinion which he had expressed. Few except antiquaries at this day disturb Selden's works, but his memory is kept green in literature by means of a collection of his Table-talk made by Milward, his secretary for twenty years. Of this choice volume Coleridge in a somewhat extravagant vein says: 'There is more weighty bullion sense in Selden's Table-talk than I ever found in the same number of pages in any uninspired writer.' The Table-talk affords a fine idea of Selden, and confirms Clarendon's eulogy when he says: 'In his conversation Selden was the most clear disconnector, and had the best faculty of making hard things easy, and of presenting them to the understanding of any man that hath been known.' Not unfrequently also, over some bright saying, will the reader be ready to exclaim with Coleridge: 'Excellent! Oh! to have been with Selden over his glass of wine, making every accident an outlet and a vehicle for wisdom.' Throughout the Table-talk there are evidences of his independent and impartial temper; High Churchmen and Puritans suffer equally from his blows. Of women his opinion is generally contemptuous. For instance, he says:

'Of Marriage.—Marriage is a desperate thing. The frogs in Esop were extreme wise; they had a great mind to some water, but they would not leap into the well, because they could not get out again.'

The experience of his times would suggest this bit of wisdom about

'Religion.—Alteration of religion is dangerous, because we know not where it will stay; it is like a millstone that lies upon the top of a pair of stairs; it is hard to remove it, but if once 'tis thrust off the first stair, it never stays till it comes to the bottom.'

Thus would Selden have justified the execution of a witch:

'Witches.—The law against witches does not prove there be any; but it punishes the malice of those people that use such means to take away men's lives. If one should profess that by turning his hat thrice, and crying "Bus," he could take away a man's life, though in truth he could do no such thing, yet this were a just law made by the state, that whoever should turn his hat thrice, and cry "Bus," with the intention to take away a man's life, shall be put to death.'

* See p. 622 of this volume.
Here is an anecdote about King James:

Judgment.—We cannot tell what is a judgment of God; its presumption to take upon us to know. Commonly we say a judgment falls upon a man for something we cannot abide. An example we have in King James, concerning the death of Henry IV. of France. One said he was killed for his wenching; another said he was killed for turning his religion.

"No," says King James (who could not abide fighting);

"he was killed for permitting duels in his kingdom."

The following have their application to the scruples and asceticism of the Puritans:

Conscience.—A knowing man [a wise man] will do that which a tender conscience man darest not do, by reason of his ignorance; the other knows there is no hurt; as a child is afraid of going into the dark, when a man is not, because he knows there is no danger.

Pleasure.—'Tis a wrong way to proportion other men's pleasure to ourselves; 'tis like the child's using a little bird, "O poor bird! thou shalt sleep with me!" so lays it in his bosom, and stilles it with its own breath; the bird had rather be in the cold air. And 'tis so too, it is the most pleasing fixture, to like what other men like.'

After a banishment of nearly four centuries, Cromwell allowed the Jews to settle in England. Selden no doubt approved his liberality, for, said he:

Jews.—Talk what you will of the Jews, that they are cursed, they thrive where er they are come, they are able to oblige the prince of their country by lending him money; none of them beg, they keep together, and for their being hated, my life for yours, Christians have one another as much.

In the following, he gives his judgment against those who hold that genius is an acquirement of education or industry:

Learning and Wisdom.—'No man is wiser for his learning; it may administer matter to work in, or objects to work upon; but wit and wisdom are born with a man.'

These morsels may give some notion of the flavour of the Table-talk; there is no better book to have at hand and dip into at an odd halffour.

Selden was born at Salvington, on the Sussex coast, near Worthing, in 1684. In the house where he spent his boyhood, on the lintel of the door withinside, is a Latin distich, rudely cut in capitals intermixed with small letters, reputed to have been the work of Selden when ten years old. The inscription runs:

'Gratus, honeste, mihi; non clauder, initiis, sed eoque:
Fur absus, non sum facta soluta tibi.'

Which may be rendered:

'Thou 'rt welcome, honest friend, walk in, make free:
Thief, get thee hence, my doors are closed to thee!'

His father was a musician, or as he is called in the parish register, 'a minstrel.' Young Selden was educated at Oxford, and from thence removed to London, and entered the Inner Temple in 1604. His early rise in life he owed simply to his own diligence and ability. When asked, in his old age, to whom he should leave his fortune, he said he had no relation but a milk-maid, and she would not know what to do with it. He died on the last day of November 1654, within sixteen days of the completion of his seventieth year. He was buried in the Temple Church, and Archbishop Usher preached his funeral sermon, in the course of which he observed, that he 'looked upon the deceased as so great a scholar, that he was scarce worthy to carry his books after him.' In person Selden was tall, being in height about six feet; his face was thin and oval, his nose long and inclining to one side; and his eyes grey, and full, and prominent.

MARSHAL Saxe

Though not a general of the highest order, Marshal Saxe is still the most distinguished commander that appeared in France during the greater part of the last century. The victory of Fontenoy, in which he repulsed the combined forces of England and Holland under the Duke of Cumberland and Prince Waldeck, was followed by a series of successes which compelled the allies to enter into negotiations with France for peace, resulting in the treaty of Aix-la-Chapelle in 1748. Honours of all sorts were showered on him by Louis XV.; and among other rewards, the magnificent castle of Chambord, twelve miles from Blois, with an annual revenue of 100,000 francs, was bestowed on the hero of so many achievements.

Marshal Saxe was the natural son of Augustus II., king of Poland, and was born at Dresden on 19th October 1696. From boyhood he was inured to arms, having, when only twelve years of age, served under Count Schleitheim before Lissa. He first entered the French army about 1720, when the Duke of Orleans appointed him to the command of a regiment. Subsequently to this he succeeded in getting himself elected Duke of Courland; but through the influence of the Czarina Catharine I. in the Politz Diet, he was deprived of his sovereignty, and compelled to retreat to France. After some vicissitudes of fortune, he took service, in 1733, again with France, under whose banners, with the exception of an interval spent in vainly prosecuting his claim to the duchy of Courland, he continued for the remainder of his life.

A foreigner by birth, Marshal Saxe was, in religious belief, a Lutheran; and as he died in the Protestant faith, it was impossible to bury him with all the rites and ceremonies due to his distinguished position and services. A lady of rank remarked on hearing of his death: 'How zealous that we cannot say a De profundis for him who made us so often sing Te Deum!' Louis XV., however, caused his corpse to be conveyed with great pomp from Chambord to Strasburg, where it was interred in the Lutheran church in that town.

THE GREAT RAILWAY MANIA-DAY.

Never had there occurred, in the history of joint-stock enterprises, such another day as the 30th of November 1845. It was the day on which a madness for speculation arrived at its height, to be followed by a collapse terrible to many thousands of families. Railways had been gradually becoming successful; and the old companies had, in many cases, bought off, on very high terms, rival lines which threatened to interfere with their profits. Both of these circumstances tended to encourage the conception of new lines. There is always a floating capital in England waiting for profitable employment; there are always professional men looking out for employment in great engineering
being filled up by hand. However executed, the problem was to get these documents to Whitehall before midnight on the 30th of November. Two guineas a mile were in one instance paid for post-horses. One express train steamed up to London 118 miles in an hour and a half, nearly 60 miles an hour. An established company having refused an express train to the promoters of a rival scheme, the latter engaged six persons for personal use, and engaged an express train to convey it to London; they did so, and the plans and sections came in the boxes, with solicitors and surveyors as mourners!

Copies of many of the documents had to be deposited with the clerks of the peace of the counties to which the schemes severally related, as well as with the Board of Trade; and at some of the offices of these clerks, strange scenes occurred on the Sunday. At Preston, the doors of the office were not opened, as the officials considered the orders which had been issued to keep open on that particular Sunday, to apply only to the Board of Trade; but a crowd of law-agents and surveyors assembled, broke the windows, and threw their plans and sections into the office. At the Board of Trade, extra clerks were employed on that day, and all went pretty smoothly into the evening. A rule was laid down for receiving the plans and sections, hearing a few words of explanation from the agents, and making certain entries in books. But at length the work accumulated more rapidly than the clerks could attend to it, and the agents arrived in greater number than the entrance-hall could hold. The anxiety was somewhat allayed by an announcement, that whoever was inside the building before the clock struck twelve should be deemed in good time. Many of the agents bore the familiar name of Smith; and when 'Mr Smith' was summoned by the messenger to enter and speak concerning some scheme, the name of which was not announced, in rushed several persons, of whom, of course, only one could be the right Mr Smith at that particular moment. One agent arrived while the clock was striking eleven, and was admitted. Soon afterwards, a carriage with reeking horses drove up; three agents rushed out, and finding the door closed, rang furiously at the bell; no sooner did a policeman open the door to say that the time was past, than the agents threw their bundles of plans and sections through the half-opened door into the hall; but this was not permitted, and the policeman threw the documents out into the street. The baffled agents were nearly maddened with vexation; for they had arrived in London from Harwich in good time, but had been driven about Pimlico, hither and thither, by a post-boy who did not, or would not, know the way to the office of the Board of Trade.

The Times newspaper, in the same month, devoted three whole pages to an elaborate analysis, by Mr Spackman; of the affair, and brought forward in 1846. They were no less than 620 in number, involving an (hypothetical) expenditure of 560 millions sterling; besides 643 other schemes which had not gone further than issuing prospectuses. More than 500 of the schemes went through all the stages necessary for being brought before parliament; and 273 of these became acts of parliament in 1846. The wonder is, that so many of those who had afterwards to find the money to fulfil the engagements into which they had so rashly entered.
And after him came next the chill December;
Yet he through merry feasting which he made,
And great bonfires, did not the cold remember;
His Saviour's birth his mind so much did glad.
Upon a shaggy-bearded goat he rode,
The same wherewith Dan Jove on tender yeares,
They say, was nourished by th' Idea's mayd;
And in his hand a broad deepes bowle he beares,
Of which he freely drinks an health to all his peers.

SPENSER.

(DESCRIPTIVE.)

DECEMBER

December has now come,
and brought with him the shortest day and longest night: he turns the mist-like rain into ice with the breath of his nostrils; and with cold that pierces to the very bones, drives the shivering and houseless beggar to seek shelter in the deserted shed. He gives a chilly blue steel-like colour to the shrivelled heps and haws, and causes the half-starved fieldfares to huddle together in the naked hedge for warmth; while the owl, rolling himself up like a ball in his feathers, creeps as far as he can into the old hollow tree, to get out of the way of the cold. Even the houses, with their frosted windows, have now a wintery look; and the iron knocker of the door, covered with hoary rime, seems to cut the fingers like a knife when it is touched. The only cheering sight we see as we pass through a village, is the fire in the blacksmith's forge, and boys sliding—as they break the frosty air with merry shouts—on the large pond with its screen of pollard willows, broken now and
then by the report of the sportsman’s gun, and the puff of smoke which we see for a few moments floating on the air like a white cloud in the distant valley. We see the footprints of the little robin in the snow, and where it lies deep, the long-eared hare betrays her hiding-place by the deep indenta-
tions she makes in the feathered flakes. The unfrozen mire looks black through the snow that lies around it, while the flag-like sedges that stand upright appear like sharp sword-blades frosted with silver. The trees mirrored deep down seem as if reflected on polished ebony, until we draw nearer and look at the cold grey sky, that appears to lie countless fathoms below. When the wind shakes the frosted rushes and the bending water-
flags, they seem to talk to one another in hoarse husky whispers, as if they had lost their voices through standing so long in the cold by the water-
courses, and forgotten the low murmuring they gave utterance to in summer. We pity the few sheep that are still left in the fields, burrowing for the cold turns up under the snow, and almost wish their owners had to procure their own food in the same way, and the frost be blown out of the thornbushes. The falling snow from some overladen branch, under which we are passing, makes us shake our heads as we feel it thawing about the neck. Now the mole is compelled to work his way deeper underground in search of food, as the worms he feeds upon are only to be found beyond the reach of the frost, below which he must penetrate or starve, for his summer hunting-grounds are now tenanted. During a severe frost, myriads of fish perish for want of air in our ponds and rivers, and those who value their stock will not neglect to make holes through the ice, and throw food into the water, for unless this is done, they will devour one another. Cattle also gather about their usual drinking-place, and wait patiently until the ice is broken for them. That lively little fellow, the water-wagtail—the smallest of our birds that walk—may now be seen pecking about the spots of ground that are unfrozen in moist places, though what he finds to feed upon there, unless it be loosened bits of grit and gravel, is difficult to ascertain. Many a shy bird, but seldom seen at any other season, now draws near to our habitations in search of food; and sometimes, when entering an outhouse, we are startled by the rush of wings, as the pretty intruder escapes by the open doorway we are entering. The black-bird dashes out of the shed as the farmer’s boy enters to fodder the cattle, frightening him for the moment, so unexpected and sudden is the rush; for cattle must now be attended to early and late, and the farmer finds plenty to do, although there is but little labour going on in the fields. Sometimes he has to hurry out of doors, while Reynard is out feasting to prevent him from running in when he is hunted. Poor old fellow! we have often felt sorry for him, as we have passed him on a cold winter’s night, with his lantern and spade, making the best of his way to some fox’s burrow, to block up the entrance, and have often wondered what the fox thinks when he returns home, and finds the doorway filled in with thorns and furze, over which the earth is shovelled. Though a thief, he is a beautifully formed animal, and I like to see him trailing his long bush through the snow cold to hear his feet stirring the fallen leaves as he steals through the wood.

How few and apt are the words Shakspeare has used to paint a perfect picture of winter in Lover's Labour’s Lost! He begins by describing the icicles hanging down the wall, and Dick the shepherd blowing his nails to warm them, with the same breath that he blows into his pokers to cool it. Next he tells us how Tom drags huge logs to the great hall-fire, which he would rear on the andirons, for grates and coal were not in use in Shakspeare’s time; then follows Marian with her red, raw nose, the milk frozen in the pail she carries, pitying the poor birds she saw outside shivering in the snow. Neither do matters mend at church, where there is such a noise of coughing and sneezing we must drown the threnody of the birds in answering to another, as if the congregation were playing at catching colds instead of balls, for as soon as one has ceased to cough, it is taken up by another, until it goes the whole round of the church. Outside, at night, the owl keeps crying, “To-whit, too-who,” hidden, perhaps, among the ivy of centuries, which has overgrown the picturesque and ornamented gable. Every line here of the great poet is a picture of winter, though only painted in words; and so distinct is each outline, that any artist, with a poetical eye, might transfer every figure, with such action as Shakspeare has given to each, to canvas. Now is the time to sit by the hearth and peruse his immortal works; and few, we think, will read a page attentively without discovering something new—some thought that assumes a fresh form, or presents itself to the mind in a new light. For out-of-door pleasure, at times, is not to be found, as the days are short, cold, comfortless, and almost dark; lanes, fields, and woods naked, silent, and desolate; while the dull gray sky seems, at times, as if sheathed with lead. What a brave heart the pretty robin must have to sing at such a season! and if anything can tempt us out of doors, it is a hope that we may hear his cheerful song.

Beside the song of the robin, the green ivy gives a life to the nakedness, especially when we see it clambering up a gigantic tree, whose branches are balled. In summer we could not see it for the intervening foliage, though it was then green with young leaves. We love to see it rumpling about our grey old churches, and old English manor-houses; sometimes clinging to the side of the tower of the one, and burrying under its close-clinging stems the twisted chimneys of the other, forming a warm shelter for the little wrens and titmice from the biting frosts and cutting winds of winter. Then there are the bright holly-bushes, with their rich clusters of crimson berries, which throw quite a cheerful warmth around the places in which they grow, and recall pleasant visions of the coming Christmas, and the happy faces they will flash upon when reflecting the sunny blaze from the snug warm hearth. Here and there, though never very common, we see the mirth-making
We often wonder how, during a long and severe frost, the birds contrive to live. That many perish through cold and want of food, is well known through the number that are picked up dead and frozen, though a greater number are eaten by the animals that prey upon everything they can find. Many pick up insects in a dormant state from out the stems of decayed trees, old walls, and the thatched roofs of cottages and out-houses, and they also range among full vehicles when it did not stick fast of which being dead, form a warm shelter for such insects as the gnats, which may be seen out in every gleam of sunshine; for there are numbers of birds that never approach the habitation of man, no matter how severe the winter may be. But most mysterious of all is the manner the waterfowl manage to subsist, when every stream, lake, and river is frozen, which has happened at times, and lasted for several weeks. It is very possible that they then leave our inland waters, and have recourse to the sea, though many naturalists have come to the conclusion that they then return to the countries from whence they came. There is but little doubt that birds feed on many things we are ignorant of. We have startled them, many a time, from some spot where they were pecking at something as fast as little birds could peck down; but even with the aid of a powerful magnifying-glass, we were unable to discover anything but small grit, sand, and portions of fine gravel on the spot. Wood-pigeons, we know well, eat the eyeseeds out of the tops of turnips, and devour the tenderest portion of winter-greens. Larks and other birds find a living in the autumn-sown cornfields, and make sad havoc among the seedling corn. Other birds tear the thatch off corn-stocks, and eat until they are hardly able to fly. Country lads know that there is good shooting to be found in places like these. Nor does the farmer care so much about what they devour, as the injury they cause to what is left; for where the thatch is off, the rain penetrates, and runs down to the very lowest leaves in the rick, which, after getting wet, soon become black and rotten. One thing we must consider, birds require less food during these short, dark days than they do at any other season of the year, as they are asleep more than double the time they pass in slumber in summer, nor when awake do they exert themselves so much on the wing as during the long days.

How dreary must have been the winters through which our forefathers passed, no further back even than a century ago! But few of our towns were then lighted at night; here and there an oil-lamp flickered, which the wind soon blew out; and these cast such a dull light, and were so far apart, that few old people ventured through the streets on dark nights without carrying lanterns in their hands. Those who could afford it, followed their servants, who were the lantern-bearers. Then the roads were almost impassable in winter, and a few may still be found in the remote corners of England, bad enough, to tell what the generality of highways were in those old days. Coaches were almost unknown, and unless people rode on horseback, there was only the slow-paced stage-wagon, which even a cripple might pass on the road; for the great timbered tilted vehicles, with their eight or ten men, seldom crept along at the rate of more than two miles an hour. All the miles of villages and roads that
THE BOOK OF DAYS.

WENT STRETCHING AWAY FROM THE little town, were in darkness; for when the last dim lamp was left behind at the town-end, no more light was to be seen, unless from the window of some solitary farmhouse, where they had not retired to rest, until you reached your own home in the far-away hamlet; and fortunate you were if you did not lose your shoes in the knee-deep muddy roads. Men have been known, in those old winters, to stick in the mud, that ran through clay lands, where they were sometimes found dead, or if they survived, were unable to move when pulled out in the following morning, until warmth was restored to the system. On lonesome moors, wide unclosed commons, and hedgeless heaths, wayfarers, unable to travel along the deep-rutted and muddy roads, lost their way, trying to find a firmer footing elsewhere, and wandered about until the old gray dawn of winter broke, fortunate if in the night they stumbled upon some dilapidated field-shed or sheepfold. Goods were carried from one town to another on the backs of packhorses; and the mounted traveller who had to journey far, carried all his necessaries in his saddle-bags, considering himself very fortunate if he had not to give them up, with all his money, to some daring highway robber that then took them by thescalps, and made them pay for it demanding without ceremony. "Your money, or your life!" Any one glancing over the files of county newspapers that appeared about a century ago, would be startled to read of the number of highway robberies that then took place, and the many wayfarers that perished through cold on the roads during those old hard winters. We, who travel by rail, and live in towns lighted by gas, are not subject to these calamities. We have, in our day, seen men compelled to cross the wide fens and marshes when snow has fallen after a hard frost, and it was impossible to tell where the water-courses lay in places that drained these wide low-lying lands, as all appeared alike a level waste buried under a white snowy pall. For safety they bestrode long leaping-poles, which they used for cloaks in such weather, or sometimes in throwing themselves across the trenches, so that if the ice broke with them, they were seldom immersed above the legs. And across those long, wide, white windy marshes, where there was neither hoof, wheel, nor footmark to guide them, would these hardy men travel on their errands, with nothing to guide them but some bush or embankment or taller tuft of sedge, whose forms were so altered by the fallen snow, that they went along in doubt as to whether they were the same landmarks they were accustomed to trust to. And sometimes they fell into deep hollows, where the snow drifted over them in the night, and were not found again for weeks after they were lost, when their bodies were borne back for burial. From some of these old newspapers now before us, describing the wayfarers hundreds of years ago in this country, we find such passages as the following: "The frost was so severe, the street-lamps could not be lighted on account of the oil being frozen; many people were found frozen to death in the fields and roads, and thousands of birds were picked up dead."

"So severe was the weather, that only eight or nine people came from the country on market-day; none of the carriers arrived, nor any sheep or cattle; the town has been without water three weeks, except what is got through melting down the ice and snow. Many people have been found dead in the stacks and sheds without the town." And during this severe weather, the quartum-loaf was selling for 1s. 4d., and wheat fetching £6 and £7 a quarter, and that was no longer ago than the first year of the present century. Another of these old papers says: "The weather was so severe, and the snow so deep, that the judges were detained on the road, and could not come in time to open the assizes."

Flocks of sheep perished in the snow-drifts during these hard winters, and shepherds who went out to look after them, were sometimes lost, nor were their bodies found until spring came and all the snow had melted away. We were shewn a deep dell in the wild woods, where one of the shepherds was found, after the snow had gone, and all around where he had so long lain dead, there were thousands of primroses in bloom. Even in the present day, when winters are generally milder, we have often with difficulty climbed some hill, that we might look over the snow-clad country at our feet. The cottages in the distance seem half-buried, as if the snow stood as high as the window-sills and reached half up the doorways, and yet so lightly do the flakes lie on one another, that the first gust of wind shakes them loose, and disperses them on the air like full-blown May-blossoms. One might fancy that the long rows of level hedges were thick marble walls, and that the black line far beyond which marks the river, was the deep chasm from which all those miles of upheaving marble has been quarried. We look behind, where hills ascend above hills, with level table-lands between, falling where, for unknown epochs, the ocean spread and sank in desolate silence; and we seem as if looking upon a dead country, from which everything living has long since passed away, and nothing could find sustenance on those cold terraces and bald high uplands of snow, to whose sides the few bare trees that lean over seem to cling in agony, as the wind goes moaning through their naked branches. But, like the blue of heaven seen through the rift of clouds beyond, there is hope before us, for the shortest day is passed, and soon some little hardy flower will be seen here and there, and far across the snow we shall hear the faint bleating of new-born lambs, and the round green daisies will begin to knock under the earth to be let out, and so frighten grim old Winter in his sleep, that he will jump up and run away, looking with averted head over his shoulder, for fear he should be overtaken by Spring.

(HISTORICAL)

December, like the three preceding months, derives its name from the place which it held in the old Roman calendar, where the year was divided, nominally, only into ten months, with
the insertion of supplementary days, to complete
the period required for a revolution of the earth
round the sun. In allusion to the practice of
lighting fires in this month for the purpose of
warmth, and the consequent inconveniences which
resulted, Martial applies to it the epithet of
fumens or smoky. He also characterises it as caesus
or hoary, from the snows which then overspread
the high grounds. By the ancient Saxons, December
was styled Winter-monat or winter month; a term
which, after their conversion to Christianity, was
changed to Helych-monat or holy month from the
anniversary, which occurs in it, of the birth of
Christ. Among the modern Germans, December
is still, from this circumstance, distinguished by
the epithet of Christmonat.

CHARACTERISTICS OF DECEMBER.
On the 22d of December, the sun enters the sign
of Capricornus or the Goat. The idea thus
allegorised by a climbing animal is said to be the
ascent of the sun, which, after reaching its lowest
decimation at the winter-solstice, on the 21st of
this month, recommences its upward path, and
continues to do so from that date till it attains its
highest altitude at the summer-solstice, on the 21st
of June.

The average temperature for the middle of
December, throughout the British Islands, is about
39°. On the 1st of the month, in the latitude of
London, the sun rises at 7.57 and sets at 4.3. As
regards meteorological characteristics, December
bears in its earlier portion a considerable resem-
blance to the preceding month of November. Heavy
falls of snow and hard frosts used to be
of normal occurrence at the season of Christmas,
but in recent years Britain has witnessed such a
cycle of mild winters, that, as a general rule, snow
rarely descends in any quantity before the com-
 mencement of the New Year.

First of December.

St Blights or Roy, bishop of Noyon, confessor, 659.

Born.—Princess Anna Comnena, historian, 1085, Con-
stantinople ; John Keill, mathematician and natural
philosopher, 1671, Edinburgh.

Died.—Henry I. of England, 1189, Rouen ; Pope
Leo X., 1521 ; Sir James Ware, antiquary, 1666, Dublin;
Susanna Centlivre, dramatist, 1723, London ; Alexander L
Emperor of Russia, 1826, Taganrog ; Dr George Birbeck,
promoter of scientific education, 1841, London ; Boeoeser
Eliot, poet (the anti-cornlaw rhymers), 1849, Barnley.

MRS CENTLIVRE.

Literary success presupposes talent and industry,
but dramatic success not only talent and industry,
but patience and tact in dealing with the world.
An author, when he has acquired the confidence
of the publishers, may live quietly at home and
transact his business from his desk ; but a dramatist,
when he has finished his work as a man of letters,
often finds himself at the beginning of his troubles.
He has to adapt his piece to the style and caprice of
the actors, to submit to the excision of what he
considers the finest efforts of his wit and fancy, and
to the insertion of what he thinks clap-trap or
commonplace. Hence, whatever may be thought
of the theatre, the writer of a dozen or two of
successful plays cannot but be regarded with a
certain reverence, as one who has passed through an
 ordeal of which only a character of equal sweetness
and energy is capable.

Of the private life and character of Mrs Centlivre
not much is known ; but in an age when female
authorship was far from being so common as in our
own, she wrote some score of plays, two or three of
which hold their place on the stage to the present
day. With few advantages of education, she
managed to acquire a respectable stock of learning,
to write with sprightliness and ease, and to find
herself a welcome guest wherever literature was
had in honour.

The date and place of her birth are both
unknown. Her father, Mr Freeman, had an
estate at Holbath, Lincolnshire, was a zealous
disserenter and republican, and, after the Restor-
sation, sought refuge from persecution in Ireland.
There, about 1690, it is supposed his daughter
Susannah was born. Whilst she was yet a girl,
she died, leaving her quite destitute. There is a
romantic story, that Susannah set out for London
alone, either to find some friends, or earn a liveli-
hood; and that, when near Cambridge, she was
seen by a young gentleman, who was so charmed
by her loveliness, that he persuaded her to dress as
a boy, and live with him as a fellow-student at the
university. There seems no doubt that, at sixteen,
she was married to a nephew of Sir Stephen Fox,
and that, within a year, she was a widow. Soon after,
Colonel Carrol made her his wife; but ere two years
were out, he was killed in a duel, and thus, before
she was twenty, the beauty was twice widowed.

Very fond of the theatre, she thought she would try
her hand at a tragedy, and was fortunate enough to
have it performed at Drury Lane in 1701, under the
title of The Perfumed Husband. Thus encouraged,
she persevered, but abandoned tragedy for comedy,
finding it the line in which she could excel. At
the same time she procured an engagement as an
actress, but, like Mrs Inchbald at a later date, she
discovered that her pen was a more effective
instrument than her voice and face. Nevertheless,
it was on the stage that she gained her third
husband. She was at Windsor in 1706, performing
as Alexander the Great in Lee’s Rival Queens, when
she won the heart of Joseph Centlivre, Yeoman of
the Mouth, or, in other words, chief cook to Queen
Anne. They were married, and lived happily
together until her death, in 1723, at his house in
Spring Gardens, Charing Cross. She was buried in St. Martin's in the Fields.

Mrs Centlivre was lively if not witty, and, for her good-humour, was loved wherever she was known. The number of her plays was little in it to attract the reader, but her plots are well constructed, the scenes full of action, and her characters natural and well marked. By these qualities they sometimes succeeded in spite of the prognostics of the players. In rehearsal, The Busy Body was decrèed; but it ran for thirteen nights, then thought an extraordinary success, whilst Congreve's Way of the World, sparkling with wit and smartness, was a failure. Mrs Centlivre shares in the sin of her time, in the occasional licentiousness of her dialogue.

During the rehearsal of her Bold Stroke for a Wife, a comedy which, as well as the Busy Body, still appears occasionally on modern play-bills, Wilkes, the actor, declared that not only would it be deëd, but that she would be deëd for writing it. Her Wonder, or a Woman keeps a Secret, if not her best is the most popular of her productions. In it, as Don Felix, Garrick took his farewell in 1776. As became the daughter of a suffering dissenter, Mrs Centlivre was an ardent Whig and advocate of the Hanoverian succession, and unfrequently introduced her politics into her plays.

Pope gave her a line in the Dunce-aid—

'At last Centlivre found her voice to fail'-

for writing a ballad against his Homer before she had read it.

THE YOUNG ROSCIUS.

Precocity of genius, or of ability, has always a certain attraction for the world; partly on account of a kindly feeling towards the young, but principally owing to a love of the marvellous, which leads most of us to run after that which is new and wonderful. If the encouragement thus afforded to precocious boys and girls had the effect of strengthening the powers thus early developed, this would be a great point in its favour; but such is certainly not the case. The youthful prodigy generally becomes, if he or she lives, a very prosy adult. This was illustrated in the instance of The Young Roscius, a boy-actor who made the public almost crazy in the early part of the present century. William Henry West Betty, the boy in question, was born near Shrewsbury in 1791. Almost from a child he evinced a taste for dramatic recitations, which was encouraged by a strong and retentive memory. Having been taken to see Mrs Siddons act, he was so powerfully affected, that he told his father 'he should certainly die if he was not made a player.' He gradually got himself introduced to managers and actors; and at eleven years of age, he learned by heart the parts of Rollo, Young Norval, Osman, and others high in popular favour in those days. On the 16th of August 1803, when under twelve years of age, he made his first public appearance at Royal. The language of her City; and went through the ordeal without mistake or embarrassment. Soon afterwards he undertook the characters of Young Norval and Romeo. His fame having rapidly spread through Ireland, he soon received an offer from the manager of the Dublin theatre. His success there was prodigious, and the manager endeavoured, but in vain, to secure his services for three years. Addresses were presented to the Young Roscius, as he was now called; and pamphlets were written in advocacy of plans for insuring the happiness and completing the education of one who was to be the bright star of the age. He next played nine nights at the small theatre at Cork, whose receipts, averaging only ten pounds on ordinary nights, amounted to a hundred on each evening of Master Betty's performance. In May 1804, the manager of the Glasgow theatre invited the youthful genius to Scotland. When, a little after, Betty went to the sister-city of Edinburgh, one newspaper announced that he 'set the town of Edinburgh in a flame;' and, at a loss apparently how to account for so brilliant a phenomenon, put forth a theory that the boy's 'pleasing movements of perfect and refined nature, had been incorporeal with his frame previous to his birth!' 

Mr Home went to see the character of Young Norval in his own play of Douglas enacted by the prodigy, and is said to have declared: 'This is the first time I ever saw the part played with any ideas of the character. He is a wonderful being!' The manager of the Birmingham playhouse then sent an invitation, and was rewarded with a succession of thirteen closely-packed audiences. Here the Rosciomania, as Lord Byron afterwards called it, appears to have broken out very violently; it affected not only the inhabitants of that town, but all the iron and coal workers of the district between Birmingham and Wolverhampton. In an article in one of the early volumes of the Penny Magazine, descriptive of the South Staffordshire district and its people, it is said: 'One man, more curious or more idle than his fellows, determined to leave his work, and see the prodigy with his own eyes. Having so resolved, he proceeded, although in the middle of the week, to put on a clean shirt and a clean face, and would even have anticipated the Saturday's shaving, but he was preserved from such extravagance by the motive which prevented Mrs Gilpin from allowing the chaise to draw up to her door on the eventful morning of the journey:--

'Last all

Should say that she was proud.'

But, notwithstanding this moderation, he did not pass unobserved. The unwonted hue of the shirt and face were portents not to be disregarded, and he had no sooner taken the road to Birmingham, than he was met by an astonished brother, whose amazement, when at last it found vent in words, produced the following dialogue: "Oi say, sirree, where be'est thee gwain?" "Oi am gwain to Brommum." "What be'est thee gwain there for?" "Oi am gwain to see the Young Roscius." "What?" "Oi tell thee oi'm gwain to see the Young Roscius." "Is it alive?" The 'Young Roscius,' who was certainly 'alive' to a very practical end, then went to Sheffield, and next to Liverpool.

Such was the boy who, on December 1, 1804, made his first bow to London's audience. After a desperate competition between the managers of Drury Lane and Covent Garden theatres, the former succeeded in securing the treasure. The flaming accounts from the country newspapers had driven the Londoners to a high pitch of excitement. The pressure at the theatre was unparalleled. As early as one o'clock in the day, persons began to
take their stations near the doors; and the inhabitants in the neighbouring streets looked out from their upper windows upon the tremendous array of people that assembled by six o'clock. Bow-Stn. and the officers were in great force within the theatre, and foot-guards without, to endeavour to maintain order. At the opening of the door, after many faintheads in the crowd, hundreds were in danger of suffocation from the mad endeavours of those behind them to force themselves forward. Although no places were unlet in the boxes, gentlemen paid box-prices to have a chance of jumping over the fronts of the boxes into the pit; and then others who could not find room for a leap of this sort, fought for standing-places with those who had hired the boxes days or weeks before. In short, it was a frightful scene, which long impressed itself on the memories of those who were present. The play, Browne's Barbarossa, in which the Young Roscius played the part of Selim, was to have been preceded by an address from Mr. Charles Kemble; but as not a word of it could be heard in the tumultuous house, he wisely gave up the attempt. Half the first scene of the play was then gone through; nothing could be heard. Kemble came forward again, but again could not be heard; and the first act of the play proceeded in dumb-show. At length, in the second act, Selim appeared, and the perspiring audience gave up their frantic noise for equally frantic admiration. Accidents as full as the theatre could hold, though without such wild paroxysms, afterwards witnessed his performance of Tancred, Romeo, Frederick, Octavian, Hamlet, Osman, Achmet, Young Norval, and other favourite characters. An arrangement was made by the patrons and managers of the two Theatres Royal, that this golden talisman should be made available for both; and he played at the two theatres on alternate nights—earning about £1000 a week altogether. Young Betty was presented to the king, and noticed by the rest of the royal family and the nobility, as a prodigy. Prose and poetry were put in requisition to celebrate his praise; prints of his person were circulated throughout the kingdom; and even the university of Cambridge was sufficiently hurried away by the tide of the moment, to make the subject of Sir William Browne's prize-medal, Quid nostrer Roscius eget? It was even in public contemplation to erect statues to him; and Opie painted a full-length portrait of him, in which the Young Roscius was represented as having drawn inspiration from the tomb of Shakespeare. But the best proof of the sensation he created is the fact, that the amount which twenty-eight nights of his performances at Drury Lane brought into the house was £17,310, an average of nearly £615 per night. It is supposed that the receipts at Covent Garden were nearly as much, and that thus £30,000 was earned by this boy for the managers in fifty-six performances.

Fortunately for young Betty, his friends took care of his large earnings for him, and made a provision for the future. He soon retired from the stage, and then became a person of no particular note in the world, displaying no more genius or talent than the average of those about him. When he became a man, he appeared on the stage again, but utterly failed; he would not and could not 'draw.' The Young Roscius and Mr. Betty were two entirely different persons in the public estimation.

MR. HEBER'S LIBRARY: BIBLIOMANIAC.

The sale by auction of Mr. Richard Heber's library, the disposal of one department of which commenced on the 1st of December 1834, illustrated in a significant way that exclusive fondness for books which is frequently styled Bibliomania, or book-madness. If the collectors were in the habit of reading the works while the books all would be well; or if, when collected, the books were sold or given in a mass to those who would know how to value them, this again would be well; but the real bibliomaniac collects books merely for the pleasure of collecting, and the collection is generally dispersed after a time. Mr. Heber was a man of great learning, whose knowledge really extended over a vast range of literature; and it is a pity that there is no 'Heber's library' in existence, as a testimony to his taste and knowledge; the library which he formed having shared the usual fate of such ponderous collections. Born in 1773, Mr. Heber (who was half-brother to the celebrated bishop of Calcutta, of the same name) inherited property which permitted him to spend immense sums in the purchase of books, and he received an education which enabled him to appreciate the books when purchased. He formed the habit of making excursions from the family-seats in Yorkshire and Shropshire to London, to attend book-sales; and the first collection which he made, consisted of curious old works relating to early English poets and dramatists. When the termination of the war, in 1815, opened the continent to English travellers, Heber visited France, Belgium, and the Netherlands, making large purchases of books in each country. Again, in 1825, he went abroad, purchasing books everywhere; and at the same time he kept an agent employed in buying largely for him at all the book-sales in England. All the hopes once entertained of him as a public man, or a country gentleman, were disappointed; he cared for nothing but books. Libraries which he possessed in different parts of the country, and booksellers' shops, were almost the only places which had attractions for him. He kept up a correspondence with all the great dealers in old books throughout the kingdom, and had all their catalogues regularly sent to him. On hearing of a curious book, he was known to have put himself into a mail-coach, and travelled three or four hundred miles to obtain it, fearful to intrust his commission to any one else. One of his biographers says: 'He has been known to seriously say to his friends, on their remarking on his many duplicates, 'Why, you see, Sir, no man can do comfortably without three copies of a work. One he must have for a show-copy, and he will probably keep it at his country-house. Another, he will require for his own use and reference; and the third he must send to part with this, which is very inconvenient, or risk the injury of his best copy, he must needs have a third at the service of his friends.' This was a handson speech to address to a borrower; but it cannot be denied that Mr. Heber's duplicates were often purchased, through that passion of collectors which demands not only that an article

645
THE BOOK OF DAYS.

ST FRANCIS XAVIER.

should be possessed, but that it should also be kept from the possession of others. The fact was, that collecting had grown into an uncontrollable habit; and that it was only satisfied in him, as in others, by an almost unlimited indulgence. The desire of possessing duplicates, or (which is the same thing under another name) preventing other collectors obtaining them, was not peculiar to Mr Heber, but was more remarkable in him, because exhibited on a large scale and with ample means.

The taste strengthened as he grew older. Not only was his collection of old English literature unprecedented, but he brought together a larger number of fine copies of Latin, Greek, French, Spanish, Italian, and Portuguese books than had ever been possessed by a private individual. His house at Hodnet, in Shropshire, was nearly all library. His house in Pimlico (where he died in 1833) was filled with books from top to bottom: every chair, table, and passage containing 'piles of erudition.' A house in York Street, Westminster, was similarly filled. He had immense collections of books, in houses rented merely to contain them, at Oxford, Paris, Antwerp, Brussels, and Ghent. When he died, curiosity was naturally excited to know what provision he had made in reference to his innumerable store of books; but when his will was discovered, after a long and almost hopeless search among bills, notes, memoranda, and letters, it was found, to the astonishment of every one on reading it, that the library was not even mentioned. It seemed as if Heber cared nothing what should become of the books, or who should possess them, after his decease; and as he was never married, or influenced greatly by domestic ties, his library was considered by the executors of his will as merely so much 'property,' to be converted into cash by the aid of the auctioneer. What was the number of books possessed by him, or the amount of money paid for them, appears to have been left in much doubt. Some estimated the library at 150,000 volumes, formed at a cost of £100,000; others reckoned it at 300,000, volupario, at an aggregate value of £250,000. The truth was, his executors did not know in how many foreign towns his collections of books were placed. Thus it could not accurately be ascertained what portion of the whole was sold by auction in London in 1834–6; but the mere catalogue of that portion fills considerably more than two thousand printed octavo pages. The sales were conducted by Mr Evans, Messrs Sotheby, and other book-auctioneers, and occupied two hundred and two days, extending through a period of upwards of two years from April 10, 1834, to July 9, 1836. One copy of the catalogue has been preserved, with marginal manuscript notes relating to almost every lot; and from this a summary of very curious information is deducible. It appears that, whatever may have been the number of volumes sold by auction, or otherwise got rid of abroad, those sold at this series of auctions in London alone were 117,613 in number, grouped into 52,672 lots. As regards the ratio borne by the prices obtained, to those which Mr Heber had paid for the books in question, the account as rendered showed that the auctioneer's hammer brought £56,776 for that which had cost £27,214. He would, therefore, that the losses accruing to Mr Heber's estate through his passion for book-collecting, amounted to upwards of £20,000, and this irrespective of the fate, whatever it may have been, of the continental libraries. We can hardly come to any other conclusion, than that Mr Heber's life was nearly a useless one—performing unnecessary work, which was undone soon after his death.

DECEMBER 2.

St Bibiana, virgin and martyr, 363.

Born.—Francis Xavier Quadrio, learned Jesuit, and historical writer, 1669, Vaticano; Rose Gally Knight, illustrator of architectural antiquities, 1768.

Died.—Hernan Cortes, conqueror of Mexico, 1547, near Seville; Margaret of Navarre, grandmother of Henri IV., 1649; St Francis Xavier, Catholic missionary, 1552, China; Gerard Mercator (Krausmam), geographer, 1604, Doornberg; Philip, Duke of Orleans, Regent of France, 1723; Amelia Opis, novelist, 1858, Norwich.

ST FRANCIS XAVIER.

St Francis Xavier was born on the 7th of April 1506, in a castle at the base of the Spanish side of the Pyrenees, not far from which his future comrade and director, Ignatius Loyola, was then living, a gay youth of fifteen. Xavier was sent to the university of Paris, and there shared a room with Peter Faber, a Savoyard, to whom he became tenderly attached. In 1528, Loyola arrived at their college, a middle-aged man, meanly clad, worn with austerities, and burning with zeal. Loyola made friends with Faber, but Xavier could not endure him, and repulsed his approaches. Loyola, discerning a desirable spirit in Xavier, nevertheless persevered. One day Xavier had been lecturing on philosophy, and having met with much applause, was walking about in a high state of elation, when Loyola whispered in his ear: 'What shall it profit a man if he gain the whole world and lose his own soul?' The question startled Xavier, and changed the current of his feelings towards Loyola. He associated with him and Faber in study and devotion. Three other students joined them—Laines, Bobadilla, and Rodriguez—and on the 16th of August 1534, the six met in a subterranean chapel of the church of Montmartre, and took vows of perpetual celibacy, poverty, and labour for the conversion of infidels. Such was the humble beginning of the Society of Jesuits. They resolved to place their lives at the service of the pope, and when preaching at Rome, in 1540, Xavier was chosen to go as a missionary to India. With joy he started, and on his way to Lisbon came within a few miles of his birthplace, and was pressed to turn aside and bid his mother farewell. He refused, lest his ardour should suffer loss in the regrets of filial affection. A voyage to India was a tedious enterprise in the sixteenth century. He sailed from Lisbon on the 7th of April 1541, wintered in Africa on the coast of Mozambique, and his ship did not reach Goa until the 8th of May 1542. The Portuguese of Goa, he found, were leading worse lives than the heathen, except that they did not worship idols, and their conversion was his first business. He learned the language of Malabar, and went preaching among the pearl-
fishers; and entering the kingdom of Travancore, he met with such success, that he reported baptizing 10,000 Indians in a month. At Malacca, then a great centre of trade, he met three Jesuits, whom Loyola had sent to his aid, and with them made a tour through the Moluccas. At Malacca, he had met a Japanese, whose account of his strange and populous country had decided Xavier to visit it. He picked up as much of the language as he could, and in two years travelled through the islands, making a host of converts. His mission was continued with great vigour by the Jesuits for nearly a century, when, for some cause or other, the government took fright, massacred the Christians, foreign and native, and sealed Japan against Europeans until our own day. He next determined to plant his faith in China, but the Portuguese merchants pleaded with him not to make the attempt, as he would assuredly be the cause of their utter destruction. Xavier was not to be moved by such alarms, and persuaded a Chinaman to run him ashore by night near Canton. This plan the Portuguese frustrated, and in the midst of his disappointment, on the barren island of Sancian, within sight of the desired Chinese mainland, he took fever, and died on the 3d of December 1553, aged only forty-seven, and in the twelfth year of his Asiatic ministry. His body was carried to Goa, and his shrine is to Catholics the holiest place in the Far East. In 1663, he was canonized, and by a papal brief in 1747, was pronounced the patron-saint of the East Indies. His festival is observed on the 3d of December.

Of Xavier in Asia, as told by Catholics, is a long record of miracle on miracle; and by his miracles they account for the otherwise incredible statements regarding his success as a propagandist.

MECHANICS’ INSTITUTIONS.

On the 3d December 1834, an institution was opened in London concerning which very warm anticipations were entertained, but which has not fully borne the fruit hoped for. After one or two minor attempts in various towns, it was resolved to establish a place in the metropolis, where workmen could acquire a knowledge of science, and of the principles of those arts on which they were daily employed. Scarcely any books on such matters were then accessible to persons of limited means, and popular lectures were nearly unknown. Many men in high places dreaded such innovations; insomuch that one declared, that ‘science and learning, if universally diffused, would speedily overturn the best-constituted government on earth.’ It is to the credit of Scotland that she took the lead of England in this matter. The Andersonian Institution at Glasgow had a mechanics’ class, at which the late benevolent Dr Birkbeck lectured to large audiences on various subjects connected with the occupations of working-men; and the School of Arts at Edinburgh, under the auspices of Mr Leonard Horner and other enlightened men, furnished similar instruction, though to smaller audiences. In October 1832, proposals were put forth for establishing a Mechanics’ Institution in London; and in the following month a public meeting on the subject was held at the Crown and Anchor Tavern. The object was declared to be the instruction of mechanics at a cheap rate in the principles of the art they practise, as well as in all other branches of useful knowledge; and the means for obtaining this object were lectureships on the different arts and sciences, a library of reference and circulation, a reading-room, a museum of models, a school of design, an experimental workshop and laboratory, and a supply of instruments and apparatus. Mr (afterwards Lord) Brougham, in an address to the meeting, as chairman, said: ‘The plan will prosper in exact proportion to the interest which the mechanics themselves take in its detail. It is for their benefit, and ought to be left in their hands as soon as possible after it is begun.’ And Mr Cobbett supported this view by saying: ‘If they—the working-men—allowed other management to interfere, men would soon be found who would put the mechanics on one side and make use of them only as tools.’ The scheme having been favourably received, the London Mechanics’ Institution was formed, and was opened on the day above named. Men of great attainments offered their services as lecturers, and the lecture-hall frequently contained a thousand persons, listening with the greatest attention to discourses on astronomy, experimental philosophy and chemistry, physics, mathematics, the beginning of art, &c. Many persons, who afterwards attained to more or less distinguished position in society, owed their first knowledge of the principles of science to the London Mechanics’ Institution. The novelty and the success of the enterprise were so great, that similar institutions sprang up rapidly in various parts of the kingdom. At a public meeting in London, in July 1834, Mr Brougham said: ‘Scarce three days ever elapse without my receiving a communication of the establishment of some new Mechanics’ Institution. At the beginning of May last, I made a calculation that since the preceding July I had received accounts of no less than thirty-three being established.’ They extended far and wide, until at length there were at the very least four hundred such institutions in Great Britain. It will not be within the province of this work to investigate fully the question why Mechanics’ Institutions have comparatively failed; why, when the first enthusiasm had worked off, they failed to realise the expectations of their founders; a few words, nevertheless, may be said on the subject. Of the fact itself, there can be little doubt.” In large towns, a careful observer remarks, ‘they [Mechanics’ institutions] have usually sprung from the exertions and wishes, not so much of the working-classes, as of the more wealthy. The energy and enthusiasm that originated them carried them on for a time; but as the novelty wore off, the members and revenue decreased, modifications of plan had to be adopted, new features introduced, and radical changes made. If these proved acceptable to the public, the institution flourished; if not, it decayed. If the original idea of giving scientific education only were strictly carried out, the number of members was small; while if amusement took the place of study, the institution lived in jeopardy, from the fickle and changing taste for amusement on the part of the public. But why have mechanics shewn themselves, except in a few special instances, unwilling to give to these institutions such a measure of support as would enable them to their profitable working? The reasons assigned
are many. In some places where blockings have existed between employers and employed on the subject of wages, and where the employers have lent aid towards establishing Mechanics' Institutions, the men have persuaded themselves that there is some secret design lurking underneath, and have suspiciously held aloof. Then, as to natural bias, most working-men shew a stronger taste for social and political subjects than for scientific and educational questions; they would rather attend a political meeting than a scientific lecture; rather read a party-newspaper than a dispassionate book; rather invest a little money in a benefit society or a building club, than in an institution for mental improvement; and although it may be a wise rule to exclude politics and theology, many men find such topics more exciting and attractive than science or education. Next, a very large class of workmen consists of persons who really do not care at all for such subjects as those last named; when their work is done, theatres, public-houses, music-halls, smoking-rooms, &c., are their regular places of resort; and they would deem it almost as strange to go to a scientific lecture as to church on a week-day evening. The quarterly payments for Mechanics' halls andlaria are a charge which few persons of the comparative failure; for a workman who receives weekly wages would more readily pay a subscription weekly, than save up for thirteen weeks in order to pay in one sum. Uncertainty of employment is another unfavourable circumstance; if a workman is out of employ when his subscription becomes due, the Mechanics' Institute is one of the first things he would give up. When the subscription is made small enough to attract numerous members, it is often too small to carry on the institute efficiently, and the instruction degenerates both in quantity and quality. One more circumstance must be noticed—unless working-men subscribe in sufficient number to form a majority, they cannot retain the management in their own hands; and unless they do, it ceases to be suitable to the wants and wishes of their class; and thus they have a further excuse for staying away.

Some among the above causes have rendered the London Mechanics' Institution, and most others of its kind, less successful than the early promoters had anticipated.

DECEMBER 3.

Born.—Luigi Pulci, Italian poet, 1431, Florence; John Gruter, eminent scholar and critic, 1660, Amsterdam; Matthew Wren, bishop of Ely, 1885, London; Samuel Crompton, inventor of the mule for spinning cotton, 1758, Firwood, near Bolton; Robert Bloomfield, poet, 1756, Hemington, Suffolk.

Died.—Alexander Farnese, Duke of Parma, distinguished commander, 1692; Giovanni Belzoni, explorer of Egyptian antiquities, 1823, Qato, in Guinea; John Flaxman, sculptor, 1826, London; Frederick VI., king of Denmark, 1839; Robert Montgomery, poet, 1825, Brighton; Christian Schanz, sculptor, 1827, Dresden. 648.

Samuel Crompton.

Musins, until near the close of last century, were all imported from India. English spinners were unable to produce yarn fine enough for the manufacture of such delicate fabrics. Arkwright had invented spinning by rollers, and Hargreaves the spinning-jenny; when, in 1778, Crompton succeeded in combining both inventions in his mule. He thereby enabled spinners to draw out long threads, in large numbers, to more than Hindu tenuity, and helped Lancashire effectually to her high and lucrative office of cotton-spinner-in-chief to the world.

Samuel Crompton was born on the 3d of December 1753, at Firwood, near Bolton. His father was a farmer, and the household, after the custom of Lancashire in those days, employed their leisure in carding, spinning, and weaving. While Samuel was a child, his father died. Shortly before his death, he had removed to a portion of an ancient mansion called Hall-in-the-Wood, about a mile from Bolton. It was a large rambling building, built in different styles and at different periods, and full of rooms, large and small, connected by latticed staircases. The romance and appearance of Hall-in-the-Wood has made it a favourite subject with artists, and it has been painted and engraved again and again. Seldom has a mechanical invention had a more romantic birthplace.

Widow Crompton was a strong-minded woman, and carried on her husband's business with energy and thrift. She was noted for her excellent butter, honey, and elder-berry wine. So high was her repute for management, that she was elected an overseer of the poor. Her boy Samuel she ruled straitly. He used to tell that she beat him occasionally, not for any fault, but because she so loved him. He received an ordinary education at a Bolton day-school, and when about sixteen, his mother set him to earn his living by spinning at home, and she exacted from him a certain amount of work daily. His youth at Hall-in-the-Wood was passed in comparative seclusion. All day he was alone at work, his mother doing the bargaining and fighting with the outer world. He was very fond of music, and managed to construct a violin, on which he learned to play with proficiency. His evenings he spent at a night-school in the study of mathematics. A virtuous, reserved, and industrious youth was Crompton's.

At Hall-in-the-Wood lived his uncle, Alexander Crompton, a remarkable character. He was so lame that he could not leave the room in which he slept and worked. On his loom he wove fustians, by which he earned a comfortable living. Like the rest of the family, his piety was somewhat austere; and as he was unable to go to church, he was accustomed on Sundays, as soon as he heard the bells ringing, to put off his working-cost and put on his best. This done, he slowly read from the prayer-book the whole of the morning-service and a sermon, concluding about the same time as the church was coming out, when his good coat was laid aside, and the old one put on. In the evening, the same solitary solemnity was gone through.

With one of Hargreaves's jennies, Crompton...
span. The yarn was soft, and was constantly breaking; and if the full quantity of allotted work was not done, Mrs Crompton scolded, and the time lost in joining broken threads kept the gentle spinner from his books and his darling fiddle. Much annoyance of this kind drove his ingenuity into the contrivance of some improvements.

Five years—from his twenty-first year, in 1774, to his twenty-sixth in 1779—were spent in the construction of his first mule. My mind had been made up on the subject from the outset, and the continual endeavour to realise a more perfect principle of spinning; and though often baffled, I as often renewed the attempt, and at length succeeded to my utmost desire, at the expense of every shilling I had in the world.' He was, of course, only able to work at the mule in the leisure left after each day's task of spinning, and often in hours stolen from sleep. The purchase of tools and materials absorbed all his spare cash; and when the Bolton theatre was open, he was glad to earn eighteen pence a night by playing the violin in the orchestra. The first mule was made, for the most part, of wood, and to a small roadside smithy he used to resort, 'to file his bits o' things.'

Crompton proceeded very silently with his invention, not only at Hall-in-the-Wood, where Hall-in-the-Wood knew little of what he was about, until his lights and noise, while at work in the night-time, excited their curiosity. Besides, inventors of machinery stood in great danger from popular indignation. The Blackburn spinners and weavers had driven Hargreaves from his home, and destroyed every jenny of more than twenty spindles for miles round. When this storm was raging, Crompton took his mule to pieces, and hid the various parts in a loft or garret near the clock in the old Hall. Meanwhile, he created much surprise in the market by the production of yarn, which, alike in fineness and firmness, surpassed any that had ever been seen. It immediately became the universal question in the trade, How does Crompton make that yarn? It was at once perceived that the greatly-desired machinery, through all the way from the East Indies, might be wrenched at home, if only such yarn could be had in abundance.

At this time Crompton married, and commenced housekeeping in a cottage near the Hall, but still retained his work-room in the old place. His wife was a first-rate spinner, and her expertness, it is said, first drew his attention to her. Orders for his fine yarn, at his own prices, poured in upon him; and though he and his young wife span their hardest, they were quite unable to meet a hundredth part of the demand. Hall-in-the-Wood became besieged with manufacturers praying for supplies of the precious yarn, and burning with desire to penetrate the secret of its production. All kinds of stratagems were practised to obtain admission to the house. Some climbed up to the windows of the work-room, and peeped in. Crompton set up a screen to hide himself, but even that was not sufficient. One inquisitive adventurer is said to have hid himself for some days in the loft, and to have watched Crompton at work through a gimlet hole in the ceiling.

If Crompton had only possessed a mere trifle of worldly experience, there is no reason why, at this invention, he might not have made his fortune. Unhappily his seclusion and soft disposition placed him as a babe at the mercy of sharp and crafty traders. He discovered he could not keep his secret. 'A man,' he wrote, 'has a very insecure tenure of a property which another can carry away with his eyes. A few months reduced me to the cruel necessity either of destroying my machine altogether, or giving it to the public. To destroy it, I could not think of; to give up that for which I had laboured so long, was cruel. I had no patent, nor the means of purchasing one. In preference to destroying it, I was better off in the public.'

Many, perhaps the majority of inventors, have lacked the means to purchase a patent, but have, after due inquiry, usually found some capitalist willing to provide the requisite funds. There seems no reason to doubt that had Crompton had the sense to bestir himself, he could easily have found a friend to assist him in securing a patent for the mule, or the Hall-in-the-Wood-Wheel, as the people at first called it.

He says he 'gave the mule to the public;' and virtually he did, but in such a way that he gained no credit for his generosity, and was put to inexpressible pain by the greed and meanness of those with whom he dealt. Persuaded to give up his secret, the following document was drawn up:

'We, whose names are hereunto subscribed, have agreed to give, and do hereby promise to pay unto, Samuel Crompton, at the Hall-in-the-Wood, near Bolton, the several sums opposite our names, as a reward for his improvement in spinning. Several of the principal tradesmen in Manchester, Bolton, &c., having seen his new machine, approve of it, and are of opinion that it would be of the greatest public utility to make it generally known, to which end a contribution is desired from every well-wisher of trade.'

To this were appended fifty-five subscribers of one guinea each, twenty-seven of half a guinea, one of five shillings and sixpence, and one of five shillings and sixpence—making, together, the munificent sum of £57, 6s. 6d., or less than the cost of one of these model-mules which Crompton supplied to the subscribers! Never, certainly, was so much got for so little. The merciful transaction receives its last touch of infamy, from the fact recorded by Crompton in these words:—'Many subscribers would not pay the sums they had set opposite their names. When I applied for them, I got nothing but abusive language to drive me from them, which was easily done; for I never till then could think it possible that any man could pretend one thing and act the direct opposite. I then found it was possible, having had proof positive.'

Deprived of his reward, Crompton devoted himself steadily to business. He removed to Oldham, a retired place, two miles to the north of Bolton, where he farmed several acres, kept three or four cows, and spun in the upper story of his house. His yarn was the best and finest in the market, and brought the highest prices; and, as a consequence, he was plagued with visitors, who came prying about under the idea that he had effected some improvement in his invention. His servants were continually bribed away from him, in the hope that they might be able to reveal something that was worth knowing. Sir Robert Peel (the first baronet) visited him at Oldham, and offered him a situation, with a large salary, and the prospect of a partnership; but Crompton had a morbid dislike to Peel,
and he declined the overtures, which might have led to his lasting comfort and prosperity.

In order to provide for his increasing family, he moved into Bolton in 1791, and enlarged his spinning operations. In 1800, some gentlemen in Manchester commenced a subscription on his behalf, but, what with the French war, the failure of crops, and suffering commerce, their kindly effort stuck fast between four and five hundred pounds. The amount collected was handed over to Crompton, who sunk it in the extension of his business.

Aided by the mule, the cotton manufacture prodigiously developed itself; but thirty years elapsed ere any serious attempt was made to recompense the ingenuity and perseverance to which the increase was owing. At last, in 1812, it was resolved to bring Crompton's claims before parliament. It was proved that 4,000,000 spindles were at work on his mules, using up 40,000,000 lbs. of cotton annually; that 70,000 persons were engaged in spinning, and 150,000 more in weaving the yarn so spun; and that a population of full half a million derived their daily bread from the machinery his skill had devised. The case was clear, and Mr. Perceval, the chancellor of the exchequer, was made a handsomely paid officer, when Crompton's usual ill-luck intervened in a most shocking manner. It was the afternoon of the 11th of May 1812, and Crompton was standing in the lobby of the House of Commons conversing with Sir Robert Peel and Mr. Blackburne, when one of them observed: 'Here comes Mr. Perceval.' The group was instantly joined by the chancellor of the exchequer, who addressed them with the remark: 'You will be glad to know that I mean to propose £20,000 for Crompton; do you think it will be satisfactory?' Hearing this, Crompton moved off from motives of delicacy, and did not hear the reply. He was scarcely out of sight when the madman Bellingham came up, and shot Perceval dead. This frightful catastrophe lost Crompton £15,000. Six weeks intervened before his case could be brought before parliament; and then, on the 24th June, Lord Stanley moved that he should be awarded £5000, which the House voted without opposition. Twenty thousand pounds might have been had as easily, and no reason appears to have been given for the reduction of Mr. Perceval's proposal. All conversant with Crompton's merits felt the grant inadequate, whether measured by the intrinsic value of his service, or by the rate of rewards accorded by parliament to other inventors.

With the £5000 Crompton entered into various manufacturing speculations with his sons; but none turned out well, and as he advanced in years some of his friends found it necessary to subscribe, and purchase him an annuity of £63. A second application to parliament on his behalf was instituted, but it came to nothing. Worn out with cares and disappointments, Crompton died at his house in King Street, Bolton, on the 26th of June 1827, at the age of seventy-four.

The unhappiness of Crompton's life sprang from the absence of those faculties which enable a man to hold equal intercourse with his fellows. 'I found to my sorrow,' he writes, 'that I was not calculated to contend in the world; neither did I know there was such a thing as protection for me on earth!' When he attended the Manchester Exchange to sell his yorns or mualins, and any rough-and-ready manufacturer ventured to offer him a less price than he had asked, he would invariably wrap up his samples, put them into his pocket, and quietly walk off. During a visit to Glasgow, the manufacturers invited him to a public dinner; but he was unable to muster courage to go through the ordeal, and, to use his own words, 'rather than face up, I first hid myself, and then fairly bolted from the city.' One day a foreign count called on him at Bolton. Crompton sent a message that he was in bed, and could not be seen. A friend, who accompanied the count, thereon ran up stairs, and proposed to Crompton that they should pay their visit in the bedroom; but he would not be prevailed on, and vowed that if the count was brought up, he would hide under the bed! His excessive pride made him extremely sensitive to the very appearance of favour or patronage. To ask what was due to him always cost him acute pain. When in London, in 1812, prosecuting his claims, he wrote to Mr. Giddy, one of his most steadfast supporters in parliament, 'Be assured, sir, there will be no difficulty in getting rid of me. The only anxiety I now feel is, that parliament may not dishonour themselves. Mr. Perceval they cannot dishonour, but they may dishonour me. I conceived it to be the greatest honour I can confer on them, to afford them an opportunity of doing me and themselves justice. I am certain my friends and family would be ashamed of me, were I to consider myself come here a begging, or on the contrary demanding. I only request that the case may have a fair and candid hearing, and be dealt with according to its merits.'

Crompton's habits were simple and frugal in the extreme, and by his industry he readily procured every comfort he cared to possess. Well would it have been for him when he lost the ownership of his invention, if he had been able to sweep every expectation connected with it into oblivion. The operation of these hopes were even less mischievous on him than on his sons and daughters, who unhappily were, and then are, the loss of their mother's good sense in their childhood. Before their eyes was continually dangling the possibility of their father being raised to affluence; and when poor Crompton came back to Bolton with £5000 instead of a great fortune, he heard the bitterest reproaches in his own household. His family he loved very tenderly, and we can fairly imagine that he was grieved by desire to satisfy them, that he spent five weary months in London in 1812, dancing attendance on members of parliament.

Crompton has been described by those who knew him in the strength and beauty of manhood, as a singularly handsome and prepossessing man; all his limbs, and particularly his hands, were elegantly formed, and possessed great muscular power. He could easily lift a sack of flour by the head, tail, and pitch it over the side of a cart. His manners and motions were at all times guided by a natural politeness and grace, as far from servility as rudeness. His portrait displays a beautiful face and head, in which none can fail to discern a philosopher and gentleman.

Crompton's memory, until lately, has been strangely neglected. In 1848, Mr. Gilbert J. French, of Bolton, published an excellent biography of his townsmen, from which work our facts have been drawn. A statue of Crompton, in bronze, by
Mr W. Calder Marshall, was erected in the marketplace of Bolton in 1862.

GIOVANNI BATTISTA BELZONI.

In 1778, a son was born to a poor barber in the ancient city of Padua. There was little room for this novel addition to an impoverished family of fourteen, and the youth’s earliest aspirations were to push his fortune far distant from his father’s house. A translation of Robinson Crusoe falling into the lad’s hands, excited an adventurous spirit, that clung to him through life; for, strange to say, Defoe’s wonderful romance, though seemingly written with a view to deter and discourage wandering spirits, has ever had the contrary effect. When quite a boy, the barber’s son ran away from home, but, after a few days’ poverty, hardship, and weary travelling, he waslain to return to the shelter of the parental roof. He now settled for a season, learned his father’s business, and, becoming an able practitioner with razor and scissors, he once more set off with the determination of improving his fortunes in the city of Rome. There a love disappointment induced him to enter a Capuchin convent, where he remained till the arrival of the French army threw the monks homeless and houseless on the world. Of an almost gigantic figure, and endowed with commensurate physical power, the barber-monk now endeavoured to support himself by exhibiting feats of strength and dexterity. The old inclination for wandering returning with increased force, he travelled through Germany to Holland and England, reaching this country in 1802. In the same year he performed at Sadler’s Wells Theatre, in the

BELZONI AT SADLER’S WELLS AS THE PATAGONIAN SAMSON.

character of the Patagonian Samson, as represented in the accompanying engraving, copied from a very rare character portrait of the day. His performance is thus described in a contemporary periodical: ‘Signor Belzoni’s performance consists in carrying from seven to ten men in a manner never
attempted by any but himself. He clasps round him a belt, to which are affixed ledges to support the men, who cling round him; and first takes up one under each arm, receives one on either side, one on each of his shoulders, and one on his back; the whole forming a kind of a pyramid. When thus encumbered, he moves as easy and graceful as if about to walk a minute, and displays a flag in as flippant a manner as on the rope.

In some unpublished notes of Ellar, the Harlequin and contemporary of Grimaldi, the pantomimist observes that he saw Belzoni in 1806, performing in Sander's Booth, at Bartholomew Fair, in the character of the French Hercules. In 1809, he continues, 'Belzoni and I were jointly engaged at the Crown Street Theatre, Dublin, in the production of a pantomime—I as Harlequin, he as artist to superintend the last scene, a sort of hydraulic temple, that, owing to what is frequently the case, the being over anxious, failed, and nearly inundated the orchestra. Fiddlers generally follow their leader, and Tom Cook, now actor at Drury Lane, was the man; out they ran, leaving Columbine and myself, with the rest, to finish the scene in the midst of a splendid shower of fire and water. The young lady who played the part of Columbine was of great beauty, and is now the wife of the celebrated Thomas Moore, the poet. Signor Belzoni was a man of gentlemanly but very unassuming manners, yet of great mind.'

There are few towns in England, Scotland, or Ireland in which Belzoni did not exhibit about this period. The following is an exact copy of one of his hand-bills, issued in Cork early in 1812. The Grand Cascade, mentioned in the bill, was in all probability the splendid shower of fire and water recorded in the preceding passage from Ellar's note-book.

Theatres, Patrick Street.

Cut

A Man's Head

Off!!!

And put it on Again!!!

This present Evening MONDAY, Feb. 24, 1812, and positively and definitively the Last Night.

SIG. BELZONI

RECOMMENDS to the Public, that, by the request of his Friends, he will Re-open the above Theatre for one night more—i.e., on MONDAY Feb. 24, and although it—has been announced in former Advertisements, that he would perform for Two Nights—he pledges his word that this present Evening, will be positively and definitively the last night of his Re-presentations, and when he will introduce a Piece of Legerdemain, which he flatters himself will astonish the Spectators, as such a feat never was attempted in Great Britain or Ireland. After a number of Entertainments, he will

A Man's Head Off!!!

And put it on Again!!!

Also the

Grand Cascade.

Belzoni married in Ireland, and continuing his wandering life, exhibited in France, Spain, and Italy. Realising a small capital by his unceasing industry, he determined to visit Egypt, a country that for ages has been the El Dorado of the Italian race. Belzoni's object in visiting Egypt was to make a fortune by instructing the natives to raise water, by a very dangerous method, now abandoned—a kind of tread-wheel, formerly known to English mechanics by the technical appellation of 'the monkey.' Being unsuccessful in this enterprise, he turned his attention to removing some of the ancient Egyptian works of art, under the advice and patronage of Mr Salt, the British consul. The various adventures he went through, and how he ultimately succeeded, are all detailed by Belzoni in the published account of his travels, entitled Narrative of the Operations and recent Discoveries in the Pyramids, Temples, Tombs, and Cities of Egypt and Nubia.

Scarceley four years' exertions in Egypt had made Belzoni comparatively wealthy and famous. On his way to England, to publish his book, he visited Padua, and was received with princely honours. The authorities met him at the city gates, presented him with an address, and ordered a medal to be struck in his honour. Arriving in London, he became the fashionable lion of the day; and with the pardonable reticence, Belzoni contented himself to allude to the character he had formerly sustained when in England. On this point the late Mr Croker Croker tells an interesting story, published in Willis's Current Notes. He says, 'I remember meeting Belzoni, the last day of 1821, at the late Mr Murray's, in Albemarle Street, where we saw the New Year in, and 'glorious John' brewed a special bowl of punch, for the occasion. Beside the juvenile family of our host the whole D'Irval family were present. We all played a merry game of Pope Joan, and when that was over, Murray presented to each a pocket-book, as a New-year's gift. Murray was engaged, at a side-table, making the punch, upon tasting the excellence of which he uttered something like the sounds made by a puppet-showman, when about to collect an audience. The elder D'Irval thereupon took up my pocket-book, and wrote with his pencil the following impromptu:

"Gigantic Belzoni at Pope Joan and tea.
What a group of mere puppets were men beside thee;
Which our kind host perceiving, with infinite jest,
Gives us Punch at our supper, to keep up the jest."

Indifferent as the epigram itself was, I smiled at it, and observed: "Very true—excellent!" Which Belzoni perceiving, said: "Will you permit me to partake of your enjoyment?" 'Certainly,' I replied, handing him the book. Never shall I forget his countenance after he had read the four lines. He read the last line twice over, and then his eyes actually flashed fire. He struck his forehead, and muttering: "I am betrayed!" abruptly left the room.

At a subsequent interview between Mr Croker and Belzoni, the latter accounted for his strange conduct by stating that he had considered the lines to be an insulting allusion to his early life as a showman. On Mr Croker explaining that they could not possibly have any reference to him, Belzoni requested the former to accompany him to Mr Murray, with the view of making an explanation. They went, and then the great publisher knew, for the first time, that the celebrated Egyptian explorer had been an itinerant exhibitor.
The active mind of Belzoni soon tired of a mere London existence. In 1832, he determined to embark in the too fatal field of African adventure. In the following year, when passing from Benin to Housea, on his way to Timbuctoo, he was stricken with dysentery, carried back to Gato, and put on board an English vessel lying off the coast, in hopes of receiving benefit from the sea-air. He there died, carefully attended by English friends, to whom he gave his amethyst ring, to be delivered to his wife, with his tender affection and regrets that he was too weak to write his last adieux.

The kindly sailors, among whom he died, carried his body ashore, and buried it under an acacia-tree, erecting a monument with the following inscription:

HERE
LIE THE REMAINS
OF
G. BELZONI, ESQ.
Who was attacked with dysentery on the 20th Nov. at Benin, on his way to Housea and Timbuctoo, and died at this place on the 3d December 1832.

The gentlemen who placed this inscription over the remains of this celebrated and intrepid traveller, hope that every European visiting this spot, will cause the ground to be cleared and the fence around repaired if necessary.

The people of Padua have since erected a statue to the memory of their townsman, the energetic son of a poor barber; but it was not till long after his death that the government of England bestowed a small pension on the widow of Belzoni.

'Crossing the Line.'

Among the festivals of the old Roman calendar, in Pagan times, we find one celebrated on the 3d of December, in honour of Neptune and Minerva. In connection with the former of these deities, we may here appropriately introduce the account of a well-known custom, which, till recently, prevailed on board ship, and was regarded as specially under the supervision of Neptune, who, in propriis personis, was supposed to act the principal part in the ceremony in question. With the necessary assistance, which used to be performed when crossing the line: that is, when passing from north to south latitude, or vice versa. The custom, in some form or other, is believed to be very ancient, and to have been originally instituted on the occasion of ships passing out of the Mediterranean into the Atlantic, beyond the 'Pillars of Hercules.' It had much more absurdity than vice about it; but sometimes it became both insulting and cruel. When the victims made no resistance, and yielded as cheerfully as they could to the whim of the sailors, the ceremony was performed somewhat in the following way, as related by Captain Edward Hall, and quoted by Hone: 'The best executed of these ceremonies I ever saw, was on board a ship of the line, of which I was lieutenant, bound to the West Indies. On crossing the line, a voice, as if at a distance, and at the surface of the water, cried: 'No, ship ahoy! I shall come on board!' This was from a person alung over the bows, near the water, speaking through his hands. Presently two men of large stature came over the bows. They had hideous masks on. One represented Neptune. He was naked to the waist, crowned with the head of a large wet swab, the end of which reached to his loins, to represent flowing locks; a piece of tarpaulin, vandyked, encircled the head of the swab and his brows as a diadem; his right hand wielded a boarding-pike, manufactured into a trident; and his body was smeared with red ochre, to represent fish-scales. The other sailor represented Amphitrite, having locks formed of swabs, a petticoat of the same material, with a girdle of red bunting; and in her hand a comb and looking-glass. They were followed by about twenty fellows, naked to the waist, with red ochre scales, as Tritons. They were received on the forecastle with much respect by the old sailors, who had provided the carriage of an eighteen-pounder gun as a car, which their majesties ascended: and were drawn a long along the gangway to the quarter-deck by the sailors. Neptune, addressing the captain, said he was happy to see him again that way; adding, that he believed there were some 'Johnny Raws' on board who had not paid their dues, and whom he intended to initiate into the salt-water mysteries. The captain answered, that he was happy to see him, but requested he would make no more confusion than was necessary. They then descended to the main-deck, and were joined by all the old hands, and about twenty 'barbers,' who submitted the shaving-tackle to inspection. This shaving-tackle consisted of pieces of rusty hoop for razors, and very unsavoury compounds as shaving-soap and shaving-water, with which the luckless victim was bedaubed and soured. If he bore it well, he was sometimes permitted to join in performing the ceremony upon other 'Johnny Raws.' See engraving on the following page.

It was not always, however, that neophytes conformed without resistance to such rough christening ceremonies. A legal action, instituted in 1805, took its rise from the following circumstances. When the ship Soleby Castle was, in the year mentioned, crossing the equator on the way to Bombay, the sailors proceeded to the exercise of their wonted privilege. On this occasion, one of the passengers on board, Lieutenant Shaw, firmly resisted the performance of the ceremony. He offered to buy quills, but not being furnished by the present of money or spirits; but this was refused by the master, and it then became a contest of one against many. Shaw shut himself up in his cabin, the door of which he barricaded with trunks and boxes; and he also barred the port or small window. After he had remained some time in this voluntary imprisonment, without light or air, during the hottest part of the day, and 'under the line,' the crew, dressed as Neptune and his satellites, came thundering at his cabin-door, and with oaths and imprecations demanded admission. This he refused, but at the same time renewed his offer of a compromise. Mr Patterson, the fourth mate, entreated the crew, but in vain, to accept the offer made to them. The men, becoming chafed with the opposition, resolved now to obtain their way by force, regardless of consequences. They failed to force the door, but failed. Mr Raymond, third mate, sanctioned and approved the conduct of the men; and suggested that while some were engaged in wrenching the door off its hinges, others should effect an entry through the port. A sailor, armed with a sword and bludgeon, was lowered by a rope
down the outside of the ship; and he succeeded in getting into the cabin, just at the moment when the other sailors forced open the door. Lieutenant Shaw defended himself for a time with his sword, and fired off his pistols—more for the sake of summoning assistance than to do injury, for they were not loaded. The whole gang now pressed round him, and after wresting the sword from his hand, dragged him upon deck. There he clung for some time to the post of the cuddy-door; and, finding the first and third mates to be abetting the seamen, he called out loudly for the captain. The captain’s cabin-door, however, was shut, and he either did not or would not hear the appeal. So impressed was the sensitive mind of the lieutenant with the indignity in store for him, that he actually endeavoured to throw himself overboard, but this was prevented by Mr Patterson. Unmoved by all

his entreaties, the crew proceeded with the frolic on which they had set their hearts, and which, after the resistance they had encountered, they resolved not to forgo on any terms. They seized the lieutenant, dragged him along the quarter-deck to the middle of the ship, and placed him sitting in a boat half-filled with filthy liquid. His eyes being bandaged with a dirty napkin, a nauseous composition of tar and pitch was rubbed over his face, as ‘Neptune’s shaving soap,’ and scraped off again by means of a rusty hoop, which constituted ‘Neptune’s razor.’ He was then pushed back with violence into the boat, and there held struggling for some seconds, with his head immersed in the noisome liquid. Injured in body by this rough treatment, he was much more wounded in his mental feelings; and when the ship arrived at Bombay, he brought an action against the first and third mates. The fourth mate bore witness in his favour; and the captain, as a witness, declared that he did not hear the cry for assistance; but it is known that captains, at that time, were mostly unwilling to interfere with the sailors on such occasions. The damages of 400 rupees (£40), though more than the mates relished being called upon to pay, could scarcely be deemed a very satisfactory recompense for the inflictions which the lieutenant had undergone.

The improvement wrought among seafaring-men during the last few years, has tended to lessen very much the frequency of this custom. Not only naval officers, but officers in the mercantile marine, are better educated than those who filled such posts in former times; and the general progress of refinement has led them to encourage more rational sports among the crew. The sailors themselves are not much more educated than formerly; but improvement is visible even here; and the spirit which delighted in the coarse fun of this equatorial ‘shaving,’ is now decidedly on the wane.
DECEMBER 4.

Born.—Thomas Carlyle, historical and miscellaneous writer, 1795, near Ecclescham, Dumfriesshire; Dr John Ritchie, Biblical Illustrator, 1804, Plymouth.

HOBBEES.

Hobbes was the plague of the theologians and philosophers of the seventeenth century. Charles II. likened him to a bear against whom the church played its young dogs in order to exercise them. Warburton, writing a century later, said: 'The philosopher of Malmesbury was the terror of the last age, as Tindall and Collins are of this. The present great with controversy, and every young churchman-militant would try his arms in thundering on Hobbes's steel cap.' A library might, indeed, be formed of the literature Hobbes provoked; and supposing it were admitted that he was altogether in the wrong, yet we should see a beneficent end in the means which stimulated so much mental activity. Faith is strengthened and assured in free contest with error; belief would lapse into mere hearsay if not sharply tested by question and denial; and we all must own, that 'truth like a torch the more it's shock it shines.'

Thomas Hobbes was born at Malmesbury, in Wilts, on Good Friday, 1588, the year of the Spanish Armada. It is said his birth was hastened by his mother's terror of the enemy's fleet; and it may be, that a timidity with which through life he was afflicted, was thus induced. He and Pear, he was wont to say, were born together. He was a precocious child; he learned much and easily, and while yet a boy, translated the Medea of Euripides from the Greek into Latin verse. At the age of fifteen he was sent to Oxford, and at twenty he entered the Cavendish family as tutor to Lord Hardwicke, and with scarcely an intermission remained in the service of that noble house as tutor and secretary to the end of his long life. Born under Elizabeth, he lived through the reigns of James and Charles; he saw the rise and fall of the Commonwealth; and died in 1679, at the great age of ninety-two, within six years of the accession of James II. The latter part of his life was spent in Derbyshire, in the charming retreat of Chatsworth, and from Bishop Kennewe have a minute account of his habits there. 'His profound rule of health was to dedicate the morning to his exercise, and the afternoon to his studies. At his first rising, therefore, he walked out and climbed any hill within his reach; or, if the weather was not dry, he fatigued himself within doors by some exercise or other, to be a sweat. . . . . After this he took a comfortable breakfast; and then went round the lodgings to wait upon the earl, the countess and the children, and any considerable strangers, paying some short addresses to all of them. He kept these rounds till about twelve o'clock; when he had a little dinner provided for him, which he ate singly by himself without ceremony. Soon after dinner, he retired to his study, and had his candle with ten or twelve pipes of tobacco laid by him; then shutting his door, he fell to smoking, thinking, and writing for several hours.' Hobbes was tall and spare; his forehead was massive, and in old age deeply wrinkled; his hair was a bright black, till time grizzled it; his eyes were quick and sparkling, and his nose long. His countenance, he tells us, was 'not beautiful, but when I am speaking, far from disagreeable.'

Hobbes's temper was naturally and intensely conservative, and his lot was cast in times when the whole current of events seemed destined to disturb it. His first work, a translation of Thucydides, in which he had the assistance of Ben Jonson, was published in 1626, in order that the absurdities of the Athenian democrats might serve as a warning to turbulent Englishmen. As civil troubles thickened, he was glad to seek refuge in Paris, where he enjoyed the acquaintance of Descartes, Gassendi, and other eminent Frenchmen. But though he had no inclination for a personal share in the strife which was rending his country into warring factions, he was far from indifferent to it. His mind was absorbed in the questions it suggested; he was asking himself, what was the origin of society? and what were the true relations between rulers and their subjects? The first result of his meditations appeared in a Latin treatise, De Oevo, printed in Paris in 1642, and afterwards translated into English as Philosophical Rudiments concerning Government and Society. Descartes wrote of De Oevo, 'I cannot see means approve of its principles or maxims, which are very bad and extremely dangerous, because they suppose all men to be wicked, or give them occasion to be so. His whole design is to write in favour of monarchy, which might be done to more advantage than he has done, upon maxims more virtuous and solid.' The principles set forth in the De Oevo, Hobbes more fully developed in the celebrated Leviathan; or the Matter, Form, and Power of a Commonwealth, Ecclesiastical and Civil, published in London, in folio, in 1651. In this work he describes man in a state of nature, or of isolation, as in a state of war, which in society he exchanges for a state of amity or peace. God made man, and man, in his turn, makes society, which is a sort of artificer's man, a man made on large scale, in which the ruler is the brain, and his subjects, according to their various offices, the members. To the monarch he accords absolute power, and to his subjects unconditional obedience, not only in matters civil but religious. It might be supposed that such a doctrine would have proved highly unacceptable to a generation in which the divine right of kings was in common vogue, but it was not unkindly discerned that though it presented a useful defence of absolutism, it was a defence, spite of Hobbes's protests, which might serve a
Cromwell as well as a Stuart. Hence, in 1666, parliament passed a censure on the Leviathan and De Oce.

Hobbes's pen, to the end of his life, was never idle. He wrote in advocacy of necessity against free-will. He translated the Iliad and Odyssey into very ordinary verse. He composed a history of the civil wars from 1640 to 1660. He had a controversy with Dr Wallis, professor of geometry at Oxford, which lasted twenty years, and in which he was thoroughly worsted. Hobbes had commenced the study of mathematics in middle life, and imagined he had discovered the quadrature of the circle. Wallis told him he was mistaken, and the dispute which ensued was acrimonious to a laughable degree. Hobbes published Six Lessons to the Professors of Mathematics in Oxford, to which Wallis replied in Due Correction for Mr Hobbes for not Saying his Lessons Right.

Though the parliament condemned Hobbes, he was a favourite with Charles II. and his court. The aversion in which he was held by the pious, was a fair title to their esteem; and his sharp sayings and low estimate of human motives, were perfectly suited to the times. Moreover, he had been mathematical tutor to Charles when in exile; and though, after the publication of the Leviathan, he had been forbidden the royal presence, the king had a real fondness for his old master, and, seeing him one day in London, as he passed along in his coach, he sent for Hobbes, gave him his hand to kiss, ordered his portrait to be taken, and settled on him a pension of £100 a year.

Hobbes was freely denounced as an atheist, but solely by inference, and in direct opposition to his own confession. He expressly acknowledged God as the 'Power of all powers, and First Cause of all causes'; but, at the same time, denied that any could know 'what He is, but only that He is.' What gave great handle to some to treat him as an atheist, was the contempt he expressed for many of those scholastics terms invented by theologians, in their endeavour to define the Infinite, and his determination to pursue his reasoning on politics and philosophy in thorough independence of their dogmas. Consistently with his principles, he conformed to the Church of England, and partook of its sacraments; but he seldom remained to listen to the sermon after the prayers.

Perhaps no writer has treated questions of policy and metaphysics with greater terseness and clearness than Hobbes, and lovers of a manly English style receive deep gratification from his pages. The late Sir William Molesworth collected and edited the works of Hobbes in sixteen volumes. When he stood as candidate for parliament for Southwark in 1845, one of the election cries was, 'Will you vote for Molesworth, the editor of Atheist Hobbes?'

JOHN GAY: ORIGIN OF A POPULAR NURSERY RHYME.

Gay is chiefly remembered as the author of the Fables and the Beggar's Opera, both of which, though not productions evincing the highest order of genius, have, by their sparkling vivacity and humour, secured for themselves transmission to posterity. He appears to have been wild and improvident in conduct, but nevertheless of a most amiable and genial disposition, which endeared him to a wide circle of literary friends, one of whom, Pope, thus touchingly commemorates him in the well known elegy on Gay:

'Of manners gentle, of affections mild;
In wit a man, simplicity, a child.'

A mock-heroic poem, by Gay, entitled Trivia, or the Art of Walking the Streets of London, gives a very lively description of the city of London as it existed in the reign of Queen Anne, and of the dangers and inconveniences to which a pedestrian was exposed in those days while traversing its thoroughfares. This poem is indirectly connected with a well-known nursery rhyme. Few of our readers are unacquainted with the effusion commencing:

'Three children sliding on the ice,
Upon a summer's day;'

with its tragi-comical catastrophe, and its moral of like character, addressed to—

'Parents that have children dear,
And eke they that have none.'

Like many other tales of that class, both in prose and verse, its origin, we believe, has long remained unknown. A little old book, however, which we had occasion to quote in our first volume (p. 173), The Loves of Hero and Leander (London, 1633 and 1677), enlightens us on this point, and gives these lines in their primitive form.

In the latter part of the work, we find a rambling story, in doggerel rhymes, attempting the comical, and no less than eighty-four lines in length: it begins thus:

'Some Christian people, all give ear
Unto the grief of us:
Cau'd by the death of three children dear,
The which it hapned thus.'

And, elsewhere in the narrative, we meet with three other quatrains, the origin evidently of the rhyme in question:

'Three children sliding thersabout,
Upon a place too thin,
That so at last it did fall out,
That they did all fall in.

For had these at a sermon been,
Or else upon dry ground,
Why then I would ne'er have been seen,
If that they had been drown'd.

Ye parents all that children have,
And ye that have none yet,
Preserve your children from the grave,
And teach them at home to sit.'

From the concluding verse of the story, as told in the original, it would seem that these lines were composed in the early part of the Civil Wars of Charles I.

In connection with this homely production, we have now to advert to an instance in which a more recent writer has evidently been indebted to it. Among the other incidents of the narrative, we are told that these unlucky children were sliding upon
the Thames, when frozen over, and that one of them had the misfortune to lose his head by the inopportune closing of the ice:

‘Of which one’s head was from his shoulders strikethome, whose name was John, who then cry’d out as loud as he could, “O Lorn—a, Lorn—a, London. Oh! tut—tut, turn from thy sinful race.”
Thus did his speech decay.’

If we turn to a passage in Gay’sTrivia (book ii. 11. 388-390), descriptive of a frost on the Thames, near a century later, we find the following account of the tragic death of Doll the apple-woman:

‘The cracking crystal yields, she sinks, she dies, Her head, snapt off, from her lost shoulders flies; “Pippins,” she cry’d, but death her voice confounds, And “Pip, pip, pip,” along the ice resounds!’

The severing of the head from the shoulders, the half-articulated words, and the ‘speech decaying; or voice confounding,’ in death, are, all of them, points so extremely similar, that there can hardly be room for supposing this to be a case of accidental coincidence.

MR PERRY OF THE MORNING CHRONICLE.

James Perry was one of those silent workers whose works do not perish; and who, even when the worker and the work both have disappeared, exert a lasting influence on those who follow them. He was an Aberdeen man, born in 1756. After receiving a good education, and commencing the study of the law, he was suddenly thrown upon his own resources through commercial disasters in his family. Coming to England, he obtained an engagement as clerk to a manufacturer in Manchester; and while thus employed, he greatly improved himself, during his leisure hours, by joining a literary society. The members of the society were assisted by their friends and by subscriptions, which enabled them to publish a newspaper called the General Advertiser, a weekly periodical, of which Perry was one of the proprietors. The paper was a success, and Perry’s name became known throughout the country. He was afterwards appointed a member of the House of Commons, and was prominent in its proceedings.

The whole of his energies he devoted to the cause of the people. During the memorable trials of Admiraels Keppel and Palliser, he gave his services to the cause of freedom, and was a consistent advocate of the principles of liberty. His speeches were full of eloquence, and his arguments were well founded.

The Morning Chronicle was a daily paper, and Perry contributed to it many valuable articles. He was a man of great learning, and his writings were characterized by clearness and force. His death was a great loss to the country, and his memory is still cherished by his countrymen.

[The following is a snippet of text from the Morning Chronicle, December 4th, 1821, regarding Mr. Perry.]
DECEMBER 5.

St Crispina, martyr, 304. St Sabas, abbot, 532. St Nicetius, bishop of Triers, about 566.

Died.—Francis II. of France, husband of Queen of Scots, 1560; Sir Henry Wotton, poet and miscellaneous writer, 1639; Etom; Johann Wolfgang Theophilus Mozart, celebrated composer, 1791; Venosa; John Bewick, woodcarver, 1795; Oswegham; Carlo Giovanni Maria Deulina, historical writer, 1812; Paris; Leopold Frederick, Count Stolberg, poet and miscellaneous writer, 1819; Sondernaklen, near Osnabruck; Captain S. A. Warner, inventor of projectiles, 1853; Pelmico.

MOZART.

Mozart appears as being eccentrically formed to be a medium for the expression of music and no grocer purpose. In this he was strong; in everything else of body and mind, he remained a child during the thirty-six years to which his life was limited.

When three years old, his great amusement was finding concords on the piano; and nothing could equal his delight when he had discovered a harmonious interval. At the age of four, his father began to teach him little pieces of music, which he always learned to play in a very short time; and, before he was six, he had invented several small pieces himself, and even attempted compositions of some extent and intricacy.

The sensibility of his organs appears to have been excessive. The slightest false note or harsh tone was quite a torture to him; and, in the early part of his childhood, he could not hear the sound of a trumpet without growing pale, and almost falling into convulsions. His father, for many years, carried him and his sister about to different cities for the purpose of exhibiting their talents. In 1764, they came to London, and played before the late king. Mozart also played the organ at the Chapel Royal; and with this the king was more pleased than with his performance on the harpsichord. During this visit he composed six sonatas, which he dedicated to the queen. He was then only eight years old. A few years after this he went to Milan; and at that place was performed, in 1770, the opera of Methusaleth, composed by Mozart at the age of fourteen, and performed twenty nights in succession. From that time till he was nineteen, he continued to be the musical wonder of Europe, as much from the astonishing extent of his abilities, as from the extreme youth of their possessor.

Entirely absorbed in music, this great man was a child in every other respect. His hands were so wedded to the piano, that he could use them for nothing else: at table, his wife carved for him; and, in everything relating to money, or the management of his domestic affairs, or even the choice and arrangement of his amusements, he was entirely under her guidance. His health was very delicate; and, during the latter part of his too short life, it declined rapidly. Like all weak-minded people, he was extremely apprehensive of death; and it was only by incessant application to his favourite study, that he prevented his spirits
sinking totally under the fears of approaching dissolution. At all other times, he laboured under a profound melancholy, which unquestionably tended to accelerate the period of his existence. In this melancholy state of spirits, he composed the "Nymphs," "The Gnome," and the celebrated Mass in D minor, commonly known by the name of his "Requiem." The circumstances which attended the composition of the last of these works are so remarkable, from the effect they produced upon his mind, that we shall detail them; and, with the account, close the life of Mozart.

One day, when his spirits were unusually oppressed, a stranger, of a tall, dignified appearance, was introduced. His manners were grave and impressive. He told Mozart that he came from a person who did not wish to be known, to request he would compose a solemn mass, as a requiem for the soul of a friend whom he had recently lost, and whose memory he was desirous of commemorating by this solemn service. Mozart undertook the task, and engaged to have it completed in a month. The stranger begged to know what price he set upon his work, and immediately paid him one hundred ducats, and departed. The mystery of this visit seemed to have a very strong effect upon the mind of the musician. He brooded over it for some time; and then suddenly calling for writing materials, began to compose with extraordinary ardour. This application, however, was more than his strength could support; it brought on fainting fits; and his increasing illness obliged him to suspend his work. "I am writing this Requiem for myself!" said he abruptly to his wife one day; "it will serve for my own funeral-service;" and this impression never afterwards left him. At the expiration of the month, the mysterious stranger appeared, and demanded the Requiem. "I have found it impossible," said Mozart, "to keep my word; the work has interested me more than I expected, and I have extended it beyond my first design. I shall require another month to finish it."

The stranger made no objection; but observing, that for this additional trouble it was but just to increase the premium, laid down fifty ducats more, and promised to return at the time appointed. Astonished at his whole proceedings, Mozart ordered a servant to follow this singular personage, and, if possible, to find out who he was: the man, however, lost sight of him, and was obliged to return as he went. Mozart, now more than ever persuaded that he was a messenger from the other world, sent to warn him that his end was approaching, applied with fresh zeal to the Requiem; and, in spite of the exhausted state both of his mind and body, completed it before the end of the month. At the appointed day the stranger returned; but Mozart was no more.

NOTES ON AN ANCIENT GOThic CROWN.

Towards the close of 1858, or early in 1859, in the course of excavations at La Fuente de Guzmán, near Toledo, on the property of a Mr. de Guzmán, a hoard of treasure of great value and interest was brought to light. No particulars of the discovery are recorded. It seems, however, that there were not found any remains of a case or casket in which the relics had been enclosed; in several parts the ornamentation had been filled with the soil in which they were found; it has, therefore, been supposed that those relics of royalty had been buried in some time of confusion without any enclosure. The spot where the crowns were found was uncultivated land, which the peasants were breaking up when the discovery was made. The treasure consisted of eight crowns: four are of gold richly jewelled; from the front of the crowns jewelled crosses are suspended by gold chains; there are also chains of the same metal for the purpose of hanging the crowns in some convenient situation. These ancient and precious objects were brought to Paris in the month of January 1859, by the proprietor of the land where they were found, and the crowns were immediately purchased by the Minister of Public Instruction, for the national collection at the Hotel de Cluny, a museum which is already possessed of many valuable examples of medieval art, besides specimens of more ancient date. The largest of the crowns bears the following inscription, in letters jewelled and appended by little chains to its lower margin, "REGESWINTHII REGIS OFFERENT.

The letters are about two inches in length each—they are separately hung, and to each is attached a pendant pearl and sapphire. The gold letters are beautifully incrustated with precious stones, and engraved in the same manner as some of the gold work of the Anglo-Saxon period. By means of the inscription, we are able to arrive at a knowledge of the date of this crown, for King Ræceswinthus governed Spain from 653 to 675; the inscription also shews that it has been an offering (probably to some religious shrine) by this ruler; and the seven other crowns, of smaller dimensions and value, may have been those of the queen and the princes and princesses of the family; some of them, judging by their size, are intended for children of early age—the whole being a solemn offering on some important occasion.

In ancient times it was customary to enrich the saintly shrines with choice and valuable gifts; amongst these, however, there were often imitation crowns and other objects given as votive-offerings, to be placed over the altar, or in some other conspicuous position. That the crowns were actually worn by kings and queens having been devoted to this purpose—amongst these may be mentioned the Iron Crown of Lombardy. It is to be observed that the gold chains by which these relics were suspended, have been added to the simple circlets which were in doubt actually worn by royal personages about twelve hundred years ago, since they are formed with hinges and fastenings to facilitate the fastening of them to the heads of the wearers.

The crown of the king measures about nine inches in diameter, and twenty-seven in circumference; it is a hoop about four inches in breadth, and upwards of half an inch in thickness; it is, however, not solid, but consists of gold plates soldered together. The margins of this hoop consist of two bands of crowns, work with incrustations of carnelian; and it is still further enriched with thirty oriental sapphires of large size, set in collets, giving to the gems a very prominent relief. Thirty very large pearls are arranged alternately with the
sapphires. The intervening spaces are pierced in open work and engraved, so as to represent foliage and flowers, and to the lower margin is appended the fringe of letters already mentioned. The golden chains are united above with foliated ornaments, which are enriched with numerous pendant pearls and sapphires, and surmounted by a capital, in the form of a knot of crystal, elaborately carved and polished, and terminating in a globe of the same material. The Latin shaped cross, suspended from the crown by a slender chain, is set with six fine sapphires and eight pearls of remarkable dimensions, mounted in very high relief; jewelled pendants are also attached to the limbs and foot of the cross. This has been worn as a fibula or brooch, the acus by which it has been fastened to the royal robes probably worn by the queen of Recesvinthi. The broad circlet is set with fifty-four rubies, sapphires, emeralds, and opals, whilst pendant sapphires fringe its lower margin. Above and below, near both edges of this circlet, there are little loops which seem to have been used for fastening a lining or cap of some costly tissue within the golden hoop, to protect the forehead of the wearer. The pendant cross is not so much decorated as that above mentioned, being, however, richly set on both sides with sapphires. The same jewels are also suspended from the cross. The eight other crowns are of several fashions. Three are essentially different from the others, for instead of a broad band, the circlet consists of open framework of gold, formed of three horizontal hoops and numerous traverses, with gems set at the points of intersection; all the crowns are enriched with not less than fifty-four precious stones and pearls, and have also hanging fringes of sapphires.

On the pendant crosses of one of the crowns is engraved the following dedication: 'IN NOMINE OFFERET SIONICAE SANCE MARLE IN SORBERA.' After the word NOMINE, a leaf is introduced as a stop; M. Du Sommerard considers that Sionica is a male appellation. The three smallest crowns had no pendant crosses. As an example of ancient art-workmanship, this may be regarded as one of the most remarkable discoveries which have been made in recent times. The articles are in excellent preservation, and the French have reason to congratulate themselves that they have gained possession of such a prize.

DR SHEEBBARE.

A person happening to pass by Charing Cross, on the 5th of December 1755, would have witnessed an extraordinary spectacle—a vast crowd surrounding a scaffold, on which stood two men and a pillory. A man in the pillory was no unusual sight in those days, but, in this particular case, the culprit's head and hands were not enclosed in the holes provided for the purpose; unconfined, he stood at his ease, and, to prevent even the rains of heaven from visiting him too roughly, a servant, dressed in a rich livery, carefully held an umbrella over his head. The man whose legally inflicted punishment was thus turned into a triumph, was Dr John Shebbeare. The son of a country attorney in Devonshire, Shebbeare was educated as a surgeon, but, being unsuccessful in his profession, turned his attention to literature. Having resolved, as he admitted, to write himself into a pension or the pillory, his political tracts were of an exceedingly virulent character, most galling to the king and ministry of the day. His best-known work is a series of Letters to the People of England, which had a wide circulation, and was eagerly read by all classes. The leading idea in the Letters was the then not unpopular one, that the grandeur of France and the misfortunes of England, were wholly attributable to the undue influence of Hanover in the British council-chamber. In allusion to the White Horse being the armorial ensign of Hanover, Shebbeare's motto prefixed to his Letters, was the well-known verse from the Apocalypse—'And I looked and beheld a pale horse; and his name that sat upon him was Death, and Hell followed.'
In consequence of these Letters, the Attorney-General, Pratt, afterwards Lord Camden, filed an information against Shebbeare in the Court of King's Bench, on Easter term, 1768. At the trial, the officers of the crown admitted a point; then and afterwards much disputed, but now incontrovertibly established, that the jury have the right to determine both the law and the fact in cases of libel. Shebbeare was found guilty, and sentenced to be fined five pounds, to stand in the pillory one hour, to be imprisoned in the Marshalsea for three years, and to give security for his good-behaviour for seven years: himself in £200, and two others in £250 each. The under-sheriff at that time was a Mr Beardmore, a person of exactly the same political principles as Shebbeare; so he brought the culprit to the pillory in one of the city-coaches, handing him out and in with the greatest demonstrations of respect. This gave Churchill occasion to write in the Author:

'Where is Shebbeare? O let not foul reproach
Bravely sit by, and a thither in a city-coach.
The pillory dare to name; the whole intent
Of that parade was fame, not punishment;
And that old staunch Whig, Beardmore, standing by
Can in full court give that reproach the lie.'

The last line refers to a trial that arose out of this affair. Beardmore was arraigned in the Court of King's Bench for not doing his duty on the occasion. He contended that he had fulfilled the letter of the law by pillorying Shebbeare, and brought forward a number of witnesses to prove it. The judge, however, ruled that Shebbeare had not been put in the pillory, and the too-indulgent sub-sheriff was sentenced to pay a fine of £50, and suffer two months' imprisonment. Beardmore afterwards had his revenge, when solicitor to Wilkes; by an over-stretch of legal power, he and his clerk were taken into custody, and recovered heavy damages from the secretary of state, for false imprisonment.

The footman who held the umbrella over Shebbeare was an Irish chairman, hired and dressed in livery for the occasion. The following day, he called on the doctor, representing that the guinea he received for his trouble was scarcely sufficient; for, as he put it, 'only think of the disgrace, your honor.' Shebbeare gave him five shillings more, and the man went away content.

Shebbeare remained three years, the full term of his sentence, in prison. On the expiration of that time, a new reign had commenced: George III., young and inexperienced, had ascended the throne; and his minister, Lord Bute, was the most unpopular of men. So it was thought best to make a friend of such a virulent and unscrupulous writer as the doctor, and a pension was granted to him accordingly. Thus his words were made good—he wrote himself into the pillory, and into a pension. Dr Johnson was pensioned shortly after, causing the wits to say that the king had first pensioned a she-bear, and afterwards a he-bear. In a satirical poem, entitled the Masquerada, Johnson and Shebbeare are thus alluded to:

'Much beared and much flattered by people of note,
With cash in his pockets for turning his coat,
Surly Johnson as Crispin the Second comes pat in,
Talking Latin in English, and English in Latin,
Successor of Shebbeare, but missing the wood.
Where, pampered by Bute, his prototype stood.'

Shebbeare's plays, novels, political, satirical, and medical works, are thirty-four in number, but now all utterly forgotten. He died at a good old age in 1788, greatly lamented by his friends; for this Ishmael of politics and public life is represented as a very amiable and worthy man in all his private relations, as husband, son, father, brother, and friend. So little do we know of each other, so little do we probably know of our own selves and characters.

DECEMBER 6.

St Theophilius, bishop of Antioch, confessor, 190. St Nicholas, confessor, archbishop of Myra, 842. Saints Dionysius, Dativ, Asamilaena, Boniface, Leontias, Terianus, and Major, martyrs, 484. St Peter Paeschal, bishop and martyr, 1300.

ST NICHOLAS.

St Nicholas belongs to the fourth century of the Christian era, and was a native of the city of Patara, in Lycia, in Asia Minor. So strong were his devotional tendencies, even from infancy, that we are gravely informed that he refused to suck on Wednesdays and Fridays, the fast-days appointed by the church! Having embraced a religious life by entering the monastery of Sion, near Myra, he was in course of time raised to the dignity of abbot, and for many years made himself conspicuous by acts of piety and benevolence. Subsequently he was elected archbishop of the metropolitan church of Myra, and exercised that office with great renown till his death. Though escaping actual martyrdom, he is said to have suffered imprisonment, and otherwise testified to the faith under the persecution of Diocletian.

As with St Cuthbert, the history of St Nicholas does not end with his death and burial. His relics were preserved with great honour at Myra, till the end of the eleventh century, when certain merchants of Bari, on the Adriatic, moved by a pious indignation similar to what actuated the Crusaders, made an expedition to the coast of Lycia, and landing there, broke open the coffin containing the bones of the saint, and carried them off to Italy. They founded at Bari on the 8th of May the Benedictine monastery of San Nicola in the sacred treasure, which they had brought with them, was deposited in the church of St Stephen. On the day when the latter proceeding took place, we are told that thirty persons were cured of various distempers through imploring the intercession of St Nicholas, and since that time his tomb at Bari has been famous for pilgrimages. In the ensuing article a description is given of the annual celebration of his festival in that seaport.

Perhaps no saint has enjoyed a more extended popularity than St Nicholas. By the Russian nation, he has been adopted as their patron, and in England no fewer than three hundred and seventy-two churches are named in his honour. He is regarded as the special guardian of virgins, of children, and of sailors. Scholars were under his protection, and from the circumstance of these being anciently denominated clerks, the fraternity of parish clerks placed themselves likewise under the guardianship of St Nicholas. He even came to be regarded as the patron of robbers, from an alleged adventure with thieves, whom he compelled
to restore some stolen goods to their proper owners. But there are two specially celebrated legends regarding this saint, one of which bears reference to his protectorship of virgins, and the other to that of children. The former of these stories is as follows: A nobleman in the town of Patara had three daughters, but was sunk in such poverty, that he was not only unable to provide them with suitable marriage-portions, but was on the point of abandoning them to a sinful course of life in order to release them from the stigma of bastardy. St Nicholas, who had inherited a large fortune, and employed it in innumerable acts of charity, had never heard of this unfortunate family, than he resolved to save it from the degradation with which it was threatened. As he proceeded secretly to the nobleman's house at night, debating with himself how he might best accomplish his object, the moon shone out from behind a cloud, and shewed him an open window into which he threw a purse of gold. This fell at the feet of the father of the maidens, and enabled him to portion his eldest daughter. A second nocturnal visit was paid to the house by the saint, and a similar present bestowed, which procured a dowry for the second daughter of the nobleman. But the latter was now determined to discover his mysterious benefactor, and with that view set himself to watch. On St Nicholas approaching, and preparing to throw in a purse of money for the third daughter, the nobleman caught hold of the skirt of his robe, and threw himself at his feet, exclaiming: 'O Nicholas! servant of God! why seek to hide thyself?' But the saint made him promise that he would inform no one of this seasonable act of munificence. From this incident in his life is derived apparently the practice formerly, if not still, customary in various parts of the continent, of the elder members and friends of a family placing, on the eve of St Nicholas's Day, little presents, such as sweetmeats and similar gifts, in the shoes or hose of their younger relatives, who, on discovering them in the morning, are supposed to attribute them to the munificence of St Nicholas. In convents, the young lady-boarders used, on the same occasion, to place silk-stockings at the door of the apartment of the abbess, with a paper recommending themselves to 'Great St Nicholas of her chamber.' The next morning they were summoned together, to witness the results of the liberality of the saint who had bountifully filled the stockings with sweetmeats. From the same instance of munificence recorded of St Nicholas, he is often represented bearing three purses, or three gold balls; the latter emblem forming the well-known pawnbrokers' sign, which, with considerable probability, has been traced to this origin. It is true, indeed, that this emblem is proximately derived from the Lombard merchants who settled in England at an early period, and were the first to open establishments for the lending of money. The three golden balls were also the sign of the Medici family of Florence, who, by a successful career of merchandise and money-lending, raised themselves to the supreme power in their native state. But the same origin is traceable in both cases—the emblematic device of the charitable St Nicholas.

The second legend to which we have adverted is every one of a more piquant nature. A gentleman of Asia sent his two sons to be educated at Athens, but desired them, in passing through the town of Myra, to call on its archbishop, the holy Nicholas, and receive his benediction. The young men, arriving at the town late in the evening, resolved to defer their visit till the morning, and in the meantime took up their abode at an inn. The landlord, in order to obtain possession of their baggage, murdered the unfortunate youths in their sleep; and after cutting their bodies to pieces, and salting them, placed the mutilated remains in a pickling-tub along with some pork, under the guise of which he resolved to dispose of the contents of the vessel. But the archbishop was warned by a vision of this horrid transaction, and proceeded immediately to the inn, where he charged the landlord with the crime. The man, finding himself discovered, confessed his guilt, with great contrition, to St Nicholas, who not only implored on his behalf the forgiveness of Heaven, but also proceeded to the tub where the remains of the innocent youths lay in brine, and then made the sign of the cross, and offered up a supplication for their restoration to life. Scarcely was the saint's prayer finished, when the detached and mangled limbs were miraculously reunited, and the two youths regaining animation, rose up alive in the tub, and threw themselves at the feet of their benefactor. We are further informed, that the archbishop refused their homage, desiring the young men to return thanks to the proper quarter from which this blessing had descended; and then, after giving them his benediction, he dismissed them with great joy to continue their journey to Athens. In accordance with this legend, St Nicholas is frequently represented, as delineated in the accompanying engraving, standing in full episcopal costume beside a tub with naked children.
An important function assigned to St Nicholas, is that of the guardianship of mariners, who in Roman Catholic countries regard him with special reverence. In several seaport towns there are churches dedicated to St Nicholas, which the sailors resort to return thanks for preservation at sea, by hanging up votive pictures, and making other offerings. This practice is evidently a relic of an old pagan custom alluded to by Horace:

Me tabulis sacer
Votivâ paries indicat uvida
Suspensisse potenti
Vestimenta maris Deco.

The office of protector of sailors, thus attributed in ancient times to Neptune, was afterwards transferred to St Nicholas, who is said, on the occasion of making a voyage to the Holy Land, to have caused by his prayers a tempest to assuage, and at another time to have personally appeared to, and saved some mariners who had invoked his assistance.

The Feast of St Nicholas.

The Feast of St Nicholas, at Bari, is one of the chief ecclesiastical festivals of Southern Italy. It is attended by pilgrims in thousands, who come from considerable distances. From the Tronto to Otranto, the whole eastern slope of the Apennines sends eager suppliants to this famous shrine, and nowhere is there more distinctly to be seen how firm and deep a hold the faith in which they have been educated has on the enthusiastic nature of the Italian peasantry, than at this sanctuary, and on this occasion.

Bari is a city of considerable importance, being the second in population of those belonging to the Neapolitan provinces. It is situated on the Adriatic coast, half-way between the spur, formed by Monte Gargano, and the heel of the boot. It contains some 40,000 inhabitants, and is capital of the province of the same name, which contains half a million of population. The city occupies a small peninsula, which escapes, as it were, into the blue waters of the Adriatic, from the bosom of the richest and most fertile part of Italy. The whole sea-board, from the mouths of the Ofanto to within a few miles of the magnificent but neglected harbour of Brindisi, recalls the descriptions given of Palestine in its ancient and highly-cultivated state. The constant industry of the people—in irrigation, in turning over the soil, in pruning the exuberant vegetation—is rewarded by a harvest in every month of the year, and the wealth of the soil is expressed by the contented aspect, the decent clothing, and the personal adornment with rings, chains, and ear-rings, of both men and women. Stockings and even gloves are commonly worn, and that not as being needed for defence against the climate, but as marks of decent competence. At Barletta, the great grain-port, which is situated between this garden of Italy and the great pastoral plain of Apulia, there is a labour-market held daily, during the summer months, at four a.m. There the labourers meet, before going to their daily toil, to settle the price of labour, and to arrange for the due distribution of workmen through the country. Each man is attended by his dog, and most of them mount their asses, at the conclusion of this ancient and admirable congress, to ride to the scene of their occupation.

The harvests of this fertile country commence, in the latter part of April and earlier portion of May, by the gathering of the olive-trees, and especially, on which the people subsist for some weeks, and of vetches. Oranges and lemons succeed during the month of May, and the country affords many species of these fruit, one at least of which, as large as a child’s head, and with a thick and edible rind, is unknown in other parts of Europe. In June, succeeds the harvest of oats, barley, and wheat, and the gathering of fennel. In July, the maize is harvested; a plant which has been regarded as of American origin, but which is represented in the frescoes of Pompeii as boiled and eaten precisely as we see it used at the present day. July is also the chief month for the making of cheese, as well as for the silk crop, or the tendering of the silk-worm till it forms its cocoons. August produces cotton, tobacco, and figs. September yields grapes and a second shearing of wool, the first having taken place in May. The next five months, in fertile years, supply a constant yield of olives; and the plucking and preserving of the fruit, as well as the manufacture of oil, afford continual occupation. The olive, which, in the south of France, appears as a small shrub, covers the hills to the south of the Ofanto, with trees about the size of the apple-trees of the Gloucestershire and Herefordshire orchards; and yet further south, in the Terra di Otranto, it rises into the magnitude of a forest-tree, and covers large districts of country with a rich and shady woodland. The culture and the varieties of the olive are the same with those that are so minutely described by Virgil, and the flavour of the edible species, and the delicacy and filbert-like aroma of the new-made oil, can only be appreciated by a visit to a country like Apulia. In March, the latest addition to the production of the country, the little Mandarin orange, becomes ripe; a delicious fruit, too delicate to export. Introduced into Italy during the present generation, it has already much increased in size, at the expense, it is said, of flavour. In April is the season for the slaughtering of fatted animals, which brings us round again to the wool-crop.

Bari is an archbishopal city, but its ancient cathedral, with its almost picturesque architecture, is outshone by the splendour of the Church of St Nicholas, the ‘protector of the city.’ The grand prior of St Nicholas is one of the chief ecclesiastical dignitaries in Italy, claiming to rank with the bishop of Loreto, the archbishop of Milan, and the cardinal of Capua. The king of Naples for the time is, when he enters the precincts of St Nicholas, a less person than the grand prior, ranking always, however, as the first canon of the chapter, and having a throne in the choir erected for his occupation in that capacity. The present grand prior is a man every way fitted to sustain such a dignity—courteous and affable, erect and vigorous in form and gait, and clear and bright in expression, although hard on foregoing years of age. He is the very counterpart of the pictures of Fenelon, but of Fenelon unworn by the charge of the education of a dauphin.

It so chanced that the writer was in Bari, and was the guest of this respectable, prelate, on the two great festivals that are distinctive of the city—
that of St Mark, and that of St Nicholas. On St Mark's Day, the chief peculiarity is the procession of the clergy and municipality to the walls of the ancient castle that overlook the sea, and the solemn firing of a cannon thrice in the direction of Venice in acknowledgment of the relief afforded by the Venetian fleet when Bari was besieged by the Saracens in 1002 A.D. The ricochet of the cannon-ball over the surface of the Adriatic is watched with the greatest interest by the people, and the distance from the shore at which the water is struck appears to be regarded as ominous.

But on the feast of St Nicholas, in addition to the rejoicings of the citizens, and to the infux of the contadini, the city is absolutely invaded by an army of pilgrims. With staves bound with olive, with pins, or with palm, each bearing a suspended water-bottle formed out of a gourd, frequently barefoot, clothed in every variety of picturesque and ancient costume, devotees from every province of the kingdom of Naples seek health or other blessings at the shrine of the great St Nicholas. The priory gives to each a meal, and affords shelter to many. Others fill every arch or sheltered nook in the walls, bivouac in the city, or spend the night in devotion. The grand vicar of the priory said that on that morning they had given food to nine thousand pilgrims, and there are many who never seek the dole, but travelling on horseback or in carriages to within a few miles of Bari, assume the pilgrim habit only to enter the very precincts of the shrine.

The clergy composing the chapter of St Nicholas are not slow to maintain the thaumaturgic character of their patron, and seem to believe in it. The bones of the saint are deposited in a sepulchre beneath the magnificent crypt, which is in itself a sort of subterranean church, of rich Saracenic architecture. Through the native rock which forms the tomb, water constantly exudes, which is collected by the canons on a sponge attached to a reed, squeezed into bottles, and sold to the pilgrims, as a miraculous specific, under the name of the ‘Manna of St Nicholas.’ As a proof of its supernatural character, a large bottle was shown to me, in which, suspended from the cork, grew and floated the delicate green blade of one of the Adriatic algae, to prove that its growth in fresh water had been extremely slow, for a person, whose word I did not doubt, assured me that he remembered the bottle from his childhood, and that the vegetation was then much less visible. ‘This,’ said the grand vicar, a tall aquiline-featured priest, who looked as if he watched the effect of every word upon a probable buyer, and offered the delicate green blade, took one of the Adriatic algae. I supposed that its efficacy be such as is asserted to be the case; but on this subject the purchasers must rely implicitly on the good faith of the canons, as mere human senses cannot distinguish it from that of the castle well.

The pilgrims, entering the Church of St Nicholas, often shew their devotion by making the circuit once, or oftener, on their knees. Some are not content with this mark of humility, but actually move around the ailes with the forehead pressed to the marble pavement, being generally led by a child, by means of a string on handkerchief, of which they hold the corner in the mouth. It is impossible to conceive anything more calculated to stir the heart with mingled feelings of pity, of admiration, of sympathy, and of horror than to see these thousands of human beings recalling, in their physiognomy, their dialects, their gesticulations, even their dresses, the Magna Graecia of more than two thousand years ago, urged from their distant homes by a strong and intense piety, and thinking to render acceptable service by thus debasing themselves below the level of the brute. The flushed face, starting eyes, and scarred forehead, fully distinguish such of the pilgrims as have thus sought the benediction of the saint.

The mariners of Bari take their own part, and that a very important one, in the functions of the day, and go to a considerable expense to perform their duty with solat. Early in the morning, they enter the church in procession, and receive from the canons the wooden image of the saint, attired in the robes and mitre of an archbishop, which they bear in triumph through the city, attended by the canons only so far as the outer archway of the precincts of the priory. They take their charge to visit the cathedral and other places, and then fairly embark him, and carry him out to sea, where they keep him until nightfall. Then they return, disembark under the blaze of illumination, bonfires, and fireworks, and the intonation, by the whole heaving mass of the population, of a Gregorian Litany of St Nicholas; parade the town, visit by torchlight, and again leave, his own church; and finally, and late in the night, return the image to the reverend custody of the canons, who, in their purple robes and fur capes turned up with satin, play only a subordinate part in the solemnity. ‘It is the only time,’ said a thickly-moustached bystander—‘it is the only occasion, in Italy, on which you see the religion of Jesus Christ in the hands of the people.’ The conduct of the festivities was, indeed, in the hands of the local pilgrims; the character of the religion is a different question.

Those who have witnessed the festivities of St Januarius, at Naples, will err if they endeavour thence to realise the character of the festivities of St Nicholas at Bari. The effect on the mind is widely different. Without the frantic excitement that marks the Neapolitan festival, there is a deep, serious, anxi-ous conviction that pervades the thousands who assemble at Bari, which renders the commemoration of St Nicholas an event unique in its nature. The nocturnal procession, the flashing torches, the rockets, the deep-toned litany, the hum and surge of the people through the ancient archways, the thousands of pilgrims that seem to have awakened from a slumber of a thousand years, is to powerfully affect the imagination. But the chief element of this power over the mind is to be found in the deep earnestness of so great a mass of human beings, while the stars look down calm and solemn on their time-honoured rite, and a deep bass to their litany rolls in from the waves of the Adriatic.
On St Nicholas's Day, in ancient times, a singular ceremony was to take place. This was the election of the Boy-bishop, an office from this date to Innocents, or Childermas Day, on 26th December, exercised a burlesque episcopal jurisdiction, and, with his juvenile dean and prebendaries, parodied the various ecclesiastical functions and ceremonies. It is well known that, previous to the Reformation, these profane and ridiculous mummeries were encouraged and participated in by the clergy themselves, who, confident of their hold on the reverence or superstition of the populace, seem to have entertained no apprehension of the dangerous results which might ultimately ensue from such sports, both as regarded their own influence and the cause of religion itself.

The election of the Boy-bishop seems to have prevailed generally throughout the English cathedrals, and also in many of the grammar-schools, but the place where, of all others, it appears to have specially obtained, was the episcopal diocese of Salisbury or Sarum. A full description of the mock-ceremonies enacted on the occasion is preserved in the Processional of Salisbury Cathedral, where also the service of the Boy-bishop is printed and set to music. It seems to have constituted literally a mimetic transcript of the regular episcopal functions; and we do not discover any trace of parody or burlesque, beyond the inevitable one of the ludicrous contrast presented by the diminutive bishop and his chapter to the grave and canonical figures of the ordinary clergy of the cathedral.

The actors in this solemn farce were composed of the choristers of the church, and must have been well drilled in the parts which they were to perform. The boy who filled the character of bishop, derived some substantial benefits from his tenure of office, and is said to have had the power of disposing of such prebends as fell vacant during the period of his episcopacy. If he died in the course of it, he received the funeral honours of a bishop, and had a monument erected to his memory, of which latter distinction an example may be seen one of the farms of the Diocese of Salisbury Cathedral, where is sculptured the figure of a youth clad in episcopal robes, with his feet on a lion-headed and dragon-tailed monster, in allusion to the expression of the Psalmist: "Conculcabis leones et draconem—"Thou shalt tread on the lion and the dragon."

Besides the regular buffooneries throughout England of the Boy-bishop and his companions in church, these pseudo-clergy seem to have parasitized the neighbourhood, and enlivened it with their jovialities, in return for which a contribution, under the designation of the "Bishop's subsidy," would be demanded from passers-by and householders. Occasionally, royalty itself deigned to be amused with the burlesque ritual of the mimetic priest, and in 1698, we find Edward I., on his visit to Scotland, permitting the Boy-bishop to say vespers before him in his chapel at Heston, near Newcastle-on-Tyne, on the 7th of December, the day after St Nicholas's Day. On this occasion, we are informed that his majesty made a handsome present to this mock-representative of Episcopacy, and the companions who assisted him in the discharge of his functions. During the reign of Queen Mary of persecuting memory, we find a performance by one of these child-bishops before her majesty, at her manor of St-James-in-the-Fields, on St Nicholas's Day and Innocents' Day, 1555. This queen restored, or at least sanctioned, the ceremony, referred to, which had been abrogated by her father, Henry VIII., in 1542. We accordingly read in Strype's Ecclesiastical Memorials, quoted by Brand, that on 13th November 1654, an edict was issued by the bishop of London to all the clergy of his diocese to have the procession of a boy-bishop. But again we find that on 5th December, or St Nicholas's Eve, of the same year, "at even-song time, came a commandment that St Nicholas should not go abroad or about. But notwithstanding, it seems so much were the citizens taken with the mock of St Nicholas—that is, a boy-bishop—that they went about these St Nicholases in divers parishes, as in Saint Andrew's, Holborn, and St Nicholas Olave's, in Bread Street. The reason the procession of St Nicholas was forbid, was that this St Nicholas Day, sent for all the convocation, bishops, and inferior clergy, to come to him to Lambeth, there to be absolved from all their perjuries, schisms, and heresies. Again Strype informs us that, in 1556, on the eve of his day, 'St Nicholas, that is, a boy habited like a bishop in pontificalibus, went abroad in most parts of London, singing after the old fashion, and was received with many ignorant but well-disposed people into their houses, and had as much good cheer as ever was wont to be had before, at least, in many places.'

With the final establishment of Protestantism in England, the pastime of the Boy-bishop disappeared; but the well-known festivity of the Eton Montem appears to have originated in, and been a continuance under another form, of the medieval custom above detailed. The Eton celebration, now abolished, consisted, as is well known, in a march of the scholars attending that seminary to Salt Hill, in the neighbourhood [AD MONTEN — To the Mount — whence the name of the festivity], where they dined, and afterwards returned in procession to Eton in the evening. It was thoroughly of a military character, the mitre and ecclesiastical vestments of the Boy-bishop and drapery of former times being exchanged for the uniform of a company of soldiers and their captain. Certain boys, denominated salt-bearers, and their scouts or deputies, attired in fancy-dresses, thronged the roads in the neighbourhood, and levied from the passers-by a tribute of money for the benefit of their captain. This was supposed to afford the latter the means of maintaining himself at the university, and amounted sometimes to a considerable sum, occasionally reaching as high as £1000. According to the ancient practice, the salt-bearers were accustomed to carry with them a handkerchief filled with salt, of which they bestowed a small quantity on every individual who contributed his quota to the subsidy. The origin of this custom of distributing salt is obscure, but it would appear to have reference to those Boy-bishops at schools and colleges in former times, when a new-comer or freshman arrived, and, by being salted, was, by a variety of ceremonies more amusing to his companions than himself, admitted to a participation with the other scholars in their pastimes and privileges. A favourite joke at Eton in former
times was, it is said, for the salt-bearers to fill with the commodity which they carried, the mouth of any stolid-looking countryman, who, after giving them a trifle, asked for an equivalent in return.

About the middle of the last century, the Eton Montem was a biennial, but latterly it became a triennial ceremony. One of the customs, certainly a relic of the Boy-bishop revels, was, after the procession reached Salt Hill, for a boy habited like a page to read prayers, whilst another officiated as clerk, who at the conclusion of the service was kicked by the parson downhill. This part of the ceremonies, however, was latterly abrogated in deference, as is said, to the wishes of Queen Charlotte, who, on first witnessing the practice, had expressed great dissatisfaction at its irreverence.

The Eton-Montem festival found a stanch patron in George III., who generally attended it with his family, and made, along with them, liberal donations to the salt-bearers, besides paying various attentions to the boys who filled the principal parts in the show. Under his patronage the festival flourished with great splendour; but it afterwards fell off, and at last, on the representation of the master of Eton College to her Majesty and the government, that its continuance had become undesirable, the Eton Montem was abolished in January 1847. This step, however, was not taken without a considerable amount of opposition.

In recent times, the Eton-Montem festival used to be celebrated on Whit-Tuesday, but previous to 1769, it took place on the first Tuesday in Hilary Term, which commences on 23rd January. It then not unfrequently became necessary to cut a passage through the snow to Salt Hill, to allow the procession to pass. At a still remoter period, the celebration appears to have been held before the Christmas holidays, on one of the days between the feasts of St Nicholas and the Holy Innocents, the period during which the Boy-bishop of old, the precursor of the 'captain' of the Eton scholars, exercised his prelatical functions.

The Introduction of Tea.

Dr Johnson gives Earsl Arlington and Ossory the credit of being the first to import tea into England. He says that they brought it from Holland in 1666, and that their ladies taught women of quality how to use it. Pepys, however, records having sent for a cup of tea, a China drink of which he had never drunk before, on the 26th of September, 1667; and in the same year, a duty of eightpence a gallon was levied on all sherbert, chocolate, and tea made for sale. Waller, writing on some tea commended by Catherine of Braganza, says:

'The best of herbs and best of queens we owe To that bold nation, which the way did shew To the fair region where the sun does rise.'

The Muses' friend, Tea, does our fancy aid, Repress the vapours which the head invade, And keeps the palace of the soul serene.'

Her majesty may have helped to render tea-drinking fashionable, but the beverage was well known in London before the Restoration. The Mercurius Politicus of September 30, 1658, contains the following advertisement:—'That excellent, and by all physicians approved, China drink, called by the Chineaus Tcha, by other nations Teas, alias Tee, is sold at the Sultaness Head Coffee-House, in Sweeting's Bents, by the Royal Exchange, London.' Possibly this announcement prompted the founder of Garraway's to issue the broadsheet, preserved in the British Museum Library, in which he thus runs riot in exaltation of tea: 'The quality is moderately hot, proper for winter or summer. The drink is declared to be most wholesome, preserving in perfect health until extreme old age. The particular virtue of these is to make the body active and lusty. It helpteth the headache, giddiness and heaviness thereof. It removeth the obstructions of the spleen. It is very good against the stone and gravel. . . . . . . . . . It taketh away the difficulty of breathing, opening obstructions. It is good against lipittude distillations, and cleareth the sight. It removeth lassitude, and cleanseth and purifieth the internal humours and a hot liver. It is good against crudities, strengthening the weakness of the stomach, causing good appetite and digestion, and particularly for men of a corpulent body, and such as are great eaters of flesh. It vanquisheth heavy dreams, easeth the brain, and strengthenth the memory. It overcometh superfluous sleep, and prevents sleepiness in general, a draught of the infusion being taken; so that, without trouble, whole nights may be spent in study without hurt to the body. It prevents and cures aches, surges, and fevers by infusing a fit quantity of the leaf, thereby provoking a most gentle vomit and breathing of the pores, and hath been given with wonderful success. It (being prepared and drunk with milk and water) strengtheneth the inward parts and prevents consumptions. . . . . It is good for colds, dropsies, and scurvies, and expellieth infection. . . . . . . . . . And that the virtue and excellence of the leaf and drink are many and great, is evident and manifest by the high esteem and use of it (especially of late years), by the physicians and knowing men in France, Italy, Holland, and other parts of Christendom, and in England it hath been sold in the leaf for six pounds, and sometimes for ten pounds the pound-weight; and in respect of its former scarce-ness and dearness, it hath been only used as a regalia in high treatments and entertainments, and presents made thereof to princes and grandees till the year 1657.'

Having furnished these excellent reasons why people should buy tea, Mr Garway proceeds to tell them why they should buy it of him: 'The said Thomas Garway doth now sell a quantity thereof, and first publicly sold the said tea in sundry drinks, made according to the directions of the
most knowing merchants and travellers into those Eastern countries; and upon knowledge and experience of the said Garway's continued care and industry in obtaining the best tea, and making drink thereof, very many noblemen, physicians, merchants, and gentlemen of quality, have ever since sent to him for the said leaf, and daily resort to his house in Exchange Alley, to drink the drink thereof. And to the end that all persons of eminency and quality, gentlemen and others, who have occasion for tea in leaf, may be supplied, these are to give notice that the said Thomas Garway hath tea to sell from sixteen shillings to fifty shillings the pound.'

*Rugg's Journal* tells us that tea was sold in almost every street in London, in 1659, and it stood so high in estimation, that, two years later, the East India Company thought a couple of pounds a gift worthy the acceptance of the king. Its use spread rapidly among the wealthier classes, although the dramatists rallied against it as only fit for women, and men who lived like women. In 1678, we find Mr Henry Saville writing to his uncle, Secretary Coventry, in disparagement of some of his friends who have fallen into 'the base unworthy Indian practice' of calling for tea after dinner in place of the pipe and bottle, seeming to hold with *Poor Robin* that

'Arabian tea

Is dishwater to a dish of whey.'

The enemies of the new fashion attacked it as an innocent pretext for bringing together the wicked of both sexes, and ladies were accused of slipping out of a morning:

'To Mrs Thody's

To cheapen tea, without a bodice.'

Dean Swift thus sketches a tea-table scene:

'Let me now survey

Our madam o'er her evening tea,

Surrounded with the noisy clans

Of prudes, coquettes, and harriads.

Now voices over voices rise,

While each to be the loudest vie.

They contradict, affirm, dispute;

No single tongue one moment mute;

And to speak and none to hearken,

They set the very lapdog barking,

Their chattering makes a louder din,

Than fishwives o'er a cup of gin;

Far less the rabble roar and rail,

When drunk with sour election ale!' *Journal of a Modern Lady.*

Scandal, if the poets are to be believed, was always an indispensable accompaniment of the cheering cup:

'Still, as their ebbing malice it supplies,

Some victim falls, some reputation dies.'

And Young exclaims:

'Tea! how I tremble at thy fatal stream!

As Letha dreadful to the love of fame.

What devastations on thy banks are seen,

What shades of mighty names that once have been!

A heastomb of characters supplies

Thy painted altars' daily sacrifice!' *The Female Spectator* (1745) declares the tea-table 'costs more to support than would maintain two children at nurse; it is the utter destruction of all economy, the bane of good-housewifery, and the source of idleness.' That it was still a luxury rather than a necessity, is plain from the description of the household management of a model country rector, as given in *The World* (1753). 'His only article of luxury is tea, but the doctor says he would forbid that, if his wife could forget her London education. However, they seldom offer it but to the best company, and less than a pound will last them a twelvemonth.' What would a frugal man have thought of the country lady mentioned by Southey, who, on receiving a pound of tea as a present from a town-friend, boiled the whole of it in a kettle, and served up the leaves with salt and butter, to her expectant neighbours, who had been invited specially to give their opinions on the novelty! They unanimously voted it detestable, and were astonished that even fashion could make such a dish palatable.

Count Belchigen, physician to Maria Theresa, ascribed the increase of new diseases to the weakness and debility induced by daily drinking tea; but as a set-off, allowed it to be a sovereign remedy for excessive fatigue, pleurisy, vapours, jaundice, weak lungs, leprosy, scurvy, consumption, and yellow fever. Jonas Hanway was a violent foe to tea. In an essay on its uses, he ascribes the majority of feminine disorders to an indulgence in the herb, and more than hints that the same vice has lessened the vigour of Englishmen, and deprived Englishwomen of beauty. He is horrified at the fact of no less than six ships and some five hundred seamen being employed in the trade between England and China! Johnson reviewed the essay in the *Literary Magazine*, prefacing his criticism with the candid avowal that the author 'is to expect little justice from a hardened and shameless tea-drinker, who has for twenty years diluted his meals with only the infusion of this fascinating plant; whose kettle has scarcely time to cool; who with tea amuses the evening, with tea solaces the midnight, and with tea welcomes the morning.' Spite of this threatening exordium, the doctor's defence of his beloved drink is but weak and lukewarm. He admits that tea is not fitted for the lower classes, as it only gratifies the taste without nourishing the body, and styles it 'a barren superfluity,' proper only to amuse the idle, relax the studious, and dilute the meals of those who cannot use exercise, and will not practise abstinence. For such an invertebrate tea-drinker, the following is but faint praise: 'Tea, among the greater part of those who use it most, is drunk in no great quantity. As it neither exhilarates the heart, nor stimulates the palate, it is commonly an entertainment merely nominal, a pretence for assembling to prattle, for interrupting business or diversifying idleness.' He gives the annual importation then (1787) as about four million pounds, 'a quantity;' he allows, 'sufficient to alarm us.' What was the doctor's fate now, when, as evening closes in, almost every English household gathers round the table, where

'The cups

That cheer but not inebriate wait on each,'

and the quantity of the article imported is nearly fortyfold what he regards in so serious a light?'
DECEMBER 7.

St Ambrose, bishop and confessor, doctor of the church, 397. St Fara, virgin and abbess, 655.

Born.—Giovanni Lorenzo Bernini, architect and sculptor, 1598, Naples; Rev. Richard Walpy, D.D., compiler of classic grammars, &c., 1764, Jersey.

Died.—Cicero, Roman orator, assassinated 43 B.C.; Algernon Sidney, republican and patriot, beheaded on Tower Hill, 1603; St. Joseph Ney, general of Napoleon, shot at Paris, 1816; Dr John Aitken, popular author, 1822, Stock-Nessington; Abbé Macpherson, rector of the Scotch College, Rome, 1846.

SINGULAR DISPENSATION GRANTED BY LUTHER AND OTHER PROTESTANT DIVINES.

Philip, landgrave of Hesse, one of the staunchest protectors of Luther, had married Catherine of Saxony; but this princess, though beautiful and accomplished, had never succeeded in finding favour in his eyes. After having, for several years, paid his addresses to various beauties, the inconstant husband at last formed a more abiding intimacy with Marguerite de Staal. A severe illness, from which he only recovered with great difficulty, had the effect of inspiring him with some scruples relative to his course of life—he resolved to have his conscience set at rest.

To attain this object, the landgrave addressed a memorial to Luther, in which, fortiﬁed by the authority of the Old Testament, he demanded from the Reformer permission to have two wives at the same time—one who, in public, should receive the honours due to a princess and his consort, and another who, without scandal, might be regarded as his legal mistress. Although, in this remarkable document, Philip supplicates the doctors to grant him this favour, he at the same time threatens to appeal to the emperor, or even the pope, should he fail in having his request complied with by the Protestant divines. Moreover, he makes most liberal promises. ‘Let them grant me,’ he says, ‘in the name of God, what I ask, so that I may be able to live and die more cheerfully for the cause of the gospel, and be more ready to undertake its defence. I engage to perform, on my part, all that may be required of me in reason, whether as regards the property of convents, or matters of a similar description.’

The conduct of this singular negotiation was intrusted to the celebrated reformer, Bucer. The Protestant clergy were embarrassed. On the one part, they feared to bring their profession of belief into discredit by so extended a compliance; while, on the other hand, they were desirous to retain a patron of such power and inﬂuence as Philip. At last Melanchthon, as principal scribe, drew up a resolution, which was approved by the other divines. An extract from this curious document is subjoined.

It is drawn up with considerable care and address. The theologians begin by laying down, according to the gospel, the position that no man ought to have more than one wife; the landgrave is requested to take notice what confusion would result, if this fundamental law of society were overthrown; and it also represents to him that the
(1640) in which the above marriage of Philip of Hesse took place, Henry VIII of England obtained, or rather commanded, the sanction of his clergy and parliament to his divorce from Anne of Cleves, merely because she did not happen to be to his liking. A still more liberal dispensation from the ordinary rules of morality was, in the last century, accorded by the Calvinistic clergy of Prussia, to the reigning king, Frederick William II, nephew and successor of Frederick the Great, to have three wives at the same time—Elizabeth of Brunswick, the Princess of Hesse, and the Countess of Ehoof. The authorisation granted by the divines was, like that of Luther and his brethren, founded on the principle, that it was better to contract an illegal marriage than to pursue habitually a course of immorality and error.

CUT-PURSES AND PICKPOCKETS.

In the olden time, ere pockets were invented, the gipciere, or purse, containing money and other valuables, being worn at the girdle, became a muchcoveted prize for the dishonest, who managed to obtain possession of it by deftly cutting the strings by which it was suspended. Autolycus said, and we can well believe him, that 'an open ear, a quick eye, and a nimble hand, is necessary for a cut-purse.' Subsequently, however, when pockets came into fashion, the cut-purses—moving with the times, as the saying is—became pickpockets; still, down to the period of the Restoration, both branches of the light-fingered art flourished contemporaneously. And, though the days of the girdle-purse are long since past, its remembrance is not even yet lost. In the language of vulgar contempt, the opprobrious epithet of 'cut-purse rogue' is still applied to a person, whose illfavoured countenance is not belied by the honesty of his character. The thieves of London have long enjoyed the reputation of being exceedingly dexterous in the art of stealing from the person. Paul Hentzner, who visited England in 1588, in the capacity of tutor to a young German nobleman, tells us that, at Bartholomew Fair, one of his company, a Dr Tobias Solander, 'had his pocket picked of his purse, containing nine crowns de soleil, which, without doubt, was so cleverly taken from him by an Englishman, who always kept very close to him, that the doctor did not in the least perceive it.'

Such dexterity is not, altogether, to be wondered at in the street-thieves of the period, seeing that they were regularly trained to the exercise of their profession. Stow informs us that, in 1588, a person named Wotton, 'kept an academy for the education and perfection of pickpockets and cut-purses.' This man was of gentle birth, and had been a merchant of good credit, but becoming reduced in circumstances, he set up an ale-house at Smart's Quay, near Billingsgate. Here 'he commenced a new trade in life,' by opening a school to teach young boys to cut purses. 'Two devices,' continues Stow, 'were hung up—one was a pocket, and the other was a purse. The pocket

had in it certain counters, and was hung about with hawk's bells, and over the top did hang a little sacring bell. The purse had silver in it, and he that could take out a counter, without noise of any of the bells, was adjudged a judicial nypper, according to their terms of art; a foyster was a pickpocket, a nypper was a pick-purse or cutpurse.'

Mr John Selman, a celebrated nypper and foyster, whose portrait is here presented to the reader, with the purse, the fatal fruit of his dishonesty, still in his hand, was in all probability trained at Wotton's academy, on Smart's Quay. His history, so far as it is known, is short and simple, and in some places reads very like a police report of the present day. On Christmas-day, 1611, when King James, Queen Anne, the Duke of York, and several of the nobility, were receiving the sacrament in the Chapel Royal of Whitehall, a Mr Dubbeday observed a stranger in the sacred edifice, whose honesty he had some reason to suspect. Seeing this person swiftly but quietly leaving the chapel, after hovering for a short time round a Mr Barrie, Dubbeday went up to Barrie, and in the stereotyped phrase of a modern policeman, asked him if he had lost anything. Barrie at first said, 'No,' but on feeling his pockets, found that his purse, containing forty shillings, was gone. The two immediately followed the stranger, and arresting him, found in one of his pockets the stolen purse, in the other, a small knife used for cutting. After service was over, Sir Richard

* The above article is, for the most part, translated from Ephemerides Politiques Litteraires et Religieuses, a French work already quoted. Strange as the facts appear, they are perfectly authentic.
Benister, clerk of the Green Cloth, as the crime had been committed within the precincts of the court, examined the prisoner. The man, having been taken "afron "delic-ious," could not deny his crime. He gave his name John Selman, resident in Shoe Lane, of no trade or profession, and acknowledged that he had gone to the royal chapel with an evil intention. He wore "a fair black cloak, lined and faced with velvet, the rest of his apparel being suitable thereto." In short, Selman was a prototype of the modern swell-mob's-man; and the short cloak he is represented wearing in the engraving, greatly resembles the cape which detectives tell us is used as a "cover" by pickpockets at the present time. Six days afterwards, Selman was tried by royal commission, and found guilty. Being asked why sentence of death should not be passed upon him, he fell on his knees, submitted himself to the king's mercy, and begged that his body might have Christian burial. Then Sir Francis Bacon delivered sentence, not without taking the opportunity of pandering to the king's love of gross flattery, by saying: "The first and greatest sin that ever was committed was done in heaven; the second was done in paradise, being heaven upon earth; and truly I cannot choose but place this in the third rank, in regard it was done in the house of God, and also God's lieutenant here on earth, being in God's house there present ready to receive the holy sacrament, all which being considered, the time, the place, and person there present, I do advise thee, that as thou hast submitted thyself to the king's mercy, so thou wilt crave pardon at God's hands." Seven days more, and the sentence was carried into execution between Charing Cross and the Court Gate. Selman's last speech we may pass over; but it appears that the crowd at the execution behaved much as such crowds now do. "See," exclaims the chronicler to whom we are indebted for Selman's history, "see the graceless and unrepenting minds of such livers; for one of his quality, a pickpocket, even at his execution, grew master of a true man's purse, who being presently taken, was imprisoned, and is like, the next sessions, to wander the long voyage after his grand captain, master John Selman." Ben Jonson humorously introduces a pickpocket in his play of Bartholomew Fair. A simple country squire, who fancies himself a match for all kinds of roguesy, asks a ballad-singer for a song. The vocalist proposing to sing, "A caveat against Out-purses," the squire exhibits, boastingly, his well-lined purse, defying any thief to take it from him, and the singer commences thus:

"My masters, and friends, and good people, draw near,
And look to your purses, for that I do say;
And though little money, in them you do bear,
It costs more to get, than to lose in a day,
You oft have been told,
Both the young and the old,
And hidden beware of the cut-purse so bold.
Then if you take heed not, free me from the curse,
Who both give you warning, you, and the cut-purse.
Youth, youth, you had better been starved by thy nurse,
Than live to be hanged for stealing a purse!"

In another verse allusion is evidently made to Selman.

"At plays, and at sermons, and at the sessions,
Tis daily their practice such booty to make;
Yes, under the gallows, as executions,
They stick not the state's abouts' purses to take.
Nay, one without grace,
At a better place,
At court, and in Christmas, before the king's face,
Alack! thou, for pity, must I bear the curse,
That only belongs to the cunning cut-purse.
Youth, youth, thou hast better been starved by thy nurse,
Than live to be hanged for stealing a purse!"

While the squire stands listening to the song, his purse in his pocket, and one hand holding it firmly, a thief tickles his ear with a straw. As the hand is lifted to brush away the supposed insect, the purse is stolen and passed to the ballad-singer, who is an accomplice. The surprise and disappointment of the squire may be imagined, but only rare Ben himself can describe it.

The most noted pickpocket in what Dr Johnson termed the Biographia Literaria was a woman named Mary Frith, but better known as Mall Cut-purse. This 'Sybilla Tyburnia' was born in 1586, and soon became an accomplished cut-purse. The times were then such that there was little new under the sun. She used to work in company with two other thieves, just as pickpockets do now. One called the 'bull', created an obstruction; Mary, the 'fire', cut the purse, and handed it to a third named the 'rub,' who carried it off. When Mary was quite young, she, for a bet of £20, rode Bank's famous horse Morocco, from Charing Cross to Shoreditch, dressed in doublets, breeches, boots, and spurs, carrying a trumpet in her hand and a 'banner' hanging on her back. For wearing men's clothes on this occasion, Mall was tried by the ecclesiastical court, and forced to do penance at the door of St Paul's Cathedral. Having thus atoned for her offence, and finding a great convenience in male attire, she wore it ever after. She soon became an adroit fencer and bold rider, and in the character of a highwayman, robbed the Parliamentary general, Fairfax, of 300 gold jacquards on Holmewhat Heath. This, however, she considered merely robbing a Philistine who had stolen the crown from her king; for Mall was the stanchest of Cavaliers, and this trait in her character throws an air of romance over her strange history. She had established herself opposite the Conduit, in Fleet Street, as a broker or negotiator between thieves and the public, when Charles I passed her door, on his return from the Border in 1639. Rushing out, she caught the king's hand, and kissed it; the same day she caused the Conduit to run with wine at her own expense. When Wentworth's trial was in progress, she sent a bull to the Bear Garden to be baited. As the sport was about to commence, she said: 'Gentlemen, that noble animal, the bull, is named Strafford; the wretched curs going to bait him are named Pym and St John; and if any one feels offended at what I say, here am I ready to maintain it by sword or cudgel.'

Mall's deeds were not all done in defiance of the law. She was instrumental in bringing to justice the notorious 'five women barbers,' who used a young girl in a very cruel and indescribable manner. With less good taste and feeling, Killigrew composed a song on this affair, which he sang to

* See Book of Days, vol. i. p. 325.
Charles II, till tears of laughter ran down the too merry monarch's cheeks. Antiquaries would give almost anything for a perfect copy of this song, which thus commences:

'Did you ever hear the like?
Did you ever hear the fame?
Of the five women barbers,
Who lived in Drury Lane.'

One of these five women barbers was the mother of Nan Clarges, who, marrying Monk, when his fortunes were at a low ebb, lived to hear herself styled Duchess of Albermarle.

Mall is said to have been the first Englishwoman who smoked tobacco. A portrait, representing her in the act of indulging in the luxury, adorns the frontispiece of Middleton's play of the Roaring Girl, in which she figures as the principal character. Another portrait represents her with a dog, an ape, and a parrot; for, like her friend Banks, she delighted in training animals, and made money by exhibiting their tricks. It is said that she was at one time worth £3000, but her generosity to distressed Cavaliers left her little more than £100 at her death. This sum she left to her relative, John Frith, a shipmaster at Rotherhithe; advising him to spend it in good wine, like a man, rather than venture it at sea, at the risk of being drowned in vile salt-water, like a dog. She died of a dropsey when upwards of seventy years of age, after having composed the following epitaph on herself, in the form of an acrostic:

'Merry I lived, and many pranks I played,
And, without sorrow, now in grave am laid;
Rest, and the sleep of death, doth now succeed,
Youth's active size, and their old-aged increase.

Famous I was for all the thieving art,
Known for what old women ride in cart,
In pocket and in packet, I had part,
His life I lived in man's disguise,
E o best laments me that with laughter cries.'

An instance of a female acquiring a considerable sum of money by picking pockets, occurred in the last century. In 1783, a Miss West, a noted pickpocket, died; leaving, according to a magazine obituary, £3000 to her two children—one of whom was born in Clerkenwell Bridewell, while the mother was imprisoned for picking pockets in Exeter Change, when Lord Baltimore (another infamous character) 'was lying in state.'

The Conception of the Blessed Virgin Mary. St Romarins, abbot, 658.

Conception of the Virgin Mary.

This is one of the festivals of the Roman Catholic Church, in connection with which a long controversy prevailed. It is well known that the doctrine of the immaculate conception of the Virgin, or her conception without the taint of original sin, was, till recently, a theological dogma on which the Church of Rome had pronounced no positive decision. Though accepted by the majority of doctors, and strenuously maintained by many theological writers, it was, nevertheless, denied by some, more especially by the Dominicans, and was pronounced by several popes to be an article of faith which was neither to be absolutely enforced or condemned—a point, in short, on which the members of the church were free to use their private judgment. But, a few years ago, the question, which for centuries had been allowed to remain an open subject for discussion, was determined in the affirmative by a deliverance of Pope Pius IX. on 8th December 1854. The doctrine of the Immaculate Conception of the Virgin forms, accordingly, now, an essential article in the Roman Catholic system of belief.

Born.—Mary, Queen of Scots, 1542, Linlithgow; Queen Christina of Sweden, 1626; Charles Wentworth Dilke, editor of the Atheneum, &c., 1789; Johann Georg von Zimmermann, celebrated author of treatise on Solitude, 1728, Brug, Switzerland.

Died.—Emperor Sigismund of Germany, 1437; Henry Jenkins, aged 169, 1670, Ellerton-upon-Swale, Yorkshire; Richard Baxter, Nonconformist divine, 1691, London; Scaramouch, celebrated May, 1694, Paris; Barthélemy d'Herbelot, distinguished orientalist, 1695, Paris; Thomas Corneille, dramatist, brother of Pierre, 1709, Andelys; Vitus Behring, navigator, 1741, Behring Island, off Kamtchatka; Thomas de Quincey, miscellaneous writer, 1859, Edinburgh.

THOMAS DE QUINCEY.

In Mrs Gordon's Memoir of Christopher North, published towards the close of 1862, we meet with several curious illustrations of De Quincey's singular character.

De Quincey's confirmed habit of taking opium, which, at one time, held complete mastery over his powerful intellect, caused him to be distinguished 671
by the undesirable title of ’the Opium Eater.’ He may be said to have given himself the appellation in the first instance, by his book, entitled The Confessions of an Opium Eater, in which he professes to describe his experience as such, vividly portraying the wretchedness and the ecstasies of those extraordinary conditions of mind and body, with which, from his constant use of the drug, he became familiar. In 1829, De Quincey made a protracted stay at Professor Wilson’s house. In the later years of his life, he almost entirely shook off an indulgence which pain, in the first instance, had led him to acquire, and which use had made habitual, and, to some extent, necessary; but at the time of this visit, he was still a slave. Mrs Gordon thus describes his daily routine, on the occasion of his visit to her father, above referred to:

‘An ounce of laudanum per diem prostrated animal life in the early part of the day. It was no unfrequent sight to find him in his room lying upon the rug in front of the fire, his head resting upon a book, with his arms crossed over his breast, plunged in profound slumber. For several hours he remained prostrate, until the effects of the drug had passed away. The time when he was most brilliant, was generally towards the early morning-hours; and then, more than once, in order to shew him off, my father arranged his supper-parties, so that, sitting till three or four in the morning, he brought Mr De Quincey to that point at which, in charm and power of conversation, he was so truly wonderful.’

A less painful and more amusing anecdote is told of that worthy, wandering manner, which renders his impassioned and beautiful prose sometimes tedious in the extreme. Being obliged, from delicacy of constitution, to be careful about his food, as Mrs Gordon tells us, he used to dine in his own room, and at his own hour. His invariable diet was ‘coffee, boiled rice and milk, and a piece of mutton from the loin.’ ‘The cook, who had an audience with him daily, received her instructions in silent awe, quite overpowered by his manner; for, had he been addressing a duchess, he could scarcely have spoken with more deference. He would couch his request in such terms as these: “Owing to dyspepsia afflicting my system, and the possibilities of any additional disarrangement of the stomach taking place, consequences incautiously distressing would arise; so much so, indeed, as to increase nervous irritation, and prevent me from attending to matters of overwhelming importance, if you do not remember to cut the mutton in a diagonal rather than in a longitudinal form.” The cook—a Scotchwoman—had great reverence for Mr De Quincey as a man of genius; but after one of these intervals, her patience was pretty well exhausted, and she would say: “Weel, I never heard the like o’ that in a’ my days; the body has an awfu’ sicht o’ words. If it had been my ain maister that was wanting his dinner, he would ha’ ordered a hale tablefu’ wi’ little mair than a waff o’ his haun, and hers a’ this clever about a bit mutton nae bigger than a prin. Mr De Quinshye would make a grant preacher, though I’m thinking a hantle o’ the folk woulda ken what he was driving at.”

The cook’s view of the opium-eater’s style was anything but superficial. During the last seventeen years of his life, De Quincey resided at the village of Lasswade, near Edinburgh. He died in the Scottish metropolis on 8th December 1859.

### SPOTS IN THE SUN.

December 8, 1590, at sunset, James Walsh of the ship Richard of Arnemdel, sailing off the coast of Guinea, observed a great black spot on the sun, and found the same appearance visible next morning.—Hablay’s Voyages, ii. 618. Similar phenomena had been observed on several previous occasions. They did not, however, become a subject for scientific remark till about 1611.

‘When viewed with a telescope and coloured glasses, the sun is observed to have large black spots upon it, surrounded with a band or border less completely dark, called a penumbra. This penumbra is partially luminous, and terminated by distinct edges, presenting no apparent gradations of luminosity; it is mostly cloudy until the effects of the torpor had passed away. The time when he was most brilliant, was generally towards the early morning-hours; and then, more than once, in order to shew him off, my father arranged his supper-parties, so that, sitting till three or four in the morning, he brought Mr De Quincey to that point at which, in charm and power of conversation, he was so truly wonderful!’

A less painful and more amusing anecdote is told of that worthy, wandering manner, which renders his impassioned and beautiful prose sometimes tedious in the extreme. Being obliged, from delicacy of constitution, to be careful about his food, as Mrs Gordon tells us, he used to dine in his own room, and at his own hour. His invariable diet was ‘coffee, boiled rice and milk, and a piece of mutton from the loin.’ ‘The cook, who had an audience with him daily, received her instructions in silent awe, quite overpowered by his manner; for, had he been addressing a duchess, he could scarcely have spoken with more deference. He would couch his request in such terms as these: “Owing to dyspepsia afflicting my system, and the possibilities of any additional disarrangement of the stomach taking place, consequences incautiously distressing would arise; so much so, indeed, as to increase nervous irritation, and prevent me from attending to matters of overwhelming importance, if you do not remember to cut the mutton in a diagonal rather than in a longitudinal form.” The cook—a Scotchwoman—had great reverence for Mr De Quincey as a man of genius; but after one of these intervals, her patience was pretty well exhausted, and she would say: “Weel, I never heard the like o’ that in a’ my days; the body has an awfu’ sicht o’ words. The cook’s view of the opium-eater’s style was anything but superficial. During the last...
DECEMBER 9.

The Seven Martyrs at Samosata, 297. St Leocadia, virgin and martyr, 304. St Wulflhilde, virgin and abbess, 990.

Born.—Gustavus Adolphus the Great, of Sweden, 1594; John Milton, poet, 1608; London; William Whiston, divine, translator of Josephus, 1667, Norton, Leicester ; Philip Y. of Spain, 1683, Vercelli; Pope Sixtus IV, 1595; Sir Anthony Vandyck, painter, 1641; London; Pope Clement IX, 1659; Edward Hyde, Earl of Clarendon, 1674, Rouen; John Reinbold Forster, naturalist, and voyager, 1798, Halle; Joseph Bramah, inventor of the Bramah press, etc, 1814, Piacenza; Charles Macfarlane, historian, 1856, London; John O'Donovan, LL.D., Irish historical antiquary, 1861, Dublin.

MILTON'S BIRTHPLACE, AND ITS VICINITY.

The house in which John Milton was born, on the 9th December 1608, no longer exists; but its site can be determined within a few yards. His father was a scrivener, who carried on business in Bread Street, Cheapside; and here was born the child who was destined to become one of the world's greatest poets. 'In those days,' says Professor Masson in his Life of Milton, 'houses in cities were not numbered, as now; and persons in business, to whom it was of consequence to have a distinct address, affected the purpose by exhibiting over the door some sign or emblem. This fashion, now left chiefly to publicans, was once common to all trades and professions. Booksellers and printers, as well as grocers and mercers, carried on their business at the "Cross Keys," the "Dial," the "Three Pigeons," the "Ship and Black Swan," and the like, in such and such streets; and every street in the populous part of such a city as London presented a succession of these signs, fixed or swung over the doors. The scrivener Milton had a sign as well as his neighbours. It was an eagle with outstretched wings; and hence his house was known as the "Spread Eagle," in Bread Street. Now, it appears that there is a little inlet or court on the east side of Bread Street, three or four doors from Cheapside, which was once called "Spread Eagle Court," but which has now no name distinct from that of the street itself; and Professor Masson thinks, not without good grounds, that this spot denotes pretty nearly the site of John Milton's birthplace. Bread Street is almost exactly in the centre of that large area of buildings which was consumed by the great fire of 1666; and the house in question was one of those destroyed. Before that year (although Paradise Lost was not yet published), Milton's name had become famous; and Anthony A Wood states that strangers liked to have pointed out to them the house where he first saw the light. The church of Allhallows, close by, still contains the register of Milton's baptism.

It is interesting to trace the changes which that part of the city has undergone since the old days. Couriers, poets, wits, and gallants were once guests at home in a place where almost every house is now a wholesale warehouse for textile goods. Milton himself, as we know from the details of his life, after his boyish days, in Bread Street, lived in Barbican, in Jewin Street, in Bartholomew Close, and in Little Britain, besides various places at the west end of the town. Bread Street was occupied as a bread-market in the time of Edward I.; and other streets turning out of Cheapside or situated near it, such as Milk Street, Wood Street, and Fetter Lane, were in like manner markets for particular kinds of commodities. William Stafford, Earl of Wiltshire, had a mansion in Bread Street, towards the close of the fifteenth century. Stow says: 'On the west side of Bread Street, amongst divers fair and large houses for merchants, and fair inns for passengers, had ye one prison-house pertaining to the sheriffs of London, called the Comptor, in Bread Street; but in the year 1553, the same were removed from thence to one other new Compter in Wood Street, provided by the city's purchase, and built for that purpose.' The 'fair inns for travellers' were the 'Star,' the 'Three Cups,' and the 'George.' But more famous than these was the 'Mermaid,' thought by some writers to have been in Friday Street, but more generally considered to have been in Bread Street. It was a tavern where Shakespeare, Ben Jonson, Beaumont, Fletcher, Donne, and other choice spirits assembled, in the time of Queen Elizabeth.

'What things have we seen Done at the Mermaid!' said one of them; and there can be little doubt that wit flashed and sparkled there merrily; for witty courtiers, as well as witty authors, swelled the number. All are gone now—the bread-market, the Compter, the earl's mansion, the inns for travelers, the renowned 'Mermaid,' and the poet's birthplace; no wealthy merchants, even, 'live' in Bread Street, for their private residences are far away from city bustle. Bread Street is now almost exclusively occupied by the warehouses of wholesale dealers in linens, cottons, woollens, silks, and all the multifarious articles, composed of these, belonging to dress. Not only are nearly all the sixty or seventy houses so occupied, but in some cases as many as seven wholesale firms will rent the rooms of one house.

And so it is in nearly all the streets that surround Bread Street. Where almost every house is now a warehouse, there were once places or people that one likes to read and hear about. 'Take Cheapside ('Chepe,' or 'West Cheaping') itself. This has always been the greatest thoroughfare in the city of London; and nearly all the city pages of old days passed through it. It contained the shops of the wealthy mercers and drapers from very early times. Lydgate, in his London Lyfepenny, written in the fifteenth century, makes his hero say:

'Then to the Chepe I began me drawne,
Where much people I saw for to stand.
One o'deled me velvet, slylke, and lawne;
An other he taketh me by the hands.'

'Here is Parys thread, the finest in the land!''

This is curious, as tending to show that the mercers or their apprentices were wont to solicit custom at their shop-doors, as butchers were the 'Conduit' in Cheapside, near which Wat Tyler beheaded some of his prisoners in 1381, and Jack Cade beheaded Lord Sayes in 1450. The cross in Cheapside, one of those erected by Edward in memory of his queen, Eleanor, was near the
MILTON'S BIRTHPLACE.

Poultry. Where Bow Church now stands, Edward I. and his queen sat in a wooden gallery to see one of the city pageants pass through Cheapside. An accident on that occasion led to the construction of a stone gallery; and when all this part of the city was laid in ashes in 1666, Sir Christopher Wren included a pageant-gallery in the front of his beautiful steeple of Bow Church, just over the arched entrance. That gallery, in which Charles II. and Queen Anne were royal visitors, is still existing, though no longer used in a similar way. Concerning the street itself, Hove writes about 1631, said: 'At this time and for divers years past, the Goldsmith's Bow' (a jutting row of wooden tenements), 'in Cheapside, was very much abated of her wonted store of goldsmiths, which was the beauty of that famous street; for the young goldsmiths, for cheapness of dwelling, take their houses in Fleet Street, Holborn, and the Strand, and in other streets and suburbs; and goldsmiths' shops were turned to milliners, linen-drapers, and the like.' Two centuries or more ago, therefore, Cheapside had lost its lustre for goldsmiths, but it had lost its lustre for mercers and drapers, became still more extensively associated with those trades. It was about that time that Charles I. dined on one occasion with Mr. Bradborne, one of the wealthy Cheapside mercers. If we turn into any one of the streets branching from this great artery, we should find strange contrasts to the old times now exhibited. In Friday Street, now occupied much in the same way as Bread Street, there was at one time a fish-market on Fridays; the 'Nag's Head,' at the corner of Cheapside, was concerned in some of the notable events of Elizabeth's reign; and a club held the meeting which led eventually to the establishment of the Bank of England. In Old Change—once the 'Old Exchange,' for the receipt of bullion to be coined; and where dealers in 'ventilating corsets' and 'elastic crinolines' now share most of the houses with mercers and drapers—Lord Herbert, of Cherbury, had a fine house and garden in the time of James I.; and early in the last century, there was a colony of Armenian merchants there. In Bow Lane, Tom Coryat, the eccentric traveller, died in 1617. In Soper's Lane, changed, after the great fire, to Queen Street, the 'Nag's Head,' where there were the whole force of a 'scullion's band,' now became the wholesale-dealers in drugs and spices. In the Old Jewry, Sir Robert Clayton had a fine house in the time of Charles II.; and in this street Professor Parson died. Bucklersbury, where Sir Thomas More lived, and where his daughter Margaret was born, was a famous place for druggists, apothecaries, herbalists, anddealers in 'simples.'

BRAMAH LOCK-PICKING.

Joseph Bramah, the mechanical engineer, is better remembered, perhaps, in connection with lock-making than with any other department of his labours, although others were of a more important character. Born in 1748, he was intended for the church; but his brother, Sir Christopher Wren, whose father was a farmer in Yorkshire; but a preference for the use of mechanical tools led him to the trade of a carpenter and cabinet-maker. He became an inventor, and then a manufacturer, of valves and other small articles in metal-work; and in 1784, he devised the 'impregnable' lock, which has ever since obtained so much celebrity. Then ensued a long series of inventions in taps, tubes, pumps, fire-engines, beer-engines for taverns, steam-engines, boilers, fire-plugs, and the like. His hydraulic-press is one of the most valuable contributions in this country to the fine mechanical arts, and his skill in manufacturing and engineering purposes. His planning-machine for wood and metal surfaces has proved little less valuable. He made a machine for cutting several pen-nibs out of one quill, and a machine for numbering bank-notes, and devised a new mode of rendering timber-proof against dry-rot. In the versatile nature of his mechanical genius, he bears a strong resemblance to the elder Brunel. His useful life, passed in an almost incessant series of inventions, was brought to a close, characteristically enough, on December 9, 1814, by a cold caught while using his own hydraulic-press for uprooting trees in Holt Forest.

The reason why Bramah's locks have been more publicly known than any other of his inventions is, because there was a mystery or puzzle connected with them. A door, so far as the public are concerned, is opened only by means of a proper key, is a problem nearly four thousand years old; for Denon, in his work on Egypt, has given figures of a lock found depicted among the bas-reliefs which decorate the great temple at Karnak: it is precisely similar in principle to the wooden locks now commonly used in Egypt and Turkey. The principle is simple, but exceedingly ingenious. Shortly before Mr. Bramah's time, English inventors sought to improve upon the old Egyptian locks; but he struck into a new path, and devised a lock of singularly ingenious and complex character. To open it without its proper key, would be (to use his own language) 'as difficult as it would be to determine what kind of impression had been made in any fluid, when the cause of such impression was wholly unknown; or to determine the separate magnitudes of any given number of unequal substances, without being permitted to see them; or to counterfeit the tally of a banker's cheque, without having either part in possession.' One particular lock made by him, having thirteen small pieces of mechanism called 'sliders,' was intended to defy lock-pickers to this extent: that there were three sliders, and any one of them could be turned by any person, unprovided with the proper key, finding the means of opening the lock without injuring it! Mr. Chubb, and many other persons both in England and America, invented locks which attained, by different means, the same kind of security sought by Mr. Bramah; and it became a custom with the makers to challenge each other—each daring the others to pick his lock. The Great Exhibition of 1851 brought this subject into public notice in a singular way. An American lockmaker, Mr. Hobbs, declared openly at that time that all the English locks, including Bramah's, might be picked; and, in the presence of sixteen witnesses, he picked one of Chubb's safety-locks in twenty-five minutes, without having seen the key, and the avowal of the inventor. After much controversy concerning the justice or unfairness of the process, a bolder attempt was made. There had, for many years, been exhibited in the shop-window of Messrs. Bramah (representatives of the original Joseph Bramah), a padlock of great size, beauty, and complexity; to
which an announcement was affixed, offering a reward of two hundred guineas to any person who should succeed in picking that lock. Mr Hobbs accepted the challenge; the lock was removed to an apartment specially selected; and a committee was appointed, chosen in equal number by Messrs Bramah and Mr Hobbs, to act as arbitrators. The lock was screwed to, and between two boards, and a fixed and sealed box, that no access could be obtained to any part of it except through the keyhole. Mr Hobbs, without once seeing the key, was to open the lock within thirty days, by means of groping with small instruments through the keyhole, and in such way as to avoid injury to the lock. By one curious clause in the written agreement, Messrs Bramah were to be allowed to use the key in the lock at any time or times when Mr Hobbs was not engaged upon it; to insure that he had not, even temporarily, either added to or taken from the mechanism in the interior, or disarranged it in any way. This right, however, was afterwards relinquished; the key was kept by the committee during the whole of the period, under seal; and the keyhole was also sealed up whenever Mr Hobbs was not engaged upon it. This agreement, elaborate enough for a great commercial enterprise, instead of merely the picking of a lock, was signed in July 1851; and Mr Hobbs began operations on the 24th. For sixteen days, spreading over a period of a month, he shut himself in the room, trying and testing the numerous bits of iron and steel that were to enable him to open the lock; the hours thus employed were fifty-one in number, averaging rather more than an hour on each of the days engaged. On the 23d of August Mr Hobbs exhibited the padlock open, in presence of Dr Black, Professor Cowper, Mr Edward Bramah, and Mr Bazalgette. In presence of two of these gentlemen, he then both locked and unlocked it, by means of the implements which he had constructed, without ever having once seen the key. On the 29th he again locked and unlocked it, under the scrutiny of all the members of the committee. On the 30th the proper key was unsealed, and the lock opened and shut with it in the usual way; thus shewing that the delicate mechanism of the lock had not been injured. Mr Hobbs then produced the instruments which he used. The makers of the lock took exception to some of the proceedings, as not being in accordance with the terms of the challenge; but the arbitrators were unanimous in their decision that Mr Hobbs had fairly achieved his task. The two hundred guineas were paid. Of the stormy controversy that arose among the lock-makers, we have not here to speak: suffice it to say, that the lock which was thus picked was one which Joseph Bramah had made forty years earlier. All the intricate details on which the lock-pickers were engaged, were contained within a small brass barrel about two inches long.

The Fortune stood on the east of Golding (now Golden) Lane, Barbican, and was built in the year 1599 for Alleyn and his partner Henalowes, by Peter Streete, citizen and carpenter. The contract for its erection has been preserved, and we find therein stipulated that the frame of the house was to be set square, and contain fourscore feet 'every way square' without, and fifty feet square within. The foundation was of brick, the building itself being constructed of timber, lath, and plaster. It consisted of three stories; the lowest, twelve, the second, eleven, and the upper one, nine feet in height; with four convenient divisions for 'gentlemen's rooms' and 'twopenny rooms'. The stage was forty-three feet wide, and projected into the middle of the yard—the open space where the groundlings congregated. The theatre was covered with tiles, instead of being thatched like the Globe, and the supports of the rooms or galleries were wrought like pilasters, and surmounted by carved satyrs. Streete contracted to do all the work, except the painting, for £440, but the entire cost was considerably more. Alleyn's pocket-book contains the following memorandum, made in 1610:

'What the Fortune cost me in November 1599:
First for the lease to Brews,  . . .  £240
Then for building the playhouse,  . . .  £220
For other private buildings of mine own, 120
So it hath cost me in all for the les,  . . .  £580
Bought the inheritance of the land of the Gills of the Isle of Man within the Fortune, and all the howses in Wight Cross Street, June 1610, for the sum of £340.
Bought John Garret's les in reversal from the Gills for twenty-one years, for £100, so in all it cost me £1320.
Blessed be the Lord God Everlasting.'

While the Fortune was in course of erection, a complaint was laid by sundry persons against building of the new theatre, which led to an order in council limiting the theatres to be allowed to the Globe on the Surrey side, and the Fortune on the Middlesex side of the river—the latter being licensed, contingent on the Curtain Theatre, in Shoreditch, being pulled down or applied to other uses. The performances were only to take place twice a week; and the house was on no account to be opened on Sundays, during Lent, or at such time as any extraordinary sickness shall appear in or about the city.

In May 1601, the 'Admiral's servants' were transferred from the Curtain to Alleyn's new house, where they appear to have prospered. After it was burned down, it was rebuilt with brick, and the shape altered from square to round; and, in 1633, Fryme speaks of it as lately pulled down and enlarged. William Alleyn founded Dulwich College (the charity from which his own profession have been so strangely excluded), the Fortune formed part of its endowment, and the funds of the college suffered greatly when the theatre was closed during the Civil War. In 1649,
some Puritan soldiers destroyed the interior of the house; and the trustees of the college finding it hopeless to expect any rent from the lessees, took the theatre into their own hands. A few years later, they determined to get rid of it altogether, and inserted an advertisement in the Mercurius Politicus of February 14, 1661, to the following effect: 'The Fortune Playhouse, situate between White Cross Street and Golding Lane, in the parish of St Giles, Cripplegate, with the ground belonging, is to be let to be built upon; where twenty-three tenements may be erected, with gardens, and a street may be cut through for the better accommodation of the buildings.' From this, it may be judged that the theatre occupied considerable space. There are no signs of any gardens now, the site of the theatre is marked by a plaster-fronted building bearing the royal arms, represented in the accompanying engraving; and the memory of the once popular playhouse is preserved in the adjacent thoroughfare called Playhouse Yard.

DECEMBER 10.
St Balelais, virgin and martyr, about 304. St Melchiades, pope, 314.

Born.—Thomas Holcroft, dramatist and translator, 1745, London; General Sir William Fenwick Williams, hero of Kara, 1800, Nova Scotia.
Died.—Llewellyn, Prince of Wales, killed, 1282; Edmund Gunter, mathematician, 1635; Jean Joseph Sue, eminent physician, 1723, Paris; Casimir Delavigne, French dramatist, 1843, Lyon; William Empson, editor of Edinburgh Review, 1852, Haileybury; Tommaso Grossi, Italian poet, 1855, Florence; Dr Southwood Smith, author of works on sanitary reform, 1861, Florence.

LLEWELLYN, THE LAST NATIVE PRINCE OF WALES.

The title of 'Prince of Wales' has entirely changed its character. Originally, it was applied to a native sovereign. In the ninth century, when the Danes and Saxons had completely broken the power of the Britons in England, Wales was still in the hands of the Cymri, a branch of the same stock as the Britons; and it was governed by three brothers, with the dignity of princes—the prince of North Wales having precedence of the others in rank. It was, however, a very stormy and unsettled rule; for we find that, during the next three centuries, the princes of Wales were often obliged to pay tribute to the Saxon, Danish, and Norman rulers of England; and, moreover, the princes were frequently quarrelling among themselves, overstepping each other's landmarks, and breaking agreements without much scruple. At length one prince, Llewellyn, rose superior to the rest, and was chosen by the general voice of the people sovereign of Wales in 1246. The border district between the two countries, known as the Marches, was the scene of almost incessant conflicts between the English and Welsh, let who might be king in the one country, or prince in the other. There is a passage in Fuller, illustrative of the hardships endured by the English soldiers during a raid across the Marches nearly to the western part of the principality: 'I am much affected with the ingenuity [ingeniousness] of an English nobleman, who, following the camp of King Henry III. in these parts (Caernarvonshire), wrote home to his friends, about the end of September 1245, the naked truth, indeed, as followeth: 'We lie in our tents, watching, fasting, praying, and freezing. We watch, for fear of the Welshmen, who are wont to invade us in the night; we fast,
for want of meat, for the half-penny loaf is worth five pence; we pray to God to send us home speedily; and we freeze for want of winter garments, having nothing but thin linen between us and the cold. On the other hand, the Welsh were always ready to take advantage of any commotions across the border. In 1688, Llewellyn was compelled to accept terms which Henry III. imposed upon him, and which rendered him little else than a feudal vassal to the king of England. When Henry died, and Edward I. became king, Llewellyn was summoned to London, to render homage to the new monarch. The angry blood of the Welshman chafed at this humiliation; but he yielded—more especially as Edward held in his power the daughter of Simon de Montfort, Earl of Leicester, to whom Llewellyn was betrothed, and he could only obtain her by coming to London. In 1278, Llewellyn and the lady were married, the king himself giving away the bride. The Prince and Princess of Wales went to their future home in the principality. Their happiness, however, was short-lived: the princess died in giving birth to a daughter, who afterwards ended her days as a nun in a Lincolnshire convent. Peace did not long endure between Llewellyn and Edward. A desolating war broke out, marked by much barbarity on both sides. Llewellyn’s friends fell away one by one, and made terms with the powerful king of England. The year 1283 saw the close of the scene. While some of his adherents were combating the Earl of Gloucester and Sir Edmund Mortimer in South Wales, Llewellyn himself was fighting in the north. Leaving the bulk of his soldiers, and coming almost unattended to Builth, he fell into an ambush, which cost him his life. Dr Powel, in 1848, translated into English an account of the scene, written by Caradoc of Llanfargan: ‘The prince departed from his men, and went to the valley with his squire alone, to talk with certain lords of the country, who had promised to meet him there. Then some of his men, seeing his enemies come down from the hill, kept the bridge called the Pont Orewyn, and defended the passage manfully, till one declared to the Englishmen where a ford was, a little beneath, through which he went. He sent a messenger to the Princess Elisa Walwyn, who suddenly fell upon them that defended the bridge, in their backs, and put them to flight. The prince’s esquire told the prince, as he stood secretly abiding the coming of such as promised to meet him in a little grove, that he heard a great noise and cry at the bridge; and the prince asked whether his men had taken the bridge, and he said, ‘Yes.’ ‘Then,’ said the prince, ‘I pass not if all the power of England were on the other side.’ But suddenly, behold the horsemen about the grove; and as he would have escaped to his men, they pursued him so hard that one Adam Franton ran him through with a staff, being unarmed, and knew him not. And his men being but a few, stood and fought boldly, looking for the English; but, on the other hand, the Royal archers, mixed with the horsemen, won the hill, and put them to flight. And as they returned, Franton went to despoil him whom he had slain; and when he saw his face, he knew him very well, and stroke off his head, and sent it to the king at the abbey of Conway, who received it with great joy, and caused it to be set upon one of the highest turrets of the Tower of London.’

Thus closed the career of Llewellyn, the last native sovereign of Wales. Edward I. speedily brought the whole principality under his sway; and Wales has ever since been closely allied to England. Edward’s queen gave birth to a son in Caernarvon Castle; and this son, while yet a child, was formally instituted Prince of Wales. It thenceforward became a custom, departed from in only a few instances, to give this dignity to the eldest son, or heir-apparent of the English king or queen. The title is not actually inherited; it is confirmed by special creation and investiture, generally soon after the birth of the prince to whom it relates. It is said, by an old tradition, that Edward I., to gratify the national feelings of the Welsh people, promised to give them a prince without blemish on his honour, Welsh by birth, and one who could not speak a word of English. He then, in order to fulfill his promise literally, sent Queen Eleanor to be confined at Caernarvon Castle, and Edward was born there had, of course, all the three characteristics. Be this tradition true or false, the later sovereigns cared very little whether the Princes of Wales were acceptable or not to the people of the principality. In the mutations of various dynasties, the Prince of Wales was not, in every case, the eldest son and heir-apparent; and in two instances, there was a princess without a prince. Henry VII. gave this title to his two daughters, Mary and Elizabeth, in succession; but the general rule has been as above stated. It may be useful here to state, in chronological order, the eighteen Princes of Wales, from the time of Edward I. to that of Victoria. We shall construct the list from details given in Dr Dorn’s Book of the Princes of Wales. Each prince has a kind of surname, according to the place where he was born. (1.) Edward of Caernarvon, son of Edward L., born 1254; died 1337, as Edward II. (2.) Edward of Windsor, son of Edward II., born 1312; died 1377, as Edward III. (3.) Edward of Woodstock, son of Edward III., born 1330; known as Edward the Black Prince, and died 1376. (4.) Richard of Bordeaux, son of Edward the Black Prince, born 1367; died 1399. (5.) John, son of Richard II. (6.) Henry VI., born 1425; died 1453; died 1471. (7.) Edward of the Sanctuary, son of Edward IV., born 1470; died 1483, as Edward V. (8.) Edward of Middleham, son of Richard III., born 1474; died 1484. (9.) Arthur of Winchester, eldest son of Henry VII., born 1486; died 1502. (10.) Henry of Grey, son of Henry VI., born 1486; died 1502 of the Black Prince’s line. (11.) Henry of Winchester, eldest son of James I., born 1594; died 1612. (12.) Charles of Dunfermline, second son of James I., born 1600; died 1649, as Charles I. (13.) Charles of St James’s, son of Charles I., born 1630; died 1688, as Charles II. (14.) George Augustus of Hanoover, son of George I., born 1683; died 1760; succeeded by Frederick Louis of Hanoover, son of George II., born 1707; died 1751. (15.) George William Frederick of Hanoover House, son of the last named, born 1738; died 1790, as George III. (16.) Henry of St James’s, son of George III., born 1789; died 1830, as George IV. (17.) Albert Edward, son of Queen Victoria, born 1841; and
THE MISSISSIPPI SCHEME.

The Book of Days.

The Mississippi Scheme.

came of age, 1862. Besides the above, there were two wanderers, who were regarded in many parts of Europe as Princes of Wales, and certainly were so in right of birth. These were the son and grandson of the fugitive James II.—James Francis Edward, born 1688, and known afterwards as the 'Old Pretender,' died 1765; and his son, Charles Edward, born 1730, and for a long period known as the 'Young Pretender,' died 1788.

FACSIMILES OF INEDITED AUTOGRAPHS:
CHRISTIANA or 'CHRISTEN,' DUCHESS OF LOURNAKE.

This princess was the daughter of Christiern II. of Denmark, exiled from his country, the Nore of the North, and Isabel of Austria. She was a woman of keen intellect and great ability.

Henry VIII. of England sought her hand, but Christiana repulsed him, with the sarcastic observation, that 'had she possessed two heads, one should have been at his grace's service.' She died December 10, 1590.

THE MISSISSIPPI SCHEME.

On the 10th of December 1720, John Law, late comptroller-general of the finances of France, retreated from Paris to his country-seat of Guermande, about fifteen miles distant from the metropolis, and in a few days afterwards quitted the kingdom, never again to return. A few months before, he had enjoyed a position and consideration only comparable with that of a crowned monarch—if, indeed, any sovereign ever received such eager and importunate homage, as for a time was paid to the able and adventurous Scotman.

The huge undertaking projected by Law, and known by the designation of the Mississippi Scheme, was perhaps one of the grandest and most comprehensive ever conceived. It not only included within its sphere of operations the whole colonial traffic of France, but likewise the superintendence of the Mint, and the management of the entire revenues of the kingdom. The province of Louisiana, in North America, then a French possession, was made over by the crown to the 'Company of the West,' as the association was termed, and the most sanguine anticipations were entertained of the wealth to be realised from this territory, which was reported, amid other resources, to possess gold-mines of mysterious value. In connection with the same project, a bank, established by law, under the sanction of the Duke of Orleans, then regent of France, promised to recruit permanently the impoverished resources of the kingdom, and diffuse over the land, by an unlimited issue of paper-money, a perennial stream of wealth.

For a time these sanguine anticipations seemed to be fully realised. Prosperity and wealth to a hitherto unheard of extent prevailed throughout France, and Law was, for a short period, the idol of the nation, which regarded him as its good genius and deliverer. Immense fortunes were realised by speculating in Mississippi stock, the price of which rose from 500 livres, the original cost, to upwards of 10,000 livres by the time that the mania attained its zenith. A perfect frenzy seemed to take possession of the public mind, and to meet the ever-increasing demand, new allotments of stock were made, and still the supply was inadequate. Law's house in the Rue Quinquempoix, in Paris, was beset from morning to night by eager applicants, who, soon by their numbers blocked up the street itself and rendered it impassable. All ranks and conditions of men—peers, prelates, citizens, and mechanics, the learned and the unlearned, the plebeian and the aristocrat—flocked to this temple of Pluto. Even ladies of the highest rank turned stockjobbers, and vied with the rougher sex in eagerness of competition. So utterly inadequate did the establishment in the Rue Quinquempoix prove for the transaction of business, that Law transferred his residence to the Place Vendôme, where the tumult and noise occasioned by the crowd of speculators proved such a nuisance, and impeded so seriously the procedure in the chancellor's court in that quarter, that the monarch of stockjobbers found himself obliged again to shift his camp. He, accordingly, purchased from the Prince of Carignan, at an enormous price, the Hôtel de Soissons, in which mansion, and the beautiful and extensive gardens attached, he held his levees, and allotted the precious stock to an ever-increasing and enthusiastic crowd of clients.

With such demands on his time and resources, it became absolutely impossible for him to gratify one tithe of the applicants for shares, and the most ludicrous stories are told of the stratagems employed to gain an audience of the great financier. One lady made her coachman overturn her carriage when she saw Mr Law approaching, and the rage succeeded, as the gallantry of the latter led him instantly to proffer his assistance, and invite the distressed fair one into his mansion, where, after a little explanation, her name entered his books as a purchaser of stock. Another female device to procure an interview with Law, by raising an alarm of fire near a house where he was at dinner, was not so fortunate, as the subject of the trick suspecting the motive, hastened off in another direction, when he saw the lady rushing into the house, which he and his friends had emerged from on the cry of fire being raised.

The terrible crash at last came. The amount of notes issued from Law's bank more than doubled all the specie circulating in the country, and great difficulties were experienced from the scarcity of the latter, which began both to be hoarded up and sent out of the country in large quantities. Severe and tyrannical edicts were promulgated, threatening heavy penalties for having in possession more than 500 livres or £20 in specie; but this only increased the embarrassment and dissatisfaction of the nation. Then came an ordinance reducing gradually the value of the paper currency to one half, followed by the stoppage of cash-payments at the bank; and at last the whole privileges of the Mississippi Company were withdrawn, and the notes of the bank declared to be of no value after the
1st of November 1720. Law had by this time lost all influence in the councils of government, his life was in danger from an infuriated and disappointed people, and he was therefore fain to avail himself of the permission of the regent (who appears still to have cherished a regard for him) to retire from the scene of his splendour and disgrace. After wandering for a time through various countries, he proceeded to England, where he resided for several years. In 1725, he returned again to the continent, fixed his residence at Venice, and died there almost in poverty, on 21st March 1729.

Such was the end of the career of the famous John Law, who, of all men, has an undoubted title to be ranked as a prince of adventurers. In him the dubious reputation formerly enjoyed by Scotland, of sending forth such characters, was fully maintained. He was descended from an ancient family in Fife; but his father, William Law, in the exercise of the business of a goldsmith and banker in Edinburgh, gained a considerable fortune, enabling him to purchase the estate of Lauriston, in the parish of Cramond, which was inherited by his eldest son John. The ancient mansion of Lauriston Castle on this property, beautifully situated near the Firth of Forth, is believed to have been erected in the end of the sixteenth century, by Sir Archibald Napier of Merchiston, father of the celebrated inventor of logarithms, and then proprietor of Lauriston. It is represented in the accompanying engraving. In recent years, the building was greatly enlarged and embellished by

Andrew Rutherfurd, Lord Advocate for Scotland, and subsequently one of the judges of the Court of Session. Law is said to have retained throughout a strong affection for his patrimonial property, and a story in reference to this is told of a visit paid to him by the Duke of Argyle in Paris, at the time when his splendour and influence were at the highest. As an old friend, the duke was admitted directly to Mr Law, whom he found busily engaged in writing. The duke entertained no doubt that the great financier was busied with a subject of the highest importance, as crowds of the most distinguished individuals were waiting in the ante-rooms for an audience. Great was his grace’s astonishment when he learned that Mr Law was merely writing to his gardener at Lauriston regarding the planting of cabbages at a particular spot!

Of Law’s general character, it is not possible to speak with great commendation. He appears to have been through life a libertine and gambler, and in the latter capacity he supported himself for many years, both before and after his brief and dazzling career as a financier and political economist. In his youth, he had served an apprenticeship to monetary science under his father, and a course of travel and study, aided by a vigorous and inventive, but apparently ill-regulated intellect, enabled him subsequently to mature the stupendous scheme which we have above detailed, and succeed in indoctrinating with his views the regent of France. His first absence from Great Britain was involuntary, and occasioned by his killing, in a duel, the celebrated Beau Wilson (see following article), and thus being obliged to shelter himself by flight from the vengeance of the law. He then commenced a peregrination over the continent, and after a long course of rambling and adventure, settled down at Paris about the period of death of Louis XIV. A pardon for the death of Wilson was sent over to him from England in 1719.

Towards the end of the reign of William III, London society was puzzled by the appearance of a young aspirant to fashionable fame, who soon became the talk of the town from the style in which he lived. His house was furnished in the most expensive manner; his dress was as costly as the most extravagant dandy could desire, or the richest noble imitate; his hunters, hacks, and racers were the best procurable for money; and he kept the first of tables, dispensing hospitality with a liberal spirit. And all this was done
without any ostensible means. All that was known of him was, that his name was Edward Wilson, and that he was the fifth son of Thomas Wilson, Esq., of Keythorpe, Leicestershire, an impoverished gentleman. Beau Wilson, as he was called, is described by Evelyn as a very young gentleman, ‘civil and good-natured, but of no great store of understandings’ and ‘very sober and of good fame.’ He redeemed his father’s estate, and portioned off his sisters. When advised by a friend to invest some of his money while he could, he replied, that however long his life might last, he should always be able to maintain himself in the same manner, and therefore had no need to take care for the future.

All attempts to discover his secret were vain; in his most careless hours of amusement he kept a strict guard over his tongue, and left the scandalous world to conjecture what it pleased. Some good-natured people said he had robbed the Holland mail of a quantity of jewelry, an exploit for which another man had suffered death. Others said he was supplied by the Jews, for what purpose they did not care to say. It was plain he did not descend to common theft, but probably for small sums—and he was to be found at all times, so it was not to be wondered at that it came to be believed that he had discovered the philosopher’s stone.

How long he might have pursued his mysterious career, it is impossible to say: it was cut short by another remarkable man on the 9th of April 1694. On that day, Wilson and a friend, one Captain Wightman, were at the ‘Fountain Inn,’ in the Strand, in company with the celebrated John Law (see preceding article), who was then a man about town. Law left them, and the captain and Wilson took coach to Bloomsbury Square. Here Wilson alighted, and Law reappeared on the scene; as soon as they met, both drew their swords, and after one pass the Bean fell wounded in the stomach, and died without speaking a single word. Law was arrested, and tried at the Old Bailey for murder. The cause of the quarrel did not come out, but there is little doubt that a woman was in the case. Evelyn says: ‘The quarrel arose from his (Wilson’s) taking away his own sister from lodging in a house where this Law had a mistress, which the mistress of the house thinking a disapparagement to it, and losing by it, instigated Law to this duel.’ Law declared the meeting was accidental, but some threatening letters from him to Wilson were produced on the trial, and the jury believing that the duel was unfairly conducted, found him guilty of murder, and he was condemned to death. The sentence was commuted to a fine, on the ground of the offense amounting only to manslaughter; but Wilson’s brother appealed against this, and while the case was pending a hearing, Law contrived to escape from the King’s Bench, and reached the continent in safety, notwithstanding a reward offered for his apprehension. He ultimately received a pardon in 1719.

Those who expected Wilson’s death would clear up the mystery attached to his life, were disappointed. He left only a few pounds behind him, and not a scrap of evidence to enlighten public curiosity as to the origin of his mysterious resources.

While Law was in exile, an anonymous work appeared which professed to solve the riddle. This was The Unknown Lady’s Poquet of Letters, published with the Countess of Dunois’ Memoirs of the Court of England (1708), the author, or authoris of which, pretends to have derived her information from an elderly gentlewoman, ‘who had been a favourite in a late reign of the then she-favourite, but since abandoned by her.’ According to her account, the Duchess of Orkney (William III’s mistress) accidentally met Wilson in St James’s Park, incontinent fell in love with him, and took him under her protection. The royal favourite was no niggard to her lover, but supplied him with funds to enable him to shine in the best society, he undertaking to keep faithful to her, and promising not to attempt to discover her identity. After a time, she grew weary of her expensive toy, and alarmed lest his curiosity should over powering his discretion, and bring her to ruin. This fear was not lessened by his accidental discovery of her secret. She broke off the connection, but assured him that he should never want for money, and with this arrangement he was forced to content. The ‘elderly gentlewoman,’ however, does not leave matters here, but brings a terrible charge against her quondam patroness. She says, that having one evening, by her mistress’ orders, conducted a stranger to her apartment, she took the liberty of playing eaves-dropper, and heard the duchess open her strong-box and say to the visitor: ‘Take this, and your work done, depend upon another thousand and my favour for ever!’ Soon afterwards poor Wilson met his death. The confidante went to Law’s trial, and was horrified to recognise in the prisoner at the bar the very man to whom her mistress addressed those mysterious words. Law’s pardon she attributes to the lady’s influence with the king, and his escape to the free use of her gold with his jailers. Whether this story was a pure invention, or whether it was founded upon fact, it is impossible to determine. Beau Wilson’s life and death must remain among unsolved mysteries.

DECEMBER 11.

Saints Fuscian, Victorious, and Gentian, martyrs, about 257. St Damasus, pope and confessor, 354. St Daniel the Stylite, confessor, about 694.

Born.—Dr William Cullen, illustrious professor of medicine, 1712, Hamilton; Paul Joseph Barthez, physiologist, 1794, Montpellier; Charles Wesley, musician, 1737, Bristol.

Died.—Michael VIII. Paleologus, Greek emperor, 1282; Louis, Prince of Condé (the Great Condé), 1686, Fontainebleau; Sir Roger l’Estrange, translator of classic authors, 1704; Charles XII. of Sweden, killed at Frederickshall, 1718; Theodore Neuhoff, ex-king of Corsica, 1756, London.

PRECIOUS MUSICIANS.

There are several unquestionable examples of an almost instinctive musical genius manifesting itself in early infancy. Probably the most remarkable of these, is the instance of the two brothers Wesley, occurring as it did in one family. Charles Wesley, son of a well-known clergyman of the same name,
and nephew of the better known founder of Methodistism, was born at Bristol on the 11th of December 1757. Nearly from his birth, his mother used to quiet and amuse the infant with her harpsichord. Even before he could speak, his musical ear was so nice, that he would not permit his mother to play with one hand only, but would take the other and place it on the keys. Soon attempting to play himself, his mother used to tie him in a chair at the harpsichord, where he would amuse himself for hours together. When only two years and nine months old, he astonished his parents by playing a tune in correct time. Soon afterwards, he could play any air he chanced to hear, with a true bass added, as if spontaneously, without study or hesitation. He then seemed to have little respect or reverence for any one not a musician. When asked to play to a stranger, he would inquire, in his childish prattle, 'Is he a musician?' and, if the answer were in the affirmative, would rush to the instrument with ready eagerness. In a short time, he was able to play a correct bass at sight, and he surprised the musical world by an oratorio, entirely his own composition, which he entitled "Bach.

As not unfrequently happens in cases of premature development, the flattering promises of youth were not fulfilled, as far as regards Charles Wesley, at least, in ripening years. He soon became an excellent player on the organ and harpsichord, at a time, it must be remembered, when the art of playing on keyed instruments, far behind what it is at the present day, was only advancing towards the perfection which, comparatively speaking, it may be said has never since been passed. Charles was brought under the notice of George III. and often had the honour of entertaining the royal leisure by performances of Handel’s music. Of great moral worth, amiable qualities, and simplicity of manners, Charles Wesley made many friends in his day, though as a musician, were not for his precocious exhibition of talent, he would be now quite forgotten. After attaining a certain degree of excellence as a performer, he remained stationary; none of his compositions ever soared above mediocrity, and the height of his eminence was the appointment of organist to the fashionable church of St. George’s, Hanover Square.

Samuel Wesley attained much greater eminence, both in point of musical and general acquirement. He was possessed by an absorbing passion for music, but this did not prevent him from becoming, in addition, a good Greek, Latin, and Italian scholar. Sheridan said of him: ‘I am no judge of Mr. Wesley’s musical abilities, but I will venture to assert that his intellectual powers and education would enable him to distinguish himself in any walk of life.’ These brilliant prospects were clouded by an unhappy misfortune. Mr. Wesley, one night, accidentally fell into an excavation for building purposes, that had shamefully been left unguarded, in one of the London streets. The effects of this fall depressed his mental energies; for seven years he remained in a low depressed state of mind, refusing the solace even of his beloved art. He subsequently experienced several recoveries and relapses, before being finally relieved by death. His musical compositions were generally of too elevated a character to please the public at large. He composed a grand mass for Pope Innocent VI., for which the pontiff returned thanks in a flattering Latin letter; and, as if to mark the amende honorable to Protestantism, Wesley composed thereafter a complete cathedral service for the Church of England, on which his fame as a musician now principally rests.

Mozart, already noticed in a previous article, was another striking instance of precocious musical genius. An exception also must be admitted in this case to the general comparison between young prodigies, and those trees, that, blossoming out of season, seldom produce good fruit. Mozart’s father was an eminent musician, and his sister an accomplished player on the harpsichord, so it may almost be said, that he and Samuel Wesley were nursed on music; their early attentions stimulated, and their ears soothed with harmony. There is an instance, however, of another precocious musician, who never possessed any such advantages.

William Crotch was born at Norwich, in July 1775. His father, by trade a carpenter, though he had no knowledge of music, was fond of the art, and with great ingenuity succeeded in building an organ, on which he learned to play God save the King, and a few other common tunes. About Christmas 1776, when the infant Crotch was not more than a year and a half old, he discovered a great inclination for music, by leaving even his food to attend to it, when the organ was playing; and six months afterwards, he would touch the key-note of his favourite tunes, to induce his father to play them. Soon after this, as he was still unable to name the tunes, he would play the two or three first notes of them, when he thought the infant began to express his wishes to be played. It seems to have been owing to his having heard the superior performance of a Mrs Lulman, a lady of musical attainments, who tried his father’s organ, and who played and sang to her own accompaniment, that young Crotch first attempted to play a tune himself. The same evening, when being carried through the room where the organ was, on his way to bed, the infant screamed and struggled violently to go to the instrument; and, on his wish being complied with, he eagerly beat down the keys with his little fist. The next day, being left with his brother, a youth of fourteen, in the same room, he persuaded the latter to blow the bellows, whilst he himself struck the keys of the organ. At first, he played at random, but presently he produced, with one hand, much of God save the King. On account of the curiosity of his father, then in his workshop, who came into the room to know who it was that played the instrument. When he found that it was his infant son, he could scarcely credit his ears and eyes. At this time young Crotch, as proved by his baptismal register, was no more than two years and three months old.
weeks old. Next day, he made himself master of
the treble of the second part, and the day after he
attempted the bass, which he performed correctly
in every particular, excepting the note immediately
before the close; this being an octave below the
preceeding sound, was beyond the reach of his little
hand. After the lapse of a few more months, he
mastered both the treble and bass of ‘Hope, thou
nurse of young desire,’ the well-known song from
Love in a Village, and ere long, from this period, he
could extemporise the bass to any melody, with
which his father was pleased.

The infantile attainments of Crotch could
scarcely be described without entering into tech-
nical details; but, unlike many infant prodigies, he
did much to fulfill the promise of his earlier years,
and became thoroughly versed in musical art, and
a skilful composer. In 1797, when in his twenty-
second year, he was appointed Professor of Music
in the University of Oxford, and in 1829 principal
of the Academy of Music. He was the author
of many pieces for the organ and pianoforte,
including the opera Palestina; he also issued
Elements of Musical Composition and Thorough-
base; and Specimens of various styles of Music of all
Ages. In addition to his great musical talent, Dr Crotch
also excelled as a painter, many of his pictures
being above mediocrity. That he was not better
known may be set down to his very retiring habits.

SIR ROGER L’ESTRANGE.

Roger L’Estrange, born in 1611, was the youngest
son of a Norfolk baronet and staunch Royalist. He
was educated at Cambridge, and went with Charles I
to the North in 1630. Faithful to his family prin-
ciples, he obtained from the king a commission for
taking the town of Lynn; and falling into the hands
of the Parliamentary army, he was arrested, tried,
and condemned to be hanged as a spy. Petitioning
the Lords, he was reprieved for fourteen days, and
the respite being afterwards prolonged, he spent a
drearv four years in the prison of Newgate, in the
daily expectation of being executed. He then
contrived to escape to the continent, where he
remained to the dissolution of the Long Parliament,
when he procured a passport to return to England,
and appealing to Cromwell in person.

The appeal was successful; he received an indem-
nity, and was discharged on giving security. His
enemies afterwards alleged that he had served
Cromwell as a musician, giving him the nickname of
‘Oliver’s fiddler.’ L’Estrange’s explanation of
this affair affords us a curious peep at the manners
of the times. He says, that while the question of indem-
nity was pending, he one day walked in
St James’s Park. Hearing an organ touched in a
low tone, in the house of a Mr Hickson, he went
in, and found a company of five or six persons,
about to practise music. They immediately re-
quested him to take a viol and bear a part, which
he did; and, soon after, Cromwell walked in,
stopped, and listened a while to the music, and then
decided, without saying a word to any one.

At the Restoration, L’Estrange finding himself,
with many other royalists, forgotten, published his
Memento, which was the means of obtaining for
him the appointment of licensor of the press. He
subsequently started and conducted more than one
newspaper, and published a great number of
political tracts. From James II. he received the
honour of knighthood, ‘in consideration of his
eminent services and unshaken loyalty to the
crown;’ and, about the same time, he obtained a
seat in parliament. At the Revolution, he was
deprieved of the commission of the peace, and after
seeing so many changes of government, wisely
retired into private life. Queen Mary condescended
to perpetrate a stupid anagram on his name; but
a distich, really shewing smartness, was written
by one Lee, who by years was so altered as scarcely
to be recognised by his old friend Sir Roger:

‘Faces may alter, but names cannot change,
I am strange Lee altered, you are still Lee strange.’

Besides his numerous political tracts, Sir Roger
published many translations from the Greek, Latin,
and Spanish. His translations, written in a semi-
language style, are full of curious old-English colloquial-
isms. It has been alleged that he thus aided in
ruining the English language, but a contemporary
writer says, ‘those who consider the number and
greatness of his books will admire he should ever
write so many; and those who have read them,
considering the style and method they are writ in,
will more admire he should write so many.’

Dr Johnson was greatly indebted to L’Estrange, as
is evidenced from the numerous quotations given
in his dictionary. Sir Roger lived to the good old
age of eighty-seven, dying on the 11th of December
1704, and his epitaph is still to be seen on one of
the pillars in his parish church of St Giles in the
Fields.

THOBEOD, KING OF CORSICA.

Monarchs have occasionally been deposed, put
to death, and subjected to various indignities, but
we question much whether any individual, who had
once exercised sovereign sway, ever presented so
brittle a spectacle as Theodore von Neuhoff, ex-
killing of Corsica. His memory is chiefly preserved
by the sympathy which his misfortunes excited in
England in the last century, and the exertions of
Horace Walpole and other eminent personages on
his behalf.

This temporary holder of regal power was the
son of a Westphalian gentleman of good family,
who had held a commission in the French army.
His son, who was born in Metz about 1695, entered
the same service, but appears afterwards to have
quitted it, and rambled, as an adventurer, over the
greater part of Europe. At last he was thrown into
prison for debt at Leghorn, and on emerging
from this confinement, he made the acquaintance
of several leaders among the Corsican insurrec-
tion, then endeavouring to efface the independence
of their country by shaking off the yoke of Genoa.
Neuhoff accepted their offer of the sovereignty
of the country in return for assistance to be fur-
nished by himself, and he accordingly, in March
1736, made his appearance on the Corsican coast
with a supply of ammunition and money which
he had succeeded in obtaining from the Bey of
Tunis, by holding out to the latter the promise of
an exclusive trade with Corsica, and permission to
have a station there for his pirate ships. Eagerly
welcomed at first by the Corsicans, Neuhoff was,
in the following month of April, elected king by their
general assembly, and, at the same time, swore to
observe the tenor of a constitution which was then
proclaimed. For some months he exercised all the

689
acts of an independent sovereign, coin money, distributing patents of nobility, and instituting an order of knighthood. He is stated also, with the view of shewing 'an example of firmness, to have put to death three persons belonging to distinguished families. Among other military enterprises, he undertook successfully the capture of Porto Vecchio from the Genoese, but was foiled in an attempt on Bastia. His popularity ere long diminished, and finding his position both an arduous and insecure one, he made arrangements for conducting the government in his absence, and quitted the island with the intention, as he asserted, of obtaining fresh succour. But his sovereignty of Corsica was never to be resumed. After visiting successively Italy, France, and Holland, he was at last arrested for debt at Amsterdam. Some Jews and foreign merchants, settled in that city, procured his release, and also furnished him with means to equip an armament for the recovery of his dominions. With this he appeared off Corsica in 1738, but was unable to land in consequence of the depression of the insurgents' cause through the assistance furnished to the Genoese by the French. A similar unsuccessful attempt was made by him in 1742.

Neuhoff now proceeded to London, where he met with great kindness and sympathy as an exiled monarch. Additional mishaps, however, befell him here, and he was obliged, in consequence of money which he had borrowed, to endure an imprisonment of some years' duration in the King's Bench Prison. Here, it is said, he used to affect a miserable display of regal state, sitting under a tattered canopy, and receiving visitors with great ceremony. Smollett has introduced a description of him in prison in his novel of *Ferdinand Count Fathom*. At last the exertions of Walpole and others succeeded in raising a sum of money, which enabled Neuhoff to obtain his release from confinement, after making over to his creditors, as an asset, his kingdom of Corsica. The advertisement in the papers of the day announcing the opening of the subscription for the ex-sovereign, was prefixed by the words in which, as is alleged, the great general of Justinian used, in his old age, to solicit alms—'*Date obolum Belisario.*'

Neuhoff did not long survive his liberation, and died in London on 11th December 1756. He was buried in the churchyard of St Ann's, Westminster, where the following epitaph, composed by Horace Walpole, was inscribed upon a tablet, with a diadem carved at the summit:

'NEAR THIS PLACE IS INTERRED
THEODORE, KING OF CORSICA,
WHO DIED IN THIS PARISH, DECEMBER 11, 1756,
IMMEDIATELY AFTER LEAVING THE KING'S BENCH PRISON,
BY THE BENEFIT OF THE ACT OF INSOLVENCY;
IN CONSEQUENCE OF WHICH
HE REGISTERED THE KINGDOM OF CORSICA
FOR THE USE OF HIS CREDITORS.'

The grave, great teacher, to a level brings Heroes and beggars, galley-slaves and kings.
But Theodore this moral learned ere dead:
 late Pour'd its lessons on his living head,
Bestowed a kingdom, and denied him bread.

DECEMBER 12.

Sainte Epimachus, Alexander, and others, martyrs, 250.
St Colman, abbot in Ireland, 659. St Radburn, abbess of Manestre, in Thanet, 761.

Born.—Nicholas Sanson, geographer, 1599, Abbeville; Samuel, Viscount Hood, British admiral, 1724, Butley, Somersetshire; Dr Erasmus Darwin, poet and physiologist, 1731, Elston, near Newark; Sir William Beechey, artist, 1753; Archduchess Maria Louisa, second wife of Napoleon, 1791.

Died.—Darius Nothus, of Persia, 405 a.C.; Henry St John, Viscount Bolingbrooke, political and philosophical writer, 1751, Battersea; Colley Cibber, dramatist, 1787, Islington; Sir Mark Isambard Brunel, engineer of Thames Tunnel, 1849, London.

THE TWO EMPRESSSES, JOSEPHINE AND MARIA LOUISA.

An historical parallel has sometimes been drawn between Queen Catharina and the Empresses Josephine: the one having been divorced by Henry VIII, in order that he might marry Anne Boleyn; and the other divorced by the Emperor Napoleon, in order that he might marry the Archduchess Maria Louisa. But, beyond these points of similarity, the parallel falls. Henry sought to throw a stigma on her of whom he was tired as a wife; Napoleon had political reasons only for what he did. Josephine bowed meekly to her fate; but Catharina felt keenly that she was an injured woman. A little has been said, in a former article (vol. i. p. 731), concerning a prophecy or fortune-teller's story to which Josephine gave credence; but something may be added here relating more nearly to Maria Louisa.

In 1809, Napoleon was approaching the zenith of his power. His conquests had made nearly all the sovereigns of Europe suppliants for his favour. Austria had long held out, but the terrible defeat at Wagram had brought her, too, into subjection. Napoleon's ambition, never satisfied, sought for still more and more of the adjuncts of imperial power. He had married a lady with no royal blood in her veins, and by this lady he had no child to inherit his imperial throne; thus a double reason was afforded to a man of his character for getting rid of his poor wife. And, in addition, the French themselves were uneasy at the future prospects of their country, in the event of the emperor dying without issue. M. Thiers, though a glorifier of Napoleon, does not hide the real character of the line of conduct adopted by him on this occasion. On the 30th of October 1809, Napoleon stated his views to the Chancellor Cambacérès: 'He loved that old companion of his life, Josephine,' says the historian, 'though he was not scrupulously faithful to her, and it wrung his heart to part from her; but, as his popularity declined, he fixed to suppose that it was not his fault, but the want of a future, which menaced his glorious throne with premature decay. To consolidate what he felt trembling under his feet, was his engaging thought; if a new wife were chosen, obtained, placed in the
The Two Empresses.

The Book of Days.

Brunel.

Tuileries, and became the mother of a male heir, the fault which had set all the world against him might, perchance, be disarmed of their consequences. It was well, no doubt, to have an indisputable heir; but better, a hundredfold better, would it have been to be prudent and wise! However this may be, Napoleon, who, notwithstanding his want of a son, at the zenith of his glory and power after Tilsit, had been unable to bring himself to sacrifice Josephine, now at last resolved to do so; because he felt the empire shaken, and was about to seek, in a new marriage, the security which he ought to have derived from an able and moderate course of conduct. Camisardes ventured to urge that the proceeding was in various ways objectionable; but Napoleon haughtily silenced him. The emperor had long before secretly sounded Alexander concerning an alliance with the House of Russia. On the 9th of December, at a painful interview between Napoleon, Josephine, and her son and daughter by her first marriage, the separation was agreed upon—the inflexible will of the emperor overbearing all opposition. On the 15th, the civil contract of marriage was formally dissolved, in presence of most of the emperor’s relations; and a concave of obsequious bishops soon afterwards found argu- ments for annulling the spiritual or religious marriage. Meanwhile negotiations were going on between Napoleon and Alexander for the marriage of the former to the Princess Anna of Russia, the Emperor Alexander’s sister. Austria and Saxony had each thrown out hints that an alliance with the great military conqueror would be acceptable; and as there was some hesitation on the part of Russia, Napoleon suddenly changed his plan, and, on the 5th of February 1810, demanded in marriage the youthful Archduchess Maria Louisa of Austria. The demand was eagerly responded to by the court of Vienna, and the lady herself seems to have urged no objection. M. Thiers states that the emperor, Francis II, delighted at the prospect, nevertheless desired that the wishes of his daughter should be consulted, and sent M. Metternich to tell her the news. Young princess, of a good figure, excellent health, and a fair German complexion. She had been carefully educated, had some talent, and a placid temper; in short, the qualities desirable in a mother. She was surprised and pleased, far from being dismayed, at going into that France where, but lately, the revolutionary monster devoured kings; and where a conqueror, now mastering the revolutionary monster, made kings tremble in his turn. She accepted with becoming reserve, but with much delight, the brilliant lot offered to her. She consented to become the consort of Napoleon, and mother to the heir of the greatest empire in the world. A marriage by proxy took place in Vienna on the 11th of March; a civil marriage at St Cloud on the 1st of April; and a final spiritual marriage at the Tuileries on the 2d.

Maria Louisa became a mother in due course, and Napoleon seems to have had no particular affection for her in any other light. She was a princess of neutral or negative qualities, kind in private life, but a little embarrassed when her husband wished her to take the lead in splendid court-ceremonies. Poor Josephine, of course, was not likely to be brought into her society. There was nearly thirty years’ difference in their ages (Josephine was born June 24, 1763, and Maria Louisa December 12, 1791); and still more difference in their antecedents. Both empresses were alike in this, they ceased to be empresses while Napoleon was still alive; though Maria Louisa succeeded in retaining a certain rank, being made Duchess of Parma by the allies, after the fall of Bonapartes.

Brunel.

Mark Isambard Brunel was born at Hasqueville, a few miles from Rouen, in 1769—that notable year which gave to the world Napoleon and Wellington, Humboldt and Cuvier. Like so many other inven- tors, Brunel displayed from childhood a passion for construction. His father, who was a prosperous farmer, determined to make him a priest; but Mark shewed no inclination whatever for literary studies, devoting his attention to drawing, mathematics, and mechanics, and amusing himself in making boats, clocks, and musical instruments, while a carpenter’s shop was to him a paradise. There was little gained by contending with such impulses, and, after going on board a merchant ship that entered the navy, made several voyages to the West Indies. In 1789, his ship was paid off, and happening shortly afterwards to visit Paris, he imprudently, in a moment of excitement, made a royalist speech at a political club, and was counselled to seek safety in flight. He escaped to Rouen, and sailed for New York, where he was naturalised as an American citizen. He found easy and abundant employment as an engineer; and was appointed to make a survey for a canal between Lake Champlain and the Hudson, to design and build a theatre in New York, and to plan the defence and fortification of that city. There was every reason for him to remain in the United States, but whilst at Rouen he had made the acquaintance of Sophia Kingdom, an English lady, for whose sake he abandoned his professional prospects. In 1799, he accordingly recrossed the Atlantic, settled in England, and married.

The story of Brunel’s life, for years hereafter, is comprised in a list of inventions over which he bestowed a world of pains and anxiety, but from which he reaped little beyond a bare subsistence. One of the most useful was a plan for making block-pulleys for ships by machinery. It was adopted by the government in 1803, and he was employed to carry it into execution in the dock- yard at Portsmouth. The ingenuity of the contrivance was not less remarkable than the accuracy and economy with which its operations were performed. It comprises, so to speak, sixteen different machines, all driven by the same steam-power, seven of which cut and shape logs of elm or ash into the shells of blocks of any required size, while nine tissue stems of lignum-vita into pulleys or sheaves, and form the iron pin, on the insertion of which the block is complete. Four men with this machine turn out as many blocks as fourscore did formerly; and although 1500 blocks are required in the rigging of a single ship of the line, the supply has never failed even in time of war; and sixty years’ experience has suggested scarcely an improvement on Brunel’s original design. The service he
thus rendered to the navy he endeavoured to repeat for the army, in devising machinery for the manufacture of shoes, in which pins took the place of threads, and the saw-mill in Chatham dock-yard was erected under his care. He devised a machine for twisting cotton and forming it into balls; another for hemming and stitching; another for knitting; another for copying letters; another for ruling paper; another for nail-making; another for making wooden boxes; a hydraulic packing-press; besides new methods and combinations for suspension-bridges, and a process for building wide and flat arches without centering. He was employed in the construction of the first Ramsigate steamer, and was the first to suggest the use of steam-tugs to the Admiralty. At the playful request of Lady Spencer, he produced a machine for shuffling cards. The cards were placed in a box, a handle was turned, and in a few seconds the sides flew open, and presented the pack divided into four parts, thoroughly mixed. This invention may give some idea of the versatility of Brunel's inventive powers, but he lacked mercantile faculty whereby to turn them to pecuniary advantage. In 1821, he was actually imprisoned for debt, and was only released by a vote of £5000 from government.

In the construction of an engine with carbonic acid gas for the motive-power, Brunel, assisted by his son, spent nearly fifteen years and £15,000 in experiments. They overcame most of the mechanical difficulties—they obtained an intense power at a low temperature—and the hopes of the scientific and commercial worlds were alike strongly excited; but in the end they had to confess a failure, and admit, 'that the effect of any given amount of carbonic acid gas on machinery was not greater than that produced by the same amount of steam and that, therefore, the practical application of condensed gases, including common air, was not so advantageous as that derived from the expansive force of steam.'

The great enterprise by which Brunel became popularly distinguished, was the Thames Tunnel. Two or three attempts had been made to connect the shores of Essex and Kent by a subaqueous passage, but all had failed. One day, when Brunel was passing through the dock-yard at Chatham, his eye was caught by a piece of ship-timber perforated by the destructive worm—the Teredo navalis—and the study of its mode of operation suggested the construction of a cast-iron shield, which should bore like an auger by means of strong hydraulic screws, while as fast as the earth was cut away, bricklayers should be at hand to replace it with an arch. He patented the plan, and revived the project of a road under the Thames. In 1824, a Thames Tunnel Company was formed, and in 1825, the work commenced, and was pursued through many difficulties from explosions of gas and irrigations of water, until 1835. At the beginning of that year about 250 feet were completed, when, on the 12th of January, the river broke through, six men were drowned, and Brunel's son, also so distinguished in after-days as an engineer, only escaped by being washed up the shaft. The tunnel was emptied, but the furnaces of the company were exhausted. In an 'Ode to M. Brunel,' Hood wrote:

'Other great speculations have been nursed,
Till want of proceeds laid them on the shelf:
But thy concern was at the worst
When it began to liquidate itself.'

For seven years, until 1835, work was suspended, when, at the solicitation of the Duke of Wellington, government advanced the company, on loan, £246,000. At last the entire 1900 feet, from Wapping to Rotherhithe, were completed, and on the 25th of March 1843 the tunnel was opened to the public. Brunel was knighted by the Queen, and his fame was borne to the ends of the earth. As an engineer, the work reflected great credit on him, but commercially it was a failure. It cost well-nigh £5000, and the tolls produced annually something less than £5000, a sum which proved barely sufficient to keep the tunnel in repair. [The tunnel consists of two parallel arched passages, 14 feet broad, 18 feet high, and 1200 feet long. In 1865, the East London Railway Company purchased the Thames Tunnel for £200,000, and about 40 trains pass through it daily.]

Brunel died in 1849, in his 49th year, leaving behind him a son, Isambard Kingdom Brunel, who fully inherited his father's genius. Brunel was a little man, with a head so large, that an Irishman once said, 'Why that man's face is all head!' Many amusing anecdotes are told of his blunders during his moods of inventive abstraction; as, for instance, caressing a lady's hand, who sat next him at table, thinking it his wife's, forgetting his own name, and handing in other people's cards at houses he visited; and getting into wrong coaches, and travelling long distances ere he discovered his mistake. At other times he showed rare presence of mind. Once when inspecting the Birmingham railway, trains, to the horror of the bystanders, were observed to approach from opposite directions. Brunel, seeing a third train approaching, and that, therefore, the practical application of condensed gases, including common air, was not so advantageous as that derived from the expansive force of steam.

parliament, known in history as the Long Parliament: a most violent proceeding, which made him practically dictator over the whole kingdom.

Cromwell, in his self-styled capacity as captain-general and commander-in-chief of all the armies and forces raised and to be raised within this commonwealth, summoned a sort of parliament, by an order dated June 6: the parliament or council to consist of persons nominated by him, and not elected by the people. A hundred and forty of these summons were issued, and all but two of them were answered. But Bulstrode expressed wonder, when recording these events, that so many persons of good-fortune and education accepted the summons from such a man as Oliver. Mr Carlyle comments on Bulstrode's perplexity, and on the constitution of the assembly generally, in one of his most characteristic passages: 'My disconsolate friend, it is a sign that Puritan England is general, whatever be the result of this action of Cromwell and his officers, and thanks them for it, in such a case of extremity; saying, as audibly as the means permitted: Yes, we did wish it so! Rather mournful to the disconsolate official mind! Lord Clarendon, again, writing with much latitude, has characterised this convention as containing in it divers gentlemen who had estates, and such a proportion of credit in the world as might give some colour to the business;' but consisting, on the whole, of a very miserable beggarly sort of persons, acquainted with nothing but the art of praying: 'artificers of the meanest trades, if they even had any trade: all which the reader shall, if he please, add to the general guano-mountains, and pass on, not regarding. The undeniable fact is, these men, were as Whitelock intimates, a quite respectable assembly; got together by anxious 'consultation of the godly clergy,' and chief Puritan lights in their respective counties; not without much earnest revision, and solemn consideration in all kinds, on the part of men adequate enough for such a work, and desirous enough to do it well. The list of the assembly exists; not yet entirely gone dark for mankind. A fair proportion of them still lives. And it was a case among peers: two: founders of peerage families, two or three, which still exist among us—Colonel Edward Montague, Colonel Charles Howard, Anthony Ashley Cooper. And better than kings' peers, certain peers of nature; whom, if not the king and his pastebord Norroys have had the luck to make peers of, the living heart of England has since raised to the peerage, and means to keep them—Colonel Robert Blake, the Sea-King, for one. "Known persons, I do think, of approved integrity, men fearing God;" and perhaps not entirely destitute of sense any one of them! Truly it seems rather a distinct

parliament—although Mr Praise-God Barebone, the leather merchant in Fleet Street, be, as all mortals must admit, a member of it. The fault, if hope, is forgivable? Praise-God, though he deals in leather, and has a name which can be misspelt, one discerns to be the son of pious parents; to be himself a man of piety, of understanding, and weight—and even of considerable private capital, my witty flunky friends! We will leave Praise-God to do the best he can, I think.—And old Francis Rose is there from Devonshire; once member for Truro; provost of Eton College; whom by-and-by they may make speaker; whose psalms the northern

kirk will sing. Richard, mayor of Hurley, is there, and even idle Dick Norton; Alexander Jaffrey of Aberdeen, Laird Swinton of the College of Justice in Edinburg; Alderman Iron, brother of the late Lord Deputy, colleague of Praise-God in London. In fact, a real assembly of the notables in Puritan England; a parliament, parliamentum, a real speaking apparatus for the now dominant interest in England, as exact as could well be got—much more exact, I suppose, than any ballot-box, free hustings, or ale-barrel election usually yields.

Such is the assembly called the Little Parliament and wittily Barebone's Parliament. Their witty name survives; but their history is gone all dark.'

This was, indeed, a little parliament of only five months' duration. Hume casts unbranch ridicule on its proceedings; Carlyle praises it, saying that its mission was 'to introduce Christianity into private life.' It failed. 'No wonder,' says Carlyle. 'Fearful impediments lay against that effort of theirs: the sluggishness, the half-end-half-ness, the greediness, the cowardice, the general opacity of ten million men against it—also, the whole world, and what we call the devil and all his angels, against it! Considerable angels, human and others.'

Cromwell found his Little Parliament often going beyond his wishes in reform; and at length a bill to abolish tithes, because the clergy would not another to abolish the Court of Chancery, raised such a storm against them that Cromwell was glad to get rid of them. By a sort of party-manouvres, on December 13, the parliament voted its own death, in a resolution: 'That the sitting of this parliament any longer, as now constituted, will not be for the good of the commonwealth; and that therefore it is requisite to deliver up unto the Lord-general Cromwell the powers which we received from him.'

The minority insisted on maintaining 'a house,' and continued the sittings with a new speaker. But General Harrison entered with a few soldiers, and asked what they were doing. 'We are seeking the Lord,' said they. 'Then you may go elsewhere,' said he: 'for to my certain knowledge, He has not been here these many years.' Thus the Barebone's Parliament died: four days afterwards, Oliver Cromwell became Protector.

THE TRADESCANTS.

The following lines are inscribed upon a tomb in Lambeth churchyard:

'Know, stranger, ere thou pass; beneath this stone,
Lyse John Tradescant, grandis, father, son;
The last dy'd in his spring; the other two
Lived till they had travelled Art and Nature through,
As by their choice collections may appear,
Of what is rare, in land, in sea, in air;
Whilst they (as Homer's Iliad shows) a wonder
Of worlds in one closet shut.
These famous antiquarians that had been
Both Gardeners to the Rose and Lily Queen,
Transplanted now themselves, sleep here; and when
Angels shall with their trumpet call the dead
And fire shall purge the world, these hence shall rise
And change this garden for a paradise.'

The grandis of the above epitaph came of Flemish origin. After travelling through Europe

and in the East, he settled in England; and was at one time gardener to the Duke of Buckingham, and afterwards to Charles I. He formed a large ‘physic garden’ at South Lambeth, and was the means of introducing many plants into this country. So ardent was he in the acquisition of rarities, that he is said to have joined an expedition against the Algerine corsairs, in order to obtain a new sort of apricot from North Africa, which was known thence as the Alger apricot. He was also an enthusiastic collector of curiosities, of which he filled his house, and earned for it the popular name of ‘Tradeckin’sArk.’ He died at an advanced age, in 1652 or 1653. His son, another John Tradescant, followed in his father’s footsteps. In 1656, he published a catalogue of his collection under the title of Museum Tradescantianum. From this we learn that it was indeed a multiform assemblage of strange things—stuffed animals and birds, chemicals, dyeing materials, idols, weapons, clothes, coins, medals, musical instruments, and relics of all sorts. We here enumerate a few of the strangest articles—Easter eggs of the patriarchs of Jerusalem; two feathers of the phoenix tayle; claw of the bird Roc, who, as authors report, is able to truss an elephant; a natural dragon above two inches long; the helmet from the island of Mauritania; so big as not to be able to fly; the bastard, as big as a turkey, usually taken by greyhounds on Newmarket Heath; a cow’s tail from Arabia; half a hazelnut, with seventy pieces of household stuff in it; a set of chemsemen in a peppercorn; landskips, stories, trees, and figures, cut in paper by some of the emperors; a trunnion of Drake’s ship; a knife wherein Hudson was killed in Hudson’s Bay; Anna Bullen’s night-vail; Edward the Confessor’s gloves.

In Ashmole’s diary, under date 12th December 1659, occurs this entry: ‘Mr Tradescant and his wife told me they had long been considering upon whom to bestow their closet of curiosities when they died, and at last resolved to give it unto me.’ Tradescant died in 1672, and bequeathed his house to Ashmole, who, after some litigation with his friend’s widow, took possession of the ark in 1674. The collection was left by Ashmole to the university of Oxford, and was the nucleus of the museum bearing his name.

In May 1671, Sir W. Watson visited the long-neglected garden of Tradescant, and found it entirely grown over with weeds, with which, however, a few of the old gardener’s favourites yet struggled for life. Among them were two trees of the arbutus, the largest which I have seen, which from being so long used to our winters, did not suffer by the severe colds of 1729 and 1740: when most of their kind were killed throughout England.’

DECEMBER 13.

ST LUCY.

St Lucy was a native of Syracuse, and sought in marriage by a young nobleman of that city; but she had determined to devote herself to a religious life, and persistently refused the addresses of her suitor, whom she still further exasperated by distributing the whole of her large fortune among the poor. He thereupon accused her to the governor, Paschasius, of professing Christian doctrines, and the result was her martyrdom, under the persecution of Emperor Diocletian. A curious legend regarding St Lucy is, that on her lover complaining to her that her beautiful eyes haunted him day and night, she cut them out of her head, and sent them to him, begging him now to leave her to pursue, unmolested, her devotional aspirations. It is added that Heaven, to recompense this act of abnegation, restored her eyes, rendering them more beautiful than ever. In allusion to this circumstance, St Lucy is generally represented bearing a platter, on which two eyes are laid; and her intersection is frequently implored by persons labouring under ophthalmic affections.

The Ember-days.

The Ember-days are periodical fasts originally instituted, it is said, by Pope Calixtus, in the third century, for the purpose of imploring the blessing of Heaven on the produce of the earth; and also preparing the clergy for ordination, in imitation of the apostolic practice recorded in the 13th chapter of the Acts. It was not, however, till the Council of Placentia, 1096 A.D., that a uniformity as regards the season of observance was introduced. By a decree of this assembly, it was enacted that the Ember-days should be the first Wednesday, Friday, and Saturday following, respectively, the first Sunday in Lent, or Quadragesima Sunday, WhitSunday, Holyrood Day (14th September), and St Lucy’s Day (19th December). The term is said to be derived from the Saxon em-ben- or emb-, denoting a course or circuit, these days recurring regularly, at stated periods, in the four quarters or seasons of the year. Others, with some plausibility, derive the epithet from the practice of sprinkling dust or embers on the head, in token of humiliation; and also from the circumstance that at such seasons it was only customary to break the fast by partaking of cakes baked on the embers, or ember-break. In accordance with a canon of the English Church, the ordination of clergymen by the bishop generally takes place on the respective Sundays immediately following the ember-days. The weeks in which these days fall, are termed the Ember-weeks, and in Latin the ember-days are denominated Jejunia quatuor temporum, or ‘the fasts of the four seasons.’

Born.—Pope Sixtus V., 1581, Montalto; Henri IV. of France, 1553, Pass; Maximilien de Bethune, Duke of Sully, minister of Henri IV., 1699, Roemy; William Drummond, poet, 1685, Haughton; Sir Arthur Pearson, Stanley, biographer of Dr Arnold, 1815.

Died.—Emperor Frederick II. of Germany, 1250; Emanuel the Great, king of Portugal, 1591; James V. of Scotland, 1542, Falkland; Conrad Gesner, eminent naturalist, 1566, Zurich; Anthony Collins, freethinking writer, 1729; Rev. John Streyre, historical writer, 1787; Hackney; Christian Furchtegott Gellers, writer of fables, 1789, Leipsic; Peter Wargentius, Swedish astronomer, 1783, Stockholm; Dr Samuel Johnson, lexicographer, 1784, London; Charles III. of Spain, 1788.
THE COUNCIL OF TRENT.

This celebrated council, one of the most important ever summoned by the Roman Catholic Church, was formally opened on 13th December 1545, and closed on 4th December 1563. Its sitings extended thus, with various prorogations, over a period of eighteen years, and through no less than five pontificates, commencing with Paul III., and ending with Pius IV.

The summoning of a general council had been ardently desired by the adherents both of the Roman Catholic and Reformed systems, partly from a desire to have many great and scandalous abuses removed, partly from the hope of effecting a reconciliation between the opposite parties, through mutual concession and an adjustment of the points in dispute by the decision of some authoritative assembly. The requisition to convocate such a meeting was first made to Clement VII., and was seconded, with all his influence, by the Emperor Charles V.; but, as is well known, popes have ever had the greatest dislike of general councils, regarding them as dangerous impugners of their pretensions, and at the present conjuncture no proposal could have been more distasteful to them, knowing the ecclesiastical abuses that prevailed, and fearful of the consequences of inquiry and exposure, Clement, by various devices, contrived, for the short remainder of his life, to elude compliance with the unpalatable proposition. But his successor, Paul III., found himself unable, with any appearance of propriety, to postpone longer a measure so earnestly desired, and he accordingly issued letters of convocation for a general ecclesiastical council. After much disputation, the town of Trent, in the Tyrol, was fixed on as the place of meeting of the assembly.

But with all the preliminary arrangements entered into, the German Protestant subjects of Charles V. were thoroughly dissatisfied. The place chosen for the meeting was unsuitable from its remote situation, and an infinitely weightier objection was made to the right assumed by the pope of presiding in the council and directing its deliberations, together with the refusal to guarantee, throughout the proceedings, the recognition of the Scriptures, and the usage of the primitive church, as the sole standards of faith. After some abortive attempts to accommodate these differences, the Protestants finally declined to attend or recognise in any way the approaching council, which was accordingly left wholly to the direction of the Catholica. One of the first points determined was: 'That the books to which the designation of Apocryphal hath been given, are of equal authority with those which were received by the Jews and primitive Christians into the sacred canon; that the traditions handed down from the apostolic age, and preserved in the church, are entitled to as much regard as the doctrines and precepts which the inspired authors have committed to writing; that the Latin translation of the Scriptures, made or revised by St Jerome, and known by the name of the Vulgate translation, should be read in churches, and appealed to in the schools as authentic and canonical.' In virtue of its infallible authority, claimed to be derived from the immediate inspiration of the Holy Spirit, the council denounced anathemas against all those who should impugn or deny the validity of its decisions. The ancient formula, however, prefixed by ecclesiastical councils to their deliverances—'It has seemed good to the Holy Spirit and to us'—was, on the occasion of the assembly at Trent, exchanged for the milder phrase—'In the presence of the Holy Spirit it has seemed good to us.'

This specimen, given by the council at the commencement of its proceedings, was sufficiently indicative of the results to be eventually expected. So far from any modification being effected in the tenets or claims of the Roman Catholic Church and its ministers, these, on the contrary, were more rigorously enforced and defined. In the words of Dr Robertson: 'Doctrines which had hitherto been admitted upon the credit of tradition alone, and received with some latitude of interpretation, were defined with a scrupulous nicety, and confirmed by the sanction of authority. Rites, which had formerly been observed only in deference to custom, supposed to be ancient, were established by the decrees of the church, and declared to be essential parts of its worship. The breach, instead of being closed, was widened and made irreparable.' While thus so antagonistic to Protestant views, the decrees of the Council of Trent are generally regarded as one of the principal standards and completed digests of the Roman Catholic faith.

ANTIQUARIAN HOAXES.

One of the most amusing traits in the character of Sir Walter Scott's kind-hearted antiquary, the estimable Monkwear, is his perfect reliance on his own rendering of the letters A. D. L. L., on a stone he believes to be antique, and which letters he amplifies into Agricola discesit libera lusua; a theory rudely demolished by Edie Ochiltree, who pronounces 'the sacrificial vessel,' also on the stone, to be the key to its true significance, Ahran Drum's long ladle. Scott had 'ta'en the antiquarian trade' (as Burns phrases it) early in life, and commenced his literary career by that popular work; his early rambles on the line of the great Roman Wall, in the Border counties, would familiarise him with inscriptions; and his acquaintance with antiquarian literature lead him to the knowledge of a few mistakes made in works of good repute. In depicting the incident above referred to, he might have had in his mind the absurd error of Vallancey, who has engraved in his great work on Irish Antiquities, a group of sepulchral stones on the hill of Tara, having upon one an inscription which he reads thus: BELI DIVOSE, 'Te Belua, God of Fire.' He indulges, then, in a long and learned disquisition on this remarkable and unique inscription;

which he has also so carefully engraved, that its real significance may easily be tested. It turned
out to be the work of an idler, who lay upon the stone, and cut his name upside down with the date of the year: E. CONID. 1731; and if the reader will turn the engraving on the preceding page, the whole thing becomes clear, and Baal is deprived of his altar.

Dean Swift had successfully shown how a choice of words, and their arrangement, might make plain English look exceedingly like Latin. The idea was carried out further by some wicked wit, who, aided by a clever engraver, produced, in 1756, a print called 'The Puzzle,' which has never been surpassed in its peculiar style. 'This curious inscription is humbly dedicated,' says its author, 'to the penetrating geniuses of Oxford, Cambridge, Eton, and the learned Society of Antiquaries.' The first, fourth, sixth, and three concluding lines are particularly happy imitations of a Latin inscription. It is, however, a simple English epitaph; the key, published soon afterwards, tells us: 'The inscription on the stone, without having regard to the stops, capital letters, or division of the words, easily reads as follows: "Beneath this stone

THE MYSTERIOUS INSRIPTION: ANTIQUARIES PUZZLED.

reposeth Claud Coster, tripe-seller of Impington, as doth his consort Jane.'

Such freaks of fancy may fairly be classed with Callot's *Impostures Innocentes*; not so when false inscriptions and forged antiques have been fabricated to mislead the scholar, or make him look ridiculous. One of the most malicious of these tricks was concocted by George Steevens, the Shakspearian commentator, to revenge himself on Gough, the director of the Society of Antiquaries of London, and author of the great work on our Sepulchral Monuments. The entire literary life of Steevens has been characterised as displaying an unparalleled series of arch deceptions, tinctured with much malicious ingenuity. He scrupled not, when it served his purpose, to invent quotations from old books that existed only in his imagination, and would deduce therefrom corroborations of his own views. Among other things, he invented the famous description of the poisonous upas-tree of Java, and the effluvia killing all things near it. This account, credited by Darwin, and introduced in his *Botanic Garden*, spread through general literature as a fact; until artists at last were induced to present pictures of the tree and the deadly scene around it. Steevens chose the magazine, or popular newspapers, for the promulgation of his inventions, and signed them with names calculated to disarm suspicion. It is impossible to calculate the full amount of mischief that may be produced by such means—literature may be disfigured, and falsehood take the place of fact.
The trick on Gough was the fabrication of an inscription, purporting to record the death of the Saxon king Hardicanute, and was done in revenge for some adverse criticism Gough had pronounced on a drawing of Steevens. Steevens vowed that, wretched as Gough deemed his work, it should have the power to deceive him. He obtained the fragment of a chimney-slab, and scratched upon it an inscription in Anglo-Saxon letters, to the effect that 'Here Hardcanute drank a wine-horn dry, stared about him, and died.' It was alleged to have been discovered in Kennington Lane, where the palace of the monarch was also said to have been, and the fatal drinking-bout to have taken place. The stone was placed carelessly among other articles in a shop where Gough frequently called. He fell fairly into the trap; and brought forward his imagined prize, as a great historic curiosity, to the notice of the Society of Antiquaries. One of the ablest members of the association—the Rev. S. Pegge—was induced to write a paper on the subject. Schnebbelie, the draughtsman of the society, was employed to draw the inscription carefully, and it was engraved, and published in vol. ix. of the Gentleman's Magazine, from which our cut is copied.

The falsely-formed letters, and absurd tenor of the whole inscription, would deceive no one now. Luckily, before its publication in the Magazine, its history was discovered; but as the plate contained other subjects, it was nevertheless issued, with a note of warning appended. Steevens, however, followed up his success with a bitter description of the triumph of his fraud, and the impossibility of Gough's 'wriggling off the hook on which he is so archaeologically suspended.' Instances might be readily multiplied of similar deceptive inventions; indeed, the history of falsehood and forgery in connection with antiquities is as vast as it is still unceasing. Rome and Naples are today what Padua was in the sixteenth century—the birthplace of spurious curiosities, manufactured with the utmost art, and brought forth with the greatest apparent innocence. Nothing is forgotten to be done that may effectually deceive; and the unguarded stranger may see objects dug out of ruins apparently ancient, that have been recently made, and placed there for his delectation. A brisk trade in painted vases has always been carried on; and many of them, evidently false, have been published in works of high character.

Birch, in his History of Ancient Pottery, speaks of this, and adds: 'One of the most remarkable fabricated engravings of these vases was that issued by Bronsted and Stackelberg, in a fit of archæological jealousy. A modern archæologist is seen running after a draped female figure called Sihim, or Fama; who flies from him, exclaiming Ekai vae kaee, "Be off, my fine fellow!" This vase, which never
THE NINE WORTHIES OF LONDON.

Everybody has read, or at least heard, of the famous History of the Seven Champions of Christendom, but few, we suspect, have either read or heard of another work by the same author, which, if less interesting than the chivalric chronicle dear to boyhood, has the merit of being to some extent founded on fact. In the year 1592, Mr Richard Johnson gave to the world The Nine Worthies of London; explaining the honourable Exercise of Arms, the Virtues of the Valiant, and the Memorable Attempts of Magnanimous Minds; pleasant for Gentlemen, not unseemly for Magistrates, and most profitable for Prentices.

The chronicle of the deeds of city-heroes is a curious compound of prose and verse. The Worthies are made to tell their own stories in rhyme, to a prose accompaniment unique in its way. What that way is, may be judged by the following quotation from the fanciful prelude: 'What time Fame began to feather herself to fly, and was winged with the lasting memory of martial men; orators ceased to practise persuasive orations, poets neglected their lyres, and Pallas herself would have nothing painted on her shield save mottos of Mars, and emblems in honour of noble achievements. Then the ashes of ancient victors, without scruple or disdain, found sepulture in rich monuments; the baseness of their origin shaded by the virtue of their noble deeds.' Fame, however, was still fearful of her honour growing faint, and, in her fear, betook herself to Perseus, and invoked the aid of the Muses in order to revive 'what ignorance in darkness seems to shade, and hateful oblivion hath almost rubbed out of the book of honour—the deeds not of kings, but of those whose merit made them great.' Choosing Clio as her companion, Fame re-entered her chariot, and speedily reached the Elysian Fields, where, upon a rose-covered bank, nine handsome knights lay asleep; waking them up, she desired them to tell their several adventures, that Clio might take them down for the benefit of mankind in general, and London prentices in particular.

Then forth stepped Sir William Walworth, shambler, twice lord mayor of London (in 1374 and 1380). His narrative begins and ends with the great event of his second mayoralty—the rebellion of Wat Tyler. He relates how the malcontents advanced to London, m mightily assaulted the Tower walls, and how—

'Earle's manner houses were by them destroyed; The Savoy and S. Jones by Smithfield spoiled.'

While—

'All men of law that fell into their hands They left them breathless, wailing in their blood; Ancient records were turned to firebrands, Any bad favour sooner than the good:

So stout these cut-throats were in their degree, That noblemen must serve them on their knee.'

To protect the person of the young king when he went to meet the rebels at Smithfield, Walworth attended with

'A loyal guard of bills and bows Collected of our tallest men of trade.'

During the parley with Wat Tyler, the sturdy magistrate sat chatting with anger at the audacity of the blacksmith's followers, but refrained from interfering, because his better was in place, till he could control himself no longer—

'When I saw the rebels' pride increasing, And none control or counter-check their rage; 'Twere service good (thought I) to purchase peace, And malice of contentious brags assassine, With this conceit all fear had taken flight, And I, alone, pressed to the traitors' sight.

Their multitude could not amaze my mind, Their bloody weapons did not make me shrink, True valour hath his constancy assigned, The eagle at the sun will never wink. Among their troo incensed with mortal hate, I did arrest Wat Tyler on the pate.

The stroke was given with so good a will, I made the rebel cough unto the earth; His fellows that behind (though strange) were still, It marred the manner of their former mirth. I left him not, but ere I did depart, I stabbed my dagger to his damned heart.'

For which daring deed Richard immediately dubbed him a knight.

'A costly hat his Highness likewise gave; That London's maintenance might ever be, A sword also he did ordain to have, That should be carried still before the mayor, Whose worth deserved succession to the chair.'

The second speaker is Sir Henry Pichard, who commences his story with an atrocious pun:

'The potter tempts not the massive gold, A meaner substance serves his simple trade, His workmanship consists of slimy mould, Where any place impressed soon is made. His Pichards have no outward glittering pomp, As other metals of a firmer stamp.'

After serving in the wars of Edward III, Pichard set up as a vintner, and thrice so well that he was elected lord mayor (1366); he hints that he could speak of liberal deeds, but prefers to rest his claim to honourable consideration upon his anxiety for the advantage of London's fame, and the part he played on Edward's return from France with 'three crowns within his conquering hand.'

'As from Dover with the prince his son, The kings of Cyprus, France, and Scots did pass, All captive prisoners to this mighty one, Five thousand men, and I their leader was, All well prepared, as to defend a fort, Went forth to welcome him in martial sort. When the city 'peared within our sights, I craved a boon, submitte upon my knee, To have his grace, these kings, with earls and knights, A day or two, to banquet it with me, The king admired, yet thankfully replied: "Unto thy house, both I and these will ride."'
The royal guests and their followers were right hospitably entertained:

"For cheer and sumptuous cost no coin did fail,
And he that thought of sparing did me wrong."

This truly civic achievement is at once admitted by Clio to justify Pitchard's enrolment among the Worthy Nine.

Sir William Seavenoke tells how he was found under seven oaks, near a small town in Kent, and after receiving some education, was apprenticed to a grocer in London. His apprenticeship having expired, he went with Henry V. to France, where—

"The Dolphyne [Dauphin] then of France, a comely knight,
Disguised, came by chance into a place
Where I, well wearied with the heat of fight,
Had laid me down, for war had ceased his chase;
And, with reproachful words, as lacy swain
He did salute me ere I long had lain.

I, knowing that he was mine enemy,
A bragging Frenchman (for we termed them so),
Ill brooked the proud disgrace he gave to me,
And therefore lent the Dolphyne such a blow,
As warmed his courage well to lay about,
Till he was breathless, though he were so stent.

At last the noble prince did ask my name,
My birth, my calling, and my fortunes past;
With admiration he did hear the same,
And so a bag of crowns he to me cast;
And, when he went away, he said to me:
"Seavenoke, be proud, the Dolphyne fought with thee!"

The war over, Seavenoke determined to turn grocer again, and in time became famous for his wealth. [In 1413, Seavenoke was made sheriff; in 1418, he was elected lord mayor; and, two years later, he represented London in parliament. By his will, he set apart a portion of his wealth to build and maintain twenty almshouses, and a free-school at Seven-oaks. In Elizabeth's reign, the school was named 'Queen Elizabeth's Grammar School,' and received a common seal for its use. It still exists, and possesses six exhibitions herewith to reward its scholars.]

Sir Thomas White, merchant-tailor, lived in the days of Queen Mary. He says he cannot speak of arms and blood-red wars—

"My deeds have tongues to speak, though I suave,
My orators the learned strive to be,
Because I twined palms in time of peace,
And gave such gifts that made fair learning free;
And did they build these bowers of sweet content,
Where many wise their golden times have spent.

The English cities and incorporate towns
Do bear me witness of my country's care;
Where yearly I do feed the poor with crowns,
For I was never niggard yet to spare;
And all chief boroughs of this blessed land,
Have somewhat tasted of my liberal hand."

Sir John Bonham's life seems not to have lacked excitement. Born of gentle parents, he was apprenticed to a mercer, and shewed such qualities that he was intrusted with a valuable cargo of merchandise for the Danish market. He was received at the court of Denmark, and there made such progress in the favour of the king's daughter, with whom every knight was in love, that she gave him a favour to wear in his helmet at a grand tournament—

"They that have guides cannot choose but run,
Their mistresse's eyes do learn them chivalry,
With those commands these tourneys are begun,
And shivered lances in the air do fly.

No more but this, there Bonham had the best,
Yet list I not to vaunt how I was best."

Despite his success in arms, Bonham did not neglect business, and as soon as he had sold his cargo and refilled his ship, he made preparations for returning home. Just as he was about to leave Denmark, the Great Solymon declared war, and began to ravage the country. Bonham was offered the command of an army destined to arrest the progress of the invader; he accepted it, and soon joined issue with the foe, half of whose army—

"Smouldered in the dust.
Lay slaughtered on the earth in gory blood;
And he himself compelled to quell his last
By composition, for his people's good.
Then at a parley he admired me so,
He made me knight, and let his army go."

The generosity of the Turk did not stop here; he loaded the new-made knight with chains of gold and costly raiment, to which the monarch he had served so well added—

"Gifts in guardion of his fight,
And sent him into England like a knight."

Our sixth Worthy rejoiced in the alliterative appellation of Christopher Croker. He was bound 'prentice to a vintner of Gracechurch Street, and, according to his own account, must have been a fascinating young fellow—

"My fellow-servants loved me with their hearts;
My friends rejoiced to see me prosper so,
And kind Doll Stodie (though for small deserts),
On me vouchsafed affection to bestow."

Still, Croker was not satisfied. He burned with a desire to raise his sweetheart to high estate, and when he was pressed for the army—believing his opportunity had arrived—he was proof against the arguments of his master, and the tears of his master's daughter. To France he went, and there, he says—

"To prove my faith unto my country's stay,
And that a 'prentice, though but small esteemed,
Unto the stoutest never giveth way
If credit may by trial be redeemed.
At Bordeaux siege, when others came too late,
I was the first made entrance through the gate."

When that famous campaign was ended, our brave 'prentice was one of ten thousand men chosen by the Black Prince to aid him in restoring Don Pedro to the Castilian throne; and when he returned to England, he returned a knight.

"Thus labour never losteth its reward,
And he that seeks for honour sure shall speed.
What craven mind was ever in regard?
Or where consisteth manhood but in deed?
I speak it that confirmed it by my life,
And in the end, Doll Stodie was my wife."

Sir John Hawkwood was born to prove it does not always take nine tailors to make a man.
His conduct in action won the notice of the Black Prince, who gave him a noble steed; and he made such good use of the gift, that he was knighted by that great captain, and enrolled among 'the Black Prince's knights.' When there were no more battles to be fought in France, Sir John collected together a force of 15,000 Englishmen, with which he entered the service of the Duke of Milan, and immortalised himself in Italian history as 'Giovanni Acuti Cavaliere.' He afterwards fought on the side of Spain against the pope, and having acquired riches and reputation, returned to Padua to die.

Like most of his co-worthies, Sir Hugh Caverley, silk-weaver, won his knighthood in France. He then went to Poland, and became renowned as a hunter, and earned the gratitude of the people by terminating the career of a monstrous boar that troubled the land. For many years he lived in honour in Poland, but ultimately left that country for France, where he died. The last of the Nine Worthies was Sir Henry Malerover, grocer, commonly called Henry of Cornhill, who lived in the days of Henry IV. He became a crusader, and did not leave the field till he saw the Holy City regained from the infidels. He stood high in favour with the king of Jerusalem, till that monarch's ears were poisoned against him, when, to avoid death, the gallant knight was compelled to seek a hiding-place. This he found in the neighbourhood of Jacob's Well, of which he assumed the guardianship.

'For my pleasure's sake
I gave both knights and princes heavy strokes;
The proudest did presume a draught to take;
Was sure to have his passport sealed with knockes.
Thus lived I till my innocence was known,
And then returned; the king was penive grown,
And for the wrong which he had offered me,
He vowed me greater friendship than before;
My false accusers lost their liberty.
And next their lives, I could not challenge more.
And thus with love, with honour, and with fame,
I did return to London, whence I came.

When the last of the Worthies thus concluded his story, Fame gently laid his head upon a soft pillow, and left him and his companions to the happiness of their sweet sleep, and enjoined Clio to give the record of their lives to the world, 'that every one might read their honourable actions and take example by them to follow virtue and aspire.'

DECEMBER 14.
St Spiridion, bishop and confessor, 848. Saintes Nicolas, archbishop of Rheims, and his companions, martyrs, 5th century.

Born.—Michael Nostradamus, famous prophet, 1503, St Remy, in Provence; Tycho Brahe, astronomer, 1546, Knabenhor, near the Baltic; Barthélemy d'Herbelet, orientalist, 1625, Paris; Daniel Neal, divine and author (History of the Puritans), 1673, London; James Bruce, Abyssinian traveller, 1750, Kinnaird, Shillingshire; Rev. Charles Wolfe, author of The Burial of Sir John Moore, 1791, Dublin.

Died.—Pope Anastasius L. 402; Sir John Oldcastle, Lord Cobham, burned as a Lollard, 1417, St Giles Fields, London; Dean Henry Aldrich, of Christ-Church, Oxford, eminent scholar and divine, 1710; Thomas Rymer, historical writer, 1715; Thomas Tenison, archbishop of Canterbury, 1718, Lambeth; Sir William Drumbl, statesman and man of letters, 1716; General George Washington, American patriotic commander and statesman, 1799, Mount Vernon, Virginia; Conrad Malte-Brun, geographer, 1826, Paris; J. C. Loudon, botanical writer, 1848, Buxtehude; Lord Kinnaird, 1st Earl of Aberdeen, statesman, 1850, London; Prince Albert, consort of Queen Victoria, 1861, Windsor Castle.

J. C. LOUDON.

There is quite as much difference between a gardener of the old school, and one of the modern era, as exists between the old sea-captain, and the scientific naval officer of the present day; Andrew Fairservice has paired off with Commodore Trunnion, and we are very well rid of both of them. There can be no doubt that the eminent position to which the art of gardening and its professors have of late years attained, is mainly due to the teachings of John Claudius Loudon. The Gardener will remember well the many articles which were written among the old-school gardeners when Loudon's Encyclopædia first appeared. 'This bookmaking-fellow,' they cried, 'will teach the gentry everything, and the masters and mistresses will know more than we do!' Their words were verified; but the consequence was, that the young gardeners had to study, in order to keep pace with their employers, and doing so speedily raised their craft to a higher platform. Having commenced this movement, Loudon devoted his whole life to urge it forward. He incessantly laboured to shew, that horticulture and botany were merely the foundations of the gardener's calling; that something more than a smattering of a dozen other arts and sciences was necessary to complete the superstructure. And now, when the grave has closed over him for twenty years, it is amply testified by the most convincing proofs that his ideas were correct.

It was in 1822 that Loudon gave to the world the most important and comprehensive publication ever written on horticulture—The Encyclopædia of Gardening; a work fully meriting its pretentious title; and though, of necessity, a compilation, enriched with much useful original matter, the result of his continental travels. The success of this work induced him to undertake a series of encyclopædias on agriculture, botany, and cognate subjects, the last of which appeared in 1839. The heraclean toils of these ten years are beyond description. 'The labour,' says Mrs Loudon, 'was immense; and for several months he and I used to sit up the greater part of every night, never having more than four hours' sleep, and drinking strong coffee to keep ourselves awake.' Undeterred, however, he next commenced a more extended and labour-exacting work than any of his previous productions, an Arborum et Fruticum Britannicum, embracing every particular relative to the trees and shrubs—whether native or introduced—of the British islands. It is scarcely credible, but no less true, that during the time that these works were in course of production, Loudon edited several periodicals. In 1839, he established the Gardener's Magazine, which he continued till his death. In
1836, he commenced his *Magazine of Natural History*, and edited it until 1836, when it passed into other hands. In 1834, he commenced the *Architectural Magazine*, discontinuing it in 1838; but in 1836 he began publishing his *Suburban Gardener*. It may be safely asserted that such multifarious and incessant labours are without a parallel in literature.

A quaint old farmer of our acquaintance, when speaking of a person who worked very hard without deriving much profit from his labours, said that he had turned over a great deal of grass, but made very little hay. It is painful to relate, that the very same words might be applied to London's heroic undertakings. When the Arboretum was completed in 1838, Loudon, who published at his own expense and risk, found himself indebted to printer, paper-maker, and engraver no less a sum than £10,000.

Loudon's literary labours would appear excessive, even for a man in perfect health, and with the vigorous use of his limbs; but they seem little less than marvellous when we consider with which they were carried on are taken into consideration. A severe attack of rheumatic fever when in his twenty-third year, produced a permanent stiffness of the left knee. Subsequently his right arm became affected, and Loudon was advised to try the curative effects of shampooing. During this process, the arm was broken so close to the shoulder as to render it useless in the usual mode impossible. Shortly after, the arm was again broken; and then, in 1836, amputation became unavoidable. In this year, it will be observed, he established the *Gardener's Magazine*, and entered on that career of herculean mental effort already detailed; nor was it carried on without a still further shattering of his frame, for now his left hand became so disabled, that the use of only the third and little finger remained. Maimed and infirm of body, his mind retained its unabated vigour, and he had recourse to the employment of an amanuensis and draughtsman. Thus did he yield ground only inch by inch, as death advanced; and when his last hour arrived, death still found him hard at work, for 'he died standing on his feet.' Chronic inflammation of the lungs terminated his life on the 14th of December 1838. The work on which he was employed at the time of his death, is entitled *Self-instruction for Young Gardeners*, the class of persons whose interests his lifelong labours were devoted to promote. Let his faithful wife, who best knew him, and who has since followed him to the last resting-place, utter his requiem—

'Never did any man possess more energy and determination; whatever he began he pursued with enthusiasm, and carried out notwithstanding obstacles that would have discouraged any ordinary person. He was a warm friend; most affectionate in all his relations of son, husband, father, and brother; and never hesitated to sacrifice pecuniary considerations to what he considered his duty.'

**VEGETABLES, HERBS, AND FRUITS IN ENGLAND IN THE THIRTEENTH CENTURY.**

In connection with the improvements in the art of gardening, effected by Mr. Loudon, the subject of the foregoing article, it may not be uninteresting to contemplate the condition of horticulture in England in the thirteenth century; and the nature and extent of the supplies of fruit, vegetables, and similar produce procurable by our ancestors.

From the roll of the household expenses of Eleanor, Countess of Leicester, third daughter of King John, and wife of the celebrated Simon de Montfort, who fell at Evesham, are the following curious details; this roll being the earliest known memorial of the expenditure of an English subject.

It cannot fail to be remarked, in perusing the roll, that very few esculent plants are mentioned. Dried pease and beans, parsley, fennel, onions, green-pease, and new beans, are the only species named. Pot-herbs, of which the names are not specified, cost 6d.; and here, on the authority of Mr. Hardy, we may mention that one shilling then would purchase as much as fifteen now. If any other vegetables were in general use at the time, they were, perhaps, comprised under the term *potagrum*. There is, however, much uncertainty upon the subject of the cultivation of vegetables, in this country, during the thirteenth and fourteenth centuries. Cresses, endive, lettuce, beets, parsnip, carrots, cabbages, leeks, radishes, and cardoons, were grown in France during the reign of Charlemagne; but it is doubtful whether many of these varieties had penetrated into England at an early period. The most skilful horticulturists of the Middle Ages were ecclesiastics, and it is possible that in the gardens of monasteries many vegetables were raised which were not in common use among the laity. Even in the fifteenth century, the general produce of the English kitchen-garden was contemptible, when compared with that of the Low Countries, France, and Italy. Gilbert Kyner can enumerate only, besides a few wild and forgotten sorts, cabbage, lettuce, spinach, beet-root, trefoil, bugloss, borage, celery, parsley, mint, a species of turnip, and small white onions. According to him, all these vegetables were boiled with meat. He observes that some were eaten raw, in spring and summer, with olive-oil and spices, but questions the propriety of the custom. This is, perhaps, the earliest notice extant of the use of salads in England.

The roll furnishes but little information respecting fruit. The only kinds named are apples and pears; three hundred of the latter were purchased at Canterbury, probably from the gardens of the monks. It is believed, however, that few other sorts were generally grown in England before the latter end of the fifteenth century; although Matthew Paris, describing the bad season of 1297, observes that 'apples were scarce, and pears scarcer, while quinces, vegetables, cherries, plums, and all shell-fruits were entirely destroyed.' These shell-fruits were, probably, the common hazel-nut, walnuts, and perhaps chestnuts: in 1256, the sheriffs of London were ordered to buy two thousand chestnuts for the king's own use. In the Wardrobe Book of the 14th of Edward I, we find the bill of Nicholas, the royal fruiterer, in which the only fruits mentioned are apples, quinces, medlars, and nuts. The supply of these from Whitesunday to November, cost £21, 14s. 1d.

This apparent scarcity of indigenous fruits naturally leads to the inquiry, what foreign kinds, besides those included in the term *spicy*, such as
almonds, dates, figs, and raisins, were imported into England in this and the following century. In the time of John, and of Henry III, Rochelle was celebrated for its pears, and conger-eels; the sheriffs of London purchased a hundred of the former for Henry in 1223. In the 16th of Edward I., a large Spanish ship came to Portsmouth; out of the cargo of which the queen bought one half of Seville figs, one half of raisins or grapes, one bale of dates, and two hundred and thirty pomegranates, fifteen citrons, and seven oranges. The last item is important, as Le Grand d'Aussy could not trace the orange in France to an earlier date than 1532; here we find it known in England in 1590; and it is probable that this was not its first appearance. The marriage of Edward with Eleanor of Castile naturally led to a greater intercourse with Spain, and, consequently, to the introduction of other articles of Spanish produce than the leather of Cordova, olive-oil, and rice, which had previously been the principal imports from that fertile country through the medium of the merchants of Bayonne and Bordeaux.

It is to be regretted that the series of wardrobe books is incomplete, as much additional information on this point might have been derived from them. At all events, it appears certain that Europe is indebted to the Arab conquerors of Spain for the introduction of the orange, and not to the Portuguese, who are said to have brought it from China. An English dessert in the sixteenth century must, it is clear, have been composed chiefly of dried and preserved fruits, dates, figs, apples, pears, nuts, and the still common dish of almonds and raisins.

With respect to spices, the arrival of a ship laden with them was an event of such importance, and perhaps rarity, that the king usually hastened to satisfy his want before the cargo was landed. Thus, in the reign of Henry III., the bailiffs of Sandwich were commanded to detain, upon their coming into port, two great ships laden with spices and precious merchandise, which were exported from Bayonne; and not to allow anything to be sold until the king had had his choice of their contents.

As to the roll, cider is mentioned only once, and in such a manner as to convey the impression that it was not in much estimation, the Countess having distributed one ton among eight hundred panpers.

**ALBERT, PRINCE CONSORT.**

On occasion subsequent to the death of the Princess Charlotte of Wales, in 1817, was any royal demise so deeply lamented in England as that of Albert, Prince Consort to Queen Victoria. Born on the 26th of August 1819—only two months after the royal lady whom he was destined to espouse—he passed his early days in receiving an education unusually complete in all that could grace a prince and a gentleman, both as regards solid learning and high-bred accomplishments. He and his elder brother, Ernest Augustus, had lasting reason to be grateful for the care bestowed upon them by their father, the reigning Duke of Saxe Coburg Gotha. The two young princes visited England in 1836, while William IV. was king; and then, it is understood, took place the interview between Albert and Victoria, which led ultimately to their union. On the return of the two brothers to Germany, both princes continued their studies with great assiduity, at various universities. Albert is believed, too, to have profited greatly during a temporary residence with his uncle, Leopold, the sagacious king of the Belgians; who, being uncle to Victoria as well as to Albert, was well fitted to instruct the young man concerning the delicate and responsible position of one who might become husband to the Queen of England. In 1839, when he was declared of age, Prince Albert came into possession of estates worth about £2,000 a year; and this was all the patrimonial property which he inherited. On the 10th of October in that year, Ernest and Albert again visited England. Victoria was then Queen. Her ministers had already agreed on the suitableness of Albert as her husband, in all that concerned political, national, and religious considerations; and the graces and accomplishments of the Prince now fairly won the heart of the young Queen. Augustus, her almost portionless young Prince to pay addresses to the greatest queen in Europe; nor was it an easy matter for an English maiden, at twenty, to shew her preference towards him; but one of the many memoirs of the Prince gives the denouement in the following form. On a certain occasion, at one of the palace balls, the Queen presented her bouquet to the Prince at the conclusion of a dance; his close uniform, buttoned up to the throat, did not permit him to place the bouquet where the Persian-like compliment would dictate; but he drew forth a penknife, ripped a hole in the breast of his coat, and placed the treasure there. On another occasion, when he was thanking the Queen for the very kind and gracious reception which he had met with in England, she replied: 'If, indeed, your Highness is so much pleased with this country, perhaps you would not object to remaining in it and making your home.' These narrations may not either of them, perhaps, be strictly correct, but there is not a doubt that the alliance proceeded from mutual affection. On the 14th of November, Prince Albert left England; and on the 23d, at a privy council summoned for the purpose, the Queen said: 'I have caused you to be summoned, in order that I may acquaint you with my resolution in a matter which deeply concerns the welfare of my people, and the happiness of my future life. It is my intention to ally myself in marriage with Prince Albert of Saxe Coburg Gotha. Deeply impressed with the solemnity of the engagement which I am about to contract, I have not come to this decision without mature consideration, nor without feeling a strong assurance, that, with the blessing of Almighty God, it will at once secure my domestic felicity, and serve the interests of my country.' By an unusual combination of circumstances, the Tory, or Church-and-King party of the day, appeared in the character of economical reformers; for they, in the House of Commons, cut down to £30,000 a year, an allowance to Prince Albert, which Viscount Melbourne's government proposed should be £250,000. On the 44th of January 1840, the Prince was made Knight of the Garter; on the 9th of February, he arrived in England; and on the next day he became husband to Queen Victoria.

During the twenty-two years of his married
life, this exemplary man laboured incessantly to be worthy of his high position, and to foster all good and ennobling schemes. His merits were partially known to the nation during his lifetime, but never so fully as after his decease. He went through a regular course of study of the system of English law, and jurisprudence, and of the rise and progress of the English constitution, under Mr Selwyn. He studied agriculture, both scientifically and practically, and became a regular exhibitor at agricultural shows. He revived the drooping Society of Arts, and made it more flourishing than it had ever been before. He was, more than any other person, the originator of International Exhibitions; and to him the world owed especially the Great Exhibition of 1851. He took a decided part in the establishment of the South Kensington Museum, and of schools of art in various parts of the country. He advocated popular education in various ways, calculated to shew the liberal tendency of his mind. He made speeches and addresses at the York and Aberdeen meetings of the British Association for the Advancement of Science, which showed a very extensive acquaintance with science in its principles, its history, and its practical applications. He had something to say worth hearing and attending to at the Educational, Statistical, and Social Science Congresses. He was the promoter of a new branch or department of the Order of the Bath, designed to recognise civil in addition to military and naval merit. He might, at one time, have become commander-in-chief of the Queen's armies; but his own appreciation of the delicate position which he occupied towards her Majesty—at once a husband and a subject—led him to decline the honour, although urged to accept it by the Duke of Wellington. There were two or three occasions in his life when he was a little misunderstood; especially in 1851 and 1854, during political discussions, which led many persons to accuse him of using 'German' influence injurious to English interests; but the leaders of both parties, in and out of office, uniformly acknowledged the purity of his intentions, and the care with which he sought always to keep strictly within the constitutional limits of his position.

Such was the Prince whose death, on the 14th of December 1861, was a source of great national grief.

Mr Tennyson published a new edition of his Idyls of the King a few weeks after the death of the Prince; to whose memory he dedicated it in lines which are likely to take a permanent place in the poetry of this country. In the following extract, the leading characteristics of the Prince's mind are well set forth:

'He seems to me
So rare other than my own ideal knight,
"Who reverence'd his conscience as his king;
Whose glory was, repressing human wrongs;
Who spake no slander, no, nor listen'd to it;
Who lov'd one only and who clave to her"—
Her, over all whose realms to their last isle,
Coomlinged with the gloom of imminent war,
The shadow of His loss moved like eclipse,
Darkening the world. We have lost him: he is gone:
We know him now: all narrow jealousies
Are silent, and we see him as he moved,
How modest, kindly, all-accomplish'd, wise,
With what sublime repose of himself,
And in what limits, and how tenderly;
Not swaying to this faction or to that;
Not making his high place the lawless perch
Of wing'd ambitions, nor a vantage-ground
For pleasure; but through all this tract of years
Wearing the white flower of a blameless life.
Before a thousand peering little eyes,
In that fierce light which beats upon a throne,
And blackens every blot: for where is he,
Who dares for shadow for an only son?
A lovelier life, a more sustain'd, than his?
Or how should England, dreaming of his sons,
Hope more for these than some inheritance
Of such a life, a heart, a mind, as thine
Thou noble father of her kings to be,
Laborious for her people and her poor—
Voice in the rich dawn of an ampler day—
Far-sighted summoner of War and Waste
To fruitful strife and rivalries of peace—
Sweet nature gilded by the gracious gleam
Of letters, dear to science, dear to art,
Dear to thy land and ours, a Prince indeed,
Beyond all titles, and a household name,
Hereafter, through all times, Albert the Good.'

And the closing lines, addressed to the royal widow, are equally beautiful:

'Break not, O woman's heart, but still endure;
Break not, for thou art royal, but endure,
Rememb'ring all the beauty of that star
Which shone so close beside thee, that ye made
One light together, but has past and left
The crown a lonely splendour.
May all love,
His love, unseen but felt, o'ershadow thee,
The love of all thy sons encompass thee,
The love of all thy daughters cherish thee,
The love of all thy people comfort thee,
Till God's love set thee at his side again.'

THE 'SACHEVERELL' FERMENT IN QUEEN ANNE'S TIME.

The effect of particular sermons has often been remarked upon in rousing the feelings of large multitudes of persons, but it seldom extended far beyond the immediate hearers; this of Dr Sacheverell's, however, rang through the whole nation; little else was spoken of for months, and in its consequences it influenced a general election, and turned out the Whig ministry of the preacher, Henry Sacheverell, was descended from a good Derbyshire family, who had taken part with the Puritans, and struggled for the very principles which the subject of the present memoir so warmly opposed; but his father had become a clergyman of the Church of England, and held the living of Marlborough, where his son Henry was born in the year 1672. The father dying in poverty, and leaving a large family, Henry was adopted by a Mr Hearst, who sent him to Magdalen College, Oxford, where he became the intimate friend of Addison, gained a fellowship, and was celebrated as a college tutor. Thus when, in after-days, we find him spoken of as an ignorant, bombastical fellow, 'who had not learning enough to write or speak true English,' and we are informed that the learned doctors of the university, in holding a high-feast to welcome their champion after his trial, were soon disgusted at his unspeakable ignorance, we cannot help suspecting that these accounts must have arisen from the violence of party-spirit. It is said that he
began life as a Whig, but not getting the promotion he wanted, he became a Tory, and, like all renegades, poured out boundless abuse on his late friends. In 1708, he was presented to the living of St Saviour's, Southwark, where his loud voice, great impudence, and graceful, well-dressed person, gained him many admirers. The popular cry at the time was, that the church was in danger from the wickedness of the ministry, and Sacheverell, taking up the cry, seized the opportunity, when preaching the sermon at Derby, on 18th August 1709, of making a violent attack on the government; and again, on the 8th of November, when addressing the corporation of London in St Paul's Cathedral, he chose for his text: 'Perils from false brethren,' and used the expression, 'the crafty insidiousness of such wily Volpones,' which was then a popular nickname for Godolphin, the lord treasurer. Foaming at the mouth, and striking the pulpits with his clenched hand, he denounced the bishops who approved of toleration to dissenters, and the supporters of the Revolution as men who had committed the unpardonable offence. The corporation gave their thanks, as usual, for the sermon, and do not generally seem to have been aware of the treason they had been listening to; but when the sermon was printed, and the Tories praised it up to the skies, setting no less than forty thousand copies in circulation, the ministry took alarm, and Marlborough and Godolphin, Sacheverell's principal patrons, were impeached of high crimes and misdemeanours. In the meantime, the people were roused to the greatest excitement by the High-Church party, who asserted that the Puritans were regaining the ascendency, the Whigs would pull down the church, and Sacheverell was to be prosecuted in order to try their strength; money and strong-arm gained them numerous partisans among the lower orders.

After some delays, the trial began on the 27th of February 1710. When the doctor had previously made his appearance in the House of Commons, he was accompanied by no less than one hundred of the most eminent clergymen in London; but the House of Lords determined that Westminster Hall would be a more suitable place for the trial than their own house, and that it had been prepared with greater care than the nearest. The queen had her box near the throne, and attended as a private individual; numbers of ladies, of every station, crowded to support their favourite preachers; and the populace rushed in such numbers, that it was much feared the galleries would give way. Out of doors, the scene was no less striking; London had been in a sort of riot ever since the arrest of Sacheverell; the lowest of the people were his greatest supporters; butchers' boys, chimney-sweeps, costermongers, formed his body-guard, and the respectable citizens, however, so much did they dread that the drunken and riotous crowd would find vent for their passions in setting fire to their houses and murdering the Whigs. The subject of all this uproar entered the hall, attended by Dr Atterbury and Dr Smalridge, and inflated with his own importance in no small degree; the old Duchess of Marlborough declaring 'that his clean gloves, good assurance, and white handkerchief well-managed, moved the heart of many at his appearance.' Four articles of impeachment were brought against him, and Robert Walpole distinguished himself much by the speech he made in support of them. Sacheverell made a speech in his own defence: 'exquisitely contrived to move pity, full of impious piety, denying the greatest part of the charge, with solemn appeals to God and such applications of Scripture as would make any serious person tremble;' whilst the beautiful daughter of the Duchess of Marlborough, who thus writes, was so much affected at his calling God to witness what was a falsehood, that she burst into tears; but other noble ladies sympathised with the accused, and saw a halo of truth and innocence around the head of the injured priest.

The doctor's return home, after the first day's trial, was one of disappointment. On the evening of the second day, the riot broke out by the pillaging and burning of some dissenting chapels; a bonfire was made in Lincoln's Inn Fields, of the books and cushions, the mob shouting around: 'High Church and Sacheverell!' Bishop Burnet, who was well known for his tolerant views, and had been denounced by Sacheverell, had a narrow escape; the mob rushed upon his house, but some of the guards arrived in time to save it. There was a movement upon the bank; happily the mob was cowardly, and dispersed as soon as the troops appeared; no blood was shed, but it was generally believed that many gentlemen, in disguise, directed and encouraged the people; the queen was suspected of being on their side, and one of his agents, who was on her way to Westminster, they gathered round her chair, shouting: 'God bless your majesty and the church; we hope your majesty is for Dr Sacheverell.' On the 20th of March, the trial came to an end; the doctor was found guilty by a majority of sixty-eight to fifty-two; three days after, he was placed on his knees at the bar, and the lord chancellor pronounced this judgment: 'You, Henry Sacheverell, are enjoined not to preach during the term of three years next ensuing, and your two printed sermons shall be burned before the Royal Exchange, at one of the clock in the afternoon, by the common hangman, in the presence of the lord mayor and sheriffs of London.' As this very mild sentence was considered equivalent to an acquittal, thejoy and rejoicings went on a tremendous scale, and every passer-by was compelled to drink to the health of the popular champion. He, on this side, was more inflamed with vanity than ever; his vulgar attendants hummed him through the streets like a successful parliamentary candidate. For some days, he employed himself in calling upon those noblemen who had voted in his favour; but the Duke of
Argyle refused him admittance, desiring his servant to tell him that what he did in parliament was not done for sake. On the other hand, Lord Weymouth presented him with fifty pounds, and many gifts were sent to him. After exhausting the enthusiasm of the metropolis, he set off on a sort of progress through the kingdom; Oxford, as the focus of high-churchism, or as the Whigs called it, the nursing-place of slavery, was loud in its approbation and warm in its reception; in every town feasts were provided, and, strange, place, when a clergman was in the case, drunkenness prevailed; three bottles and a magnum were pure orthodoxy, and since the restoration of Charles II., such scenes had not been witnessed. Sacheverell was received by the mayors, and escorted by a mounted train; garlands and flags adorned the streets, and medals, with his picture engraved, were struck.

Happily, after a few weeks, people recovered their senses, and acknowledged the justice of the Duchess of Marlborough’s remark: ‘Oh, what dreadful things do we undergo for the sake of the church!’ At Ely, the doctor was pelted with stones and curses; and on wishing to make a speech to the Company of the Bank of England, the directors ordered him to be turned out; nevertheless, the affair had a most powerful influence on the elections, and the Tory ministry were brought back to their places. The living of Salatin, in Shropshire, was presented to him; and a month after the three years’ suspension had expired, the queen, who at heart was always on his side, gave him the valuable living of St Andrews, Holborn. Like many who owe their popularity to circumstances rather than any merit of their own, Sacheverell dropped into private life, and nothing worthy of note is told of him, but that his quarrels with his parishioners were by no means unfrequent; just what might be expected from so pugnacious a disposition. He inherited a considerable fortune, and died on the 5th of June 1724, having lived in comfort and affluence during his later years.

DECEMBER 15.

St Eusebius, bishop of Veronali, 371.

Born.—George Romney, portrait painter, 1734, Dalton, Lancashire; Jerome Bonaparte, youngest brother of Napoleon, 1784, Ajaccio.

Died.—Timoleon, liberator of Syracuse, 337 B.C.; Pope John VIII, 82 A.D.; Isaac Walton, author of The Complete Angler, 1688, Winchester; George Adam Sirvius, jurist, 1692, Jena; Benjamin Stillingfleet, naturalist, 1717, London; Jean Baptiste Carrier, revolutionary terrorist, guillotined, 1794; Mrs Sarah Trimmer, authoress of juvenile and educational works, 1810, Brentford; David Dous, botanist, 1841, London; Leon Faucher, eminent French statesman and publicist, 1864, Marseille.

WILLIAM HOGARTH.

Were it desired to select from the distinguished men of Great Britain, one who should approach most near to the true-born Englishman in all his uprightness and honesty, his frank-hearted vivacity and genial joviality of temperament, and at the same time, his roughness, obstinacy, and inveteracy of prejudice, no better representative of such aggregate virtues could be chosen than William Hogarth, our great pictorial moralist. Repulsive and painful as many of his subjects are, seldom exhibiting the pleasing or sunny side of human nature, their general fidelity and truthfulness commend themselves alike to the hearts of the most illiterate and the most refined, whilst the impressive, if at times coarsely-expressed, lessons which they convey, are the most permanent, and foremost rank of those who have not inaptly been termed ‘week-day preachers.’

With the exception of two memorable excursions—one with a company of friends to Rochester and Sheerness, and another to Calais—Hogarth’s life appears to have been almost exclusively confined to London and its immediate vicinity. His father, Richard Hogarth, was the youngest son of a Westmoreland yeoman, who originally kept a school at St Bees, in Cumberland, but came up when a young man to London, and settled as a schoolmaster in Ship Court, in the Old Bailey. He married and had three children—William, afterwards the celebrated artist, and two girls, Mary and Anne.

Young Hogarth, having early showed a turn for drawing, was bound apprentice to a silversmith and goldsmith, and initiated in the art of engraving arms and cyphers on plate. The employment did not satisfy the aspirations of his genius, and he accordingly, on the expiration of his indentures, entered Sir James Thornhill’s academy, in St Martin’s Lane, where he occupied himself in studying drawing from the life. In the mere delineation, however, of the external figure, irrespective of the exhibition of character and passion, Hogarth never acquired any great proficiency. During the first years of his artistic career, he supported himself by engraving arms and shop-bills; and then gradually ascending in the professional scale, he turned his attention successfully to portrait-painting, and in the course of a few years derived both a considerable income and reputation from this source. An amusing and characteristic anecdote of him is related in connection with this period of his life. A certain nobleman, remarkable for ugliness and deformedness, employed Hogarth to paint his picture—a behest which the artist executed with only too scrupulous fidelity. The peer was dissatisfied at so correct a representation of himself, and refused to take or pay for the picture. After numerous ineffectual negotiations with his lordship on the subject, Hogarth addressed him the following note: Mr Hogarth’s dutiful respects to Lord—who finding that he does not mean to have the picture which was drawn for him, is informed again of Mr Hogarth’s pressing necessities for the money. If, therefore, his lordship does not send for it in three days, it will be disposed of, with the addition of a package of things which are of no value to his lordship’s collection. The work was successful; the price agreed on was paid for the picture, which was forthwith destroyed.

Having attained the age of thirty-three, Hogarth contracted, in 1730, a secret marriage with the only daughter of the celebrated portrait painter, Sir James Thornhill, who was at first extremely indignant at the match. He afterwards, however, relented,
and lived till his death in great harmony with his son-in-law.

With the publication of the 'Harlot's Progress,' in 1733, Hogarth commenced those serial prints which have rendered his name immortal. From the first, his success in this depart- ment of art was assured. The 'Harlot's Progress' was followed, after the interval of four years, by the still more famous 'Rake's Progress,' and this again by the series of 'Marriage à la Mode,' 'Industry and Idleness,' the 'Stages of Cruelty,' and the 'Election Prints.' Numerous other individual pieces might be mentioned, such as the 'March to Finchley,' which excited the wrath of George II., by the ludicrous light in which his soldiers were presented; 'Modern Midnight Conversation,' 'Strolling Players in a Barn,' and 'Beer Street,' and 'Gin Lane;' the former a plea for the liquor which Hogarth, like a true Englishman, deemed the most wholesome and generous beverage; the latter, a fearfully repulsive, but at the same time salutary delineation of the dreadful miseries resulting from the abuse of ardent spirits. To each of these pictures Hogarth gave a curious anecdote. He had made an excursion thither with some friends, but with the determination apparently to find nothing in France either pleasing or commendable. Like Smollett, Hogarth seems to have entertained a thorough contempt for the French nation, and he was unable to refrain from giving vent to his sentiments even in the open street. The lank and grotesque figures which presented themselves everywhere, and by their appearance gave unmistakable evidence of the poverty and misery of the country, under the old régime, called forth all his powers of ridicule; whilst the light-heartedness and vivacity with which, like the Irish, the French people could forget or charm away their wretchedness, raised only to a higher pitch his feeling of contempt. Very speedily and summarily, however, he himself was entirely outstripped by the country which he so heartily despised. Ignorant of foreign jealousies on the subject of bulwarks and fortifications, he began to make a sketch of the gate of Calais, as a curious piece of architecture. This action being observed, he was arrested as a spy, and conveyed by a file of musketeers before the governor of the town. There his sketch-book was examined, but nothing whatever was discovered to warrant the suspicion entertained against him. The governor, however, assured him with the utmost politeness, that it were not for the circumstance of the preliminaries of a treaty of peace having actually been signed between England and France, he should have been under the disagreeable necessity of hanging Mr Hogarth on the ramparts of Calais. As it was, he must insist on providing him with a military escort whilst he continued in the dominions of Louis XV. The discomfited artist was then conducted by two sentinels to his hotel, and from thence to the English packet in the harbour. Hogarth's guards of honour accompanied him to the distance of about a league from the shore, and then seizing him by the shoulders, and spinning him round and round, they deposited the pictures by Hogarth on the promontory of the town, whilst the hand of a sentinel is in the act of being laid on the artist's shoulder. Though he thus perpetuates the recollection of the circumstance, it is said that he never liked to hear any reference to the mortifying incident that ensued. In a letter from Walpole, 1st Duke of Hesse-Mann, dated 15th December 1748, this misadventure of Hogarth is communicated as a piece of news which had just transpired.

Hogarth's prints are thus admiringly epitomised by Mr Thackeray in his English Humorists: 'They give us the most complete and truthful picture of the manners, and even the thoughts, of the past century. We look, and see pass before us the England of a hundred years ago—the peer in his drawing-room, the lady of fashion in her apartment, foreign singers surrounding her, and the chamber filled with gawgs in the mode of that day; the church, with its quaint florid architecture and singing congregation; the parson with his great wig and the beadle with his cane: all these are represented before us, and we are sure of the truth of the portrait. We see how the lord mayor dines in state; how the prodigal drinks and sports at the bagnio; how the poor girl beats hemp in Bridewell; how the thief divides his booty, and drinks his punch at the night-cellar, and how he finishes his career at the gibbet. We may depend upon the perfect accuracy of these strange and varied portraits of the bygone generation; we see one of Walpole's members of parliament, after his election, and the lieges celebrating the event, and drinking confusion to the Pretender; we see the grenadiers and trainbands of the city marching out to meet the enemy; and have before us, with sword and firelock, and white Hanoverian horse embroidered on the cap, the very figures of the men who ran away with Johnny Cope, and who conquered at Culloden. The lancashire wagon rolls into the inn-yard; the country parson, in his jack-boots, and his bands and short cassock, comes trotting into town, and we fancy it is Parson Adams, with his sermons in his pocket. The Salisbury fly sets forth from the old "Angel"—you see the passengers entering the great heavy vehicle, up the wooden steps, their hats tied down with handkerchiefs over their faces, and under their arms, sword, handkerchief, and case-bottle; the landlady—apolectic with the liquors in her own bar—is tugging at the bell; the hunchbacked postilion—he may have ridden the leaders to Humphry Clinker—is begging a gratuity; the miser is grumbling at the bill; Jack of the Centurion lies on the top of the clumsy vehicle, with a soldier by his side—it may be Smollett's Jack Schawley—it he, is rummaging Leesahago. You see the suburbia fair, and the strolling-company of actors; the pretty milkmaid singing under the windows of the enraged French musician—it is such a girl as Steele charmingly described in the Guardian, a few years before this date, singing, under Mr Ironside's window in Shire Lane, her pleasant carol of a May morning. You see noblemen and bluestockings searching the cock-pit; you see Garrick as he was arrayed in King Richard; Macbeth and Polly in the dresses which they wore when they charmed our ancestors, and when noblemen in blue ribbons sat on the stage, and listened to their delightful music. You
see the ragged French soldier, in their white coats and cockades, at Calais Gate—they are of the regiment, very likely, which friend Roderick Random joined before he was rescued by his preserver, Monsieur de Strap, with whom he fought on the famous day of Dettingen. You see the judges on the bench; the audience laughing in the pit; the student in the Oxford theatre; the citizen on his country-walk; you see Broughton the boxer, Sarah Malcolm the murderess, Simon Lovat the traitor, John Wilkes the demagogue, leering at you with that squint which has become historical, and that face which, ugly as it was, he said he could make as captivating to woman as the countenance of the handsomest man in town. All these sights and people are with you. After looking in the Rake’s Progress at Hogarth’s picture of St James’s Palace-gate, you may people the street, but little altered within these hundred years, with the gilded carriages and thronging chairmen that bore the courtiers, your ancestors, to Queen Caroline’s drawing-room, more than a hundred years ago.

Hogarth was not only a painter and an engraver, but likewise an author, having published, in 1753, a quarto volume, entitled the Analysis of Beauty, in which he maintains the fundamental principle of beauty to consist in the curve or undulating line, and that round swelling figures are the most attractive to the eye. This idea appears to have been cherished by him with special complacency, as in that characteristic picture which he painted of himself and his dog Trump, and of which a copy is here engraved, he has inscribed, in association with the curve, ‘The Line of Beauty and Grace,’ as his special motto.

A very curious and interesting memorial of William Hogarth and his associates, exists in the narration of a holiday excursion down the river as far as Sheerness. Though Hogarth himself is not the chronicler, we are favoured, by one of the party, with a most graphic description of the merry company, who seem to have enjoyed their trip with all the zest of school-boys or young men ‘out on a lark.’ Hogarth acted as draughtsman, making rough sketches of many of the incidents of the journey, which seems to have been as jovial an expedition as good-humour, high spirits, and beer, could have contributed to effect.

One of the members of this party was Hogarth’s brother-in-law, John Thornhill, who afterwards became sergeant-painter to the king, but resigned his office in favour of Hogarth in 1757. It has been imagined that this connection with the court, in his latter years, led the artist into that pictorial warfare with Wilkes and Churchill, in which certainly no laurels were gathered by any of the parties engaged. Hogarth’s health began now visibly to decline, and after languishing in this state about two years, he expired suddenly of anæurism in the chest, on 25th October 1764. He was interred in the churchyard at Chiswick, where a monument, recently restored, was erected to his memory. He never had any family, and was survived for twenty-five years by his wife, who died in 1789.

The Society of the Gm.

At the beginning of the fourteenth century, London contained many foreigners, whose business it was to frequent the various fairs and markets held in England, and with whom their idle time hung heavily for want of some congenial amusement. To meet this want, they formed a semi-musical, semi-friendly association, called the Company or Brotherhood of the Gm.—in honour of God, our Lady Saint Mary, and all saints both male and female; and in honour of our Lord the king, and all the barons of the country.’ Both the name and nature of the association were derived from similar societies then existing in France and Flanders, which are supposed to have taken their titles from the city of Le Puy, in Auvergne, a city rejoicing in the possession of a famous statue of the Virgin, popular with the pilgrims of the age.

The rules and regulations of the London society are preserved in the Liber Custumarum, one of the treasures of the Guildhall library. From these we learn that the avowed object of the loving companions of the Gm. was to make London renowned for all good things: to maintain mirth, peace, honesty, joyousness, and love; and to annihilate wrath and rancour, vice and crime. The brotherhood, which was not confined to foreigners, consisted of an unlimited number of members, each of whom paid an entrance-fee of sixpence, and an annual subscription of one shilling, towards the expenses of the yearly feast, to which the management of the society’s affairs was intrusted to twelve companions, who held office till removed by death or their secession from the brotherhood, but the president or prince, as he was called, was changed every year. Any member was eligible to serve, and none could decline the office if chosen by the outgoing prince—his choice being ratified by eleven
of the twelve companions declaring him, upon oath, to be ‘good, loyal, and sufficient.’ The expense entailed by accepting the honour was not very burdensome, consisting merely in paying for the official costume, a ‘cost and surcoat without sleeves, and mantle of one suit, with whatsoever arms he may please.’ The crown was provided by the society at the cost of one mark, and was passed from one prince to another. The only other officers were a clerk to keep the accounts, register the names of the members, and summon them to the meetings of the company; and a chaplain, ‘at all times singing mass for living and dead companions.’

To suit the convenience of the mercantile community, the great festival of the Piu was held on the first Sunday after Trinity, in a room strewed with fresh rushes, and fairly decked with leaves. As soon as the company were assembled, the investiture of the new prince took place, with the following simple ceremony: ‘The old prince and his companions shall go through the room, from one end to the other, singing; and the old prince shall carry the crown of the Piu upon his head, and a gift cup full of wine in his hands. And when they shall have gone round, the old prince shall give to drink unto him whom they shall have chosen, and shall give him the crown, and such person shall be prince.’ The blazon of the new chief’s arms were then hung in a conspicuous place, and the most important business of the day commenced.

This was the choosing of the best song. The competitors—who were exempted from paying the festival-fee—were ranged on a seat covered with cloth of gold, the only place allowed to be so decorated. The judges were the two princes and a jury of fifteen members, who took an oath not to be biased in their judgment, ‘for love, for hate, for gift, for promise, for neighbourhood, for kindred, or for any acquaintance of old or new, nor yet anything that is.’ Further to insure the prize being properly awarded, it was decreed that, ‘there be chosen two or three who well understand singing and music, for the purpose of trying and examining the notes, and the points of the songs, and shall constitute the upper committee of composers thereof.

For without singing, no one ought to call a composition of words, a song; nor ought any royal song to be crowned without the sweet sounds of melody sung.’ When the song had been chosen, it was hung beneath the arms of the prince, and its author crowned. Then dinner was served, each guest receiving good bread, ale and wine, potage, one course of solid meat, double roast in a dish, cheese, ‘and no more.’ At the conclusion of this moderate banquet, the whole company rose, mounted their horses, and went in procession through the city, headed by the princes past and present, between whom rode the musical champion of the meeting. On arriving at the house of the new prince, the brethren dismounted, had a dance ‘by way of a hearty good-bye,’ and departed home-ward on foot.

None but members of the company were invited to the festival, and ladies were especially excluded from taking part in it, by a clause which is a curiosity in its way, as a gallant excuse for an ungentle act. It runs thus: ‘Although the becoming-pleasances of virtuous ladies is a rightful theme and principal occasion for royal singing, and for composing and furnishing royal songs, nevertheless it is hereby provided that no lady or other woman ought to carry great fame in the Piu, for the reason that the companions ought hereby to take example and rightful warning to honour, cherish, and commend all ladies, at all times, in all places, as much in their absence as in their presence.’

The day after the feast a solemn mass was sung at the priory of St Helen’s for the souls of all Christian people in general, and those of the brotherhood in particular. The accounts were audited, and any surplus left, added to the treasury of the company; if the expenses of the feast exceeded the receipts, the difference was made good by contributions from the members. The names of absentees in arrears were published, and those who had neglected paying their subscription for seven years were expelled the society, the same sentence being passed against evil-minded companions, respecting whom there was this emphatic statute: ‘If there be any one who is unwilling to be obedient to the peace of God, and unto the peace of our lord the king—which God preserve—the community of the companions do not wish to have him or his fees, through whom the company may be accused or defamed.’

Members were also expected to attend at the wedding or funeral of a brother, and were furthermore enjoined always to aid, comfort, and counsel one another in faith, loyalty, peace, love, and concord as brethren in God and good love.

**NEGRE AUTHORS.**

There are so few very instances on record of any of the pure African negro race exhibiting a taste or ability for literary composition, that their names seem not unworthy of notice in this collection. First in the list stands Ignatius Sancho, who was born in 1729, on board of a slave-ship, a few days after leaving the coast of Guinea, for the Spanish-American colonies. At Carthagena, he was christened Ignatius; his mother died soon after; and his father, unable to survive her, deserted the poor infant, and the poor mistress of his education. When two years of age, Ignatius was brought to England, and given by his owner as a present to three elderly maiden-sisters, residing near Greenwich. These ladies, having just previously read Don Quixote, gave their little slave the name of Sancho; but, however fond of reading themselves, they denied that advantage to Ignatius, believing that ignorance was the only security for obedience; that to cultivate the mind of their slave, was equivalent to emancipating his person. Happily, the Duke of Montague, then residing at Blackheath, near Greenwich, saw the little negro, and admired in him a native frankness of manner, as yet unimpaired by servitude, if unrefined by education. Learning that the child was trying to educate himself, the duke lent him books, and strongly recommended to his three mistresses the duty of cultivating a mind of such promising ability. The ladies, however, remained inflexible; it was of no use to educate the lad, they said, as they had determined to send him back to West Indian slavery. At this crisis, the duke died; and, the duchess declining to interfere between the

THE BOOK OF DAYS.

SIR WILLIAM PETTY.

negro-lad and his mistresses, Sancho, in the immediate prospect of being sent away, fell into a state of despair. With four shillings, all the wealth he possessed, he bought a pistol, and threatened to follow the example of his father. The ladies, now terrified in their turn, gave up all claim to their slave, and he was taken into the service of the Duchess of Montague. In this family Sancho, principally in the capacity of butler, for many years, till corpulence and gout rendered him unfit for duty. He then set up a small grocer’s shop, and by care and industry gained a decent competence to support his family till his death, which took place on the 16th of December 1780.

Sancho corresponded with many notabilities of his day, such as Sterne, Garrick, and the few persons who then took an interest in the abolition of the slave-trade. His letters were written after his death, edited by a Miss Crewe, who, as she says, did not give them to the public till she had obviated an objection which had been advanced, that they were originally written with the view of publication. She declares that no such idea was ever entertained by Sancho; that not one letter was printed from a copy or a duplicate preserved by himself, but all collected from the various friends to whom he had written them. She also adds, that her reasons for publishing them, were her desire of shewing that an African may possess abilities equal to a European; and the still superior motives of serving a worthy family. In this undertaking Miss Crewe had the happiness of finding that the world was not insensible to the voice of obscure merit.

The first and second editions of Sancho’s letters produced £500 to his widow and family, and the writer has seen a fifth edition, published more than twenty years after his death, by his son, William Sancho, then a respectable bookseller in Westminster.

Attobah Cuqona, a Fantin negro, was carried as a slave to Grenada, when quite a child. Meeting with a benevolent master, he was subsequently liberated and sent to England, where he entered the service of Mr Cosway, the celebrated portrait-painter. Little is known of this negro’s history, though it would seem that he was a much able man than Sancho, with less advantages of education and the assistance of influential friends. He was the author of a work of considerable celebrity in its day, entitled Thoughts and Sentiments on the evil and wicked Traffic of the Slavery and Commerce of the Human Species: Humbly submitted to the Inhabitants of Great Britain. This is certainly an ably composed book, containing the essence of all that has been written against slavery from a religious point of view; and though the matter is ill arranged, and some of the arguments scarcely logical, it was translated into French, and obtained great consideration among the continental philanthropists. Another interesting example of literary distinction achieved by what Thomas Fuller, with a quaintness and benevolence of phrase peculiarly his own, styles “God’s image cut in ebony,” is afforded by Phillis Wheatley, an African negro, who, when about seven years of age, was brought to Boston as a slave in 1761. She was purchased by a respectable merchant, named Wheatley, who had her christened Phillis, and, according to custom, her master’s surname was bestowed on her. She never received any instruction at school, having been taught to read by her master’s family; the art of writing she acquired herself. Phillis composed a small volume of poems, which was published in her nineteenth year. Like many others of her race, she vainly hoped that the quarrel between the mother-country and the American colonies would be beneficial to African freedom; that when independence was gained by the white man, the black would be allowed some share in the precious boon. In a poem on Freedom, addressed to the Earl of Dartmouth, the secretary of state for the colonies, she thus writes—

‘Should you, my lord, while you pursue my song,
Wander from whence my love of freedom sprung,
Whence flow those wishes for the common good,
By feeling hearts alone best understood—
I, young in life, by seeming cruel fate,
Was snatched from Africa’s fancied happy seat.
What pangs excruciating must molest,
What sorrow’s labour in my parent’s breast?
Steeled was that soul, and by no misery moved,
That from a father seized the babe beloved.
Such, such my case—and what a case it is but pray,
Others may never feel tyrammio away!’

Phillis married a person of her own complexion, a tradesman in comfortable circumstances in Boston. Her married life was unhappy. From the notice bestowed on Phillis by persons of station and influence, her husband, with the petty jealousy common to his race, felt hurt that his wife was respected more than himself. In consequence, he behaved to her harshly and cruelly, and she, sinking under such treatment, died in her twenty-sixth year, much regretted by those capable of appreciating her modest talents and virtues.

DECEMBER 16.

St Ado, archbishop of Vienne, confessor, 875. St Albinus or Adelaide, empress of Germany, 999.

Born.—John Selden, lawyer and politician, 1584; Salvington, Sussex; George Whitefield, celebrated preacher, 1714, Bell Inn, Gloucester; Elizabeth Carter, distinguished literary lady, 1717, Deal; Christian Guillame Lamoignon de Malmaison, minister and defender of Louis XVI, 1721, Paris; Bernard, Comte de Lacépède, eminent naturalist, 1756, Agen; Jane Austen, novelist, 1775, Steventon, Hampshire; Carl Maria Von Weber, composer of Der Freischiitz, 1858, Stettin, in Holstein.

Died.—Sir William Petty, eminent political economist, 1687, Westminster; Abbé Desfontaines, translator of Virgil and Horace, 1745; Thomas Pennant, naturalist, 1798, Downing, Flintshire; Antoine François de Fourcroy, distinguished French chemist, 1809; Rev. Samuel Lee, orientalist, 1833; Barley, Herefords; Wilhelm Grimm, writer of fairy tales, &c., 1859, Berlin.

SIR WILLIAM PETTY.

In the small town of Romsey or Romsey, in Hampshire, William Petty, the son of a humble tradesman, was born in 1623. Like Franklin, he boy took great delight in watching artisans working at their various occupations, and when little more than twelve years of age, he acquired a facility and dexterity in handling tools, which
proved of great advantage to him in after-life. At the age of fifteen, having mastered all the education afforded by the grammar-school of Rumsey, Petty proceeded to the college of Caen, in Normandy. An orphan, without patrimony or patron, the young man took a small venture of English goods with him to France, and during the four years he remained at college there, he supported himself by engaging in trade. Josiah Wedgwood used to say, that there was no pleasanter occupation than making money by honourable industry; and Petty always alleged that making money was the very best kind of employment to keep a man out of mischief. Having acquired French, mathematics, astronomy, and navigation, Petty returned to England and entered the sea-service; but being reproved for not reporting a certain landmark he was ordered to look out for, he discovered, for the first time, that he was near-sighted, and, in consequence, determined to abandon the sea. In the very curious autobiographical preamble Petty attached to his will, we learn that when he was the prince of all the whole fortune consisted of sixty pounds. Having chosen medicine as his future profession, he went and studied at Leyden, Utrecht, Amsterdam, and Paris. At the last place he devoted his attention particularly to anatomy, the subsequently celebrated Hobbes being his class-fellow. Petty, during this sojourn on the continent, supported and educated a younger brother named Anthony, and was sometimes so reduced, that in Paris he is said to have lived for two weeks on three penny-worth of walnuts. His ingenuity and industry extricated him from such difficulties, and he very probably exercised his favourite method of keeping out of mischief; for when he and his brother returned to England, after a three years' absence, and all charges of travel, subsistence, and education, for two persons had been paid, Petty's sixty pounds, instead of being diminished, had increased to seventy.

He then invented an instrument for double writing, which seems to have been merely a copying-machine. Four years afterwards, he obtained the degree of Doctor of Medicine. His seventy pounds were then reduced to twenty-eight; but, being appointed to the professorship of anatomy at Oxford, and the Fellowship of Gresham College, in two more years he was worth four hundred pounds. And then, being appointed physician to the army in Ireland, with an outfit of one hundred pounds, he went to that country with five hundred pounds at his command, and a salary of one pound per day, in addition to which he soon acquired a private practice of four hundred pounds per annum.

The tide which bade him to fortune, was the appointment of physician to the army in Ireland. This, however, was no mere lucky accident. Petty, by hard industry, rigid economy, and great ingenuity, had prepared himself to take advantage of such a flood, to swim and direct his course upon it at pleasure, not to be swept away by it. His reputation as a man of great the sea-service, his appointment as a member of the Gresham College, his unexampled ability, his temperance, the monk, the friar, the pope's priest, with such admirable action, and alteration of voice and tone, as if it were not possible to abet from wonder, and one would swear to hear several persons, or forbear to think he was not in good earnest an enthusiast, and almost beside himself; then he would fall out of it into a serious discourse; but it was by him who was prevailed on to oblige the company with this faculty, and that only amongst intimate friends.

Petty invented a double-bottomed ship, and patented inventions for the improvement of carriages, cannon, and pumps. During all these
occupations, he found time to write treatises on statistics and political economy, being one of the first to elevate the latter study to the rank of a science. His Political Anatomy of Ireland gives the first authentic account of the population of that country, and affords valuable information of its state towards the close of the seventeenth century. He clearly foresaw the great advantages of a union between England and Ireland, and of a free commercial intercourse between the two kingdoms. His treatise on Taxes and Contributions is far in advance of his time, and in this work is first demonstrated the now universally recognised doctrine, that the labour required for the production of commodities alone determines their value. In his Quantumumqua (a treatise on money), he condemns laws regulating the rate of interest, observing that there might just as well be laws to regulate the rate of exchange; and he exposes the then prevailing fallacy, that a country might be drained of cash by an unfavourable balance of trade.

Pettys, in that remarkable document, his will, shows that he well understood the true principles of political economy as respects mortuary charities; clearing the way that has since been from injudicious bequests. He says:

'As for legacies to the poor, I am at a stand; as for beggars by trade and election, I give them nothing; as for impotents by the hand of God, the public ought to maintain them; as for those who have no calling nor estate, they should be put upon their kindred; as for those who can get no work, the magistrates should cause them to be employed, which may be well done in Ireland, where is fifteen acres of improvable land for every head; prisoners for crimes, by the king; for debts, by their prosecutors; as for those who compassionate the sufferings of any object, let them relieve themselves by relieving such sufferers—that is, give them alms pro re nata, and for God's sake, relieve the several species above mentioned, if the above-mentioned obliges fall in their duties. Wherefore, I am contented that I have assisted all my poor relations, and put many in a way of getting their own bread, and have laboured in public works, and by inventions have sought out real objects of charity; and I do hereby conjure all who partake of my estate, from time to time, to do the same at their peril. Nevertheless, to answer custom, and to take the surer side, I give £20 to the most wanting of the parish, in which I may die.'

He further concludes his will with the following profession of his religious opinions:

'I die in the profession of that faith, and in the practice of such worship, as I find established by the laws of my country; not being able to believe what I myself please, nor to worship God better than by doing as I would be done unto, and observing the laws of my country, and expressing my love and honour of Almighty God by such signs and tokens as are understood to be such by the people with whom I live, God knowing my heart, even without any at all; and thus begging the Divine Majesty to make me what he would have me to be, both as to faith and good works, I willingly resign my soul into his hands, relying only on His infinite mercy and the goodness of my Saviour for my happiness after this life, where I expect to know and see God more clearly than by the study of the Scriptures, and of his works, I have hitherto been able to do. Grant me, O Lord, an easy passage to thyself, that as I have lived in thy fear, I may be known to die in thy favour, Amen.'

Pettys died on the 16th of December 1687, and was interred beside his humble parents at Runsey, a flat stone in the church pavement, cut by an illiterate workman, records—

'Sir William Pettys

The renown literary copartnership, known as the 'Brothers Grimm,' was, on the 16th of December 1859, dissolved by the death of the younger member of the firm. The year 1863 witnessed the death of the surviving elder brother, Jacob Grimm; and in the decease of these two eminent men, Germany has been deprived of the two greatest philologues and critical archaologists which even she can boast of. The learning and industry of the brothers was only surpassed by the beautiful simplicity and affection which characterised their progress and mutual intercourse through life. An interesting epistle of their history, as well as some curious circumstances connected with the marriage of Wilhelm Grimm, are given in a letter which lately appeared in the columns of a widely-circulated newspaper, from its Prussian correspondent. The story, from its piquancy, merits being preserved, and we accordingly quote it as follows:

'From morn till night they [Jacob and Wilhelm Grimm] worked together in contiguous rooms for nearly sixty years. United in literary labour, they never separated socially. A librarian's office, or a professorship, conferred upon one of them, was never accepted until an analogous post had been created for the other. William installed Jacob in the library of Marburg, Jacob drawing William after him to the university of Göttingen. They lived in the same house, and it is more than a fable they intended to marry the same lady; or rather they intended not. The story is, that an old aunt, taking communion on the two elderly bachelors, and appreciative of the pecuniary consequences of their students' life, resolved to provide them with partners fit to take care of them after her death. After great reluctance, the two philological professors were brought to see the sense of the plan. They agreed to marry, but on this condition, that one of them should be spared, and the wife of the other obliged to look after the finances and linen of both. A young lady being produced, the question of who should be the victim was argued for many an hour between the unlucky candidates. Nay, it is even alleged that
the publication of one of their volumes was delayed full eight days by the matrimonial difference. At length Jacob, being the elder, was convinced of his higher duty to take the leap. But he had no heart to find work, and ingratiate himself with the lady. Half from a desire to encourage his brother, and half from a wish to take some share of the burden, William offered to come to the rescue in this emergency, and try to gain favour with the future Mrs Grimm. Then Cupid interfered, and took the matter into his own hands. The lady being a lovely girl of tender years, and being characterized by the qualities of heart and head, proved too many for the amateur. She had been entirely ignorant of the honours intended for her, and the fraternal compact to which she had given occasion; and it is, perhaps, for this very reason that, falling in love with her resolute antagonist, she so changed the feelings of the latter as to convert him into a slave and admirer before the end of the week. Then arose a difficulty of another kind. Jacob, with what had been going on before his eyes, this useful creature cut the Gordian-knot in a trice. So far from getting into a fury, and hating his brother for what he could not help, Jacob was barbarous enough to declare this the most joyous tidings he had ever received. So William was married, Jacob making off for the Harz, and roving about among the hills and vales with the feelings of an escaped convict. The marriage was happy. Of the two sons resulting from it, the younger, a poet of great promise, many years after married the second daughter of Bettina von Arnim. After, as before it, the two brothers continued to keep house together.

In further reference to the Brothers Grimm, who, as is well known, have acquired great popularity with juvenile readers by their collection of fairy tales, and long before the publication of their Annals of the Old School, an anecdote may here also be introduced. It is related in the Athenaeum for 1859, and is given on the authority of Jacob Grimm himself. A little girl of about eight years old, evidently belonging to an upper-class family, called one day at Dr Grimm’s house, and desired to see the ‘Herr Professor.’ The servant shewed her into the study, where Dr Grimm received her, and inquired, with great kindness, what she had to say to him. The little maiden, looking very earnestly at the professor, said: ‘Is it thou who hast written those fine Märchen [fairy tales]?

‘Yes, my dear, my brother and I have written the Haus Märchen.

‘Then thou hast also written the tale of the clever little tailor, where it is said, at the end, who will not believe it must pay a thaler’ [dollar]?

‘Yes, I have written that too.

‘Well, then, I do not believe it, and so, I suppose, I have to pay a thaler; but as I have not so much money now, I’ll give thee a groschen [about three-halfpence] on account, and pay the rest by and by.’
ABOLITION OF THE PASSPORT-SYSTEM IN FRANCE.

A wise and liberal measure adopted by the emperor of the French, in 1861, had the effect of drawing public attention to an international system which travellers had ample reason to remember with bitterness. This was the system of passports — that ingenious invention, as a writer in the Quarterly Review, in 1858, characterised it, "for impeding the tourist and expediting the fugitive." From early times, some right of prohibiting, if they chose, the entrance into their dominions of the subjects of another sovereign; and of equally prohibiting the exit of their own subjects. Hence, when states were at peace, the sovereigns adopted a plan of permitting the relaxation of this rule, through the medium of their respective ambassadors or representatives. Hall, in his Chronicles, adverts to these sovereign rights in the reign of Edward IV.; and the rules are known to have been very strict in the times of Elizabeth and James I. Passports are a very ancient institution. It is mentioned by some of the old monkish chroniclers as an achievement on the part of King Canute, that he obtained free passes for his subjects through various continental countries, on their pilgrimages to the shrines of the Apostles Peter and Paul at Rome. Each pilgrim was furnished with a document in the nature of a passport, called Tractus de Primero Peragesa. The general form of these documents was as follows: "I (here comes the name of the person granting the passport), to our holy and apostolic and venerable fathers in Christ, and to all kings, bishops, abbots, priests, and clerks in every nation of Christendom, who devote themselves to the service of the Creator, in monasteries, in cities, in villages, or in hamlets. Be it known to you that this our brother [here comes the name of the person holding the passport] and your servant, has obtained permission from us to proceed on a pilgrimage to the Church of St. Peter, your father, and to other churches, to pray for his soul's sake, for yours, and for ours. Therefore do we address this to you, begging that you will, for the love of God and of St. Peter, give him hospitable treatment, aiding, counseling, and comforting him—affording to him free ingress, egress, and return, so that the true purpose of the pilgrimage may return to us. And for so doing, may a fitting reward be bestowed on you, at the last day, by Him who lives and reigns for ever!" This was something more than a passport, however, seeing that it entreated hospitality for the pilgrims.

These perplexing people, the Chinese, who have anticipated us in so many things, had a passport system nearly a thousand years ago. The Abbé Henaudot, in his translation of the Travels of Emin Wanh, in the tenth century, gives the following passage: "If a man travel from one place to another, he must take two passes with him—the one from the governor, the other from his deputy or lieutenant. The governor's pass permits him to set out on his journey, and takes notice of the name of the traveller and of the great wit and bore which of the day, Mr. Bosville's own parties seem to have borne a close resemblance, though doubtless his social and conversational powers paled before those of the author of The Divorces of Purley.

ABOLITION OF THE PASSPORT-SYSTEM IN FRANCE.

A wise and liberal measure adopted by the emperor of the French, in 1861, had the effect of drawing public attention to an international system which travellers had ample reason to remember with bitterness. This was the system of passports — that ingenious invention, as a writer in the Quarterly Review, in 1858, characterised it, 'for impeding the tourist and expediting the fugitive.' From early times, some right of prohibiting, if they chose, the entrance into their dominions of the subjects of another sovereign; and of equally prohibiting the exit of their own subjects. Hence, when states were at peace, the sovereigns adopted a plan of permitting the relaxation of this rule, through the medium of their respective ambassadors or representatives. Hall, in his Chronicles, adverts to these sovereign rights in the reign of Edward IV.; and the rules are known to have been very strict in the times of Elizabeth and James I. Passports are a very ancient institution. It is mentioned by some of the old monkish chroniclers as an achievement on the part of King Canute, that he obtained free passes for his subjects through various continental countries, on their pilgrimages to the shrines of the Apostles Peter and Paul at Rome. Each pilgrim was furnished with a document in the nature of a passport, called Tractus de Primero Peragesa. The general form of these documents was as follows: 'I (here comes the name of the person granting the passport), to our holy and apostolic and venerable fathers in Christ, and to all kings, bishops, abbots, priests, and clerks in every nation of Christendom, who devote themselves to the service of the Creator, in monasteries, in cities, in villages, or in hamlets. Be it known to you that this our brother [here comes the name of the person holding the passport] and your servant, has obtained permission from us to proceed on a pilgrimage to the Church of St. Peter, your father, and to other churches, to pray for his soul's sake, for yours, and for ours. Therefore do we address this to you, begging that you will, for the love of God and of St. Peter, give him hospitable treatment, aiding, counseling, and comforting him—affording to him free ingress, egress, and return, so that the true purpose of the pilgrimage may return to us. And for so doing, may a fitting reward be bestowed on you, at the last day, by Him who lives and reigns for ever!' This was something more than a passport, however, seeing that it entreated hospitality for the pilgrims.

These perplexing people, the Chinese, who have anticipated us in so many things, had a passport system nearly a thousand years ago. The Abbé Henaudot, in his translation of the Travels of Emin Wanh, in the tenth century, gives the following passage: "If a man travel from one place to another, he must take two passes with him—the one from the governor, the other from his deputy or lieutenant. The governor's pass permits him to set out on his journey, and takes notice of the name of the traveller and of the great wit and bore which of the day, Mr. Bosville's own parties seem to have borne a close resemblance, though doubtless his social and conversational powers paled before those of the author of The Divorces of Purley.

ABOLITION OF THE PASSPORT-SYSTEM IN FRANCE.

A wise and liberal measure adopted by the emperor of the French, in 1861, had the effect of drawing public attention to an international system which travellers had ample reason to remember with bitterness. This was the system of passports — that ingenious invention, as a writer in the Quarterly Review, in 1858, characterised it, 'for impeding the tourist and expediting the fugitive.' From early times, some right of prohibiting, if they chose, the entrance into their dominions of the subjects of another sovereign; and of equally prohibiting the exit of their own subjects. Hence, when states were at peace, the sovereigns adopted a plan of permitting the relaxation of this rule, through the medium of their respective ambassadors or representatives. Hall, in his Chronicles, adverts to these sovereign rights in the reign of Edward IV.; and the rules are known to have been very strict in the times of Elizabeth and James I. Passports are a very ancient institution. It is mentioned by some of the old monkish chroniclers as an achievement on the part of King Canute, that he obtained free passes for his subjects through various continental countries, on their pilgrimages to the shrines of the Apostles Peter and Paul at Rome. Each pilgrim was furnished with a document in the nature of a passport, called Tractus de Primero Peragesa. The general form of these documents was as follows: 'I (here comes the name of the person granting the passport), to our holy and apostolic and venerable fathers in Christ, and to all kings, bishops, abbots, priests, and clerks in every nation of Christendom, who devote themselves to the service of the Creator, in monasteries, in cities, in villages, or in hamlets. Be it known to you that this our brother [here comes the name of the person holding the passport] and your servant, has obtained permission from us to proceed on a pilgrimage to the Church of St. Peter, your father, and to other churches, to pray for his soul's sake, for yours, and for ours. Therefore do we address this to you, begging that you will, for the love of God and of St. Peter, give him hospitable treatment, aiding, counseling, and comforting him—affording to him free ingress, egress, and return, so that the true purpose of the pilgrimage may return to us. And for so doing, may a fitting reward be bestowed on you, at the last day, by Him who lives and reigns for ever!' This was something more than a passport, however, seeing that it entreated hospitality for the pilgrims.

These perplexing people, the Chinese, who have anticipated us in so many things, had a passport system nearly a thousand years ago. The Abbé Henaudot, in his translation of the Travels of Emin Wanh, in the tenth century, gives the following passage: "If a man travel from one place to another, he must take two passes with him—the one from the governor, the other from his deputy or lieutenant. The governor's pass permits him to set out on his journey, and takes notice of the name of the traveller and of the great wit and bore which of the day, Mr. Bosville's own parties seem to have borne a close resemblance, though doubtless his social and conversational powers paled before those of the author of The Divorces of Purley.
reciprocity, the subjects of her Majesty the Queen of Great Britain and Ireland coming into France, shall be admitted and allowed to travel about without passports. The Minister of the Interior will give instructions to his agents to see this matter carried out.' It had been long known that the Emperor's personal opinions were opposed to the passport-system, and that he had only waited for the current of French thought to flow in the same direction as his own. A leading article in the Times, two days afterwards, forcibly depicted the evils of the system which has thus been happily abolished: 'The passport-system was a standing annoyance to British subjects in France. It involved the two things which Englishmen dread most — vexatious stoppages for the sake of small excursions, and constant liability to official interference. You might seldom experience the actual evil, but you never got rid of the risk. At any hour of the day or night, on any pretence, or on no pretence, you might be required to produce your “papers,” like a suspicious-looking vessel on the high-seas; and, if this manifest of your person and purposes did not satisfy the inquirer, you were liable to detention and imprisonment at his discretion. It was a right of search in the most offensive form, hanging over the traveller at every stage of his journey. At the best, you could never escape molestation or fine. You might compound with a commissaire, and be quit of the job for a two-franc piece and a couple of hours' delay; but that much was inevitable, and, as it might recur as every town you came to, you were never safe. Above all—and this was the most exasperating feature in the case—the system placed you, as a matter of course, under the notice and control of the police, from the first moment of your arrival in the country, to the moment of your departure. The very fact of your travelling was regarded as a proceeding requiring justification. You had to clear yourself of a primum facie case against you, and the passport was your ticket-of-leave. Unluckily, it was impossible to insure the completeness of this precious document. No man could ever take it for granted that his passport was in perfect order; and, consequently, he was always at the mercy of the police, who, from whim, suspicion, zeal, or spite, might deal with him as they chose, on no other warrant than some alleged defect in the casablistic form of the passport. Passports were to police agents what the confession is to the Romish priesthood—the instrument of power and action.' If this mode of keeping out the unoffending had the effect of keeping out offenders also, something might be said in its favour; but this is precisely what it did not do. 'None knew this better than the police themselves. They understood perfectly that all the fish they pretended to catch, slipped always, and, as a matter of course, through the meshes. We may or may not produce an instance of a conspirator, malefactor, or other evil-minded person who was arrested upon the evidence of his passport. On the contrary, as the police were bound, by the conditions of their own system, to take the shewing of the passport as conclusive, and as the papers of these gentry were invariably in order, the disguise proved exceedingly convenient to them. Except for the passports they might have had to give some account of themselves, but these documents saved them all trouble and risk together. There they were, stamped and ticketed as lawful travellers by the police themselves, bearing the police-mark and covered by the police certificate. As they had taken excellent care to observe every formality, there was nothing to be done with them; and the weight of the system consequently fell on the unsuspecting victims, whose very innocence had prevented them from providing against its snare.'

The truth is, that a swarm of officials lived and prospered upon the profits of the system; and as the destruction of those gains would be equivalent to the destruction of a profession, all those who practised the profession had a strong reason for maintaining the system, and staving off reform as long as possible. Hence the oft-repeated assertions that the passport-system was the palladium, theegis, the shield of good government.

The probabilities are, that other governments will, one by one, abandon the absurd restrictions which have thus been abolished by France.

DECEMBER 17.

St. Olympia, widow, about 410. St. Begin, widow and abbess, 698.

Born.—Anthony Wood or a Wood, antiquarian writer, 1652, Oxford; Gabrielle Emilie, Marquise du Chastelier, translator of Newton's Principia, 1708; Ludwig Beethoven, eminent composer, 1770, Bonn; Sir Humphry Davy, chemist, 1779, Penzance.

Died.—Sir William Gascoigne, lord chief-justice, 1413; Simon Bolivar, liberator of South America, 1811, Caracas; Kaspar Hauser, mysterious foundling, from the stroke of an assassin on the 14th, 1828, Napepol, Bavaria; Maria Louisa, archduchess of Parma (extress of the French), 1847, Parma.

KASPAR HAUSER.

Like the 'Man in the Iron Mask,' the identity of the unfortunate Kaspar Hauser, the foundling of Nuremberg, has formed the subject of much curious speculation. To the present day, the mystery hanging over his origin remains undisbelped, and the whole affair is beset with such anomalies and contradictions, that it is almost impossible to form even a well-grounded conjecture on the subject. The following are the ascertained facts of the case.

Between four and five o'clock in the afternoon of 26th May 1828, a young lad, apparently of about sixteen or seventeen years of age, was found in a hapless and forlorn condition in the marketplace of Nuremberg, by a citizen of that town. He was dressed like a peasant-boy, and had with him a letter addressed to the captain of the regiment of horse at Nuremberg. Being conducted to this officer and interrogated, it soon became evident that he could speak very little, and was almost totally ignorant. To all questions he replied, 'Von Regensburg' (from Regensburg), or 'Ich woas nit' (I don't know). On the other hand, he wrote his name in firm legible characters on a sheet of paper, but without adding the place of his birth, or anything else, though requested to do so. Short and broad shouldered, his figure was perfectly
KASPAR HAUSER.

THE BOOK OF DAYS.

THE DAY OF THE ANCIENT BRITON.

well-proportioned. His skin was very white; his limbs delicately formed, the hands and feet small and beautiful, the latter, however, shewing no marks of his having ever worn shoes. With the exception of dry bread and water, he shewed a very proper love of meat and drink. His language was confined to a few words or sentences in the old Bavarian dialect. He shewed entire ignorance of the most ordinary objects, and great indifference to the conveniences and necessaries of life. Among his scanty articles of clothing was a handkerchief marked K.H.; he had likewise about him some written Catholic prayers. In the letter which he carried, dated 'From the confines of Bavaria, place unknown, 1888,' the writer stated himself to be a poor day-labourer, the father of ten children, and said that the boy had been deposited before his door by his mother, a person unknown to the writer. He stated further, that he had brought up the boy secretly, without allowing him to leave the house, but had instructed him in reading, writing, and the doctrines of Christianity; adding that it was his wish to become a horse-soldier. The letter enclosed a line, apparently from the mother, stating that she, a poor girl, had given birth to the boy on the 30th April 1812, that his name was Kaspar, and that his father, who had formerly served in the sixth regiment, was dead.

The poor boy having been taken before and attended to by the magistrates, his story was soon made known to the public, and he himself became the object of general sympathy. Binder, a burgomaster, exerted himself, in particular, to throw some light on the obscurity in which the origin of the young man was involved. In the course of many conversations with him, it came out that Hauser, from his childhood, had worn only a shirt and trousers; that he had lived in a dark place underground, where he was unable to stretch himself out at full length; that he had been fed upon bread and water by a man who did not shew himself, but who cleaned and dressed him, and provided him with food and drink while he was in a state of natural or artificial sleep. His sole occupation was playing with two wooden horses. For some time before he was conveyed to Nuremberg, an indigent woman had procured his clothes, and had taught him to write by guiding his hand, and to lift his feet and walk. This narrative gave rise to various suppositions and rumours. According to some, this mysterious foundling was the natural son of a priest, or of a young lady of high rank, while others believed him to be of princely origin, or the victim of some dark plot respecting an inheritance. Some incredulous persons believed the whole affair to be an imposition. On the 16th July 1828, Hauser was handed over to the care of Professor Daumer, who afterwards acted the part of his biographer. The history of his education is remarkable in a pedagogic point of view, as his original desire for knowledge, his extraordinary memory, and acute understanding decreased in proportion as the sphere of his knowledge extended. His first progress was, on the whole, small. On the 17th October 1839, he was found bleeding from a slight wound on the brow, which he said had been inflicted by a man with a black head. All efforts made to discover the perpetrator were ineffectual. The incident excited a great sensation; Hauser was conveyed to the house of one of the magistrates, and constantly guarded by two soldiers. Among the many strangers who came to see him was Lord Stanhope, who became interested in him, and sent him to be educated at Eton College. Here he was employed in an office of the court of appeal, but he by no means distinguished himself either by industry or talent, and was gradually forgotten, till his death again made him the subject of attention.

This event took place under the following singular circumstances. A stranger, under the pretext of bringing him a message from Lord Stanhope, and informing him of the circumstances of his birth, engaged to meet Hauser in the palace garden at three o'clock in the afternoon of the 14th December 1833. The hapless young man was faithful to the rendezvous, but he had scarcely commenced to converse with the unknown emissary, when the latter stabbed him in the left side, and he fell mortally wounded. He had, however, sufficient strength left to return home and relate the circumstances of his assassination to his companions, and on the 17th December 1833, he died. Among the many surmises current regarding the unfortunate Hauser, the latest is that he was the scion of a noble family in England, and that his dark and mysterious history, with its atrocious termination, had its origin in this country. But nothing beyond mere conjecture has ever been adduced.

THE DAY OF THE ANCIENT BRITON.

Ancient Britain is not so entirely a thing of the past as is generally supposed. When the ancient Britons were driven out of their territory, they could not carry their old homes with them; these were abandoned, and it is probable that the sites of many of them were occupied by the Roman conquerors. But in inaccessible places, beyond the Roman Wall, this was not the case; and to this day, among the Cheviot Hills, may be seen one of their deserted towns, several strong forts, numerous isolated huts, a monolithic ring temple, terraces on the steep hillsides on which they grew their corn, barrows and cairns innumerable. These remains of ancient Britain yield a vivid realisation of the day of our Celtic forefathers.

The deserted town just mentioned, is situated on the southern slope of one of the Cheviot Hills, called Greenshaw. It consists of a group of stone huts, between sixty and seventy in number, divided into three clusters. The largest cluster, containing upwards of thirty huts, is surrounded by two strong stone rampiers, a fact which suggests the supposition that on report of coming foes, all the inhabitants would take shelter within the entrenchment. Time has clothed the summits of the walls with vegetation, and heaped up earth on the ruins; but this has not destroyed the identity of the place. The huts are of a circular form, built of large pieces of unhewn porphyry. This is the stone of the district; and is still to be seen in enormous quantities, lying, in blocks, among the heather and ferns on the sides of the hills. There was no quarrying required. All the ancient Briton had to do, was to collect pieces of suitable and portable sizes. To every hut there is a doorway; and to one of them an indication of a sill, or similar arrangement, to receive a door. They are
all roofless; and the question of what material the roofs were formed, is the only one about which there is any doubt; whether they were simply thatched with the abundant gorse, heather, or ferns, as the shepherds' huts are to this day in the same country, or whether they were composed of the rough, ragged stone roofs of or timber, we shall probably never know. In the extreme north of Scotland, there are circular stone-houses of a similar antiquity with conical stone roofs; yet, when several of these huts were cleared of the accumulations within them, for the purposes of an antiquarian survey, at which the writer was present, no traces of roof stones were discovered. In nearly every instance, charred wood was found upon the flat stones with which the floors were rudely paved. There is a burn, called Linhope, near this town, from which, as well as from a couple of springs close by, water could be procured; and it is noticeable, that the distance to this stream is protected by a length of rampier. Several pieces of rough clay-pottery, found in the soil of the town, prove that potters were at work on this spot, many centuries ago. There is an ancient roadway, sunk two or three feet deep, and fortified by a rampier, down to the neighbouring river Breamish; and two others of a similar construction, lead from the west and from the east into the town.

On another of the Cheviot Hills, Yeavering Bell, are further traces of ancient Britain. On the summit of this hill, about two thousand feet above the level of the sea, is an area of twelve acres, enclosed by a stone wall, upwards of ten feet thick, having four entrances into it, one of which is defended by a guard-house; and within this area is an inner fort, excavated out of the rock, of an oval form, measuring thirteen feet across the widest part. On the sides of the hill, and in a high valley between the Bell and the next hill, called Whitefowl, there are many remains of stone huts rudely flagged, some in groups surrounded by rampiers, and others isolated. Barrows, too, are numerous here. On Ingram Hill, several of these old-world tumuli have been opened; but nothing but charred wood has been found in them.

In the valley of the Breamish, where there are many more camps, there are traces of ancient Britain, and of two rampiers, on the hillside, rising one above another. On some hills there are a dozen or more of these primitive cornfields, or hanging gardens. It is supposed that as the valleys were boggy and liable to floods, this was the mode of culture which presented less difficulty than any other to the Celtic mind.

The Celtic temple, or monolithic ring, in the same district, consists of thirteen huge stones, which once marked an oval enclosure on the bank of the three Stone Burn. There were, probably, fourteen originally; as between the first and thirteenth there is a space double the extent that exists between any of the others. Several are overthrown, and lie bedded in heather. They are of different heights; the tallest being upwards of five feet; the shortest, scarcely two feet above the ground. As this could not have been a place of residence, or of defence, we may reasonably conclude that it was a place of worship. What rites were celebrated within its mystic oval we can but imagine; but the temple itself we may see with our eyes.

In fine, among the gorse, ferns, scarlet-leaved bilberries, mountain pinks, mosses, tall foxgloves, and heather of the Cheviot district, with its myriads of blocks of porphyry strewn upon the hills, and valleys covered with sea-green lichens, we have a considerable tract of ancient Britain still. We may enter the ancient Briton's fort, or his hut; we may climb the rampiers raised by his hands, see his vast hunting-grounds and his terraced cornfields; and we may saunter, as we have seen, in his temple — so rudely grand with its background of hills and canopy of sky. We may search the debris of his deserted home, and find the flint arrow-head with which he shot; the horns of the deer so slain; the flint javelin-head he reserved for hostile tribes; the handmills with which his women ground corn; pieces of the pot that they used for domestic purposes; and, maybe, a portion of a discarded armlet worn by a Celtic princess.

THE 'O. P. RIOTS.'

The disturbance known in theatrical annals as the O. P. Riots, or the O. P. Bce, was perhaps the most remarkable manifestation of the popular will ever displayed at any of our places of amusement, ending with a concession to public opinion rather than to rightful claim.

On the 30th of September 1806, Covent Garden Theatre was burned to the ground, involving the loss of many lives, and the destruction of property valued at little less than a quarter of a million sterling. As it had belonged to a sort of joint-stock company, money was soon found to rebuild the theatre; and great admiration was bestowed on the magnitude and beauty of the new structure, when it was opened to the public on the 17th of September 1809. But a storm was impending. The proprietors had issued an address or prospectus, announcing that, in consequence of the great expense incurred in rebuilding the theatre, the increased ground rent charged by the Duke of Bedford, and the enhanced prices of almost everything needed for stage purposes, they would be compelled to raise the prices of admission to the boxes and pit. They appealed to the kindness and consideration of the public under these circumstances; and Mr John Kemble, in an opening address, adverted to the matter in the following very unpoetical terms:

'Solid our building, heavy our expense; We rest our claim on your munificence; What ardour plans a nation's taste to raise, A nation's liberality repays.'

If there had been anything like 'free-trade' in theatres, the audience would have had no right to

* The Berwickshire Naturalists' Club, assisted by a contribution from the Duke of Northumberland, surveyed the Celtic antiquities of the Cheviot district, in the summers of 1861 and 1862. An elaborate report of the survey was written by Mr Geo. Tate, F.G.S., Alnwick, one of the secretaries for the transactions of that body.

* The following parody on these clumsy lines—testifying how the public were disposed to view the matter—appeared in the Times:

'Heavy our building, but not so th' expense; We rest our hopes upon your want of sense; What a'rice spends, new minds of wealth to raise, A gen'mous people's folly soon repays.'

709
complain, but simply to stay away if they did not choose to pay the enhanced prices. As matters stood, however, in those days, the two 'Patent' or 'Royal' theatres, Covent Garden and Drury Lane, claimed great privileges over all the minor establishments; the public were forbidden to see Shakespeare represented except at the two great houses; and therefore they claimed, rightly or wrongly, to have some voice in determining the prices of admission. To assert this right, was evidently the purpose of the, not very energetic, but very determined opening night. They received Kemble with volleys of hooting, groaning, whistling, 'cat-calls,' and cries of 'Old Prices!'—the last soon abbreviated to 'O. P.!' The opening address passed over in a dumb show; and so did the tragedy of Macbeth and the farce of the Quaker. The mob outside sympathised with the audience within, and Bow Street was a scene of tremendous commotion. Excited by the accounts given in the newspapers, the public prepared to go to the theatre on the second night in a spirit more warlike than ever; and on the third night, Kemble gave still greater offence to the audience by saying to them: 'I wait to know what you want.' So matters continued for a week: the actors and actresses bravely bearing the storm, instead of receiving the applause to which they were accustomed; and the audience, determining that not a single word of the performances should be heard. At length, on the 23rd, Mr. Kemble made an announcement from the stage, which was certainly a fair one under the circumstances, to this effect—that a committee of gentlemen should be appointed to examine the accounts of the theatre, with a view of determining whether the new prices were or were not equitable; that the theatre should be closed until that committee had reported on their proceedings; and that the report should be accepted as conclusive by the two belligerents, the public and the proprietors. The audience took this proposal in good part; and on the following day a committee was formed, consisting of Alderman Sir Charles Price, Sir Thomas Plumer (solicitor-general), Mr. Sylvester (recorder of the City of London), Mr. Wheler (chaired by Mr. Bank of England), and Mr. Angerstein. The report of the committee was decidedly in favour of the proprietors; shewing that, if the new house were fully insured, and all expenses honourably paid, the probable gross receipts at the new prices would not yield more net profit than three and a half per cent on the capital sunk; and that at the old prices, there would be no profit whatever. This report was printed on the play-bill for the reopening night, October 4. The public had evidently expected a different decision, and manifested signs of turbulence before the curtain rose. The malcontents were of two kinds—those who insisted on the old prices, whether right or wrong; and those who doubted whether the committee had satisfactorily explained the meaning, and their mode of reasoning. The report said that the 'future profits' would probably be three and a half per cent. or nil, according as the new or the old prices were adopted. But there arose a doubt whether five per cent. had been implied as regular interest on the capital sunk, in addition to the profit named. This produced an explanation, to the effect that no such interest had been implied; and that the proprietors, in the opinion of the committee, would obtain no return whatever for their money, unless the new prices were adopted. According to all principles of fairness, the opposition should have ended here, unless some other fallacy or error had been detected. But it did not. On the contrary, the O. P. advocates formed themselves into a party, resolved to disturb the performances night after night, until their demands were acceded to. They ensued a series of struggles which lasted during the extraordinary period of ten weeks, when the end of the 'Treaty of Peace' was framed on the 17th of December. It became a regular part of the duty of the daily newspapers to notice the state of affairs at the theatre on the previous evening. Sometimes there were merely speeches pro and con by the pit-operators and Mr. Kemble; sometimes cries and shouts, such as 'Old Prices!' 'No hubbub for John Bull!' 'No garbled extracts!' &c.; while on other occasions the malcontents went to the not inoffensive expedient of placards to the following effect: 'Mr. Kemble, let your monopoly cease, and then raise your prices as high as you please!' 'No private boxes for intriguing!' 'A long pull, a strong pull, and a pull altogether, for old prices!' 'John Bull, be very bold and resolute! never depart from your resolution, but firmly keep your station.' The word 'monopoly' gives a clue to one motive for the opposition—the patent rights which Mr. Kemble haughtily claimed in reference to the legitimate drama. As to the private boxes, they had increased in number, as a source of additional profit; and the dissatisfied public chose to stigmatise them on other than financial grounds. In addition to cries and placards, there was a continuous tumult of groaning, singing, laughing and whistling; with an occasional accompaniment of coachmen's horns, showmen's trumpets, dustmen's bells, and watchmen's rattles. Many came with the symbolic initials, 'O. P.', on their hats or coats. The malcontents got up a gymnastic exercise, which was known as the 'O. P. dance,' and which consisted in an alternate stamping of the feet, accompanied with the regular cry of 'O. P.!' in noisy and incommunicable unison. And it was rather expensive to keep on this system night after night, the rioters began to adopt the plan of coming in at half-price; the curious effect of which was, that three acts of a play were listened to in the usual orderly manner by peaceful visitors; while of the remaining two acts not a word could be heard. If the proprietors had remained quiescent, the disturbances would probably have died out after a few nights; and the new prices would have been adhered to or not, according as the house was well or ill filled. But they adopted a most reprehensible step—that of hiring prize-fighters, to convince the public by the force of fists. This gave a wholly new aspect to the struggle; many persons who had hitherto held aloof, now took part in the contest, for they had exasperated at procedure so insulting. Dutch Sam, a noted pugilist of those days, organised his corps; and the pit became a scene of fighting. On one particular evening, Mr. Clifford, a barrister, who had taken an active part in the opposition, entered the pit with the letters O. P. on his hat; he was received with cheers, and the old 'O. P. dance' again commenced. The proprietors now thought themselves strong enough to adopt decisive measures; at least this was the
view of Mr. Brandon, the box-keeper, for he caused Mr. Clifford to be arrested. Then ensued new scenes of excitement. Mr. Brandon failed to get Mr. Clifford convicted as a rioter; whereupon Mr. Clifford succeeded in obtaining a verdict against Mr. Brandon for false imprisonment. A meeting took place at the Crown and Anchor Tavern, with the view of obtaining subscriptions to defend any persons against whom, like Mr. Clifford, proceedings might be instituted as rioters. Mr. Kemble, feeling that the public were taking up the matter rather seriously, requested and obtained admission to this assembly. He offered, on the part of the proprietors, to concede most of the objects demanded, and to drop all prosecutions. The meeting demanded also the dismissal of Mr. Brandon, who seems to have made himself unnecessarily offensive; but a supplicatory letter from him pacified the public. A few weeks afterwards, a public dinner was held, in which Mr. Kemble took part, as a sort of ratification of the Treaty of Peace.

One of the most remarkable circumstances connected with the O. P. Riots is, that these enabled Stockdale, the publisher, to fill two entire octavo volumes, forming a compilation called the Covent Garden Journal. This work comprises, first, a statement of the cause of the quarrel; then a Journal of the sixty-seven nights' disturbances, numbered with all the regularity of Scheherazade's narrations in the Arabian Nights' Entertainments; and then an appendix of documents. These documents are valuable, in so far as they show the tone of public feeling on the subject, as reflected in the newspaper-press. The Times, Chronicle, Post, Examiner, Herald, Public Ledger, and Evening Post, all are represented in these documents, and generally as opponents of the Kemble party. Some of the newspaper jargon is preserved, and some of the placards distributed in the theatre, shewed how heartily many of the public entered into the comicality which formed one aspect of the affair. One commenced:

'Cease, cease the public here to knock, sir; The pit was never made for box-ers.'

Another:

'Surely the manager devoid of grace is; He pigeons both our pockets and our places.'

A third: 'In consequence of the general hoarseness in town, occasioned by a clamour for Old Prices, the confectioners, it is said, have determined, in the sale of their pectoral lozenges, to follow Mr. Kemble's plan, by charging an advance.' The Morning Chronicle appeared with:

'Since naught can appease Johnny Bull but O. P., And the promised suspension of every P. R., The playhouse, no doubt, will continue M. T., For King John has declared he'd be sooner D.'

The following was a parody on Gray's Bard, beginning:

'Ruin seize thee, ruthless John, Confusion on thy banners wait.'

And another on Chevy Chase:

'God prosper long our noble king, Our cash and comforts all; In Covent Garden while I sing The row that did befal.'

One effusion was to be sung to the tune of 'Said a Smile to a Tear':

'Said a P to an O, Where d'ye intend to go? Said the O, I've not fixed upon whither. O them, said the P, You and I will agree, To kick up a row both together.'

A second to the air of 'Derry Down':

'They send in their ruffians, who sanctify sit, With their doxies in front seats of boxes and pit, With orders to stifle the voice of the town, And convince us of error by knocking us down. Derry down.'

A third to that of The Frog in an Opera Hat:

'John Kemble would an acting go; Heigo, says Rowley. He raised the price which he thought too low, Whether the public would let him or no, With his rolly-poly, Gammon, and spinach, Heigo, says Kemble.'

The House that Jack Built was brought into requisition, with stanzas which commenced with—

'This is the House that Jack built. These are the Boxes, let to the great, that Visit the House that Jack built.'

And so on to the last cumulative clause, which ran thus:

'This is the Manager full of scorn, who raised the price to the People forlorn, and directed the Thief-taker, shaven and shorn, to take up John Bull with his Bugle-horn, who hissed the Cat engaged to squall, to the poor in the Pigeon-holes, over the Boxes, let to the Great, who visit the House that Jack built.'

The 'Cat' was Madame Catalani, a little out of favour at that time with some of the public. Nor did the National Anthem fail in the hands of these parodists:

DECEMBER 18.

Saints Rufus and Lotinus, martyrs, 116. St Gaius, first bishop of Tours, confessor, about 300. St Winebald, abbot, and confessor, 760.

Born.—Prince Rupert, military commander, 1619, Prague. Died.—Robert Nantenell, celebrated engraver, 1678, Paris; Rennage Finch, Earl of Nottingham, 1682; Veit Ludwig von Seckendorf, political and theological writer, 1692, Halle; Soame Jenyns, religious and general writer, 1787; Pierre Louis de Préville, celebrated French composer, 1779; Johann Gottfried von Herder, German theologian and philosopher, 1803; Dr Alexander Adam, eminent classic scholar and teacher, 1809, Edinburgh; Thomas Dunham Whitaker, antiquarian writer, 1821, Blackburn; General Lord Lynedoch, 1845, London; Samuel Rogers, poet, 1855, London.

711
SUN-DIALS AND HOUR-GGLASSES.

When the philanthropist Howard was on his death-bed, he said: 'There is a spot near the village of Dauphiney, where I should like to be buried; suffer no pomp to be used at my funeral, no monument to mark the spot where I am laid; but put me quietly in the earth, place a sun-dial over my grave, and let me be forgotten.' A similar affection was evinced by Sir William Temple, who desired that his heart might be placed in a silver box and deposited under the sun-dial in his garden, where he had experienced so much pleasure in contemplating the works of nature.

Sun-dials are of very ancient date, and the honour of inventing them is claimed for the Phoenicians. The earliest mention of them occurs in the well-known incident recorded in Scripture of King Hezekiah, who, when sick and penitent, is granted, in miraculous evidence of the Lord's intention to restore him to health, that the shadow shall go backward ten degrees on the sun-dial of Ahaz. Homer, too, often supposed to be a contemporary of Hezekiah, states, in his Odyssey, that there was a dial in the Island of Syra, upon which was represented the sun's annual race.

Two centuries ago, sun-dials attracted more attention than they do at the present time. The great sculptor, Nicholas Stone, mentions, under date 1612, the making of a dial at St James's, the king finding stone and workmanship only, for the which he had £6, 13s. 4d. 'And in 1622,' he says, 'I made the great diall in the privy-garden, at Whitehall, for the which I had £46.' 'And in that year, 1622,' he continues, 'I made a diall for my Lord Brook, in Holbourn, for the which I had £8, 10s.' And for Sir John Davies, at Chelsey, he made a dial and two statues of an old man and a woman, for which he received £7 a piece.*

In Joseph Moxon's *Tutor to Astronomia and Geographia, or An easy way to know the use of both the Globes* (1659), there are ample directions for the making of sun-dials of many various kinds, and among others 'a solid ball or globe that will shew the hour of the day without a gnomon.' The principle followed in this case, was to have a globe marked round the equator with two series of numbers from 1 to 12, and to erect it, rectified for the latitude, with one of the 12's set to the north, the other to the south. When the sun shone on this globe, the number found under the place where the shadowed and illuminated parts met, was the hour of the day.

Mr. Moxon has fortunately given us a representation, here copied, of a dial of this kind perched on the top of a columnar fountain, which was erected by Mr. John Leake, at Leadenhall Corner, in London, in the mayoralty of Sir John Dethick, knight, and thus has preserved to us, incidentally, an object much more important than the dial—namely, a beautiful fountain which once adorned one of the principal thoroughfares of the metropolis, furnishing those supplies of healthful beverage which the charity of our age has again offered through the medium of our so-called 'drinking fountains.'

However invaluable sun-dials might be as chronometers, they could only be of use in daylight, and when the sun was actually shining. Some mode had to be devised for supplying their place in cloudy weather, at night, or within doors. One contrivance employed by the ancients for this end was the clepsydra, or water-clock, which noted the passing of time by the escape of water through a vessel, with a hole at the bottom, into a cistern beneath. Another method, designed on a similar principle, was that of the hour-glass, by which the lapse of time was ascertained through the passing of a small quantity of sand from the upper to the
lower part of the glass. Hour-glasses are said to have been invented at Alexandria about the middle of the third century, and we are informed that persons used to carry them about as we do watches. They are familiar to us as an accompaniment, in pictorial representations, of the solitary monk or anchorite, where the hour-glass is generally exhibited along with the skull and crucifix. They were also attached to pulpits, in order to regulate the length of sermons.

But this last mode of employing hour-glasses seems to have been chiefly introduced after the Reformation, when long sermons came much into fashion. Previous to that period, pulpit-discourses appear to have been generally characterised by brevity. Many of St Austin’s might be easily delivered in ten minutes; nor was it usual in the church to devote more than half an hour to the most persuasive eloquence. These old sermons were of the nature of homilies, and it was only when the church felt called upon to explain tenets attacked, or eliminate doctrinal disputes, that they altered in character; and the pulpit became a veritable ‘drum-ecclesiastic.’ From the days of Luther, the length of sermons increased, until the middle of the seventeenth century; when the Puritan preachers inflicted discourses of two hours or more in duration on their hearers. In some degree to regulate these enthusiastic talkers, hour-glasses were placed upon the desks of their pulpits, and in 1623, we read of a preacher ‘being attended by a man that brought after him his book and hour-glass.’ Some churches were provided with half-hour glasses also, and we may imagine the anxiety with which the clerk would regard the choice made by the parson, as upon this would depend the length of his attendance. L’Estrange tells an amusing story of a parish clerk, who had sat patiently under a preacher, ‘till he was three-quarters through his second glass,’ and the auditory had slowly withdrawn, tired out by his prolixity; the clerk then arose at a convenient pause in the sermon, and calmly requested when he had done; if he would be pleased to close the church-door, ‘and push the key under it,’ as himself and the few that remained were about to retire.

In the sixteenth century, pulpits began to be regularly furnished, with iron-work stands, for the iron bar, acts as a handle by which the hour-glass may be turned in its stand. Sometimes these stands and glasses were very elaborate in design, and of costly materials. At Hurst, in Berkshire, is a wrought-iron work of the kind most intricately designed. It has the date 1636, and the words, ‘as this glass runneth, so man’s life passeth,’ amid foliations of oak and ivy. The frame of the hour-glass of St Dunstan’s, Fleet Street, was of solid silver, and contained enough of the precious metal to be melted down, and converted into staff-heads for the parish beaules.

The lonely church of Cliffe, on the Kentish coast, between Gravesend and the Norne, furnishes us with a second example of the stand alone. The pulpit is of carved wood, dated 1634. This stand is affixed thereto by a bracket, which bears upon the shield the date 1636. It is on the preacher’s left side.

In the book of St Katherine’s Church, Aldgate, date 1664, we find, ‘Paid for an Hour-glass that hangeth by the pulpit where the preacher doth make a sermon, that he may know how the hour passeth away, one shilling;’ and in the same book, among the bequests of date 1616, is ‘an hour-glass with a frame of iron to stand in.’ In the time of Cromwell, the preacher, having named the text, turned up the glass; and if the sermon did not last till the sand had run down, it was said by the congregation that the preacher was lazy; but if, on the other hand, he exceeded this limit, they would yawn and stretch themselves till he had finished.

Many humorous stories originated from this clerical usage. There is a print of Hugh Peter’s preaching, holding up the hour-glass, as he utters the words, ‘I know you are good-fellows, so let’s have another glass!’ A similar tale is told of Daniel Burgess, the celebrated Nonconformist divine, at the beginning of the last century. Famous for the length of his pulpit harangues, and the quaintness of his illustrations, he was at one time declaiming with great vehemence against the sin of drunkenness, and in his ardour had fairly allowed the hour-glass to run out before bringing his discourse to a conclusion. Unable to arrest himself in the midst of his eloquence, he reversed the monitory horologe, and exclaimed, ‘Brethren,
SUN-DIALS AND HOUR-GLASSES.

THE BOOK OF DAYS.

I have somewhat more to say on the nature and consequences of drunkenness, so let's have the other glass—and then!—the usual phrase adopted by toppers at protracted sittings.

Mr James Maidment, in his Third Book of Scottish Pasquils, has given a somewhat similar anecdote. A humorous story, he observes, has been preserved of one of the Earls of Airly, who entertained at his table a clergyman, who was to preach before the Commissioner next day. The glass circulated, perhaps, too freely; and whenever the divine attempted to rise, his lordship prevented him, saying: “Another glass—and then!” After conquering his lordship, his guest went home. The next day the latter selected as his text, “The wicked shall be punished and right easily!” Inspired by the subject, he was by no means sparing of his oratory, and the hour-glass was disregarded, although he was repeatedly warned by the precentor, who, in common with Lord Airly, thought the discourse rather lengthy. The latter soon knew why he was thus punished, by the reverend gentleman (when reminded) always exclaiming, not sotto voce, “Another glass—and then!”

Fosbroke, in his British Monachism, tells a quaint tale of a mode by which long sermons were avoided: “A rector of Bibury used to preach two hours, regularly turning the glass. After the text, the esquire of the parish withdrew, smoked his pipe, and returned to the blessing.” Hogarth, in his “Sleeping Congregation,” has introduced an hour-glass on the left-hand side of the preacher. They lingered in country churches; but they ceased to be in anything like general use after the Restoration.

DECEMBER 19.

St Nenalle, and others, martyr, 250. St Bontham, virgin and abbot, 738.

* Born.—Charles William Scheele, distinguished chemist, 1742; Strachey; Captain William Edward Parry, Arctic navigator, 1790, Bath.

* Died.—Frederick Melchior, Baron Grimm, statesman and wit, 1807, Gotha; Benjamin Smith Barton, American naturalist, 1815; Augustin Pugin, architectural draughtsman, 1842; Joseph Mallard William Turner, painter, 1851, Chelsea.

J. M. W. TURNER.

Joseph Mallard William Turner, R.A., was the son of a barber, and was born at his father's shop, in Maiden Lane, in London, in 1775. The friendly chat of the celebrities of the time in that room of frizzling and curling, persuaded Turner, the father, that his son would become a great man; so he gave him a very fair education, and in his rude way encouraged the lad's taste for art. The son formed a close friendship with a clever young artist, like himself, Girtin, who would have been, had he lived, some critics say, his great rival. Turner himself used good-naturedly to assert: 'If poor Tom had lived, I should have starved.'

In 1789, Turner entered the Royal Academy as a student. After remaining there in that capacity for five years, and working actively at his profession for other five, during which periods he sent to the exhibition no less than fifty-nine pictures, he was elected in 1798 an associate of the Royal Academy. In the two following years he exhibited fourteen pictures, and in 1802 was elected an Academician. Till this time he had chiefly been known as a landscape painter in water-colours, but thenceforth he turned his attention to oil-painting, and in the ensuing half-century produced at the Academy exhibitions upwards of two hundred pictures. In 1807, he was elected professor of perspective in the Royal Academy, and the following year appeared his Liber Studiorum, or Book of Studies, which Charles Turner, Mr Lupton, and others, engraved. Other engraved works by him are his illustrations of Lord Byron's and Sir Walter Scott's poems; Rogers' Italy and Poems; The Rivers of England; The Rivers of France, and Scenery of the Southern Coast. To enumerate the different paintings of Turner would be impossible. They have established him as the greatest of English landscape painters, and one has his own appellation of the 'English Claude,' to whom, indeed, many of his admirers pronounce him superior. Among his more famous pictures, reference may specially be made to his 'Kilchurn Castle, Loch Awe; 'The Tenth Plague of Egypt; 'The Wreck of the Minerva; 'Calais Pier; 'The Fighting Temeraire Tugged to her Last Berth; 'The Grand Canal, Venice; 'Dido and Aeneas; 'The Golden Bough; 'Modern Italy; 'The Fall of Carthage,' and 'The Building of Carthage.' The sea in all its varied aspects, but chiefly under that of gloom or tempests; bright sunny landscapes and noble buildings, lighted up by the glowing rays of the setting sun; and generally nature in her weird-like and unwonted moods, form the favourite themes of this great artist. Through all his productions the genius of a poet declares itself, impressing us with the same mysterious feeling of ineffable grandeur that we experience in reading the works of Dante or Milton. The eccentricity of his colouring and indefiniteness of his figures, rendering many of his later pictures, to ordinary observers, nothing more than a splash or unmeaning medley, have been frequently animadverted on; and with respect to the pictures executed during the last twenty years of his life, it cannot be denied, notwithstanding their unfailing suggestiveness, that much of this censure is well founded.

The Royal Academy treated Turner well, and he, in return, adhered to it devotedly to his death. But the prime of his life was spent in struggles with poverty, in unmerited obscurity, and battles with his employers. He had a rigid sense of justice, and a proud consciousness of his own merits and the dignity of his art. The pertinacity with which he exacted the last shilling in all cases made him seem mean. The natural way in which he continued to retain the simple, we might say uncouth, habits which poverty taught him, after he became wealthy, caused him to be branded as a miser. His gruff and peculiar ways, his austerity, as well as his munificence, made many enemies. But he lived to reach a high pinnacle of popularity, and to know himself fairly appreciated.

Turner's life is a strange story, a narrative at once painfully and pleasingly interesting. Many
seeds of human frailty, many taints of a vulgar origin were never uprooted, though ever kept in check by a truly noble soul. Turner was emphatically a child of nature. His faults were natural frailties not restrained, his virtues rather good impulses than acquired principles. When he rudely dismissed a beggar-woman, and then ran after her with a five-pound note, he furnished a key which unlocks his whole life.

We must set one thing against another. Turner was rough and blunt; yet of how many could it be said, that he was never known to say an ill word of any human being, never heard to utter one word of depreciation of a brother-artist’s work? Let the reader learn to wonder at Turner’s greatness, by applying to himself such a test. A curious tale is told of his obstinacy. He was visiting at Lord Egremont’s. He and his host quarrelled so desperately as to whether the number of windows in a certain building was six or seven, that the carriage was ordered, and Turner driven to the spot, to compare the windows with his host’s. But on another occasion, when Lord Egremont ordered up a bucket of water and some carrots, to settle a question about their swimming, Turner proved to be in the right.

He was fond of privacy, and on this subject Chantrey’s stratagem, by which he got into the artist’s studio, long remained a standing joke against Turner. There were some things, unhappily, connected with his private life, which were wisely kept concealed; and when, to an unknown residence, which he had at Chelsea, the old man retired at last to die, he was only discovered by his friends the day before his final journey.

Undoubtedly, Turner was fond of hoarding, but he was too great to become a miser. He hoarded his sketches even more eagerly than his sixpences. If he amassed £140,000, it was to leave it to found a charity for needy artists. This was his life’s wish. If his grasping was great, his pride was greater. For when his grand picture of ‘Carthage’ was refused by some one, for whom it was painted to order, at the price of £100, Turner, in his pride, resolved to leave it to the nation. ‘At a great meeting at Somerset House, where Sir Robert Peel, Lord Harewood, and others were present, it was unanimously agreed to buy two pictures of Turner, and to present them to the National Gallery, as monuments of art for eternal incitement and instruction to artists and all art-lovers. A memorial was drawn up, and presented to Turner by his sincere old friend, Mr. Griffiths, who exulted in the pleasant task. The offer was £2000 for the two pictures, ‘The Rise,’ and ‘Fall of Carthage.’ Turner read the memorial, and his eyes brightened. He was deeply moved: he shed tears; for he was capable, as all who knew him well knew, of intense feeling. He expressed the pride and delight he felt at such a noble offer from such men, but he added sternly, directly he read the word ‘Carthage’—No, no, they shall not have it,’ at the same time informing Mr. Griffiths of his prior intention for the pictures.

All his friends loved him, and he was really, as we have stated, no miser. There was silver found under his pillow, when he lay quite alone he had been staying at; but this was because he was too sensitive to offer it to the servants in person. We read of him paying, of his own accord, for expensive artist-dinners, of his giving a merry picnic, of his sending upwards of £20,000 secretly to the aid of a former patron.

Turner was generous-hearted, too, in other than pecuniary matters. He pulled his own picture down, to find a place for the picture of some insignificant young artist, whom he wished to encourage. He blackened a bright sky in one of his academy pictures, which hung between two of Lawrence’s, so as to cast its merits into the shade. In this befouled condition, he allowed his own production to remain throughout the exhibition; and whispered to a friend, to allay his indignation: ‘Poor Lawrence was so distressed; never mind, it’ll wash off; it’s only lampblack!’

His genuine affections were never drawn out. The history of his first love is a sad story of disappointment, enough to darken a life. He always stuck close to his old ‘dad,’ as he called him; but quitted, much to the old man’s disappointment, a pleasant country-house and garden, for a dull house in town. The reason for this proceeding was cussed one day in conversation with a friend: ‘Dad would work in the garden, and was always catching cold.’

This great artist’s will, after all, was so loosely expressed, that its intentions were to a great extent frustrated, and the bulk of his property, which he had bequeathed for national and artistic purposes, was successfully claimed by his relatives. By a compromise, however, effected with the latter, the magnificent series of oil-paintings and drawings, known as the Turner Collection, have been secured for our national galleries as the most exalted trophies of British art.

‘ALMANACS FOR THE ENSUING YEAR.’

The year is now drawing to its close, the Christmas festivities are in active preparation, and almost every one is looking forward with cheerful anticipation to the welcome variety from the regular pursuits and monotonous routine of ordinary life, which characterises the death of the Old year, and the birth of the New one. Youngsters at school are looking eagerly forward to the delights of home and the holidays—the intermission from study and scholastic restraint; the sliding, skating, and other sports of the season; the mince-pies, the parties, and the pantomimes. A universal bustle and anticipation everywhere prevails. Hampers with turkeys, geese, bacon, and other substantial provisions are coming up in schoobars to town as presents from country friends; whilst barrels of pickled oysters, and boxes of cakes, dried fruits, and hams find their way in no less force to the provinces. Nor in thus providing for material and gastronomic enjoyment, are the more refined and intellectual cravings of humanity neglected. Christmas-books of all shapes, sizes, and subject-matter blaze forth magnificently in booksellers’ windows, decked in all the colours of the rainbow, replete in all the gorgeousness of modern bookbinding, and displaying the grandest display of processes and illustrative skill. The publishers of the various popular periodicals now put forth the ‘extra Christmas number,’ and the interest and curiosity excited by this last are shared with the graver and more business-like ‘almanacs for the ensuing year.’
The time-honoured street-cry just quoted, may still be heard echoing through many of our public thoroughfares, though it is probably much less common now than it used to be, when itinerant venders of all kinds found a greater toleration from the authorities, and a fair market with the public for their wares. In the present day, people generally resort to the regular booksellers or stationers for their almanacs. Here purchasers of all means and tastes may be suited, whether they desire a large and comprehensive almanac, which, in addition to the mere calendar, may furnish them with information on all matters of business and general utility throughout the year, or whether they belong to that class whose humble wants in this direction are satisfied by the expenditure of a penny.

It is well known that the Stationers' Company of London enjoyed, in former times, a monopoly of the printing of all books; and long after this privilege had gradually been withdrawn from them, they continued to assert the exclusive right of publishing almanacs; but this claim was successfully contested in 1775 by Thomas Carnan, a bookseller in St Paul's Churchyard, who obtained a decision against the company in the Court of Common Pleas, and this judgment was subsequently confirmed, after an animated discussion. The Stationers' Company continued the publication of almanacs with considerable profit to themselves, notwithstanding this infringement of what they deemed a vested right; and to the present day this branch of trade, the sole relic of a business which formerly comprehended the whole world of literature, forms, in spite of competition, a most profitable source of revenue to the association. The day on which the Stationers' Company issue their almanacs to the public (on or near the 23rd November) presents a very animated and exciting scene, and is delineated

in the accompanying engraving. We quote the following description from Knight's London: 'Let us step into Ludgate Street, and from thence through the narrow court on the northern side to the Hall. The exterior seems to tell us nothing to suggest nothing, unless it be that of a very commonplace looking erection of the seventeenth century, and therefore built after the fire which destroyed everything in this neighbourhood; so we enter. Ha! here are signs of business. The Stationers cannot, like so many of its municipal brethren, be called a dozing company; indeed it has a reputation for a quality of a somewhat opposite kind. All over the long tables that extend through the hall, which is of considerable size, and piled up in tall heaps on the floor, are canvas bales or bags innumerable. This is the 23rd of November. The doors are locked as yet, but will be opened presently for a novel scene. The clock strikes, wide saunders start the gates,
and in they come, a whole army of porters, dashing hither and thither, and seize the said bags, in many instances as big as themselves. Before we can well understand what is the matter, men and bags have alike vanished—the hall is cleared, another hour or two, and the contents of the latter will be flying along railways, east, west, north, and south; yet another day, and they will be dispersed throughout every city and town, and parish and hamlet of England; the curate will be glancing over the pages of his little book to see what promotions have taken place in the church and sith as he thinks of rectories, and deaneries, and bishoprics; the sailor will be deep in the mysteries of tides and new moons that are learnedly expatiated upon in the pages of his; the believer in the stars will be finding new draughts made upon that Bank of Faith, impossible to be broken or made bankrupt—his superstition as he turns over the pages of his Moore—but we have let out our secret. Yes, they are all almanacs—those books that no mortal man can understand; almanacs: Moore's, Partridge's, and Ladies and Gentleman's, and Goldsmith's, and Clerical, and White's celestial, or astronomical, and gardening almanacs—the last, by the way, a new one of considerable promise, and we hardly know how many others. It is even so. The—at one time—printers and publishers of everything, Bibles, prayer-books, school-books, religion, divinity, politics, poetry, philosophy, history, have become at last publishers only of these almanacs and 'prognostications,' which once served but to eke out the small means of their poorer members. And even in almanacs they have no longer a monopoly. Hundreds of competitors are in the field. And, notwithstanding, the Stationers are a thriving company. In the general progress of literature, the smallest and humblest of its departments has become so important as to support in vigorous prosperity, in spite of a most vigorous opposition, the company, in which all literature—in a trading sense—was at one time centered and monopolised! It is not necessary here to enter into the history of almanacs, a subject which has already been thoroughly discussed in the introduction to this work. We may remark, nevertheless, that till a comparatively recent period, every subject-matter of which the majority of almanacs was composed, reflected little credit, either on the general progress of the nation in intelligence, or the renowned company by whom these books were supplied. The gross superstitions and even incendies which disgraced Poor Robin's Almanac, and the predictions and other absurdities of the publications bearing the names of Partridge and Moore, continued to flourish with unceasing vigour up to 1828. In that year, the Society for the Diffusion of Useful Knowledge issued in the British Almanac a quiet protest against the worthless papulum hitherto supplied to the public. This new work both found extended favour with the public, and produced a signal reform in most of the popular almanacs. In the following year, Poor Robin disappeared altogether from the stage; a great portion of the astrology which pervaded the other almanacs was retrenched; and since that period the publications of the Stationers' Company have kept pace with the growing requirements and improved tastes of the age.

LONDON STREET NOMENCLATURE

The sponsors of Old London performed their duties more conscientiously than most of their successors; as a consequence, the names of the older streets of the capital serve not only as keys to their several histories, but as landmarks by which we can measure the changes wrought by time in the topographical features of the city. The streams which once murmured pleasantly near the abodes of the Londoners have long since been degraded into sewers, but their memory is preserved in the streets of Fleet, Walbrook, and Holborn (from the Saxon Bubonere, the stream at the foot of the hill), and the parish of St Mary-le-borne—a corruption of St Mary-le-bourne. The favourite trysting-places of the youthful citizens, the wells to which they flocked in the sweet summer-time, have left their names to Clerkenwell, Holywell Street, Bridewell, and Monkwell Street; as the mineral springs have to Spas-Fields and Bagnolette Wells Road. The wall that encompassed the city has left its name with all its gates, but London Wall, Aldgate, Alderagate, Moor-gate, Bishopsgate, Newgate, Cripplegate, and Ludgate, are still familiar words. Barbican marks the site of the ancient burgh-kenning or watch-tower. Covent Garden and Hatton Garden remind us that trees bore fruit and flowers once bloomed in these now stony precincts, while Vine Street (the site of the vineyard of the royal palace at Westminster), and Vinegar Yard, Drury Lane (originally Vine-garden Yard), speak of the still more distant day when the grape was cultivated successfully in town.

Cheapside was the principal market or chase in London; the fish-market was held in Fish Street, the herb-market in Grass (Grace) Church Street, corn-dealers congregated in Cornhill, bakers in Bread Street, and dairymen in Milk Street. Friday Street takes its name from a fish-market opened there on Fridays. Goldsmith's Row, Silver Street, Hosier Street, Cordwainer Street (now Bow Lane), and the Poultry, were inhabited respectively by goldsmiths, silversmiths, stockers, sellers, bootmakers, and poulterers. Garlick Hill was famous for its garlic. In Sermon, or Sheremoner's Lane, the cutlers of gold and silver to be seen. Ave-Maria Lane, Creed Lane, and Paternoster Row, were occupied principally by the writers and publishers of books containing the alphabet, ayes, creeds, and patent offices. Cloth fair was the resort of drapers and clothiers, and the Haymarket justified its name until 1830, when the market was removed to another quarter.

Till a few years ago, the Northumberland Lion still looked over Charing Cross, and a peer of the realm resided in Islington; yet no one would look for a duke in Clerkenwell, or expect to find aristocratic mansions just out of the lord mayor's jurisdiction. Such associations were not always incongruous, the town-houses of the Earls of Aylesbury and the Dukes of Newcastle stood on the ground now occupied by Aylesbury and Newcastle Streets, Clerkenwell: the White House also gave way to the square of that name (Bishopsgate Without) till the year 1690, and in earlier times the kingmaker feasted his dependents where Warwick Lane abuts on Newgate Street. Succumbing to fashion's constant cry of 'Westward
name, who married Henry VIII's sister, Mary; Stafford Row, Pimlico—from Lord Stafford, one of Oates's victims; Throgmorton Street—from Sir Nicholas Throgmorton, said to have been poisoned by the Earl of Leicester; Hare Court Temple—after Sir N. Hare, Master of the Rolls in the reign of Elizabeth; Cumberland Street and Gale—after Sir Robert Gale, who was slain in a duel at the Kit-Kat Club; Literary celebrities come in for but a small share of brick-and-mortar compliments. Mrs Montagu, the authoress, lives in Montagu Place (Portman Square); Kiligrew, the wit, has given his name to a court in Scotland Yard; and Milton has received the doobtful compliment of having the notorious Grub Street of the Dunciad days re-dedicated to him. The founder of the Foundling Hospital is most solomnly commemorated in Great Ormond Street; and Lamb, the charitable cloth-worker, who built a conduit at Holborn in 1677, has his munificence recorded in Lamb's Conduit Street. Downing Street takes its name from Sir George Downing, secretary to the treasury in 1667; and the once fashionable Bond Street was called after Henrietta Maria's comptroller of the household. Barton Booth, the Cato of Addison's tragedy, has left his name in Westminster; the adjacent Cowley Street, being called after his birthplace. These are not the only thoroughfares connected with the drama; the site of the old Fortune Theatre is marked by Playhouse Yard (Central Street); and that of the Red Bull Theatre, by Red Bull Yard (St John's Street Row). Globe Alley and Rose Alley are mementoes of those famous playhouses; while the Curtain Theatre is represented by the road of that name. Apollo Court, Fleet Street, reminds us of Jonson's glorious sons of Apollo. Spring Gardens (Charing Cross) was a favourite resort of pleasure-seekers in Pepys's time, but bought but its name is left now to recall its fame, a fate that has befallen its rival Vauxhall.

Old Street was the old highway to the north-eastern parts of the country. Knight Rider Street was the route of knights riding to take part in the Smithfield tournaments. Execution Dock, Wapping, was the scene of the last appearance of many a bold pirate and salt-water thief. Bowl Yard (St Giles') was the spot where criminals were presented with a bowl of ale on their way to Tyburn. Finsbury and Moorfields were originally mans and moors; Houndsditch was an open ditch noted for the number of dead dogs cast into it; Shoreditch was known as Soho-ditch long before the goldsmith's fruil wife existed. Paul's Chain owes its name to a chain or barrier that used to be drawn across St Paul's Churchyard, to assure quietness during the hours of divine worship. The Great and Little Turnstiles were originally closed by revolving barriers, in order to keep the cattle passed in Holborn's Inn Fields from straying into the streets. The Sanctuary (Westminster) was once what its name implies. The Birdcage-Walk (St James's Park) derived its name from an aviary formed by James I. The aristocratic neighbourhood of Mary Fair is so called from the annual fair of St James, which was held here till the year 1609.

Corruption has done its work with street-names. The popular love of abbreviations has reduced the Via de Alwyth (the old name for Drury Lane) into Wych Street, and Gutham into Gutter Lane, while vulgar mispronunciation has altered Desmond
into Deadman's Place, Sidion into Sythyn and Seething Lane, Candlewick into Cannon Street, Strypes Court (named after the historian's father) into Tripe Court, St Olave's into Tooley Street, Golding into Golden Square, Birchower into Birchin Lane, Blanche-Appleton into Blind-chapel Court, and Knightsguild Lane (so called from tenements pertaining to the knight-guild created by Edgar the Saxon) into Nightingle Lane. Bateresses figures in Domesday Book as Patricies, passing to its present form through the intermediate ones of Batcherse and Bateresse; Chelsea, known to the Saxons as Osalchythe, and to Sir Thomas More as Chalchth, is, according to Norden, 'so called from the nature of the place, whose strand is like the cheese, cosel or csol, which the sea casteth up, of sand and pebble stones, thereof called Chelseysel, briefly Chelsea.' In the fourteenth century, Kentish-town was known as Kaentelos; Lambeth assumes the various shapes of Lamde, Lammbe, Lamhet, and Lambyth; Stepney was once Stebenhede, and afterwards Stepheythe; Islington took the form of Isendune, Iselidon or Eyselond; Kensingston was Chenesitune, and Knighbridge appears in the reign of Edward III. as 'the town of Knighbrig.' Other changes have been wrought by mere caprice. There may have been reasons for converting Petty France into New Broad Street, Dirty Street into Abingdon Street, Stinking Lane, otherwise Chick Lane, otherwise Blow-bladder Lane, otherwise Butcher-hall Lane, into King Edward Street, Knave's Acre into Poultney Street, Duck Lane into Duke Street, and Pedlar's Acre into Belvedere Road; but Cato Street (the scene of Thistlewood's conspiracy), mayon Street (celebrated for its frippery and second-hand garments), Dyt Street, and Shirley Lane (which marked the line of boundary between the city and the county), might well have been left in possession of these old names; nothing has been gained by re-christening them Homer Street, Dudley Street, George Street, and Lower Scarle's Place.

DECEMBER 20.

St Philonemus, bishop of Antioch, confessor, 322. St Paul of Litrae, or Litra, hermit, 926.

Born—John Wilson Croker, reviewer and miscellaneous writer, 1780, Galway.

Died.—Ignatius, bishop of Antioch, martyred at Rome, 107 A.D.; Bernard de Montfaucon, French antiquary, 1741; Louis the Dauphin, father of Louis XVI., 1765; Thomas Hill, patron of literary men, and prototype of Paul Pry, 1846, Adelphi, London.

THE SUPPRESSION OF STAGE-PLAYS.

On December 20, 1642, 'some stage-players in St John Street were apprehended by troopers, their clothes taken away, and themselves carried to prison.'—Whedlock's Memorials.

When England was torn by civil strife, the drama had a hard struggle for existence. Its best supporters had more serious matters to attend to, and while its friends were scattered far and wide, its foes were in authority, and wielded their newly-won power without mercy. When the civil war broke out, one of the first acts of parliament was the issuing, in September 1642, of the following:

'Ordinances of the Lords and Commons concerning Stage-plays.

Whereas the distressed estate of Ireland, steeped in her own blood, and the distracted estate of England, threatened with a cloud of blood by a civil war, call for all possible means to appease and avert the wrath of God appearing in these judgments; among which fasting and prayer, having been often tried to be very effectual, have been lately, and are still, enjoined; and whereas public sports do not well agree with public calamities, nor public stage-plays with the seasons of humiliation, this being an expression of sad and pious solemnity, and the other being spectacles of pleasure too commonly expressing lascivious mirth and levity; it is therefore thought fit, and ordered by the Lords and Commons in this Parliament assembled, that while these sad causes and set times of humiliation do continue, public stage-plays shall cease and be forbidden. Instead of which are recommended to the people of this land the profitable and seasonable consideration of repentance, reconciliation, and peace with God, which probably will produce outward peace and bring again times of joy and gladness to these nations.'

It was not to be expected that this unwelcome ordinance would be submitted to in silence. The Actors' Remonstrance soon appeared, complaining of the inconsistency of parliament in closing well-governed theatres, used only by the best of the nobility and gentry, while it permitted the bear-gardens to remain unmolested, patronised, as they were, by boisterous butchers, cutting cobblers, hand-handled masons, and the like riotous disturbers of the public peace; and gave uncontrolled allowance to puppet-shows. After defending the play-houses against sundry charges of their assailants, the pamphleteer promises, on behalf of the poor disrespected players, that if they are re-invested in their houses, they will not admit any female whatsoever unless accompanied by her husband or some near relative; that they will reform the abuses in tobacco, and allow none to be sold, even in the threepenny galleries, except the pure Spanish leaf; that all ribaldry shall be expelled the stage; and for the actors, 'we will so demean ourselves as none shall esteem us of the ungodly, or have cause to repine at our actions or interludes; we will not entertain any comedian that shall speak his part in a tone as if he did it in derision of some of the pious, but reform all our disorders and amend all our amissess.'

The author of Certain Propositions offered to the Consideration of the Honourable House of Parliament, advises that (as there must necessarily be amusements at Christmas, whether parliament likes it or not) the authorities should declare they merely intended to reform, and not abolish the actor's calling, and to that end confine the plots of plays to scriptural subjects. He is evidently a royalist, and satirically suggests: 'Joseph and his brethren would make the ladies weep; that of David and his troubles would do profit; and, doubtless, Susannah and the elders would be a scene that would take above any that were ever yet presented. It would not be amiss, too, if, instead of the music that plays between the acts, there were only a psalm sung for distinction sake. This might be easily brought to pass, if either the
court playwrights be commanded to read the Scriptures, or the city Scripture-readers be commanded to write plays.”

One half-serious argument used in favour of re-opening the theatres was that, by so doing, the ranks of the royal army would be materially weakened. Most of the leading actors of the day had, in fact, exchanged their stage-foils for weapons of a steadier sort. Prince Rupert’s regiment had in its ranks three of the most popular representatives of feminine parts—Burton being a cornet, Hart a lieutenant, and Shatterer quartermaster. Mohun became captain in another regiment; and Allen of the Cockpit was quartermaster-general at Oxford. Other players contrived, spite of the law, to eke out a precarious living by practising their profession by stealth. In 1644, the sheriffs dispensed an audience assembled at the Salisbury Court Theatre to witness Beaumont and Fletcher’s King and No King; but the poor players still found such encouragement in defying the law, that a second ordinance was issued, instructing the civic authorities to seize all actors found plying their trade, and commit them to the common jail, to be sent to the sessions, and punished as rogues. The same was done in Shapcote Street, when, under a bill of indictment, the act was passed, by which it was enacted “that all stage-players, and players of interludes, and common plays are, and shall be, taken for rogues, whether they be wanderers or no, and notwithstanding any licence whatsoever from the king or any other person or persons, to that purpose.” The lord mayor, the sheriffs, and the justices of the peace were ordered to have all galleries, boxes, and seats, in any building used for theatrical representations, at once pulled down and demolished. A fine of five shillings was inflicted upon anyone attending such illegal performances, all money taken at the doors was to be confiscated for the benefit of the poor of the parish; and last, but not least, any player caught in the act was to be publicly whipped, and compelled to find sureties for future good-behaviour. If he chose to offend a second time, he was to be considered an incorrigible rogue, ‘and dealt with as an incorrigible rogue ought to be.’

For a time parliament seems to have attained its object in completely suppressing the drama, but as soon as the war was over, the actors who had passed through it unscathed returned to their old haunts; and those wails and strays of the various old companies, uniting their forces in the winter of 1648, obtained possession of the Cockpit in Drury Lane, and attempted, in a quiet way, to supply the town with its favourite recreation. For a few days they were allowed to act without interference, but one afternoon, during the performance of The Bloody Brother, a troop of soldiers entered the house, turned the dispossessed playgoers out, and carried the actors to prison in their stage-clothes. To prevent further infraction of the law, a provost-marshal was appointed, who was expressly instructed to seize all ballad-singers, and suppress all stage-plays.

Under the Protectorate, this stringency seems to have been relaxed. Plays were acted privately a little way out of town, and at Christmas and Easter week-ends, too, as in 1651 a more stringent bribery, to have performances at the Red Bull, in St John Street. Friendly noblemen, too, often allowed them to make use of their houses; Goffe, the woman-actor of the Blackfriars theatre, being employed to notify the time and place to all persons whom it might concern. As soon as Cromwell was dead, and the signs of the time gave any hope of a restoration of the monarchy, the players grew bolder. Several plays were acted at the above-mentioned theatre in 1659, and by June 1660, the Cockpit was again opened by Rhodes and the Salisbury Court Theatre, by Newton. When Charles was fairly seated on the throne, the drama was soon legalised by the granting of two patents, one to Sir W. Davenant, and the King’s servants at Drury Lane, and the other to Killigrew and the Duke’s servants at Dorset Gardens—and so ended the puritanical suppression of stage-plays.

In the reign of Elizabeth, somewhere about the year 1580, there had been a partial suppression of theatres. Certain ‘godly citizens and well-disposed gentlemen of London,’ brought such a pressure to bear upon the city magistrates, that the latter petitioned her majesty to expel all players from London, and permit them to destroy every theatre within their jurisdiction. Their prayer was granted, and the several playhouses in Gracechurch Street, Water Lane, and elsewhere, were stripped of their scenery, and closed. The houses outside the city-bounds were, fortunately, in no way molested, or English literature would have been the poorer by some of Shakespeare’s greatest works.

Whenever the plague made its appearance in London, the drama was put to the wall; and as long as it stayed in town, the players were forced to be idle. Sir Henry Herbert’s office-book contains the following memorandum: ‘On Thursday morning the 23rd of February, the bill of the plague made the number of forty-four, upon which decrease the king gave the players their liberty, and they began the 24th February 1636.

‘The plague increasing, the players lay still until the 3d of October, when they had leave to play.’

Of course the closing of the theatres was rigidly enjoined during the Great Plague, but the court was only too glad to seize the earliest opportunity of opening them again. Pepys says, in his Diary, under date 20th November 1665: ‘To church, it being Thanksgiving-day for the cessation of the plague; but the town do say, that it is hastened before the plague is quite over, there being some people still ill of it; but only to get ground of plays to be publicly acted, which the bishops would not suffer till the plague was over.’

A FLYING SHIP IN 1706.

In No. 56 of the Evening Post, a newspaper published in the reign of Queen Anne, and bearing date 20–23d December 1709, we find the following curious description of a Flying Ship, stated to have been lately invented by a Brazilian priest, and brought under the notice of the King of Portugal in the following address, translated from the Portuguese:

‘Father Bartholomew Laurent says that he has found out an Invention, by the Help of which one may more speedily travel through the Air than

720
any other Way either by Sea or Land, so that one may go 200 Miles in 24 Hours; send Orders and Conclusions of Councils to Generals, in a manner, as soon as they are determined in private Cabinets; which will be so much the more Advantageous to your Majesty, as your Dominions lie far remote from one another, and which for want of Councils cannot be maintained nor augmented in Revenues and Extent.

Merchants may have their Merchandize, and send Letters and Packets more conveniently. Places besieged may be Supply'd with Necessaries and Succours. Moreover, we may transport out of such Places what we please, and the Enemy cannot hinder it:

The Portuguese have Discovered unknown Countries bordering upon the Extremity of the Globe: And it will contribute to their greater Glory to be Authors of so Admirable a Machine, which so many nations have in vain attempted.

Many Misfortunes and Shipwrecks have happened for want of Maps, but by this Invention the Earth will be more exactly Measure'd than ever, besides many other Advantages worthy of your Majesty's Encouragement.

But to prevent the many Disorders that may be occasioned by the Usefulness of this Machine, Care is to be taken that the Use and full Power over the same be committed to one Person only, to whom your Majesty will please to give a strict Command, that whoever shall presume to transgress the Orders herein mentioned shall be Severely punished.

May it please your Majesty to grant your humble Petitioner the Privilege that no Person shall presume to Use, or make this Ship, without the Express Licence of the Petitioner, and his Heirs, under the Penalty of the loss and Forfeiture of all his Lands and Goods, so that one half of the same may belong to the Petitioner, and the other to the Informer. And this to be executed throughout all your Dominions upon the Transgressors, without Exception or Distinction of Persons, who likewise may be declared liable to an Arbitrary punishment, &c.'

Of this much-vaunted invention an engraving is given in the same newspaper, and is here presented to the reader, who may probably be equally amused by the figure delineated, and the explanation of its uses, as subjoined.

An Explanation of the Figure.
A. Represents the Sails wherewith the Air is to be divided, which turn as they are directed.
B. The Stern to govern the Ship, that She may not run at random.
C. The Body of the Ship which is formed at both ends Stellepolewise; in the concavity of which is a pair of Bellowes, which must be blown when there is no Wind.
D. Two Wings which keep the Ship upright.
E. The Globes of Heaven and Earth containing in them Attractive Virtues. They are of Metal, and serve for a Cover to two Leadstones, placed in them upon the Pedestals, to draw the Ship after them, the Body of which is of Thin Iron Plates, covered with Straw Mats, for convenience of 10 or 11 men besides the Artist.
F. A cover made of Iron Wire in form of a Net, on which are Fastened a good number of Large Amber Beads, which by a Secret Operation will help to keep the Ship Aloft. And by the Sun’s heat the aforesaid Mats that line the Ship will be drawn towards the Amber Beads.
beliefs in demons has existed in all ages of known history, and among the pagan peoples, it was almost a more important part of the vocation of the priesthood to control the evil spirits than to conduct the worship of the beneficent deities; at all events, it was that ascended faculty which gave to the greatest influence over their ignorant votaries. The introduction of Christianity did not discourage the belief in demons, but, on the contrary, it was the means of greatly increasing their numbers. Not only were the multiflora spirits of the then popular credos, such as satyrs, wood-nymphs, elves, &c., accepted as demons, but all the false gods of the pagans were placed in the same category, and thus was introduced into medieval magic a host of names of individual demons, taken from all countries, to the effect, necessarily, of creating very confused ideas on a subject which, in the olden time, had been tolerably clear even to the vulgar. When the learned men of the middle ages began to take demonology into their hands, they sought to reduce this confusion into order by arranging and classifying, and they soon produced an elaborate system of orders and ranks, and divided the infernal regions into a regular monarchy, modelled upon the empires of this world, with offices and dignities imitated from the same pattern. It was in the course of the fifteenth and sixteenth century that this system of a demonical commonwealth received its full development; and men like Johannes Wierus, who published his Pseudomonarchia Daemonum, the latter of these two centuries, and the other writers of his class and of that period, were able to give a minute account of all its details. They are amusing enough, and the subject is, in many points of view, very interesting.

According to these writers, the emperor of the demons was Belzebuth or Belzebub. He is said to have been worshipped by the people of Cannaan under the form of a fly, and hence he is said to have founded the Order of the Fly; the only order of knighthood which appears to have existed among the demons. When these writers became acquainted with Hades, a revolution had taken place there, and Satan, who had formerly been monarch, had been dethroned and Belzebub raised to his place. Satan had now placed himself at the head of the opposition party. Among the great princes were: 1. Euryonomy, prince of death, and grand-cross of the order of the Fly. He was of course taken from the Greek mythology. 2. Moloch, prince of the country of tears, also grand-cross of the order, and member of the imperial council of state. 3. Pluto, prince of fire, and superintendent of the infernal punishments. 4. Leosomed, grand-master of the Sabbath, and inspector-general of magick and secrecy. He was a Knight of the Order of the Fly, and appeared often as a black man or negro. 5. Baalberith, 'master of the alliances,' and, according to some, secretary-general, and keeper of the archives of hell. The four previous named princes were demons of the first order; Baalberith was only of the second. 6. Proserpine, archduchess of Hades, and sovereignty principia of the evil spirits.

The ministers of state of Belzebuth's court were:
1. Atradamo, grand-chancellor, and grand-cross of the order of the Fly. 2. Astaarto, grand-treasurer. 3. Nergal, chief of the secret police. 4. Baal, general-in-chief of the armies, and grand-cross of
the order of the Fly.—5. Leviathan, grand-admiral, and knight of the Fly.

Belzebuth had his ambassadors also, and their different appointments were, perhaps, intended to convey a little satire on the different countries to which they were sent. They were: 1. To France, Belphégor, an unclean demon, who often appeared in the form of a young woman; he was the demon of discoveries and ingenious inventions, and gave napoleonic pride. 2. To Turkey, Belial, one of the most vicious of all the demons. 3. To Spain, Thamnus, who was the inventor of artillery. 4. To Italy, Hugfin, a familiar demon, who took pleasure in oblige people. 5. To Switzerland, Martinet, who was especially familiar with magicians, and assisted travellers who had lost their way.

Among other high officials were, Lucifer, who was grand-jusiciatus and minister of justice; and Alastor, who held the distinguished office of executioner. The officers of the household of the princes were: Verdelet, master of the ceremonies, whose duty it was to convey the witches to the Sabbath; Salmac, chief of the witches; and the demon of jealousy; Chamos, grand-chamberlain, and the demon of flattery—he was knight of the Fly; Malchom, treasurer and payer of the public servants; Niasioph, chief of the kitchen; Behemoth, grand-cupbearer; Dagon, master of the pantry; and Mullin, principal valet-de-chambre. There were also certain ministers or officers of the privy-purse of Belzebuth, such as Kobal, director of the theatres, who was in this world the patron of comedians; Asmodeus, the superintendent of the gambling-houses; Nybbas, the grand-parodist, and who had also the management of dreams and visions; and Antichrist, who was the great juggler and necromancer of the shades.

With a court so complicated in its arrangements, and numerous in its officers, we might perhaps, like to know what was the population of Belzebuth's empire. Wierus has not left us without full information, for he tells us that there are in hell, 6666 legions of demons, each legion composed of 6666 demons, which, therefore, makes the whole number amount to 44,433,566.

Whoever wishes for further information, need only have recourse to Johannes Wierus, and he may obtain as much as he can possibly desire. It must not be forgotten that these statements were at one time fully believed in by men of education and intellect.

DECEMBER 21.

St Thomas, apostle. St Edurbie, virgin, 9th century.

St Thomas’s Day.

The festival of St Thomas was instituted in the twelfth century, and, as an old author alleges, was assigned an early place in the ecclesiastical calendar because this apostle having been vouchsafed the most indisputable evidence of the resurrection. In pictorial art, St Thomas is represented holding a builder’s square, and in accordance with the following legend, he is regarded as the patron saint of architects and builders.—When St Thomas was at Cæsarea, our Lord appeared unto him, and said: ‘The king of the Indies, Gondoforus, hath sent his provost, Abanes, to seek for workmen well versed in the science of architecture, who shall build for him a palace finer than that of the emperor at Rome; and I will send them to him.’ And St Thomas went, and Gondoforus commanded him to build a magnificent palace, and gave him much gold and silver for the purpose. The king went to a distant country, and was absent for two years; and St Thomas, meanwhile, instead of building a palace, distributed all the treasures intrusted to him among the poor and sick; and when the king returned he was full of wrath, and commanded that St Thomas should be seized and cast into prison, while he meditated for him a horrible death. Meantime, the brother of the king died, and the king resolved to erect for him a magnificent tomb; but the dead man, after that he had been dead four days, suddenly rose, sat upright, and said to the king: ‘The man whom thou wouldst torture is a servant of God; behold, I have been in Persia, and I will show thee a wondrous palace of gold, silver, and precious stones; and they said: This is the palace that Thomas the architect has built for thy brother King Gondoforus.’ And when the king heard those words, he ran to the prison, and delivered the apostle, and then St Thomas said to him: ‘Knowest thou not that they who possess heavenly things have little care for the goods of this world? There are in heaven rich palaces without number, which were prepared from the beginning of the world for those who purchase the possession thereof through faith and charity. Thy riches, O king, may prepare thy way to such a place, but they cannot follow thee thither.’ Like many other of the old saintly legends, this was never meant or assumed to be a matter-of-fact relation, but simply a parable or recondite story of the instruction of the people, and rendered the more impressive and striking by an exalted apostle being made the hero of the tale.

It is said that after the dispersion of the apostles, St Thomas preached the gospel to the Medes, Persians, Bactrians, Ethiopians, and Indians, among the latter of whom he suffered martyrdom at Meeapore, and was buried in a church, which had caused to be erected in that city. Marco Polo, who travelled in the thirteenth century, says: ‘In that province of Malabar, is the body of the glorious martyr St Thomas, the apostle, who there suffered martyrdom. It rests in a small city, not frequented by many merchants, because unsuited for the purposes of commerce; but, from devotional motives, a vast number both of Christians and Saracens resort thither. The Christians who reside in this place, in their pilgrimage on the first day of the newage collect earth, which is of a red colour, from the spot where he was slain, and reverentially carry it away with them, often employing it afterwards in miracles, and giving it with water to the sick, by which many disorder are cured. A variety of miracles are daily performed at the tomb of St Thomas, through the intercession of the blessed apostle.’

Sir John Mandeville, in his travels, describes the
same country as 'a great kingdom containing many fair cities and towns. In that kingdom lies the body of St Thomas the apostle in flesh and bone, in a fair tomb, in the city of Calamyl; for there he was martyred and buried. But men of Assyria carried his body into Mesopotamia into the city of Edessa; and afterwards he was brought thither again. And the arm and the hand that he put to our Lord's side, when he appeared to him after his resurrection, is yet lying in a vessel without the tomb. By that hand they there make all their judgments. For, when there is any dissension between two parties, and each of them maintains his own cause, both parties write their causes on two bills, and put them in the hand of St Thomas; and anon, the hand casts away the bill of the wrong cause, and holds still the bill with the right cause, and therefore men come from far countries to have judgments of doubtful causes.' The accompanying engraving, from an illumination in an ancient manuscript of Mandeville's travels, preserved in the Bibliothèque Imperiale of Paris, represents the judgment of St Thomas. And if the story be considered incredible, the writer can only quote Mandeville's own lines addressed to unbelievers thus:

'If scanty be my land and praise,
And witness folk should call me liar,
For that my book contains strange lays,
I will not storm nor burst with ire.
Let him who credits not my tales,
Travel as far as I have been,
Then, may he tell if truth prevails,
In what I say that I have seen.'

St Thomas's Day falls on the winter solstice, the shortest day in the year, as expressed in the following couplet:

'St Thomas gray, St Thomas gray,
The longest night and the shortest day.'

In some parts of the country the day is marked by a custom, among poor persons, of going a gooding, as it is termed—that is to say, making the round of the parish in calling at the houses of their richer neighbours, and begging a supply either of money or provisions to procure good things, or the means of enjoying themselves at the approaching festival of Christmas. From this circumstance St Thomas's Day is in some places designated 'Dole Day,' and in others 'Mumpin [begging] Day.' In Warwickshire, the custom under notice used to be called going a cornling, from the poor people carrying with them a bag in which they received a contribution of corn from the farmers. By a correspondent of Notes and Queries, in 1857, we are informed that the custom of 'Gooding' exists in full force in Staffordshire, where not only the old women and widows, but representatives from every poor family in the parish, make their rounds in quest of alms. The clergyman is expected to give a shilling to each person, and at all houses a subsidy is looked for either in money or kind. In some parts of the same county a sum of money is collected from the wealthier inhabitants of the parish, and placed in the hands of the clergyman and churchwardens, and put on the Sunday nearest to St Thomas's Day, distributive in the vestry under the name of 'St Thomas's Doe.' We learn also from another correspondent that the writer just quoted, that at Harrington, in Worcestershire, it is customary for children on St Thomas's Day to go round the village begging for apples, and singing—

'Wassail, wassail, through the town,
If you've got any apples, throw them down;
Up with the stocking, and down with the shoe,
If you've got no apples, money will do;
The jug is white and the ale is brown,
This is the best house in the town.'

In return for the alms bestowed during these 'gooding' peregrinations, it was customary for the recipients, in former times, to present to their benefactors a sprig of holly or mistletoe. A liberal doe was distributed at the 'great house,' or the mansion of the principal proprietor in the parish; and at the kitchens of all the squires and farmers' houses, tankards of spiced ale were kept for the special reception of the red-cloaked old wives who made in procession these foraging excursions on St Thomas's Day. It is said that the hospitality shewn on such occasions proved sometimes rather overpowering, and the recipients of this and other charitable benefactions found themselves occasionally wholly unable to find their way back to their own habitations, having been rendered, through the agency of John Barleycorn, as helpless as the 'Wee bit Wifie' immortalised in Scottish song.

THE 'ADVENT IMAGES' AND THE 'VESSEL-CUP.'

In connection with the practice of 'going a gooding' on St Thomas's Day, described in the foregoing article, an account may here be given of a kindred custom which appears not yet to be
extinct—that of the 'Advent Images.' These are two dolls, dressed the one to represent the Saviour, and the other the Virgin Mary, and during the week before Christmas they are carried about the country by poor women, who, in return for their exhibition, expect a halfpenny, which it is considered as insuring the height of ill-luck to deny. The following carol is sung on the occasion by the bearers of the images:

'The first good joy that Mary had, it was the joy of one,
To see her own son Jesus to suck at her breast-bone; It brings tidings of comfort and joy!

The next good joy that Mary had, it was the joy of two,
To see her own son Jesus to make the lame to go. It brings, &c.

The next good joy that Mary had, it was the joy of three,
To see her own son Jesus to make the blind to see. It brings, &c.

The next good joy that Mary had, it was the joy of four,
To see her own son Jesus to read the Bible o'er. It brings, &c.

The next good joy that Mary had, it was the joy of five,
To see her own son Jesus to make the dead alive. It brings, &c.

The next good joy that Mary had, it was the joy of six,
To see her own son Jesus to bear the crucifix! It brings, &c.

The next good joy that Mary had, it was the joy of seven,
To see her own son Jesus to wear the crown of Heaven. It brings, &c.'

This custom is also termed going about with a 'vessel-cup,' and the performers are styled 'vessel-cup singers.' The word 'vessel-cup' is evidently a corruption for 'wassail-cup,' and denotes the wish expressed on the occasion for the health and happiness of the party who bestows his charity on the exhibitor of the images. It may here be stated that in Yorkshire only one image used to be carried about—that of the Saviour, which was placed in a box surrounded by evergreens, and such flowers as could be procured at the season. The party to whose house the figure was carried was at liberty to take from the decorations of the image a leaf or a flower, which was carefully preserved, and regarded as a sovereign remedy for the toothache! The following was one of the stanzas of the quaint old carol sung by the old women who carried the image:

'God bless the master of this house,
The mistress also, And all the little children That round the table go.'

Not only was it considered peculiarly unlucky to refuse the tribute claimed by the image-bearers, but it was even deemed an augury of bad fortune if any household was not visited by the 'Advent Images' before Christmas Eve at the latest. The expression, 'As unhappy as the man who has seen no Advent Images,' was at one time proverbial in Yorkshire.

---

Died.—Giovanni Boccaccio, celebrated tale-writer, 1465, Certaldo; Maximilien, Duke of Sully, minister of Henri IV., 1644, Vittebo; Catherine of Braganza, queen of Charles II. of England, 1705, Lisbon; James Harris, author of Hermes, 1780; Arnauld de Berquin, author of L'Ame des Enfants, 1791, Paris; Rev. Dr Harris, author of Mammon, The Great Teacher, &c., 1850, London.

CATHERINE OF BRAGANZA.

Many other women besides queens live miserable lives, but the insignificant possess one advantage over those nobler born—their sufferings are unobserved and uncommented on. The woman of rank is a subject for perpetual remark among those of her own class, the journals of the day keep the public well informed as to the minutest particulars of her history, and the rabbles at the corners of every street shun their shoulders as the passers-by. Catherine of Braganza, the wife of Charles II., began life under favourable auspices. Reared in a palace, beautiful, possessed of ample dowry, the daughter of one king and the wife of another, loving her husband devotedly, and not herself unpleasing in his eyes, she must have cast no unprofitable glance into the future; yet at that very minute, fortune's wheel was turning. Twenty-three miserable years awaited her, each one worse and more hopeless than the one which preceded it. The neglect of the king, the scorn of his mistresses, the plots of courtiers, and the laughter of the world, combined to make the childless Catherine the most wretched of all women in her own gay and dissolute court.

Queen Catherine was born on the Festival of St Catherine, the 26th of November, in the year 1638. She arrived at Portsmouth in May 1662, where Charles was waiting to receive her. The marriage-ceremony was performed privately by the archbishop of Canterbury, and also a second time, with greater secrecy, according to the Romish ritual; for the queen, who was a staunch Catholic, did not hold the first bond to be valid. After staying some weeks at Hampton Court, she made her public entry into London on the 23d of August. 'The queen,' says Evelyn, 'arrived, with a train of Portuguese ladies, in their monstrous farthingales, or guard-infantas; their complexions olive-d, and sufficiently disagreeable: her majesty in the same habit; her fortop long, and turned aside very strangely. She was yet of the handsomest countenance of all the rest, and, though low of stature, pretty shaped; languishing and excellent eyes; her teeth wronging her mouth by sticking a little too far out; for the rest, lovely enough.'

Many queens have arrived in England to be hated from the first moment of their appearance, but it was not so with Catherine. Charles had not made the first advances. The king of Portugal, having with difficulty recovered his crown out of the hands of Spain, found the same difficulty in retaining possession of it. Cromwell had driven
him to great straits, in revenge for assistance which he extended to Charles I. France, an old ally, had recently abandoned him. Thus, by proposing a marriage between Charles II. and the Infanta, he hoped to establish his power. On the other hand, Charles found the marriage profitable. He procured for England the possession of two important islands, and for himself the acceptable present of £500,000. All this was in the usual course of things. But the Infanta was pretty and agreeable, and a good Catholic, and Charles good-naturedly took a liking to her, as several of his predecessors were pleased with that from that of Queen Caroline, or Anne of Cleves.

But twenty-three years of annoyance embittered the remembrance of their pleasant days. Charles, by wit and neglect, by urbanity and threats, broke her into his position; so that, from having treated his mistresses with disdain and resentment, she learned to endure them with coldness, and saw the Infanta of Savoy with a peculiar and smouldering air, with patience. Despair prompted at length a sacrifice of self-respect, and she made them friends and confidantes; and finally, says Burnet, she went about masked, and came into houses unknown, and danced there, with a great deal of wild frolic.

Strange to say, Charles never seems to have entertained any serious ill-feeling towards her, though we generally hate those whom we injure. He returned without disgust, the satirical Buckingham to carry her off to the West Indies, and procure a divorce on the plea of desertion, and despised the insinuations and charges of several who accused her of plotting with the Jesuits to take the king's life. And when he was on his death-bed, and the queen, whose grief drove her to distraction, asked pardon of her husband, if by any chance she had ever offended him, she gained at last this one poor consolation: 'Alas, poor woman,' he exclaimed, 'she beg my pardon! I beg hers with all my heart.'

Catherine survived the Revolution, remaining in England till the arrival of the Prince of Orange, and ultimately died at Lisbon on 21st December 1706.

THE MAIMING OF SIR JOHN COVENTRY.

A strange scene was enacted in London on the night of the 31st December 1669. Near Suffolk Street were assembled fifteen or twenty of his majesty's guards, mounted and unmounted, under the command of Sir Thomas Sands and the son of the Earl of Inchiquin. From ten o'clock to two, they waited impatiently for the coming of Sir John Coventry, whom they expected to pass on his way home from the tavern at which he supped. At length he came, and divining their hostile purpose at a glance, Sir John snatched a flamberge from his servant, and drawing his sword, placed his back against the wall, and bravely defended himself with both weapons. He succeeded in disabling O'Brien and some others of his assailants, but was forced to encounter many more. After they had disarmed him, the cowardly crew threw him down, and cutting his nose to the bone, left him.

This atrocious outrage was perpetrated in accordance with the orders of the Duke of Monmouth, Coventry's professed friend; but the actual instigator was Charles II. himself. In a parliamentary committee of Ways and Means, a motion had been made: 'That towards the Supply, every one that resorted to any of the Playhouses who sit in the boxes, shall pay 1s.; every one who sits in the pit, shall pay 6d.; and every other person, 3d.' This was opposed by the court-party, on the ground that the players were the king's servants, and a part of his pleasure. Whereupon Sir John Coventry pertinently, but indirectly, asked: 'Whether the king's pleasure lay among the men or the women that acted?' This was touching Old Rowley too nearly to be pleasant, and it did not need much argument to persuade him to agree that if the offence was allowed to pass unpunished, reflections on royal weakesses would become dangerously common. And so the king, forgetful of obligations incurred by the fugitive Charles Stuart, determined to make an example of Coventry, and carried out his resolve despite the remonstrances of his brother.

Bold Andrew Marvell could not let his pen lie idle upon such an event. In his Instructions to a Painter, he says:

'While the king of France with powerful arms,
Gives all his fearful neighbours strange alarms,
We, in our glorious bacchanals, dispose
The humbled fate of a plebeian nose.
Which to effect, when thus it was decreed,
Draw me a champion mounted on a steed;
And after him a brave brigade of horse
Armed at all points, ready to reinforce
Him; this assault upon a single man.

'Tis this must make O'Brien great in story,
And add more beams to Sandys's former glory.'

Parliament was furious at the indignity offered to one of its members on the very night after its adjournment, and made it the first subject for consideration upon re-assembling. The result of their deliberations was the passing of an act banishing the principal actors in the affair, with a special clause rendering them incapable of receiving the royal pardon; while to prevent a recurrence of the offence, the cutting, maiming, and disfiguring of any man was made felony without benefit of clergy, and punishable with death. The Coventry Act, as it was called, remained on the statute-book till the year 1828, when it was repealed.

It is a curious circumstance that Pepys records the fact of Sir William Coventry, uncle to Sir John, meditating, about nine months previous to the outrage on his nephew, a similar revenge to that taken by Charles. Sir William fancied that Killigrew intended to bring him upon the stage; and he accordingly gave the dramatist to understand that if any of his actors 'did offer anything like representing him, that he would not complain to my Lord Chamberlain, which was too weak, nor get him beaten as Sir Charles Sedley is said to have done, but that he would cause his nose to be slit.'

The Halcyon Days.

The seven days preceding, and the seven days following the shortest day, or the winter-solstice, were called by the ancients the Halcyon Days. This phrase, so familiar as expressive of a period of tranquillity and happiness, is derived from a fable, that during the period just indicated, while the halcyon bird or king-fisher was breeding, the sea
was always calm, and might be navigated in perfect security by the mariner. The name halcyon is derived from two Greek words—hale, the sea; and cyan, to conceive; and, according to the poetic fiction, the bird was represented as hatching her eggs on a floating nest, in the midst of the waters. Dryden thus alludes to the notion:

‘Amidst our arms as quiet you shall be,
As halcyons brooding on a winter’s sea.’

DECEMBER 22.

St Ischyrius, martyr, 253. Saints Cyril and Methodius, confessors, end of 9th century.

Died.—Emperor Vitellius, beheaded at Rome, 69 A.D.; Richard Plantagenet, alleged son of Richard III, 1550; Bastard, Kent; Richard Allein, Nonconformist divine, 1659 and 1433, celebrated actor, 1729; Paris; Sir Philip Francis, reputed author of Janissary, 1818; London; Dr James Cowles Prichard, distinguished ethnologist, 1848; London; Rev. M. J. Routh, D.D., president of Magdalen College, Oxford, in his 100th year, 1854; Oxford.

THE ORIGINAL BLUEBEARD.

For more than a century and a half, Bluebeard has been a favourite melodramatic hero: favourite, that is, with those who wish to find a tyrant as a foil to some ill-used damsel or heroine; and the more savage he is, the more intense is the interest felt in the story—by boys and girls, if not by ‘children of larger growth.’ In this, as in some other histories, the more thoughtful readers occasionally ask—Is it true? There certainly was no real lady to say: ‘Sister Anne, sister Anne, do you see anybody coming?’ but nevertheless Miserere, and other French writers, tell us of a man who really suggested to Perrault the idea for the story of Bluebeard.

Giles de Laval, Seigneur de Retz, better known in French history as Marshal de Retz, was born in or about the year 1396. Losing his father in 1416, Giles entered the service of his sovereign-prince, the Duc de Bretagne; and his name is found mentioned in connection with events in 1430 and 1435. He next entered the service of the French king, Charles VII, and was actively engaged in the defensive war maintained by that monarch against the English; distinguishing himself in many engagements. In 1459, he was one of the captains under the celebrated Joan of Arc; and aided her in bringing provisions into Orleans. We then hear of Giles, and his brother René, accompanying the king to Rheims; and it is supposed that Giles was on this occasion created Marshal of France, in recognition of his military merits. It was he who carried the holy ampulla, at the consecration of the king, from the abbey of St Remi to the cathedral. He appears also at this time to have been councillor and chamberlain to the king. Again we hear of him commanding troops against the English in 1430 and 1433, in which last-named year his martial services appear to have terminated.

Now, there is nothing whatever in this career to denote a cruel or depraved taste: on the contrary, Giles de Laval presents himself to us as the Marshal de Retz, a man of high birth, successful as a military commander, and in high favour at the court of the king of France. Yet the French annals tell us that this man, at the age of thirty-seven, commenced the abominable course of life which has brought infamy upon his name. When twenty years of age, he had inherited large estates from his father; at twenty-four, he had married Catherine de Thouars, who brought him still larger property; and when his maternal grandfather, Jean de Cras, died in 1438, another set of estates fell to him: insomuch that Giles became the richest subject in France. This immense fortune was the grand cause of his ruin. He plunged into a course of profligacy and debauchery which diminished his wealth rapidly; and he sold one estate after another to defray his lavish expenses. He maintained a guard of honour of two hundred horsemen; and his suite, of fifty persons, comprised chaplains, choristers, musicians, pages, and servitors; most of whom were made ministers or accomplices in his acts of libertinism. Yet, wretched, he affected great pomp and magnificence in religious ceremonies. His chapel was hung with cloth of gold and silk; the sacred vessels were of gold, and enriched with precious stones. His chaplains, habited in scarlet robes adorned with fur, bore the titles of dean, chanter, archdeacon, and bishop; and he even sent a deputy to the pope, to ask permission for a cross to be carried before him: These, and other extravagances, made such inroads on his wealth that he began to dispose of his estates one after another. His family, alarmed at this prodigal waste of means, in which they all had an interest, obtained a decree from the parliament of Paris, forbidding him to make any further alienations of his property. Even at this stage we do not recognise in Giles de Retz what the world would call a monster; we see in him only a profligate spendthrift, who joined licentiousness with religious observances in a way not at all unusual in the middle ages. But the worst was approaching. Craving for wealth to supply his extravagance, he had recourse to alchemy. Failing, then, to discover the grand art of transmuting base metals into gold, he next turned his attention to magic or sorcery, under the guidance of an Englishman, named Messeire Jean, and an Italian, named Francesco Prelati. He is reported to have now made a compact with Satan, offering to give, in return for boundless wealth, everything except his own life and soul: as regarded the lives and souls of others, he felt no scruple. It was at this time, according to the accounts which have descended to us, that he began to immolate children—even while fulfilling his religious duties in his chapel with careful precision. The poor little creatures, made the victims of his iniquity in various ways, were finally put to death, and their blood and hearts used as charms in diabolical rites. His myrmidons inveigled boys and girls from the neighbouring villages into his castle, and they were never afterwards seen. Other agents of his, during his tours from one to another of his castles in Bretagne, were wont to persuade poor peasants, who had beautiful children, to intrust them to the care of the marshal, who promised to attend to their advancement in life. The children were never again seen; and when outcries were made in consequence, the accomplices
in De Retz’s iniquities sought to stifle them by threats or bribery. This continued so long, and the number of children who disappeared became so large, that the matter came under the notice and interference of the authorities. In 1440, the marshal was arrested, together with two of his men, Henri and Etienne Corrallant. Confronted with a guilty accomplice, Goulas as it was called, he first denied all knowledge of them; but a threat of the torture having alarmed him, he made what is called a ‘clean breast of it’ by revealing everything. The judges were frozen with horror at the obscene and atrocious recital which he made. There is no doubt as to the authenticity of the horrible transactions; and a biographer of the marshal, in the *Biographes Universels*, states that manuscript reports of the trial (which lasted a month) exist in the Bibliothèque Impériale at Paris, and also among the archives of the Château at Nantes. What the wretched young victims (who varied from eight to eighteen years of age) were made to endure before being put to death, cannot be described here. During a period of at least eight years, and at his several castles of Machecoul, Chantocé, and Trévarez as well as at Nantes and Susz, were these atrocities carried on. In most cases he burned the bodies; but sufficient remains were found to indicate forty-six victims at Chantocé, and eighty at Machecoul. Giles did not boast of his atrocities; he confessed them, and publicly asked pardon of the parents of the murdered innocents. Condemned to be strangled, he exhibited once more a characteristic of his strange nature, by being seated in a manner that the bishop of St. Malo to the Tower, in the reign of Henry VI, says: ‘This doing so much displeased the people, that if politic provision had not been made, great mischief had immediately ensued. For the commons, in sundry places of the realm, assembled together in great companies, and chose to them a captain, whom they called Bluebeard; but ere they had attempted any enterprise, their leaders were apprehended, so that the matter was pacified without any hurt committed.

As to the children’s Bluebeard, it was written by Perrault in the time of Louis XIV, and has been translated from the French into nearly all the languages of Europe. This Bluebeard’s propensity is not to kill children, but to marry wife after wife in succession, kill them, and deposit them in the fatal closets which curious persons would not leave untouched. We all know how another victim was saved, and how Bluebeard met his death.

**Richard Plantagenet.**

December 22, 1550, died a poor working-man, named Richard Plantagenet, who was believed to be a son of Richard III, king of England. The story has been preserved by Dr. Thomas Brett, who saw the entry of the man’s death in the parish register of Eastwell, and who, about 1790, obtained other particulars from the Earl of Winchelsea at Eastwell House.

Sir Thomas More, having about 1545, purchased the estate of Eastwell, began to build the mansion alluded to. He was surprised to observe that one of the bricklayers, a man well advanced in years, was accustomed, on leaving off work, to take out a book and beg first denied all knowledge of them; but a threat of the torture having alarmed him, he made what is called a ‘clean breast of it’ by revealing everything. The judges were frozen with horror at the obscene and atrocious recital which he made. There is no doubt as to the authenticity of the horrible transactions; and a biographer of the marshal, in the *Biographes Universels*, states that manuscript reports of the trial (which lasted a month) exist in the Bibliothèque Impériale at Paris, and also among the archives of the Château at Nantes. What the wretched young victims (who varied from eight to eighteen years of age) were made to endure before being put to death, cannot be described here. During a period of at least eight years, and at his several castles of Machecoul, Chantocé, and Trévarez as well as at Nantes and Susz, were these atrocities carried on. In most cases he burned the bodies; but sufficient remains were found to indicate forty-six victims at Chantocé, and eighty at Machecoul. Giles did not boast of his atrocities; he confessed them, and publicly asked pardon of the parents of the murdered innocents. Condemned to be strangled, he exhibited once more a characteristic of his strange nature, by being seated in a manner that the bishop of St. Malo to the Tower, in the reign of Henry VI, says: ‘This doing so much displeased the people, that if politic provision had not been made, great mischief had immediately ensued. For the commons, in sundry places of the realm, assembled together in great companies, and chose to them a captain, whom they called Bluebeard; but ere they had attempted any enterprise, their leaders were apprehended, so that the matter was pacified without any hurt committed.

As to the children’s Bluebeard, it was written by Perrault in the time of Louis XIV, and has been translated from the French into nearly all the languages of Europe. This Bluebeard’s propensity is not to kill children, but to marry wife after wife in succession, kill them, and deposit them in the fatal closets which curious persons would not leave untouched. We all know how another victim was saved, and how Bluebeard met his death.

**Richard Plantagenet.**

December 22, 1550, died a poor working-man, named Richard Plantagenet, who was believed to be a son of Richard III, king of England. The story has been preserved by Dr. Thomas Brett, who saw the entry of the man’s death in the parish register of Eastwell, and who, about 1790, obtained other particulars from the Earl of Winchelsea at Eastwell House.

Sir Thomas More, having about 1545, purchased the estate of Eastwell, began to build the mansion alluded to. He was surprised to observe that one of the bricklayers, a man well advanced in years, was accustomed, on leaving off work, to take out a book and beg first denied all knowledge of them; but a threat of the torture having alarmed him, he made what is called a ‘clean breast of it’ by revealing everything. The judges were frozen with horror at the obscene and atrocious recital which he made. There is no doubt as to the authenticity of the horrible transactions; and a biographer of the marshal, in the *Biographes Universels*, states that manuscript reports of the trial (which lasted a month) exist in the Bibliothèque Impériale at Paris, and also among the archives of the Château at Nantes. **Richard Plantagenet.**

December 22, 1550, died a poor working-man, named Richard Plantagenet, who was believed to be a son of Richard III, king of England. The story has been preserved by Dr. Thomas Brett, who saw the entry of the man’s death in the parish register of Eastwell, and who, about 1790, obtained other particulars from the Earl of Winchelsea at Eastwell House.
interest. A well in Eastwell Park still bears his name; tradition points to an uninscription tomb in Eastwell churchyard as his last resting-place; and, lastly, the very handwriting which, more than two centuries ago, recorded his interment, is still in existence.

In further connection with the subject of the Plantagenc family, Sir Bernard Burke, in his work, entitled "Vicissitudes of Families," remarks: "What race in Europe surpassed in royal position, personal achievement, or romantic adventure, our Plantagenets, equally wise as valiant, no less renowned in the cabinets than the field? Yet, as late as 1637, the great-grandson of Margaret Plantagenet, herself daughter and heir of George, Duke of Clarence, was following the cobbler craft at Newport, in Shropshire. Among the lineal descendants of Edmund Woodstock, Earl of Kent, son of Edward the First, entitled to quarter the royal arms, occur a butcher and a toll-gatherer, the first a Mr Joseph Smart; of Hales Owen (Salop), the latter Mr G. Wymot, keeper of the turnpike-gates, Cooper's Bank, Dudley. Among descendants of Thomas Plantagenet, Duke of Gloucester, son of Edward III, we discover Mr Penny, late sexton at St George's, Hanover Square—a strange descent from sword and sceptre to spade and pick."

MRS MAPP, THE BONE-SETTER.

'Died last week, at her lodgings, near the Seven Dials, the much-talked of Mrs Mappes, the bone-setter, so miserably poor, that the parish was obliged to bury her.'—London Daily Post, 29th December 1737.

The subject of this melancholy obituary notice was for a time the object of popular wonder and enthusiasm. The daughter of a country bone-setter, she had, after wandering about from place to place, settled herself at Epsom, where she soon became famed for wonder-working cures—cures apparently effected more by boldness and personal strength than skill. She married a mercer's servant, but the match seems to have been an unfortunate one, for the Grub-Street Journal of April 18, 1736, says: 'We hear that the husband of the famous bone-setter at Epsom is away from her last week, taking with him upwards of a hundred guineas, and such other portable things as lay next to his hand. Several letters from Epsom mention that the footman, whom the fair bone-setter married the week before, had taken a sudden journey from thence with what money his wife had earned; and that her concern at first was very great, but as soon as the surprise was over, she was very gay; and seems to think the money well disposed of, as it was like to rid her of a husband.' He must have been a bold man to marry her, and still bolder to have ventured to incur her wrath, if her portrait does her justice—a more ill-favoured, or a stronger-framed woman, it would have been difficult to find.

Her professional success, however, must have come far to solace her for matrimonial failure. Besides driving a profitable trade at home, she used to drive to town once a week, in a coach-and-four, and return again bearing away the crutches of her patients as trophies of honour. She held her levees at the Grecian Coffee-house, where she operated successfully upon a niece of Sir Hans Sloane. The same day, she straightened the body of a man whose back had stuck out two inches for nine years; and a gentleman who went into the house with one shoe-heel six inches high, came out again cured of a lameness of twenty years standing, and with both his legs of equal length. She was not always so successful. One Thomas Barber, tallow-chandler, of Saffron Hill, thought proper to issue the following warning to her would-be patients:

"Whereas it has been industriously (I wish I could say truly) reported that I had found great benefit from a certain female bone-setter's performance, and that it was from a want of resolution to undergo the operation that I did not meet with a perfect cure;—This is to give notice, that any persons afflicted with lameness (who are willing to know what good and harm others may receive, before they venture on desperate measures themselves), will be welcome any morning to see the dressing of my leg, which was sound before the operation, and they will then be able to judge of the performance, and to whom I owe my present unhappy confinement to my bed and chair."

The cure of Sir Hans Sloane's niece made Mrs Mapp the town-talk, and if it was only known that she intended to make one of the audience, the theatre favoured with her presence was sure to be crowded to excess. A comedy was announced at the Lincoln's Inn Fields Theatre, called The Husband's Relief, or The Female Bone-setter and the Worm-doctor. Mrs Mapp attended the first night, and was gratified at hearing a song in her praise, of which we give two verses as a specimen:

'You surgeons of London who puzzle your pates, To ride in your coaches and purchase estates; Give over for shame, for your pride has a fall, And the doctress of Epsom has outdone you all.'

Dame Nature has given her a doctor's degree,
She gets all the patients and pockets the fee;
So if you don't instantly prove it a cheat,
She'll roll in a chariot whilst you walk the street.'

She seems to have been accompanied on this occasion by two noted quacks—Ward the worm-doctor, and Taylor the oculist. A rhymster in the Grub-street Journal, alluding to this strange conjunction, says:

'While Mapp to th' actors shewed a kind regard, On one side sat Taylor, on th' other side Ward. When their mock persons of the drama came, Both Ward and Taylor thought it hurt their game. Wondering how Mapp could in good-humour be— Zounds! cries the manly dame, it hurts not me, Quacks, without art, may either blind or kill, But demonstration shews that mine is skill.'

Mrs Mapp soon afterwards removed from Epsom to Pall Mall, but she did not forget her country friends. She gave a plate of ten guineas to be run for at Epsom, and went to see the race. Singularly enough, the first heat was won by a mare called 'Mrs Mapp's Favorite,' which so delighted her that she gave the jockey a guinea, and promised to make it a hundred if he won the plate, but to his chagrin he failed to do so. The fair bone-setter's career was but a brief one. In 1736, she was at the height of her prosperity, and at the end of 1737, she died in the miserable circumstances set forth in our opening paragraph.
DECEMBER 23.

St Seratus, bishop, 590. The Ten Martyrs of Crete, 8th century. St Victor, virgin and martyr, 255.

Born.—Henry Finch, Earl of Nottingham, 1621; Robert Barclay, celebrated Quaker, author of the *Apology*, 1645; Gordonstone, Morayshire; Frederick Augustus of Saxony, 1750; Sir Martin Archer Shee, portrait-painter, 1812; Daniel Defoe, 1660; Alexander Hamilton, 1770.

Died.—Childbert I., of France, 558; Paris; Henri de Lorraine, Duke of Guise, assassinated at Blois, 1588; William Davison, secretary of state to Queen Elizabeth, 1608; Michael Drayton, poet, 1631; James Sargant Storer, engraver, 1844, London.

THE EIKON BASSILIKÉ.

‘On the 23d of December 1648, Richard Royston, the royal bookseller at the “Angel” in Ivy Lane, received the MS. copy of the *Eikon Bassiliké* for the press.’ Such is the earliest date we find in connection with a book which became very famous during the turbulent times of the Commonwealth. Whether any copies were printed by the 30th of the ensuing month, the day when Charles I. was executed, is doubtful; but there is no doubt that it was largely in circulation soon afterwards, and that it produced a powerful effect on the Royalists. Most of them believed that the king wrote it; the peculiar character of the book, and the publishing of it by the king’s bookseller, encouraged this belief; nor were the active members of the court-party (for reasons presently to be noticed) at all anxious to disturb this favourite and favourable impression.

The work itself, which was the chief means of obtaining for Charles I. the designation of the ‘Royal Martyr,’ is a remarkable composition, by whomsoever written. M. Guizot, in his history of the events of those times, thus characterises it: ‘The manuscript had probably been perused, perhaps even corrected, by Charles himself, during his residence in the Isle of Wight. In any case, it was the real expression, and true portrait of his position, character, and mind, as they had been formed by misfortune. It is remarkable for an elevation of thought which is at once natural and strained; a constant mingling of blind royal pride and sincere Christian humility; heart-impulses struggling against habits of obstinate self-consciousness; true piety in the midst of misguided conduct; invincible though somewhat inert devotion to his faith, his honour, and his rank; and as all these sentiments are expressed in monotonous language, which, though often emphatic, is always grave, tranquil, and even uncouth with serenity and sadness—it is not surprising that such a work should have profoundly affected all royalist hearts, and easily persuaded them that it was the king himself who addressed them.

There can be no doubt that Royalists and Parliamentarians were alike attracted by the *Eikon Bassiliké*; it was prefixed to the correspondence of the Archbishops of Canterbury, and appeared directly after the king’s death, and purporting to be a ‘Portraiture of his Sacred Majesty in his Solitudes and Sufferings,’ it could not fail to excite a deep interest in the faithful adherents of the House of Stuart. Even among many of Charles’s opponents his fate had excited strong sympathy; he was regarded as having been less in error than some of his advisers; and there was a general tendency to forget his faults, and remember his virtues. ‘Hence,’ says Lord Macaulay (‘Milton,’ *Encyclopaedia Britannica’), ‘the appearance of a work, professedly by his own hand—in which he is represented in the constant exercise of prayer, asserting the integrity of his motives before the Great Searcher of Hearts, and urging a fervent appeal from the injustice and cruelty of man to the justice and clemency of God—was eminently calculated to agitate the public mind in his favour, and to make every tongue raise curses on his enemies.’ The Royalists unquestionably relied greatly on the effect which they expected to be produced by the book; and nearly fifty thousand copies of it were sold in England. On the other hand, the Puritans or Parliamentarians, alarmed at the effect on the public mind, desired Milton to write an answer to the *Eikon Bassiliké*, with the view of showing that, whether written by the king or not, its political meanings were invalid. Milton accepted the duty; and hence his *Iconoclastes*, or *Image Breaker*, one of the most celebrated of his works. The two books should be read together: the *Eikon Bassiliké*, not as the production of the unfortunate king, but of the bishop of Exeter, Dr Gauden; and the *Iconoclastes* (more frequently spelled *Iconoclastes* or *Iconoclast*) of Milton. There is reason to believe that Milton suspected the author of the *Eikon* to be some bishop or clergyman; but still he answered it as if it had been a royal production. Macaulay, less favourable than Guizot to the Royalists, thus characterises the *Iconoclastes*: ‘Pressing closely on his antagonist, and tracing [tracking] him step by step, he either exposes the fallacy of his reasoning, or the falsehood of his assertions, or the hopelessness of his professions, or the convenient speciousness of his devotions. He discovers a quickness which never misses an advantage, and a keenness of remark which carries an irresistible edge. In argument and in style, the *Iconoclastes* is equally masterly, being at once compressed and energetic, perspicacious and elegant. It is a work, indeed, which cannot be read by any man, whose reason is not wholly unmarred, without producing a conviction unfavourable to the royal party; and it justly merited the honourable distinction conferred upon it by royalist vengeance, of burning in the same flames with the *Defence of the People of England*.’

We have mentioned Dr Gauden, bishop of Exeter, as the author of the *Eikon Bassiliké*. This is now known to have been the case, but the Royalist and High-Church party continued, in an advanced period, to foster the popular belief that the First Charles wrote it. The question was long a matter of literary discussion, and in the last century, we find Hume, in his *History of England*, advocating the claims of the king to the authorship, in preference to those of Dr Gauden. Moreover, it was a species of pious fraud, which the statesmen and churchmen deemed desirable, to create the appearance of a public advantage.’ The late Sir James Mackintosh was of opinion that, irrespective of other testimony, the *Eikon* reads more like the production of a priest than of a king. ‘It has more of dissertation than effusion. It has more regular division and systematic order than agree with the habits of Charles. The choice and arrangement of words
FAMILY OMENS OF DEATH.

The popular omens of death are almost innumerable, yet the appearance of any one of them is, according to rustic credulity, sufficient to forebode the decease of any ordinary person in the middle or lower classes of society. For common people must be satisfied with common things. Even superstition knows how to pay due deference to rank and genealogy, and cunningly insinuates herself among the aristocracy, by contributing her mysterious influence to enhance the honours of rank and birth. Thus, among the élite, death-omens assume a special and distinctive shape, and, becoming a sort of household dependents, are never heard of but when they appear to do "suit and service" to the respective families with which they are severally connected. So that the family, thus supernaturally honoured, while disdaining all vulgar omens of mortality, beholds the appearance of its own with delight, feeling assured that death will soon visit some one of its members. Some of these family omens are curious and interesting. There still exists in Devon a family named Oxenham, with which such an omen is said to be connected. Prince, in his *Worthies of Devon*, speaking of this, says: "There is a family of considerable standing of this name at South Tawton, near Oakampton, of which is this strange and wonderful thing recorded, that at the death of any of them, a bird with a white breast is seen for awhile fluttering about their beds, and then suddenly to vanish away." Mr. James Howell tells us that, in a lapidary's shop in London, he saw a large marble slab to be sent into Devonshire, with an inscription: "That John Oxenham, Mary his sister, James his son, and Elizabeth his mother, had each the appearance of such a bird fluttering about their beds as they were dying."

There is a local ballad on this subject which is too long for insertion, but, as it is little known, a few extracts from it may be interesting. It begins thus:

> Where lofty hills in grandeur meet,  
> And Taw meandering flows,  
> There is a sylvan, calm retreat,  
> Where erst a mansion rose.  
> There dwelt Sir James of Oxenham.  
> A brave and generous lord;  
> Benighted traveller ever came  
> Unwelcome to his board.  
> In early life his wife had died,  
> A son he never had known,  
> And Margaret, his age's pride,  
> Was heir to him alone.  

Margaret became affianced to a young knight, and their marriage-day was fixed. On the evening preceding it, her father gave a banquet to his friends, who, of course, congratulated him on the approaching happy union. He stood up to thank them, and in alluding to the young knight, so soon

---

* See Howell's *Familiar Letters.*

---

*Edinburgh Review, 1826.*
to be his daughter's husband, he jestingly called him his son:

"But while the dear, unpractised word
Stilled lingered on his tongue,
He saw a silvery-breasted bird
Fly o'er the festive throng.
Swift as the lightning's flash she fleet,
And loses their brilliant light,
Sir James sank back upon his seat,
Pale and entranced with fright.'

He, however, managed to conceal the cause of his embarrassment, and the next day the wedding-party assembled in the church, and the priest had begun the marriage-service:

"When Margaret with terrible screams
Made all with horror start—
Good heavens! her blood in torrents streams,
A dagger's in her heart!"

The deed had been done by a discarded lover, who, by the aid of disguise, had stationed himself just behind her. He drew the dagger from her breast, and, with a frantic laugh, exclaimed:

"Now marry me, proud maid, he cried;
A stumpy bloody hand with mine shall wed;
He dashed the dagger in his side,
And at her feet fell dead.
Poor Margaret, too, grows cold with death,
And round her hovering flies
The phantom-bird for her last breath,
To bear it to the skies.'

The owl is one of the most usual omens of death among the commonalty; so, of course, it could not be received as a family omen among the aristocracy. As an honourable distinction, therefore, the dispenser of omens has assigned two owls, of enormous size, to premonish the noble family of Arundel of Wardour of approaching mortality. Whenever these two solemn spectres are seen perched on a battlement of the family mansion, it is too well known that one of its members will soon be summoned out of this world.

The ancient baronet's family of Clifton, of Clifton Hall, in Nottinghamshire, is forewarned that death is about to visit one of its members, by a stumpy bloody hand with mine shall wed; he dashed the dagger in his side, and at her feet fell dead. Poor Margaret, too, grows cold with death, and round her hovering flies the phantom-bird for her last breath, to bear it to the skies.'

There is an ancient Roman Catholic family in Yorkshire, of the name of Middleton, which is said to be apprised of the death of any one of its members by the apparition of a Benedictine nun. Camden, in his "Magna Britannica," after speaking of the illustrious antiquity of the Brereton family, says 'this wonderful thing respecting them is commonly believed, and I have heard it myself affirmed by many, that for some days before the death of the heir of the family, the trunk of a tree has always been seen floating in the lake adjoining their mansion.' On this omen, Mrs Hemans has some spirited stanzae, among which occur the following:

"Yes! I have seen the ancient oak
On the dark deep water cast,
And it was not failed by the woodman's stroke,
Or the rush of the sweeping blast;
For the axe might never touch that tree,
And the air was still as a summer sea.

'Tis fallen! but think thou not I weep
For the forest's pride o'erthrown;
An old man's tears lie far too deep,
To be poured for that alone!
But by that sign too well I know
That a youthful head must soon be low!

He must, he must! in that deep dell,
By that dark water's side,
'Tis known that ne'er a proud tree fell,
But an heir of his father's died.
And he—there's laughter in his eye,
Joy in his voice—yes he must die!

Say not 'tis vain! I tell thee, some
Are warned by a meteor's light,
Or a pale bird flitting calls them home,
Or a voice on the winds by night;
And they must go! and he too, he—
Woe for the fall of the glorious Tree!'"
All hailed, with uncontrolled delight,
And general voice, the happy night,
That to the cottage, as to the crown
Brought tidings of salvation down!

The fire, with well-dried logs supplied,
Went roaring up the chimney wide;
The huge, half-table's oaken face,
Scrubbed till it shone, the day to grace,
Bore then upon its massive board
No mark to part the squire and lord.
Then was brought in the lusty brawn,
By old blue-coated serving-man;
Then the grim boar's head frowned on high,
Created with bays and rosemary.
Well can the green-garbed ranger tell,
How, when, and where the monster fall;
What dogs before his death he tore,
And all the bating of the boar.

The Wassail round in good brown bowls,
Garnished with ribbons, blithely trowls.
There the huge sirloin reeked : hard by
Plum-porridge stood, and Christmas-pye;
Nor failed old Scotland to produce,
At such high-tide, her savoury goose.

Then came the merry masquers in,
And carols roared with bithesome din;
If unmelodious was the song,
Was a hearty note, and strong.

Who listeth in their humming see
Traces of ancient mystery;
White shirts supplied the masquerade,
And smutted cheeks the visors made;
But, oh! what masquers, richly dight,
Can boast of bosoms so light?
England was merry England, when
Old Christmas brought his sports again.

'Twas Christmas broached the mightiest ale;
'Twas Christmas told the merriest tale;
A Christmas gambol oft could cheer
The poor man's heart through half the year!

To investigate the origin of many of our Christmas customs, it becomes necessary to wander far back into the regions of past time, long ere Julius Cæsar had set his foot on our shores, or St Augustine preached the doctrines of Christianity to the men of Kent. We have frequently, in the course of this work, had occasion to remark on the numerous traces still visible in popular customs of the old pagan rites and ceremonies. These, it is needless here to repeat, were extensively retained after the conversion of Britain to Christianity, partly because the Christian teachers found it impossible to wean their converts from their cherished superstitions and observances, and partly because they themselves, as a matter of expediency, ingrained the rites of the Christian religion on the old heathen ceremonies, believing that thereby the cause of the Cross would be rendered more acceptable to the generality of the populace, and thus be more effectually promoted. By such an amalgamation, no festival of the Christian year was more thoroughly characterised than Christmas; the festivities, of which, originally derived from the Roman Saturnalia, had afterwards been intermingled with the ceremonies observed by the British Druids at the period of the winter-solstice, and at a subsequent period became incorporated with the grim mythology of the ancient Saxons. Two popular observances belonging to Christmas are more especially derived from the worship of our pagan ancestors—the
hanging up of the mistletoe, and the burning of the Yule log.

As regards the former of these practices, it is well known that, in the religion of the Druids, the mistletoe was regarded with the utmost veneration, though the reverence which they paid to it seems to have been restricted to the plant when found growing on the oak—the favourite tree of their divinity Tutanæ—who appears to have been the same as the Phenician god Baal, or the sun, worshipped under so many different names by the various pagan nations of antiquity. At the period of the winter-solstice, a great festival was celebrated in his honour, as will be found more largely commented on under our notice of Christmas Day. When the sacred anniversary arrived, the ancient Britons, accompanied by their priests, the Druids, sallied forth with great pomp and rejoicings to gather the mystic parasite, which, in addition to the religious reverence with which it was regarded, was believed to possess wondrous curative powers. When the oak was reached on which the mistletoe grew, two white bulls were bound to the tree, and the chief Druid, clothed in white (the emblem of purity), ascended, and, with a golden knife, cut the sacred plant, which was caught by another priest in the folds of his robe. The bulls, and often also human victims, were then sacrificed, and various festivities followed. The mistletoe thus gathered, was divided into small portions, and distributed among the people, who hung up the sprays over the entrances to their dwellings, as a propitiation and shelter to

the sylvan deities during the season of frost and cold. These rites in connection with the mistletoe, were retained throughout the Roman dominion in Britain, and also for a long period under the sovereignty of the Jutes, Saxons, andAngles.

The following legend regarding the mistletoe, from the Scandinavian mythology, may here be introduced: Balder, the god of poetry and eloquence, and second son of Odin and Friga, communicated one day to his mother a dream which he had had, intimating that he should die. She (Friga), to protect her son from such a contingency, invoked all the powers of nature—fire, air, earth, and water, as well as animals and plants—and obtained an oath from them that they should do Balder no hurt. The latter then went and took his place amid the combats of the gods, and fought without fear in the midst of showers of arrows. Loake, his enemy, resolved to discover the secret of Balder's invulnerability, and, accordingly, disguising himself as an old woman, he addressed himself to Friga with complimentary remarks on the valour and good-fortune of her son. The goddess replied that no substance could injure him, as all the productions of nature had bound themselves by an oath to refrain from doing him any harm. She added, however, with that awkward simplicity which appears so often to characterize mythical personages, that there was one plant which, from its insignificance, she did not think of conjuring, as it was impossible that it could inflict any hurt on her son. Loake inquired the name of the plant in question, and was informed that it was a feeble little shoot, growing
on the bark of the oak, with scarcely any soil.

Then the treachereous Leake ran and procured the mistletoe, and, having entered the assembly of the gods, said to the blind Heda: 'Why do you not contend with the arrows of Balder?' Heda replied: 'I am blind, and have no arma.' Leake then presented him with an arrow formed from the mistletoe, and said: 'Balder is before thee.' Heda shot, and Balder fell pierced and slain.

The mistletoe, which has thus for so many years been connected with it, is believed to be propagated in its natural state by the misell-thrush, which feeds upon its berries. It was long thought impossible to propagate it artificially, but this object has been attained by bruising the berries, and by means of their viscosity, causing them to adhere to the bark of fruit-trees, where they readily germinate and take root. The growth of the mistletoe on the oak is now of extremely rare occurrence, but in the orchards of the west-midland counties of England, such as the shires of Gloucester and Worcestershire, the plant flourishes in great frequency and luxuriance on the apple-trees. Large quantities are annually cut at the Christmas season, and despatched to London and other places, where they are extensively used for the decoration of houses and shops. The special custom connected with the mistletoe on Christmas Eve, and an indubitable relic of the days of Druidism, handed down through a long course of centuries, must be familiar to all our readers. A branch of the mystic plant is suspended from the wall or ceiling, and any one of the fair sex, who, either from inactivity, or, as possibly may be insinuated, on purpose, passes beneath the sacred spray, incurs the penalty of being then and there kissed by any lord of the creation who chooses to avail himself of the privilege. The burning of the Yule log is an ancient Christmas ceremony, transmitted to us from our Scandinavian ancestors, who, at their feast of Jule, at the winter-solstice, used to kindle huge bonfires in honour of their god Thor. The custom, though sadly shrunk of the pomp and circumstance which formerly attended it, is still maintained in various parts of the country. The bringing in and placing of the ponderous block on the hearth of the wide chimney in the Baronial hall was the most joyous of the ceremonies observed on Christmas Eve in feudal times. The venerable log destined to crackle a welcome to all-comers, was drawn in triumph from its resting-place at the feet of its living brethren of the woods. Each wayfarer raised his hat as it passed, for he well knew that it was full of good promises, and that its flame would burn out old wrongs and heartburnings, and cause the liquor to bubble in the wassail-bowl, that was quaffed to the drowning of ancient feuds and animosities. So the Yule-log was worthily honoured, and the ancient bards welcomed its entrance with their minstrelsy. The following ditty, appropriate to such an occasion, appears in the Sloane Manuscripts. It is supposed to be of the time of Henry VI:

\[ WELCOME YULE. \]

Welcome be thou, heavenly King,
Welcome born on this morning,
Welcome for whom we shall sing,
Welcome Yule.

\[ WELCOME YULE. \]

Welcome be ye Stephen and John,
Welcome Innocents every one,
Welcome Thomas Martyr one,
Welcome Yule.

Welcome be ye, good New Year,
Welcome Twelfth Day, both in Jere,*
Welcome saints, loved and dear,
Welcome Yule.

Welcome be ye, Candlemas,
Welcome be ye, Queen of Hils,
Welcome both to more and less,
Welcome Yule.

Welcome be ye that are here,
Welcome all, and make good cheer,
Welcome all, another year,
Welcome Yule.

And here, in connection with the festivities on Christmas Eve, we may quote Herrick's inspiring stanzas:

\[ 'Come bring with a noise,
My merry, merry boys,
or other, comes to the firing,
While my good dame she
Bids ye all be free,
And drink to your heart's desiring.

With the last year's brand
Light the new block, and,
For good success in his spending,
On your psalteries play
That sweet luck may
Come while the log is a teesing.\]

\[ Drink now the strong beer,
Cut the white loaf here,
The while the meat is a shredding;
For the rare mince-pie,
And the plums stand by
To fill the paste that's a knading.\]

The allusion at the commencement of the second stanza, is to the practice of laying aside the half-consumed block after having served its purpose on Christmas Eve, preserving it carefully in a cellar until the next anniversary of Christmas, and then lighting the new log with the charred remains of its predecessor. The due observance of this custom was considered of the highest importance, and it was believed that the preservation of last year's Christmas log was a most effectual security to the house against fire. We are further informed, that it was regarded as a sign of very bad-luck if a wailing person entered the hall when the log was burning, and a similarly evil omen was exhibited in the arrival of a bare-footed person, and, above all, of a flat-footed woman! As an accompaniment to the Yule log, a candle of monstrous size, called the Yule Candle, or Christmas Candle, shed its light on the festivestanding board during the evening. Brand, in his Popular Antiquities, states that, in the buttery of St John's College, Oxford, an ancient candle socket of stone still remains, ornamented with the figure of the Holy Lamb. It was formerly used for holding the Christmas candle, which, during the twelve nights of Christmas, was burned on the high table at supper.

\[ * In company. + Burning \]
In Devonshire, the Yule log takes the form of the aathom fagot, and is brought in and burned with great glee and merriment. The fagot is composed of a bundle of ash-sticks bound or hooped round with bands of the same tree, and the number of these last ought, it is said, to be nine. The rods having been cut a few days previous, the farm-labourers on Christmas Eve, early forth joyously, bind them together, and then, by the aid of one or two horses, drag the fagot, with great rejoicing, to their master's house, where it is deposited on the spacious hearth which serves as the fireplace in old-fashioned kitchens. Fun and jollity of all sorts now commence, the members of the household—master, family, and servants—seat themselves on the settles beside the fire, and all meet on terms of equality, the ordinary restraint characterising the intercourse of master and servant being, for the occasion, wholly laid aside. Sports of various kinds take place, such as jumping in sacks, diving in a tub of water for apples, and jumping for cakes and tresples; that is to say, endeavouring, by springs (the hands being tied behind the back), to catch with the mouth a cake, thickly spread with treacle, and suspended from the ceiling. Liberal libations of cider, or egg-hot, that is, cider heated and mixed with eggs and spices, somewhat after the manner of the Scottish hot-pint, are supplied to the assembled revellers, being an acknowledged and time-honoured custom that for every cracok which the bands of the aathom fagot make in bursting when charred through, the master of the house is bound to furnish a fresh bowl of liquor. To the credit of such gatherings it must be stated that they are characterised, for the most part, by thorough decorum, and scenes of inebriation and disorder are seldom witnessed. One significant circumstance connected with the vigorous blaze which roars up the chimney on Christmas Eve ought not to be forgotten. We refer to the practice of most of the careful Devonshire housewives, at this season, to have the kitchen-chimney swept a few days previously, so as to guard against accidents from its taking fire. In Cornwall, as we are informed by a contributor to Notes and Queries, the Yule log is called 'the mock,' and great festivities attend the burning of it, including the old ceremony of lighting the block with a brand preserved from the fire of last year. We are informed also that, in the same locality, Christmas Eve is a special holiday with children, who, on this occasion, are allowed to sit up till midnight and 'drink to the mock.'

Another custom in Devonshire, still practised, we believe, in one or two localities on Christmas Eve, is for the farmer with his family and friends, after partaking together of hot cakes and cider (the cake being last put in the liquor previous to being eaten), to proceed to the orchard, one of the party bearing hot cake and cider as an offering to the principal apple-tree. The cake is formally deposited on the fork of the tree, and the cider thrown over the latter, the men firing off guns and pistols, and the women and girls shouting—

'Bear blue, apples and pears snow, 
Barn fulls, bag fulls, sack fulls, 
Hurrah! hurrah! hurrah!'

A similar libation of spiced-ale used to be sprinkled on the orchards and meadows in Norfolk; and the author of a very ingenious little work, published some years ago,* states that he has witnessed a ceremony of the same sort, in the neighbourhood of the New Forest in Hampshire, where the chorus sung was—

'Apples and pears with right good corn, 
Come in plenty to every one, 
Eat and drink good cake and hot ale, 
Give Earth to drink and she'll not fail.'

From a contributor to Notes and Queries, we learn that on Christmas Eve, in the town of Chester and surrounding villages, numerous parties of singers parade the streets, and are hospitably entertained with meat and drink at the different houses where they call. The farmers of Cheshire pass rather an uncomfortable season at Christmas, seeing that they are obliged, for the most part, during this period, to dispense with the assistance of servants. According to an old custom in the county, the servants engage themselves to their employers from New-Year's Eve to Christmas Day, and then for six or seven days, they leave their masters to shift for themselves, while they (the servants) resort to the towns to spend their holidays. On the morning after Christmas Day hundreds of farm-servants (male and female) dressed in holiday attire, in which all the hues of the rainbow strive for the mastery, throng the streets of Chester, considerably to the benefit of the tavern-keepers and shopkeepers. Having just received their year's wages, extensive investments are made by them in smock-frocks, cotton dresses, plume-waistcoats, and woollen shawls. Dancing is merrily carried on at various public-houses in the evening. In the whole of this custom, a more vivid realisation is probably presented than in any other popular celebration at Christmas, of the precursor of these modern jovialities—the ancient Roman Saturnalia, in which the relations of master and servant were for a time reversed, and universal licence prevailed.

Among Roman Catholics, a mass is always celebrated at midnight on Christmas Eve, another at daybreak on Christmas Day, and a third at a subsequent hour in the morning. A beautiful phase in popular superstition, is that which represents a thorough prostration of the Powers of Darkness as taking place at this season, and that no evil influence can then be exercised by them on mankind. The cock is then supposed to crow all night long, and by his vigilance to scare awry all malignant spirits. The idea is beautifully expressed by Shakespeare, who puts it in the mouth of Marcellus, in Hamlet—

'It faded on the crowing of the cock. 
Some say, that ever gainst that season comes 
Wherein our Saviour's birth is celebrated, 
The bird of dawning singeth all night long; 
And then, they say, no spirit can with him abroad; 
The nights are wholesome; then no planets strike, 
No fairy takes, nor witch hath power to harm; 
So hallow'd and so gracious is the time.'

A belief was long current in Devon and Cornwall, and perhaps still lingers both there and in other remote parts of the country, that at midnight, on Christmas Eve, the cattle in their stalls fall down on their knees in adoration of the

---

infant Saviour, in the same manner as the legend reports them to have done in the stable at Bethlehem. Bees were also said to sing in their hives at the same time, and bread baked on Christmas Eve, it was averred, never became mouldy. All nature was thus supposed to unite in celebrating the birth of Christ, and partake in the general joy which the anniversary of the Nativity inspired.

THE CHRISTMAS-TREE: CHRISTMAS EVE IN GERMANY AND AMERICA.

In Germany, Christmas Eve is for children the most joyous night in the year, as they then feast their eyes on the magnificence of the Christmas-tree, and rejoice in the presents which have been provided for them by its branches by their parents and friends. The tree is arranged by the senior members of the family, in the principal room of the house, and with the arrival of evening the children are assembled in an adjoining apartment.

At a given signal, the door of the great room is thrown open, and in rush the juveniles eager and happy. There, on a long table in the centre of the room, stands the Christmas-tree, every branch glittering with little lighted candles, while all sorts of gifts and ornaments are suspended from the branches, and possibly also numerous other presents are deposited separately on the table, all properly labelled with the names of the respective recipients. The Christmas-tree seems to be a very ancient custom in Germany, and is probably a remnant of the splendid and fanciful pageants of the Middle Ages. Within the last forty years, and apparently since the marriage of Queen Victoria with Prince Albert, previous to which time it was almost unknown in this country, the custom has been introduced into England with the greatest success, and must be familiar to most of our readers.

Though thoroughly an innovation on our old Christmas customs, and partaking, indeed, somewhat of a prosaic character, rather at variance with the beautiful poetical usages, he would be a cynic indeed, who could derive no pleasure from contemplating the group of young and happy faces who cluster round the Christmas-tree.

S. T. Coleridge, in a letter from Ratzeburg, in North Germany, published in the Friend, and quoted by Hone, mentions the following Christmas customs as observed in that locality. Part of them seems to be derived from those ceremonies proper to St Nicholas’s Day, already described under 6th December. ‘There is a Christmas custom here which pleased and interested me. The children make little presents to their parents, and to each other, and the parents to their children. For three or four months before Christmas, the girls are all busy, and the boys save up their pocket-money to buy these presents. With the present to be is cautiously kept secret; and the girls have a world of contrivances to conceal it—such as working when they are out on visits, and the others are not with them; gathering up in the morning before daylight, &c. Then, on the evening before Christmas-day, one the parlours is lighted up by the children, into which the parents must not go; a great yew-bough is fastened on the table at a little distance from the wall, a multitude of little boxes are fixed in the bough, but not so as to burn it till they are nearly consumed, and coloured paper, &c., hangs and flutters from the twigs. Under this bough the children lay out, in great order, the presents they mean for their parents, still concealing in their pockets what they intend for each other. Then the parents are introduced, and each presents his little gift; they then bring out the remainder, one by one, from their pockets, and present them with kisses and embraces. While this scene is going on, there were eight or nine children, and the eldest daughter and the mother wept aloud for joy and tenderness; and the tears ran down the face of the father, and he clasped all his children so tight to his breast, it seemed as if he did it to stifle the sob that was rising within it. I was very much affected. The shadow of the bough and its appendages on the wall, and arching over on the ceiling, made a pretty picture; and then the raptures of the very little ones, when at last the twigs and their needles began to take fire and map—O! it was a delight to them! On the next day (Christmas-day), in the great parlour, the parents lay out on the table the presents for the children; a scene of more sober joy succeeds; and as on this day, after an old custom, the mother says privately to each child, what she has present for them, that which he has observed most praiseworthy, and that which was most faulty, in their conduct. Formerly, and still in all the smaller towns and villages throughout North Germany, these presents were sent by all the parents to some one fellow, who, in high-buskins, a white robe, a mask, and an enormous flax-wig, personates Knecht Rupert—i.e., the servant Rupert. On Christmas-night, he goes round to every house, says that Jesus Christ, his Master, sent him thither. The parents and elder children receive him with great pomp and reverence, while the little ones are most terribly frightened. He then inquires for the children, and, according to the character which he hears from the parents, he gives them the intended presents, as if they came out of heaven from Jesus Christ. Or, if they should be short of our Christmas usages, he would be a cynic indeed, who could derive no pleasure from contemplating the group of young and happy faces who cluster round the Christmas-tree.”
understanding is that Kriss-Kinkle and Polichinell are distinct personages—the one the reaper of good children, the other the punisher of the bad—they are also occasionally represented as the same individual under different characters, the prototype of which was doubtless the charitable St Nicholas.

CHRISTMAS GAMES: SNAPDRAGON.

OMF interesting particulars relative to the indoor diversions of our ancestors at Christmas, occur in the following passage quoted by Brand from a tract, entitled Round about our Coal-fire, or Christmas Entertainments, which was published in the early part of the last century. 'The time of the year being cold and frosty, the diversions are within doors, either in exercise or by the fireside. Dancing is one of the chief exercises; or else there is a match at Blindman's Buff, or Puss in the Corner. The next game is Questions and Commands, when the commander may oblige his subjects to answer any lawful question, and make the same obey him instantly, under the penalty of being smitten [having the face blackened] or punished in such a manner as may be laid on the aggressor. Most of the other diversions are cards and dice.'

From the above we gather that the sports on Christmas evenings, a hundred and fifty years ago, were not greatly dissimilar to those in vogue at the present day. The names of almost all the pastimes then mentioned must be familiar to every reader, who has probably also participated in them himself at some period of his life. Let us only add charades, that favourite amusement of modern drawing-rooms (and of these only the name, not the sport itself, was unknown to our ancestors), together with a higher spirit of amusements and delicacy, and we shall discover little difference between the juvenile pastimes of a Christmas-party in the reign of Queen Victoria, and a similar assemblage in the reign of Queen Anne or the first George.

One favourite Christmas sport, very generally played on Christmas Eve, has been handed down to us from time immemorial under the name of 'Snapdragon.' To our English readers this amusement is perfectly familiar, but it is almost unknown in Scotland; and it seems therefore desirable here to give a description of the pastime. A quantity of raisins are deposited in a large dish or bowl (the broader and shallower this is, the better), and brandy or some other spirit is poured over the fruit and ignited. The bystanders now endeavour, by turns, to grasp a raisin, by plunging their hands through the flames; and as this is somewhat of an arduous feat, requiring both courage and rapidity of action, a considerable amount of laughter and merriment is evoked at the expense of the unsuccessful competitors. As an appropriate accompaniment we introduce here:

**The Song of Snapdragon.**

*Here he comes with flame-bowl,*  
*Don't be mean to take his toll,*  
*Snip! Snap! Dragon!*  
*Take care you don't take too much,*  
*Be not greedy in your clutch,*  
*Snip! Snap! Dragon!*  
*With his blue and lapping tongue,*  
*Many of you will be stung,*  
*Snip! Snap! Dragon!*  

For he snaps at all that comes  
Snatching at his feast of plums,  
Snip! Snap! Dragon!  

But Old Christmas makes him come,  
Though he looks so fee! fai fum!  
Snip! Snap! Dragon!  
Don't 'ee fear him, be but bold—  
Out he goes, his flames are cold,  
Snip! Snap! Dragon!*

Whilst the sport of Snapdragon is going on, it is usual to extinguish all the lights in the room, so that the lurid glare from the flaming spirits may exercise to the full its weird-like effect. There seems little doubt that in this amusement we retain a trace of the fiery ordeal of the middle ages, and also of the Druidical fire-worship of a still remoter epoch. A curious reference to it occurs in the quaint old play of *Lyneus*, quoted by Mr Sandy in his work on Christmas.

'Memory. Oh, I remember this dish well; it was first invented by Pluto to entertain Proserpine withal.'

*Phantastes.* I think not so, Memory; for when Hercules had killed the flaming dragon of Hesperia, with the apples of that orchard he made this fiery meat; in memory whereof he named it Snapdragon.'

Snapdragon, to personify him, has a 'poor relation' or 'country cousin,' who bears the name of *Flipdragon.* This is a favourite amusement among the common people in the western counties of
England, and consists in placing a lighted candle in a can of ale or cider, and drinking up the contents of the vessel. This act entails, of course, considerable risk, but more than one has been saved, and herein lies the essence of the sport, which may be averred to be a somewhat more arduous proceeding in these days of moustaches and long whiskers than it was in the time of our close-shaven grandfathers.

The Mummers.

The mummers, or, as they are styled in Scotland, the guisers or guisers, occupied a prominent place in the Christmas revels of the olden time, and their performances, though falling, like the other old customs of the season, into desuetude, are still kept up in several parts of the country. The passion for masquerade, like that for dramatic representation, seems an inherent one in human nature; and though to the fastidious and fashion-averse it may modify and vary the peculiar mode of development, the tendency itself remains unaltered, and only adopts from age to age a new, and, it may be, more intellectual phase. Thus the rude and irreverent mysteries and miracle plays which delighted our ancestors, have been succeeded in the gradual course of improvement by the elaborate stage mechanism and display of our own times; and the coarse drolleries which characterised the old Christmas festivities, have made way for the games and charades, and other refined amusements of modern drawing-rooms. But in all these changes we only find an expression under altered and diversified forms of certain essential feelings and tendencies in the constitution of humanity.

Looking back to the Roman Saturnalia, from which so many of our Christmas usages are derived, we find that the practice of masquerading was greatly in vogue at that season among the people of Rome. Men and women assumed respectively the attire of the opposite sex, and masks of all kinds were worn in abundance. The early Christians, we are informed, used, on the Feast of the Circumcision or New-year’s Day, to run about in masks of ridicule of the pagan superstitions; but they apparently altogether forgot that they also frequented the frolics of their heathen neighbours, and the fathers of the church had considerable difficulty in prevailing on their members to refrain from such unedifying pastimes. Afterwards, the clergy endeavoured to metamorphose the heathen revels into amusements, which, if not really more spiritual in character than those which they supplanted, had at least the merit of being suitable to the observances, and really exciting the authority of the church and its ministers. The mysteries or miracle plays in which even the clergy occasionally took part as performers, were the results, amid numerous others, of this policy.

These singular dramas continued for many centuries to form a favourite amusement of the populace, both at Christmas and other seasons of the year; and in the first volume of this work (p. 635) will be found an account of the celebration of the Whitamidate mysteries at Chester. The Christmas mumming was in many respects a kindred diversion, though it appears to have partaken less of the religious element, and resembled more nearly those medieval pageants in which certain subjects and characters, taken from pagan mythology or popular legends, were represented. Frequently, also, it assumed very much the nature of a masquerade, when the sole object of the actors is to disguise themselves, and excite alternately laughter and admiration by the splendid or ridiculous costumes in which they are arrayed.

The term mummer is synonymous with masker, and is derived from the Danish, munmer, or Dutch, mommer. The custom of mumming at the present day, such as it is, prevails only at the Christmas season, the favourite and commencing night for the pastime being generally Christmas Eve. Formerly, however, it seems to have been practised also at other times throughout the year, and Stow, in his Survey of London, has preserved to us an account of a splendid ‘mummerie,’ which, in 1577, was performed shortly before Candlemas by the citizens of London, for the amusement of Prince Richard, son of the Black Prince, and afterward the unfortunate monarch Richard II. In the year 1400, we are informed that Henry IV., holding his Christmas at Eltham, was visited by twelve aldermen and their sons as mummers, and that these august personages ‘had great thanks’ from his majesty for their performance. But shortly afterwards, as Fabian tells us, a conspiracy to murder the king was organised under the guise of a Twelfth-night mumming. The plot was discovered only a few hours before the time of putting it in execution. Henry VIII., who ruthlessly demolished so many ancient institutions, issued an ordinance against mumming or guise, declaring all persons who went about great houses arrayed in this fashion, liable to be arrested as vagabonds, committed to jail for three months, and fined at the king’s pleasure. The reason assigned for this edict, is the number of murders and other felonies which have arisen from this cause. But we hear of no permanent or serious check sustained by the mummers in consequence.

In the tract, Round about our Coal-fire, or Christmas Entertainments, already quoted, the following passage occurs in reference to the practice of mumming at a comparatively recent period: ‘Then comes mumming or masquerading, when the squire’s wardrobe is really rent asunder. All kinds. Corks are burnt to black the faces of the fair, or make deputy-mustaches, and every one in the family, except the squire himself, must be transformed.’ And in further illustration of an old English pastime, the subjoined verses on mumming, in the characteristic form of the madrigal, from La Musa Madrigalesa, may here be introduced:

To shorten winter’s sadness,
See where the folks with gladness
Disguised all are coming,
Right wantonly a mumming.

While youthful sports are lasting,
To toasting turn our fasting;
With revels and with Wassails,
Make grief and care our vassals.

For youth it well beseecheth,
That pleasure be esteecheth;
And sullen age is hated,
That mirth would have abated.

Fe la.

Fe la.
The grand and special performance of the mummers from time immemorial, has been the representation of a species of drama, which embodies the time-honoured legend of St George and the dragon, with sundry whimsical adjuncts, which contribute to give the whole affair an aspect of 'very tragical mirth.' The actors, chiefly young lads, having arrayed themselves in the costumes proper to the allegorical characters which they are to support, sally forth in company on Christmas Eve, to commence their round of visits to the houses of the principal inhabitants of the parish. Arriving at the first residence in their way, they knock at the door, and claim the privilege of Christmas in the admission of St George and his 'merry men.' The accompanying engraving delineates a motley group on such an occasion as we are describing. First is seen Old Father Christmas, bearing, as emblematic devices, the holly bough, wassail-bowl, &c. Beside him stands a pretty little girl, carrying a branch of mistletoe. Then come the Grand Turk, the gallant knight, St George, and the latter's antagonist, the devouring dragon. A doctor is also present with a large box of pills to cure the wounded. Drums and other music accompany the procession, which, moreover, in the above engraving is represented as accompanied by the parish-beadle, whose command of the stocks, in days gone by, rendered him a terror to evil-doers, and insured the maintenance of order and decorum.

The institution of the mummers, as already intimated, is one that has considerably declined, but it still flourishes in some of the remoter districts of England. As regards the guisers in Scotland, where the festivities of the winter-season cluster chiefly around the New Year, we shall have occasion to make special reference to them under the 31st of December.

In conclusion, we present our readers with a specimen of the mumming-drama, as exhibited at the present day at Tenby, in South Wales. At this town, for three weeks at the Christmas season, the mummers are accustomed to go their rounds, mostly three in company, in a quaint guise, when every house is visited by them, and leave to enter requested. Upon being admitted, they commence the performance of the following drama, which has already been printed in Tales and Traditions of Tenby. As each of the three represents various characters, they shall be designated Nos. 1, 2, and 3.

No. 1.—Here come I, Old Father Christmas,
Christmas or not,
I hope Old Father Christmas
Will never be forgot.
A room—make room here, gallant boys,
And give us room to rhyme,
We're come to show activity
Upon a Christmas time.
Acting youth or acting age,
The like was never acted on this stage;
If you don't believe what I now say,
Enter St George, and clear the way.
No. 2.—"Here come I, St George, the valiant man,
With naked sword and spear in hand,
Who fought the dragon, and brought him to
the slaughter,
And for this won the king of Egypt's daughter.
What man or mortal will dare to stand
Before me with my sword in hand;
I'll slay him, and cut him as small as flies,
And send him to Jamaica to make mince-pies."

St George's challenge is soon taken up, for says
No. 3:

"Here come I, a Turkish knight,
In Turkish land I learned to fight,
I'll fight St George with courage bold,
And if his blood's hot, will make it cold."

To this rejoins No. 2, who says:

"If thou art a Turkish knight,
Draw out thy sword, and let us fight."

A battle is the result; the Turk falls, and St
George, struck with remorse, exclaims:

"Ladies and gentlemen,
You've seen what I've done,
I've cut this Turk down
Like the evening sun;
Is there any doctor that can be found,
To cure this knight of his deadly wound?"

No. 1 re-enters, metamorphosed.

"Here come I, a doctor,
A ten-pound doctor;
I've a little bottle in my pocket,
Called hokum, shokum, alicampana;
I'll touch his eyes, nose, mouth, and chin,
And say: 'Rise, dead man,' and he'll fight again."

After touching the prostrate Turk, the latter leaps
up, ready again for the battle. St George, how-
ever, thinks this to be a favourable opportunity
for sounding his own praises, and rejoins:

"Here am I, St George, with shining armour bright,
I am a famous champion, also a worthy knight;
Seven long years in a close cave was kept,
And out of that into a prison leap.
From out of that into a rock of stones,
There I laid down my grievous bones.
Many a giant did I subdue,
And ran a fairy dragon through.
I fought the man of Tillotree,
And still will gain the victory.
First, then, I fought in France,
Second, I fought in Spain,
Thirdly, I came to Tenby,
To fight the Turk again."

A fight ensues, and St George, being again victor,
repeats his request for a doctor, who succeeds as
before, in performing a miraculous cure, and at
once comes forward as the Protector:

"Here come I, Oliver Cromwell,
As you may suppose,
Many nations have conquered,
With my copper nose.
I made the French to tremble,
How was my sword.
I fought the jolly Dutchmen,
And made their hearts to ache."

No. 2 then changes his character into that of the
gentleman in black:

"Here come I, Beelzebub,
Under my arm I carry a club,
Under my chin I carry a pan,
Don't I look a nice young man?"

Having finished his speech, the main object of the
visit is thus delicately hinted by No. 3:

"Ladies and gentlemen,
Our story is ended,
Our money-box is recommended;
Five or six shillings will not do us harm,
Silver, or copper, or gold if you can."

After this appeal has been responded to, St George,
The Turk, Doctor, Oliver Cromwell, and Beelzebub,
take their departure, and the 'guinga' is at an
end.

The Lord of Misrule.

The functionary with the above whimsical title
played an important part in the festivities of Christ-
mas in the olden time. His duties were to lead and
direct the multifarious revels of the season, or, as
we should say at the present day, to act as Master
of the Ceremonies. The following account of him is
given by Stow: 'In the feast of Christmas, there
was in the king's house, wheresoever he
lodged, a Lord of Misrule, or Master of Merry
Disports, and the like had ye in the house of
every nobleman of honour or good worship, were
he spiritual or temporal. The Mayor of London,
and either of the Sheriffs, had their several Lords
of Misrule, ever contending, without quarrel or
offence, who should make the rarest pastime to
delight the beholders. These lords beginning their
rule at Allhallowd Eve, continued the same till
the morrow after the Feast of the Purification,
commonly called Candlemas Day, in which space there
were fine and subtle disguisings, masks and mumm-
eries, with playing at cards for counters, nayles
and points, in every house, more for pastimes than
for gain.'

In the university of Cambridge, the functions of
the Lord of Misrule were performed by one of the
Masters of Arts, who was regularly elected to super-
intend the annual representation of Latin plays by
the students, besides taking a general charge of
their games and diversions during the Christmas
season, and was styled the Imperator or Prefectus
Ludorum. A similar Master of Revels was chosen
at Oxford. But it seems to have been in the Inns
of Court in London that the Lord of Misrule reigned
with the greatest splendour, being surrounded with
all the parade and ceremony of royalty, having his
lord-keeper and treasurer, his guard of honour,
and even his two chaplains, who preached before him
on Sunday in the Temple Church. On Twelfth Day,
he abdicated his sovereignty, and we are informed
that in the year 1636, this mock-representative of
royalty expended in the exercise of his office about
two thousand pounds from his own purse, and at
the conclusion of his reign was knighted by Charles I.
At Whitehall. The office, indeed, seems to have
been regarded among the Templars as a highly-
honourable one, and to have been generally con-
ered on young gentlemen of good family.

The following is an extract from the 'articles'
drawn up by the Right Worshipful Richard Evelyn,
Esq., father of the author of the Diary, and deputy-
lieutenant of the counties of Surrey and Sussex, for
appointing and defining the functions of a Christ-
mas Lord of Misrule over his estate at Wotton: —

"Imprimis, I give free leave to Owen Flood, my
trumpeter, gentleman, to be Lord of Misrule of all
good orders during the twelve days. And also, I
give free leave to the said Owen Flood to command all and every person or persons whatsoever, as well servants as others, to be at his command whenever he shall sound his trumpet or music, and to do him good service, as though I were present myself, at their peril. . . . I give full power and authority to his lordship to break up all locks, bolts, bars, doors, and latches, and to fling up all doors out of hinges, to come at those who presume to disobey his lordship’s commands. God save the king!’

In the accompanying engraving, one of these Lords of Misrule is shown with a fool’s bawbe as his badge of office, and a page, who acts as his assistant or confederate in conducting the jocularities. We are informed that a favourite mode for

Prynne and other zealous Puritans. ‘If,’ says the author of the Historia-Mastica, ‘the comparison of these Saturnalia and Feasts of Janua, we shall find such near affinity between them both in regard of time (they being both in the end of December and on the first of January) and in their manner of solemnizing (both of them being spent in revelling, epicurism, wantonesse, idleness, dancing, drinking, stage-plays, masques, and car-nall pompes and jollity), that we must needs conclude the one to be but the very same or issue of the other. Hence Polydore Virgil affirms in express terms that our Christmas Lords of Misrule (which custom, saith he, is chiefly observed in England), together with dancing, masques, mummeries, stage-players, and such other Christmas disorders now in use with Christians, were derived from these Roman Saturnalia and Bacchanalian festivals; which (concludes he) should cause all pious Christians eternally to abominate them.

In Scotland, previous to the Reformation, the monasteries used to elect a functionary of a similar character, for the superintendence of the Christmas revels, under the designation of the Abbot of Unreason. The readers of the Waverley Novels will recollect the graphic delineation of one of these mock-ecclesiastics in The Abbot. An ordinance for suppressing this annual burlesque, with other festivities of a like kind, was passed by the Scottish legislature in 1655. In France, we find the congener of the Lord of Misrule and the Abbot of Unreason in the Abbé Stullerum—the Abbot or Pope of Fools.

Died.—George of Cappadocia, noted Arian bishop, slain at Alexandria, 361 a. d.; Thomas Beaufort, Duke of Exeter, 1436, Bury St Edmunds; Vasco de Gama, celebrated Portuguese navigator, 1524, Cochin, Malabar; Madame de Genlis, popular authoress, 1830, Paris; Davies Gilbert, antiquarian and man of science, 1839, Eastbourne, Sussex; Archdeacon Henry John Todd, editor of Johnson’s Dictionary, &c., 1845, Beverley, Yorkshire; Dr John Aytoun, Paris, chemist, 1854, London; Hugh Miller, geologist, 1856, Portobello.

The Waits.

It is a curious circumstance, that no one appears clearly to know whether the term Waits denoted originally musical instruments, a particular kind of music, or the persons who played under certain special circumstances. There is evidence in support of all these views. At one time, the name of Waits was given to minstrels attached to the king’s court, whose duty it was to guard the streets at night, and proclaim the hour—something in the same manner as the watchmen were wont to do in London before the establishment of the metropolitan police. A regular company of waites was established at Exeter as early as 1401, and in relation to the duties and emoluments of such personages in the reign of Edward IV., the following curious account is furnished by Rymer: ‘A wayte, that nightely from Shyelmas to Shreve Thoresday pipethe the watche within this courte fower tymes;
in the somere nyghtes ij tymes, and makethe bon gayte at every chambers-dore and office, as well for feare of pyckers and pillers. He eateth in the halle with mynstrielles, and taketh jyevyere [allowance] at nyghtes a loffe, a galone of alle, and for somere nyghtes ij candles pich, a bushel of coles; and for wintere nyghts halfe a loffe of bread, a galone of alle, ijij candles piche, a bushel of coles; daylye every wynter he is present in cheques roales allowed iiijj. ob. or else iiijj. by the discreision of the steeardes and tresessorere, and that, after his cominge and disesivenge; also cloathinge with the household yeomen or mynstrielles lyke to the wages that he taketh; and if he be syke he taketh twoe loves, ij messe of great meate, one galon of alle. Also he partith with the household of general gyte, and hath his beldinge carryed by the comptrollers asseyment; and under this yeoman to be a groome watur. Ye he can excuse the yeoman in his absence, then he taketh warde, cloathinge, meate, and all other things lyke to other grooms of household. Also this yeoman waught at the makinge of Kyghtes of the Bath, for his attendance upon them by nyghtes-tyme, in watchinge in the chappelle, hath he to his fee all the pleyntage of the kyng and all the other things upon him. This statement is interesting, as it shows that the Wait, or Yeoman-soch, at court was a kind of page, paid partly in money and partly in board-wages; and it may be a fair question whether the yeoman-soch of later days is not to be traced to some such origin.

In Mr. Thoms's edition of The famous History of Dr Faustus, the term under notice is clearly applied to a musical instrument: 'Lastly was heard by Faustus all manner of instruments of music—as organs, clari-golds, lutess, viols, citternes, soch, horn-pipes, anones, harps, and all manner of instruments of music.' Butler, also, in his Principles of Music, published in 1638, mentions 'the soch or hobbes'—implying that that which was called the soch or waughites, was the same instrument as the long known as the hoboy, hauboy, hautbois, or caulus, and that the name soch or waughites was transferred to the German soch, which signifies a watchman or night-guard; a meaning not necessarily connected with music in any way. Dr Rimbault states that, in a roll of officers in the service of Henry VII., one of the entries is 'Musicians for the Waughites.'

Dr Busby, in his Musical Dictionary, speaking of the waughs, says: 'This noun formerly signified hauboy, and which is remarkable has no singular number.' From the instruments, its signification was, after a time, transferred to the performers themselves; who, being in the habit of parading the streets at night with their music, occasioned the name to be applied generally to all musicians who followed a similar practice.

In the following extract from a communication to the Gentleman's Magazine in 1766, describing the mode of the old London waiters, the word soch or waughes is distinctly spoken of as persons. After describing certain ridiculous ceremonies, the writer proceeds to say: 'They [the freeman in prospect] are generally met by women dressed up with ribbons, bells, and garlands of gum-flowers, who welcome them with dancing and singing, and are called soch or waughes—perhaps a corruption of simbrelsoches, players on simbrels.' Mr. H. Coloridge also has expressed a belief that the original soches were wind-instrument players, as shown by the use of the word in the romances of Kyng Alfred and Sir Egloguer.

A writer in Notes and Queries draws attention to the analogy between the words soch and waugh, the latter of which, in Scotland, means wandering or roaming about from place to place. Such wanderers were the minstrels of Scotland, who, three centuries ago, wandered about the streets of the city of Glasgow, and at the city's expense were clothed in blue coats or outer garments. 'A remnant of this custom, still popularly called soch, yet exists in the magistrates annually granting a kind of certificate or diploma to a few musicians, generally blind men of respectable character, who perambulate the streets of the city during the night and morning, for about three weeks or a month previous to New-year's Day, in most cases performing on violins the slow, soothing airs peculiar to a portion of the old Scottish melodies; and in the solemn silence of the street the effect is very fine. At the commencement of the New-year, these men call at the houses of the inhabitants, and, presenting their credentials, receive a small subscription.

It is evident that considerable confusion prevails on the subject of the waiters, but if we abide by the modern meaning of the term, we shall find that it refers exclusively to a company of musicians whose performances bear a special relation to the season of Christmas. In Scotland, perhaps, they are more associated with the New Year, but in England their functions belong certainly to a period which ends with Christmas-day.

When the waiters became town-musicians, instead of court-pages, they were sometimes civic servants, employed as watchmen to call the hour at night, sometimes serenaders or nocturnal minstrels, who looked for a living from private liberality. There is a paper in the Tatler (No. 223), which speaks of waiters as they were a century and a half ago, and introduces the subject in the following manner: 'Whereas, by letters from Nottingham, we have advice that the young disinherited of that place complain for want of sleep, by reason of certain riotous lovers, who for this last summer have very much infested the streets of that eminent city with violines and bass-violis, between the hours of twelve and four in the morning; we have more to the same purport. It then proceeds to state that the same practice existed in other towns, and accounts for it thus: 'For as the custom prevails at present, there is scarce a young man of any fashion in a corporation who does not make love with the town music; the waiters often help him through his courtship.'

At present, and in London, the waiters are musicians who play during the night-hours for two or three weeks before Christmas, terminating their performances usually on Christmas Eve. They use generally as much music as they can, and any tunes which happen to be popular at the time. They call at the houses of the inhabitants soon afterwards for Christmas donations.

Down to the year 1829, perhaps later, the waiters had a certain degree of official recognition in the cities of London and Westminster. In London, the post was purchased; in Westminster, it was an appointment under the control of the High Constable and the Court of Burgesses. A police
inquiry about Christmas-time, in that year, brought
the matter in a singular way under public notice.
Mr. Clive had been the official leader of the waits
for Westminster; and on his death, Mr. Monro
obtained the post. Having employed a number
of persons in different parts of the city and liberties
of Westminster to serenade the inhabitants, trusting
to their liberality at Christmas as a remuneration,
he was surprised to find that other persons were,
unauthorised, assuming the right of playing at
night and making applications to the inhabitants
from house to house. Mr. Clive, himself, so
magistrate, promised to aid Mr. Monro in the
assertion of his claims; and the result, in several
cases, showed that there really was this 'vested
right' to charm the ears of the citizens of
Westminster with nocturnal music. At present
(as stated in the last paragraph), there is nothing
to prevent any number of such itinerant minstrels
from plying their midnight calling.

DECEMBER 25.
The Nativity of Jesus Christ. St. Eugenia, virgin and
martyr, about 257. St. Anastasia, martyr, 304. Another
St. Anastasia.

Christmas-Day.
The festival of Christmas is regarded as the
greatest celebration throughout the ecclesiastical
year, and so important and joyous a solemnity is
it deemed, that a special exception is made in its
favour, whereby, in the event of the anniversary
falling on a Friday, that day of the week, under all
other circumstances a fast, is transformed to a
festival.

That the birth of Jesus Christ, the deliverer of
the human race, and the mysterious link connect-
ing the transcendent and incomprehensible attri-
butes of Deity with human sympathies and affections,
should be considered as the most glorious event
that ever happened, and the most worthy of being
reverently and joyously commemorated, is a propo-
sition which no one, thinking of the source and
reason of every one of His followers, who
aspires to walk in His footsteps, and share in the
ineffable benefits which His death has secured to
mankind. And so though at one period denominated
by the Puritans as superstitious, and to the present
day disregarded by Calvinistic Protestants, as un-
warranted by Scripture, there are few who will
seriously dispute the propriety of observing the
anniversary of Christ's birth by a religious service.

A question, however, which has been long and
eagerly agitated, is here brought forward. Is the
5th of December really the day on which our
Saviour first shewed himself in human form in the
manger at Bethlehem? The evidence which
we possess regarding the date is not only tradi-
tional, but likewise conflicting and confused. In
the earliest periods at which we have any record of
the observance of Christmas, we find that some
communities of Christians celebrated the festival
on the 1st or 6th of January; others on the 28th of
March, the time of the Jewish Passover; while
others, it is said, observed it on the 28th of Sep-
tember, or Feast of Tabernacles. There can be no
doubt, however, that long before the reign of Con-
tantine, in the fourth century, the season of the
New Year had been set apart as the period for cele-
brating the Nativity, though a difference in this
respect existed in the practice of the Eastern and
Western Churches, the former observing the 6th of
January, and the latter the 25th of December.
The custom of the Western Church at last prevailed,
and both of the ecclesiastical bodies agreed to hold
the anniversary on the same day. The fixing of
the date appears to have been the act of Julius L,
who presided as papa in Rome in the year 337 to 352 A.D.
The circumstance is doubted by Moebus, but is confirmed by St. Chrysostom, who
died in the beginning of the fifth century. This
celebrated father of the church informs us, in one
of his epistles, that Julius, on the solicitation of St.
Cyril of Jerusalem, caused strict inquiries to be
made on the subject, and thereafter, following what
seemed to be the best authenticated tradition,
settled authoritatively the 25th of December as the
anniversary of Christ's birth, the 'Festorum
omnium metropolis,' as it is styled by Chrysostom.
It is true, indeed, that some have represented this
fixing of the day to have been accomplished by
St. Telephorus, who was bishop of Rome 128-139
A.D., but the authority for the assertion is very
doubtful. Towards the close of the second century,
we find a notice of the observance of Christmas in
the reign of the Emperor Commodus; and about a
hundred years afterwards, in the time of Dioclesian,
an atrocious act of cruelty is recorded of the last-
named emperor, who caused a church in Nicom-
epolis, where the Christians were celebrating the
Nativity, to be set on fire, and by barring every
means of egress from the building, made all the
worshippers perish in the flames. Since the end of
the fourth century at least, the 25th of December
has been uniformly observed as the anniversary
of the Nativity by all the nations of Christendom.

Thus far for ancient usage, but it will be readily
comprehended that insurmountable difficulties yet
exist with respect to the real date of the momentous
event under notice. Sir Isaac Newton, indeed,
remarks in his Commentary on the Prophesies of
Daniel, that the feast of the Nativity and the
other ecclesiastical anniversaries, were originally
fixed at cardinal points of the year, without any
reference to the dates of the incidents which they
commemorated, dates which, by the lapse of time,
had become impossible to be ascertained. Thus
the Annunciation of the Virgin Mary was placed on
the 25th of March, or about the time of the
vernal equinox; the feast of St Michael on the
29th of September, or near the autumnal equinox;
and the birth of Christ and other festivals at the
time of the winter-solstice. Many of the apostles'
days—such as St Paul, St Matthias, and others—were
determined by the days when the sun entered the
respective signs of the ecliptic, and the pagan festi-
vals had also a considerable share in the adjustment
of the Christian year. To this last we shall shortly
have occasion to advert more particularly, but in
present we shall content ourselves by remarking
that the views of the great astronomer just indicated,
present at least a specious explanation of the
original construction of the ecclesiastical calendar.
As regards the observance of Easter indeed, and
its accessory celebrations, there is good ground for
maintaining that they mark tolerably accurately
the anniversaries of the Passion and Resurrection of our Lord, seeing that we know that the events themselves took place at the period of the Jewish Passover. But no such precision of date can be added in regard to Christmas, respecting which the generally received view now is, that it does not correspond with the actual date of the nativity of our Saviour. One objection, in particular, has been made, that the incident recorded in Scripture, of shepherds keeping watch by night on the plains of Bethlehem, could not have taken place in the month of December, a period generally of great inclemency in the region of Judæa.

Though Christian nations have thus, from an early period in the history of the church, celebrated Christmas about the period of the winter-solstice or the shortest day, it is well known that many, and, indeed, the greater number of the popular festive observances by which it is characterised, are referrible to a much more ancient origin. Amid all the pagan nations of antiquity, there seems to have been a universal tendency to worship the sun, as the giver of life and light, and the visible manifestation of the Deity. Various as were the names bestowed by different peoples on this object of their worship, he was still the same divinity. Thus, at Rome, he appears to have been worshipped under one of the characters attributed to Saturn, the father of the gods; among the Scandinavian nations he was known under the epithet of Odin or Wodan, the father of Thor, who seems afterwards to have shared with his parent the adoration bestowed on the latter, as the divinity of whose light the sun was the visible manifestation; whilst with the ancient Persians, the appellation for the god of light was Mithras, apparently the same as the Irish Mithr, and with the Phœnicians or Carthaginians it was Baal or Bel, an epithet familiar to all students of the Bible.

Concurring thus as regards the object of worship, there was a no less remarkable uniformity in the period of the year at which these different nations celebrated a grand festival in his honour. The time chosen appears to have been universally the season of the New Year, or, rather, the winter-solstice, from which the new year was frequently reckoned. This unanimity in the celebration of the festival is, to be ascribed to the general feeling of joy which all of us experience when the gradual shortening of the day reaches its utmost limit on the 21st of December, and the sun, recommencing his upward course, announces that mid-winter is past, and spring and summer are approaching. On similar grounds, and with similar demonstrations, the ancient pagan nations observed a festival at midsummer, or the summer-solstice, when the sun arrives at the culminating point of his ascent on the 21st of June, or longest day.

By the Romans, this anniversary was celebrated under the title of Saturnalia, or the festival of Saturn, and was marked by the prevalence of a universal licence and merry-making. The slaves were permitted to enjoy for a time a thorough freedom of speech and behaviour, and it is even said that their masters waited on them as servants. Every one feasted and rejoiced, work and business were for a season entirely suspended, the houses were decked with laurels and evergreens, presents were made by parents and friends, and all sorts of games and amusements were indulged in by the citizens. In the bleak north, the same rejoicings had place, but in a ruder and more barbarous form. Fires were extensively kindled, both in and out of doors, blocks of wood placed in honour of Odin and Thor, the sacred mistletoe was gathered by the Druids, and sacrifices, both of men and cattle, were made to the savage divinities. Fires are said, also, to have been kindled at this period of the year by the ancient Persians, between whom and the Druids of Western Europe a relationship is supposed to have existed.

In the early ages of Christianity, its ministers frequented these old customs, in inducing the converts to refrain from indulging in the popular amusements which were so largely participated in by their pagan countrymen. Among others, the revellers and licence which characterised the Saturnalia called for special animadversion. But at last, convinced partly of the inefficacy of such denunciations, and partly influenced by the idea that the spread of Christianity might thereby be accelerated, the visible manifestations of the Deity, such as it were, the old and new religions, and sought, by transferring the heathen ceremonies to the solemnities of the Christian festivals, to make them subservient to the cause of religion and piety. A compromise was thus effected between clergy and laity, though it must be admitted that it proved anything but a harmonious one, as we find a constant, though ineffectual, opposition by the ecclesiastical authorities to the most favourite amusements of the people, including among others the sports and revelries at Christmas.

Ingrafted thus on the Roman Saturnalia, the Christmas festivities received in Britain further changes and modifications, by having superadded to them, first, the Druidical rites and superstitions, and then, after the arrival of the Saxons, the various ceremonies practised by the ancient Germans and Scandinavians. The result has been the strange medley of Christian and pagan rites which contribute to make up the festivities of the modern Christmas. Of these, the burning of the Yule log, and the superstitions connected with the mistletoe have already been described under Christmas Eve, and further accounts are given under separate heads, both under the 24th and 25th of December.

The name given by the ancient Goths and Saxons to the festival of the winter-solstice was Jul or Yule, the latter term forming, to the present day, the designation in the Scottish dialect of Christmas, and preserved also in the phrase of the 'Yule log.' Perhaps the etymology of no term has excited greater discussion among antiquaries. Some maintain it to be derived from the Greek Ἰούλιος or Ἰούλιος, the name of a hymn in honour of Ceres; others say it comes from the Latin jubilium, signifying a time of rejoicing, or from its being a festival in honour of Julius Caesar; whilst some also explain its meaning as synonymous with ori, or os, which in the ancient Gothic language denotes a feast, and also the favourite liquor used on such occasions, and much endowed with much more probable derivation of the term in question is from the Gothic gudl or hul, the origin of the modern word wheel, and bearing the same signification. According to this very probable explanation, the Yule festival received its name from its
being the turning-point of the year, or the period at which the fiery orb of day made a revolution in his annual circuit, and entered on his northern journey. A confirmation of this view is afforded by the common name that in the old clog almanacs, a wheel is the device employed for marking the season of Yule-tide.

Throughout the middle ages, and down to the period of the Reformation, the festival of Christmas, inrafted on the pagan rites of Yule, continued throughout Christendom to be universally celebrated with every mark of rejoicing. On the adoption of a new system of faith by most of the northern nations of Europe in the sixteenth century, the Lutheran and Anglican churches retained the celebration of Christmas and other festivals, which Calvinists rejected absolutely, denouncing the observance of all such days, except Sunday, as superstitious and unscriptural. In reference to the superstition anciently prevalent in Scotland against spinning on Christmas or Yule day, and the determination of the Calvinistic clergy to put down all such notions, the following anonymous passage is quoted by Dr Jamieson from John Hamilton's Fasciculus Trivitatis: 'The ministers of Scotland—in contempt of the Easter days observed in England—cause their wyfs and servants spin in opprobrium of the people on Yeul day; and their affecionate auditors constrains their tenants to yok their ploughs on Yeul day in contempt of Christ's Nativity, whilks our Lord has not left vnapunisht; for their ains ran wod [mad], and brak their neks, and leamit [lamed] sum plough men, as is notoriously known insindrie parties of Scotland.' In consequence of the Presbyterian form of church-government, as constituted by John Knox and his coadjutors on the model of the ecclesiastical polity of Calvin, having taken such firm root in Scotland, the festival of Christmas, with other commemorative celebrations retained from the Romish calendar by the Anglicans and Lutherans, is comparatively unknown in that country, at least in the Lowlands. The tendency to mirth and jollity at the close of the year, which seems almost inherent in human nature, has, in North Britain, been, for the most part, transferred from Christmas and Christmas Eve to New-year's Day and the preceding evening, known by the appellation of Hogmany. In many parts of the Highlands of Scotland, however, and also in the county of Forfar, and one or two other districts, the day for the great annual merry-making is Christmas.

From a curious old song preserved in the Harleian Manuscripts in the British Museum, we learn that it was considered peculiarly lucky when Christmas-day fell on a Sunday, and the reverse when it occurred on a Saturday. The intermediate days are, for the most part, characterised by a happy uniformity of propitious augury. The vulgarisation is of the rudest and most rough description, but as an interesting specimen of medieval folk-lore, we subjoin the stanzas relating to Sunday and Saturday:

'Lordines, I warn you al before,
Yef that day that Criste was borne,
Fulle upon a Sunday;
That wynter shall be good par pay,
But grete wyndes aloffe shall be,
The somer shall be faire and drye.'
CHRISTMAS-DAY.

Witcher, who belongs to the first-half of the seventeenth century, describes with hilarious animation the mode of keeping Christmas in the poet's day:

'So now is come our joyous feast;
Let every man be jolly;
Each room with ivy leaves is drest,
And every post with holly.
Though some chairs at our mirth repine,
Round your foreheads garlands twine;
Drown sorrow in a cup of wine,
And let us all be merry.

Now all our neighbours' chimneys smoke,
And Christmas blocks are burning;
Their ovens they with baked meat choke,
And all their spits are turning.
Without the door let sorrow fly;
And if for cold it hap to die,
We'll bury 't in a Christmas-pie,
And evermore be merry.

Now every lad is wondrous trim,
And no man minds his labour;
Our lasses have provided them
A bagpipe and a piper:
Young men and maids, and girls and boys,
Give life to one another's joys;
And you anon shall by their noise
Perceive that they are merry.

Rank misers now do sparing shun;
Their hall of mirth soundeth;
And dogs thence with whole shoulders run,
So all things them aboundeth.
The country-folks, themselves advance,
With crowdy-mutters out of France;
And Jack shall pipe and Jyll shall dance,
And all the town be merry.

Ned Squash hath fetched his hands from pawn,
And all his best apparel;
Briak Neil hath bought a ruff of lawn
With dropping of the barrel.
And those that hardly all the year
Had bread to eat, or rage to wear,
Will have both clothes and dainty fare,
And all the day be merry.

Now poor men to the justices
With capons make their errants;
And if they hap to fail of these,
They plague them with their warrants:
But now they feed them with good cheer,
And what they want, they take in beer,
For Christmas comes but once a year,
And then they shall be merry.

Good farmers in the country nurse
The poor, that else were undone;
Some landlords spend their money worse,
On lust and pride at London.
There the roysters they do play,
Drab and dice their lands away,
Which may be ours anothet day,
And therefore let's be merry.

The client now his suit forbearst,
The prisoner's heart is eased;
The debtor drinks away his cares,
And far the time is pleased.
Though others' purses be more fat,
Why should we pine or grieve at that?
Hang sorrow! care will kill a cat,
And therefore let's be merry.

Hark! now the ways abroad do call,
Each other forth to rambling;
Anon you'll see them in the hall,
For nuts and apples scrambling.
Hark! how the roofs with laughter sound,
Anon they'll think the house goes round,
For they the cellar's depth have round,
And there they will be merry.

The wenches with their wassel-bowls
About the streets are singing;
The boys are come to catch the owls,
The wild maries in it bring.
Our kitchen-boy hath broke his box,
And to the dealing of the ox,
Our honest neighbours come by flax,
And here they will be merry.

Now kings and queens poor sheepepoes have,
And mate with every body;
The honest now may play the knave,
And wise men play the noddy.
Some youmas will now a munning go,
Some others play at Rowland-bo,
And twenty other game boys mo,
Because they will be merry.

Then, wherefore in these merry daies,
Should we, I pray, be duller?
No, let us sing some roundelayes,
To make our mirth the fuller.
And, while thus inspired we sing,
Let all the streets with soesee rong;
Woods and hills and every thing,
Bear witness we are merry.

At present, Christmas-day, if somewhat shorn of its ancient glories, and unmarked by that boisterous jollity and exuberance of animal spirits which distinguished it in the time of our ancestors, is, nevertheless, still the holiday in which of all others throughout the year, all classes of English society most generally participate. Partaking of a religious character, the forenoon of the day is usually passed in church, and in the evening the re-united members of the family assemble round the joyous Christmas-board. Separated as many of these are during the rest of the year, they all make an effort to meet together round the Christmas-hearth. The hallowed feelings of domestic love and attachment, the pleasing remembrance of the past, and the joyous anticipation of the future, all cluster round these family-gatherings, and in the sacred associations with which they are intertwined, and the active deeds of kindness and benevolence which they tend to call forth, a realisation may almost be found of the angelic message to the shepherds of Bethlehem—Glory to God in the highest, and on earth peace, goodwill toward men.'

Christmas Carols.

Amid so many popular customs at Christmas, full of so much sweet and simple poetry, there is perhaps none more charming than that of the Christmas carols, which celebrate in joyous and yet devout strains the Nativity of the Saviour. The term is believed to be derived from the Latin cantare (to sing), and rola! an interjection expressive of joy. The practice appears to be as ancient as the celebration of Christmas itself, and we are informed that in the early ages of the church, the bishops were accustomed to sing carols on Christmas-day among
their clergy. The quaint and inestimable Jeremy Taylor, referring in his Great Exemplar to the Gloria in Excelsis, or hymn sung by the angels on the plains of Bethlehem, says: 'As soon as these blessed choristers had sung their Christmas Carol, and taught the Church a hymn to put into her offices for ever in the anniversary of this festivity, the angels returned into heaven.' Milton also, in the twelfth book of Paradise Lost, thus alludes to what may be regarded as the first Christmas carol:

His place of birth a solemn angel tells
To simple shepherds, keeping watch by night;
They gladly thither haste, and by a quire
Of squadron'd angels hear his carol sung.'

In process of time, these Christmas hymns became very much secularised, and latterly, were frequently nothing more than festive chants, sung during the revelries of the Christmas season. The earliest specimen which we possess of the medieval carol, belongs to this class, and is preserved in a manuscript in the British Museum. It is composed in Norman-French, and belongs to the thirteenth century. The same convivial quality characterises a 'set of carols,' the earliest printed edition of these Christmas chants, published by Wynkyn de Worde in 1521. The 'Boar's Head' song, quoted in a subsequent article, occurs with others of a similar class in the collection referred to.

As with the generality of our popular ballads, we find the earlier specimens of Christmas carols often extremely rugged and unadorned in point of

CHILDREN'S CAROL ON CHRISTMAS MORNING.

Herde'men beheld these angels bright,
To them appearing with great light,
Who said: "God's Son is born this night."

In Excelsis Gloria.

This King is come to save mankind,
As in scripture truth we find,
Therefore this song have we in mind,

In Excelsis Gloria.

Then, Lord, for Thy great grace,
Grant us the bliss to see thy face,
Where we may sing to Thy solace.

In Excelsis Gloria.'
In his *History of English Poetry*, Warton notices a licence, granted in 1562, to John Tysdale for printing 'Certayne goody Carolwes to be songe to the glory of God;' and again 'Crestemmas Carowles suctorsished by my lord of London.' This may be regarded as a specimen of the endeavours made at the time of the Reformation, to supplant the old popular carols, by compositions of a more devout and less popish character, and in Scotland we find instances of the same policy in the famous *Gude and Godly Ballates*, and *Ane compendious Book of godly and spiritual Songs*; the latter printed at Edinburgh in 1631. The Puritans, indeed, denounced not only the singing of Christmas carols, but the observance of the festival of Christmas itself, as pernicious and unscriptural, and to their influence has been ascribed much of the seriousness characterizing this department of popular poetry in later times.

It will be recollected that Goldsmith's *Vicar of Wakefield*, describing the unsophisticated character of his parishioners, says: 'They kept up the Christmas carol.' Such a composition as the following might have been sung by these simple swains. It is one of the most popular of the class of chants under notice.

'God rest you merry, gentlemen,  
Let nothing you dismay,  
For Jesus Christ our Saviour  
Was born upon this day,  
To save us all from Satan's power,  
When we were gone astray.  
O tidings of comfort and joy!  
For Jesus Christ our Saviour  
Was born on Christmas-day.

In Bethlehem, in Jewry,  
This blessed babe was born,  
And laid within a manger  
Upon this blessed morn;  
The which his mother Mary  
Nothing did take in scorn.  
O tidings, &c.

From God our Heavenly Father,  
A blessed angel came,  
And unto certain shepherds,  
Brought tidings of the same,  
How that in Bethlehem was born,  
The Son of God by name.  
O tidings, &c.

Fear not, then said the angel,  
Let nothing you affright,  
This day is born a Saviour  
Of virtue, power, and might;  
So frequently to vanquish all,  
The friends of Satan quite.  
O tidings, &c.

The shepherds at those tidings,  
Rejoiced much in mind,  
And left their flocks a-feeding  
In tempest, storm, and wind,  
And went to Bethlehem straightway,  
This blessed babe to find.  
O tidings, &c.

But when to Bethlehem they came,  
Whereas this infant lay,  
They found Him in a manger,  
Where oxen feed on hay,  
His mother Mary kneeling,  
Unto the Lord did pray.  
O tidings, &c.

Now to the Lord sing praises,  
All you within this place,  
And with true love and brotherhood,  
Each other now embrace;  
This holy tide of Christmas,  
All others doth deface.  
O tidings, &c.'

Another of these carols is presented to the reader. Without laying claim to literary merit of an exalted order, it has all that simplicity and melodiousness which render ballad-poetry so charming:

*I saw three ships come sailing in  
On Christmas-day, on Christmas-day;  
I saw three ships come sailing in  
On Christmas-day in the morning.

And what was in those ships all three,  
On Christmas-day, on Christmas-day?  
And what was in those ships all three,  
On Christmas-day in the morning?

Our Saviour Christ and his Lady,  
On Christmas-day, on Christmas-day;  
Our Saviour Christ and his Lady,  
On Christmas-day in the morning.

Pray whither sailed those ships all three,  
On Christmas-day, on Christmas-day?  
Pray whither sailed those ships all three,  
On Christmas-day in the morning?

O they sailed into Bethlehem,  
On Christmas-day, on Christmas-day;  
O they sailed into Bethlehem,  
On Christmas-day in the morning.

And all the bells on earth shall ring,  
On Christmas-day, on Christmas-day;  
And all the bells on earth shall ring,  
On Christmas-day in the morning.

And all the angels in heaven shall sing,  
On Christmas-day, on Christmas-day;  
And all the angels in heaven shall sing,  
On Christmas-day in the morning.

And all the souls on earth shall sing,  
On Christmas-day, on Christmas-day;  
And all the souls on earth shall sing,  
On Christmas-day in the morning.

Then let us all rejoice amain,  
On Christmas-day, on Christmas-day;  
Then let us all rejoice amain,  
On Christmas-day in the morning.'

The next carol, which we proceed to quote, is of a very different character, being one of those doggerel rhymes sung by children, when they go on a gooding excursion on Christmas-morning. An explanation of the term in italics has been already given in our notice of St Thomas's Day, to which such expeditions are more strictly appropriate. The carol, as subjoined, is sung on Christmas-morning by children in Yorkshire, who bear along with them, on the occasion, a Christmas-tree as a badge of their mission. The scene is also pictorially delineated on the following page.
Well-a-day! well-a-day!
Christmas too soon goes away,
Then your gooding we do pray,
For the good time will not stay—
We are not beggars from door to door,
But neighbours' children known before,
So gooding pray,
We cannot stay,
But must away,
For the Christmas will not stay,
Well-a-day! well-a-day.'

Christmas carols are sung on Christmas Eve as well as on the morning of Christmas-day, and indeed the former is regarded by many as the more appropriate occasion. Then the choristers, attached to the village-church, make their rounds to the principal houses throughout the parish, and sing some of those simple and touching hymns. The airs to which they are sung are frequently no less plaintive and melodious than the words, and are often accompanied by instruments. The writer retains a vivid recollection of a carol which he heard sung, some years ago, on Christmas Eve by a detachment of the village choir, in front of a country-house in Devonshire, where he was at the time a visitor. The sweet and pathetic melody, which was both remarkably well sung and played, the picturesque-ness of the group of singers, whose persons were only rendered visible, in the darkness of the night, by the light of one or two lanterns which they carried, and the novelty and general interest of the scene, all produced an impression which was never to be forgotten. These Christmas-eve carols are very general in Devonshire, and the usual custom for the singers is to club the money which they receive on such occasions, and expend it in a social merry-making on Twelfth Day, a fortnight afterwards.

One or two poets of note have essayed carol-writing, among whom may be mentioned Bishop Hall and Robert Herrick, both belonging to the earlier half of the seventeenth century. And here, though we have already quoted so largely, we cannot refrain from introducing the following singularly beautiful effusion of Herrick, forming the first part of a poem, entitled the Star Song, written as a hymn for the Epiphany, but of which the first three stanzas, as here presented, are fully as applicable to Christmas. It glows with an imagery truly oriental:

'A flourish of music: then follows the Song.
Tell us, thou clear and heavenly tongue,
Where is the Babe that lately sprung?
Lies he the lily-banks among?
Or say, if this new Birth of ours
Sleeps, laid within some ark of flowers,
Spangled with dew-light; thou canst clear
All doubts, and manifest the where.
Declare to us, bright star, if we shall seek
Him in the morning's blushing cheek,
Or search the beds of spices through,
To find him out?'

These charming verses are introduced in a very beautiful Book of Christmas Carols, published in 1846, adorned with splendid illuminations from manuscripts preserved in the British Museum. The typography of the lyric in question is literally
bedded among a most lovely and characteristic group of fruits and flowers.

We find scarcely any traces of the singing of Christmas carols in Scotland, though from time immemorial it has been so universally prevalent, not only in England, but in France, Italy, and other countries of the continent. In England, at one time, it was customary on Christmas-day, more especially at the afternoon-service, to sing carols in churches, instead of the regular psalms and hymns. We are, moreover, informed that at the end of the service it was the usage on such occasions for the clerk in a loud voice to wish all the congregation A Merry Christmas and a Happy New-Year.

The Three Magi.

In connection with the birth of the Saviour, and as a pendant to the notice under Twelfth Day, or the Epiphany, and the observances commemorative of the visit of the Wise Men of the East to Bethlehem (see vol. i. p. 61), we shall here introduce some further particulars of the ideas current in medieval times on the subject of these celebrated personages.

The legend of the Wise Men of the East, or, as they are styled in the original Greek of St Matthew's gospel, Magi (the Magi), who visited the infant Saviour with precious offerings, became, under monastic influence, one of the most popular during the middle ages, and was told with increased and elaborated perspicuity as time advanced. The Scripture nowhere informs us that these individuals were kings, or their number restricted to three. The legend converts the Magi into kings, gives their names, and a minute account of their stature and the nature of their gifts. Melchior (we are thus told) was king of Nubia, the smallest man of the triad, and he gave the Saviour a gift of gold. Balthasar was king of Chaldea, and he offered incense; he was a man of ordinary stature. But the third, Jasper, king of Tarshish, was of high stature, 'a black Ethiopia,' and he gave myrrh. All came with many rich ornaments belonging to king's array, and also with mules, camels, and horses loaded with great treasure, and with multitude of people, to do homage to the Saviour, 'then a little child of thirty days old.'

The barbaric pomp involved in this legend made it a favourite with artists during the middle ages. Our engraving is a copy from a circular plate of silver, chased in high-relief, and partly gilt, which is supposed to have formed the centre of a more, or large brooch, used to fasten the decorated cope of an ecclesiastic in the latter part of the fourteenth century. The subject has been frequently depicted by the artists subsequent to this period. Van Eyck, Durer, and the German schools were particularly fond of the theme—their chief striking work being that by Rubens, who revelled in such pompous displays. The artists of the Low Countries were, probably, also biased by the fact, that the cathedral of Cologne held the shrine in which the bodies of the Magi were said to be deposited, and to which the faithful made many pilgrimages, greatly to the emolument of the city, a result which induced the worthy burgheers to distinguish their shield of arms by three crowns only, and to designate the Magi as 'the three kings of Cologne.'

It was to the Empress Helena, mother of Constantine the Great, that the religious world was indebted for the discovery of the place of burial of these kings in the far east. She removed their bodies to Constantinople, where they remained in the church of St Sophia, until the reign of the Emperor Emanucl, who allowed Eustorgius, bishop of Milan, to transfer them to his cathedral. In 1164, when the Emperor Frederick conquered Milan, he gave these treasured relics to Raynul- dus, archbishop of Cologne, who removed them to the latter city. His successor, Philip of Hain-berg, placed them in a magnificent reliquary, enriched with gems and enamels, still remaining in its marble shrine in the cathedral, one of the chief wonders of the noble pile, and the principal 'sight' in Cologne. A heavy fee is ex-
The popular belief in the great power of intercession and protection possessed by the Magi, as departed saints, was widely spread in the middle ages. An article that had touched these skulls was believed to have the power of preventing accidents to the bearer while travelling, as well as to counteract sorcery, and guard against sudden death. Their names were also used as a charm, and were inscribed upon girdles, garters, and finger-rings. We engrave two specimens of such rings, both works of the fourteenth century. The upper one is of silver, with the names of the Magi engraved upon it; the lower one is of lead simply cast in a mould, and sold cheap for the use of the commonalty. They were regarded as particularly efficacious in the case of cramp. Traces of this superstition still linger in the curative properties popularly ascribed to certain rings.

Bishop Patrick, in his Reflections on the Devotions of the Roman Church, 1674, asks with assumed naïveté how these names of the three Wise Men—Melchior, Balthazar, and Jasper—are to be of service, 'when another tradition says they were Apollius, Amerus, and Damascus; a third, that they were Megalath, Galgalath, and Sarastin; and a fourth calls them A tea, Sazer, and Peritas; which last I should choose (in this uncertainty) as having the more kindly sound.'

Born—Jesus Christ, Saviour of the world. * Sir Isaac Newton, natural philosopher, 1642, Woolsthorpe, near Grantham; Johann Jacob Beata, oriental scholar, 1716, Zurbig, Saxony; William Collins, poet, 1720, Chichester; Richard Forson, Greek scholar, 1759, East Ruston, Norfolk.

Died—Persius, satiric poet, 22 A.D.; Pope Adrian I, 796; Emperor Leo V., the Armenian, slain at Constantinople, 820; Sir Matthew Hale, eminent judge, 1677; Rev. James Harvey, author of the Meditations, 1738, Weston Fazley, Northamptonshire; Mrs Chapone, moral writer, 1801, Hadley, Middlesex; Colonel John Gurwood, editor of Wellington's Dispatches, 1854, Brighton.

CHRISTMAS CHARITIES.

We have already, in commenting on Christmas-day and its observances, remarked on the hallowed feelings of affection and good-will which are generally called forth at the celebration of this anniversary. Quaals are composed and forgotten, old friendships are renewed and confirmed, and a universal spirit of charity and forgiveness evoked. Nor is this charity merely confined to acts of kindness and generosity among equals; the poor and destitute experience the bounty of their richer neighbours, and are enabled like them to enjoy themselves at the Christmas season. From the Queen down to all classes of society contribute their mites to relieve the necessities and increase the comforts of the poor, both as regards food and raiment. Even in the work-houses—those abodes of short-commons and little ease—the authorities, for once in the year, become liberal in their housekeeping, and treat the inmates on Christmas-day to a substantial dinner of roast-beef and plum-pudding. It is quite enlivening to read the account in the daily papers, a morning or two afterwards, of the fare with which the inhabitants of the various work-houses in London and elsewhere were regaled on Christmas-day, a detailed chronicle being furnished both of the quality of the treat and the quantity supplied to each individual. Beggars, too, have a claim on our charity at this season, manage all maxims of political economy, and must not be turned from our doors unrelieved. They may, at least, have their dole of bread and meat; and to whatever bad uses they may possibly turn our bounty, it is not probable that the deed will ever be entered to our discredit in the books of the Recording Angel. Apropos of these sentiments, we introduce the following monitory lines by a well-known author and artist:

SCATTER YOUR CRUMBS.
BY ALFRED CROSWELL.

Amidst the freezing sleet and snow,
The timid robin comes;
In pity drive him not away,
But scatter out your crumbs.

And leave your door upon the latch
For whoever comes;
The poorer they, more welcome give,
And scatter out your crumbs.

All have to spare, none are too poor,
When want with winter comes;
The loaf is never all your own,
Then scatter out the crumbs.

Soon winter falls upon your life,
The day of reckoning comes;
Against your sins, by high decree,
Are weighed those scattered crumbs.

In olden times, it was customary to extend the charities of Christmas and the New Year to the lower animals. Burns refers to this practice in 'The Auld Farmer's Address to his Mare,' when presenting her on New-Year's morning with an extra feed of corn:

'A guid New-year, I wish thee, Maggie! Has, there's a ripp to thy auld baggie!'

The great-grandfather of the writer—a small proprietor in the Carse of Falkirk, in Scotland, and an Episcopalian—used regularly himself, every Christmas-morning, to carry a special supply of fodder to each individual animal in his stable and cow-house. The old gentleman was wont to say, that this was a morning, of all others in the year, when man and beast ought alike to have occasion to rejoice.

CHRISTMAS DECORATIONS.

The decking of churches, houses, and shops with evergreens at Christmas, springs from a period far anterior to the revelation of Christianity, and seems proximately to be derived from the custom prevalent during the Saturnalia of the inhabitants of Rome ornamenting their temples and dwellings with green boughs. From this latter circumstance,
CHRISTMAS DECORATIONS.

we find several early ecclesiastical councils prohibiting the members of the church to imitate the pagans in thus ornamenting their houses. But in process of time, the pagan custom was like others of a similar origin, introduced into and incorporated with the surrounding plant, should always be green and flourishing, and live for evermore.\(^1\) Festive carols, we are informed, used to be chanted at Christmas in praise of the evergreens, so extensively used at that season. The following is a specimen:

'**HOLLY.**

Here comes holly that is so green,
To please all men is his intent.
Alleluja!

Whosoever against holly do pray,
In a rope shall be hung full high.
Alleluja!

Whosoever against holly do sing,
He may weep and his hands wring.
Alleluja!

**IVY.**

Ivy is soft and meek of speech,
Against all bale she is bliss,
Well is he that may her reach.

Ivy is green, with colours bright,
Of all trees best she is,
And that I prove will now be right.

Ivy beareth berries black,
God grant us all his bliss,
For there shall be nothing lack.'

The decorations remain in the churches from Christmas till the end of January, but in accordance with the ecclesiastical canons, they must all be cleared away before the 2d of February or Candlemas-day. The same holds good as a custom with regard to private dwellings, superstition in both cases rendering it a fatal prejudice, if any of these sylvan ornaments are retained beyond the period just indicated.\(^*\) Herrick thus alludes to the popular prejudice.

* Down with the rosemary, and so
  Down with the bays and mistletoe;
  Wherewith ye drest the Christmas hall;

  That so the superstitious find
  No one least branch there left behind;
  For look, how many leaves there be,
  Neglected there, maids trust to me,
  So many goblins you shall see.*

Aubrey informs us that in several parts of Oxfordshire, it was the custom for the maid-servant to ask the man for ivy to decorate the house; and if he refused or neglected to fetch in a supply, the maids stole a pair of his breeches, and nailed them up to the gate in the yard or highway. A similar usage prevailed in other places, when the refusal to comply with such a request incurred the penalty of being debarred from the well-known privileges of the mistletoe.

* See p. 53 of this volume.
The brawner's head was then placed upon the table with a solemn gravity befitting the dignity of such a noble dish:

'Sweet rosemary and bays around it spread;
His foaming tuskis with some large pippin grace;
Or midst those thundring spears an orange placed,
Sauce, like himself, offensive to its nose;
The roguish mustard, dangerous to the nose.'

The latter condiment was indispensable. An old book of instruction for the proper service of the royal table says emphatically: 'First set forth mustard with brawn; take your knife in your hand, and cut brawn in the dish as it lieth, and lay on your sovereign's trencher, and see there be mustard!'

When Christmas, in the time of the Commonwealth, was threatened with extinction by act of parliament, the tallow-chandlers loudly complained that they could find no sale for their mustard, because of the diminished consumption of brawn in the land. Parliament failed to put down Christmas, but the boar's-head never recovered its old supremacy at the table. Still, its memory was cherished in some nooks and corners of Old England long after it had ceased to rule the roast. The lessee of the tithes of Horn Church, Essex, had, every Christmas, to provide a boar's-head, which, after being dressed and garnished with bay, was wrestled for in a field adjoining the church. The custom of serving up the ancient dish at Queen's College, Oxford, to a variation of the old carol, sprung, according to the university legend, from a valorous act on the part of a student of the college in question. While walking in Shotover forest, studying his Aristotle, he was suddenly made aware of the presence of a wild-boar, by the animal rushing at him open-mouthed. With great presence of mind, and the exclamation, 'Graecum est,' the collegian thrust the philosopher's ethics down his assailant's throat, and having choked the savage with the sage, went on his way rejoicing.

The Lord Jersey of the Walpolian era was a great lover of the quondam Christmas favourite, and also—according to her own account—of Miss Ford, the lady whom Whitehead and Lord Holderness thought so admirably adapted for Gray's friend, Mason, 'being excellent in singing, loving solitude, and full of immeasurable affectations.' Lord Jersey sent Miss Ford a boar's head, a strange first present, at which the lady laughed, saying she had often had the honour of meeting it at his lordship's table, and would have ate it had it been edible! Her noble admirer resented the scornful insinuation, and indignantly replied, that the head in question was not the one the lady had seen so often, but one perfectly fresh and sweet, having been taken out of the pickle that very morning; and not content with defending his head, Lord Jersey revenged himself by denying that his heart had ever been susceptible of the charms of the fair epicure.

Next in importance to the boar's-head as a Christmas-dish came the peacock. To prepare Argus for the table was a task entailing no little trouble. The skin was first carefully stripped off, with the plumage adhering; the bird was then roasted; when done and partially cooled, it was sewed up again in its feathers, its beak gilt, and so sent to table. Sometimes the whole body was covered with leaf-gold, and a piece of cotton,
saturated with spirits, placed in its beak, and lighted before the carver commenced operations. This ‘food for lovers and meat for lords’ was stuffed with spices and sweet herbs, basted with yolk of egg, and served with plenty of gravy; on great occasions, as many as three fat wethers being bruised to make enough for a single peacock.

The noble bird was not served by common hands; that privilege was reserved for the lady-guests most distinguished by birth or beauty. One of them carried it into the dining-hall to the sound of music, the rest of the ladies following in due order. The bearer of the dish set it down before the master of the house or his most honoured guest. After a tournament, the victor in the lists was expected to show his skill in cutting up inferior animals. On such occasions, however, the bird was usually served in a pie, at one end of which his plummed crest appeared above the crust, while at the other his tail was unfolded in all its glory. Over this splendid dish did the knights-errant swear to undertake any perilous enterprise that came in their way, and succour lovely woman in distress after the best entrenched cavalier fashion. Hence Justice Shallow derived his oath of ‘By cock and pie!’ The latest instance of peacock-eating we can call to mind, is that of a dinner given to William IV. when Duke of Clarence, by the governor of Grenada; when his royal highness was astonished by the appearance of the many-hued bird, dressed in a manner that would have delighted a medieval Ude or Sover.

Gruss, capon, pheasant drenched with ambergrise, and pies of carpe-tongue, helped to furnish the table in bygone Christmases, but there was one national dish—neither flesh, fowl, nor good red herring—which was held indispensable. This was fumurate, frumenty or fumery, concocted—according to the most ancient formula extant—in this wise: ‘Take clean wheat, and bray it in a mortar, and the bulbs be all gone off, and seeth the it till it burst, and take it up and let it cool; and take clean fresh broth, and sweet milk of almonds, or sweet milk of kine, and temper it all; and take the yolks of eggs. Boil it a little, and set it down and mess it forth with fat venison or fresh mutton.’ Venison was seldom served without this accompaniment, but fumery, sweetened with sugar, was a favourite dish of itself, the ‘clean broth’ being omitted when a lord was to be the partaker.

Mince-pies were popular under the name of ‘mutton-pies,’ so early as 1596, later authorities all agreeing in substituting neats-tongue in the place of mutton, the remaining ingredients being much the same as those recommended in modern recipes. They were also known as shrewd Christmas pies:

‘Without the door let sorrow lie,
And if for cold it hap to die,
We’ll bury it in a Christmas-pie,
And evermore be merry!’

In Herrick’s time it was customary to set a watch upon the pies, on the night before Christmas, lest sweet-toothed thieves should lay felonious fingers on them; the jovial vicar sings:

‘Come guard the Christmas-pie,
That the thief, though ne’er so sly,
With his flesh-hooks don’t come nigh,
To catch it,
From him, who all alone sits there,
Having his eyes still in his ear,
And a deal of nightly fear,
To watch it.’

Selden tells us mince-pies were baked in a coffin-shaped crust, intended to represent the cratch or manger in which the Holy Child was laid; but we are inclined to doubt his statement, as we find our old English cookery-books always style the crust of a pie ‘the coffin.’

When a lady asked Dr Parr on what day it was proper to commence eating mince-pies, he answered, ‘Begin on O. Sapientia (December 16th), but please to say Christmas-pie, not mince-pie; mince-pie is puritanical.’ The doctor was wrong at least on the last of these points, if not on both. The Christmas festival, it is maintained by many, does not commence before Christmas Eve; and the mince-pie was known before the days of Henry VIII. Barnaby, and his strait-laced brethren, for Ben Jonson personifies it under that name in his Masque of Christmas. Likely enough, the name of ‘Christmas-pie’ was obnoxious to puritanical ears, as the enjoying of the dainty itself at that particular season was offensive to puritan taste:

‘All plums the prophet’s sons deny,
And spice-broths are too hot;
Treason’s in a December-pie,
And death within the pot.’

Or, as another rhymer has it:

The high-shoe lords of Cromwell’s making
Were not for dainties—roasting, baking;
The chiefest food they found most good in,
Was rusty bacon and bag-pudding;
Plum-broth was popish, and mince-pie—
O that was flat idolatry!’

In after-times, the Quakers took up the prejudices, and some church-going folks even thought it was not meet for civilised men, and adherents of the doctrine which called forth the following remonstrance from Bickerstaffe—‘The Christmas-pie is, in its own nature, a kind of consecrated cake, and a badge of distinction; and yet it is often forbidden, the Druid of the family. Strange that a sirloin of beef, whether boiled or roasted, when entire is exposed to the utmost depredations and invasions; but if minced into small pieces, and tossed up with plumbs and sugar, it changes its property, and forsith is meat for his master.’

Mortifying as Lord Macartney’s great plum-pudding failure may have been to the diplomatist, he might have consoled himself by remembering that plum-porridge was the progenitor of the pride and glory of an English Christmas. In old times, plum-pottage was always served with the first course of a Christmas-dinner. It was made by boiling beef or mutton with broth, thickened with brown bread; when half-boiled, raisins, currants, prunes, cloves, mace and ginger were added, and when the mess had been thoroughly boiled, it was sent to table with the best meats. Sir Roger de Coverley thought there was some hope of a dissent, when he saw him enjoy his porridge at the hall on Christmas-day. Plum-broth figures in Poor Robin’s Almanacs for 1750, among the items of Christmas fare, and Mrs Fraser, ‘sole teacher of the art of cookery in Edinburgh, and several years’ colleague, and afterwards successor to Mrs
M'iver,' who published a cookery-book in 1791, thought it necessary to include plum-pottage among her soups. Brand partook of a tureen of 'luscious plum-porridge' at the table of the royal chaplain in 1801, but that is the latest appearance of this once indispensable dish of which we have any record.

As to plum-pudding, we are thoroughly at fault. Rabahia gives a recipe in his Whole Body of Cookery Dissected (1675), for a pudding to be boiled in a basin, which bears a great resemblance to our modern Christmas favourite, but does not include it in his bills of fare for winter, although 'a dish of stewed broth, if at Christmas,' figures therein. It shared honours with the porridge in Addison's time, however, for the Tattle tells us: 'No man of the most rigid virtue gives offence by an excess in plum-pudding or plum-porridge, because they are the first parts of the dinner;' but the Mrs Fraser above mentioned is the earliest culinary authority we find describing its concoction, at least under the name of plum-pudding.

While Christmas, as far as eating was concerned, always had its specialities, its liquors carte was unlimited. A carolist of the thirteenth century sings (we follow Donne's literal translation):

'Lordlings, Christmas loves good drinking,
Wines of Gascony, France, Anjou,
English ale that drives out thinking,
Prince of liquors, old or new.
Every neighbour shared the bowl,
Drinks of the spicy liquor deep;
Drinks his fill without control,
Till he drowns his care in sleep.'

And to attain that end every exhilarating liquor was pressed into service by our ancestors.

THE CHRISTIAN AND OTHER ERAS IN CHRONOLOGY.

The Christian Era adopts a particular year as a commencement or starting-point, from which any subsequent year may be reckoned. It has no particular connection with Christmas-day, but it may suitably be noticed in this place as associated with the great festival.

All nations who have made any great advance in civilisation, have found it useful to adopt some particular year as a chronological basis. The Romans adopted for this purpose the year, and even the day, which some of their historians assigned as the date for the foundation of Rome. That particular date, designated according to our present chronology, was the 21st of April, in the year 754 B.C. They were wont to express it by the letters A.U.C., or Ab urbe condita, signifying 'from the foundation of the city.' The change effected in the calendar by the first two Cessars, and which, with the alteration afterwards rendered necessary by the lapse of centuries, forms, to the present day, the standard for computing the length and divisions of the year, took place 47 B.C. or 707 A.D.

The Olympiads were a Greek mode of computing time, depending on chronological groups, each of which measured respectively four years in length. They began in 776 B.C., in commemoration of an event connected with the Olympic Games. Each period of four years was called an Olympiad; and any particular date was denoted by the number of the Olympiad, and the number of the year in it; such as the third year of the first Olympiad, the first year of the fourth Olympiad, and so on. The Greeks, like the Romans, made in ancient times their civil years a little longer or a little shorter than the true year, and were, like them, forced to reform their calendar occasionally. One of these reforms was made by Meton in 432 B.C., a year which corresponded to the fourth year of the eighty-sixth Olympiad, and another in 330 B.C. When the power of Greece sank to a shadow under the mighty influence of that of Rome, the mode of reckoning by Olympiads gradually went out.

The Christian Era, which is now adopted by all Christian countries, dates from the year in which Christ was born. According to Greek chronology, that year was the fourth of the 194th Olympiad; according to Roman, it was the year 753 A.U.C.—or 754, if the different dates for beginning the year be rectified. It is remarkable, however, that the beginning of the Christian era was not introduced till the sixth century; and even then its adoption made very slow progress. There is an ambiguity connected with the Christian era, which must be borne in mind in comparing ancient dates. Some chronologists reckon the year immediately before the birth of Christ, as 1 B.C.; while others call it 0 B.C., reserving 1 B.C. for the actual year of the birth. There is much to be added in favour of each of these plans; but it suffices to say that the former is the one most usually adopted.

The Julian Period is a measure of time proposed by Joseph Scaliger, consisting of the very long period of 7980 years. It is not, properly speaking, a chronological era; but it is much used by chronologists on account of its affording considerable facilities for comparing different eras with each other, and in marking, without ambiguity, the years before Christ. The number of years (7980) forming the Julian period, marks the interval after which the sun, moon, and earth will come round to exactly the same positions as at the commencement of the cycle. The exact explanation is too technical to be given here; but we may mention the following two rules:—To convert any date B.C. into the Julian system, subtract the year B.C. from 4714, and the remainder is the corresponding date in the Julian period; to convert any date A.D. into the Julian system, add 4713 to the year of the Christian era.

The Mohammedan Era, used by most or all Mohammedan nations, dates from the flight of Mohammed to Medina—the 16th of July, 622 A.D. This date is known as the Hegira, or flight. As the Christian era is supposed to begin on the 1st of January, year 0, a process of addition will easily transfer a particular date from the Mohammedan to the Christian era.

For some purposes, it is useful to be able to transfer a particular year from the Roman to the Christian era. The rule for doing so is this: If the given Roman year be less than 754, deduct it from 754; if the given Roman year be not less than 754, deduct 754 from it; the remainder gives the year B.C. in the one case, and A.D. in the other.

In like manner it may be useful to know how to convert years of the Greek Olympiads to years of the Christian era. It is done thus: Multiply the next preceding Olympiad by 4, and add the odd years; subtract the sum from 777 if before Christ,
or subtract 776 from the sum if after Christ; and the remainder will be the commencement of the given year—generally about the middle of July in the Christian era.

In regard to all these five eras (and many others of less importance), there is difficulty and confusion in having to count sometimes backwards and sometimes forward, according as a particular date is before or after the commencement of the era. To get over this complexity, the "Creation of the World has been adopted, by Christians and Jews alike, as the commencement of a universal era. This would be unexceptionable, if authorities agreed as to the number of years which elapsed between that event and the birth of Christ; but so far are they from agreeing, that, according to competent authorities, there are one hundred and forty different computations of this interval! The one most usually adopted by English writers is 4004 years; but they vary from 3616 up to 6454 years. The symbol A.D., or Anno Domini, signifying 'year of the Lord,' is arrived at by adding 4004 to the Christian designation for the year—that is, if the popular English chronology be adopted. There are, however, three other calculations for the year of the world that have acquired some historical note; and the best almanacs now give the following among other adjustments of eras—taking the year 1665 as an example.

Christian Era (A. D.), 1565
Roman Year (A. v. c.), 2618
Anno Mundi (Jewish account), 5623
- (Alexandrian account), 7355
- (Constantinopolitan), 7371
- (Popular Chronology), 5567
Mohammedan Era (A. H.), 1279
Julian Period, 6576

Sir Isaac Newton and the Apple.

The Christmas-day of 1642 was marked by the birth of one of the world's greatest men—one who affected more than any other person in rendering the world familiar to us, in an astronomical point of view. During his long and invaluable life, which extended to the 30th of March 1727 (he presided at the meeting of the Royal Society as late as the 26th of February in that year, when more than eighty-four years of age), his researches extended over an illimitable domain of science, and are imperishably written on the page of philosophy. One or two incidents connected with his life will be found narrated in a previous article (vol. i. p. 393); but we may suitably notice, in this place, the remarkable way in which the grandest and most sublime of all his discoveries has become popularly associated with a very trivial circumstance—the fall of an apple.

It is curious to trace the manner in which this apple-story has been told by different writers, and the different opinions formed concerning it. Pemberton, who received from Newton himself the history of his first idea of gravitation, does not mention the apple, but speaks simply of the idea having occurred to the philosopher 'as he sat alone in a garden.' Voltaire says: 'One day, in the year 1666, Newton went into the country, and seeing fruit fall from a tree (as his niece, Madame Conduit, has informed me), entered into a profound train of thought as to the causes which could lead to such a drawing-together or attraction.' Martin Folkes speaks of the fruit being an apple. Hegel, referring to this subject, alludes contemptuously to the story of the apple, as a modern version of the history of the tree of knowledge, and the serpent beguiled Eve. Gauss, a great mathematician, who believes that a philosopher worthy of the name would not need to have his attention drawn to the subject by so trivial an incident, says: 'The history of the apple is too absurd. Whether the apple fell or not, how can any one believe that such a discovery could in that way be accelerated or retarded? Undoubtedly, the occurrence was something of this sort. There comes to Newton a stupid importunate man, who asks him how he hit upon his great discovery. When Newton had convinced himself what a noodle he had to do with, and wanted to get rid of the man, he told him that an apple fell on his nose; and this made the matter quite clear to the man, and he went away satisfied.'

Sir David Brewster, in his Life of Newton, does not expressly declare either his acceptance or rejection of the apple-legend; but his tone denotes the former rather than the latter. He considers the date to have been more probably 1665 than 1666, when the 'apple is said to have fallen from the tree at Woolsthorpe, and suggested to Newton the idea of gravity.' When sitting alone in the garden, and speculating on the power of gravity, it occurred to him that as the same power by which the apple fell to the ground was not sensibly diminished at the greatest distance from the centre of the earth to which we can reach, neither at the summits of the loftiest spires, nor on the tops of the highest mountains, it might extend to the moon and retain her in her orbit, in the same manner as it bends into a curve a stone or a cannon-ball, when projected in a straight line from the surface of the earth. If the moon was thus kept in her orbit by gravitation to the earth, or, in other words, its attraction, it was equally probable, he thought, that the planets were kept in their orbits by gravitating towards the sun. Kepler had discovered the great law of the planetary motions, that the squares of their periodic times were as the cubes of their distances from the sun; and hence Newton drew the important conclusion, that the force of gravity or attraction, by which the planets were retained in their orbits, varies as the square of their distances from the sun. Knowing the force of gravity at the earth's surface, he was, therefore, led to compare it with the force exhibited in the actual motion of the moon, in a circular orbit; but having assumed that the distance of the moon from the earth was equal to sixty of the earth's semidiameters, he found that the force by which the moon was drawn from its rectilinear path in a second of time was only 139 feet, whereas, at the surface of the earth it was 161 feet. This great discrepancy between his theory and what he then considered to be the fact, induced him to abandon the subject and knowledge, which the moon fruits had been previously occupied.' In a note, Sir David advert to the fact that both Newton's niece and Martin Folkes (who was at that time president of the Royal Society) had mentioned the story of the apple; but that neither Whiston nor Pemberton had done so. He speaks of a proceeding of his own, which denotes an affection towards Newton's.
Sir Isaac Newton, such as might be felt by one who believed the story: 'We saw the apple-tree in 1814, and brought away a portion of one of its roots. The tree was so much decayed that it was taken down in 1830, and the wood of it carefully preserved by Mr. Turner of Stoke Rochford.'

Professor De Morgan, in a discussion which arose on this subject a few years ago in the pages of Notes and Queries, points out somewhat satirically, that the apple-tree, having stood in Newton's garden, goes very little way towards proving that the fall of an apple from that tree suggested the mighty theory to the philosopher; and he illustrates it by the story of a man who once said: 'Sir, he made a chimney in my father's house, and the bricks are alive to this day to testify it; therefore deny it not.' Mr. De Morgan believes that the current story grew out of a conversation, magnified in the way of which we have such a multitude of instances. Sir Isaac, in casual talk with his niece, may have mentioned the fall of some fruit as having once struck his mind, when he was pondering on the moon's motion; and she, without any intention of deceiving, may have recalled this conversation in a way calculated to give too much importance to it. The story of the apple is pleasant enough, and would need no help of us discussion, if it were not connected with a remarkable misapprehension. As told, the myth is made to convey the idea that the fall of an apple put into Newton's mind what had never entered into the mind of any one before him—namely, the same kind of attraction between several bodies as exists between an apple and the earth. In this way, the real glory of such men as Newton is lowered. It should be known that the idea had been for many years floating before the minds of physical inquirers, in order that a proper estimate may be formed of the way in which Newton's power cleared away the confusion, and vanquished the difficulties which had prevented very able men from proceeding beyond conjecture. Mr. De Morgan proceeds to show how, on M. Legendre's theory of attractions, however vague or obscure the matter of the apple may have been, it showed no more than any other universal law of nature. His account of the miracle is a true one, and one which, with an account of the Marvelous Thorn, that blows still on Christmas-day, and the wonderful Walnut-tree, that annually used to blow upon St. Barnaby's Day, 'My curiosity,' he says, 'having led me twice to Glastonbury within these two years, and inquiring there into the antiquity, history, and rarities of the place, I was told by the innkeeper where I set up my horses, who rents a considerable part of the enclosure of the late dissolved abbey, that St. Joseph of Arimathea landed not far from the town, at a place where there was an oak planted in memory of his landing, called the Oak of Avalon; that he (Joseph) and his companions marched thence to a hill near a mile on the south side of the town, and there being weary rested themselves, which gave rise to the name Weary-all-Hill; that St. Joseph stuck on the hill his staff, being a dry hawthorn-stick, which grew, and constantly budded and blew upon Christmas-day; but, in the time of the Civil Wars, that thorn was grubbed up. However, there were, in the town and neighbourhood, several trees raised from that thorn, which yearly budded and blew upon Christmas-day, as the old root did.'

Eyton states that he was induced, by this narrative, to search for printed notices of this famous thorn; and he came to a conclusion, that 'whether it sprang from St. Joseph of Arimathea's dry staff, stuck by him in the ground when he rested there, I cannot find, but beyond all dispute it sprang up miraculously.' This tree, growing on the south ridge of Weary-all-Hill (locally abbreviated into Wervall), had a double trunk in the time of Queen Elizabeth; 'in whose days a saint-like Puritan, taking offence at it, hewed down the biggest of the two trunks, and had cut down the other body in all likelihood, had he not been miraculously punished by cutting his leg, and one of the chips flying up to his head, which put out one of his eyes. Though the trunk cut off was separated quite from the root, excepting a little of the bark which stuck to the rest of the body, and lay above the ground about thirty years together, yet it still
continued to flourish as the other part of it did which was left standing; and after this again, when it was quite taken away, and cast into a ditch, it flourished and budded as it used to do before. A year after this, it was stolen away, not known by whom or whither. We are then, on the authority of a Mr Broughton, told how the remaining trunk appeared, after its companion had been lopped off and secretly carried away. 'The remaining trunk was as big as the ordinary body of a man. It was a tree of that kind and species, in all natural respects, which we term a white thorn; but it was so cut and mangled round about in the bark, by engraving people's names resorting hither to see it, that it was a wonder how the sap and nutriment should be diffused from the root to the branches thereof, which were also so maimed and broken by comers thither, that I wonder how it could continue any vegetation, or grow at all; yet the arms and boughs were spread and diluted in a circular manner as far or further than any other tree in the Churchyard, near St Jossom's Church, bearing haws as fully and plentifully as others do. The blossoms of this tree were such curiosities beyond seas, that the Bristol merchants carried them into foreign parts.' But this second trunk—which bore the usual infallibility of the names of silly visitors—was in its turn doomed to destruction. This trunk was likewise cut down by a military saint, as Mr Andrew Paschal calls him, in the rebellion which happened in King Charles I's time. However, there are at present divers trees from it, by grafting and inoculation, preserved in the town and country adjacent; amongst other places, there is one in the garden of a currier, living in the principal street; a second at the White Hart Inn; and a third in the garden of William Strode, Esquire. Then ensues a specimen of trading, by no means rare in connection with religious relics: 'There is a person about Glastonbury who has a nursery of them, who, Mr Paschal tells us he is informed, sells them for a crown a piece, or as he can get.' Nothing is more probable. That there was a thorn-tree growing on the hill, is undeniable; and if there was any religious legend concerning its mode of getting there, a story may have been made up to suit the purpose. When young plants, after the old one had disappeared. Down to very recent times, thorn-trees have been shewn in various parts of Somersetshire, each claiming to be the Glastonbury thorn. In Withering's 'Arrangement of British Plants,' the tree is described botanically, and then (in the edition of 1815) the author says: 'It does not grow within the abbey at Glastonbury; but in a lane beyond the churchyard, on the other side of the street, by the side of a pit. It appears to be a very old tree: an old woman of ninety (about thirty years ago) never remembers it otherwise than it now appears. There is another tree of the same kind, two or three miles from Glastonbury. It has been reported to have no thorns; but that I found to be a mistake. It has thorns, like other Hawthorns, but with thin leaves in late May and early June. It is said to blossom twice a year. The winter blossoms, which are about the size of a sixpence, appear about Christmas, and sooner if the winter be severe.' Concerning the alleged flowering of the tree on Christmas-day especially, there is a curious entry in the 'Gentleman's Magazine' for January 1783, when the public were under some embarrassment as to dates, owing to the change from the old style to the new. 'Glastonbury.—A vast concourse of people attended the noted thorn on Christmas-day, new style; but, to their great disappointment, there was no appearance of its blooming, which made them watch it narrowly the 5th of January, the Christmas-day, old style, when it bloomed as usual.' Whether or not we credit the fact, that the tree did blossom precisely on the day in question, it is worthy of note that although the second trunk of the famous legendary tree had been cut down and removed a century before, some one particular tree was still regarded as the wonderful shrub in question, the perennial miracle.

A thorn-tree was not the only one regarded with reverence at Glastonbury. Mr Eyton thus informs us of another:—'Besides the Holy Thorn, Mr Camden says there was a miraculous Walnut-Tree, which, by the marginal notes that Mr Gibeson hath set upon Camden, I found grew in the Holy Chappel, but that they say, never budded forth before the Feast of St Barnabas, which is on the eleventh of June, and on that very day shot out leaves and flourisht then as much as others of that kind. Mr Broughton says the stock was remaining still alive in his time, with a few small branches, which continued yearly to bring forth leaves upon St Barnabas's Day as usual. The branches, when he saw it, being too small, young, and tender to bring forth fruit, or sustain their weight; but now this tree is likewise gone, yet there is a young tree planted in its place, but whether it blows, as the old one did, or, indeed, whether it was raised from the old one, I cannot tell. Doctor James Montagus, Bishop of Bath and Wells in King James I's days, was so wonderfully taken with the extraordinaryness of the Holy Thorn, and this Walnut-Tree, that he thought a branch of these trees was worthy the acceptance of the then Queen Anne, King James I's consort. Fuller, indeed, ridicules the Holy Thorn; but he is severely reproved for it by Doctor Heylin (another Protestant writer), who says 'he hath heard from persons of great worth and credit, dwelling near the place, that it had budded and bloomed upon Christmas Day,' as we have above shewn. A flat stone, with certain initials cut in it, at the present day marks the spot where the famous tree once stood, and where, according to the legend, Joseph of Arimathaea stuck his pilgrim's staff into the ground.

CHRISTMAS CUSTOM AT CUMOR.

There is a pleasant Christmas custom connected with the parish of Cumnor, in Berkshire, the church of which is a vicarage, and a beautiful specimen of the venerable parochial edifices of that kind in England. On Christmas-day, after evening-service, the parishioners, who are liable to pay any tithes, repair to the vicarage, and are there entertained with bread, cheese, and ale. It is no benefit on the part of the vicar, but claims a right on the part of the parishioners, and even the quantity of the good things which the vicar brings forward is specified. He must have four bushels of malt brewed in ale and small-beer, two bushels of wheat made into bread, and half a hundredweight of cheese; and whatever remains

789
unconsumed by the vicarage-payers is distributed next day, after morning-prayers, among the poor. In connection with this parish, there is another curious custom, arising from the fact that Cassenton, a little district on the opposite side of the Thames, was once a part of it. The Cassenton people had a space on the north side of the church set apart for their burials, and on this account paid sixpence a year to Cumnor. They had to bring their dead across the Thames at Somerford Mead, where the plank stones they used in crossing remained long after visible; thence they came along a 'riding' in Cumnor Wood, which they claimed as their church-way, beginning the psalm-singing at a

particular spot, which marked the latter part of the ceremonial.

Not less curious is the perambulation performed in this parish during Rogation week. On arriving at Swinford Ferry, the procession goes across and lays hold of the twigs on the opposite shore, to mark that they claim the breadth of the river as within the bounds of the parish. The ferryman then delivers to the vicar a noble (6s. 8d.), in a bowl of the river-water, along with a clean napkin. The vicar fishes out the money, wipes his fingers, and distributes the water among the people in commemoration of the custom. It seems a practice such as the Total Abstinence Society would approve of; but we are bound to narrate that the vicarages collected on the occasion, are for the most part diffused, in the form of ale, among the thirsty parishioners.*

760

THE SEVERE CHRISTMAS OF 1860: INTENSE COLD AND ITS EFFECTS.

The Christmas of 1860 is believed to have been the severest till then experienced in Britain. At nine o'clock in the morning of Christmas-day in that year, the thermometer, at the Royal Humane Society's Receiving House, in Hyde Park, London, marked 16° Fahrenheit, or 17° below the freezing-point, but this was a mild temperature compared with what was prevalent in many parts of the country during the preceding night. Mr E. J. Lowe, a celebrated meteorologist, writing on 25th December to the Times, from his observatory at Beeston, near Nottingham, says: 'This morning the temperature at four feet above the ground was 8° below zero, and on the grass 13.8° below zero, or 45° of frost. . . . The maximum heat yesterday was only 20°, and from 7 P.M. till 11 A.M. the
THE SEVERE CHRISTMAS OF 1860:

DECEMBER 25.

INTENSE COLD AND ITS EFFECTS.

The temperature never rose as high as zero of Fahrenheit's thermometer. At the present time (12.30 P.M.), the temperature is 1° above zero, as far as 40° above the ground. Other observations recorded throughout England correspond with this account of the intensity of the cold, by which, at a nearly uniform rate, the three days from the 24th to the 26th December were characterised. The severity of that time must still be fresh in the memory of our readers. In the letter of Mr. Lowe, above quoted, he speaks of having "just seen a horse pass with icicles on his nose that reached in length, at least, to his three fingers." Those who then wore mustaches must remember how that appendage to the upper-lip became, through the congelation of the vapour of the breath, almost instantaneously stiff and matted together, as soon as the wearer put his head out of doors.

What made this severity of cold the more remarkable, was the circumstance that for many years past destruction of the vineyards of the British Islands had experienced a succession of generally mild winters, and the present generation had almost come to regard as legendary the accounts which their fathers related to them of the hard frosts and terrible winters of former times. Here, therefore, was an instance of a reduction of temperature unparalleled, not only in the recollection of the oldest person living, but likewise in any trustworthy record of the past.

During the three days referred to, the damage inflicted on vegetation of all kinds was enormous. The following account of the effects of the frost in a single garden, in a well-wooded part of the county of Suffolk, may serve as a specimen of the general damage occasioned throughout England. The garden referred to is bounded on the west by a box-hedge, and on the south by a low wall, within which was a strip of shrubbery consisting of laurels, Portugal laurels, laurus rustica, red cedar, arbor vitae, phillyrea, &c. Besides these, there stood in the garden some evergreen oaks, five healthy trees of some forty years' growth, two yews (which were of unknown age, but had been large trees beyond the memory of man), and a few younger ones between thirty and forty years old. All these, with the exception of the young yews and box, some of the arbor vitae, and some little evergreen oaks, were either killed outright, or else so injured that it became necessary to cut them down. Nor was this done hastily without waiting to see whether they would recover themselves; ample time was given for discovering whether it was only a temporary check from which the trees and shrubs were suffering, or whether it was an indication of destruction of part of them which was above ground. In some cases, it was found that the root was still alive, and this afterwards sent forth fresh shoots, but in other cases it turned out to be a destruction literally "root and branch." Some of the trees, indeed, after having been cut down level with the ground, made a desperate attempt to revive, and sent up apparently healthy shoots; but the attempt was unsuccessful, and the shoots withered.

Nor was the damage confined to the evergreens: fruit-trees suffered also; for instance, apple-trees put forth leaves and flowers, which looked well enough for a time, but, before the summer was over, these withered, as if they had been burned; while one large walnut-tree, half a century old, not only had its young last year's shoots killed, but lost some of its larger branches.

Beyond the limits of the garden referred to, the effects of this frost were no less remarkable. Elm-trees were great sufferers; they, along with the very oaks, had many of their outer twigs killed; and a magnificent, perhaps unique, avenue of cedars of Lebanon, which must have been among the oldest of their kind in the kingdom (they were only introduced in Charles II.'s reign) was almost entirely ruined.

Notwithstanding this unexampled descent of temperature, the nadir,* as it may be termed, of cold till then experienced in Britain, the period during which it continued to prevail was of such short duration that there was no time for it to effect those wonderful results which we read of in former times as occasioned by a severe and unusually protracted frost. In a former part of this work (Vol. i. p. 105) we have given an account of several remarkably hard frosts, which are recorded to have taken place in England. From a periodical work we extract the following notice of similar instances which occurred chiefly on the continent of Europe in past ages. * In the year 401, the Black Sea was entirely frozen over. In 465, the Danube was frozen, so that Theodoric marched on the ice to Swabia, to avenge his brother's death. In 763, the cold was so intense that the Strait of Dardanelles and the Black Sea were entirely frozen over. The snow, in some places, drifted to the depth of fifty feet, and the ice was heaped in such quantities on the cities as to cause the walls to fall down. In 890, the Adriatic was entirely frozen over. In 891 and 893, the vines were killed by frost, and cattle died in their stalls. In 991, the winter lasted very long and was extremely severe. Everything was frozen over, and famine and pestilence closed the year. In 1067, the cold was so intense that most of the travellers in Germany were frozen to death on the roads. In 1133, it was excessively cold in Italy; the Po was frozen from Cremona to the sea, while the heaps of snow rendered the roads impassable; wine-casks burst and trees split by frost with an immense noise. In 1294, a pine-forest was killed by frost at Ravenna. In 1299, the Rhine was frozen in Scotland, and the Cattegat was frozen between Norway and Jutland. In 1281, the houses in Austria were covered with snow. In 1299, the Rhine was frozen; and in Germany 600 peasants were employed to clear the way for the Austrian army. In 1344, all the rivers in Italy were frozen. In 1498, the winter was so severe in Flanders that the wine was cut with hatchets to be distributed to the soldiery. In 1594, the winter was so severe that the Rhine and Scheldt were frozen, and even the sea at Venice. In 1670, the frost was very intense in England and Denmark; both the Little and Great Belt were frozen over. In 1684, many forest-trees and oaks in England were split with the frost. In 1691, the cold was so intense, that the starved wolves entered Vienna. The cold of 1749 was scarcely inferior to that of 1709. In 1776 there was very keen cold.

In the winter of 1848—1849, the public journals

* Since 1880, the winters of 1870-71, 1877-78, 1879-80, and 1889-90 have been very severe.

761
recorded that the mercury, on one occasion, froze in the thermometers at Aggershusen, in Sweden. Now, as mercury freezes at 39° below zero, we know that the temperature must have been at least as low as this—perhaps several degrees lower. And yet, as we shall afterwards shew, lower degrees of temperature even than this have been experienced by the Arctic voyagers.

As might be expected, it is from the latter voyages that we obtain such instructive information concerning low temperatures. In the long and gloomy winter of the polar regions, the cold assumes an intensity of which we can form little conception. Mercurial thermometers often become useless; for when the mercury solidifies, it can sink no further in the tube, and ceases to be a correct indicator. As a more available instrument, a spirit-thermometer is then used, in which the place of mercury is supplied by rectified spirit of wine. With such thermometers, our Arctic explorers have recorded degrees of cold far below the freezing-point of mercury. Dr. Kane, the American Arctic explorer, in his narrative of the Grinnell Expedition in search of Franklin, records having experienced —43° on the 7th February 1851; that is, 74° of frost, or 3° below the freezing-point of mercury.

Let us conceive what it must have been to act a play, in a temperature only a few degrees above this! A week after the date last mentioned, the crew of the ship engaged in the expedition referred to, performed a farce called The Mysteries and Miseries of New York! The outside temperature on that evening was —30°; in the theatre, it was —22° behind the scenes, and —50° in the audience department. One of the sailors had to enact the part of a damsel with bare arms; and when a cold flat-iron, part of the properties of the theatre, touched his skin, the sensation was like that of burning with a hot-iron. But this was not the most arduous of their dramatic exploits. On Washington’s birthday, February 23, the crew had another performance. The ship’s thermometer outside was at —46°; while the audience and actors, by aid of lamps, lampas, and hangings, got as high as —30°, only 82° below the freezing-point—perhaps the lowest atmospheric record of a theatrical representation. It was a strange thing altogether. The condensation was so excessive, that we could barely see the performers; they walked in a cloud of vapour. Any extra vehemency of delivery was accompanied by volumes of smoke. Their hands steamed. When an excited Thespian took off his coat, it smoked like a dish of potatoes.

Dr. Kane records having experienced as low a temperature as —53°, or 80° below the freezing-point; but even this is surpassed in a register furnished by Sir Edward Belcher, who, in January 1854, while in a whaler at 80° below zero, accurately, endured for eighty-four consecutive hours, a temperature never once higher than —50°. One night it sank to —59°; and on another occasion the degree of cold reached was —62°, or 94° below the freezing-point!

Dr. E. D. Clarke, the celebrated traveller, told Dr. Whiting that he was once nearly frozen to death—not in any remote polar region, but in the very matter-of-fact county of Cambridge. After performing divine service at a church near Cambridge, one cold Sunday afternoon in 1618, he mounted his horse to return home. Sleepiness came upon him, and he dismounted, walking by the head of his horse; the torpor increased, the reins dropped from his hand, and he was just about sinking—prostrate, it seemed to rise—when a passing traveller rescued him. This torpor is one of the most perilous accompaniments of extreme cold, and is well illustrated in the anecdote related of Dr. Solander in a previous article.

Sir Edward Parry remarks, in reference to extremely low temperatures: ‘Our bodies appeared to adapt themselves so readily to the climate, that the scale of our feelings, if I may so express it, was soon reduced to a lower standard than ordinary; so that after being for some days in a temperature of —15° or —20°, it felt quite mild and comfortable when the thermometer rose to zero’—that is, when it was 32° below the freezing-point. On one occasion, speaking of the cold having reached the degree of —58°, he says: ‘Not the slightest inconvenience was suffered from exposure to the open air by a person well clothed, as long as the weather was perfectly calm; but in walking against a very slight air of wind, a smarting sensation was experienced all over the face, accompanied by a pain in the middle of the forehead, which soon became rather severe.’ As a general remark, Parry on another occasion said: ‘We find it necessary to use great caution in handling our sextants and other instruments, particularly the eye-pieces of telescopes, which, if suffered to touch the face, occasioned an intense burning pain.’ Sir Leopold McClintock, while sledding over the ice in March 1859, trudged with his men eight hours at a stretch, over rough hummocks of ice, without food or rest, at a temperature of —45°, or eighty degrees below the freezing-point, with a wind blowing 30° at the time. In one of the expeditions a sailor inadvertently did some of his outdoor work without mittens; his hands froze; one of them was plunged into a basin of water in the cabin, and the intense cold of the hand instantly froze the water, instead of the water thawing the hand! Poor fellow: his hand required to be chopped off.

Dr. Kane, who experienced more even than the usual share of sufferings attending these expeditions, narrates many anecdotes relating to the cold. One of his crew put an icicle at —28° into his mouth, to crack it; one fragment stuck to his tongue, and two to his lips, each taking off a bit of skin—burning it off, if this term might be used in an inverse sense. At —25°, ‘the beard, eyebrows, eyelashes, and the downy pubescence of the ears, acquire a delicate, white, and perfectly enveloping cover of venerable hoar-frost. The mouth, cheeks, and under-lip form pendulous beads of dangling ice. Put out your tongue, and it instantly freezes to this icy crustling, and a rapid effort, and some hand-aid will be required to liberate it. Your chin has a trick of freezing to your upper-jaw by the luting aid of your beard; my eyes have often been so glued, as to shew that even a wink may be unsafe.’
reference to the torpor produced by extreme cold, Dr. Kane further remarks: 'Sleepiness is not the sensation. Have you ever received the shocks of a magneto-electric machine, and had the peculiar numbing sensation of "Can't let go," extending up to the neck and shoulders? Deprive this of its paroxysmal character; subdue, but diffuse it over every part of the system—and you have the so-called pleasurable feelings of incipient freezing.' One day he walked himself into 'a comfortable perspiration,' with the thermometer seventy degrees below the freezing-point. A breeze sprang up, and instantly the sensation of cold was intense. His beard, coated before with icicles, seemed to bristle with increased stiffness; and an unfortunate hole in the back of his mitten 'stung like a burning coal.' On the next day, while walking, his beard and moustache became one solid mass of ice. 'I inadvertently put out my tongue, and it instantly froze fast to my lip. This being nothing new, costing only a smart pull and a bleeding afterward, was pursued by my mouth hands to "black hot," and thus the unruly member from its imprisonment. Instead of succeeding, my mitten was itself a mass of ice in a moment; it fastened on the upper side of my tongue, and flattened it out like a batter-cake between the two disks of a hot griddle. It required all my care with the bare hands to release it, and then not without laceration.'

The following remarkable instances of the disastrous results of extreme cold in Canada are related by Sir Francis Head:—'One day inquired of a fine, ruddy, honest-looking man, who called upon me, and whose toes and insteps of each foot had been truncated, how the accident happened? He told me that the first winter he came from England, he lost his way in the forest, and that after walking for some hours, feeling pain in his feet, he took off his boots, and from the flesh immediately swelling, he was unable to put them on again. His stockings, which were very old ones, soon wore into holes, and as rising on his insteps he was hurriedly proceeding he knew not where, he saw with alarm, but without feeling the slightest pain, first one toe and then another break off, as if they had been pieces of brittle stick; and in this manner he continued to stagger on until he reached a path which led him to an inhabited log-house, where he remained suffering great pain till his cure was effected.'

On another occasion, while an Englishman was driving, one bright beautiful day, in a sleigh on the ice, his horse suddenly ran away, and fancying he could stop him better without his cumbersome fur-gloves than with them, he unfortunately took them off. As the infuriated animal at his utmost speed proceeded, the man, who was facing a keen north-west wind, felt himself gradually, as it were, turning into marble; and by the time he stopped, both his hands were so completely and so irrecoverably frozen, that he was obliged to have them amputated.'

Englishmen, take them one with another, bear up against this dearth better than against intense heat, one principal reason being, that the air is in such circumstances less tainted with the seeds of disease. They are then more lively and cheerful, feel themselves necessitated to active and athletic exertion, and become, consequently, better able to combat the adverse influences of a low degree of temperature.

DECEMBER 26.

St Stephen, the first martyr. St Dionysius, pope and confessor. 269. St Tarlath, confessor, first bishop of Tuam, in Ireland, 6th century.

St Stephen's Day.

To St Stephen, the Proto-martyr, as he is generally styled, the honour has been accorded by the church of being placed in her calendar immediately after Christmas-day, in recognition of his having been the first to seal with his blood the testimony of fidelity to his Lord and Master. The year in which he was stoned to death, as recorded in the Acts of the Apostles, is supposed to have been 33 A.D. The festival commemorative of him has been retained in the Anglican calendar.

A curious superstition was formerly prevalent regarding St Stephen's Day—that horses should then, after being fast well galled, be copiously let blood, to insure them against disease in the course of the following year. In Barnaby Goes' translation of Naasporius, the following lines occur relative to this popular notion:

'If then followeth Saint Stephen's Day, whereon doth every man
His horses jaunt and course abroad, as swiftly as he can,
Until they do extremely sweat, and then they let them blood,
For this being done upon this day, they say doth do them good,
And keepeth them from all maladies and sicknesses through the yeare,
As if that Steven any time tokest charge of horses heare.'

The origin of this practice is difficult to be accounted for, but it appears to be very ancient, and Dunsce supposes that it was introduced into this country by the Danes. In one of the manuscripts of that interesting chronicler, John Aubrey, who lived in the latter half of the seventeenth century, occurs the following record: 'On St Stephen's Day, the farrier came constantly and bled all our cart-horses.' Very possibly convenience state his circumstance, indebted on the occasion with superstition, for in Tusser's Rudimentary, a work published in the middle of the last century, we find this statement: 'About Christmas is a very proper time to bleed horses in; for then they are commonly at house, then spring comes on, the sun being now coming back from the winter-solstice, and there are three or four days of rest, and if it be upon St Stephen's Day it is not the worse, seeing there are with it three days of rest, or at least two.'

In the parish of Drayton Beauchamp, Bucks, there existed long an ancient custom, called Stepheining, from the day on which it took place. On St Stephen's Day, all the inhabitants used to pay a visit to the rector, and practically assert their right to partake of as much bread and cheese and ale as they chose without expense. On one of these occasions, according to local tradition, the then rector, being a penurious old bachelor, determined to put a stop, if possible, to this rather expensive and unceremonious visit from his parishioners. Accordingly, when St Stephen's Day arrived, he ordered his housekeeper not to open the
CHRISTMAS-BOXES.

The institution of Christmas-boxes is evidently akin to that of New-year's gifts, and, like it, has descended to us from the times of the ancient Romans, who, at the season of the Saturnalia, practised universally the custom of giving and receiving presents. The fathers of the church denounced, on the ground of its pagan origin, the observance of such a custom by the Christians; but their anathemas had little practical effect, and in process of time, the custom of Christmas-boxes and New-year's gifts, like others adopted from the heathen, attained the position of a universally recognised institution. The church herself has even got the credit of originating the practice of Christmas-boxes, as will appear from the following curious extract from The Athenian Oracle of John Dunton; a sort of primitive Notes and Queries, as it is styled by a contributor to the periodical of that name.

'Q. From whence comes the custom of gathering of Christmas-box money? And how long since?

A. It is as ancient as the word mass, which the Romish priests invented from the Latin word missa, to send, by putting the people in mind to send gifts, offerings, oblations; to have masses said for everything almost, that no ship goes out to the Indies, but the priests have a box in that ship, under the protection of some saint. And for masses, as they cant, to be said for them to that saint, &c., the poor people must put in something into the priest's box, which is not to be opened till the ship return. Thus the mass at that time was Christ's mass, and the box Christ's mass-box, or money gathered against that time, that masses might be made by the priests to the saints, to forgive the people the debaucheries of that time; and from this, servants had liberty to get box-money, because they might be enabled to pay the priest for masses—because, No penny, no potenost—for though the rich pay ten times more than they can expect, yet a priest will not say a mass or anything to the poor for nothing; so charitable they generally are.'

The charity thus ironically ascribed by Dunton to the Roman Catholic clergy, can scarcely, so far as the above extract is concerned, be warrantably claimed by the whimsical author himself. His statement regarding the origin of the custom under notice may be regarded as an ingenious conjecture, but cannot be deemed a satisfactory explanation of the question. As we have already seen, a much greater antiquity and diversity of origin must be asserted.

This custom of Christmas-boxes, or the bestowing of certain expected gratuities at the Christmas season, was formerly, and even yet to a certain extent continues to be, a great nuisance. The journeymen and apprentices of trades-people who went to levy regular contributions from their masters' customers, who, in addition, were mulcted by the trades-people in the form of augmented charges in the bills, to recompense the latter for gratuities expected from them by the customers' servants. This most objectionable usage is now greatly diminished, but certainly cannot yet be said to be extinct. Christmas-boxes are still regularly expected by the postman, the lamplighters,
CHRISTMAS BOXES.

DECEMBER 26.

CHRISTMAS PANTOMIMES.

the dustman, and generally by all those functionaries who render services to the public at large, without receiving payment therefor from any particular individual. There is also a very general custom at the Christmas season, of masters presenting their clerks, apprentices, and other employees, with little gifts, either in money or kind.

St Stephen's Day, or the 26th of December, being the customary day for the claimants of Christmas-boxes going their rounds, it has received popularly the designation of Boxing-day. In the evening, the new Christmas pantomime is generally produced for the first time; and as the pockets of the working-classes, from the causes which we have above stated, have commonly received an extra supply of funds, the theatres are almost universally crowded to the ceiling on Boxing-night; whilst the 'gods,' or upper gallery, exercise even more than their usual authority. These interested in theatrical matters aware with considerable eagerness the arrival, on the following morning, of the daily papers, which have on this occasion a large space devoted to a chronicle of the pantomimes and spectacles produced at the various London theatres on the previous evening.

In conclusion, we must not be too hard on the system of Christmas-boxes or *handeals,* as they are termed in Scotland, where, however, they are scarcely ever claimed till at the commencement of the New Year. That many abuses did and still do cling to them, we readily admit; but there is also intermingled with them a spirit of kindness and benevolence, which it would be very undesirable to extirpate. It seems almost instinctive for the generous side of human nature to bestow some reward for civility and attention, and an additional incentive to such liberality is not unfrequently furnished by the belief that its recipient is but inadequately remunerated otherwise for the duties which he performs. Thousands, too, of the commonalty look eagerly forward to the forthcoming gordon on Boxing-day, as a means of procuring some little unwonted treat or relaxation, either in the way of sight-seeing, or some other mode of enjoyment. Who would desire to abridge the happiness of so many?

CHRISTMAS PANTOMIMES.

Pantomimic acting had its place in the ancient drama, but the grotesque performances associated with our English Christmas, are peculiar to this country. Gibber says that they originated in an attempt to make stage-dancing something more than motion without meaning. In the early part of the last century, a ballet was produced at Drury Lane, called the * Loves of Mars and Venus,* 'wherein the passions were so happily expressed, and the whole story so intelligibly told by a mute narration of gesture only, that even thinking-spectators allowed it both a pleasing and national entertainment.' From this sprung forth that succession of monstrous medleys that have so long infested the stage, and which arise upon another another alternately at both houses, ousting in expense, like contending bribes at both sides at an election, to secure a majority of the multitude.' Gibber's managerial rival, Rich, found himself unable, with the Lincoln's-Inn-Fields company, to compete with Drury Lane in the legitimate drama, and struck out a path of his own, by the invention of the comic pantomime. That he was indebted to Italy for the idea, is evident from an advertisement in the *Daily Courant,* for the 26th December 1717, in which his *Harlequin Executed* is described as 'A new Italian Mimic Scene (never performed before), between a Scaramouch, a Harlequin, a Country Farmer, his Wife, and others.' This piece is generally called 'the first English pantomime' by theatrical historians; but we find comic masques 'in the high style of Italy,' among the attractions of the pantomime-houses, as early as 1700. Rich seems to have grafted the scenic and mechanical features of the old masque upon the pantomimic ballet. Davies, in his *Dramatic Miscellanies,* describes Rich's pantomimes as 'consisting of two parts—one serious, the other comic. By the help of gay scenes, fine habits, grand dances, appropriate music, and other decorations, he exhibited a story from *Ovid's Metamorphoses,* or some other mythological work. Between the pauses or acts of this serious representation, he interwove a comic fable, consisting chiefly of the courtship of Harlequin and Columbine, with a variety of surprising adventures and tricks, which were produced by the magic wand of Harlequin; such as the sudden transformation of palaces and temples to huts and cottages; of men and women into wheel-barrows and joint-stools; of trees turned to houses; columns to beds of tulips; and mechanics' shops into serpents and ostriches.'

Pope complains in *The Dunciad,* that people of the first quality go twenty and thirty times to see such extravagances as—

'A sable sorcerer rise,
Swift to whose hand a winged volume flies:
All sudden, gorgons hiss and dragons glare,
And ten-horned fiends and giants rush to war.
Hell rises, Heaven descends, and dance on earth,
Gods, imps and monsters, music, rage, and mirth,
A fire, a jig, a battle and a ball.
Till one wide confusion swallows all.
Thence a new world to Nature's laws unknown,
Breaks out refugent, with a heaven its own;
Another Oynthia her journey runs,
And other planets circle other suns.
The forests dance, the rivers upward rise,
Whales sport in woods, and dolphins in the skies;
And last, to give the whole creation grace,
Lo! one vast egg produces human race.'

The success of the new entertainment was wonderfully lasting. Garrick and Shakespeare could not hold their own against Pantomime. The great actor reproaches his aristocratic patrons because—

'They in the drama find no joys,
But doat on mimicry and toys.
Thus, when a dance is in my bill,
Nobility my boxes fill;
Or send three days before the time,
To crowd a new-made pantomime.'

And *The World* (1st March 1759) proposes that pantomime shall have the boards entirely to itself.

People of taste and fashion have already given sufficient proof that they think it the highest entertainment the stage is capable of affording; the most innocent we are sure it is, for where nothing is said and nothing is meant, very little harm can be done. Mr Garrick, perhaps, may start a few
objections to this proposal; but with those universal talents which he so happily possessed, it is not to be doubted but he will, in time, be able to handle the wooden sword with as much dignity and dexterity as his brother Lum.'

The essayist does Rich injustice; the latter's Harlequin was something more than a dexterous performance. Rich was a first-rate pantomimic actor, to whom words were needless. Garrick bears impartial witness to the genius of the exhibitor of the characters of mollium. In the prologue to a pantomime with a talking-hero, produced after Rich's death, he says:

'Tis wrong.
The wits will say, to give the fool a tongue.
When Lum appeared, with matchless art and whim, He gave the power of speech to every limb;
Though masked and mute, conveyed his quick intent,
And told in frolic gestures all he meant.

At this time the role of Harlequin was not considered derogatory to an actor as it is now—Woodward, who established his reputation by playing such characters as Lord Poplington, Mann, and Sir Andrew Aguescheek, was equally popular as the party-coloured hero.

In the hands of Lum's successors, Harlequin sadly degenerated; and when Grimaldi appeared upon the scene, his genius elevated the Clown into the principal personage of the pantomime. The harlequinade still remained the staple of the piece, the opening forming a very insignificant portion. John Kemble himself did not disdain to suggest the plot of a pantomime. Writing to Tom Dibdin, he says: 'The pantomime might open with three Saxon witches lamenting Merlin's power over them, and forming an incantation, by which they create a Harlequin, who is supposed to be able to counteract Merlin in all his designs against King Arthur. If the Saxons come on in a dreadful storm, as they proceeded in their magical rites, the sky might brighten, and a rainbow sweep across the horizon, which, when the ceremonies are completed, should contract itself from either end, and form the figure of Harlequin in the heavens. The wizards may fetch him down as they will, and the sooner he is set to work the better.'—Dibdin's Reminiscences.

Dibdin himself was a prolific pantomime author; and we cannot give a better idea of what the old-fashioned pantomime was than by quoting the first scene of his Harlequin in his Element; or Fire, Water, Earth, and Air, performed at Covent Garden Theatre in 1807. The dramatica persona consists of Ignuso, the spirit of Fire; Aquina, the fairy of the Fountain; Aurino, genius of Air; Terrena, spirit of Earth; Harlequin (Mr Bologna, Junr.); Columbine (Miss Adams); Sir Amoroso Sordid, guardian to Columbine (Mr Ridgway); and Goby Grin, his servant (Mr Grimaldi).

**SCEEN I.**

A beautiful garden, with terraces, arcades, fountains, &c. The curtain rises to a soft symphony. Aurino is seen descending a light staircase: he approaches a fountain in the centre of the garden, and begins the following duet:

_Aurino._ Aquina! Fountain Fairy! The genius of the Air Invites thee here From springs so clear, With love to banish care.

_Aquina._ Rises from fountain.

_Aurino._ Airy charmer, Behold thy nymph appear. What peril can alarm her, When thou, my love, art near?

_Terrena._ Rises from the earth, and addresses the other two.

_Terr._ Why rudely trample thus on Mother Earth! Fairies, ye know this ground's my right by birth. These pranks I'll punish: Water shall not rise Above her level; Air shall keep the skies.

_It thunders;_ _Ignuso_ descends.

_Ig._ 'Tis burning shame, such quarrels 'mong you three, Though I warn you, you're always cold to me. The sons of Earth, on every slight disaster, Call me good servant, but a wicked master. Of Air and Water, too, the love I doubt, One blows me up, the other puts me out. Nay, if you're angry, I'll have my turn too, And you shall see what mischief I can do!

_Ign._ Throws the fire from his wand; the flowers all wither, but are revived by the other fairies.

_Terr._ Fire, why so hot? Your bolts distress not me, But injure the fair mistresses of these bowers; Whose sordid guardian would her husband be, For laurel, not for love. Rather than quarrel, let us use our powers, And gift with magic aid some active sprite, To foil the guardian and the girl to right.

_Quartet._

_Ig._ About is quick! _Terr._ This cold to form shall grow, _Aur._ With dew refreshed— _Aqu._ With vital air— _Ign._ Warm with magic glow.

**HARLEQUIN** is produced from a bed of party-coloured flowers; the magic sword is given him, while he is thus addressed:

_Terr._ This powerful weapon your wants will provide; Then trip, _Aur._ Free as air, _Aqu._ As brisk as the tide, _Ign._ Away, while thy efforts we jointly inspire. _Terr._ Tread lightly! _Aur._ Fly! _Ign._ Run! _Aqu._ And you'll never hang fire!

_IGNUSO sinks. AQUINA strikes the fountains: they begin playing. TERRENA strikes the ground; a bed of roses appears. Harlequin surveys everything, and runs round the stage. Earth sinks in the bed of roses, and Water in the fountain. Air ascends in the car. Columbine enters dancing; is amused at the sight of Harlequin, who retires from her with equal surprise; they follow each other round the fountain in a sort of pas de deux. They are surprised by the embrace of Columbine's Guardian, who comes in, preceded by servants in rich liveries. Clown, as his running-footman, enters with a lopadog. Old Man takes snuff—visits himself in a pocket-glass. Clown imitates a lady, &c. Old Man sees Harlequin and Columbine, and pursues them round the fountain, but the lovers go off, followed by Sir Amoroso and servants.

And so the lovers are pursued by Sir Amoroso and Clown through sixteen scenes, till the fairies unite.

765
them in the Temple of the Elements. The harlequinade is full of practical jokes, but contains no
hits at the follies of the day throughout it all; the relative positions of Clown and Sir Amoroso, 
Pantaloons, or the Guardian (as he is styled indifferently), as servant and master, are carefully
preserved.
Since Dibdin's time, the pantomime has undergone a complete change. The dramatic author
furnishes only the opening; which has gradually become the least part of the piece; while the
harlequinade—left to the so-called pantomimists to arrange—is nothing but noise. Real pantomime
acting is eschewed altogether; Harlequin and Columbine are mere dancers and postureurs; and
Clown, if he does not usurp the modern Harlequin's attribute, is but a combination of the acrobat
and coarsebuffoon. The pantomime of the present
day would certainly not be recognised by Rich or
owned by Grimaldi.

Born—Guillulmus Xylander, translator of the classics,
1532, Augsburg; Thomas Gray, poet, 1716, Orphick,
London.
Died—Antoine Houdart de la Motte, dramatist, 1751,
Paris; Joel Barlow, American author and diplomatist,
1812, near Oswego; Stephen Girard, millonaire, 1831.

STEPHEN GIRARD.

In a country, destitute of a titled and hereditary aristocracy, wealth is distinction. The accumula-
tion of great wealth is evidence of strong character; and when the gathered riches are well used
and well bestowed, they give celebrity and even renown.
Stephen Girard was the son of a common sailor
of Bourdeaux, France, and was born May 21, 1750.
At the age of ten he went, a cabin-boy, to New
York, where he remained in the American coasting
trade until he became master and part-owner of
a small vessel, while he was still a youth. During
the American Revolution, he kept a grocery and
liquor-shop in Philadelphia, made money enough
from the American and British armies, as they
successively occupied the city, to embark largely
in trade with the West Indies. Fortune comes at first by slow degrees. The first thousand
pounds is the step that costs. Then, in good
hands, capital rolls up like a snow-ball. In 1790,
Girard had made $5000. Now the golden stream
began to swell. The misfortunes of others were
his gain. At the time of the terrible massacre of
St Domingo, he had some ships in a harbour of
that island. The planters sent their plate, money,
and valuables on board his vessels, and were
preparing to embark, with their families, when they
were massacred by the infuriated negroes. Property
to the value of $10,000 was left in the hands of
Girard, for which he could find no owners.
He married, but unfortunately, and soon sepa-
rated from his wife, and he had no children and
no friends. Yet this hard, money-making man
was a hero in courage and in charity. When pro-
cessing Christians fled from the yellow fever in
Philadelphia, in 1793, 1797, and 1798, Girard, who
had no religious belief, stayed in the city, and
spent day and night in taking care of the sick
and dying. As his capital accumulated, he became
a banker; and when the United States governmen,
in the war of 1812 with England, wanted a loan
of $1,000,000, and only got an offer of $4000,
Girard undertook the entire loan. When he died,
December 26, 1831, he left $1,500,000, nearly
the whole of which was bequeathed to charitable
institutions, $2400,000 being devoted to the foun-
dation of a college for orphan boys. The buildings
of this college, in the suburbs of Philadelphia, are
constructed of white marble, in the Grecian style,
and are among the most beautiful in the world.
Girard was a plain, rude man, without educa-
tion, frugal and friendless; yet kind to the sick,
generous to the poor, and a benefactor to the
orphan.

LONDON LIFE A CENTURY AGO.

Hogarth has bequeathed us the most perfect
series of pictures possessed by any nation, of the
manners and custom of its inhabitants, as seen by
himself. They go lower into the depths of every-
day life than is usually ventured upon by his
brethren of the brush. The higher-class scenes
of his 'Marriage à la Mode' teach us little more than
we can gather from the literature of his era; but
when we study 'Gin Lane' in all its ghastly reality, we see—and shudder in contemplating it
—the abyss of vice and poverty in which so large a number of the lower classes had fallen,
and which was too disgusting as well as too
familiar, to meet with similar record in the pages
of the annalist.

There exists a curious octavo pamphlet—dedi-
cated by its author to Hogarth himself—which
minutely describes the occupation of the inhabit-
ants of London during the whole twenty-four
hours. It is unique as a picture of manners, and
though rude in style, invaluable for the informa-
tion it contains, and which is not to be met elsewhere. It
appears to have been first published in 1759,
and ran through several editions. It is entitled
Love Life: or, one half the World knows not how
the other half lives; and purports to be 'a true
description of a Sunday as it is usually spent
without the Bills of Mortality, on the 21st of
June,' the anniversary (new style) of the accession
of King George II. Mr G. A. Sala, in his volume
entitled Twice Round the Clock, acknowledges that
his description therein of the occupation of each
hour of a modern London day, was suggested by
the perusal of a copy of this old pamphlet, lent
to him by Mr Dickens, and which had been pre-
scribed to that gentleman by another great nostrum,
Mr Thackeray. Under such circumstances, we
may warrantably assume that there is something
valuable in this unpretentious brochure, and we
therefore advise to glean from it as much as may
enable our readers to comprehend London life a
century ago; premising that a great part of it is
too gross, and a portion likewise too trivial, for
modern readers.

Our author commences his description at twelve
o'clock on Saturday night, at which hour, he says:
'The Salop-man in Fleet Street shuts up his
geasaing coffee-house.'* Almost the next inci-
dent reminds us of the old roguary and insecurity

* The liquid known as salop or saloos, kept hot, was
at one time much sold at street-corners in London, but
the demand ceased about thirty years since. It was
made from an infusion of masses, and said to be very
nutritive.

767
of London—watchmen taking fees from house-breakers, for liberty to commit burglaries within their beats, and at the same time promising to give them notice if there is any danger of their being taken, or even disturbed in their villanies.† The markets begin to swarm with the wives of poor journeymen shoemakers, smiths, tinkers, tailors, &c. &c. The poor by the elegant charge of parish livings for money. Dark-house Lane, near Billingsgate, in an uproar, with custom-house officers, sailors' wives, smugglers, and city-apprentices, waiting to hear the high-water bell ring, to go in the tilt-boat to Gravesend.♦ Ballad-singers, who have encumbered the corners of markets several hours together, repairing to the houses of appointed rendezvous, that they may share with pickpockets what had been stolen from the crowd of fools, which had stood about them all the evening. Houses which are left open, and are running to ruin, filled with beggars; some of whom are asleep, while others are pulling down the timber, and packing it up to sell for firing to washwomen and clear-starchers. Tapsters of public-houses on the confines of London, receiving pennies and twopences from those who have light to town from over the fields, and who were too drunk and fearful to come by themselves.

From two till three o'clock, our author notes—'Most private shops in and about London (as there are too many), where Geneva is publicly sold in defiance of the act of parliament, filled with the worst classes. Young fellows who have been out all night on the run-down, stealing slates and lanterns from such watchmen as they find sleeping on their stands. The whole company of Finders (a sort of people who get their bread by the hurry and negligence of sleepy tradesmen), are marching towards all the markets in London, Westminster, and Southwark; to make a seizure of all the butchers, poulters, green-grocers, and other market-people have left behind them, at their stalls and shambles, when they went away. Night-cellars about Covent Garden and Charing-Cross, fille’d with mechanics, some sleeping, others playing at cards, with dead-beer before them, and link-boys giving their attendance. Men who intend to pretend to walk thirty or forty miles into the country, preparing to take the cool of the morning to set out on their journeys. Vagabonds who have been sleeping under hay-ricks in the neighbouring villages and fields, awake, begin to rub their eyes, and get out of their nests.'

From three to four o'clock.—'Fools who have been up all the night, going into the fields with dogs and ducks, that they may have a morning's diversion at the noisy and cruel amusement;’ Fiddlers preparing to take long rambles out of London, to give their pigeons a flight. The bulks of these men's houses crowned with various bonds, who having been picking pockets, carrying links, fetching spendthrifts from taverns, and beating drunken-men, have now got drunk themselves and gone to sleep.♦ Watchmen crying “Past four o'clock,” at half-an-hour after three, being persuaded that scandalous pay deserves scandalous attendance.† Poor people carrying their dead children, nailed up in small deal-boxes, into the fields to bury them privately, and save the expense. Begging time, time, are beginning to be quiet—the fishwomen gone to Billingsgate to wait the tide for the arrival of the mackerel-boats.'

From four till five o'clock.—'Early risers, with pipes stuck in their jaws, walking towards Hornsey Wood, Dulwich Common, Marybone, and Stepney, in order to take large morning-draughts, and secure the first fiddle of the day. Beggars going to parish nurses, to borrow poor helpless infants at fourpence a day, and persuade credulous charitable people they are their own, and have been sometimes sick and fatherless. The wives and servant-girls of mechanics and day-labourers, who live in courts and alleys, where one cock supplies the whole neighbourhood with water, taking the advantage before other people are up, to fill their tubs and basins with a sufficiency to serve them the ensuing seven days.'

From five till six o'clock.—'The several newly-built bun-houses about the metropolis, at Chelsea, Stepney, Stangate, Marybone, &c., are now open. People who keep she-asses about Brompton, Knightsbridge, Hoxton, and Stepney, getting ready to run with their cattle all over the town, to be milked for the benefit of sick and infirm persons. Poor people with fruit, naseegays, buns, &c., making their appearance. Petty equipages preparing to take citizens country journeys. The pump near St Anthonil's Church, in Watling Street, crowded with fishwomen who are washing their stinking mackerel, to impose them on the public for fish come up with the morning’s tide. Bells tolling, and the streets beginning to fill with old women and charity-children, who attend the services of the church.'

From six to seven o'clock.—'A great number of people of both sexes, especially fanciers and dealers in birds, at the Birds Nest Fair held every Sunday morning, during the season, on Dulwich Common. Beggars who have put on their woful countenances, and also managed their sores and ulcers so as to move compassion, are carrying wands of straw to the corners of the most public streets, that they may take their seats, and beg the charity of all well-disposed Christians the remaining part of the day.'

From seven to eight o'clock.—'Country fellows, newly come to London, running about to see parish churches, and find out good ale and new acquaintances. Chairmen at the court-end of the town fast asleep in their chairs, for want of business or a better lodging. Common people going to quack-doctors, and petty barbers, in order to be let blood (and perhaps have their arms lamed) for three-pence. Abundance of lies told in barbers' shops by those who come to be shaved, many fools taking those places to be the repositories of polite education.'

* The journey to Gravesend was a serious adventure in those days, always occupying twelve hours, and frequently more; if the tide turned, the passengers met with great delay, and were sometimes put ashore far from their destination. The only accommodation in these open boats, was a litter of straw, and a sail-cloth over it.

† For a further account of this sport, and one favourite London locality where it was chiefly indulged in, see p. 74 of the present volume.

++ These bulks were the stalls of the open shops then very common in London—for an account of which see vol. i. p. 360.

†† We may refer to p. 410 of the present volume for some further notice of these old night-guardians.
The whole cities of London, Westminster, and the borough of Southwark, covered by a cloud of smoke, most people being employed at lighting fires.'

From eight to nine.—People in common trade and life, going out of town in stage-coaches to Edinburgh, Stratford, Deptford, Acton, &c.; tradesmen who follow the amusement of angling, preparing set out for Sheepe-Carps Iron, Eel Brook, or the Thames Forest, and other places of diversion; to pass away the two or three feast-days of the week. Servants to ladies of quality are washing and combing such lapdogs as are to go to church with their mistresses that morning.'

From nine to ten.—Pupils belonging to surgeons going about their several wards, letting blood, mending broken bones, and doing whatever else they think necessary for their poor patients. Citizens who take a walk in the morning, with an intent to sleep away the afternoon, creeping to Sadler's Wells, or Newington, in order to get drunk during the time of divine service. French artificers quit their garrets, and exchange their greasy woollen caps and flannel shirts for swords and ruffles; and please themselves with a walk in St James's Park, the Temple, St. James's Park, Lincoln's Inn walks, or Gray's Inn; and then look sharp after an eleemosynary dinner at some dirty public-house. The new breakfast-hut near Sadler's Wells, crowded with young fellows and their sweethearts, who are drinking tea and coffee, telling stories, repeating love-songs, and broken scraps of low comedy, till towards dinner-time. The royal parks are open. At Horsey Wood, crowded with men, women, and children, eating rolls and butter, and drinking of tea, at an extravagant price.'

From ten till eleven.—Crowds of old country fellows, women, and children, about the lord-mayor's coach and horses, at the south side of St Paul's Churchyard. Much business done on the outside of the churches. In the piazzas, the porch of St Mary-le-Bow Church, in Cheapside, since the nave of St Paul's has been kept clear, by order of the bishop of London. The churches about London, as Stepney, Pancras, Ialington, &c., filled with people reading the tombstones, and eating currants and gooseberries. Actors and actresses meeting at their apartments to rehearse the parts they are to perform. Fine fans, rich brilliants, white hands, anxious eyes, and enamelled snuff-boxes, displayed in most places of divine service, where people of fashion endure the intolerable fatigue with wonderful seeming patience.'

From eleven till twelve.—Poor French people, about the Seven Dials and Spitalfields, picking dandelion in the adjacent fields, to make a salad for dinner. The organ-hunters running about from one parish church to another, to hear the best masters, as Mr Stanley, &c., play. The wives of gentlemen mechanics, under pretence of going to prayers in their apartment, take a nap and a dram, after which they chew lemon-pee to prevent being smelt. Ladies about St James's reading plays and romances, and making paint for their faces.'

From twelve till one.—Idle apprentices, who have played under gateways during the time of divine service, begging the text of old women at the church-doors, the houses of the squares, and masters and mistresses. Young tradesmen, half-starved gentlemen, merchants' clerks, petty officers in the customs, excise, and news-collectors, very noisy over their half-pints and dumplings in tavern-kitchens about Temple Bar and the Royal Exchange. Nosegay-women, flying-fruiterers, and black-shoe boys come again into business as the morning-service is over. The south side of the Royal Exchange, in Cornhill, very much crowded with gentlemen doing business and hearing news. The Mall, in St James's Park, filled with Frenchmen picking their teeth, and counting the trees for their dinner. All the common people's jays in and about this great metropolis in full employment.'

From one till two.—The friends of criminals under sentence of death in Newgate, presenting money to the turnkeys to get to the sight of them, in order to take their last farewell, and present them with white caps with black ribbons, prayer-books, nosegays, and oranges, that they may make a decent appearance up Holborn, on the road to the other world. Church bells and tavern bells keep time with each other. Men and boys who intend to swim in the River Lea near Hackney, the Boat-house near Hampstead, and the river Thames near Chelsea, this afternoon, are setting out according to their appointments. Pickpockets take their stands at the avenues of public places, in hopes of making a good booty during the hurry of the afternoon.'

From two till three.—Strollers, posture-masters, puppet-show men, fiddlers, tumblers, and toy-monsters, packing up, for Hockney fair. Women set out for such fairs as Wandsworth, &c., which, according to the custom of the nation, begin the next day. Pawnbrokers' wives dressing themselves in their customers' wearing-apparel, rings and watches, in order to make a gay appearance in the fields, when evening-service is over. Citizens who have pieces of gardens in the adjacent villages, walking to them with their wives and children, to drink tea, punch, or bottled ale; after which they load themselves with flowers for bean-pots; and roots, salads, and other vegetables for their suppers. The paths of Kensington, Highgate, Hampstead, Ialington, Stepney, and Newington, found to be much pleasanter than those of the gospel.'

From three till four.—Tallow-chandlers who do business privately in back-cellar and upper-rooms to evade the king's duty, taking advantage of most people being at church, in the fields, or asleep, to make mould-candles, known by the name of "running the buck." A general jumble from one end of London to another of silks, cottons, printed linens, and calicoes. Merchants get into their counting-houses with bottles of wine, pipes and tobacco before them, studying schemes for the advancement of their several stocks, both in trade and the public funds.'

From four till five.—Some hundreds of people, mostly women and children, walking backward
and forward on Westminster Bridge for the benefit of the air. Eel-pies most unmercifully devoured at Green’s Ferry, Jeremy’s Ferry, and Bromley Lock on the River Lea; and at Clay Hall, near Old Ford, at Bow. The office-keepers of the Theatres Royal, tracing the streets from the houses of noblemen, ladies, and the principal actors and actresses, to let them know what is to be performed the ensuing day. The cider-cellar, in Spring Gardens, crowded with people of all nations.’

From five till six.—‘People who have the convenience of flat leaded roofs on the tops of their houses, especially such as have prospects of the river Thames, drinking tea, beer, punch, and smoking tobacco there till the dusk of the evening. Well-dressed gentlewomen, and ladies of quality, drove out of St James’s Park, Lincoln’s Inn Gardens, and Gray’s Inn Walks, by milliners, mantua-makers, sempstresses, stay-makers, clear-starchers, French barbers, dancing-masters, gentlemen’s gentlemen, tailors’ wives, conceited old maids, and butchers’ daughters. Great numbers of footmen near the gate-entrance of Hyde Park, wrestling, cudgel-playing, and jumping; while others who have drank more than their share are swearing, fighting, or sleeping, till their ladies return from the Ring.’

From six till seven.—‘Children in back-alleys and narrow passages very busy at their several doors, shelling peas and beans for supper; and making boats, as they call them, with bean-shells and deal-matches. New milk and biscuits plentifully attacked by old women, children, and fools, in St James’s Park, Lamb’s Conduit Fields, and

St George’s Fields, Southwark. Westminster Abbey crowded with people, who are admiring the monuments, and reading their inscriptions.’

From seven till eight.—‘Fishermen out with their boats on the river Thames, and throwing out their nets to catch undersized fish, contrary to act of parliament. The drawers at Stealer’s Wells, and the Prospect House, near Ealing; Jenny’s Whim at Chelsea; the Spring Gardens at Newington and Stepney; the Castle at Kentish Town; and the Angel at Upper Holloway; in full employment, each of them trying to cheat, not only the customers, but even the person who has the care of the bar; and every room in those houses filled with talk and smoke. The taverns about the Royal Exchange filled with merchants, underwriters, and principal tradesmen, who oftentimes do as much business on the Sunday evenings, as they do when they go upon the Exchange.

770

From eight to nine.—Black eyes and broken heads exhibited pretty plentifully in the public streets, about precedence. Great struggling at Paris-Garden stairs, and the Barge-House stairs in Southwark, to get into the boats that ply to and from Blackfriars and the Temple. Young highwaymen venturing out upon the road, to attack such coaches, chaises, and horsemen as they think are worth meddling with on their return to London.’

From nine till ten.—‘Masters of private mechanic families reading to them chapters from The Whole Duty of Man before they go to bed. The streets hardly wide enough for numbers of people, who about this time are reeling to their habitations. Great hollowing and whooping in the fields, by such persons as have spent the day abroad, and are now returning home half-drunk, and in danger of losing their company.’

From ten till eleven.—‘Link-boys who have
been asking charity all day, and have just money sufficient to buy a torch, taking their stands at Temple Bar, London Bridge, Lincoln's-Inn-Fields, Smithfield, the City Gates, and other public places, to light, knock down, and rob people. The gaming-tables at Charing Cross, Covent Garden, Holborn, and the Strand, begin to fill with men of desperate fortunes, bullies, fools, and gamblers.

'From eleven till twelve.—People of quality leaving off gaming in order to go to supper. Nighthouses being crowded. One cottage of the Board of Trade of London fast sale, and almost penniless. The watch-houses begin to fill with young fellows shut out of their apartments, who are proud of sitting in the constable's chair, holding the staff of authority, and sending out for liquor to treat the watchmen. Bell-ringers assembling at churches to usher in the 23rd of June, the day of the king's accession.'

Such are a few of the items illustrative of past manners, afforded by a pamphlet characterised by Mr. Sala as 'one of the minutest, the most graphic, the most pathetic pictures of London life a century since that has ever been written.' The author tells us that he chose Sunday for his descriptive day, in order that he might not be accused of any invidious choice: 'hardly can it be expected that the other six begin or end in a more exemplary manner.' To this he adds, 'on Sunday, 1708, is appended a picture of St. Monday, that universal day of debuch among the working-classes (see the engraving on the preceding page). Here we see tradesmen of all denominations idling and drinking, while a busy landlady chalks up double scores. Each man is characterised by some emblem of his trade. To the left, a shoemaker and tailor are seated on a bench, the former threatening his ragged wife, who urges him home, with the strap; the tailor quietly learns a new song. The butcher, busy at cards, has his game deranged by a termagant wife, who proceeds to blows. The sturdy porter in front defies the staggering leather-cutter, who upsets the painter's colours; the painter, stupidly drunk on a bench behind, is still endeavouring to lift another glass. On the walls, 'King Charles's Golden Rules' are hung up with all the pretentious morality of low haunts; another paper, inscribed 'Pay to-day, I trust to-morrow,' is the most likely to be appealed to and enforced by the busy hostess.

We gather from this slight review of a curious work, that London hours were earlier, and London habits in some degree more natural, as regards rising and walking, than among ourselves; but we also see greater coarseness of manners, and insecurity of life and property. Altogether, we may congratulate ourselves on the changes that a century has produced, and leave to re-unreasoning sentimentalists the office of bewailing the 'good old times.'

DECEMBER 27.

St. John, apostle and evangelist. St. Theodorus Grapt, confessor, 9th century.

St. John the Evangelist's Day.

A special reverence and interest is attached to St. John—'the disciple whom Jesus loved.' Through a misapprehension of the Saviour's words, a belief we are informed, came to be entertained among the other apostles that this disciple should never die; and the notion was doubtless fostered by the circumstance, that John outlived all his brethren and conductors in the Christian ministry, and was indeed the only apostle who died a natural death. He expired peacefully at Ephesus, it is stated, at the advanced age of ninety-four, in the reign of the Emperor Trajan, and the year of our Lord 100; thus, as Brady observes, 'making the first century of the Christian Era and the Apostolical Age, terminate together.'

Though John thus escaped actual martyrdom, he was, nevertheless, called upon to endure great persecution in the cause of his Friend and Master. Various fathers of the church, among others Tertullian and St. Jerome, relate that in the reign of Domitian, the Evangelist, having been accused of attempting to subvert the religion of the Roman Empire, was transported from Asia to Rome, and there, in presence of the emperor and senate, before the gate called Porta Latina, or the Latin Gate, he was cast into a caldron of boiling oil, which he not only remained in for a long time uninjured, but ultimately emerged from, with renovated health and vigour. In commemoration of this event, the Roman Catholic Church retains in its calendar, on the 6th of May, a festival entitled 'St. John before the Latin Gate.'

Domitian, we are further informed, notwithstanding this miraculous interposition, continued obdurate, and banished St. John to Patmos, a lonely island in the Grecian Archipelago, where he was employed in working among the criminals in the mines. In this dreary abode, the apostle, as he informs us himself, witnessed those sublime and wondrous visions, which he has recorded in the Apocalypse.

On the assassination of Domitian, and the elevation of Nerva to the imperial throne, John was released from his confinement at Patmos, and returned to Ephesus, where he continued till his death. A tradition obtains, that in his last days, when unable to walk to church, he used to be carried there and back, and taught meditation in his own memorable words, 'Little children, love one another.' Partly in reference to the angelic and amiable disposition of St. John, partly also, apparently, in allusion to the circumstance of his having been the youngest of the apostles, this evangelist is always represented as a young man, with a heavenly mien and beautiful features. He is very generally represented holding in his left hand an urn, from which a demoniacal figure is escaping. This device appears to bear reference to a legend which states that, a priest of Diana having denied the divine origin of the apostolic miracles, and challenged St. John to drink a cup of poison which he had prepared, the Evangelist, to remove his scepticism, after having first made on the vessel the sign of the cross, emptied it to the last drop without receiving the least injury. The purging of the cup from all evil is typified in the flight from it of Satan, the father of mischief, as represented in the medieval emblem. From this legend, a superstitious custom seems to have sprung of obtaining, on St. John's Day, supplies of hallowed wine, which was both drunk and used in the manufacture of medicines or little loaves; the individuals who partook of this were thereby safe and secure from all danger of poison throughout the
ensuing year. The subjoined allusion to the practice occurs in Googe’s translation of Naegorius:

‘Nexte John the sonne of Zebedom hath his appointed day,
Who once by cruel Tyrannus’ will, constrained was they say
Strong poysen up to drinke; therefore the Papistes
That whose put trust in him, no poysen them
Can greve:
The wine beside that holowed is in worship of his name,
The Priestes doe give the people that bring money
For the same.
And after with the self same wine are little
Manchetts made
Agaynst the boystrous Winter storms, and sundrie
Such like trade.
The men upon this solemn day, do take this holy wine.
To make them strong, so do the maydys to make them faire and fine.’

THOMAS GUY, AND GUY’S HOSPITAL: THE BOOK OF DAYS.

BOOKSELLERS AND STATIONERS.

There is one noble institution in the metropolis, Guy’s Hospital, which renders a vast amount of good to the poor, without any appeal either to the national purse or to private benevolence. Or, more correctly, it is a type of many such institutions, thanks to the beneficence of certain donors. Once now and then, it is necessary to bring public opinion to bear upon these charities, to insure equitable management; but the charities themselves are noble.

Thomas Guy was the son of a coal-merchant and lighterman, at Horseleydown, and was born in 1645. He did not follow his father’s trade, but was apprenticed to a bookseller, and became in time a freeman and liverrman of the Stationers’ Company. He began business on his own account as a bookseller, in a shop at the corner of Cornhill and Lombard Street, pulled down some years ago when improvements were made in that neighbourhood. He made large profits, first by selling Bibles printed in Holland, then as a contractor for printing Bibles for Oxford University. He next made much money in a way that may, at the present time, seem beneath the dignity of a city shopkeeper, but which in those days was deemed a matter of course: viz., by purchasing seamen’s tickets. The government, instead of paying seamen their wages in cash, paid them in bills or tickets due at a certain subsequent date; and as the men were too poor or too improvident to keep those documents until the dates named, they sold them at a discount to persons who had ready cash to spare. Mr Guy was one of those who, in this way made us out of the seamen, owing to a bad system for which the government was responsible. About that time, too, sprung up the notorious scheme called the South-sea Company, which ultimately brought ruin and disgrace to many who had founded or fostered it. Guy did not entangle himself in the agogery of the company; but he bought shares when low, and had the proceeds to sell out when they were high. By these various means he accumulated a very large fortune. Pennant deals with him rather severely (in his History of London) for the mode in which a great part of his fortune was made; but, taking into consideration the times in which he lived, his proceedings do not seem to call for much censure. When his fortune was made, he certainly did good with it. He granted annuities to many persons in impoverished circumstances; he made liberal benefactions to St Thomas’s Hospital; he founded an almshouse at Tamworth, his mother’s native town; he left a perpetual annuity of £400 to Christ’s Hospital, to receive four children yearly nominated by his trustees; and he gave large sums for the discharge of poor debtors. The following anecdote of him may here be introduced: ‘(Guy) was a man of very humble appearance, and of a melancholy cast of countenance. One day, while pensively leaning over one of the bridges, he attracted the attention and commiseration of a bystander, who, apprehensive that he might meditate self-destruction, could not refrain from addressing him with an earnest entreaty “not to let his misfortunes tempt him to commit any rash act;” then, placing in his hand a guinea, with the delicacy of genuine benevolence, he hastily withdrew. Guy, roused from his reverie, followed the stranger, and warmly expressed his gratitude, but assured him he was mistaken in supposing him to be either in distress of mind or of circumstances: making an earnest request to be favoured with the name of the good man, his intended benefactor. The address was given, and they parted. Some years after, Guy was in the bankrupt-list, hastened to his house; brought to his recollection their former interview; found, upon investigation, that no blame could be attached to him under his misfortunes; intimated his ability and full intention to serve him; entered into immediate arrangements with his creditors; and finally re-established him in a business which ever after prospered in his hands, and in the hands of his children’s children, for many years, in Newgate Street.’

The great work for which Thomas Guy is remembered, is the hospital bearing his name, in the borough. In connection with the foundation of this building, a curious anecdote has been related, which, though now somewhat hackneyed, will still bear repetition. Guy had made his way of strictly frugal habits, and who made his wishes known in a most careful study. So attentive was she to his orders on all occasions, that he resolved to make her his wife, and he accordingly informed her of his intention. The necessary preparations were made for the wedding; and among others many little
repairs were ordered, by Mr Guy, in and about his house. The latter included the laying down a new pavement opposite the street-door. It so happened that Sally, the bride-elect, observed a portion of the pavement, beyond the boundary of her master's house, which appeared to her to require mending, and of her own accord she gave orders to the workmen to have this job accomplished. Her directions were duly attended to in the absence of Mr Guy, who, on his return, perceived that the workmen had carried their labours beyond the limits which he had assigned. On inquiring the reason, he was informed that what had been done was 'by the mistress's orders.' Guy called the foolish Sally, and telling her that she had forgotten her position, added: 'If you take upon yourself to order matters contrary to my instructions before we are married, what will you not do after? Therefore renounce my matrimonial intentions towards you!' Poor Sally, by thus assuming an authority to which she then had no claim, lost a rich husband, and the country gained the noble hospital; named after its founder, who built and endowed it at a cost of £238,592.*

Guy was seventy-six years of age when he matured the plan for founding an hospital. He procured a large piece of ground on a lease of 999 years, at a rent of £30 per annum, and pulled down a number of poor dwellings which occupied the site. He laid the first stone of his new hospital in 1722, but did not live to witness the completion of the work; for he died on the 27th of December 1724—just ten days before the admission of the first sixty patients. His trustees procured an act of parliament for carrying out the provisions of his bequest. They leased more ground, and enlarged the area of the hospital to nearly six acres; while the endowment or maintenance fund was laid out in the purchase of estates in Essex, Herefordshire, and Lincolnshire.

The building itself is large and convenient, but not striking as an architectural pile. This has indeed been a lucky hospital; for, nearly a century after Guy's death, an enormous bequest of nearly £200,000 was added to its funds. Mr Hunt's will, dated 1829, left this sum, expressly to enlarge the hospital to the extent of one hundred additional beds. The rental of the hospital estates now exceeds £30,000 per annum. In the open quadrangle of the hospital is a bronze statue of Guy by Scheemakers; and in the chapel, a marble statue of him by Bacon.

In connection with Thomas Guy, who, of all the members of the Stationers' Company of London, may certainly be pronounced to have been one of the most successful in the acquisition of wealth, an interesting circumstance regarding the original import of the term stationer calls here for notice. Up to about the commencement of the last century, the term in question served almost exclusively to denote a bookseller, or one who had a station or stall in some public place for the sale of books. An instance of this application of it occurs in the following passage in Fuller's _Worthies of England:_ ‘I will not add that I have passed my promise (and that is an honest man's bond) to my former stationer, that I will write nothing for the future, which was in my former books so considerable as

* Lawton's History of Banking.

may make them interfere one with another to his prejudice.'

The annexed engraving exhibits a stationer's stall or bookseller's shop in ancient times, when books were generally exposed for sale in some public place in the manner here represented. A

A STATIONER'S STALL, OR BOOKSHOP IN THE OLDEN TIME.

parallel to this mode of conducting business still exists in the book-fairs at Leipsic and Frankfort, in Germany. In medieval days, the stationarius or stationer was an official connected with a university, who sold at his stall or station the books written or copied by the librarius or book-writer. From this origin is derived the modern term stationer, which now serves exclusively to denote an individual whose occupation consists in supplying the implements instead of the productions of literary labour.

JOANNA SOUTHCOTT.

Joanna Southcott was born about the year 1750, of parents in very humble life. When about forty years old, she assumed the pretensions of a prophetess, and declared herself to be the woman mentioned in the twelfth chapter of the Book of Revelation. She asserted that, having received a divine appointment to be the mother of the Messiah, the visions revealed to St John would speedily be fulfilled by her agency and that of the son, who was to be miraculously born of her. Although extremely illiterate, she scribbled much mystic and unintelligible nonsense as visions and prophecy, and for a time carried on a lucrative trade in the sale of seals, which were, under certain conditions, to secure the salvation of the purchasers. The imposture was strengthened by her becoming subject to a rather rare disorder, which gave her the 773.
appearance of pregnancy after she had passed her grand climacteric. The faith of her followers now rose to enthusiasm. They purchased, at a fashionable upholsterer's, a cradle of most expensive materials, and highly decorated, and made costly preparations to hail the birth of the miraculous babe with joyous acclamation. The delusion spread rapidly and extensively, especially in the vicinity of London, and the facts of Johanna's case have been said to have amounted to upwards of one hundred thousand. Most of them were of the humbler order, and remarkable for their ignorance and credulity; but a few were of the more educated classes, among whom were two or three clergymen. One of the clergymen, on being reproved by his diocesan, offered to resign his living if 'the holy Johanna,' as he styled her, failed to appear on a certain day with the expected Messiah in her arms. About the close of 1814, however, the prophetess herself began to have misgivings, and in one of her lucid intervals, she declared that 'if she had been deceived, she had herself been the sport of some spirit either good or evil.' On the 27th of December in that year, death put an end to her expectations—but not to those of her disciples. They would not believe that she was really dead. Her body was kept unburied till the most active signs of decomposition appeared; it was also subjected to a post–mortem examination, and the cause of her peculiar appearance fully accounted for on medical principles. Still, numbers of her followers refused to believe she was dead; others flattered themselves that she would speedily rise again, and bound themselves by a vow not to shave their beards till her resurrection. It is scarcely necessary to state, that most of them have passed to their graves unshorn. A few are still living, and within the last few years several families of her disciples were residing together near Chatham, in Kent, remarkable for the length of their beards, and the general singularity of their manners and appearance. Joanna Southcott was interred, under a fictitious name, in the burial-ground attached to the chapel in St John's Wood, London. 'A stone has since been erected to her memory, which, after reciting her age and other usual particulars, concludes with some lines, evidently the composition of a still unshaken believer, the fervour of whose faith far exceeds his inspiration as a poet.'

CHARLES AND MARY LAMB.

The lives of literary men are seldom characterized by much stirring adventure or variety of incident. The interest attaching to them consists mainly of the associations with which they are intertwined—the joys, trials, and sorrows of their domestic history, and the tracing of the gradual development of their genius to its culminating-point, from its first unfledged essays. In contemplating their career, much benefit may be derived both by the philosopher and moralist—the former of whom will gain thereby a deeper and more thorough knowledge of the workings of human nature, and the latter reap many an instructive and improving lesson.

Marriage gives so much beauty, or are more marked by a touching and lively interest, than those of Charles Lamb and his sister Mary. Devotedly attached to each other, united together by a strong sympathy both in mental and physical temperament, and a highly-refined and cultivated literary taste, they passed from youth to age; and when first the brother, and afterwards the sister, were laid in the same grave, in the peaceful churchyard of Edmonton, it might truly be said of them, that they 'were lovely and pleasant in their lives, and in their death they were not divided.'

We shall now present the reader with a brief sketch of their history.

Their father, John Lamb, was a clerk to Mr Salt, a bancher of the Inner Temple; and in Crown Office Row of this classic locality, Charles was born in February 1775. His sister Mary was ten years older than himself, and there was also an elder brother, John. Young Lamb's early associations were thus all of a quaint and antiquarian nature. The grand old Temple church, so impressive, both from its architectural beauty and the romantic interest attached to its former possessors, the Knights Templars, who reposed in its precincts; the dim walks and passages of the inns-of-court, redolent alike of learning and jurisprudence; and the pleasant sunny gardens descending to the noble Thames, where King Edward of yore had mustered a gallant array of knighthood and men-at-arms, were setting forth on his last expedition to Scotland—all combined to stamp their impress on the mind of a sensitive, affectionate, and poetical child. At the age of seven, he obtained a presentation to Christ's Hospital, where the ensuing seven years of his life were spent, and a lasting friendship formed with the poet Coleridge, then a student at the same institution. Lamb made here considerable progress in classical learning; but an impediment of speech, which clung to him through life, prevented him, as originally intended, from entering the church, a profession indeed to which his inclinations were not adapted; and he accordingly quitted school at fourteen, and was placed for a time in the South-sea House, where his brother John held a situation. From this he was, in a year or two, transferred to a clerkship in the East India House, an establishment in which he gradually rose to the enjoyment of a large salary; and was ultimately pensioned off on a handsome allowance, a few years previous to his death. Shortly after entering on this employment, his parents removed from the Temple to Little Queen Street, Holborn. The pecuniary resources of the family were at this time but scanty, consisting of Charles's then small salary from the East India House, an annuity enjoyed by his father from the liberality of his old master, Mr Salt, and the scanty returns which his sister Mary could procure by her industry with the needle. Old Mr Lamb was now sinking into dotage, and his wife was stricken by an infirmity which deprived her of the use of her limbs. An old maiden-aunt whose affectionately commemorated, resided with them, and paid them a small board. Notwithstanding all the difficulties with which they had to struggle, the affection which bound the different members of the family together, and, more especially, Mary and Charles, secured their enjoyment of a large share of happiness; but a fearful misfortune was about to overtake them.

A disposition to insanity seems to have been inherited by the Lamb's. At the age of twenty, Charles was seized by a fit of this malady, which
compelled his removal, for a few weeks, to a lunatic asylum. His recovery, however, was complete and final; and till the end of his life his intellect remained sound and unclouded. A sadly different fate was that of poor Mary, his sister. Worn out by her double exertions in sewing and watching over her mother, who required constant attention, her mind which, on previous occasions, had been subject to aberration, gave way, and burst into sobbing at the sight of the food that had been laid for dinner, the malady attacked her with such violence, that, in a transport she snatched up a knife, and plunged it into the breast of her mother, who was seated, an invalid, in a chair. Her father was also present, but unable from frailty to interpose any obstacle to her fury; and she continued to brandish the fatal weapon, with loud shrieks, till her brother Charles entered the room, and took it from her hand. Assistance was procured, and the unfortunate woman was conveyed to a madhouse, where, in the course of a few weeks, she recovered her reason. In the meantime, her mother was dead, slain, though in innocence, by her hand; her father and aunt were helpless; and her brother John disposed to concur with the parish authorities and others in detaining her for life in confinement. But the effects of the visit were stepped forward, and by pleading himself to undertake the future care of his sister, succeeded in obtaining her release. Nobly did he fulfil his engagement by the sedulous and unremitting care with which he continued ever afterwards to watch over her, abandoning all hopes of marriage to devote himself to the charge which he had undertaken. In the charge, indeed, sufficiently onerous, as Miss Lamb's complaint was constantly recurring after intervals, necessitating her removal for a time to an asylum. It was a remarkable circumstance connected with her disease, that she was perfectly conscious of its approach, and would inform her brother, with as much gentleness as possible, of the fact, upon which she would ask leave of absence from the India House, as if for a day's pleasure, and accompany him, till she was thought to need the confinement of her remaining journey to the place of confinement. On one of these occasions, they were met crossing a meadow near Hoxton by a friend, who stopped to speak to them, and learned from the weeping brother and sister their destination. In setting forth on the excursions which at first they used to make annually, during Lamb's holidays, to some place in the country, Mary would always carefully pack up in her trunk a straw-waistcoat, to be used in the event of one of her attacks coming on. Latterly, these jaunts had to be abandoned, as they were found to exercise on her an injurious influence. The attendance required from Lamb at the India House was from ten to four every day, leaving him in general the free enjoyment of his evenings. These were devoted to literary labours and studies, or spent in conversation with his friends, of whom his gentle and amiable nature had endeared to him an extensive circle. On Wednesday evenings, he usually held a reception, at which the principal literary celebrities of the day would assemble, play at whist, and discuss all matters of interest relating to literature, the fine arts, and the drama. Among those present on these occasions, in Lamb's younger days, might be seen Godwin, Hunt, and Hazlitt, and when in town, Wordsworth, Southey, and Coleridge. At a later period, Allan Cunningham, Cary, Edward Irving, and Thomas Hood would be found among the guests. Shortly after Miss Lamb's first release from confinement, her brother and she removed from Holborn to Pentonville, where, however, they did not remain long, and in 1800 took up their abode in the Temple, in which locality, dear to the hearts of both of them from early associations, they resided about seventeen years as the home of the remains of their existence. From the Temple, they removed to Russell Street, Covent Garden, and thence to Colebrook Cottage, Islington, on the banks of the New River, where, rather curious to say, Lamb, for the first time in his life, found himself raised to the dignity of a householder, having hitherto resided always in lodgings. Not long, too, after his settling in this place, he exchanged the daily drudgery of the desk for the independent life of a gentleman at large, having been allowed to retire from the India House on a comfortable pension. In a few years, however, his sister's increasing infirmities, and the more frequent recurrence of her mental disorder, induced him to quit London for the country, and he took up his abode at Enfield, from which he afterwards migrated to Edmonton. Here, in consequence of the effects of the climate, in the head, he expired tranquilly and without pain, after a few days' illness, in December 1834. His sister was labouring at the time under one of her attacks, and was therefore unable to feel her loss with all the poignancy which she would otherwise have experienced. She survived her brother for upwards of twelve years, and having been latterly induced by her friends to remove from Enfield to London, died quietly at St. John's Wood on 20th May 1847.

It is now proper to refer to Lamb's literary works. Being independent of the pen as a main support, his writings are more in the character of fugitive pieces, contributed to magazines, than of weighty and voluminous labours. As an author, his name will principally be recollected by his celebrated Essays of Elia, and a second series, even superior to the first, entitled the Last Essays of Elia. These delightful productions, so racy and original, place Lamb incontestably in the first rank of our British essayists, and fairly entitle him to contest the palm with Addison and Steele. Egotistical they may in one sense be termed, as the author's personal feelings and predilections, with many of his peculiar traits of character, are brought prominently forward; but the egotism is of the most charming and unselfish kind—a sentiment which commends itself all the more winningly to us when he comes to speak of his sister under the appellation of his Cousin Bridget. Other essays and pieces were contributed by him to various periodicals, including Leigh Hunt's Reflector, Blackwood's Magazine, and the Englishman's Magazine, in the character of quaintness, simplicity, and playful wit. In his early days, his tendencies had been principally exerted in the direction of poetry, in the production of which there was a sort of copartnership between him and Coleridge, along with Charles Lloyd, and a volume of pieces by the trio was published at Bristol in 1797. As a votary of the Muse, however, Lamb's claims cannot be rated, his poems, though graceful and melodious,
being deficient both in vigour and originality of thought. The one dramatic piece, the farce of Mr.
Mr., which he succeeded in getting presented on
the boards of Drury Lane, was shelved on the first
night of its representation. The disappointment
was borne manfully by him, and as he sat with his
sister in the pit, Lamb joined himself in the hisses
by which the fate of his unfortunate bantling was
sealed.

Allusion has already been made to Lamb’s
amiability of disposition. Through the whole
course of his life he never made a single enemy,
and the relations between him and his friends
were scarcely ever disturbed by the slightest fracas.
To use a favourite expression of Lord Jeffery, he
was eminently ‘sweet-blooded.’

Though of a highly poetic and imaginative
temperament, Lamb took little pleasure in rural
scenery. A true child of London, no landscape,
in his estimation, was comparable with the crowded
and bustling streets of the great metropolis, Covent-
Garden Market and its piazzas, or the gardens of
the inns of court. A visit to Drury Lane or Covent-
Garden Theatre in the evening, a rubber at whist,
or a quiet fireside-chat with a few friends, not
unaccompanied by the material consolations of
sundry steaming beverages and the fragrant fumes
of the Virginian weed, were among his dearest
delights. One unfortunate failing must here be
recorded—his tendency, on convivial occasions, to
exceed the limits of temperance. This, however,
can scarcely be regarded as a habitual error on his
part, and has probably received a greater prominence
than it merited, from his well-known paper,
The Confessions of a Drunkard, in which he has
so graphically described the miserable results of
excess. Another predilection, his addiction to the
use of tobacco, was ultimately overcome by him
after many struggles. His tastes, in the consump-
tion of the fragrant weed, were not very delicate,
inducing him to use the strongest and coarsest
kinds. On being asked one day by a friend, as he
was puffing forth huge volumes of smoke, how he
had ever managed to acquire such a practice, he
replied: ‘By striving after it as other men strive
after virtue.’ His convivial habits leading him not
unfrequently to the heaviest of his meals and his
appearance at business next morning was some-
times considerably beyond the proper hour. On
being one day reproved by his superior for his
remissness in this respect, the answer was: ‘True,
sir, very true, I often come late, but then, you
know, I always go away early.’ To a man of his
disposition, it can be readily supposed that the dull
routine of his duties at the India House was a most
distasteful drudgery, and we accordingly find him
often bewailing humorously his lot in letters to his
correspondents. His good sense, however, rendered
him perfectly aware of the benefits of regular
employment and a fixed income, and his complaints
must therefore be regarded in a great measure as
ironical, the offspring of the spirit of grumbling, so
characteristic of the family of John Bull.

The interior of his family. Miss Lamb
appeared in her natural and attractive aspect, the
well-bred mistress of her brother’s house, doing its
honours with all grace, and most tenderly solicitous
and careful in everything relating to his comfort.
Her conversation and correspondence were both
776
JOHN LOGAN.

DECEMBER 28.

THE WHITE HORSE OF BERKSHIRE.

it was their privilege on this morning to rouse from grateful slumbers by a sound drubbing administered in tacto.

In reference to the three consecutive commemorations, on the 26th, 27th, and 28th of December, theologians inform us that in these are comprehended three descriptions of martyrdom, all of which have their peculiar efficacy, though differing in degree. In the death of St Stephen, an example is furnished of the highest class of martyrdom; that is to say, both in will and deed. St John the Evangelist, who gave practical evidence of his readiness to suffer death for the cause of Christ, though, through miraculous interposition, he was saved from actually doing so, is an instance of the second description of martyrdom—in will though not in deed. And the slaughter of the innocents affords an instance of martyrdom in deed and not in will, these unfortunate children having lost their lives, though involuntarily, on account of the Saviour, and it being therefore considered that God supplied the defects of their will by his own acceptance of the sacrifice.

Born.—Thomas Henderson, astronomer, 1789, Dundee; Alexander Keith Johnston, geographer, 1804.

JOHN LOGAN.

The name of John Logan, though almost entirely forgotten in South Britain, is not likely to pass into oblivion in Scotland, as long as the church of that country continues to use in her services those beautiful Scripture paraphrases and hymns, undoubtedly the finest and most poetical of any extant collection of chants for divine worship employed by any denomination of Christians in the United Kingdom. Some of the finest of these, including the singularly solemn and affecting hymn, 'The hour of my departure's come,' are from the pen of Logan.

The history of this gifted man forms one of those melancholy chapters which the lives of men of genius have too often furnished. The son of a small farmer near Fala, in Mid-Lothian, he was educated for the Scottish Church in the Edinburgh University, and almost immediately after being licensed as a preacher, was presented to a church in Leith, where for several years he enjoyed great renown as an eloquent and popular preacher. He delivered a course of lectures in Edinburgh with much success on the 'Philosophy of History,' published a volume of poems, and had a tragedy called 'Romancodes' acted at the Edinburgh theatre in 1783. The times were now somewhat changed since the days when the production of Homer's tragedy of 'Douglas' had excited a ferment in the Scottish Church, which has become historical. We are informed by Dr Carlyle, who himself had to encounter the violence of the storm which burst forth against Homer and the classical poet who supported him, that about 1756, so complete a revolt of feeling had taken place on the subject of theatricals, owing to the predominance gained by the Moderate over the Evangelical party, that when Mrs Siddons made her first appearance in Edinburgh, the General Assembly of the Scottish Church was obliged to adjourn its sittings at an early hour to enable its reverend members to attend the theatre and witness the performance of the great tragic actress. Yet, notwithstanding this altered state of public opinion, Logan did undergo some obloquy and animadversion in connexion with the play above referred to, and the annoyance thereby occasioned, combined with a hereditary tendency to hypochondria, seems to have induced a melancholy and depression of spirits which prompted him to seek relief in the fatal solace of stimulating liquors. The habit rapidly gained strength; and having so far forgotten himself as on one occasion to appear in the pulpit in a state of intoxication, the misguided man was glad to make an arrangement with the ecclesiastical authorities, by which he was allowed to resign his ministerial charge, and retain for his maintenance a portion of its revenues. He then proceeded to London, where he eked out his income by literary labour of various kinds, but did not long survive his transference to the metropolis, dying there on 28th December 1788. Two posthumous volumes of his sermons long enjoyed great popularity.

Whilst yet a student at Edinburgh College, Logan acted for a time as tutor to a boy who afterwards became Sir John Sinclair of Ulbster, famous for his many public-spirited undertakings. The following anecdote of this period of his life exhibits an amusing instance of a tendency to practical joking in the disposition of the future divine and poet. About 1766, the Sinclair family, with whom he resided, made a progress from Edinburgh to its remote Caithness home; and owing to the badness of the roads, it was necessary to employ two carriages, the heaviest of them drawn by six horses. 'When the cavalcade reached Kinross, the natives gathered round in crowds to gaze upon it, and requested the tutor to inform them who was travelling in such state.' Logan affected a suspicious reluctance to give an answer; but at last took aside some respectable bystander, and, after enjoining secrecy, whispered to him, pointing to the lard: 'You observe a portly stout gentleman, with gold lace upon his clothes. That is (but it must not be mentioned to mortal) the great Duke William of Cumberland; he is going north, to see the field of Culloden once more.' This news was, of course, soon spread, and brought the whole population to catch a glimpse of the hero.*

The White Horse of Berkshire.

In a previous article,* we took occasion to describe the celebrated Berkshire monument known as 'Wayland Smith's Cave,' the history of which is shrouded in a mysterious antiquity. About a mile from this famous cromlech exists a no less remarkable memorial of bygone times—the renowned White Horse of Berkshire.

The colossal representation which bears this name, consists of a trench, about two feet deep,
cut in the side of a steep green hill, which is called White Horse Hill, and rises on the south of the vale known as the Vale of the White Horse. It is situated in the parish of Uffington, in the western district of Berkshire, about five miles from Greenstone. Though rudely cut, the figure, excavated in the chalk of which the hill is composed, presents, when viewed from the vale beneath, a sufficiently recognisable delineation of a white horse in the act of galloping. Its length is about 374 feet, and the space which it occupies is said to be nearly two acres.

No exact evidence can be adduced regarding the origin of this remarkable figure, but there seems to be little doubt that, in accordance with the popular tradition, it was carved to commemorate the victory of King Ethelred and his brother Alfred, afterwards Alfred the Great, over the Danes at Ashdown, in the year 871. The actual site of this great battle is not known, and has been the subject of some discussion; but the balance of probability is in favour of its having been fought in the neighbourhood of White Horse Hill, on the summit of which, at the height of 893 feet above the sea, is an ancient encampment, consisting of a plain of more than eight acres in extent, surrounded by a rampart and ditch. This enclosure is called Uffington Castle, and immediately beneath it is the stupendous engraving of the White Horse.

Were the preservation of this curious monument dependent only on the persistency of the original figure, it would probably have long since been obliterated by the washing down of debris from above into the trench, and the gradual formation of turf. From time immemorial, however, a custom has existed among the inhabitants of the neighbouring district, of assembling periodically, and scouring or cleaning out the trench, so as to renew and preserve the figure of the horse. This ceremony is known as 'The Scouring of the White Horse,' and, according to an ancient custom, the scourers are entertained at the expense of the lord of the manor. The festival which concludes their labours, forms a fête of one or two days' duration. Rustic and athletic games of various kinds, including wrestling, backsword-play, racing, jumping, and all those pastimes included in the general category of 'old English sports,' are engaged in on this occasion with immense enthusiasm, and prizes are distributed to the most successful competitors. A most interesting and graphic description of one of these rural gatherings, which took place in Septem-

ber 1857, is given in The Scouring of the White Horse, from the spirited pen of Mr Hughes, the well-known author of Tom Brown's School-days.

CARD-PLAYING AND PLAYING-CARDS.

A universal Christmas custom of the olden time was playing at cards; persons who never touched a card at any other season of the year, felt bound to play a few games at Christmas. The practice had even the sanction of the law. A prohibitory statute of Henry VII's reign, forbade card-playing save during the Christmas holidays. Of course, this prohibition extended only to persons of humble rank; Henry's daughter, the Princess Margaret, played cards with her suitor, James IV. of Scotland; and James himself kept up the custom, receiving from his treasurer, at Melrose, on Christmas-night, 1496, thirty-five unicorns, eleven French crowns, a ducat, a ridare, and a les, in all about equal to £24 of modern money, to use at the card-table. One of Poor Robin's rhythmical effusions runs thus:

'Christmas to hungry stomachs gives relief,
With mutton, pork, pies, pasties, and roast-beef;
And men, at cards, spend many idle hours,
At lodaum, whisk, cross-ruff, put, and all-fours.'

Palamedes, it is said, invented the game of chess to assuage the bitter pangs of hunger, during the siege of Troy; and, similarly, Poor Robin, in another doggerel rhyme, seems to imply that a pair—an old name for a pack—of cards may even cheer a comfortless Christmas—

'The kitchen that a-cold may be,
For little fire you in it may see.
Perhaps a pair of cards is going
And that's the chiepest matter doing.'

The immortal Sir Roger de Coverley, however, took care to provide both creature-comfort and amusement for his neighbours at Christmas; by sending 'a string of hog's puddings and a pack of cards' to every poor family in the parish.

Primero was the fashionable game at the court of England during the Tudor dynasty. Shakespeare represents Henry VIII, playing at it with the Duke of Suffolk; and Falstaff says: 'I never prospered, since I forswore myself at Primero.' In the Earl of Northumberland's letters about the Gunpowder plot, it is noticed that Joscelin Percy was playing at this game on Sunday, when his uncle, the constable, called on him at Essex House. In the Sidney papers, there is an account of a desperate quarrel between Lord Southampton, the patron of Shakespeare, and one Ambrose Willoughby. Lord Southampton was then 'Squire of the Body' to Queen Elizabeth, and the quarrel was occasioned by Willoughby persisting to play with Sir Walter Raleigh and another at Primero, in the Presence Chamber, after the queen had retired to rest, a course of proceeding which Southampton would not permit. Primero, originally a Spanish game, is said to have been made fashionable in England by Philip of Spain, after his marriage with Queen Mary. Rogers elegantly describes the fellow-voyagers of Columbus engaged at this game:

'At daybreak might the caravels be seen,
Chasing their shadows o'er the deep serena;
Their burnished prows lashed by the sparkling-tide,
Their green-cross standards waving far and wide.'
And now once more, to better thoughts inclined,
The seaman, mounting, clambered in the wind.
The soldier told his tales of love and war;
The courtesan sung, sung to his gay guitar.
Round at Primero, sate a whiskered band;
So fortune smiled, careless of sea or land.

Maw succeeded Primero as the fashionable game at the English court. Sir John Harrington notices it as—

"Maw,
A game without civility or law;
An odious play, and yet in court oft seen,
A saucy Knave to trump both King and Queen."

Maw was the favourite game of James I., who appears to have played at cards, just as he played with affairs of state, in an indolent manner; requiring in both cases some one to hold his cards, if not to prompt him what to play. Weldon, alluding to the poisoning of Sir Thomas Overbury, in his Court and Character of King James, says:

"The next that came on the stage was Sir Thomas Monson, but the night before he was to come to his trial, the king being at the game of Maw, said: "To-morrow comes Thomas Monson to his trial."

"Yes," said the king's card-holder, "where if he do not live, I will in his master's place, your majesty shall never trust me." This so raged in the king's mind, that at the next game, he said he was sleepy, and would play out that set the next night."

The writer of a contemporary pamphlet, entitled True Tell-truth, shows that he was well acquainted with James's mode of playing cards, and how, moreover, his majesty was tricked in his dawdling with state matters, where the friendly services of a card-holder were less to be depended on. This pamphleteer, addressing James, observes: "Even in the very gaming ordinances, where men have scarce leisure to say grace, yet they take a time to censure your majesty's actions, and that in their old-school terms. They say you have lost the fairest game at Maw that ever king had, for want of making the best advantage of the five-finger, and playing at the issue of money. That your own card-holders play booby, and give the sign out of your own hand." This gives us a suspicion of what the game of Maw was like, which is fully verified by the following verses under a caricature of the period, representing the kings of England, Denmark, and Sweden, with Bethem Gabor, playing at cards against the pope and some monks.

"Denmark, not sitting far, and seeing what hand Great Britain had, and how Rome's less did stand, Hopes to win something too: Maw is the game. At which he plays, and challenges at the same A Monk, who stakes a chalice; Denmark sets gold And shuffles; the Monk cuts; Denmark being bold, Deals freely round; and the first card he shows Is the five-fingers, which, being turned up, goes Cold to the Monk's heart; the next Denmark sees Is the ace of hearts; the Monk cries out I lose! Denmark replies, Sir Monk shew what you have; The Monk could shew him nothing but the knave."

From the preceding allusions to the five-finger (the five of trumps), the ace of hearts, and the knave, it is evident that Maw differed very slightly from Five Cards, the most popular game in Ireland at the present day. As early as 1674, this game was popular in Ireland, as we learn from Cotton's Compleat Connois, which says: "Five Cards is an Irish game, and is much played in that kingdom, for considerable sums of money, as All-fours is played in Kent, and Post-and-pair in the west of England. Games migrate and acquire new names, as well as other things. Post-and-pair, formerly the great game of the west of England, has gone further west, and is now the Poker of the southwestern states of America; and the American backwoodman, when playing his favourite game of Euchre, little thinks that he is engaged at the fashionable Parisian Ecarté.

Noddy was one of the old English court games, and is thus noticed by Sir John Harrington:

"Now Noddy followed next, as well it might, Although it should have gone before of right, At which I say, I name not any body, One never had the knave, yet laid for Noddy."

This has been supposed to have been a children's game, and it was certainly nothing of the kind. Its nature is thus fully described in a curious satirical poem, entitled Batt upon Batt, published in 1694.

"Show me a man can turn up Noddy still, And deal himself three fives too, when he will; Conclude with one-and-thirty, and a pair, Never fall ten in Stock, and yet play fair, If Batt be not that right, I lose my aim."

From these lines, there can be no doubt that the ancient Noddy was the modern Cragibe—the Nob of to-day, rejoicing in the name of Noddy, and the modern Crib, being termed the Stock. Cribbage is, in all probability, the most popular English game at cards and the present day. It seems as if redolent of English comfort, a snug fireside, a Welsh-rabbit, and a little mulled something simmering on the hob. The rival powers of chance and skill are so happily blended, that while the influence of fortune is recognised as a source of pleasing excitement, the game of Cribbage admits, at the same time, of such an exertion of the mental faculties, as is sufficiently to engage the player. It is the only game, known to the writer, that still induces the village surgeon, the parish curate, and two other old-fashioned friends, to meet occasionally, on a winter's evening, at the village inn.

Ombre was most probably introduced into this country by Catherine of Portugal, the queen of Charles II.; Waller, the court-poet, has a poem on a card torn at Ombre by the queen. This royal lady also introduced to the English court the reprehensible practice of playing cards on Sunday. Pepys, in 1667, writes: "This evening, going to the queen's side to see the ladies, I did find the queen, the Duchess of York, and another at cards, with the room full of ladies and great men; which I was informed at to see on a Sunday, having not believed, but contrarily flatly denied the same, a little while since, to my cousin."

In a passage from Evelyn's Memoirs, already quoted (vol. i. p. 226), the writer impressively describes another Sunday-evening scene at Whitehall, a few days before the death of Charles II., in which a profligate assemblage of couriers is represented as deeply engaged in the game of Bassey, brought by Cardinal Mazarin to France; Louis XIV. is said to have lost large sums at it; and it was most likely brought to England by some of the French ladies..."
of the court. It did not stand its ground, however, in this country; Ombre continuing the fashionable game in England, down till after the expiration of the first quarter of the last century. It is utterly forgotten now, but being Belinda’s game in the Rape of the Lock, where every incident in the deal is minutely described, it could be at once revived from that delightful poem. Pope’s Grotto and Hampton Court excited in Miss Mitford’s mind; ‘vivid images of the fair Belinda and the game of Ombre.’ The writer, who resides in that classic neighbourhood, sometimes sees at auctions in old houses, the company puzzling their brains over a curious three-cornered table, wondering what it possibly could have been for. It is an Ombre-table, expressly used for playing this game, and is represented, with an exalted party so engaged, on the frontispiece of Seymour’s Compleat Gambereter, published in 1739. From the title-page we learn that this work was written ‘for the use of the young princesses.’ These were the daughters of George, Prince of Wales, afterwards George II. One of them, Amelia, in her old-maidenhood, was a regular visitor at Bath, seeking health in the pump-room, and amusement at the card-table.

Quadrille is a game of Ombre, with a curious reason did not reign so long as its predecessor. From the peculiar nature of Quadrille, an unfair confederacy might be readily established, by any two persons, by which the other players could be cheated. In an annual publication, the Annales of Gaming, for 1775, the author says, ‘this game is most commonly played by ladies, who favour one another with the game’s signs. The great stroke of the ladies attempt is keeping the pool, when by a very easy legerehand they can serve themselves as many fish as they please.’

While the preceding games were in vogue, the magnificent temple of Whist, destined to outshine and overshadow them, was in course of erection.

‘Let India vaunt her children’s vast address,
Who first contrived the warlike sport of Chess;
Let nice Fiquette the boast of France remain,
And the pride of Spain, Invention’s praise shall England yield to none,
When she can call delightful Whist her own.’

All great inventions and discoveries are works of time, and Whist is no exception to the rule; it did not come into the world perfect at all points, as Minerva emerged from the head of Jupiter. Nor were its wonderful merits early recognised. Under the vulgar appellations of Whisk and Swobbers, it long lingered in the servants-hall, ere it could ascend to the drawing-room. A length, some gentlemen, who met at the Crown coffee-house, in Bedford Row, studied the game, gave it rules, established its principles, and then Edward Hoyle, in 1743, blazoned forth its fame to all the world.

‘Whilst Ombre and Quadrille at court were used,
And Basset’s power the city dames amused,
Imperial Whist was yet but little esteemed,
And pastime fit for none but rustics deemed. How slow, at first, is still the growth of fame! And what obstacles wait each rising name! Our stupid fathers thus neglected, long
The glorious boast of Milton’s epic song;
But Milton’s muse, at last, a critis found;
Who o’er all the world around;
And Hoyle, at length, for Whist performed the same,
And proved its right to universal fame.’

Many attempts have been made, at various times, to turn playing-cards to a very different use from that for which they were originally intended. Thus, in 1518, a learned Franciscan friar, named Marner, published a Logica Memorativa, a mode of teaching logic, by a pack of cards; and, subsequently, he attempted to teach a summary of civil law in the same manner. In 1656, an Englishman, named Jackson, published a treatise, entitled the Scholar’s Sciential Cards, in which he proposed to teach reading, spelling, grammar, writing, and arithmetic, with various arts and sciences, by playing-cards; premising that the learner was well grounded in all the games played at the period. And later still, about the close of the seventeenth century, there was published the Gentle Housekeeper’s Pastimes; or the Mode of Carving at Table represented in a Pack of Playing-Cards, by which any one of Ordinary Capacity may learn how to Carve, in Mode, all the most usual Dishes of Flesh, Fish, Fowl, and Baked Meats, with the several Sauces and Garnishes proper to Every Dish of Meat. In this system, flesh was represented by hearts, fish by clubs, fowl by diamonds, and baked-meat by spades. The king of hearts ruled a noble sirloin of roast-beef; the man of diamonds, a pickled herring; and the king of diamonds reared his battle-axe over a turkey; while his brother of spades smiled benignantly on a well-baked venison-pasty. A still more practical use of playing-cards can be vouched for by the writer. Some years ago, a shrewd Yankee skipper, bound for New York, found himself contesting against the long westerly gales of winter with a short and inefficient crew, but a number of sturdy Irish emigrants as passengers. It was most desirable to make the latter useful in working the ship, by pulling and hauling about the deck; but their utter ignorance of the names and positions of the various ropes rendered the project, at first sight, apparently impossible. The problem, however, was readily solved by placing a playing-card, as a mark or signal, at each of the principal ropes; the red cards in the fore-part of the ship, the black cards in the after; hearts and clubs on the starboard-side, spades and diamonds on the larboard. In five minutes, every Irishman knew his station, and the position of the cards; there was no mysterious nautical nomenclature of tacks, sheets, hauling, braces, bowlines, &c., to bother the Hibernian mind. The men who were stationed at the ace of spades, for instance, well knew their post, and when called to tack ship, were always found at it; when orders were given to haul down the king of clubs, the rope was at once seized by ready hands. The writer has seen the after-guard and waisters of a newly-commissioned crack ship-of-war, longer in learning their stations, and becoming efficient in their duties, than those card-taught Irishmen were.

Even the pulpit has not disdained to turn playing-cards to practical use. Bishop Latimer, preaching at Cambridge on the Sunday before Christmas, 1557, suited his sermon to the card-playing practice of the season rather than the text. And Fuller gives another example of a clergyman preaching from Romans xii. 3—4, and thus dealt to every man the measure of faith. ‘The gentleman in question adopted as an illustration of his discourse the metaphor of dealing as applied...'

780
to cards, reminding his congregation that they should follow suit, ever play above-board, improve the gifts dealt out to them, take care of their trumps, play promptly when it became their turn, and so forth.

The familiar name of the nine of diamonds has already been noticed in these pages (vol. i. p. 75). In Ireland, the six of hearts is still termed ‘Grace’s card.’ The Honourable Colonel Richard Grace, an old Cavalier, when governor of Athlone for James II., was solicited, by promises of royal favour, to betray his trust, and espouse the cause of William III. Taking up a card, which happened to be the six of hearts, Grace wrote upon it the following reply, and handed it to the emissary who had been commissioned to make the proposal. ‘Tell your master I despise his offer, and that honour and conscience are dearer to a gentleman, than all the wealth and titles a prince can bestow.’

Short notes were frequently written on the back of playing-cards. In an old collection of poetry is found the following lines:

TO A LADY, WHO SENT HER COMPLIMENTS TO A CLERGYMAN ON THE TEN OF HEARTS.

‘Your compliments, dear lady, pray forbear,
Old English services are more sincere.
You send ten hearts—the tithe is only mine,
Give me but one, and burn the other nine.’

The kind of advertisements, now called circulars, were often, formerly, printed on the backs of playing-cards. Visiting-cards, too, were improvised, by writing the name on the back of playing-cards. About twenty years ago, when a house in Dean Street, Soho, was under repair, several visiting-cards of this description were found behind a marble chimneypiece, one of them bearing the name of Isaac Newton. Cards of invitation were written in a similar manner. In the fourth picture, in Hogarth’s series of ‘Marriage à-la-Mode,’ several are seen lying on the floor, upon one of which is inscribed: ‘Count Basset begs to no how Lade Squander asleep last night.’ Hogarth, when he painted this inscription, was most probably thinking of Mrs. Beeton’s play, The Bassed Table, which a critic describes as containing a great deal of plot and business, without much sentiment or delicacy.

An animated description of a round game at cards, among a party of young people in a Scottish farmhouse, is given in Wilson’s ever-memorable Noces. It is the Shepherd who is represented speaking in this wise:

‘As for young folks–lads and lasses, like—when the gudeman and his wife are gae to bed, that’s the harm in a ggem at cairds! It’s a cheerfu’, noisy, sicht o’ comfort and confusion. Sic luckin’ into anither’s hauns! Sic false shufflin’! Sic unfair dealin’! Sic winkin’ to tell your pairnter that ye hae the king or the ace! And when that wunna do, sic kickin’ o’ shins and treadin’ on tae a neath the table—allen the wrong ans! Then drop them cards in a clash on the board, because you’ve ane ower few, and the coof mawn lose his deal! Then what gadjin’ amongst the lasses! What amicable, nay, love-querrels, between pairnters! Jokin’, and jeestin’, and tauntin’, and toozlin’—the cawnel blown out, and the soon’ o’ a thousand kisses!—That’s caird-playing in the kintra, Mr. North; and where’s the man amang ye that will daur to say that it’s no a pleasant pastime o’ a winter’s nicht, when the snaw is cumin’ doon the lum, or the spaut’s roarin’ amang the mirk montains?’

A curious and undoubtedly authentic historical anecdote is told of a pack of cards. Towards the end of the persecuting reign of Queen Mary, a commission was granted to a Dr Cole to go over to Ireland, and commence a fiery crusade against the Protestants of that country. On coming to Chester, on his way, the doctor was waited on by the mayor, to whom he shewed his commission, exclaiming, with premature triumph: ‘Here is what shall hush the heretics of Ireland.’ Mrs Edmonds, the landlady of the inn, having a brother in Dublin, was much disturbed by overhearing these words; so, when the doctor accompanied the mayor down stairs, she hastened into his room, opened his box, took out the commission, and put a pack of cards in its place. When the doctor returned to his apartment, he put the box back in portmannean without suspicion, and the next morning sailed for Dublin. On his arrival, he waited on the lord-lieutenant and privy council, to whom he made a speech on the subject of his mission, and then presented the box to his lordship; but on opening it, there appeared only a pack of cards, with the knave of clubs uppermost. The doctor was petrified, and assured the council that he had had a commission, but what was become of it he could not tell. The lord-lieutenant answered: ‘Let us have another commission, and, in the meanwhile, we can shuffle the cards.’ Before the doctor could get his commission renewed, Queen Mary died, and thus the persecution was prevented. We are further informed that, when Queen Elizabeth was made acquainted with the circumstances, she voted a pension of £40 per annum on Mrs Edmonds, for having saved her Protestant subjects in Ireland.

There are few who sit down to a quiet rubber that are aware of the possible combinations of the pack of fifty-two cards. As a curious fact, not found in Hoyla, it is worth recording here, that the possible combinations of a pack of cards cannot be numerically represented by less than forty-seven figures, arrayed in the following order: 16, 160, 563, 659, 176, 299, 962, 688, 164, 794, 000, 749, 006, 367, 006, 400.

An old work on card-playing sums up the morality of the practice, very concisely, in the following lines:

‘He who hopes at cards to win,
Must never think that cheating’s sin;
To make a trick wheres’er he can,
No matter how, should be the plan.
No case of conscience makes him slack,
Except how he may save his stakes;
The only object of his prayers
Not to be caught and kicked down stairs.’

A more summary process of scomption, even, than kicking down stairs, seems to have been occasionally adopted in the olden time; sharpers having sometimes been thrown out of a window. A person so served at Bath, it is said, went to a solicitor for advice, when the following conversation took place:

‘Says the lawyer: “What motive for treatment so hard?”’

‘Dear sir. All my crime was but—slipping a card.”

781
Becket proved not only a most accomplished courtier and delightful companion, but likewise a clear-headed and sagacious statesman. He even gave evidence of military tastes and prowess by accompanying the king on an expedition to France, where, at the head of a company of knights, he took active part in several sieges, and unhorsed in single combat a French knight of high renown for bravery and feats of arms.

But Henry was not content with the position to which he had raised Becket, and in which, if he had been allowed to remain, his life would, in all probability, have ultimately terminated in tranquillity and honours, instead of the awful tragedy by which it was prematurely brought to a close. Desirous of curbing the growing pretensions of the church, and believing that in his chancellor he would find a ready coadjutor in this project, the king insisted on the latter accepting the archbishopric of Canterbury, which had just then become vacant. Becket, it is said, would have declined this accession of honours, and frankly warned the king of the consequences which he must expect. Henry however insisted, and Becket was forthwith installed in his new dignity.

A most extraordinary change of conduct now took place. From the gay and worldly chancellor, who joined in all his sovereign's amusements, and indulged in every obtainable luxury and splendour, Becket was transformed to the austere and enthusiastic monk, whose sole aim is the exaltation of his order, and the extension of the power of the church. The first sign of this altered procedure was the resigning of the office of chancellor, an act which likewise occasioned the first coldness between him and the king. Then followed an exhibition of self-mortification and asceticism, such as in medieval times was regarded as the most conclusive evidence of goodness and piety. Yet much exaggeration seems to have taken place on this subject, as Becket, notwithstanding his numerous charities, and those ostentatious but highly-esteemed acts of humility which he now practised, maintained to the close of his life a great magnificence in establishment and retinue.

After many causes of dissension and ill-will between Henry and the archbishop, produced by the zeal and energy of the latter in persecuting the interests of the church and the claims of the see in particular, an open rupture was at last occasioned by the immunity which the clergy claimed from secular jurisdiction, and which Becket vehemently urged and supported. The king was no less resolute in asserting the subjection of priests to the authority of the ordinary courts, in the event of crimes committed by ecclesiastics, and a vital struggle ensued, in which his own had for a time the advantage. Becket was forced to quit the country as an exile, and remained abroad for several years. Through the influence of the pope and the king of France, a seeming reconciliation was at last effected in July 1170, and in the beginning of the ensuing month of December, the formidable champion of ecclesiastical rights returned to England, and was received with amicable acclamations by the archiepiscopal metropolis of Canterbury.

The reconciliation had proved but hollow with both parties, neither of whom were disposed to recede from what they considered their rights.
Three prelates, the archbishop of York, and the bishops of London and Salisbury, had given an inexpressible offence to Becket by performing, in the absence of the latter, the coronation of the king's eldest son, Prince Henry, an act which the archbishop of Canterbury represented as an unpardonable encroachment on his exclusive privileges. He published letters of excommunication against the offending bishops, with notes of their way to France, where Henry II. was then residing, in the castle of Bur, near Bayez, and reported this fresh instance of Becket's resistance to the authority of the crown. Henry's rage on receiving this intelligence was tremendous, and vented itself in complaints against those lukewarm and spiritless courtiers, who, he said, allowed this uppstart priest to treat their sovereign with such insolence. These fatal words proved Becket's death-warrant. Four courtiers, named respectively Reginald Fitzurse, Hugh de Morville, William de Tracy, and Richard le Breton, understanding these expressions as an authorisation of the murder of Becket, quitted forthwith the castle, and took their way to the coast, where they embarked for England. Arriving there, they assembled on the 26th of December, 1170, at the castle of Winchester, occupied by Randolph de Broc, a mortal enemy of Becket, and here, it is said, they concocted in darkness, without seeing each other's faces, the scheme for the murder of Becket. The next day, the party proceeded to Canterbury, and in the afternoon made their way into the archbishop's palace and the apartment where Becket was sitting with his clergy. Fitzurse acted as the spokesman, and announcing that he and his companions had come to the archbishop with a message from the king, demanded satisfaction in the absolution of the three bishops, and compliance with the royal will in that and other matters. Becket defended his conduct, and a scene of violent and mutual recrimination ensued. The conspirators then, boiling with passion, quitted the palace, which they ransacked, armed, and therewith galloped on their swords, one or two of the party, moreover, arming themselves with hatchets. Having returned to the archbishop's residence, they found the avenues of admission barred against them, but they at last succeeded in forcing an entrance. Becket, meantime, had been urged by a small band of faithful adherents to take refuge within the cathedral, and though, for a time, he rejected this proposal as cowardly and inglorified, he was at last induced to do so on being reminded that it was now five o'clock, and the time of vesper-service. Quitting the palace by a private door, he gained the cloisters of the cathedral, and from thence entered the church by a door in the north transept. His enemies, who had now by this time succeeded in making their way into the cloisters, followed him by the same entrance into the sacred building, and here Becket and his foes were again confronted. A scene of altercation similar to what had already taken place in the palace now recommenced, and after much invective on both sides, Fitzurse struck Becket a blow on the head with his sword, which, however, did no further damage than knocking off his cap. Tracy followed with a more deadly stroke, severing the archbishop's head, and leaving his lifeless corpse on the pavement of the church. It is needless to pursue the terrible story any further. No punishment beyond excommunication and the enforced pilgrimage of one or two of the conspirators to the Holy Land, seems to have befallen the murderers; for by a singular reciprocity, it would appear that, by the same principle for which Becket contended so stoutly—the immunity of the clergy from sacred jurisdiction—crimes committed by laymen against priests were, like the offences of the clergy themselves, only cognisable before ecclesiastical courts, where, in both cases, the highest sentence that could be pronounced was excommunication. But the benefit accruing to the church from the archbishop's death was incalculable. Becket was now regarded as, and received the honours of, a martyr, and it was with great difficulty that Henry succeeded in obtaining absolution from the pope for the passionate expressions which had indirectly authorised the archbishop's murder. The king's subsequent pilgrimage to Canterbury, and his painful pence of a day and a night at the tomb of the sainted Thomas, exhibited thoroughly the church's triumph over the secular power. The victory which the latter had gained in the celebrated 'Constitutions of Clarendon,' at the commencement of the reign, thereby to Becket, and Henry II., was now more than avenged. In the advanced supremacy of ecclesiastical over temporal sway, which reached its climax in the reign of Henry's son, King John, it may well be averred of Becket's murder that 'it was more than a crime; it was a blunder.' From the period of Becket's death to the Reformation, his shrine in Canterbury Cathedral continued to be visited by crowds of pilgrims, whose offerings proved as valuable a source of clerical revenue as those of the worshippers at the less celebrated tomb of St. Cuthbert, in the cathedral of Durham. The Canterbury pilgrimages have been immortalised by Chaucer, from whose Canterbury Tales we learn that piety and devotion were by no means uniformly characteristic of the visitors who flocked, on such occasions, to the shrine of St. Thomas. On the overthrow of the Roman Catholic religion in the sixteenth century, Becket's shrine was dismantled and plundered, and the name of the saint himself excluded from the calendar, in the reformed liturgy. An entire revulsion of feeling now took place regarding him, and from the rank of a holy man and a martyr he descended in general estimation to the level of a scheming priest and audacious rebel, whilst his murder, if not actually approved, was regarded in the light of a righteous judgment for his overweening ambition. This view of his character prevailed generally up to the present day, when a second revolution in public opinion took place; and Becket has found several able panegyrists, not only on grounds of Roman Catholic or Anglican high-church predictions and sympathies, but in reference to principles of a different nature—motives of patriotism and resistance to feudal tyranny. These last-mentioned views are advocated by M. Thierry and Mr. Froude; the former of whom regards Becket in the same aspect that he does Robin Hood, as the vindicator of Saxon rights and liberties against Norman oppression; the latter considers a bulwark to the people against monarchical and baronial outrage, such as the power of the church actually often was in medieval times. M. Thierry's
view seems to be entirely fanciful; and neither in this light, nor in the view taken by Mr. Froude, is it possible to attribute to Becket the character either of a martyr or a hero. That he was not a hypocrite, may be fairly conceded; and he appears to have been in many respects a really charitable and generous-minded man. But his disposition was both obstinate and headstrong in the highest degree; and in his machinations to render the church paramount, we can only see the pious trappings of an ambition alike undeserving of commendation on religious or moral grounds, and most dangerous to the progress of the intellectual and personal liberties of mankind. The Constitutions of Clarendon, against which he protested so strenuously, contained nothing more objectionable than what has come to be universally recognised as essential to the maintenance of good order and liberty in the various relations of church and state. In the opinions of certain parties, it is impossible to exalt too highly the power of the church, and under no circumstances can any procedure be deemed inexcusable, whose object is the furtherance of this holy cause. To persons of this way of thinking, Becket must of course ever appear as a hero.

LEGEND OF BECKET'S PARENTS.

In connection with the renowned Thomas Becket, noticed in the preceding article, a curious story is related of the marriage of his parents. It is said that Gilbert, his father, had in his youth followed the Crusaders to Palestine, and while in the East had been taken prisoner by a Saracen or Moor of high rank. Condemned by the latter within his own castle, the young Englishman's personal attractions and miserable condition alike melted the heart of his captor's daughter, a fair Mohammedan, who enabled him to escape from prison and regain his native country. Not wholly disinterested, however, in the part which she acted in this matter, the Moor's daughter obtained a promise from Gilbert, that as soon as he had settled quietly in his own land, he should find and marry her protector's daughter. Years passed on, but no message ever arrived to cheer the heart of the love-born maiden, who thereupon resolved to proceed to England and remind the forgetful knight of his engagement. This perilous enterprise she actually accomplished; and though knowing nothing of the English language beyond the Christian name of her lover and his place of residence in London, which was Chesham, she contrived to search him out; and with greater success than she possibly could have anticipated, found him ready to fulfill his former promise by making her his wife. Previous to the marriage taking place, she professed her conversion to Christianity, and was baptized with great solemnity in St. Paul's Cathedral, no less than six bishops assisting at the ceremony. The only child of this union was the celebrated Thomas Becket whose devotion in after-years to the cause of the church, may be said to have been a befitting recompense for the attention which her ministers had shewn in watching over the spiritual welfare of his mother.

This singular story has found credence in recent times with Dr. Giles, M. Thirry, Mr. Froude, and M. Michelet; but by one of the most judicious modern biographers of Becket, Canon Robertson, it is rejected as a legendary tale, wholly unsupported by the evidence of those chroniclers who were Becket's contemporaries. It gave rise, both in England and Scotland, to more than one ballad, in which the elder Becket's imprisonment in the East, his liberation by the aid of the Moorish damsel, and the latter's expedition to Britain in quest of him, are all set forth with sundry additions and embellishments. In one of these, while the brave knight rode on the fair young Saracen, who, by some extraordinary corruption or misapprehension, is recorded under the designation of Susis Fye, follows her lover to Scotland, and there surprises him at the very hour when he is about to unite himself in marriage to another lady. The faithless lover on being reminded of his previous compact, professes the utmost contrition, and declares at once his resolve to wed the Saracen's daughter, who had given such evidence of her love and attachment to him, by making so long and dangerous a journey. The hapless bride, who would otherwise have speedily become his wife, is unceremoniously dismissed along with her mother; and the nuptials of Lord Belcham and Susie Fye are then celebrated with great magnificence. Another ballad on the same subject is entitled Cal Fye, in which, however, the heroine is represented as the daughter of the king of France, and distinguished by the title of Burd Isabel. By such romantic embellishments, and so incongruous and ridiculous a nomenclature, did the ballad-writers of a later age embody in verse the story of the parents of the renowned archbishop of Canterbury.

MALTHUS.

This celebrated writer, whose theory on population has been the subject of so much unmerited abuse, was the son of a gentleman of independent fortune, who possessed a small estate in the county of Surrey. Young Malthus received his early education mainly from a private tutor, and subsequently attended Christ Church, Oxford, where he studied for the church, and obtained a fellowship in 1797. For a time, he held the incumbency of a small parish in Surrey near his native place.

It was not in the church, however, that Mr. Malthus was to become famous. Through life, the bent of his genius seems to have led him in the direction of political economy and statistics; and in pursuit of information on this subject, he made extensive journeys and inquiries through various countries of Europe. The first edition of the work, which has conferred on him such notoriety, appeared in 1798, under the title of An Essay on the Principle of Population, as it affects the Future Improvement of Society, with Remarks on the Speculations of Mr. Godwin, M. Condorcet, and other Writers. In subsequent issues, the title of the work was changed to its present form: An Essay on the Principle of Population; or a View of its Past and Present Effects on Human Happiness, with an Inquiry into our Prospects respecting the Future Removal or Mitigation of the Evils which it occasions. The leading principle in this work is, that population, when unchecked, doubles itself at the end of every period of twenty-five years, and thus increases, in a geometrical progression, or the ratio of 1, 2, 4, 8, 16,
DECEMBER 30.

St Sabinus, bishop of Assisiun, and his companions, martyrs, 304. St Anysia, martyr, 304. St Maximus, confessor, about 602.

102
THE STORY OF THE RESOLUTION.

Perhaps the most remarkable voyage on record, was that of the Arctic exploring-ship Resolution. Abandoned by her officers and crew to anticipated destruction, she, as if instinct with life, made a voyage of a thousand miles alone, back to regions of civilisation—as if in indignant protest against her abandonment.

In April 1853, Sir Edward Belcher, with the ships Assistance, Pioneer, Resolution, Intrepid, and North Star, left England to search for Sir John Franklin and his companions. Captain McClure, in the Investigator, was at that time struggling against appalling difficulties in the ice-bound seas north of the American continent. On the 6th of April 1853, Captain McClure and Lieutenant Pim had their memorable meeting on the ice; the former having come from the Pacific, the latter from the Atlantic. Lieutenant Pim belonged to Captain Kellett's ship Resolution, part of Belcher's squadron. The Investigator, the ship with which McClure had practically solved the problem of the North-west Passage, showed the north-west commander and the remainder of the crew were received on board the Resolution. With the exception of this single fact of rescuing McClure, Belcher was singularly unfortunate: achieving little or nothing in other ways. On the 16th of May 1854, at his express command, but sorely against their will, Captain Kellett and Commander M'Clintock finally abandoned the Resolution and Intrepid, locked in ice off the shores of Melville Island. On the 24th of August, in the same year, again at the express command of Belcher, Commander Sherard Osborn abandoned the Pioneer, while Belcher himself abandoned the Assistance, both ships being ice-locked in Wellington Channel. The officers and crews of no less than five abandoned ships reached England before the close of the year.

It was one of these five deserted ships which, we may almost say, came to life again many months afterwards; to the astonishment of every one conversant with the arctic region. Late in the year 1855, Captain Buddington, in the American whaler George Henry, was sailing about in Davis's Strait, when, on the 17th of September, about forty miles from Cape Mercy, he descried a ship presenting unusual appearances; no signals were put out or answered; and, when he approached, no crew were visible. It was the Resolution, as sound and hearty as ever, with the exception of a little water which had got into the hold, and the spoiling of some of the perishable articles inside. Any one with a map of the arctic regions before him, will see what a lengthened voyage the good old ship must have made from Melville Island, through Barrow Straits, Lancaster Sound, and Baffin's Bay, during the period of 474 days which intervened between her abandonment and her recovery. The probable track is marked in a map attached to Mr. M'Dougall's Eventful Voyage of the Resolution. It is supposed that ice, loosened during the short summers of 1854 and 1855, drifted with the current into Davis's Strait, and carried along with it the ship.

The gift of the adventurous old ship by America to England was gracefully managed. The United States congress, on the 26th of August 1856, passed the following resolution: 'Whereas it has become known to Congress, that the ship Resolution, late of the navy of Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, on service in the Arctic Seas in search of Sir John Franklin and the survivors of the expedition under his command, was rescued and recovered in those seas by the officers and crew of the American whale-ship, the George Henry, after the Resolution had been necessarily abandoned in the ice by her officers and crew, and after drifting still in the ice for more than one thousand miles from the place where so abandoned—and that the said ship Resolution, having been brought to the United States by the salvors at great risk and peril, had been generously relinquished by them to Her Majesty's government. Now, in token of the deep interest felt in the United States for the service in which Her Majesty's said ship was engaged when thus necessarily abandoned, and of the sense entertained by Congress of the act of Her Majesty's government in surrendering said ship to the salvors: Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That an amount of $10,000 be, and he is hereby requested to cause the said ship Resolution, with all her armament, equipment, and property on board when she arrived in the United States, and which has been preserved in good condition, to be purchased of her present owners, and that he send the said ship with everything pertaining to her as aforesaid, after being fully repaired and equipped at one of the naval-yards of the United States, back to England under the control of the secretary of the navy, with a request to Her Majesty's government, that the United States may be allowed to restore the said ship Resolution to Her Majesty's service—and for the purchase of said ship and appurtenances, as aforesaid, the sum of forty thousand dollars, or so much thereof as may be required, is hereby appropriated, to be paid out of any money in the treasury not otherwise appropriated.'

The final incident in the story was the formal presentation of the ship to the Queen of England, on the part of the government of the United States. This presentation was delayed no less than 469 days after the discovery or recovery of the ship by Captain Buddington, owing to various causes, some avoidable and others unavoidable. On the 13th of November 1856, the Resolution, in excellent trim after her repairs, set sail, and arrived near Cowes on December the 19th, under the care of Captain Hartstein of the United States navy. Sir George Seymour, naval commander-in-chief at Portsmouth, made arrangements for a royal visit to the recovered ship. The Queen, the Prince Consort, the Prince of Wales, the Princess Royal, and Princess Alice, left Osborne House, and steamed out to the old ship, which was decked out in colours, with the English and American flags flying at the peak. Captain Hartstein and the officers, in full uniform, received the royal party, to whom they were severally introduced. Captain Hartstein then said to the Queen: 'Allow me to welcome your Majesty on board the Resolution, and, in obedience to the will of my countrymen and of the President of the United States, to restore her to you, not only as an evidence of friendly feeling to your sovereignty, but as a token of love.'
admiration, and respect to your Majesty personally.'

The Queen made a short but kindly recognition of the admiration, took a royal walk round the ship, and examined it with great interest. Captain Hartstein, with a map spread out before him, traced the course which the deserted ship had followed, and the relation which that course bore to arctic voyages generally. Captain Hartstein, in reply to a question from the Prince Consort, expressed a belief that Sir John Franklin, or some of his companions, might still be alive, among the Eskimo — a belief which many persons entertained at that time, but which gradually gave way to hopelessness. After the departure of the royal visitors, a dejeuner was given in the ward-room, during which one 'toast' was, 'The future success of the Resolute, and may she be again employed in prosecuting the search for Sir John Franklin and his comrades.'

The Americans had done their self-imposed work well and gracefully. With such care had the repairs and re-equipment been performed, that not only had the ship's stores — even to flags — been replaced, but the officers' libraries, pictures, musical-boxes, &c., had been preserved, and with excellent taste had all been restored to their original positions. The royal family were touched at the sight of these little memorials, as they went from cabin to cabin of the ship. Captain Hartstein was invited to visit the Queen at Osborne that evening. On the following day the Resolute was brought into Portsmouth harbour, amid great rejoicings, and complimentary salutes to the American flag. Many banquet invitations were given to Captain Hartstein and his officers on subsequent days; the chief of which, for grandeur and importance, was given by the mayor and corporation of Portsmouth. A deputation from the Shipowners' Association of Liverpool came to Portsmouth, with an invitation for the American officers; which, however, their limited time prevented them from accepting. The prime minister entertained Captain Hartstein at his seat in Hampshire; the government gave a dinner to the American sailors on Christmas-day; and Lady Franklin invited all the officers to an entertainment provided by her for them at Brighton.

At length, on the 30th of December, the formal transfer of the interesting old ship took place. Captain George Seymour, of the Victory, with two subordinate officers, and small parties of seamen and marines, went on board the Resolute. Precisely at one o'clock, the Victory hoisted the American flag at her main, and fired a salute of twenty-one guns; while Captain Hartstein hailed down the American colours from the Resolute, and substituted the British, and the American crew manned the yards to give three cheers to the Victory. Captain Hartstein, with his officers around him, then addressed Captain Seymour: 'Sir, the closing scene of my most pleasant and important mission has now to be performed. And permit me to hope that, long after every timber in her sturdy frame shall have perished, the remembrance of the old Resolute will be cherished by the people of the respective nations. I now, with a pride totally at variance with our professional ideas, strike my flag, and to you, sir, give up the ship.' Captain Seymour made a suitable reply; and soon afterwards the whole of the American officers and seamen were conveyed on board the United States' mail-steamship Washington, in which they returned to their own country. The British government offered to convey them in the war-steamer Retribution, in friendly compliment to the American government; but arrangements previously made interfered with this plan.

The issue of this affair was, after all, not a pleasant one. The Admiralty, with indecorous haste, ordered the brave old ship to be dismantled and reduced to the state of an unsightly hulk. This was a bit of paltry economy, which assented ill with extravagance in other matters. It was injudicious in many ways; for the old ship would have formed a memento of arctic expeditions; it would have afforded testimony concerning the currents and drift-ice of those regions; it would have been a pleasant object for Englishmen to visit, side by side with Nelson's famous ship in Portsmouth harbour; and it would have been gratifying to Americans visiting England, to see that the liberality of their government had been appreciated.

PRIMITIVE STYLE OF SKATING.

Fitz-Stephen, in his account of the sports of the young citizens of London on the ice in the twelfth century (as quoted by us under January 20), notes their expertness in using the bones of animals as a means of increasing their velocity, 'taking in their hands poles adjoin iron, which at times they strike against the ice, they are carried along with as great rapidity as a bird flying, or a bolt discharged from a cross-bow.' The cut here given illustrates this practice. A child is using the jaw-bones of a horse or cow as a sledge, and propelling himself with pointed staves. It is copied from a Dutch engraving, representing sports on the ice in the town-ditch at Antwerp, 1694.
the ordinary routine of daily life have again been resumed; or, to apply to English habits the words of an old Scottish rhyme still current, but evidently belonging to the old times, anterior to the Reformation, when Christmas was the great popular festival:

'Yule's come and Yule's gane,
And we has toasted well;
Sae Jock maun to his fiall again,
And Jenny to her wheel.'

Whilst thus the inhabitants of South Britain are settling down again quietly to work after the festivities of the Christmas season, their fellow-subjects in the northern division of the island are only commencing their annual saturnalia, which, till recently, bore, in the license and boisterous merriment which used to prevail, a most unmistakable resemblance to its ancient pagan namesake. The epithet of the Deff [mad] Days, applied to the season of the New Year in Scotland, indicates very expressively the uproarious joviality which characterised the period in question. This excess of joyousness—which, it must be admitted, sometimes led to great excesses—has now much declined, but New-year's Eve and New-year's Day constitute still the great national holiday in Scotland. Under the 1st of January, we have already detailed the various revelries by which the New Year used to be ushered in, in Scotland. It now becomes our province to notice those ceremonies and customs which are appropriate to the last day of the year, or, as it is styled in Scotland, Hogmanay.

This last term has puzzled antiquaries even more than the word Yule,* already adverted to; and what is of still greater consequence, has never yet received a perfectly satisfactory explanation. Some suppose it to be derived from two Greek words, ἀγέω μηθή (the holy moon or month), and in reference to this theory it may be observed, that, in the north of England, the term used is Hogmene, which does not seem, however, to be confined to the 31st of December, but denotes generally the period immediately preceding the New Year. Another hypothesis combines the word with another sung along with it in chorus, and asserts 'Hogmanay, trolloy!' to be a corruption of 'Homme est né—Trois Rois la' ('A Man is born—Three Kings are there'), an allusion to the birth of our Saviour, and the visit to Bethlehem of the Wise Men, who were known in medieval times as the 'Three Kings.' But two additional conjectures seem much more plausible, and the reader may select for himself what he considers the most probable. One of these is, that the term under notice is derived from Hoggynott, Hogenat, or Hogg-night, the ancient Scandinavian name for the night preceding the feast of Yule, and so called in reference to the animals slaughtered on the occasion for sacrificial and festal purposes—the word hogg signifying to kill. The other derivation of Hogmanay is from Au gui mens ("To the mistletoe" or "To the mistletoes this New Year"), an allusion to the ancient Druidical ceremony of gathering that plant. In the pasoie of Touraine, in France, the word used is Aquillanua; in Lower Normandy, and in Guernsey, poor persons and children used to solicit a contribution under the title of Hogueinam or Oguinuan; whilst in Spain the term, Aguinaldo, is employed to denote the presents made at the season of Christmas.

In country places in Scotland, and also in the more retired and primitive towns, it is still customary on the morning of the last day of the year, or Hogmanay, for the children of the poorer class of people to go themselves swaddled in a great sheet, doubled up in front, so as to form a vast pocket, and then to go along the streets in little bands, calling at the doors of the wealthier classes for an expected dole of oat-cake. Each child gets one quadrant section of oat-cake (sometimes, in the case of particular favourites, improved by an addition of cheese), and this is called their hognay. In expectation of the large demands thus made upon them, the housewives busy themselves for several days before they begin preparing a suitable quantity of cakes. The children coming to the door cry, 'Hogmanay!' which is in itself a sufficient announcement of their demands; but there are other exclamations which either are or might be used for the same purpose. One of these is:

'Hogmanay,
Trolloy.
Give us of your white bread, and none of your gray.'

And another favourite rhyme is:

'Get up, goodwife, and shake your feathers,
And dinna think that we are beggars;
For we are bairns come out to play,
Get up and gie' our hogmanay!'

The following is of a moralising character, though a good deal of a truism:

'Get up, goodwife, and binna swair,
And deal your bread to them that's here;
For the time will come when ye'll be dead,
And then ye'll neither need ale nor bread.'

The most favourite of all, however, is more to the point than any of the foregoing:

"My feet's cauld, my shoon's thin;
Gie's my cakes, and let me rin!"

It is no unpleasing scene, during the forenoon, to see the children going laden home, each with his large apron bellying out before him, stuffed full of cakes, and perhaps scarcely able to waddle under the load. Such a mass of oat-cakes no inconsiderable addition to the comfort of the poor man's household, and enables him to enjoy the New-year season as much as his richer neighbours.

In the primitive parish of Deerness, in Orkney, it was customary, in the beginning of the present century, for old and young of the common class of people to assemble in a great band upon the evening of the last day of the year, and commence a round of visits throughout the district. At every house they knocked at the door, and on being admitted, commenced singing, to a tune of its own, a song appropriate to the occasion. The following is what may be termed a restored version of this chant, the imagination having been called on to make up in several of the lines what was deficient in memory. The 'Queen Mary' alluded to is evidently the Virgin:

---

* See p. 745 of this volume.
NEW-YEAR'S EVE, OR HOGMANAY.

DECEMBER 31. BURNING OF 'THE CLAVIR.'

'This night it is guild New'r' Eve's night,
We're a' here Queen Mary's men;
And we're come here to crave our right,
And that's before our Lady.

The very first thing which we do crave,
We're a' here Queen Mary's men;
A bonny white candle we must have,
And that's before our Lady.

Goodwife, gae to your butter-ark,
And weigh us here ten mark.
Ten mark, tea pand,
Look that ye grip weel to the grund.*
Goodwife, gae to your geelin vat,
And fetch us here a sked o' that.

Gang to your swmrie, gin ye please,
And bring frae here a sharping-stane,
We'll sharp our whittles like a na.

Ye'll cut the cheese, and eke the round,
But aye take care ye cutna your thoom.
Gae fill the three-pint cog o' ale,
The mast maun be aboon the meal.
We hop your ale is stark and stout,
For men to drink theauld year out.
Ye ken the weather's smaw and sleet,
Stir up the fire to warm our feet.
Our aboon's made o' mare's skin,
Come open the door, and let 'em in.'

The inner-door being opened, a tremendous rush was made fas the house. The inmates furnished a long table with all sorts of homely fare, and a hearty feast took place, followed by copious libations of ale, charged with all sorts of good-wishes. The party would then proceed to the next house, where a similar scene would be enacted. How they contrived to take so many suppers in one evening, heaven knows! No slight could be more keenly felt by a Deerness farmer than to have his house passed over unvisited by the New-year singers.

The doings of the guisers or guiserards (that is, masquers or mummers) form a conspicuous feature in the New-year proceedings throughout Scotland. The favourite night for this exhibition is Hogmanay, though the evenings of Christmas, New-year's Day, and Handel Monday, enjoy likewise a privilege in this respect. Such of the boys as can lay any claim to the possession of a voice have, for weeks before, been poring over the collection of 'excellent new songs,' which lies like a bunch of rags in the window-sill; and being now able to screech up 'Barbara Allan,' or the 'Wee cot-house and the wee kail-yardie,' they determine upon enacting the part of guisers. For this purpose they don old shirts belonging to their fathers, and mount mitre-shaped casques of brown paper, possibly borrowed from the Abbots of Unreason;

* In stooping into a deep ark, or chest, there is of course a danger of falling in, unless the feet be kept firm to the ground.
+ For an account of the English mummers, see p. 739 of this volume.

attached to this is a sheet of the same paper, which falling down in front, covers and conceals the whole face, except where holes are made to let through the point of the nose, and afford sight to the eyes and breath to the mouth. Each vocal guiser is, like a knight of old, attended by a sort of humble squire, who assumes the habiliments of a girl, with an old-woman's cap and a broomstick, and is styled 'Bessie.' Bessie is equal in no respect, except that she shares fairly in the proceeds of the enterprise. She goes before her principal, opening all the doors at which he pleases to exert his singing powers; and busies herself, during the time of the song, in sweeping the floor with her broomstick, or in playing any other antics that she thinks may amuse the indwellers. The common reward of this entertainment is a halfpenny, but many curlewis persons fall upon the unfortunate guisers, and beat them out of the house. Let such persons, however, keep a good watch upon their cabbage-gardens next Halloween!

The more important doings of the guisers are of a theatrical character. There is one rude and grotesque drama which they are accustomed to perform on each of the four above-mentioned nights; and which, in various fragments or versions, exists in every part of Lowland Scotland. The performers, who are never less than three, but sometimes as many as six, having dressed themselves, proceed in a band from house to house, generally contenting themselves with the kitchen for an arena; whither, in mansions presided over by the spirit of good-humour, the whole family will resort to witness the spectacle. Sir Walter Scott, who delighted to keep up old customs, and could descend to simple things without losing genuine dignity, invariably had a set of guisers to perform this play before his family both at Abbotsfield and Abbotsford. The drama in question bears a close resemblance, with sundry modifications, to that performed by the mummers in various parts of England, and of which we have already given a specimen.*

Such are the leading features of the Hogmanay festivities in Scotland. A similar custom to that above detailed of children going about from house to house, singing the Hogmena chorus, and obtaining a dole of bread or cakes, prevails in Yorkshire and the north of England; but, as we have already mentioned, the last day of the year is not in the latter country, for the most part, invested with much peculiar distinction. One or two closing ceremonies, common to both countries—the requiem, as they may be termed, of the dying year—will be more appropriately noticed in the concluding article of this work.

BURNING OF 'THE CLAVIR.'

A singular custom, almost unparalleled in any other part of Scotland, takes place on New-year's Eve (old style) at the village of Burghhead, on the southern shore of the Moray Firth, about nine miles from the town of Elgin. It has been observed there from time immemorial, and both its origin, and that of the peculiar appellation by which it is distinguished, form still matter of conjecture and dispute for antiquaries. The following extract from the Banffshire Journal presents a very interesting

* See p. 740 of this volume.
and comprehensive view of all that can be stated regarding this remarkable ceremonial:

"Any Hogmanay afternoon, a small group of sea-
men and coopers, dressed in blue overcocks, and
followed by numbers of noisy youngsters, may be
seen assembling at the lower end of the south-west
extremity of the village, where it is customary to
build the Clavie. One of the men bears on his
shoulders a stout Archangel tar-barrel, kindly pre-

tised for the occasion by one of the merchants,
who has very considerably left a quantity of the
resinous fluid in the bottom. Another carries a
common herring-cask, while the remainder are laden
with other raw materials, and the tools necessary
for the construction of the Clavie. Arrived at the
spot, three cheers being given for the success of the
undertaking, operations are commenced forthwith.

In the first place, the tar-barrel is sawn into two
unequal parts; the smaller forms the groundwork
of the Clavie, the other is broken up for fuel. A
common fir prop, some four feet in length, called
the "spoke," being then procured, a hole is bored
through the tub-like machine, that, as we have
already said, is to form the base of the unique
structure, and a long nail, made for the purpose,
and furnished gratuitously by the village black-
smith, unites the two. Curiously enough, no ham-
mer is allowed to drive this nail, which is "sent
home" by a smooth stone. The herring-cask is
next demolished, and the staves are soon under-
going a diminution at both extremities, in order
to fit them for their proper position. They are nailed,
att intervals of about two inches all round, to the
lower edge of the Clavie-barrel, while the other
ends are firmly fastened to the spoke, an aperture
being left sufficiently large to admit the head of a
man. Amid tremendous cheering, the finished
Clavie is now set up against the wall, which is
mounted by two stout young men, who proceed to
the business of filling and lighting. A few pieces
of the split-up tar-barrel are placed in a pyramidal
form in the inside of the Clavie, enabling a small
spare for the reception of a burning peat, when
everything is ready. The tar, which had been
previously removed to another vessel, is now poured
over the wood; and the same inflammable substance
is freely used, while the barrel is being closely
packed with timber and other combustible ma-
terials, that rise twelve or thirteen inches above the
riser.

"By this time the shades of evening have begun
to descend, and soon the subdued murmur of the
crowd breaks forth into one loud, prolonged cheer,
as the youth who was dispatched for the fiery peat
(for custom says no sulphurous lucifer, no pestent
congreve dare approach within the sacred precincts
of the Clavie) arrives with his glowing charge.
The master-builder relieving him of his precious
trust, places it within the opening already noticed,
where, revived by a hot blast from his powerful
lungs, it ignites the surrounding wood and tar,
which quickly bursts into a flame. During the
short time the fire is allowed to gather strength,
cheers are given in rapid succession for "The
Queen," "The Laird," "The Provost," "The Town,
"The Harbour," and "The Railway," and then
Clavie-bearer number one, popping his head
between the staves, is away with his flaming bur-
ken. Formerly, the Clavie was carried in triumph
until very vessel in the harbour, and a handful
of grain thrown into each, in order to insure
success for the coming year; but as this part of the
ceremony came to be tedious, it was dropped, and
the procession confined to the boundaries of the
town. As fast as his heavy load will permit him,
the bearer hurries to the south-west extremity,
followed by the shouting Burghheadians, the boiling
tar meanwhile trickling down in 'dark sluggish
streams all over his back. Nor is the danger of
scalding the only one he who essays to carry the
Clavie has to confront, since the least stumble is
sufficient to destroy his equilibrium. Indeed,
this untoward event, at one time looked on as a
dire calamity, foretelling disaster to the place,
and certain death to the bearer in the course of next
year, not unfrequently occurs. Having reached
the junction of two streets, the carrier of the Clavie
is relieved; and while the change is being effected,
firebrads plucked from the barrel are thrown
among the crowd, who eagerly scramble for the
tarry treasure, the possession of which was of old
deemed a sure safeguard against all unlucky con-
tingencies. Again the multitude bound along;
again they have arrived at the village Beatty,
individual takes his place as bearer—a post for the
honour of which there is sometimes no little
striving. The circuit of the town being at length
completed, the Clavie is borne along the principal
to a small hill near the northern extremity of
the promontory called the "Doorie," on the
summit of which a freestone pillar, very much
resembling an ancient altar, has been built for its
reception, the spoke being inserted in a socket in the
centre. Being now firmly seated on its throne,
fresh fuel is heaped on the Clavie, while, to make
the fire burn the brighter, a barrel with the ends
knocked out is placed on the top. Cheer after
cheer rises from the crowd below, as the efforts
made to increase the blaze are crowned with
success.

"Though formerly allowed to remain on the
Doorie the whole night, the Clavie is now removed
when it has burned about half an hour. Then
comes the most exciting scene of all. The barrel
is lifted from the socket, and thrown down on the
western slope of the hill, which appears to be all
in one mass of flame—a state of matters that does
not, however, prevent a rush to the spot in search
of embers. Two stout men, instantly seizing the
fallen Clavie, attempt to demolish it by dashing it
to the ground: which is no sooner accomplished
than a final charge is made among the blazing
fragments, that are snatched up in total, in spite
of all the powers of combustion, in an incredibly
short space of time. Up to the present moment,
the origin of this peculiar custom is involved in
the deepest obscurity. Some would have us to
believe that we owe its introduction to the Romans;
and that the name Clavie is derived from the
Latin word clauus, a nail—wrenches being frequently
put to death in a barrel stuck full of iron spikes;
or from clavus, a key—the rite being instituted
when Agricola discovered that Poroton, i.e.,
Burghhead, afforded the grand military key to the
north of Scotland. As well might these wild
speculators have remarked that Doorie, which may
be spelled Dore, sprang from davis, cruel, on
account of the bloody ceremony celebrated on its
summit. Another opinion has been boldly advanced
by one party, to the effect that the Clavie is
Scandinavian in origin, being introduced by the Norwegian Vikings, during the short time they held the promontory in the beginning of the eleventh century, though the theorist advances nothing to prove his assumption, save a quotation from Scott's Marmion; while, to crown all, we have to listen to a story that bears on its face its own condemnation, invented to confirm the belief that a certain witch, yclept "Kitty Claven," bequeathed her name to the singular rite. Unfortunately, all external evidence being lost, we are compelled to rely entirely on the internal, which we have little hesitation, however, in saying points in an unmistakable manner down through the long vistas of our national history to where the mists of obscurity hang around the Druid worship of our forefathers. It is well known that the elements of fire were often present in Druidical orgies and customs (as witness their cren-taars); while it is universally admitted that the bonfires of May-day and Midsummer eve, still kept up in different parts of the country, are vestiges of these rites. And why should not the Clavie be so too, seeing that it bears throughout the stamp of a like parentage? The carrying home of the embers, as a protection from the illis of life, as well as other parts of the ceremony, finds a counterpart in the customs of the Druids; and though the time of observance be somewhat different, yet may not the same causes (now unknown ones) that have so greatly modified the Clavie have likewise operated in altering the date, which, after all, occurs at the most solemn part of the Druidical year?

Born.—Hermann Boerhave, distinguished physician, 1665, Voorhout, near Leyden; Charles Edward Stuart, younger Pretender, 1721, Rome; Charles, Marquis Cornwallis, Indian commander, 1738; Dr Johann Gaspar Spurzheim, 1776, Longwood, near Tripoli.

Died.—Commodus, Roman emperor, murdered, 192 A.D.; John Wycliffe, early reformer, 1384, Lutterworth, Leicester; Thomas Erastus, physician, and author of treaties on Excommunication, 1688, Basel; Giovanni Alfonso Borelli, physician and astronomer, 1709; Robert Boyle, chemist and discoverer of a gas, 1691; London; John Flamsteed, astronomer, 1719, Greenwich; Jean-Francois Marmontel, tale-writer, 1799; William Gifford, reviewer and satirist, 1826, London.

WYCLIFFE.

Of Wycliffe, 'the morning-star of the Reformation,' very little is with certainty known beyond what is gathered from his writings; hence he has been compared to 'the voice of one crying in the wilderness'—a voice and nothing more—a mighty agency manifest only in its effects. A portrait of the reformer is preserved at Lutterworth, but it can scarcely be of the age assumed; it is probably the copy of a contemporary picture. At any rate, it fulfils our ideal of Wycliffe. We behold, in what was said to be his 'spare, frail, emaciated frame,' the countenance of a Yorkshireman, firm and unshaken by any who could form an opinion and hold it against the world, and all the more resolutely because against the world.

The year of Wycliffe's birth is usually stated as 1324, three years before the accession of Edward III. His name he took from his native village, situated about six miles from Richmond in Yorkshire, and thus it is sometimes written John de Wycliffe. In his time there were in truth but two professions—arms and the church; most lawyers, physicians, and even statesmen, were ecclesiastics. The universities were therefore thronged with crowds of students, perhaps as numerous (if medieval statistics are to be credited) as the entire populations of Oxford and Cambridge at this day. Wycliffe was sent to Oxford, where, in course of time, he rose to high distinction as a lecturer, became a consummate master in dialectics, and the pride of the university. 'He was second to none in philosophy,' writes Knighton, a monk, who abhorred him; and in the discipline of the schools he was incomparable.' He was promoted to various dignities—to the wardenship of Baliol and Canterbury Halls, to the living of Fillingham, and finally to that of Lutterworth in Leicestershire, with which his name is most intimately associated, as where he dwelt longest, and where he died.

Wycliffe first rose into national publicity by his bold denunciations of the mendicant friars, who were swarming over the land, and interfering with the duties of the settled priesthood. In this contest he carried with him the sympathy, not only of the laity, but of the clergy, who saw in the friars troublesome interlopers. He treated all the orders with a severity now thought justifiable, and, in their hypocrites, who, professing beggary, had stately houses, rode on noble horses, and had all the pride and luxury of wealth, with the ostentation of poverty. The humbler, he rated with indignation as common able-bodied vagabonds, whom it was a sin to permit to saunter about, and fatten on the thrift of the poor.

Edward III., in 1366, called on Wycliffe for his advice as to his relation to the papacy. Urban V. had demanded payment of the tribute due under the convention of King John, and which had fallen thirty-three years into arrear. With many subtle and elaborate arguments, Wycliffe counselled resistance of the claim. He was still further honoured by his appointment, in 1374, as a member of a deputation sent by Edward to Gregory XI. to treat as to the adjustment of differences between the English and ecclesiastical powers. Wycliffe, by his experience gained in this journey sharpened and intensified Wycliffe's aversion to the papacy, for on his return he began to speak of the pope as 'Antichrist, the proud worldly priest of Rome, and the most cursed of clippers and cut-purses.' This daring language soon brought him into conflict with the authorities, and in 1377 he was cited to appear as St Paul's, to answer the charge of holding and publishing certain heretical doctrines. Wycliffe presented himself on the appointed day, accompanied by his friend John of Gaunt, Duke of Lancaster; but an altercation arising between Gaunt and Courtney, the bishop of London, the crowd broke into a tumult, and the court separated without doing anything. Other attempts were made to bring him to judgment, but with no decisive results. His teaching was condemned by convocation; Richard II., by letter, commanded silence at Oxford, but at Lutterworth he wrote and preached with undaunted spirit. He owed something of this impunity to the great schism which had broken out in 1378 in consequence of the election of two popes, by which for several years the papal power was paralysed. Wycliffe seized the occasion for writing a tract, in which he called
upon the kings of Christendom to use the oppor-
tunity for pulling down the whole fabric of the
Romish dominion, 'seeing that Christ had cloven
the head of Antichrist, and made the two parts
fight against each other.' The favour of John of
Gaunt was likewise a strong defence, but it is
doubtful whether he would have cared to stand
between Wycliffe and the terrible penalty of proven
heresy. Gaunt was no theologian; he rejoiced in
humbling the clergy, but he showed no desire to
tamper with the faith of the people.
Wycliffe's opinions are difficult to define, first,
because they were progressive, changing and ad-
vanving with experience and meditation; and
second, because the authorship of many manus-
cripts ascribed to him is doubtful. He commenced
by questioning the piosity of Roman Catholicism,
and ended in asserting its theology to be erroneous.
In doctrine, Calvin might have claimed Wycliffe as
a brother, but far beyond Calvin he was ready
to accord perfect freedom of conscience. "Christ," he
said, "wished his law to be observed willingly,
freely, that in such obedience men might find hap-
iness. Hence he appointed no civil punishment
to be inflicted on the transgressors of his command-
ments, but left the persons neglecting them to the
suffering which shall come after the 'day of doom.'
In the matter of church-government, he advocated
principles which would almost identify him with
the Independents. The whole framework of the
hierarchy he pronounced a device of priestly am-
bit——the first step in the ascending scale, the dis-
tinction between bishop and presbyter being an
innovation on the practice of the primitive church,
in which all were equal. He was opposed to estab-
lishments and endowments, insisting that pastors
should depend on the free offerings of their flock.
As a missionary, he was the director of a number
of zealous men, styled 'poor priests,' who received
and bodily diffused his doctrines. "Go and preach,"
his said them to; "it is the sublimest work: but
imitate not the priests, whom we see after the ser-
mon sitting in the ale-houses, or at the gaming-
table, or wasting their time in hunting. After your
sermon is ended, do you visit the sick, the aged, the
poor, the blind, and the lame, and succour them
according to your ability."
His industry was astonishing. The number of his
books, mostly brief tracts, baffles calculation.
Two hundred are said to have been burned in
Bohemia. His great work was the translation of
the Scriptures from the Vulgate into English. Of
this undertaking, Lingard says: "Wycliffe multi-
plied copies with the aid of transcribers, and his
poor priests recommended it to the perusal of their
flock. In their hands it became an engine of
wonderful power. Men were flattered with the
appearance of private judgment; the new doc-
trines insensibly acquired partisans and protectors
in the higher classes." Wycliffe's translation did
much to give form and permanence to the English
language, and it will for ever remain a mighty
landmark in its history.

Wycliffe's influence appeared to die with him;
more than a century elapsed between his death and
the birth of Latimer; yet his memory, his manus-
cripts, and above all his version of the Scriptures,
gave life to the Lollards, whom no persecution
could extirpate, and whose faith at last triumphed
in the supremacy of Protestantism. In 1415, the
Council of Constance, which consigned John Huss
and Jerome of Prague to the flames, condemned
forty-five articles, said to be extracted from the
works of Wycliffe, as erroneous and heretical.
Wycliffe they designated an obstinate heretic, and
ordered that his bones, if they could be distinguished
from those of the faithful, should be dug up and
cast on a dunghill. Thirteen years later, this sen-
tence was executed by the bishop of Lincoln, at the
command of the pope. The Reformers' bones were
disinterred and burned, and the ashes cast into the
Swift, whence, says Fuller, 'they were conveyed to
the Avon, by the Avon to the Severn, by the Severn
to the narrow seas, and thence to the main ocean.
Thus the ashes of Wycliffe are the emblem of his
doctrine, which is now dispersed all the world
over.'

STRUGGLE FOR A CASE OF WINE.

There are many curious circumstances connected
with the ownership of abandoned, lost, or unclaimed
property. In such cases the crown generally comes
forward as the great claimant, subject of course to
such pretensions as other parties may be able to
substantiate in the matter. If a man finds or picks
up treasure, it becomes a knotty point to determine
whether he may keep it. If the owner has thrown
it away, the finder may keep it; but if the owner
hides it or loses it, without an intention of parting
with it, there is often much legal difficulty in
deciding whether the crown or any one else
acquires a right to it.

And so it is at sea, and on the British coasts.
The laws concerning wrecked property are marked
by much minuteness of detail, on account of the
great diversity of the articles forming the cargoes
of ships, and the relation they bear to the 'sink or
swim' test. As a general rule, the king or queen
is entitled to wrecks or wrecked property, unless
and until a prior claimant appears. The main
object of this prerogative was, not to grasp at the
property for emolument, but to discourage the
barbarous custom of wrecking, by which ships and
human life were often purposely sacrificed as a
means of giving booty to the wreckers who lived
on shore. Then, to determine who shall obtain the property if the crown waives its claim, shipwrecked goods are divided among flotsam, jetsam, ligamentum, and simple wreck. Flotsam is when the ship is split, and the goods float upon the water between high and low water marks. Jetsam is when the ship is in danger of foundering, and the goods are cast into the sea for the purpose of saving it. Ligamentum, ligamentum, or ligamentum, is when heavy goods are thrown into the sea with a buoy, so that mariners may know where to retake them. Wreck, properly so called, is where goods shipwrecked are cast upon the land. By degrees, as the country became more amenable to law, the sovereign gave up the claim to some of these kinds of wrecked property, not infrequently vesting them in the lords of adjacent manors. Ligamentum belongs to the crown if no owner appears to claim it; but if any owner appears, he is entitled to recover the possession; for even if the goods were cast overboard, the ship owner is officer, and in order to lighten the ship, the owner is, not, by this act of necessity, construed to have renounced his property. All the goods called flotsam, jetsam, and ligamentum become wreck if thrown upon the land, instead of floating, and subject to the laws of wreck. By a very curious old law, if a man or a dog, or a cat escape "quick" or alive out of ship, that ship shall not be regarded as wreck; it still continues the property of the same owner as before; the words man, dog, or cat, are interpreted to mean any living animals by which the ownership of the vessel might be ascertained. Lord Mansfield put a very liberal interpretation upon this old statute. A case was brought before him for trial, in which the lord of a manor claimed the goods of a wrecked ship cast on shore, on the ground that no living creature had come alive from the ship to the shore. But Lord Mansfield disallowed this claim. He said: "The coming to shore of a dog or a cat alive can be no better proof than if they should come ashore dead. The escaping alive makes no sort of difference. If the owner of the animal were known, the presumption of the goods belonging to the same person would be equally strong, whether the animal were living or not.

The words of our law and equity courts give some curious information concerning the struggles between the crown and other persons, concerning the right to property thrown ashore. One famous case is known by the title Rex v. Two Casks of Tallow. Another, Rex v. Forty Nine Casks of Brandy, shews the curious manner in which the judgment of the court awarded some casks to the crown and some to the lord of the manor—accused were lost at sea or by fire, floating beyond three miles from the shore, floating within that distance, lying on the wet foreshore, lying on the dry foreshore, or alternately wet and dry.

A still more curious case was tried at the end of December 1809, between the crown and Mr Constable, lord of the manor of Holderness, in Yorkshire. It was a struggle who should obtain a cask of wine, thrown ashore on the coast of that particular manor. The lord's bailiff, and some custom-house officers, hearing of the circumstance, hastened to the spot, striving which should get there first. The officers laid hold of one end of the cask, saying: 'This belongs to the king.' The bailiff laid hold of the other end, and claimed it for the lord of the manor. An argumentative dispute arose. The officers declared that it was smuggled, not having gone through the custom-house. The bailiff retorted that he believed the wine to be Madeira, not port. The officers, smiling, said that they meant port of entry, not port wine—a fact that possibly the bailiff knew already, but chose to ignore. The bailiff replied: 'It has been in no port, it has come by itself on the beach.' The officers resolved to go for further instructions to the custom-house. But here arose a dilemma: what to do with the case of wine in the interim? As the bailiff could not very well drink the wine while they were gone, they proposed to place it in a small hut hard by. They did so; but during their absence, the bailiff removed it to the cellar of the lord of the manor. The officers, when they returned, said: 'Oh, no! now we have you; the wine is the king's now, under any supposition; for it has been removed without a permit.' To which the bailiff responded: 'If I had not removed the wine without a permit, the sea would have done so the next tide.' The attorney-general afterwards filed an information against the lord of the manor; and the case came on at York—on the question whether the bailiff was right in removing the wine without a custom-house 'permit!' The arguments pro and con were very lengthy and very learned; for although the cask of wine could not possibly be worth so much as the costs of the case, each party attached importance to the decision as a precedent. The decision of the court at York was a special verdict, which transferred the case to the court of Exchequer. The judgment finally announced was in favour of the lord of the manor—on the grounds that no permit is required for the removal of wine unless it has paid duty; that wine to be liable to duty, must be imported; that wine cannot be imported by itself, but requires the agency of some one else to do so; and that therefore wine wrecked, having come on shore by itself, or without human volition or intention, was not 'imported,' and was not subject to duty, and did not require a permit for its removal. The trial virtually admitted the right of the lord of the manor to the wine, as having been thrown ashore on his estate; the only question was, had he forfeited it by the act of his servant in removing it from the spot without a permit from the custom-house officers; and the decision of the court was in his favour on this point. But it proved to be by far the most costly cask of wine he ever possessed; for by a strange arrangement in these Exchequer matters, even though the verdict be with the defendant, he does not get his costs.

RINGING OUT THE OLD YEAR: CONCLUSION.

The close of the year brings along with it a mingled feeling of gladness and melancholy—of gladness in the anticipation of brighter days to come with the advent of the New Year, and of melancholy in reflections on the fleeting nature of time, and the gradual approach to the inevitable goal in the race of life. That so important an occasion should be distinguished by some observance or ceremony appears but natural, and we accordingly find various customs prevail, some sportive, others serious, and others in which both the mirthful and pensive moods are intermingled.
Ringing Out the Old Year: The Book of Days. Conclusion.

One of the best known and most general of these customs is, that of sitting up till twelve o'clock on the night of the 31st December, and, then, when the eventide hour has struck, proceeding to the house-door, and unharring it with great formality to 'let out the Old, and let in the New Year.' The evening in question is a favourite occasion for social gatherings in Scotland and the north of England, the assembled friends thus welcoming together the birth of another of Father Time's ever-increasing, though short-lived progeny. In Philadelphia, in North America, we are informed that the Old Year is there 'fired out,' and the New Year 'fired in,' by a discharge of every description of firearm—musket, fowling-piece, and pistol. In the island of Guernsey, it used to be the practice of children to dress up a figure in the shape of a man, and after parading it through the parish, to bury it on the sea-shore, or in some retired spot. This ceremony was styled 'enterre le vieux bout de l'an.'

A custom prevails, more especially among English dissenters, of having a midnight service in the various places of worship on the last night of the year, the occasion being deemed peculiarly adapted both for pious meditations and thankfulness, and also for the reception and retention of religious impressions. And to the community at large, the passing away of the Old Year and the arrival of his successor is heralded by the peals of bells, which, after twelve o'clock has struck, burst forth from every steeple, warning us that another year has commenced. At such a moment, painful reflections will obtrude themselves, of time misspent and opportunities neglected, of the fleeting nature of human existence and enjoyment, and that ere many more years have elapsed, our joys and sorrows, our hopes and our forebodings, will all, along with ourselves, have become things of the past. Such is the dark side of the question, but it has also its sunny side and its silver lining:

'For Hope shall brighten days to come
And Memory gild the past.'

And on such an occasion as we are contemplating, it is both more noble and more profitable to take a cheerful and reassuring view of our condition, and that of humanity in general—laying aside futile reflections on past imprudence and mismanagement, and resolving for the future to do our utmost in fulfilling our duty to God and our fellow-men.

With the 'Ringing out of the Old Year,' we now conclude our labours in The Book of Days; and in reference to the aspirations just alluded to, which every generous mind must feel, we take leave of our readers, in the subjoined utterance of our greatest living poet:

'Ring out wild balls to the wild sky,
The flying cloud, the frosty light:
The Year is dying in the night;
Ring out, wild balls, and let him die.'

Ring out the old, ring in the new,
Ring, happy bells, across the snow:
The Year is going, let him go;
Ring out the false, ring in the true.

Ring out the grief that aches the mind,
For those that here we see no more;
Ring out the foud of rich and poor,
Ring in redress to all mankind.

Ring out a slowly-dying cause,
And ancient forms of party strife;
Ring in the nobler modes of life,
With sweeter manners, purer laws.

Ring out the want, the care, the sin,
The faithless coldness of the times;
Ring out, ring out my mournful rhymes,
But ring the fuller minstrel in.

Ring out false pride in place and blood,
The civic slander and the spite;
Ring in the love of truth and right,
Ring in the common love of good.

Ring out old shapes of foul disease;
Ring out the narrowing lust of gold;
Ring out the thousand wars of old,
Ring in the thousand years of peace.

Ring in the valiant man and free,
The larger heart, the kindlier hand;
Ring out the darkness of the land,
Ring in the Christ that is to be.'
